## I. CALL TO ORDER

## II. APPROVAL OF MEETING MINUTES

**1.** Approval of September 21, 2021 Meeting Minutes

## III. PUBLIC HEARINGS FOR SITE PLANS/SPECIAL PERMITS/SUBDIVISIONS

**1. WALLACE CAMPUS: DEMOLITION, CONVERSION & NEW CONSTRUCTION**
Site Plan application for demolition, conversion and new construction, resulting in a mixed use development with 187 dwelling units, 14,235 SF of retail commercial space, and publically-accessible open space on the parcels at 319, 325, 327-329 and 331 Main Street. Redevelopment of the off-street parking area will involve the properties at 302, 304, 306 and 310 Mill Street. Grid #6162-77-114098, 109079, 109077, 121116, 112116, 116114, 128113 and 6162-78-127091; Owner: 319 & 331 Main Street - IIC Properties, Inc., 327-329 Main Street - Key Main LLC, and 325 Main Street - Wallace Campus Manager LLC (Emanuel Kokinakis) (outright and by contract); Applicant: Wallace Campus Manager, LLC (A Larovere Consulting and Development, Mega Contracting Group, and Urban Green Equities); Consultant: Ken Casamento, LRC Group; Architect: SLCE Architects, LLP; Zoned: Poughkeepsie Innovation District Urban Village (PID-UV) and Historic Core (PID-HC). File #2020-010

**2. 58 PARKER AVENUE: OFFICE AND OPEN SPACE**

Application for Site Plan Review relative to the conversion of the existing former industrial complex at 58 Parker Avenue to workspace (offices) for Scenic Hudson, including development of a surface parking lot on the north side of Parker Avenue. Owner/Applicant: Northside Junction, LLC (Caroline Alsup/Scenic Hudson); Consultant: MASS Design Group; Zoning District: Walkway Gateway District Mixed Use Commercial Subdistrict (G-CM) Grid #6162-77-6162-62-148369 and 6162-54-125385; File #2021-045

**3. 584 MAIN STREET: MIXED USE CONVERSION AND EXPANSION**
Application for Site Plan Review relative to the proposed conversion of the existing building at 584 Main Street, including construction of an addition, from a used furniture store to a mixed use building containing office space and thirty (30) dwelling units. Owner: Hooker 21 LLC; Applicant: Wulf Lueckerath/Mark Lehman; Consultant: Liscum, McCormack, VanVoorhis; Zoned: Main Street Commercial (C-2A) District; Grid #6161-24-439917; File #2021-013

**4. MILTON STREET: MULTIFAMILY RESIDENTIAL DEVELOPMENT**
Application for site plan review relative to the proposed multifamily residential development consisting of two buildings containing a total of 63 units, with a swimming pool and accessory surface parking. Owner/Applicant: Maselo Realty LLC; Consultant: Chazen Companies (Caren LoBrutto); Grid #6162-73-623227; Zoning District: Planned Residential District (PRD); File #2021-029

**5. 134-136 SOUTH AVENUE: MIXED USE NEW CONSTRUCTION**
Application for Site Plan Review relative to the proposed demolition of an existing structure and construction of a new mixed use building with three (3) commercial spaces and fifteen (15) apartments with eleven (11) one-bedroom units and four (4) two-bedroom units. Owner: 134-136 South Avenue LLC (Brian Trematore); Applicant: AE Baxter LLC (Eric Baxter); Zoning District: Neighborhood Commercial (C-1); Grid #6061-44-956742; File #2021-050

## IV. SITE PLANS/SPECIAL PERMITS/SUBDIVISIONS

**1. 267 MILL STREET: SITE PLAN AMENDMENT**
Application for Site Plan Amendment relative to the proposed conversion of a former office building to a multiple dwelling with a total of eight (8) dwelling units. The previous approval was for seven (7) units; Grid #6162-69-073173; Owner: Page Park Associates; Applicant: Kelly Libolt/Page Park Associates: Zoning District: Poughkeepsie Innovation District – Creative Edge (PID-CE); File #2020-044 (1)

**2. 27 HIGH STREET: MULTIFAMILY RESIDENTIAL DEVELOPMENT**
Application for Site Plan Review relative to the proposed 67 unit multifamily development at 27 High Street, including the conversion of the existing vacant building and construction of a new building, Owner: 27 High Street Lofts LLC; Applicant: 27 High Street Lofts LLC/Kelly Libolt; Consultant: LRC Group; Zoned Medium High Density Residence (R-4) District; Grid #6162-62-192294; File #2021-018

**3. 135 MAIN STREET: MULTIFAMILY RESIDENTIAL SUBDIVISION**
Application for Site Plan Review and Subdivision relative to the proposed subdivision of the property at 135 Main Street into two lots of record with construction of a new building containing 72 dwelling units on the new lot. Owner: Omni New York; Applicant: Tinkleman Architecture; Consultant: Ken Casamento/LRC Group; Grid #6062-76-911183; Zoning District: Urban Density Residence (R-6) District; File #2021-037 and 2021-038

## V. APPROVAL EXTENSIONS

**1. 69 & 73 CATHARINE STREET: AGENCY COMMUNITY RESIDENCE/OFFICE**
Site Plan and Special Permit application regarding the proposed conversion of the former Catharine Street Community Center to a twenty-seven (27) bed Agency Community Residence and conversion of the former office building at 73 Catharine Street to an associated out-patient clinic and offices. Grid #6162-70-201163 & 6162-70-198164; Owner/Applicant: St. Joseph’s Rehabilitation Center, Inc.; Consultant: Architectural & Engineering Design Associates PC; Zoned: Medium High Density Residential (R-4) District; File #2020-024

# CITY OF POUGHKEEPSIE
# PLANNING BOARD MINUTES
# MEETING OF SEPTEMBER 21, 2021

**Present**
Robert S. Levine, Esq
Rosaura Andujar-McNeil
Nick DeLuccia
Sean O'Donnell
Robert Mallory (arrived late)
Anne Saylor
Marjorie Smith
Brian Veltre

**Staff present:**
Natalie Quinn, Planning Director

The meeting was called to order at 7:01pm with the pledge of allegiance.

The minutes from the August 2021 meeting were approved on a motion from Marjorie Smith seconded by Anne Saylor.

**584 MAIN STREET**
Application for Site Plan Review relative to the proposed conversion of the existing building at 584 Main Street, including construction of an addition, from a used furniture store to a mixed use building containing office space and thirty (30) dwelling units. Owner/Applicant: 584 Main Street LLC (Wulf Lueckerath/Mark Lehman); Consultant: Spencer Hall, LLS/Liscum, McCormack, VanVoorhis; Grid #6161-439917; Zoned: Main Street Commercial (C-2A) District; File #2021-013

Appearing on behalf of the application were Wulf Lueckerath, Mark Lehman and Don Petruncola, who provided a presentation.

Appearing on behalf of the City relative to the application was Chris Mansfield.

On a motion by Marjorie Smith and seconded by Anne Saylor, the Board opened the Public Hearing.

Chris Mansfield, the City's architectural consultant for the project, offered the following comments:

- Recommends fence along south façade
- Where will the refuse be located
- Celebration of existing structure and brick is missing: probe to determine brick value and if salvageable
- Shutter/non shutter is not good
- Method to break up façade, plane change
- Appreciates canopies
- Better celebrate residential entrance on Palmer to activate street with lighting
- Lighting on south
- HVAC screening is appropriate
- Will there be hood

The Board discussed the architectural recommendations, particularly agreeing that the shutter/non-shutter approach doesn't work, that the arched windows should be retained, that the Palmer Avenue entrance needs to be highlighted and illuminated, that the existing brick should be exposed.

The applicant's consultant agreed to explore alternating between siding and brick. The applicant indicated that they did not want the building, especially with the addition, to look too patched together.

Contact information from the brick work at 27 High Street will be forwarded.

Internal garbage on the Palmer Street side.

Parking: request the applicant to submit 10 preferred spaces for waiver. Consideration should be given to avoid crossing the arterial.

Request to include bicycle parking.

To allow sufficient time for re-circulation to the Engineering Department, the Board voted to adjourn the public hearing to October 19, 2021, on a motion by Marjorie Smith, seconded by Sean O'Donnell

Motion: Marjorie Smith
Second: Sean O'Donnell
Carried: 7:0:0

**58 PARKER AVENUE: OFFICE CONVERSION**
Application for Site Plan Review relative to the conversion of the existing former industrial complex at 58 Parker Avenue to workspace (offices) for Scenic Hudson, including development of a surface parking lot on the north side of Parker Avenue. Owner/Applicant: Northside Junction, LLC (Caroline Alsup/Scenic Hudson); Consultant: MASS Design Group; Zoning

District: Walkway Gateway District Mixed Use Commercial Subdistrict (G-CM) Grid #6162-77-6162-62-148369 and 6162-54-125385; File #2021-045

Appearing on behalf of the application were Caroline Aslup, Jason Camporese and Linda Cooper.

- Façade renovations will follow state and federal guidelines.
- Brick work will include cleaning and repointing masonry. Details on replacement windows will be provided.
- Variances will be required for parking setback
- Crosswalk is provided
- Parking analysis and data were presented
- The need for signage was discussed.
- Appreciation for retention of industrial building (adaptive re-use) was expressed

On a motion by Marjorie Smith, seconded by Sean O'Donnell, the public hearing was opening.

Speaking in support of the application was city resident Mario Johnson.

To allow sufficient time for returned comments from County Planning and internal departments, on a motion by Marjorie Smith, seconded by Nick DeLuccia, the Board adjourned the public hearing to October 19, 2021.

On a motion by Marjorie Smith, seconded by Anne Saylor, the Board voted to rescind its previous resolution to establish an escrow account.

**316 MAIN STREET: RESIDENTIAL NEW CONSTRUCTION**
Application for Site Plan review relative to the proposed demolition of an existing one-story building and construction of a six-story mixed use building with eighty (80) residential units and 21,705 SF of commercial space. Applicant / Owner: 316 Main Street LLC (Eric Baxter); Consultant: MASS Design Group; Zoned Poughkeepsie Innovation District – Historic Core (PID-HC) Subdistrict; Grid #6162-77-091064; File #2021-003

Robert Levine, Esq, recused himself. Anne Saylor assumed the duties of the chair.

Appearing on behalf of the application were Eric Baxter and Justin Brown, who summarized changes.

It was noted that the revised plan provides greater detail and options on the cornices.

WHEREAS, the Planning Board has received an application for Site Plan Review relative to the proposed demolition of an existing one-story building and construction of a six-story mixed use building with eighty (80) residential units and 21,705 SF of commercial space at 316 Main Street; and

WHEREAS, this application for site plan is considered to be an Type 1 Action under SEQR and the applicant submitted a Full EAF which adequately describes the proposed action; and

WHEREAS, the Board as Lead Agency adopted a Negative Declaration on August 17, 2021; and,

WHEREAS, the ZBA granted the required variance with regards to a height variance of one story

WHEREAS, the action is more fully detailed on supplemental information and on plans prepared by Rodney Morrison, PE of LRC Group, dated 2/9/21; and elevations prepared by MASS Design Group dated 8/9//21; and

NOW THEREFORE BE IT FURTHER RESOLVED that the Board grant site plan approval for the proposed construction of a six-story mixed-use buildings at 316 Main Street, with the following conditions:

- Applicant will return for façade review

Motion: Marjorie Smith
Second: Sean O'Donnell
Ayes: 5
Nays: 1
Abstentions: 0

The motion carried.

**27 HIGH STREET: RESIDENTIAL CONVERSION AND NEW CONSTRUCTION**
Application for Site Plan Review relative to the proposed multifamily development of 67 units at 27 High Street, including the conversion of the existing vacant building and construction of a new building; Owner: 27 High Street Lofts LLC; Applicant: 27 High Street Lofts LLC/Kelly Libolt; Consultant: LRC Group; Grid #6162-62-192294; Zoned: Medium High Density Residence (R-4) District; File #2021-015

Robert Levine, Esq, was recused. Anne Saylor continued with the duties of the chair.

Appearing on behalf of the application was Kelly Libolt, who outlined changes to the project.

WHEREAS, the Planning Board has received an application for site plan review relative to the proposed multifamily development of sixty-seven (67) units, including the conversion of the existing vacant building and construction of a new building at 27 High Street; and

WHEREAS, this application for site plan is considered to be an Unlisted Action under SEQR; and

WHEREAS, the applicant submitted a Short EAF which adequately describes the proposed action; and

WHEREAS, the action is more fully detailed on supplemental information and on plans prepared by Rodney Morrison, PE of LRC Group, dated 8/31/21; and elevations prepared by QPK Design, dates 5/26/21; and

WHEREAS, the Board has compared the impacts that are likely to result from the action against those in 617.7(c)(1)(i) through (xii), as noted in the completed Part 2 and Part 3 of the EAF, and has determined that there will be no significant adverse environmental impacts and therefore, a draft environmental impact statement will not be prepared.

NOW THEREFORE BE IT RESOLVED that the Planning Board hereby adopts a Negative Declaration for the File PB#2021-015 as detailed in the application and the above referenced plans.

Motion: Marjorie Smith
Second: Nick Deluccia
Carried:5:0:0

The Planning Board encourages the applicant go before the Zoning Board of Appeals to seek the required variances for lot area, front yard setback, building height, parking, and landscaping.
Motion: Marjorie Smith
Second: Nick DeLuccia
Carried: 5:0:0

Pursuant to Section 19-6.1(e)(2)(g) the Board shall act on a site plan within 45 days after the public hearing is closed. As the public hearing was closed on August 17th, 2021, the Board shall make a decision to approve, approve with conditions, or deny the application by October 1st, 2021 unless the review is extended by mutual consent of the applicant and Board. The applicant is required to secure approvals from the ZBA before they can receive a final decision from the Planning Board.

The Planning Board consented to extending review of the application past the 45 day timeline to the next regularly scheduled meeting on October 19, 2021.
Motion: Marjorie Smith
Second: Sean O'Donnell
Carried: 5:0:0

**MILTON STREET: MULTIFAMILY RESIDENTIAL DEVELOPMENT**
Application for site plan review relative to the proposed multi-residential development consisting of two buildings containing a total of 63 units, with a swimming pool and accessory surface parking. Owner/Applicant: Maselo Realty LLC; Consultant: Chazen Companies (Caren LoBrutto); Grid #6162-73-623227; Zoned Planned Residential District (PRD); File #2021-029

Appearing on behalf of the application were Caren LoBrutto and Timothy Lynch, who provided an overview of changes.

Appearing on behalf of the City was Chris Kroner of MASS Design who outlined his comments.

Right of way along the Fallkill Creek will be added
Requested revised open space calculations
Safety measures wre encouraged along pedestrian path

The Board determined that the matter is of wide public interest and set a public hearing be set for October 19, 2021.
Motion: Marjorie Smith

Second: Sean O'Donnell
Carried: 6:0:0

**135 MAIN STREET: MULTIFAMILY RESIDENTIAL/SUBDIVISION**

Application for Site Plan Review and Subdivision relative to the proposed subdivision of the property at 135 Main Street into two lots of record with construction of a new building containing 72 dwelling units on the new lot. Owner: Omni New York; Applicant: Tinkleman Architecture; Consultant: Ken Casamento/LRC Group; Grid #6062-76-911183; Zoning District: Urban Density Residence (R-6) District; File #2021-037 and 2021-038

Appearing on behalf of the application were Ken Spillberg (Omni), Steven Tinkleman, Anthony Juliano and Ken Casamento, who made a presentation relative to the project.

The following information was provided:
The existing building is planned to be rehabilitated within the new 2 years
Services are/will be provided on site
Income regulated at 40-60% of AMI ($26K to $49K)
Maximum utilization of existing parking lot is 33 spaces
The owner of the property is actually as affiliate of Omni New York.

The following comments were made:

- The applicant requested the Board's approval to remove some proposed parking and add more open space
- Add zoning letter of August 26, 2021 to packet
- Still need landscaping plans and lighting plans
- Need to submit colors and materials
- Engineering is at a preliminary stage
- A long term land lease was recommended
- Supporting documentation of shuttle was requested
- Consideration of structured parking, removal of surface parking and addition of more open space was recommended
- Concern was expressed about the institutional/hospital-like appearance of the building
- Stepping down the height of the building was proposed

The Board declared itself lead agency for the purposes of SEQR and authorized circulation of the plans for review and comment.

Motion: Marjorie Smith
Second: Anne Saylor
Carried: 6:0:0

The Board requested an escrow account of $3,000 be established by the applicant for architectural review services by an architectural consulting firm.

Motion: Marjorie Smith
Second: Sean O'Donnell

Carried: 6:0:0

**134-136 SOUTH AVENUE: MIXED USE NEW CONSTRUCTION**

Application for Site Plan and Special Permit Review relative to the proposed demolition of an existing structure and construction of a new mixed use building with three (3) commercial spaces and fifteen (15) apartments with eleven (11) one-bedroom units and four (4) two-bedroom units. Owner: 134-136 South Avenue LLC (Brian Trematore); Applicant: AE Baxter LLC (Eric Baxter); Zoning District: Neighborhood Commercial (C-1); Grid #6061-44-956742; File #2021-050

The Board declared itself lead agency for the purposes of SEQR and authorized circulation of the plans for review and comment.

Motion: Marjorie Smith
Second: Sean O'Donnell
Carried: 5:0:0

The Board determined that the matter is of wide public interest and set a public hearing for October 19, 2021.

Motion: Marjorie Smith
Second: Sean O'Donnell
Carried: 5:0:0

The meeting was adjourned at 11:18pm on a motion by Marjorie Smith, seconded by Nick DeLuccia.

Revised January 2018: Previous Editions Obsolete

## PROJECT INFORMATION

New construction: X (yes) _____ (no)

Change of use: X (yes) _____ (no)

Expansion/addition: X (yes) _____ (no)

Alteration: X (yes) _____ (no)

Cost of Construction: $ 66M

### LOT AND BULK INFORMATION:

Lot area: 2.52 (acres) 109,771 (square feet)

Building Footprint: 23,091 (proposed square feet for new construction)

25,180 (existing square feet for change of use/expansion)

_____ (additional proposed square feet for expansion)

48,271 (total building footprint, square feet)

Lot Coverage: 44% (percentage, building coverage only)

Gross Floor Area: 140,671 (proposed square feet for new construction)

114,856 (existing square feet for change of use/expansion)

_____ (additional proposed square feet for expansion)

255,527 (total gross floor area, square feet)

Building Height: 3, 4, 5 (stories) varies - see plans (feet)

Floor Area Ratio: 2.33 (ratio of gross floor area divided by lot area)

## VIII. PROJECT PARKING INFORMATION

A) Number of Off-Street Parking Spaces required: 32

B) Number of Off-Street Parking Spaces provided: 63

C) Waiver Requested: _____ (Yes) X (No)

Is municipal parking available within 600 feet? X (Yes) _____ (No)

If yes, name all such municipal facilities: Conklin Street Lot; Garden Street Lot; Crannell Street; Financial Plaza Parking Garage

(If a waiver is requested based on proximity to municipal facilities, a written request for such waiver, addressed to the City Planning Staff and the Chairman of the Planning Board, must be submitted with the application.)

If a private parking facility is to be utilized, is such facility within 600 feet?

_____ (Yes) _____ (No)

If yes, provide the address of the facility, name of the property owner, number of spaces in the lot, number of spaces available for lease, and length of lease. Attach copy of lease. Additional information may be required by the Planning Board):

## IX. RESIDENTIAL PROPOSALS

A) Type of Development: Multi-family housing
(Townhouse, condominium, multiple residence rental, etc.)

B) Unit Breakdown:

Number of efficiency or "studio" units: 46

Number of one (1) bedroom units: 92

Number of two (2) bedroom unit's 40

Number with three or more bedrooms: 9

Total number of units: 187

C) Is funding public? X Yes ____ No

If yes, describe funding source: NYS HFA Bond; 4% LIHTC and other sources

## X. OFFICE PROPOSALS (____ Medical/Dental ____ Professional ____ Business)

A) Number of Employees: _____

B) Number of doctors/dentists/medical practitioners: _____

C) Days/Hours of Operation: _____

## XI. SERVICE BUSINESS PROPOSALS

A) Specify Business: _____
(e.g., laundromat, drycleaner, beauty parlor, travel agency, banks)

B) Number of Employees: _____

C) Number of Washing Machines (for laundromat): _____

D) Days/Hours of Operation: _____

## XII. MERCANTILE PROPOSALS (Retail X Wholesale _____)

A) Type of Mercantile (specify): TBD (14,325 SF)

B) Number of Employees: TBD

C) Days/Hours of Operation: Normal Business Hours

## XIII. STANDARD RESTAURANT/FAST FOOD RESTAURANT/COFFEE SHOP/DONUT SHOP/NIGHTCLUB/DISCOTHEQUE/BAR PROPOSALS

A) Specify Use: _____

B) Number of seats (excluding bar stools and outdoor seating):_____

C) Meals served (i.e., breakfast, lunch, dinner): _____

D) Type of Menu: _____

E) Days/Hours of Operation: _____

F) Entertainment (live and/or recorded):_____

G) Will the restaurant contain a bar/lounge?: _____ Yes _____ No

H) If yes, how many seats at the bar? _____

I) Is a drive-through window proposed? _____

J) Is a walk-up window proposed? _____

K) Is an outdoor seating area proposed? _____

L) If yes, how many seats are proposed? _____

M) If yes, is outdoor cooking proposed? _____

## XIV. INDUSTRIAL/COMMERCIAL PROPOSALS (Automobile repair, taxi, motor vehicle sales, warehouse, manufacturing, animal hospital, research facilities, etc.)

A) Specify Use: _____

B) Number of shifts (if any): _____

C) Number of employees: _____
(If shifts are proposed, list number of employees per shift)

E) Number of work bays (if automobile repair): _____

F) Days/Hours of operation: _____

**XV. EDUCATIONAL/INSTITUTIONAL/RECREATIONAL PROPOSALS** (e.g., Museums, Theatres, Conference Centers, Hotels, Motels, Hospitals, Nursing Homes, Assisted Living Facilities, Nursery Schools, Private Schools, Day Care Centers, Places of Worship, Marinas, Membership Clubs, etc.)

A) Specify: _____

B) Number of shifts (if any): _____

C) Number of employees: _____
(If shifts are proposed, list number of employees per shift)

D) Number of beds (hospitals, nursing homes, etc): _____

E) Number of seats in largest assembly space: _____

F) Number of classrooms (schools): _____

G) Number of rental units (hotels, motels, etc.) _____

H) Number of boat slips/courts (e.g., tennis, handball, etc.), alleys: _____

I) Days/Hours of Operation: _____

**XVI. PROPOSALS NOT MENTIONED ABOVE** (Please be specific):

Publicly accessible open space

**XVII. APPLICANT CERTIFICATION**

I, Emanuel Kokinakis, certify that the this application has addressed the objectives outlined in the Zoning Ordinance with consideration given to the public health, safety and welfare; the comfort and convenience of the public in general or the residents or users of the proposed development and of the immediate neighborhood.

The applicant certifies that all information contained herein is accurate and complete as of the date of this application.

Re: **Wallace Campus Project: September 2021 updates**

Dear Ms. Quinn:

Enclosed is a proposed revised Site Plan designed to address Planning Board, City consultant, County Planning Department, and public comments. The purpose of the Site Plan revision is to enhance compliance with the recently enacted PID zoning and confirm the Applicant's continuing efforts to work with the City to bring an excellent project to fruition. The key characteristics of the proposed modified Site Plan [hereafter, "Reduced Size Plan"] are:

**Features eliminated:**

- Height Variances eliminated: All height variance requests pertaining to both the Main Street and Catharine Street buildings have been eliminated.
- Reduction in unit count: The number of apartment units has been reduced from 214 to 187 units.
- Elimination of climbing gym and day care facility: In response to comments these large uses have been eliminated.

**Features modified:**

- The range of unit sizes was adjusted: More multi-bedroom units were added. Two-bedrooms increased from 25 to 39 units. Three-bedrooms increased from 0 to 9 units.

- Commercial space available for rent has increased: The 7-Story/Daycare Plan proposed 6,416 sf of retail commercial space. The Reduced Size Plan provides 14,235 sf of retail commercial space, providing more flexibility to meet a variety of future pedestrian-oriented commercial tenancies.

- Vehicular circulation has been modified to eliminate the double drive aisles and proposed drop-off area required by the Daycare use: The revised plan provides one way exit and entrance in a manner that provides the greatest sight distance for exiting vehicles on Mill Street. The revised plan provides 63 parking spaces, exceeding the parking demand of site uses. See enclosed Traffic Report by Colliers, dated September 28, 2021.

**Features maintained:**

- High Quality Architectural Design: The reduced size project maintains the same high-quality architecture. See Architectural Drawing Set by SLCE Architects, submitted herewith.

- Pedestrian interconnection between Main Street and Mill Street: The Reduced Size Plan maintains the Promenade and pedestrian walkway between Main Street and Mill Street.

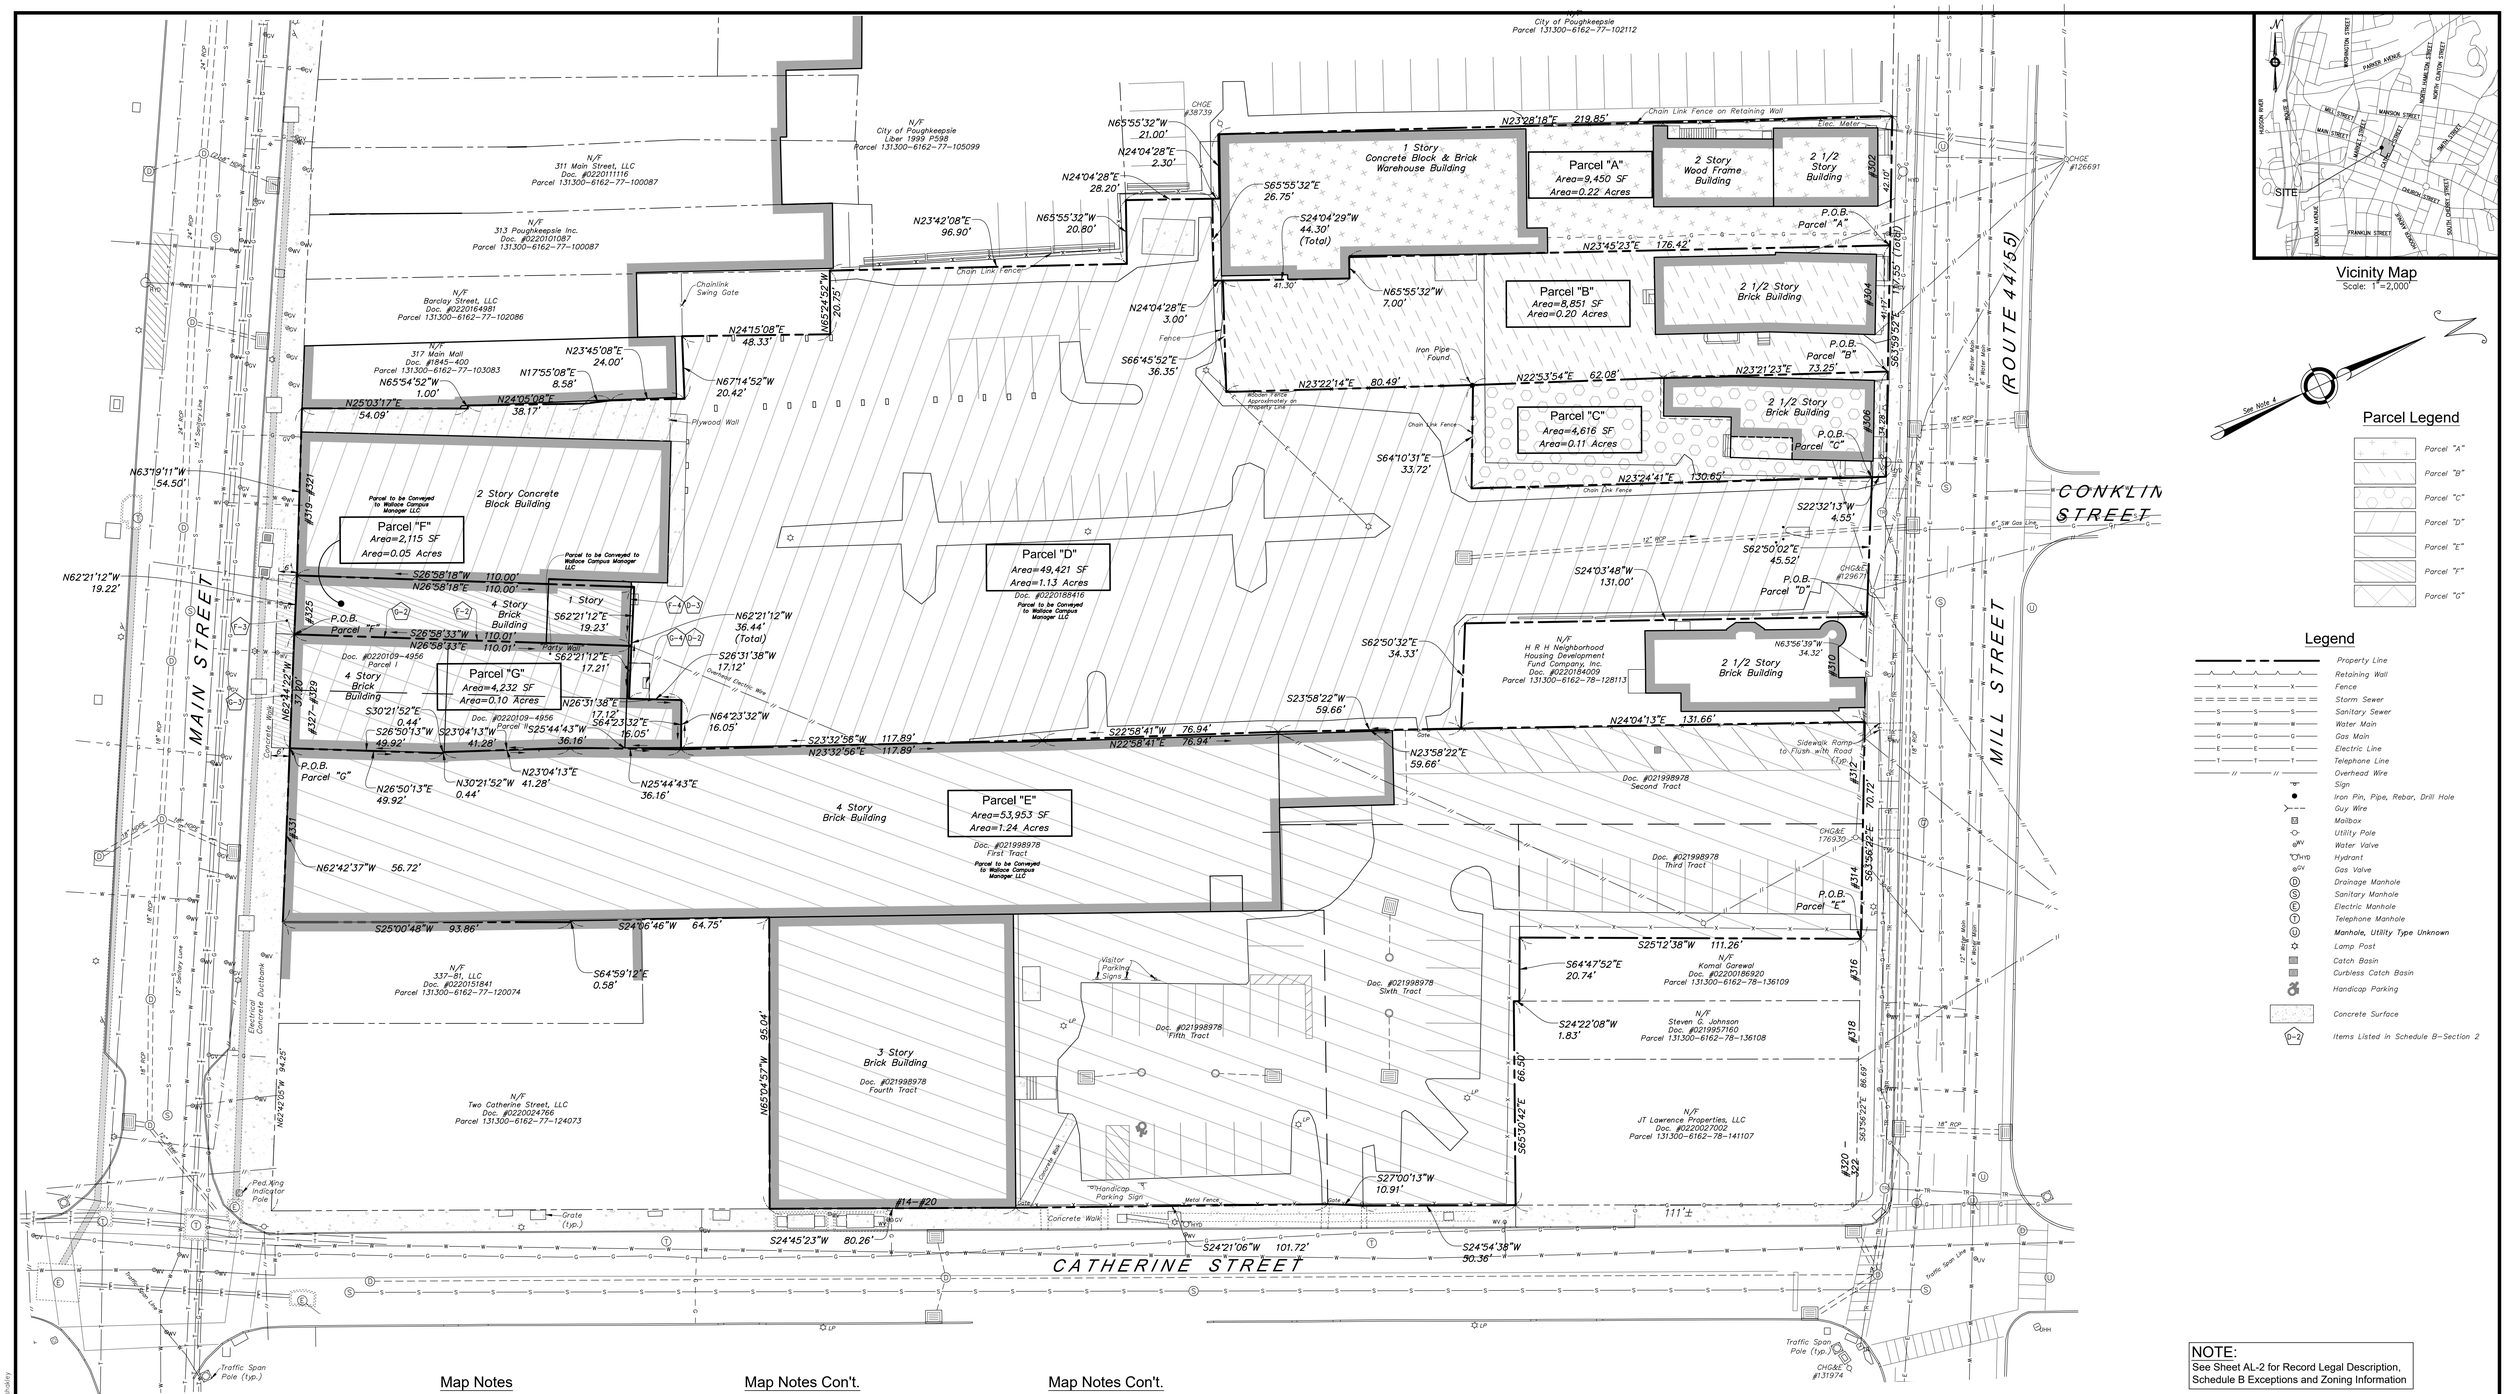
- Wallace Green: The privately maintained, but publicly accessible green space known as Wallace Green, including the tiered seating area.

- Consolidation of entrances with neighboring properties/shared parking: The project continues to provide for consolidation of access into the block, sharing access and parking with adjoining properties at 302, 304, 306 Mill Street parcels and with Hudson River Housing.

Enclosed is a Project Narrative describing the Reduced Size Project, which provides further details on all aspects of the project.

We would like to schedule a staff-level meeting with you and your review team at your earliest convenience to discuss the proposed plans. We would like to discuss the zoning determination for the revised plan with Judith Knauss, and confirm PID design compliance, before proceeding to prepare the full Site Plan set. We would also appreciate any feedback on the plans, architecture, and circulation and parking. We believe that the reduced size plan creates reduced impacts as compared to the 7-Story/Daycare Plan, and the EAF will require only minor amendments to include reference to the revised plan. We also recognize that the modified plan would have to be re-referred to Dutchess County Planning for their 239-m review. Since the plan reduces the size of the project, we do not believe that it requires a re-circulation to all City Departments, but we would like to confirm the review process moving forward relating to the reduced-size plan.

ALC
Planning & Development



Thank you for your continued and thoughtful review of Wallace Campus project. We look forward to working with you towards bringing the project to fruition.

Thank you,

Rachel Goodfriend

## Certification

To: Chicago Title Insurance Company
Leviticus 25:23 Alternative Fund, Inc., its successors and/or assigns

This is to certify that this map or plat and the survey on which it is based were made in accordance with the 2016 Minimum Standard Detail Requirements for ALTA/ACSM Land Title Surveys, jointly established and adopted by ALTA and NSPS, and includes items 1, 2, 3, 4, 6a, 6b, 7a, 7b(1)(2), 7c, 8, 9, 10a, 11, 13, 14, 16, 17, 18, 19, 20 & 21 of Table A thereof. The field work was completed on February 17, 2021.

I hereby declare this map to be prepared in accordance with the Code of Practice of the New York State Association of Land Surveyors, adopted October, 1998 and revised through July 18, 1997.

JOHN D. WAGENBLATT L.S. No. 050,547

## Map Notes

1. Unauthorized alteration or addition to a survey map bearing a licensed land surveyor's seal is a violation of section 7209, sub-division 2, of the New York State Education Law.
2. Only copies from the original of this survey marked with an original of the land surveyor's seal shall be considered to be a true copy.
3. The above certification shall run only to the person for whom the survey is prepared ,, and on his behalf to the title company, governmental agency and lending institution. Certifications are not transferable to additional institutions or subsequent owners.
4. North Arrow and bearings are referenced to the North American Datum (NAD) of 1983 projected onto the New York East State Plane Coordinate based on GPS observations made on February 10, 2020 utilizing the Keystone KeyNetGPS VRS GPS network.
5. Field survey was completed on March 12, 2020.
6. Reference is made to the following maps:
   A. "Map of Survey Prepared for Urban Green Equities LLC, City of Poughkeepsie, Dutchess County, New York," scale 1"=20", dated February 7, 2020, prepared by J. Williams Komisar, L.L.S.
   B. "Survey of Con-Mar Realty, Inc., City of Poughkeepsie, Dutchess Co., N.Y.," scale 1"=10', dated October 5, 1962, prepared by John Drumgould, map on file in the Dutchess County Clerk's Office as map #3097.
   C. "Map of Property in Pughkeepsie Formerly Belonging to the Estate of Smith Thompson," dated April 26, 1848, prepared by L.M. Northrop, map on file in the Dutchess County Clerk's Office as map #109.
   D. Map prepare by John Ogden Surveyor, scale 1"=30', dated September 22, 1925, map on file in the Dutchess County Clerk's Office as map #1405.
   E. Map of Garden Street, dated June 15, 1970, map on file in the Dutchess County Clerk's Office as map #1636.
7. Property is located in Zone "X" areas determined to be located outside of the 0.2% annual chance floodplain as depicted on Flood Insurance Rate Map (FIRM) Panel 0358E, Dutchess County, New York, City of Poughkeepsie, community number 360222, map number 36027C0358E, effective date: May 2, 2012.

## Map Notes Con't.

8. The subsurface utilities depicted hereon conform to the following Utility Quality Levels, as defined by the American Society of Civil Engineers (ASCE) in Document C/ASCE 38-02 titled "Standard Guidelines for the Collection and Depiction of Existing Subsurface Utility Data":
   - Sanitary Sewer: QLC
   - Storm Sewer: QLC
   - Water: QLC and QLD
   - Natural Gas: QLC and QLD
   - Electric: QLC and QLD
   - Communications: QLC and QLD

   The subsurface utilities were compiled from parol evidence, record drawings, and surficial evidence located during the field survey. The Surveyor has not physically exposed the subsurface utilities, and makes no guarantee that the subsurface utilities depicted hereon comprise all such utilities within the surveyed area, either in service or abandoned. The Surveyor further does not warrant or guarantee that the subsurface utilities are in the exact location depicted, though they have been plotted, in accordance with the standard of care, from information available.

   The contractor is required to utilize the local utility one call system prior to excavation for the purpose of verifying the subsurface utilities in the area.
9. Reference is made to the following Commitment for Title Insurance issued by Chicago Title Insurance Company:
   a. Parcel D&E - Commitment Title Number CT20-00618-D, date of application 09/14/2020
   b. Parcel F - Commitment Title Number CT20-00584-D, date of application 09/02/2020
   c. Parcel G - Commitment Title Number CT20-00619-D, date of application 09/14/2020
10. There is no observable evidence on the subject property of earth moving, building construction, or building additions within recent months.
11. There is no observable evidence on the subject property of changes in street right-of-way lines either completed or proposed, or observable evidence on the subject property of recent street or sidewalk repairs.
12. There is no observable evidence on the subject property of use as a solid waste dump, sump or sanitary landfill.

## Map Notes Con't.

13. There is no observable evidence of field delineation of wetlands on the subject property.
14. There is no observable evidence on the subject property of watercourses or water bodies such as streams, lakes or ponds.
15. There is no observable evidence on the subject property of gravesites, cemeteries, or burial grounds.
16. Except as depicted or noted, there are no observable easements or rights of way of on the subject property which the undersigned has been advised.
17. Except as depicted or noted on the survey, there are no observable above-ground encroachments of (a) improvements on the subject property upon adjoining properties, streets, or alleys or (b) improvements on adjoining properties, streets. or alleys upon the subject property.
18. The subject property has access to and from Main Street and Mill Street, a duly dedicated and accepted public street or highway.
19. The total number of marked parking spaces on the subject parcel is 58, including 1 designated handicapped space.
20. Except as depicted or noted hereon there are no party walls located on the subject property.
21. There are no gaps, gores, or overlaps in the legal description.

## Record Legal Description

*The land referred to herein below is situated in the County of Dutchess, State of New York, and described as follows:*

*PARCEL "A"*
*Area: 9,450 S.F.*
*0.22 Acres*

*Beginning at a point in the southerly right of way line of Mill Street said point being the following five (5) courses and distances from the intersection of the said southerly right of way line of Mill Street with the westerly street line of Catherine Street N63°56'22"W 157.41 feet, N63°56'39"W 34.32 feet, N62°50'02"W 45.52 feet, N22°32'13"W 4.55 feet and N63°59'52"W 75.45 feet said beginning point is also the northwest corner of Parcel "B" and the northeast corner of herein described parcel;*

*Thence running southerly, easterly and southerly again the following three (3) courses and distances along said Parcel "B" S23°45'23"W 176.42 feet, S65°55'32"E 7.00 feet and S24°04'29"W 44.30 feet to a point in the northerly property line of Parcel "D" the previous three (3) courses and distances is partially along the face of a concrete block & brick building;*

*Thence running N65°55'32"W 26.75 feet along said Parcel "B" to a point in the easterly property line of land now or formerly of City of Poughkeepsie;*

*Thence running northerly, westerly, and northerly again the following three (3) courses and distances along land now or formerly of said City of Poughkeepsie N24°04'28"E 2.30 feet, N65°55'32"W 21.00 feet and N23°28'18"E 219.85 feet to a point in the southerly right of way line of Mill Street (Route 44/55);*

*Thence running S63°59'53"E 42.10 feet along the said southerly right of way line of Mill Street to the point or place of beginning.*

*PARCEL "B"*
*Area: 8,851 S.F.*
*0.20 Acres*

*Beginning at a point in the southerly right of way line of Mill Street said point being the following five (5) courses and distances from the intersection of the said southerly right of way line of Mill Street with the westerly street line of Catherine Street N63°56'22"W 157.41 feet, N63°56'39"W 34.32 feet, N62°50'02"W 45.52 feet, N22°32'13"W 4.55 feet and N63°59'52"W 34.28 feet said beginning point is also the northwest corner of Parcel "C" and the northeast corner of herein described parcel;*

*Thence running southerly the following two (2) courses and distances along Parcel "C" S23°21'23"W 73.25 feet and S22°53'54"W 62.08 feet to an iron pipe found at the southwest corner of said Parcel "C";*

*Thence running southerly and westerly the following two (2) courses and distances along Parcel "D" S23°22'14"W 80.49 feet and N66°45'52"W 36.35 feet to a point in the easterly property line of Parcel "A";*

*Thence running the following three (3) courses and distances along said Parcel "A" N24°04'29"E 41.30 feet, N65°55'32"W 7.00 feet and N23°45'23"E 176.42 feet to a point in the southerly right of way line of Mill Street (Route 44/55) the previous three (3) courses and distances are partially along the face of a concrete block and brick building;*

*Thence running S63°59'52"E 41.17 feet along the said southerly right of way line of Mill Street to the point or place of beginning.*

*PARCEL "C"*
*Area: 4,616 S.F.*
*0.11 Acres*

*Beginning at a point in the southerly right of way line of Mill Street said point being the following three (3) courses and distances from the intersection of the said southerly right of way line of Mill Street with the westerly street line of Catherine Street N63°56'22"W 157.41 feet, N63°56'39"W 34.32 feet and N62°50'02"W 45.52 feet said beginning point is also the northwest corner of Parcel "D" and on the easterly property line of the herein described parcel;*

*Thence running southerly and westerly the following two (2) courses and distances along said Parcel "D" S23°24'41"W 130.65 feet and N64°10'31"W 33.72 feet to an iron pipe found in the easterly property line of Parcel "B";*

*Thence running northerly the following two (2) courses and distances along said Parcel "B" N22°53'54"E 62.08 feet and N23°21'23"E 73.25 feet to a point in the southerly right of way line of Mill Street ( Route 44/55);*

*Thence running easterly and southerly the following two (2) courses and distances along the said right of way line of Mill Street (Route 44/55) S63°59'52"E 34.28 feet and S22°32'13"W 4.55 feet to the point or place of beginning.*

*PARCEL "D"*
*Area: 49,421 S.F.*
*1.13 Acres*

*Beginning at a point in the southerly right of way line of Mill Street said point being the following two (2) courses and distances from the intersection of the said southerly right of way line of Mill Street with the westerly street line of Catherine Street N63°56'22"W 157.41 feet and N63°56'39"W 34.32 feet said beginning point is the northwest corner of land now or formerly of HRH Neighborhood Housing Development Fund Company, Inc. and the northeast corner of the herein described parcel;*

*Thence running southerly and easterly the following two (2) courses and distances along land now or formerly of said HRH Neighborhood Housing Development Fund Company, Inc. S24°03'48"W 131.00 feet and S62°50'32"E 34.33 feet to a point in the westerly property line of Parcel "E";*

*Thence running southerly the following three (3) courses and distances along the said westerly property line of Parcel "E" S23°58'22"W 59.66 feet, S22°58'41"W 76.94 feet and S23°32'56"W 117.89 feet to the northeast corner of Parcel "G" the previous three (3) courses and distances being partially along the face of a brick building;*

*Thence running westerly, southerly, westerly again and southerly again the following four (4) courses and distances along said Parcel "G" and Parcel "F" partially by each N64°23'32"W 16.05 feet, S26°31'38"W 17.12 feet, N62°21'12"W 36.44 feet the previous three (3) courses and distances being along the face of two (2) brick buildings and S26°58'18"W 110.00 feet to a point in the northerly street line of Main Street the previous courses and distance being through a portion of the brick building of Parcel "F" along the face there of;*

*Thence running N63°19'11"W 54.50 feet along the said northerly street line of Main Street to the southeast corner of land now or formerly of 317 Main Mall;*

*Thence running northerly, westerly, northerly again, westerly again, and northerly the following eight (8) courses and distances along land now or formerly of said 317 Main Mall and land now or formerly of Barclay Street, LLC partly be each N25°03'17"E 54.09 feet, N65°54'52"W 1.00 feet, N24°05'08"E 38.17 feet, N17°55'08"E 8.58 feet, N23°45'08"E 24.00 feet, the previous five (5) courses and distances being along the face of a building N67°14'52"W 20.42 feet, N24°15'08"E 48.33 feet and N65°24'52"W 20.75 feet to a point in the easterly property line of land now or formerly of 313 Poughkeepsie Inc.;*

*Thence running northerly, westerly and northerly again the following three (3) courses and distances along land now or formerly of said 313 Poughkeepsie Inc. and land now or formerly of City of Poughkeepsie partly be each N23°42'08"E 96.90 feet, N65°55'32"W 20.80 feet and N24°04'28"E 28.20 feet to a point in the southerly property line of Parcel "A";*

*Thence running easterly, northerly, easterly again, and northerly again the following four (4) courses and distances along said Parcel "A" and Parcel "B" partly by each S65°55'32"E 26.75 feet, N24°04'28"E 3.00 feet, S66°45'52"W 36.35 feet and N23°22'14"E 80.49 feet to an iron pipe found at the southwest corner of Parcel "C";*

*Thence running easterly and northerly the following two (2) courses and distances along said Parcel "C" S64°10'31"E 33.72 feet and N23°24'41"E 130.65 feet to a point in the southerly right of line of Mill Street;*

*Thence running S62°50'02"E 45.52 feet along the said southerly right of way line of Mill Street to the point or place of beginning.*

## Record Legal Description

*PARCEL "E"*
*Area: 53,953 S.F.*
*1.24 Acres*

*Beginning at a point in the southerly right of way line of Mill Street said point N63°56'22"W 86.89 feet from the intersection of the said southerly right of way line of Mill Street with the westerly street line of Catherine Street said beginning point is the northwest corner of land now or formerly of Komal Garewal and the northeast corner of the herein described parcel;*

*Thence running southerly, easterly, southerly again and easterly again the following four (4) courses and distances along land now or formerly of said Komal Garewal, land now or formerly of Steven G. Johnson and land now or formerly of JT Lawrence Properties, LLC partly by each S25°12'38"W 111.26 feet, S64°47'52"E 20.74 feet, S24°22'08"W 1.83 feet and S65°30'42"E 66.50 feet to a point in the westerly street line of Catherine Street;*

*Thence running southerly the following four (4) courses and distances along the said westerly street line of Catherine Street S24°54'38"W 50.36 feet, S27°00'13"W 10.91 feet, S24°21'06"W 101.72 feet and S24°45'23"W 80.26 feet to the northeast corner of land now or formerly of Two Catherine Street, LLC the previous course and distance being along the face of a brick building;*

*Thence running westerly and southerly the following four (4) courses and distances along land now or formerly of said Two Catherine Street, LLC and land now or formerly of 337-81, LLC partially by each N65°04'57"W 95.04 feet, S24°06'46"W 64.75 feet, S64°59'12"E 0.58 feet and S25°00'48"W 93.86 feet to a point in the northerly street line of Main Street the previous four (4) courses and distances being generally along the face of a brick building;*

*Thence running N62°42'37"W 56.72 feet along the said northerly street line of Main Street to the southeast corner of Parcel "G";*

*Thence running northerly the following eight (8) courses and distances along said Parcel "G", Parcel "D" and land now or formerly of HRH Neighborhood Housing Development Fund Company, Inc. partially by each N26°50'13"E 49.92 feet, N30°21'52"W 0.44 feet, N23°04'13"E 41.28 feet, N25°44'43"E 36.16 feet, N23°32'56"E 117.89 feet, N23°58'41"E 76.94 feet, N23°58'22"E 59.66 feet and N24°04'13"E 131.66 feet to a point in the southerly right of way line of Mill Street (Route 44/55);*

*Thence running S63°56'22"E 70.72 feet along the said southerly right of way line of Mill Street to the point or place of beginning.*

*PARCEL "F"*
*Area: 2,115 S.F.*
*0.05 Acres*

*Beginning at a point in the northerly street line of Main Street said point being the following three (3) courses and distances from the intersection of the said northerly street line of Main Street with the westerly street line of Catherine Street N62°42'05"W 94.25 feet, N62°42'37"W 56.72 feet and N62°44'22"W 37.20 feet said beginning point is the southwest corner of Parcel "G" and the southeast corner of the herein described parcel;*

*Thence running N62°21'12"W 19.22 feet along the said northerly street line of Main Street to the southeast corner of Parcel "D";*

*Thence running northerly and easterly the following two (2) courses and distances along said Parcel "D" N26°58'18"E 110.00 feet the previous course and distance being through a portion of the brick building on Parcel "D" and along the face and S62°21'12"E 19.23 feet to the northwest corner of Parcel "G";*

*Thence running S26°58'33"W 110.01 feet along said Parcel "G" to the point or place of beginning.*

*PARCEL "G"*
*Area: 4,232 S.F.*
*0.10 Acres*

*Beginning at a point in the northerly street line of Main Street said point being the following two (2) courses and distances from the intersection of the said northerly street line of Main Street with the westerly street line of Catherine Street N62°42'05"W 94.25 feet and N62°42'37"W 56.72 feet said beginning point is the southwest corner of Parcel "E" and the southeast corner of the herein described parcel;*

*Thence running N62°44'22"W 37.20 feet along the said northerly street line of Main Street to the southeast corner of Parcel "F";*

*Thence running northerly, westerly and northerly again the following three (3) courses and distances along land now or formerly of said 313 Poughkeepsie Inc. and land now or formerly of City of Poughkeepsie partly be each N23°42'08"E 96.90 feet, N65°55'32"W 20.80 feet and N24°04'28"E 28.20 feet to a point in the southerly property line of Parcel "A";*

*Thence running easterly, northerly, easterly again, and northerly again the following four (4) courses and distances along said Parcel "A" and Parcel "B" partly by each S65°55'32"E 26.75 feet, N24°04'28"E 3.00 feet, S66°45'52"W 36.35 feet and N23°22'14"E 80.49 feet to an iron pipe found at the southwest corner of Parcel "C";*

*Thence running easterly and northerly the following two (2) courses and distances along said Parcel "C" S64°10'31"E 33.72 feet and N23°24'41"E 130.65 feet to a point in the southerly right of line of Mill Street;*

*Thence running S62°50'02"E 45.52 feet along the said southerly right of way line of Mill Street to the northwest corner of land now or formerly of HRH Neighborhood Housing Development Fund Company, Inc.;*

*Thence running southerly, easterly and northerly the following three (3) courses and distances along land now or formerly of said HRH Neighborhood Housing Development Fund Company, Inc. S24°03'48"W 131.00 feet, S62°50'32"E 34.33 feet and N24°04'13"E 131.66 feet to a point in the southerly right of way line of Mill Street;*

*Thence running S63°56'22"E 70.72 feet along the said southerly right of way line of Mill Street to the point or place of beginning.*

## Items Corresponding to Schedule B Section 2

*PARCEL D&E*

D–2 *Emergency Access Easement Agreement by and between Hay–Rit and Patricia A. Longbard, as Trustee of the Catherine Alice Walker 2002 Minor Trust and the Regina Hynes Walker 2002 Minor Trust dated 03/17/2006, recorded 03/31/2006 in Document No. 02–2006–2612 (Affects Parcel I) (Affects Parcel & noted on survey)*

D–3 *Agreement between Hay–Rit and 321 Main Street LLC dated 08/22/2006, recorded 09/06/2006 in Document No. 02–2006–7299. (Affects Parcel & noted on survey)*

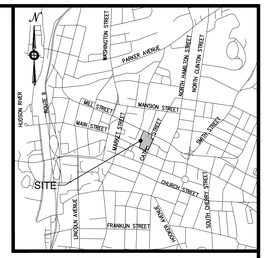
*PARCEL F*

F–2 *Party Wall Agreement contained in Deed from Isadore Wurtzel and Augusta Wurtzel, his wife to Harold Rosen dated 04/16/1945, recorded 04/17/1945 in Liber 624 cp 587, as repeated in Deeds recorded in Liber 1338 cp 156, Liber 1729 cp 528. (Affects Parcel & noted on survey)*

F–3 *Reservation of Easement contained in Deed from Zimmer Brothers, Inc. to Poughkeepsie Urban Renewal Agency dated 07/26/1973, recorded 02/11/1974 in Liber 1377 cp 387. (Affects Parcel & noted on survey)*

F–4 *Agreement between HAY–RIT, a New York Limited Partnership and 321 Main Street LLC dated 08/22/2006, recorded 09/06/2006 in Document No. 02–2006–7299, which easement provides for emergency pedestrian traffic egress upon the grantor's property. (Affects Parcel & noted on survey)*

*PARCEL G*



G–2 *Party Wall Rights contained in Deed from Louis Schonberger to Louis Schonberger and Rose S. Schonberger, his wife dated 5/8/1934, recorded 5/9/1934 in Liber 538 cp 163. (Affects Parcel II) (Affects Parcel & noted on survey)*

G–3 *Reservation of Easement contained in Deed from Zimmer Brothers, Inc. to Poughkeepsie Urban Renewal Agency dated 7/26/1973, recorded 2/11/1974 in Liber 1377 cp 384. (Affects Parcel II) (Affects Parcel & noted on survey)*

G–4 *Agreement for Emergency Access between Hay–Rit and Patricia A. Longbard, as Trustee of the Catherine Alice Walker 2002 Minor Trust and the Regina Hynes Walker 2002 Minor Trust dated 3/17/2006, recorded 3/31/2006 in Document No. 02–2006–2612. (Affects Parcel & noted on survey)*

## GENERAL MAP NOTE:

ACCESS, SHARED PARKING, AND LANDSCAPING IMPROVEMENTS WITH ADJOINING PARCELS:

THE WALLACE CAMPUS DRAWING SETS FORTH THE BOUNDARIES OF THE WALLACE CAMPUS CONSOLIDATED LOT AND SHOWS THE SITE PLAN FOR THAT LOT. FOUR ADJOINING PARCELS OUTSIDE THE WALLACE CAMPUS ARE ALSO SHOWN ON THE DRAWING SET, FOR THE LIMITED PURPOSE OF DEPICTING THE OFF-SITE IMPROVEMENTS TO BE MADE ON THOSE PROPERTIES PURSUANT TO SHARED PARKING AND EASEMENT AGREEMENTS, AND TO SHOW THE MANNER IN WHICH THOSE PHYSICAL IMPROVEMENTS AND ACCESS PROVISIONS WILL IMPROVE PEDESTRIAN AND VEHICULAR CIRCULATION IN THE NEIGHBORHOOD, AS WELL AS LANDSCAPING, LIGHTING, AND COMMUNITY CHARACTER. THE PROJECT SPONSOR WILL ENTER INTO SHARED PARKING AND PERMANENT ACCESS EASEMENT AGREEMENTS WITH THE OWNERS OF THESE ADJOINING PARCELS, WHICH WILL BE APPROVED BY THE PLANNING BOARD AS PART OF THE PROJECT APPROVALS. THE DRAWING SET DEPICTS THE OFF-SITE WORK TO BE PERFORMED BY THE PROJECT SPONSOR ON THESE PARCELS TO IMPLEMENT THE SHARED PARKING AND ACCESS AGREEMENTS. THE WORK ON 302, 304 AND 306 MILL STREET ("THE 3 MILL STREET LOTS") WOULD ELIMINATE TWO EXISTING CURB CUTS ON MILL STREET (BETWEEN 302 AND 304 MILL AND BETWEEN 304 AND 306 MILL), AND PROVIDE ADDITIONAL GREEN SPACE ON THOSE LOTS, INCLUDING ALONG THE MILL STREET FRONTAGE TO REPLACE THOSE DRIVEWAYS. THE WALLACE CAMPUS OWNER WILL PROVIDE A PERMANENT ACCESS EASEMENT TO THE OWNER OF THE 3 MILL STREET LOTS FOR THE BENEFIT OF OWNERS AND TENANTS, TO ACCESS THE PARKING AREAS LOCATED ON THESE LOTS VIA THE WALLACE CAMPUS ACCESS DRIVES. THE SHARED PARKING AGREEMENT WOULD MAINTAIN THE ALLOCATION OF DEDICATED PARKING (12 SPACES) TO THE 3 MILL STREET LOTS IN COMPLIANCE WITH THE PID ZONING. LIGHTING IMPROVEMENTS, PEDESTRIAN WALKWAYS, AND STORMWATER IMPROVEMENTS WILL BE PROVIDED TO SERVE THE OFFSITE SHARED PARKING AREAS IN THE SAME MANNER AS THE PARKING AREAS ON THE WALLACE CAMPUS PARCEL. PURSUANT TO A SEPARATE SHARED PARKING AGREEMENT WITH THE HUDSON RIVER HOUSING ("HRH") PROPERTY, THE PROJECT SPONSOR WILL BE GRANTED A PERMANENT EASEMENT TO CONSTRUCT PEDESTRIAN SIDEWALK PATHS WITHIN THE HUDSON RIVER HOUSING PROPERTY CONNECTING TO MILL STREET AND PROVIDING ACCESS FROM THAT PARKING AREA TO THE REAR ENTRANCE TO THE HRH OFFICE BUILDING, AND PARKING IMPROVEMENTS ALONG THE HRH LOT SOUTHERLY BOUNDARY THAT INTEGRATE WITH THE WALLACE CAMPUS PARKING AREA. LIGHTING IMPROVEMENTS AND LANDSCAPING WILL BE INSTALLED AS SHOWN ON THE DRAWING SET. THE PROJECT SPONSOR WILL PROVIDE HRH WITH A PERMANENT ACCESS EASEMENT TO USE THE TWO WALLACE CAMPUS MILL STREET ENTRANCES AND EXITS FOR ACCESS TO, AND USE OF, 6 PARKING SPACES WHICH ARE LOCATED ON WALLACE CAMPUS PROPERTY DIRECTLY ABUTTING THE WESTERLY BOUNDARY OF HRH'S PROPERTY (AS SHOWN ON THE DRAWING SET), WHICH SPACES WILL BE RESERVED FOR USE BY HRH EMPLOYEES DURING WORKING HOURS 8 AM TO 6 PM MONDAY TO FRIDAY. THE 6 SPACES TO BE AVAILABLE FOR WALLACE CAMPUS PARKING OUTSIDE OF THOSE HOURS.

## TABLE OF CONTENTS

**FULL ENVIRONMENTAL ASESSMENT FORM..... 4**

**SUPPORTING INFORMATION**

**1.0 INTRODUCTION ..... 17**

1.1. Project Summary ..... 17

1.2. Site Description and Project Details ..... 17

1.3. Anticipated Funding/Permits/Approvals ..... 17

**2.0 SITE CONDITIONS ..... 18**

2.1. Early Investigations 2005 to 2013 ..... 18

2.2. Recent Investigations: 2020 ..... 19

2.3. Current Regulatory Status ..... 20

**3.0 LAND USE, ZONING, AND PUBLIC POLICY ..... 20**

3.1. Land Use and Zoning ..... 20

3.2. Public Policy ..... 21

**4.0 COMMUNITY SERVICES ..... 22**

4.1. Emergency Services ..... 22

**5.0 NATURAL RESOURCES ..... 23**

5.1. Soils ..... 23

5.2. Habitats ..... 23

5.3. Water Resources.. ..... 23

5.4. Floodplain ..... 23

**6.0 UTILITIES ..... 24**

6.1. Water and Wastewater ..... 24

6.2. Stormwater ..... 24

**7.0 TRAFFIC AND PARKING ..... 24**

**8.0 HISTORIC AND ARCHAEOLOGICAL RESOURCES ..... 25**

**9.0 RECREATIONAL RESOURCES ..... 25**

## FIGURES

1 - Site Location Map

2 - Tax Map

3 - Site Property Map

4 - Land Use Map

5 - Zoning Map

6 - Zoning Detail Map

7 - Endangered Species Map

8 - New York State Wetlands Map

9 - Federal Wetlands Map

10 - National Flood FIRMette Map

## ATTACHMENTS

A - Letter of Completeness

B - Zoning Compliance Letter

C - Poughkeepsie NRI Maps

D - Soil Survey

E - Parking and Traffic Analysis

F - Site Plans

G - Historic Inventory by Street

H - Map of Historic Districts

## Instructions for Completing Part 1

**Part 1 is to be completed by the applicant or project sponsor.** Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1is accurate and complete.

**A. Project and Applicant/Sponsor Information.**

| | | |
|---|---|---|
| Name of Action or Project:<br>Wallace Campus | | |
| Project Location (describe, and attach a general location map):<br>319 Main Street, 325 Main Street, 327-329 Main Street, and 331 Main Street, City of Poughkeepsie | | |
| Brief Description of Proposed Action (include purpose or need):<br>See Supporting Information, attached. | | |
| Name of Applicant/Sponsor:<br>Wallace Campus Manager, LLC | Telephone: (718) 932-6342<br>E-Mail: EKokinakis@megagroup.ny | |
| Address: Mega Development, 48-02 25th Ave, Suite 400 | | |
| City/PO: New York | State: NY | Zip Code: 11103 |
| Project Contact (if not same as sponsor; give name and title/role):<br>Emanuel Kokinakis | Telephone: (718) 932-6342<br>E-Mail: EKokinakis@megagroup.ny | |
| Address:<br>Mega Development, 48-02 25th Ave, Suite 400 | | |
| City/PO:<br>New York | State:<br>NY | Zip Code:<br>11103 |
| Property Owner (if not same as sponsor):<br>Properties under site control of Wallace Campus Manger, LLC -- see Supporting Docs | Telephone:<br>E-Mail: | |
| Address: | | |
| City/PO: | State: | Zip Code: |

**B. Government Approvals**

**B. Government Approvals, Funding, or Sponsorship.** ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

| Government Entity | If Yes: Identify Agency and Approval(s) Required | Application Date (Actual or projected) |
|---|---|---|
| a. City Counsel, Town Board, or Village Board of Trustees ☑Yes ☐No | Common Council/IDA | TBD |
| b. City, Town or Village Planning Board or Commission ☑Yes ☐No | City of Poughkeepsie Planning Board - Site Plan Approval | Spring 2020 |
| c. City, Town or Village Zoning Board of Appeals ☑Yes ☐No | City of Poughkeepsie ZBA - possible variances | TBD |
| d. Other local agencies ☑Yes ☐No | City of Poughkeepsie Common Council; City of Pok Industrial Development Agency | TBD |
| e. County agencies ☑Yes ☐No | Referral from Planning Board and ZBA for Advisory Opinion | City PB - March 2021; ZBA - TBD |
| f. Regional agencies ☐Yes ☑No | | |
| g. State agencies ☑Yes ☐No | SHPO; DOT; DEC; DOH; HCR; HFA; Empire State Development. | Various |
| h. Federal agencies ☑Yes ☐No | NPS (Historic Tax Credits); Federal Home Loan Bank of New York | Spring 2020 |

i. Coastal Resources.

*i.* Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes ☑No

*ii.* Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes ☑No

*iii.* Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No

**C. Planning and Zoning**

**C.1. Planning and zoning actions.**

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes ☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

**C.2. Adopted land use plans.**

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes ☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☐Yes ☑No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway; Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☑Yes ☐No

If Yes, identify the plan(s):

Hudson River Valley National Heritage Area; Poughkeepsie Innovation District; EnZone Type AB.

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No

If Yes, identify the plan(s):

**C.3. Zoning**

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
PID-Historic Core and PID-Urban Village

b. Is the use permitted or allowed by a special or conditional use permit? ☑ Yes ☐ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
*i.* What is the proposed new zoning for the site? _____

**C.4. Existing community services.**

a. In what school district is the project site located? City of Poughkeepsie School District

b. What police or other public protection forces serve the project site?
City of Poughkeepsie Police Department

c. Which fire protection and emergency medical services serve the project site?
City of Poughkeepsie Fire Department

d. What parks serve the project site?
The nearest park is Mansion Square Park located approximately 0.2 mile from the Site. The applicant is also proposing to create privately owned public green space on a portion of the Site.

**D. Project Details**

**D.1. Proposed and Potential Development**

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Mixed-use development: residential, commercial, recreational, and community facility, including fitness center and daycare. Also pedestrian and passive open space amenities.

b. a. Total acreage of the site of the proposed action? 2.52 acres
b. Total acreage to be physically disturbed? 2.52 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 2.52 acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
*i.* If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☐ Yes ☑ No
If Yes,
*i.* Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
_____
*ii.* Is a cluster/conservation layout proposed? ☐ Yes ☑ No
*iii.* Number of lots proposed? _____
*iv.* Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will the proposed action be constructed in multiple phases? ☐ Yes ☑ No
*i.* If No, anticipated period of construction: 24 months
*ii.* If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

f. Does the project include new residential uses? ☑ Yes ☐ No

If Yes, show numbers of units proposed.

| | One Family | Two Family | Three Family | Multiple Family (four or more) |
|---|---|---|---|---|
| Initial Phase | | | | 214 Apartments |
| At completion of all phases | | | | 1 Phase only |

g. Does the proposed action include new non-residential construction (including expansions)? ☑ Yes ☐ No

If Yes,

*i.* Total number of structures 3

*ii.* Dimensions (in feet) of largest proposed structure: 74' height; 85' 11" width; and 184' 7" length

*iii.* Approximate extent of building space to be heated or cooled: 89,582 square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☐ Yes ☑ No

If Yes,

*i.* Purpose of the impoundment: _____

*ii.* If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☐ Other specify:

_____

*iii.* If other than water, identify the type of impounded/contained liquids and their source.

_____

*iv.* Approximate size of the proposed impoundment. Volume: _____ million gallons; surface area: _____ acres

*v.* Dimensions of the proposed dam or impounding structure: _____ height; _____ length

*vi.* Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete):

_____

**D.2. Project Operations**

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite) ☑ Yes ☐ No

If Yes:

*i* .What is the purpose of the excavation or dredging? Construction/soil remediation

*ii.* How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards): TBD
- Over what duration of time? TBD

*iii.* Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

Likely urban fill, requiring management and disposal as a non-hazardous regulated waste. Management and disposal will be governed by NYSDEC approved RAWP under BCP, including CAMP implementation.

*iv.* Will there be onsite dewatering or processing of excavated materials? ☐ Yes ☑ No

If yes, describe. _____

_____

*v.* What is the total area to be dredged or excavated? TBD acres

*vi.* What is the maximum area to be worked at any one time? TBD acres

*vii.* What would be the maximum depth of excavation or dredging? TBD feet

*viii.* Will the excavation require blasting? ☐ Yes ☑ No

*ix.* Summarize site reclamation goals and plan: _____

See attached Supporting Information. Total volume and area to be excavated will be a function of the remedy chosen for the site as determined in the NYSDEC approved RAWP. A Track 1 cleanup would require a greater volume of soil/fill to be removed from the site than a Track 2 cleanup.

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐ Yes ☑ No

If Yes:

*i.* Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): _____

_____

*ii.* Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

_____

_____

_____

_____

*iii.* Will the proposed action cause or result in disturbance to bottom sediments? ☐Yes ☐No

If Yes, describe: _____

*iv.* Will the proposed action cause or result in the destruction or removal of aquatic vegetation? ☐Yes ☐No

If Yes:

- acres of aquatic vegetation proposed to be removed: _____
- expected acreage of aquatic vegetation remaining after project completion: _____
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access): _____

_____

- proposed method of plant removal: _____
- if chemical/herbicide treatment will be used, specify product(s): _____

*v.* Describe any proposed reclamation/mitigation following disturbance: _____

_____

c. Will the proposed action use, or create a new demand for water? ☑Yes ☐No

If Yes:

*i.* Total anticipated water usage/demand per day: 29,003± gallons/day

*ii.* Will the proposed action obtain water from an existing public water supply? ☑Yes ☐No

If Yes:

- Name of district or service area: City of Poughkeepsie
- Does the existing public water supply have capacity to serve the proposal? ☑Yes ☐No
- Is the project site in the existing district? ☑Yes ☐No
- Is expansion of the district needed? ☐Yes ☑No
- Do existing lines serve the project site? ☑Yes ☐No

*iii.* Will line extension within an existing district be necessary to supply the project? ☐Yes ☑No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

_____

- Source(s) of supply for the district: _____

*iv.* Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☑No

If, Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- Proposed source(s) of supply for new district: _____

*v.* If a public water supply will not be used, describe plans to provide water supply for the project: _____

_____

*vi.* If water supply will be from wells (public or private), what is the maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑Yes ☐No

If Yes:

*i.* Total anticipated liquid waste generation per day: 29,003± gallons/day

*ii.* Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each): _____

sanitary wastewater

_____

*iii.* Will the proposed action use any existing public wastewater treatment facilities? ☑Yes ☐No

If Yes:

- Name of wastewater treatment plant to be used: City of Poughkeepsie Water Pollution Control Plant
- Name of district: City of Poughkeepsie
- Does the existing wastewater treatment plant have capacity to serve the project? ☑Yes ☐No
- Is the project site in the existing district? ☑Yes ☐No
- Is expansion of the district needed? ☐Yes ☑No

- Do existing sewer lines serve the project site? ☑ Yes ☐ No
- Will a line extension within an existing district be necessary to serve the project? ☐ Yes ☑ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

*iv.* Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐ Yes ☑ No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

*v.* If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge or describe subsurface disposal plans):

N/A

*vi.* Describe any plans or designs to capture, recycle or reuse liquid waste: _____

N/A

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☑ Yes ☐ No

If Yes:

*i.* How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or 1.52 acres (impervious surface)

_____ Square feet or 2.52 acres (parcel size)

*ii.* Describe types of new point sources. No new point sources - project is decreasing the amount of impervious surface by 1 acre

*iii.* Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

On-site stormwater management structures

- If to surface waters, identify receiving water bodies or wetlands: N/A
- Will stormwater runoff flow to adjacent properties? ☐ Yes ☑ No

*iv.* Does the proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☑ Yes ☐ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☑ Yes ☐ No

If Yes, identify:

*i.* Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

Heavy equipment will be utilized during construction of new buildings that are components of the proposed project.

*ii.* Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

N/A

*iii.* Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

HVAC units to provide heat and A/C for the buildings

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐ Yes ☑ No

If Yes:

*i.* Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐ Yes ☐ No

*ii.* In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide ($CO_2$)
- _____Tons/year (short tons) of Nitrous Oxide ($N_2O$)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride ($SF_6$)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

*i.* Estimate methane generation in tons/year (metric): _____

*ii.* Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☑Yes ☐No

If Yes:

*i.* When is the peak traffic expected (Check all that apply): ☑ Morning ☑ Evening ☐Weekend ☐ Randomly between hours of _____ to _____.

*ii.* For commercial activities only, projected number of truck trips/day and type (e.g., semi trailers and dump trucks): _____

*iii.* Parking spaces: Existing 121 Proposed 62 Net increase/decrease -59

*iv.* Does the proposed action include any shared use parking? ☑Yes ☐No

*v.* If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:

Consolidation of existing driveways with 302, 304, 306 Mill street. Four driveway connections to Mill Street.

*vi.* Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☑Yes ☐No

*vii* Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☑Yes ☐No

*viii.* Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☑Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☑Yes ☐No

If Yes:

*i.* Estimate annual electricity demand during operation of the proposed action: 48,700 kWh

*ii.* Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):

Central Hudson Gas & Electric

*iii.* Will the proposed action require a new, or an upgrade, to an existing substation? ☐Yes ☑No

l. Hours of operation. Answer all items which apply.

*i.* During Construction:

- Monday - Friday: 6:30 a.m. - 9:00 p.m.
- Saturday: N/A
- Sunday: N/A
- Holidays: N/A

*ii.* During Operations:

- Monday - Friday: 24 hours
- Saturday: 24 hours
- Sunday: 24 hours
- Holidays: TBD- reduced hours most holidays

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☑ Yes ☐ No

If yes:

*i.* Provide details including sources, time of day and duration:

Per City of Poughkeepsie Code of Ordinances, Section 13 1/2-6, construction will be limited to the hours of 6:30 a.m. - 9:00 p.m. weekdays. Ambient noise levels will not be exceeded during operation.

*ii.* Will the proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☑ No

Describe: _____

n. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

*i.* Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

See Submission Set, pages LP-1 and LP-2

*ii.* Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☑ No

Describe: _____

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

*i.* Product(s) to be stored _____

*ii.* Volume(s) _____ per unit time _____ (e.g., month, year)

*iii.* Generally, describe the proposed storage facilities:_____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☑ No

If Yes:

*i.* Describe proposed treatment(s):

*ii.* Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☐ Yes ☑ No

If Yes:

*i.* Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: _____ tons per _____ (unit of time)
- Operation : _____ tons per _____ (unit of time)

*ii.* Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: _____
- Operation: _____

*iii.* Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: _____
- Operation: _____

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

*i.* Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

*ii.* Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

*iii.* If landfill, anticipated site life: _____ years

t. Will the proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

*i.* Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

*ii.* Generally describe processes or activities involving hazardous wastes or constituents: _____

*iii.* Specify amount to be handled or generated _____ tons/month

*iv.* Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

*v.* Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☑ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

Unlikely to present - waste characterization sampling performed prior to site remediation under the BCP will identify any such materials, which, if present, will be managed and disposed of per the RAWP.

## E. Site and Setting of Proposed Action

### E.1. Land uses on and surrounding the project site

a. Existing land uses.

*i.* Check all uses that occur on, adjoining and near the project site.

☑ Urban ☐ Industrial ☑ Commercial ☐ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☑ Other (specify): construction

*ii.* If mix of uses, generally describe:

The property is located in an urban setting, with most properties developed for mixed-use (commercial/residential) and commercial uses. Uses at adjoining properties include an active construction site across Catharine Street, & buildings used for commercial and mixed commercial/residential uses

b. Land uses and covertypes on the project site.

| Land use or Covertype | Current Acreage | Acreage After Project Completion | Change (Acres +/-) |
|---|---|---|---|
| • Roads, buildings, and other paved or impervious surfaces | 2.52 | 1.52 | -1 |
| • Forested | 0 | 0 | 0 |
| • Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural) | 0 | 0 | 0 |
| • Agricultural (includes active orchards, field, greenhouse etc.) | 0 | 0 | 0 |
| • Surface water features (lakes, ponds, streams, rivers, etc.) | 0 | 0 | 0 |
| • Wetlands (freshwater or tidal) | 0 | 0 | 0 |
| • Non-vegetated (bare rock, earth or fill) | 0 | 0 | 0 |
| • Other Describe: Wallace Green - maintained lawn | 0 | 1 | +1 |

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☑ No

*i.* If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☑ Yes ☐ No

If Yes,

*i.* Identify Facilities:

More Young Children Magnet Elementary School, Clinton Elementary School, Hudson River Healthcare Inc., Community Family Development, Humble Life Family Daycare

e. Does the project site contain an existing dam? ☐ Yes ☑ No

If Yes:

*i.* Dimensions of the dam and impoundment:

- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

*ii.* Dam's existing hazard classification: _____

*iii.* Provide date and summarize results of last inspection:

_____

_____

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☑ No

If Yes:

*i.* Has the facility been formally closed? ☐ Yes ☐ No

- If yes, cite sources/documentation: _____

*ii.* Describe the location of the project site relative to the boundaries of the solid waste management facility:

_____

_____

*iii.* Describe any development constraints due to the prior solid waste activities: _____

_____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☑ Yes ☐ No

If Yes:

*i.* Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

The site was used for activities including automotive repair, machining operations, furniture finishing, laundry activities (potentially involving use of chlorinated solvents), and use of gasoline underground storage tanks (USTs). Site will be characterized and remediated under the BCP.

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☑ Yes ☐ No

If Yes:

*i.* Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☑ Yes ☐ No

☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____

☑ Yes – Environmental Site Remediation database — Provide DEC ID number(s): BCP C314134

☐ Neither database

*ii.* If site has been subject of RCRA corrective activities, describe control measures: _____

N/A

*iii.* Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☑ Yes ☐ No

If yes, provide DEC ID number(s): B001483, E314110, C314130

*iv.* If yes to (i), (ii) or (iii) above, describe current status of site(s):

B001483 - remediation completed, ongoing maintenance required, engineering controls on-site
E314110 - ERP App submitted and withdrawn, non-registry site
C314130 - Crannell Square, under construction, likely Track 1 cleanup under BCP

*v.* Is the project site subject to an institutional control limiting property uses? ☐ Yes ☑ No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

If the project fails to achieve Track 1 Cleanup under BCP, institutional and/or engineering controls may be imposed on the site as part of the remedy. Based on data available to date, the site will achieve Track 1, supporting the conclusion that such controls will be unnecessary.

**E.2. Natural Resources On or Near Project Site**

a. What is the average depth to bedrock on the project site? 41 feet - 62 feet feet

b. Are there bedrock outcroppings on the project site? ☐ Yes ☑ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? _____%

c. Predominant soil type(s) present on project site:

| | |
|---|---|
| Urban Land Soils | 100 % |
| | % |
| | % |

d. What is the average depth to the water table on the project site? Average: 15 feet

e. Drainage status of project site soils:

| | | |
|---|---|---|
| ☑ | Well Drained: | 100 % of site |
| ☐ | Moderately Well Drained: | % of site |
| ☐ | Poorly Drained | % of site |

f. Approximate proportion of proposed action site with slopes:

| | | |
|---|---|---|
| ☑ | 0-10%: | 100 % of site |
| ☐ | 10-15%: | % of site |
| ☐ | 15% or greater: | % of site |

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.

*i.* Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☐ Yes ☑ No

*ii.* Do any wetlands or other waterbodies adjoin the project site? ☐ Yes ☑ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

*iii.* Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☐ Yes ☐ No

*iv.* For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name _____ Classification _____
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name _____ Approximate Size _____
- Wetland No. (if regulated by DEC) _____

*v.* Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☐ No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100-year Floodplain? ☐ Yes ☑ No

k. Is the project site in the 500-year Floodplain? ☐ Yes ☑ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:

*i.* Name of aquifer: _____

m. Identify the predominant wildlife species that occupy or use the project site:

typical urban wildlife

n. Does the project site contain a designated significant natural community? ☐ Yes ☑ No

If Yes:

*i.* Describe the habitat/community (composition, function, and basis for designation):

*ii.* Source(s) of description or evaluation:

*iii.* Extent of community/habitat:

- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐ Yes ☑ No

If Yes:

*i.* Species and listing (endangered or threatened):

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐ Yes ☑ No

If Yes:

*i.* Species and listing:

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐ Yes ☑ No

If yes, give a brief description of how the proposed action may affect that use:

**E.3. Designated Public Resources On or Near Project Site**

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐ Yes ☑ No

If Yes, provide county plus district name/number:

b. Are agricultural lands consisting of highly productive soils present? ☐ Yes ☑ No

*i.* If Yes: acreage(s) on project site?

*ii.* Source(s) of soil rating(s):

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐ Yes ☑ No

If Yes:

*i.* Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature

*ii.* Provide brief description of landmark, including values behind designation and approximate size/extent:

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐ Yes ☑ No

If Yes:

*i.* CEA name:

*ii.* Basis for designation:

*iii.* Designating agency and date:

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? ☑ Yes ☐ No

If Yes:

*i.* Nature of historic/archaeological resource: ☐ Archaeological Site ☑ Historic Building or District

*ii.* Name: Portions of Site are located in the Upper Mill Street Historic District and adjoining properties are listed (see Attachments G & H)

*iii.* Brief description of attributes on which listing is based:

Age and past uses (see Supporting Information)

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☑ Yes ☐ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

*i.* Describe possible resource(s): _____

*ii.* Basis for identification: _____

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☑ Yes ☐ No

If Yes:

*i.* Identify resource: Walkway over the Hudson, FDR, Springside, College Hill, Kaal Rock, Victor C. Waryas, Eastman, Pulaski, Dongan, Wheaton

*ii.* Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): State/local parks, State historic trail (walkway only)

*iii.* Distance between project and resource: between 0.2 to 5 miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

*i.* Identify the name of the river and its designation: _____

*ii.* Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

**F. Additional Information**

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

**G. Verification**

I certify that the information provided is true to the best of my knowledge.

Applicant/Sponsor Name Wallace Campus Managers, LLC Date _____

Signature _____ Title _____

PRINT FORM

# 1.0 INTRODUCTION

## 1.1. Project Summary

The Project Site consists of the entirety of the contiguous parcels known as 319 Main Street (Block 77, Lot 114098); 325 Main Street (Block 77, Lot 109079); 327-329 Main Street (Block 7, Lot 109077); and 331 Main Street (Block 78, Lot 127091), City of Poughkeepsie, New York (see Figures 1-2). The Applicant, Wallace Campus Manager, LLC, is proposing the renovation of the existing building at 331 Main Street and the construction of two new, mixed-use residential and commercial buildings. The Project will include 214 new dwelling units, on-site parking for vehicles, facilities for bike parking and circulation, and a sidewalk/footpath system throughout the campus. The portion of the Project involving new construction on Main Street, which is within the Historic Core (HC) sub-district of the Poughkeepsie Innovation District (PID), will require an area variance from the Zoning Board of Appeals for the two additional stories in excess of five stories in height. The parcel at 325 Main Street is owned by Wallace Campus Manager, LLC. All other parcels are in contract to be purchased by the Applicant. However, access to the non-owned parcels has been granted by the current owners.

## 1.2. Site Description and Project Details

The Site is a 2.52-acre commercial property, which is abutted by Mill Street to the north and Main Street to the South (see Figure 3). The southern portion of 319 Main Street currently contains a two-story building (former restaurant and club). The 325 and 327-329 Main Street lots each contain a four-story building with rear two-story sections (former bookstore and residence, and active office building, respectively), and the southern/central portions of 331 Main Street contain a four-story building with a three-story section to the east, utilized for offices and light manufacturing. The remaining northern portions of 319 and 331 Main Street contain paved parking areas, walkways, and yards. The development proposal includes 214 units of mixed-income rental housing, 6,416 square feet of new retail spaces along the Main Street pedestrian frontage, and 39,197 square feet of community service facilities along the Catharine Street frontage, including a community recreation facility with climbing wall in the Wallace annex building and a community day-care facility on the ground floor of the new Catharine Street building. New construction will only take place in areas where there has been previous ground disturbance and the development will not directly impact wetlands or the Fall Kill Creek (located approximately 650 feet northeast of the property). The buildings will occupy approximately 1.1 acre and the “Wallace Green,” an area of landscaped green space in a park-like setting, will occupy approximately 1-acre of the 2.52-acre property. The remaining space will be used for parking and additional open space.

## 1.3. Anticipated Funding/Permits/Approvals

Table 1 provides a list of the funding/approvals/permits that are anticipated for the project.

| AGENCY | FUNDING/APPROVAL/PERMIT |
|---|---|
| City of Poughkeepsie Planning Board | Site Plan Approval |
| City of Poughkeepsie Zoning Board of Appeals | Possible Variances |
| City of Poughkeepsie Common Council | Possible PILOT |
| City of Poughkeepsie Industrial Development Agency | Possible Sales Tax relief |
| Dutchess County Department of Health | Water and Sewer Connections |
| Dutchess County Department of Planning and Development | GML 239m referral |
| New York's State Historic Preservation Office | Listing Wallace Campus Building on State and National Registers of Historic Places; Historic Tax Credits |
| New York State Department of Transportation | Highway Work Permit; Driveways |
| New York State Department of Environmental Conservation | BCA; BCP Tax Credit; SPDES GP-0-20-001 |
| New York State Housing and Community Renewal | Site Alteration Letter; Low-Income Tax Credit |
| New York State Empire State Development | Potential Funding Source |
| Federal Home Loan Bank of New York | Potential Funding Source |
| National Park Service | Historic Tax Credits |

## 2.0 SITE CONDITIONS

The project site, first developed prior to 1887, has primarily been used for commercial purposes with some limited historical residential use. The most significant commercial uses, including automotive repair, machining operations, furniture finishing, laundry activities (potentially involving use of chlorinated solvents), and use of gasoline underground storage tanks (USTs) occurred at the eastern portion of the site near Catherine Street.

### 2.1. Early Investigations 2005 to 2013

GBTS reviewed the following environmental reports, prepared for portions of the property:

- Phase I ESA of 327-329 Main Street, John R. Bien, P.E., December 2005;
- Phase I ESA of 331 Main Street, Ecosystems Strategies, Inc., June 2013; and,
- Limited Phase II Subsurface Investigation for 331 Main Street (Lot D, "Phase II SSI"), Greenstar Environmental Solutions, LLC, August 2013.

No notable environmental conditions were identified at the 327-329 Main Street parcel; at the 331 Main Street parcel, however, former automotive repair activities and a historical gasoline underground storage tank (UST) were identified as Recognized Environmental Conditions. According to a conversation with an employee for the City of Poughkeepsie Fire Department, an "unofficial notation in a log book" indicated that Lot D had two, 1,000-gallon tanks removed on June 15, 1979 (location unknown).

The Limited Phase II SSI was conducted on the northeastern portion of 331 Main Street along Catharine Street. Fieldwork included a ground penetrating radar survey, advancement of six soil borings in the vicinity of the former automotive repair facility (SB-01 and SB-02) and the suspect UST (SB-03 through SB-06), and collection of groundwater samples from two borings (SB-04 and SB-06) converted to temporary monitoring wells.

The GPR survey did not indicate the presence of any USTs. No field evidence of petroleum contamination was encountered at any boring location, and laboratory analysis of three soil samples (SB-02, SB-04, and SB-06) did not document the presence of any volatile organic compounds (VOCs) or semi-volatile organic compounds (SVOCs). Low levels of lead were detected in two groundwater samples; however, the report notes that the lead detection was likely due to suspended soil particles. No VOCs or significant levels of SVOCs were detected in groundwater.

## 2.2. Recent Investigations: 2020

Recent investigations include the following:

- Geotechnical report for Wallace Campus Buildings ("Geotech Report"), Daniel G. Loucks, P.E. Geotechnical Engineering, September 8, 2020; and,
- Phase II ESA for the Wallace Campus, GBTS, October 2020.

The Geotech Report documents subsurface site conditions on several portions of the property. Subsurface soils throughout the site are generally comprised of an upper layer of fill extending from between 1 and 7 feet bsg. A sandy-gravelly layer underlies the fill layer to depths ranging between 17 to 23 feet bsg, which is underlain by a layer of dense silty clayey soils to depths ranging between 23 to 51 feet bsg. Weathered shale bedrock is reported to be at depths ranging between 41 to 62 feet bsg.

Soils at multiple locations throughout the Site, in an interval ranging from approximately 1 to 7 feet below the parking lot surface, are impacted by PAHs and metals (mercury and lead) above Restricted Residential Use Soil Cleanup Objectives (RRU SCOs). No significant levels of VOCs, SVOCs, pesticides or PCBs were found in soil samples collected for general screening purposes, and no significant levels of

VOCs were found in soil vapor or in groundwater samples, suggesting that on-site contamination is limited to PAHs and metals impacts in soils. The source of this PAH and metal contamination is unknown, but may be related to historical commercial uses, impacts from building demolition, or the placement of fill materials.

Existing soil vapor data are limited in areas of proposed building footprints. Due to the urban nature of the Site, additional soil vapor investigation is warranted to determine whether soil vapor intrusion poses a risk to future building occupants.

## 2.3. Current Regulatory Status

A Brownfield Cleanup Program (BCP) Application and a Remedial Investigation Work Plan (RIWP) were submitted for the site to NYSDEC on January 28, 2021 and a Letter of Completeness was issued on February 16, 2021 (see Attachment A). The Application is in Public Comment, which will conclude on March 26, 2021. Shortly thereafter, Wallace Campus Manager LLC will execute a Brownfield Cleanup Agreement (BCA) with the State and the SIWP will be approved. Once the BCA is executed, the fieldwork required to completely delineate the site to the BCP standard will be performed. It is anticipated that a RIR and RAWP will be submitted to the NYSDEC mid- May 2021 and NYSDEC could potentially issue the Decision Document for the site in July 2021. Based on currently available data, it is anticipated that the site will be cleaned up to Track 1 standards.

# 3.0 LAND USE, ZONING, AND PUBLIC POLICY

## 3.1. Land Use and Zoning

The project site was first developed prior to 1887 and has included commercial and some limited residential use although its recent history has, like other parts of downtown Poughkeepsie, been of underutilizion and vacancy. In 2019 the Poughkeepsie Innovation District (PID) rezoning was undertaken by the City to put in place a framework to encourage and govern future development of the core commercial section of the city's downtown into an economic center anchored by increased residential population and a creative economy. Located in the central northern portion of the PID, the project site is zoned PID-Historic Core and PID-Urban Village.

The proposed Wallace Campus Project would be a significant moment in the ongoing realization of the City's vision as expressed in the PID rezoning and would include: restoring an area with large expanses of underutilized space; restoring the architectural street wall integrity on Catherine Street; creating Wallace Green, a dynamic open space available for public use; creating a pedestrian connection mid-block between Main Street and Mill Street; providing buildings that are of excellent architectural design; and, providing mixed use development on Main Street, including ground floor retail. In order to realize the project as such, and provide the increased height and density encouraged by the PID, several height variances are being requested:

- A height variance to allow the Catharine Street building to be 6 stories tall, where 5 stories is allowed.

- A height variance relating to a portion of the Main Street Building within the PID-HC subdistrict to allow that portion of the building to be 7 stories tall, where 5 stories is permitted. The variance includes a total of 4,578 SF in total, constituting 5.8% of the building area.

- A height variance relating to a portion of the Main Street Building within the PID-UV subdistrict to allow that portion of the building to be 7 stories tall, where 6 stories is permitted. The variance includes an area totalling 7,240 SF, or 9.28% of the building SF.

Further information regarding zoning can be found in Attachment B.

## 3.2. Public Policy

*City of Poughkeepsie Comprehensive Plan, 1998*

The City updated its Comprehensive Plan in 1998 with a focus on three areas: Main Street, the Cottage Street Business District, and the Waterfront. These areas were identified as being critically important to the City's future growth. Other areas of interest updated in the Plan included neighborhood planning issues, the City's Zoning Code, and recreational resources. The Plan outlines the following goals:

- Goal #1: A Traditional Downtown and Main Street;
- Goal #2: Neighborhoods with a Strong Sense of Community;
- Goal #3: A Vibrant Waterfront for Commerce and Recreation;
- Goal #4: Increased Employment Opportunities;
- Goal #5: User-Friendly Transportation Systems;
- Goal #6: A Regional Center for Commerce, Medicine, and Government; and
- Goal #7: The Creation of New Economic Opportunities

The Plan states with regard to Goal #2 that, "City government can play a strong role in making the City a safe, healthy place to live. Policies and decisions on zoning issues that define and protect neighborhood character, and capital investment in parks, sidewalks, and streets, should be in keeping with this goal."

Wallace Campus adheres to this goal by providing outdoor amenity spaces to benefit residents and the public. A public pedestrian walkway will provide new connectivity between Main Street and Mill Street, beginning at a new Promenade entrance between the Wallace and Main Street buildings, and proceeding through the campus to Mill Street, near the intersection with Conklin. The new pedestrian walkway also provides access to an inviting central Green ("Wallace Green") that provides landscaping, play areas, a garden, tiered seating gathering area, and internal pedestrian access between the new buildings and the landscaped internal parking area. Vehicular access to the site is provided through consolidation of existing entrances from Mill Street. Through agreements with adjoining lots fronting on Mill Street (302, 304, 306 and 310 Mill Street), the Project will eliminate two existing curb cuts on Mill Street, provide additional Green space around and between existing buildings fronting on Mill Street, in

addition to enhancing the pedestrian use of Mill Street via the new Wallace Green walkway between Main and Mill Streets. Additionally Goal #2 states that "the City should also support renovation and reuse of vacant buildings, and removal and replacement of dilapidated structures." Wallace Campus supports this goal by renovating and repurposing the long dormant Wallace Campus Department Store and by replacing the old buildings west of the Wallace Campus Department Store with a new 89,582 SF building.

Goal #4 states that "the City should maintain a wide variety of employment opportunities for its residents and for workers living outside the City." The proposed project will provide new retail spaces (6,416 sf) along the Main Street pedestrian frontage, which will create new employment opportunities for residents and workers living outside the City. The proposed action is therefore consistent.

*Dutchess County Hudson River Valley Greenway Compact Plan, 2000*

Dutchess County is one of 13 counties that make up the Hudson River Valley Greenway, which was established by the State by the Hudson River Valley Greenway Act of 1991. In March 2000, the Hudson River Valley Greenway Council approved the Dutchess County Greenway Compact Plan, "Greenway Connections: Greenway Compact Program and Guides for Dutchess County Communities." The Greenway was created to facilitate the development of a voluntary regional strategy for preserving scenic, natural, historic, cultural, and recreational resources while encouraging compatible economic development and maintaining the tradition of home rule for land use decision-making. By Local Law Number 1 of 2002, the City became a participating community in the Greenway Compact, and adopted a statement of land use policies, principles and guides entitled, "Greenway Connections: Greenway Compact Program and Guides for Dutchess County Communities." The City requires that consideration of the Greenway Compact Plan policies, principles, and guides be used to supplement other established land use policies in the City where discretionary decisions are made. The proposed development is anticipated to adhere to the purpose of the plan, as it will provide multifamily housing within a site design that encourages conservation of natural and historic resources. Therefore, the proposed action is consistent.

## 4.0 COMMUNITY SERVICES

### 4.1. Emergency Services

Fire emergency/ambulance service is provided by the City of Poughkeepsie. According to the City website, the Fire Department is a 64-man career-staffed department that protects 31,000 people living in an area of 4.78 square miles. It operates three fire stations that respond to almost 5,000 calls per year. The City's apparatus includes four engines, two ladder trucks, one rescue vehicle, and a fire/rescue boat. Water for fire protection is obtained from the City of Poughkeepsie water supply. A truck turning radius plan will be submitted during the site plan review. It is anticipated that there is sufficient firefighting capability to meet the minimal increase in demand related to the proposed 214 new residential units. The City of Poughkeepsie Police Department, with support from Dutchess County Sheriff's Department and NYS Police, provides police protection.

# 5.0 NATURAL RESOURCES

## 5.1. Soils

Soils in the vicinity of the subject property are likely to be derived from glacial till deposits, which overlie greywacke and shale bedrock (see Attachment C). According to the Natural Resources Conservation Service and information contained in the Dutchess County Soil Survey, soils at the project site consist entirely of Urban Land Soils (see Attachment D). The Urban Land designation identifies areas where at least 80% of the surface is covered by buildings, parking areas or other impervious structures, and specific soil and bedrock characteristics are generally not well known. The presence of on-site structures suggests that soils located on the property may have been altered by cutting, regrading, and/or filling activities.

Previous site investigations conducted at eastern-central portion of 331 Main Street documented soils consisting of a mixture of sand, silt, and silty clay. Bedrock was not encountered during the advancement of soil borings to a maximum depth of 20 feet below surface grade (bsg). Depth to bedrock is not reported for Urban Land soils and bedrock outcrops were not observed on the property. Shallow groundwater flow in the vicinity of the property is likely to generally follow surficial topography and be toward the Fall Kill Creek. Groundwater was encountered at approximately 15 feet bsg during previous investigations at 331 Main Street.

## 5.2. Habitats

According to the NYSDEC Environmental Resource Mapper and the Poughkeepsie National Resource Inventory (see Figure 7 and Attachment C), there is no known occurrence of endangered, threatened, or rare species on or in the immediate vicinity of the project site.

## 5.3. Water Resources

According to the Poughkeepsie NRI (Attachment C), there is a NYSDEC Class C stream, Fall Kill Creek (Regulation 862-393) located approximately 650 feet northeast of the Project Site. Class C streams are not regulated by the NYSDEC. No waterbodies or wet areas were observed within the boundaries of the Project Site or in the immediate vicinity during previous site inspections. Federal and state mapping data do not identify any other classified surface waterbodies, wet areas, or regulated wetlands on or in the immediate vicinity of the property (Figures 8-9).

## 5.4. Floodplain

According to the Poughkeepsie NRI Water Resources Map (Attachment C), the Project Site and the area immediately surrounding it are not within a flood hazard area. FEMA's National Flood Layer Flood Insurance Rate Map (FIRM Panel 36027C0358E) the Site is located within Zone X, which has a 0.2%

annual chance of flooding (Figure 10). There will be a substantial buffer and distance between the proposed development and the Fall Kill and the implementation of the SWPPP will ensure that no significant adverse impacts to the floodplain will occur.

## 6.0 UTILITIES

### 6.1. Water and Wastewater

Municipal water and sewer service currently serve the project site. According to the New York State Department of Environmental Conservation (NYSDEC) *Design Standards for Intermediate Sized Wastewater Treatment Systems*, March 2014, with a 20% reduction for the use of modern water saving fixtures, the proposed project is expected to require water usage of 29,003± gallons per day. The existing demand is 28,226 ± gallons per day resulting in a net increase of approximately 777± gallons per day. It is anticipated that the City's municipal water system has capacity to serve the proposed use. The Site Utilities Plan, attached, shows the locations of all fire and domestic water mains, as well as the locations of all sanitary sewage mains.

### 6.2. Stormwater

The proposed project will require greater than one acre of disturbance and will require coverage under the State Pollutant Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Construction Activity. A SWPPP has been prepared in conformance with the most current New York State Stormwater Management Design Manual and New York State Standards and Specifications for Erosion and Sediment Control. Stormwater will be directed to on-site stormwater management structures. Therefore, the proposed project is not expected to result in any adverse impacts in regard to stormwater.

## 7.0 TRAFFIC AND PARKING

The Site is currently accessed via two existing driveway connections to Mill Street (U.S. Route 44/NYS Route 55). Under current conditions, these two driveways are not currently connected internally; however, as part of the proposed development these driveways are proposed to be connected by an internal parking area providing for internal circulation between the driveways. Mill Street is a three-lane roadway that accommodates only westbound traffic in the vicinity of the Site. The roadway is under the jurisdiction of the New York State Department of Transportation (NYSDOT). Any modifications to the proposed driveways including, repaving, signing, striping, and concrete sidewalk modifications along the Mill Street Site frontage will require a Highway Work Permit to be obtained from the NYSDOT. This also includes any work within the NYSDOT Right-of-Way associated with the closure of the existing driveways to 302, 304, and 306 Mill Street.

Based on the Parking and Traffic analysis (see Attachment E), the required parking for the proposed Wallace Campus development will exceed the proposed parking supply by 18 vehicles. The analysis demonstrates that these excess vehicles can be accommodated by the off-site public parking in the

vicinity of the Site and therefore the Applicant should request a waiver be granted by the Planning Board for these excess parking spaces. This is permitted under the City of Poughkeepsie Zoning Code and requires payment of a one-time fee to the City. In addition, the required parking needs associated with the proposed seasonal public performances and community gatherings (to be held at the tiered seating area within the Wallace Green) can be accommodated during both the Weekday evening and Weekend periods, when there is anticipated to be an excess of 500 available public parking spaces in the vicinity of the Site. Furthermore, the proposed development is not anticipated to have any significant traffic related impacts on the surrounding area intersections.

## 8.0 HISTORIC AND ARCHAEOLOGICAL RESOURCES

According to the Poughkeepsie NRI (Attachment C), several adjoining properties are listed as historic sites or are located within the Upper Mill Street Historic District.

Landmark Consulting LLC, the preservation consulting firm hired by the Wallace Campus development team, authored the Commercial Rehabilitation Tax Credit Part 1 application for certification to pursue the rehab incentive program. The Part 1 application and draft National Register Nomination for the Wallace Building (331 Main and 14-20 Catharine) was formally confirmed to have been entered into the New York State Historic Preservation Office's (SHPO) CRIS (Cultural Resource Information System) database on Feb. 8th, 2021. SHPO's program analyst Chelsea Towers of the Survey and National Register Unit confirmed receipt and is underway with her review, slated for completion by March 10th, 2021.

Subsequent to SHPO's review the documents will be submitted to the National Park Service (NPS) with an attending recommendation letter for review. NPS will have 30-days in which to review and provide judgement on the Part 1 application and draft National Register Nomination.

An additional online submission was entered into the SHPO CRIS requesting a general evaluation of the Project Sites historical and archaeological resources. This submission is still under review and no formal Effect Finding letter has been issued.

## 9.0 RECREATIONAL RESOURCES

Mural Square, a nearby open space, is located on the northern side of Main Street, approximately 400 feet west of the Site. According the Poughkeepsie NRI (Attachment C), no other recreational resources are located on or in the immediate vicinity of the Site.

Wallace Campus Manager LLC
Attn: John Logsdon
93 4th Avenue #1289
New York, NY 10276

**RE: Brownfield Cleanup Application**
Wallace Campus
Site No. C314134

Dear John Logsdon:

The New York State Department of Environmental Conservation (DEC) has received your application for participation in the Brownfield Cleanup Program (BCP) pursuant to Environmental Conservation Law (ECL) § 27-1401 et seq. We are pleased to advise you that your application has been determined to be complete based upon DEC's initial non-substantive review of your application package. While the application is complete, DEC may require additional information regarding site contamination in order to demonstrate that the site requires remediation pursuant to ECL § 27-1407(1). Additionally, if your application also seeks a determination that the site is eligible for tangible property credits under ECL § 27-1407(1-a), DEC may require additional information in order to make such a determination. If you propose additional material to supplement this application, DEC may consider it at its sole discretion. If additional material or information supplied significantly changes the scope of the site subject to the application, the Department may require you to publish another public notice of availability of the complete application. DEC would then adjust the time frame specified under ECL § 27-1407(6) for notifying you that your request for participation in the BCP is either accepted or rejected.

Pursuant to ECL § 27-1407(5), a 30-day public comment period is to begin after DEC's determination that an application is complete. DEC will publish a notice of the receipt of your application seeking public comment in the "Environmental Notice Bulletin." In accordance with the ECL and DEC regulations (see 6 NYCRR § 375-3.4(b)), you must notify, in writing, all parties on the site contact list[1] of the availability of the complete application for public review and comment.

[1] The site contact list includes (see section 375-1.2(as)) all interested "persons, government agencies, groups or organizations, including, but not limited to, the chief executive officer and zoning board of each county, city, town and village in which such site is located, the public water supplier which serves the area in which such site is located, any site residents, adjacent property owners, any person who has requested to be placed on the site contact list, and the administrator of any school or day care facility located on the site for the purposes of posting and/or dissemination at the facility. Provided, however, that where the site or adjacent real property contains multiple dwelling units, the remedial party may propose an alternative method, consistent with the citizen participation goals set forth in section 375-1.10, for providing such notice in lieu of mailing to each individual."

In order to facilitate the notifications, DEC has prepared the enclosed documents for your use as Public Notices along with instructions. You are responsible for placing a copy of the application (including any attachments) and copies of all other related documents such as any site assessments, investigation reports, and/or remedial work plans in the document repository as soon as the repository has reopened to the public. The language in the enclosed Public Notice must be used without alteration in the newspaper notice that you have published in accordance with sections 375-3.2(f) and 375-3.10.

The shorter enclosed public notice must be provided to a local newspaper servicing the area including the site for publication no later than February 24, 2021. By February 23, 2021, the other notifications specified above must be distributed. The site documents must be placed in the repository as soon as it has reopened to the public. To the extent that the mailings and publications are not completed in accordance with these time frames, DEC will extend the comment period for a period sufficient to comply with the required public notice requirements running from the latest of these mailings and publications.

Within five days of the mailings, you must submit a "certificate of mailing" using the enclosed form. Additionally, you must submit a proof of publication provided by the newspaper within three days of your receipt of such document. Please submit these documents to DEC's Project Manager:

Michael Kilmer
NYS Dept. of Environmental Conservation
21 South Putt Corners Road
New Paltz, NY 12561-1696
michael.kilmer@dec.ny.gov

DEC will use all best efforts to notify you if the application is accepted or rejected within five days after the close of the public comment period. We look forward to working cooperatively to address the environmental conditions at the brownfield site and return this property to productive use.

Sincerely,

Leonard Zinoman for
Kelly A. Lewandowski, P.E.

**Brownfield Cleanup Program**
**Public Notice Instructions to Requestor[2]**

**1) Newspaper Notice**

a) The Requestor must publish the language in the enclosed public notice with the heading "Notice to be published in newspaper" without modification, in a local newspaper of general circulation that services the area that includes the site not later than the date specified in the Division of Environmental Remediation's (DER) cover letter. The notice must be a paid newspaper advertisement, prominently located in the community bulletin section or comparable local section of the newspaper (not as a legal notice). The Requestor must publish the notice in English and in any other language spoken by a significant number of people within the site community.

b) The Requestor must submit a proof of publication of the newspaper notice to the DER Project Manager by the date specified in the DER cover letter.

**2) Requestor's Instructions to Newspapers Regarding Printing the Public Notice**

a) The enclosed public notice with the heading "Notice to be published in newspaper" announces the receipt of a complete Brownfield Cleanup Program application package by the New York State Department of Environmental Conservation. Pursuant to ECL Section 27-1405(22), the public notice must be a paid newspaper advertisement, prominently located in the community bulletin section or similar local section of the newspaper (not as a legal notice). The public notice must be published by the date specified. Please provide a proof of publication to the DER Project Manager as soon as possible.

**3) Site Contact List**

a) The Requestor must mail the enclosed public notice with the heading "Notice to be distributed to those on contact list included in the BCP Application", without modification, to the parties on the site contact list included with the application. The mailing must be performed by the date specified in the DER cover letter. No other materials can be mailed with this notice with the exception of the instructions provided in #4a below.

b) The Requestor must complete the certificate of mailing and submit it to the DER Project Manager by the date specified in the DER cover letter (see enclosed certificate of mailing form).

**4) Requestor's Instructions to Parties on the Site Contact List Receiving the Public Notice**

a) The enclosed public notice announces the receipt of a complete Brownfield Cleanup Program application package by the New York State Department of Environmental Conservation. Pursuant to ECL Section 27-1407(5), a public notice announcing the receipt of an application must be sent to parties on the site contact list. Please read the enclosed public notice and review the application package in the site document repository for further information regarding the application and how to submit comments.

**5) Document Repository**

a) The Requestor must put the application package (application and all attachments) in the site document repository specified in the application as soon as it has reopened to the public.

---

[2] A requestor (§ 375-3.2(i)) is a person who has submitted an application to participate in the BCP whose eligibility has not yet been determined by DEC.

Notice to be published in newspaper:

Site information can be viewed by entering the site ID noted above at: http://www.dec.ny.gov/cfmx/extapps/derexternal/index.cfm?pageid=3

We would also encourage those interested in receiving information on future activities at this site or any other site to sign up to DEC's Contaminated Sites Email List at: http://www.dec.ny.gov/chemical/61092.html

**What is the Brownfield Cleanup Program?**

New York's Brownfield Cleanup Program (BCP) is designed to encourage private-sector cleanups of brownfields and to promote their redevelopment as a means to revitalize economically blighted communities. The BCP is an alternative to "greenfield" (land not previously developed or contaminated) development and is intended to remove some of the barriers to, and provide tax incentives for, the redevelopment of brownfields. Since its inception (2003), the BCP has catalyzed the cleanup of more than 300 contaminated sites statewide and incentivized redevelopment. There are more than 350 active sites in the BCP.

Additional information on the State's Brownfield program is available at DEC's website: http://www.dec.ny.gov/chemical/8450.html

March 1, 2021

Mr. Robert Levine, Planning Board Chair
City of Poughkeepsie Planning Board
62 Civic Center Plaza, 3rd Floor
Poughkeepsie, NY 12601

Re: Wallace Campus: zoning and land use

Dear Chairman Levine and members of the Planning Board:

This letter briefly summarizes zoning issues relevant to the Board's Site Plan review, recognizing that formal determination and resolution of technical zoning compliance issues rests with the Zoning Administrator and ultimately with the Zoning Board of Appeals.

The Purposes of the PID District:

One could characterize the Wallace Campus Project in terms of its comprehensive contribution to one of the 6 main components of the PID Framework: Strategies for remediating and redeveloping vacant properties including surface parking lots. Yet in doing so, the project also accomplishes a number of other important goals of the PID program:

- Comprehensive planning and design of a major portion of the block surrounded by Main, Catharine, and Mill Street, providing major improvements to the streetscape on all three lot frontages.

- Rehabilitation and adaptive reuse of the historic Wallace building, one of the most important historic buildings in the PID.

- Creating two new buildings of excellent design, reflecting sensitivity to historic design elements of existing context. These contribute to the architectural stateliness of the Main Street corridor, and restore the street wall on Catharine with a design that complements

the proposed building now under construction at the southeast corner of Catharine and Mill

- Integrating the Mill Street frontage into the project design, enhancing the pedestrian function of the Mill Street sidewalks by consolidating driveways, eliminating two driveways that interrupt the pedestrian route, and providing attractive pedestrian views into the site, inviting use of the new mid-block pedestrian walkway to Main Street. The same inviting views into the consolidated lot will be seen by drivers along the corridor, supporting efforts to reduce the function of the Mill Street arterial as a highway, and reinforcing its role as a City street.

- Integrated invitation to pedestrian activity throughout the site, from all sides of the property: the Main street Promenade entrance between the Wallace and Main Street buildings; the Catharine Street building breezeway; the Mill Street entrance to the mid-block Wallace Green Walkway; and the connection from Garden Street, along the path and community garden.

- Reclaiming almost an acre of pavement to create the Wallace Green, which reinforces the invitation to pedestrian connectivity by a large central landscaped Green, with opportunities for lunchtime strolls and informal gatherings.

- Providing 214 residential units of mixed-income affordable housing serving households earning from 30% AMI up to 80% AMI as defined by the Dutchess County AMI tiers (Poughkeepsie-Newburgh-Middletown, NY HUD Metro Area).

- All on-site environmental conditions with the potential to impact human health and the environment will be remediated per a NYSDEC Remedial Action Work Plan under the New York State Brownfield Program.

These are all substantial successes, and the Applicant thanks the Planning Board, City Staff, and City consultants for many of the suggestions that have improved the contributions of the project.

<u>Zoning Variances in Context:</u>

The project will require certain area variances. The need for these variances should not be seen as the result of flaws in the project design. They actually are the natural result of good planning for the site, and the difficulties created by pre-existing conditions and the division of the large project site into two different zoning districts.

Height Variances for Main Street and Catharine Street Buildings:

The need for the height variances is directly connected to the planning strategy of creating the large Wallace Green at the center of the site. Without Wallace Green, the buildings could have been lower in height and larger in footprint.

The height variances are not substantial in their nature: The requested variance for the Catharine Street building is one story, the Applicant having minimized the request by reducing the height of the building from 7 to 6 stories. The requested variance for the Main Street building is one story (to be 7 stories where 6 permitted as of right) in the UV zoned portion of the building. This variance covers only 9.28% of the total building area. (See attached graphic PD-2). The Applicant has minimized the variance by stepping back the building, providing a height of only 5 stories along the Main Street frontage. The multiple renderings of the building in context, as even more fully explained by the architects in their presentations, demonstrate that the proposed height of this building is compatible with the area context, and does not cause any adverse effect on the neighborhood or character of the community. To the contrary, the effect is positive.

The Main Street building is bisected by the zoning line separating the PID-UV and PID-HC subdistricts. The result is that one small section of the Main Street building, representing less than 20% of the area of the building's footprint, requires a two-story variance, because the as-of-right height in the HC subdistrict is only 5 stories. (See attached graphic PD-1) This variance has also been minimized by the step back of the building, and the total variance requested (i.e. total of both floors) represents only 5.8% of the total building area.

These variances are required because the height is measured in stories. The building does not exceed the height (if measured in feet) of buildings that would be permitted if their floor-to-floor height were greater than the Applicant's propose. (permitted heights are 20 feet for ground floor commercial and 14 feet for upper floors, which would permit the Main Street building to be 90 feet tall in the PID-UV portion and 76 feet tall in the PID-HC portion. The building is 74 feet to its tallest point.

Additionally , the building "steps back" at the 5th story, at a height of just over 50 feet. Under the PID zoning, a step back is not actually required until the point at which the Main Street building would exceed 114 feet (twice the width of the Main Street row).

Both these factors confirm that the building is not outside the goals of the zoning law, and is within the neighborhood context.

Similar considerations apply to the Catharine Street building, which is within the PID-HC district. The reason for the additional story is the same: to concentrate buildings at the streetwall and create substantial, accessible, open space within the site. The building exceed permitted stories by one story (6, where 5 permitted as of right). The actual height of the building is 53 feet, 8 inches. A permitted 5 story building could reach the height of 76 feet. The PID zoning would require a step back of the building at 88 feet (twice the row of Catharine Street). The building does not rise to a height requiring that step back.

In conclusion, the buildings require modest height variances from the Zoning Board of Appeals, but from the context of site planning, architectural review, and neighborhood planning, the buildings are congruent with, and improve the character of, the neighborhood.

Variances Relating to the Mill Street Frontage:

The second major category of area variances are caused by the pre-existing condition that Mill Street does not have a consistent street wall of buildings, and has functioned as vehicular site access for many years. The consolidated lot has two entrances on Mill Street, which has functioned as vehicular access for many years. The continuation of the two access points enhances circulation and safety. Nonetheless, the zoning requires 100% frontage occupancy by a building in the PID-HC subdistrict (where the eastern driveway is located) and 80% frontage occupancy in the PID-UV subdistrict (where the western driveway is located). This is a standard that is not even met by the existing buildings on Mill Street, nor is it part of the historic context of existing buildings. Finally, the consolidated lot is a through lot with 3 frontages, requiring conformance with frontage and frontage occupancy requirements on all frontages. Compliance with this standard would effectively bar any vehicular access to parking on the site.

The Mill Street situation will require a number of variances relating to frontage, frontage occupancy, visibility of parking, parking forward of the building line, and parking within a 40 foot setback. In some cases, a variance will be required for 100% of the required standard. While this is, on the surface, a “substantial” variance, there is uniform authority that substantiality is not judged simply by a mathematical formula, but based upon the actual effect on the neighborhood.

While the technical issues on variances are within the jurisdiction of the Zoning Board of Appeals, the Planning Board will naturally consider the issue from the point of site planning, circulation, and the like. The site entrances have been improved, and adjusted as to parking as suggested by the City consultant. The proposal adds greenspace and landscaping to the Mill Street frontage. It also adds significant support for pedestrian activity along the Mill Street frontage. From a points of circulation and parking, the access is needed. Kindly refer to the extensive Parking,

Circulation, and Traffic Report from Maser Consulting, which also addresses the proposal for Shared Parking and Waiver/fee in lieu requests.

Variances of 100% Frontage Occupancy on Main Street And Mill Street to Accommodate the Mid-Block Pedestrian Connecting Pathway:

Area variances will be required on Main Street (PID-HC) and Mill Street (PID-UV) of the applicable 100%/80% frontage occupancy in order to create the mid-block pedestrian connection. The pedestrian mid-block connections are directly encouraged by the PID large lot provisions (19-3.37 (12)) and the proposal to create such a connection was actually made by the City to the Applicant. The variance creates positive effects in terms of neighborhood character. The connector also provides an opportunity to "wrap around" the commercial frontages at the Main Street promenade opening to the pedestrian through-way, thus providing retail "frontage" that is the equivalent of that which would be provided by a continuing streetwall.

Variance for Side Setback Along Western Side of Main Street Building:

An area variance will also be required for the side setback along the western side of the Main Street building. The building meets the setback at the frontage, but, since the building is in "T" form, the setback increases along the building sideline beyond the 10 feet permitted in the district. This variance does not adversely impact neighborhood character. It actually enhances neighborhood character by providing additional open space and building separation along the side lines, while maintaining the street wall on Main Street.

Conformance with PID Building Design Standards: 19-3.37 (10):

The variance requests should also be evaluated in light of the character of the proposal as described in detail in the architectural drawings and renderings which are part of the submission, the presentations by the Architects at Planning Board meetings, and the improvements as shown on the rendered Site Plan (illustrative site plan). To supplement these materials, the following information is submitted as to compliance with the Building Design Standards.

(a) TRANSPARENCY:

1. There is no mirrored, reflective or darkly tinted glass. Glass used in the three buildings to be transparent low-e, double pane argon filled insulated glass. See Z-001 for extent of glass.

2. No security grills are proposed at any of the three buildings. The decorative swinging gates proposed at the Catharine Street building will be used as the primary access point to the daycare lobby from Catharine Street via breezeway. The gates will only be closed during the off-hours of the daycare. See A-200D.

3. No curtains, blinds, or posters are proposed at the ground floor for any of the three buildings. See Z-001 for transparency percentages.

(b) FRONTAGES: SLCE has chosen a Shopfront Type C Frontage Type for all three buildings. See sheets A-200A thru A-200E

(c) DESIGN AND ARCHITECTURE:

1. Entrance Orientation: All 3 buildings have main entrance or entrances on the front façade. Maximum distance between entrances is attained. See Site Plan SP-1

2. Shopfront entrance orientation: Principal pedestrian entrances for all 3 buildings are directly connected to the sidewalk. The entrance to the Day Care is within a sheltered sidewalk with room for strollers. Principal entrances to shopfronts are highlighted with architectural features as presented to the Planning Board and shown on the renderings. See also Site Plan SP-1

3. Historic rehabilitation: SLCE Architects engaged in substantial research to assure that their proposed new construction reflects the traditional architecture of Main Street in building and roof forms, window proportions, materials, colors and details.

   With our site in the heart of the historic core, our proposal seeks to take its cues from the existing and historical fabric of Main Street, creating a gateway which reinforces the pedestrian connection from Main Street to Mill Street, near its intersection with Conklin, and passing through a new greenspace (Wallace Green) centrally located on the proposed campus. This new pedestrian connection is designed to be similar in scale to the pedestrian connection between Main Street and Mill Street via Garden St. further west on Main Street.

   The existing urban fabric on Main Street is characterized by a finer grain of buildings interrupted by medium and larger scale lots, with our site spanning between the medium scale of the existing Wallace building and the finer grain of main mall row. Our proposal for Main Street mediates between the large scale and stoic quality of

the existing Wallace building and the refined ornament and articulation of the buildings on Main Mall Row.

We were particularly interested in the Cast Iron Building - the way it turns the corner from Main Street to Garden St. by continuing the Main St. façade material and terminating at a setback, giving the effect of a thickened façade, as well as division of the facade into a clear base, middle, & top w/ a highly articulated cornice.

In the attached historical images of the Wallace building and Windsor hotel, a few things struck us. One was the way the canopy at the storefront level really begins to help activate the street level. We also found the rhythmic structure of the Windsor hotel piers successful at creating continuity along the storefront edge as it turns the corner from Catharine to Main Street. And in the Morgan house hotel photo where the canopies and window shades create a remarkable streetscape.

In Plan, our building forms a Tee pushed to the western edge of the site. At the connection of the tee we introduced a recess in the plan to visually separate the building into two volumes, and allow the stem of the tee to realign with the kink in the Wallace Building and prevent the path from narrowing toward the park while the volume on Main Street remains parallel to Main. It also provides a clear termination to the commercial spaces which wrap into the pedestrian walkway encouraging the pedestrian connection and shortening the perceived distance to the park. The façade is predominately brick with cast stone accents, a precast base, and precast cornice. The windows run in a regular grid with deep returns and articulation of the brick achieved through corbeling. The windows terminate with arched openings at the upper floor to accentuate the building top, similar to the historical buildings on Main Street.

The precast base is conceived as a series of structural piers continuing the rhythm of the Windsor hotel. Between the piers are inserted metal panel canopies and aluminum storefronts, defining the pedestrian edge. We are also introducing ornamental relief to the precast base inspired by the pressed tin ceilings of the existing Wallace building.

The Main street building cornice mimics the depth and section profile of the Cast Iron Building Cornice, while following the stepped silhouette of 311 Main Street. This gives the façade a proportion that is more in keeping with the proportions of the historical buildings on Main Street.

Our design for the Catharine Street building is intended to complement the Wallace building extension facing Catharine Street. Our building is divided into three zones with precast structural piers and aluminum storefront along the base, a center zone of brick (taking its material cue from the existing Wallace building extension), ornamental precast, and articulated cornice. The upper zone is conceived as an enlarged cornice with a change to white brick and inserting a spandrel panel and accent mullion, unifying the openings. We're using the same spandrel treatment at the 4th floor and ornamental precast at the remaining slab edges to give a hierarchy of scales to the façade. The remaining windows are separated by a small brick pier which is mirrored around each of the structural columns. These small piers add a secondary rhythm to the façade while keeping the windows proportional to the openings found in the historical district. The ground floor incorporates canopies and the structural piers to open and activate the street level. A decorative gate and breezeway are proposed on Catharine Street to promote connectivity to the park and parking areas, and will act as the primary point of access to the Daycare.

4. Blank walls: No visible façade of any of the buildings is blank. We have paid particular attention to the sides of the buildings that face the Wallace Green Walkway and the Green. These are also important facades that frame the view from Mill Street, which will form an important entrance to the side for both vehicles and pedestrians. See detailed renderings with the March 2021 submission which show views from Mill Street. See building elevations and renderings A-200A through A-215.

5. Façade articulation: Facades along all three buildings are broken up with divisions in materials, separate entrances and windows. Awnings are also used. Building articulation continues to wrap around the corners of Main Street and Wallace buildings to invite patrons and visitors into the pedestrian mid-block connector and provide access to residential entrances. The façade of the Catharine Street building has multiple doors and window treatments, as well as awnings and a gated breezeway. See elevations and renderings A-200A through A-215.

6. Awnings: Awnings for the three buildings are to be Aluminum Composite Panels over a recessed entry and extend 3'-4' beyond the building face. Scale drawings are provided to show height. See A-200A through A-200E.

7. Roofs: All roofs have been designed to conceal mechanical equipment. See detailed elevations and roof plans in the March 2021 submission set, and accompanying diagrams demonstrating that neither rooftop bulkheads nor rooftop mechanicals will

be visible from the street or adjoining properties. Mechanicals will be low in height and will be totally screened.

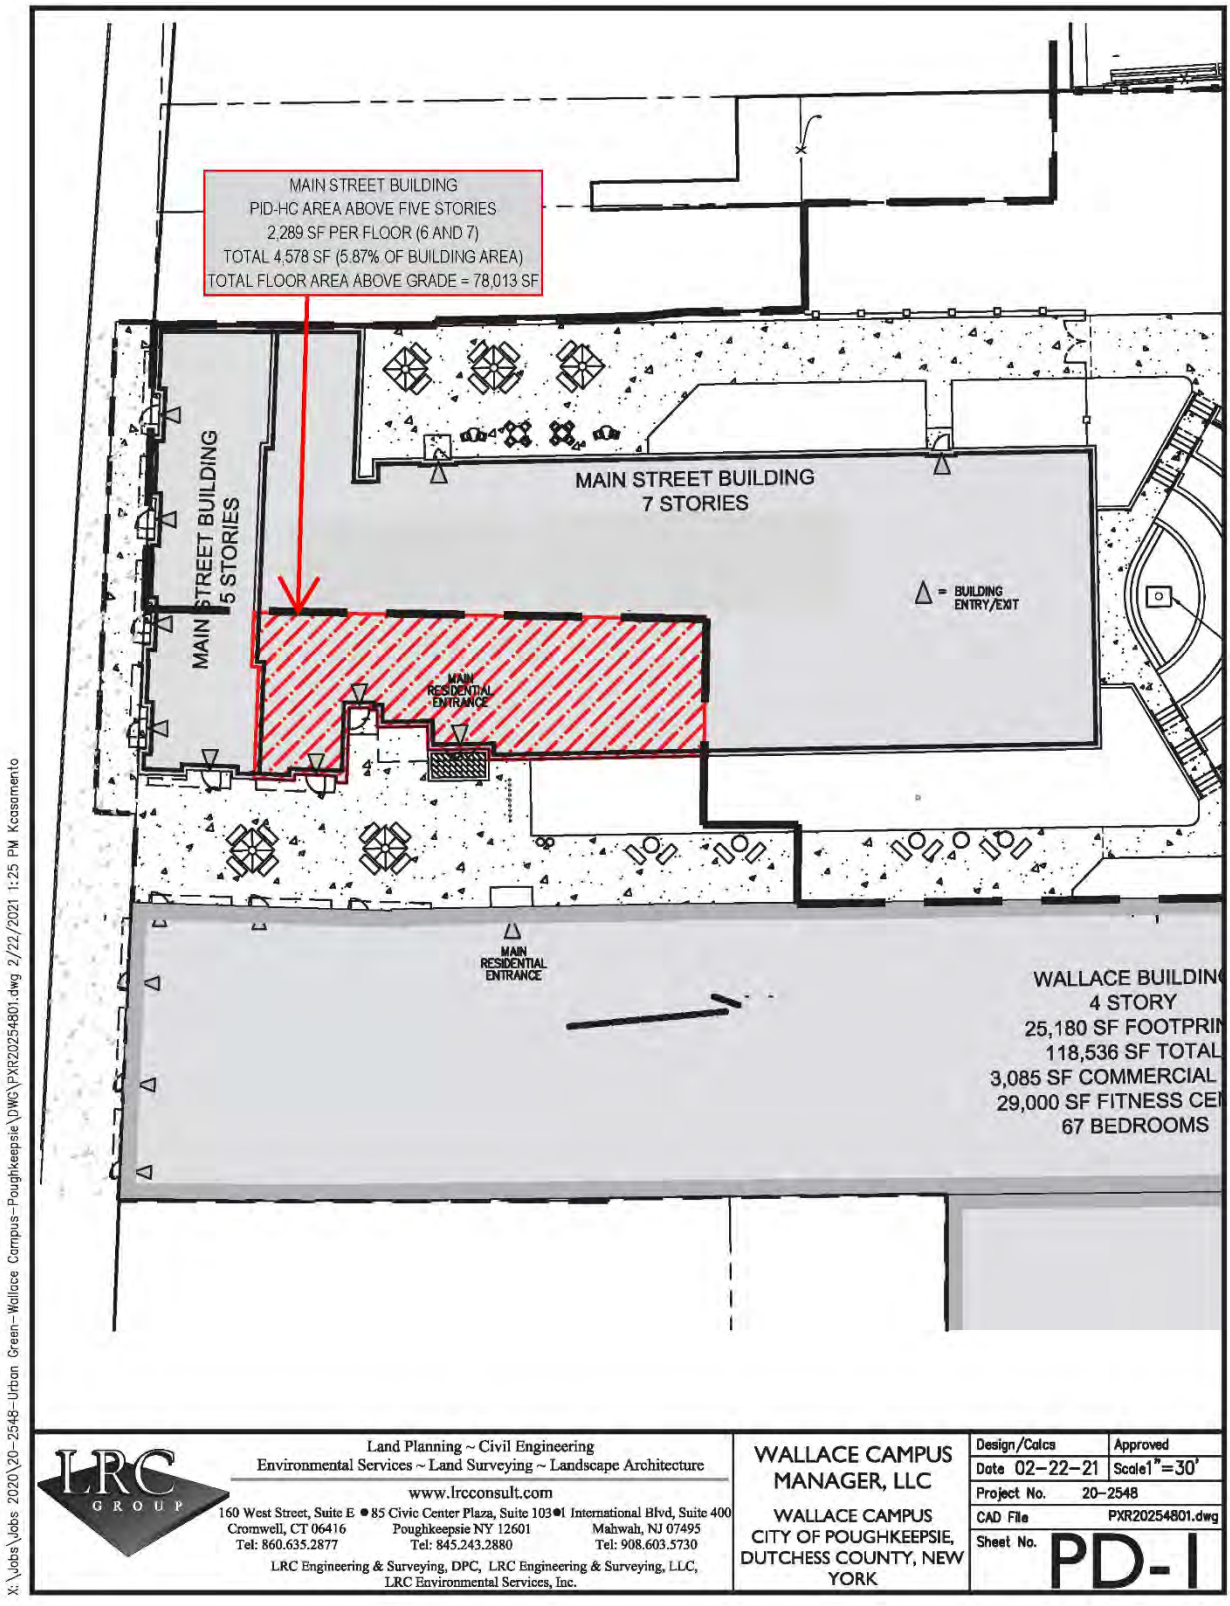
Main St Building – The roof over the front portion of the building (at 5-story height) will be a permeable vegetated green roof with access only available for maintenance. The Roof over the 7th floor will be a high albedo built-up roof system.

Catharine Street Building - The roof over the 6th floor will be a high albedo built-up roof system.

Wallace Building – The existing roof of the Wallace building will be replaced and repaired to match the existing roof as required. No new additions to the roof are proposed.

8. Screening: Roof Screening will be a perforated metal screen finished to match the metal of the window frames of the buildings. Mech. equipment will be located away from the edge of the buildings to further shield from view.

Conclusion:



Viewed in the context of the purposes of the PID zoning, the variances necessary to implement the project will result in no substantial negative impact on the neighborhood and community and actually a part of the overall contributions of the project to attaining the purposes of the PID zoning.

Very truly yours,

Jennifer Van Tuyl

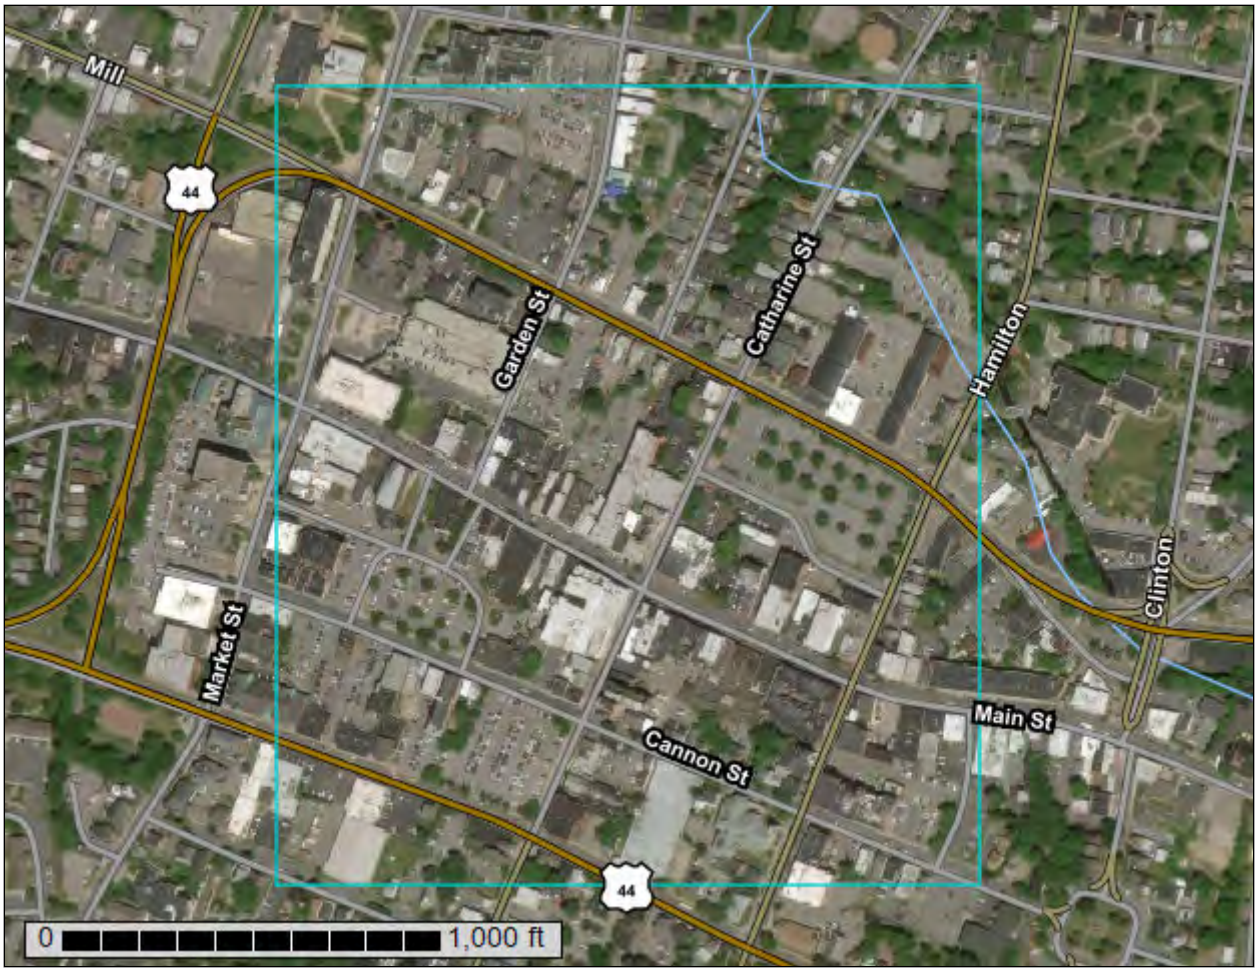
# *Attachment D*

# *Soil Survey*



United States Department of Agriculture

NRCS

Natural Resources Conservation Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

# Custom Soil Resource Report for Dutchess County, New York

# Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). # How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

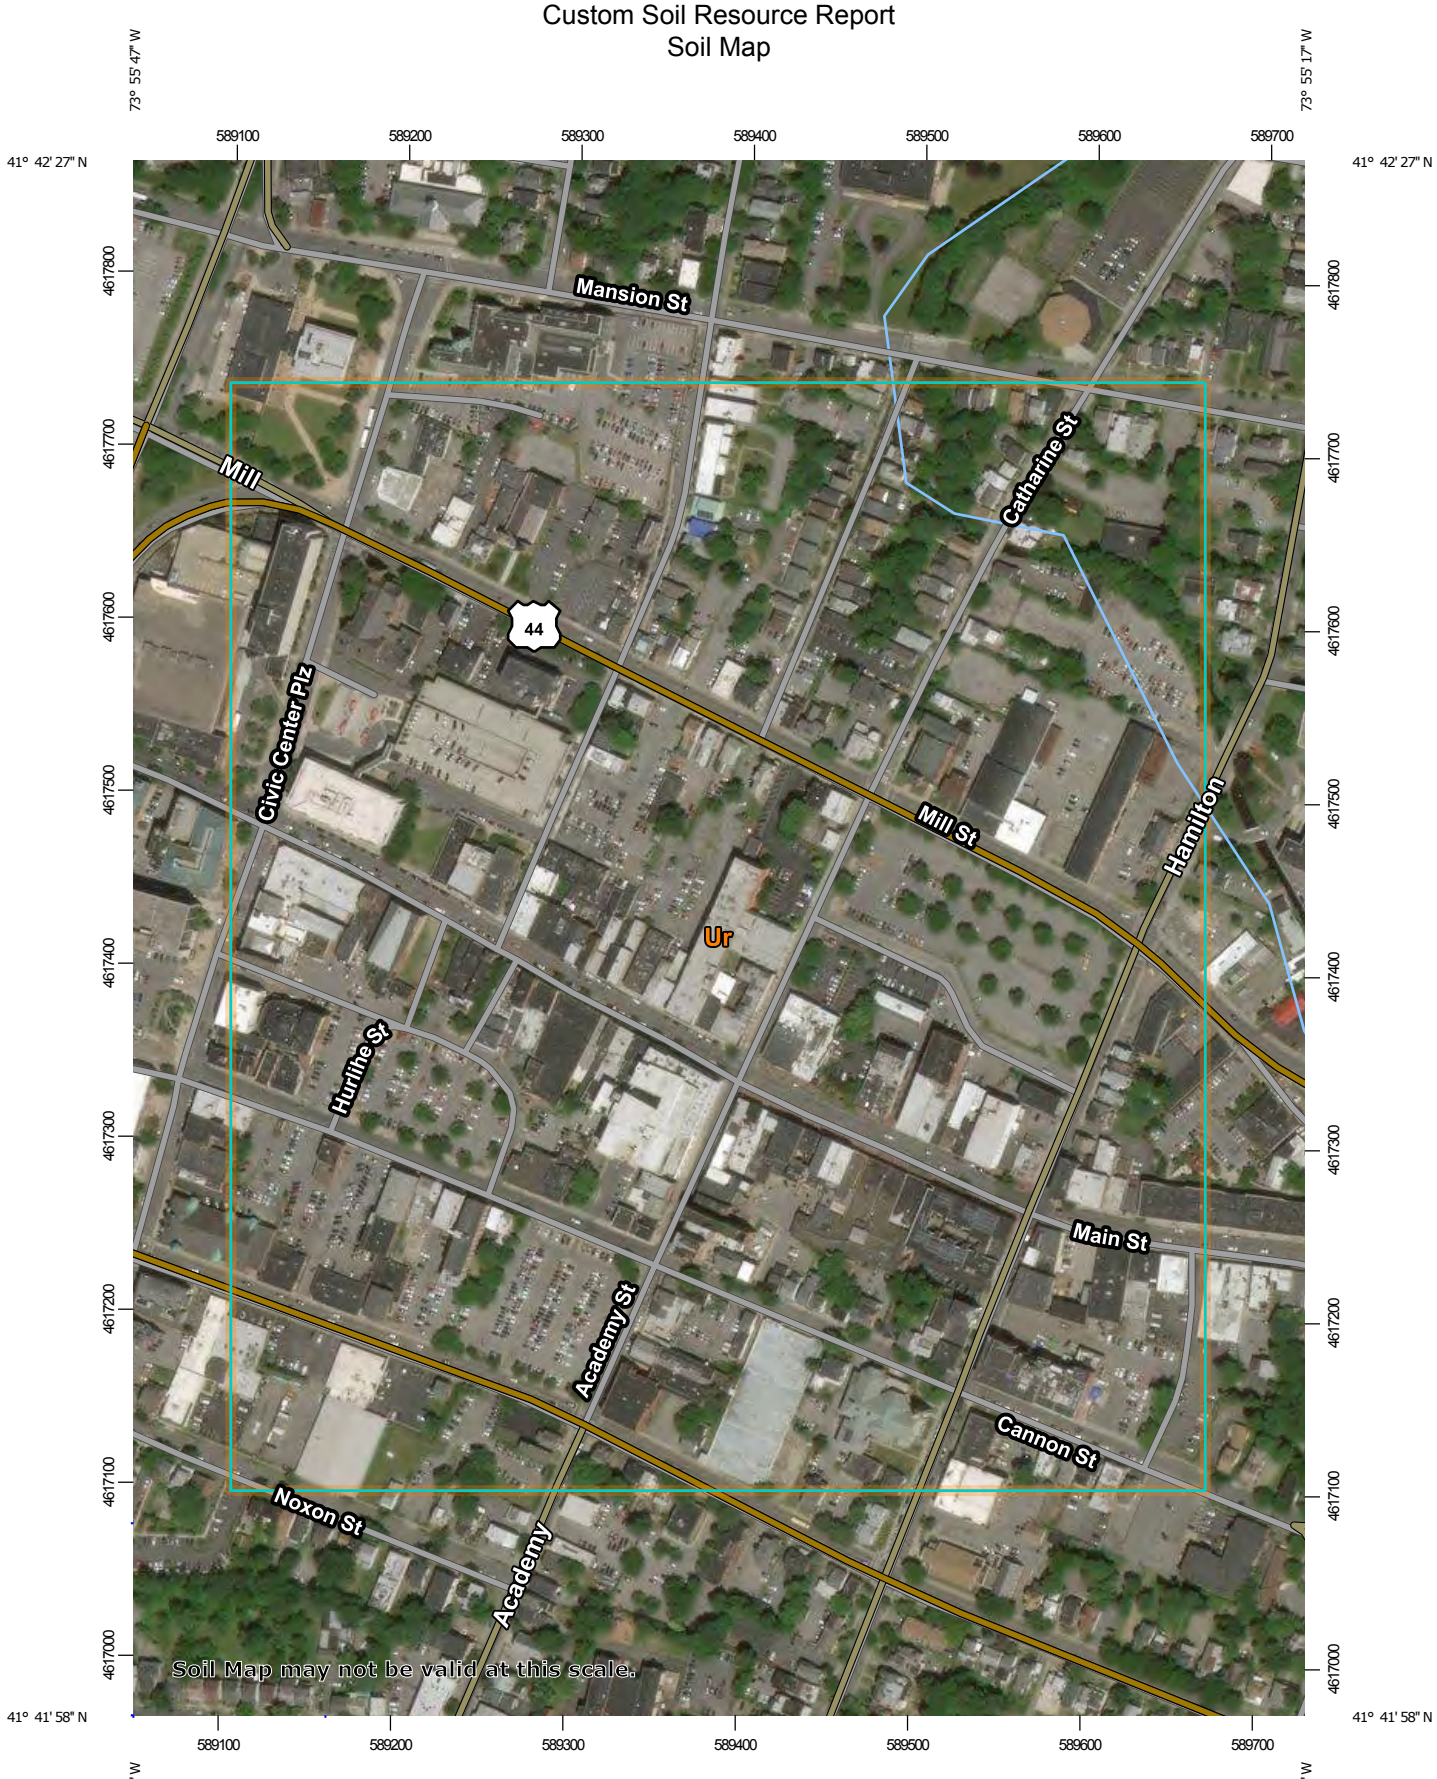
scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.



Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

# Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

## MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Dutchess County, New York
Survey Area Data: Version 17, Jun 11, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Oct 7, 2013—Feb 26, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

# Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

# Dutchess County, New York

## Ur—Urban land

### Map Unit Setting

*National map unit symbol:* 9rjb
*Mean annual precipitation:* 41 to 47 inches
*Mean annual air temperature:* 45 to 50 degrees F
*Frost-free period:* 115 to 195 days
*Farmland classification:* Not prime farmland

### Map Unit Composition

*Urban land:* 90 percent
*Minor components:* 10 percent
*Estimates are based on observations, descriptions, and transects of the mapunit.*

### Description of Urban Land

#### Typical profile

*H1 - 0 to 6 inches:* variable

#### Interpretive groups

*Land capability classification (irrigated):* None specified
*Land capability classification (nonirrigated):* 8s
*Hydric soil rating:* Unranked

### Minor Components

#### Udorthents, smoothed

*Percent of map unit:* 5 percent
*Hydric soil rating:* No

#### Udorthents, wet substratum

*Percent of map unit:* 3 percent
*Hydric soil rating:* No

#### Unnamed soils, undisturbed

*Percent of map unit:* 1 percent
*Hydric soil rating:* Unranked

#### Rock outcrop

*Percent of map unit:* 1 percent
*Hydric soil rating:* Unranked

Re: Wallace Campus Development
Mill Street & Main Street at Catharine Street
City of Poughkeepsie, Dutchess County, New York
MC Project No. 20003474A

Dear Mr. Kokinakis:

This report, originally submitted in November 2020, has been revised to reflect modifications to the proposed development plan for the proposed Wallace Campus Development, including the elimination of the proposed 7th story from the Catharine Street Building, the reduction in size and depth of the tiered seating area within the Wallace Green, enhancements to the pedestrian circulation throughout the site, and modifications to the parking layout and vehicle/pedestrian circulation through the parking area. Revisions have also been made in response to comments from the City of Poughkeepsie Planning Board, staff and consultants.

This report analyzes the parking, traffic and access related impacts of the Wallace Campus development. Elements of the report relating to parking include (1) a study of parking generation for all uses in the Project; (2) a Shared Parking Study which discusses the relationship of the Project Site with adjoining lots, the feasibility of shared parking, the overall parking demand of the project, including peak demands of the various uses, and the traffic load for all uses that might share spaces, and (3) a Study addressing the factors relating to a request for parking waivers and fee-in-lieu of parking, and discussing constraints of parking availability on the Project Site and the availability of sufficient parking in proximate municipal parking facilities.

## PROJECT DESCRIPTION

Wallace Campus is a proposed mixed-use development located on properties on the west side of Catharine Street between Mill Street (U.S. Route 44/NYS Route 55) and Main Street in the City of Poughkeepsie, Dutchess County, New York. The Site, which falls within the Poughkeepsie Innovation District Historic Core (PID-HC) and Urban Village (PID -UV) subdistricts, is currently underutilized and features large expanses of unused blacktopped parking. The former Wallace Department store at 331 Main Street, is proposed to remain and be adaptively repurposed. Proposed new buildings include a new 7-story building on Main Street ("the Main Street

Building") to the west of the Wallace building and a new 6-story building ("the Catharine Street Building"), reduced in height from the previously proposed 7-stories, fronting on Catharine Street immediately north of the 3-story portion of the 331 Main Street building ("the Wallace building extension).

The proposed development will consist of 214 mixed income affordable housing units, a 10,197 sq. ft. daycare facility, an approximately 29,000 sq. ft. community fitness center/climbing gym, 6,416 sq. ft of retail/commercial space and an approximately 1-acre privately owned, but publicly accessible green space ("Wallace Green"). The daycare facility is located within the Catharine Street Building and the retail/commercial space is split between the Wallace Building (3,085 sq. ft.) and the Main Street Building (3,331 sq. ft.). The Wallace Green will include an approximately 1,250 sq. ft. tiered seating area to be located at the south end of the Wallace Green (back of the 7-story Main Street Building). This seating area has been materially reduced in size in response to comments from the City consultants. It no longer extends a full story below grade and is no longer accompanied by backstage accommodations which were previously proposed within the basement of the Wallace Building. The overall size of the seating area and the number of tiers has also been reduced. The Wallace Green will be open seven days a week during daylight hours and is geared towards daily use by pedestrians in the area who live and/or work in downtown Poughkeepsie. The tiered seating, like other areas of the Green, will primarily be used as a sitting area and small gathering space for residents of the Wallace Campus project, and by Poughkeepsie residents and visitors who are enjoying the public park area during open hours. This smaller tiered seating area will also allow for occasional small performances and community gatherings, which could include spoken word poetry, dance and acoustic music performances. Any use of this space for events is clearly secondary to its primary function as a flexible and informal gathering space for residents and green space for visitors. Use of the seating areas for all purposes is also expected to be seasonal in view of its outdoor nature.

During the review process the layout of pedestrian and parking circulation has also been improved. The Site now includes the Wallace Green Walkway, which creates a full mid-block pedestrian connection between Main Street and Mill Street, arriving at Mill Street close to the intersection with Conklin. The parking areas within the Site now provide better internal circulation, with the cooperation in shared parking and circulation with four (4) adjoining parcels. The Wallace Campus development will be provided a total of 62 parking spaces. This overall parking count will include the parking spaces on lands outside the Wallace Campus consolidated parcel on the 302, 304, and 306 Mill Street lots and on the Hudson River Housing (HRH) lot (310 Mill Street), including 12 spaces that will be designated for the use of the 302, 304 and 306 Mill Street residential buildings as well as six (6) parking spaces located on the Wallace Campus property that will be designated for dedicated use as HRH employee parking Weekdays between the hours of 8 AM and 6 PM. The Shared Parking agreements among the property owners will also provide for easements to create a consolidation of ingress and egress to the Mill Street properties through the Wallace Campus, thus eliminating two existing driveway curb cuts to Mill Street and providing for additional greenspace and landscaping along the Mill Street frontage.

The following provides a detailed description of the existing and future parking conditions on and in the vicinity of the Site as well as a review of the proposed Site access conditions, on-site circulation and a review of potential traffic impacts.

## EXISTING PARKING CONDITIONS

PID Zoning provisions require consideration of features of the Project Site itself, as well as parking conditions on nearby properties, including municipal parking facilities in the area. In order to determine the existing parking conditions in the vicinity of the proposed development, the ***Poughkeepsie Downtown Parking Improvement Plan – Assessment of Existing Conditions and Demand***, prepared by Nelson Nygaard dated February 2018 was referenced. The current COVID-19 pandemic has resulted in significant variations in traffic and parking conditions and any observations conducted under current conditions would not be considered representative of typical conditions. Therefore, the Poughkeepsie Downtown Parking Improvement Plan is the best source of available parking utilization and capacity data for the vicinity of the Site at this time. Note that the proposed parking study area includes all publicly available parking as required by the City Code in Section 19-3.37.(13).(f).

A review of this study and the available public parking in the vicinity of the Site indicates the following:

- There are four (4) public pay parking lots located within a 600 ft. radius of the Site totaling 980 parking spaces. These lots include:
  - Crannell surface parking lot located along Mill Street between Catharine Street and N. Hamilton Street – 340 parking spaces
  - Garden Street surface parking lot located immediately west of the Wallace Campus & 302 Mill Street properties – 90 parking spaces
  - Financial Plaza Parking Garage – 550 parking spaces (access to this parking garage is provided via Civic Center Plaza and Garden Street)
  - Conklin Street surface parking lot located opposite the 302 Mill Street property (north side of Mill Street) – 32 parking spaces.
- On-street metered, and free parking is also available within a 600 ft. radius of the Site totaling 130 parking spaces. These on-street parking areas include
  - Main Street on-street parking – 101 metered pay parking spaces Monday to Friday 8AM-6PM plus 3 additional short-term free parking spaces.

Based on the above there are a total of approximately 1,116 public pay and limited short term free parking spaces within a 600 ft. radius of the Site. Additional on-street parking is also available along Catharine Street north of Mill Street and south of Mill Street, along Conklin Street and along Garden Street totaling approximately 29 additional parking spaces, however due to the sporadic locations and the limited availability of these spaces as indicated and Poughkeepsie Downtown Parking Improvement Plan study, these 29 spaces have not been considered in the parking analysis.

A further review of the Poughkeepsie Downtown Parking Improvement Plan study provides additional information relative to the parking utilization for the public parking in the vicinity of the Site. Below is a table summarizing the parking utilization rates for each of the identified parking areas based on the Poughkeepsie Downtown Parking Improvement Plan study.

**TABLE NO. 1**
**EXISTING PARKING UTILZIATION RANGE**
**WITHIN 600 FT. OF WALLACE CAMPUS DEVELOPMENT**

| PARKING LOT | PERCENTAGE PARKING UTILIZATION | | | | |
|---|---|---|---|---|---|
| | WEEKDAY | | | WEEKEND | |
| | 10AM – 12PM | 12PM – 2PM | 6PM – 8PM | 12PM – 2PM | 6PM – 8PM |
| **OFF-STREET PUBLIC PARKING SURFACE LOTS AND GARAGES** | | | | | |
| CRANNELL LOT | 0-30% | 0-30% | 0-30% | 0-30% | 0-30% |
| GARDEN STREET LOT | 30-60% | 30-60% | 0-30% | 0-30% | 0-30% |
| FINANCIAL PLAZA GARAGE | 60-80% | 60-80% | 0-30% | 0-30% | 0-30% |
| CONKLIN STREET LOT | 0-30% | 0-30% | 0-30% | 0-30% | 0-30% |
| **ON-STREET PARKING** | | | | | |
| MAIN STREET | 60-80% | 60-80% | 60-80% | 80-90% | 80-90% |

Utilizing the higher end of the range of parking utilization for each of the above lots during each time period, the below table summarizes the assumed occupied parking spaces during each time period and the total available parking spaces within 600 ft. of the proposed development. It should be noted that a portion the Crannell lot is proposed to be developed by the proposed Crannell Square development. This development will reduce the overall parking supply of this lot by approximately 162 parking spaces from 340 total spaces to 178± parking spaces. Furthermore, the Crannell Square development will include 30 parking spaces for the exclusive use of residents of that development, however the required parking for that development is a total of 45 spaces per the April 18, 2019 letter submitted by CPL to the Planning Board. This letter requested a waiver of 15 spaces for the Crannell Square development, which would need to be accommodated within the available public parking in the area. To account for this, it is assumed that the available parking in the reduced Crannell lot would accommodate these 15 spaces, which would further reduce the future available parking supply within the Crannell lot.

**TABLE NO. 2**
**EXISTING PARKING UTILZIATION**
**WITHIN 600 FT. OF WALLACE CAMPUS DEVELOPMENT**

| PARKING LOT | TOTAL PARKING SPACES | OCCUPIED PARKING SPACES | | | | |
|---|---|---|---|---|---|---|
| | | WEEKDAY | | | WEEKEND | |
| | | 10AM – 12PM | 12PM – 2PM | 6PM – 8PM | 12PM – 2PM | 6PM – 8PM |
| **OFF-STREET PUBLIC PARKING SURFACE LOTS AND GARAGES** | | | | | | |
| CRANNELL LOT[1] | 178 | 117 | 117 | 117 | 117 | 117 |

| TOTAL OCCUPIED PARKING SPACES | | 702 | 702 | 394 | 404 | 404 |
| TOTAL AVAILABLE PARKING SPACES | | 249 | 249 | 557 | 547 | 547 |

**NOTE:**
1) CRANNELL LOT CALCULATION OF OCCUPIED SPACES IS BASED ON 30% OCCUPANCY OF EXISTING 340 SPACE LOT DURING EACH TIME PERIOD PER THE POUGHKEEPSIE DOWNTOWN PARKING IMPROVEMENT PLAN WHICH EQUALS 102 SPACES. 15 SPACES ARE THEN ASSUMED TO ALSO BE OCCUPIED FOR THE EXCESS PARKING TO BE ACCMMODATED FOR THE PROPSED CANNELL SQUARE DEVELOPMENT.

It should be noted that utilizing the available data from the Poughkeepsie Downtown Parking Improvement Plan study, as indicated above, the peak parking utilization for the 600 ft. radius area around the Site is approximately 62%. However, the Poughkeepsie Downtown Parking Improvement Plan study indicates that the peak parking utilization for the overall study area for that study is between 50%-55%. Therefore, it is our opinion that the total available parking spaces identified above are somewhat conservative and account for increases in parking demand since the time of that study as well as additional occupancies of unoccupied spaces that may have occurred since the data was collected in 2017/2018.

## PROPOSED DEVELOPMENT PARKING DEMAND

The Poughkeepsie Innovation District (PID) rezoning outlines parking requirements for residential and commercial developments. The PID zoning also recognizes the availability of underutilized surplus parking in the PID downtown area. Table No. 3 below identifies the required parking per the City of Poughkeepsie Zoning requirements for the PID Zone (Section 19-3.37.(13)) for the Wallace Campus development. It is noted that the City Code does not provide parking standards for the Daycare or Community Fitness Center/Climbing Gym uses within the PID Zone, therefore the below table identifies recommended parking requirements based on other available data, which is discussed further below.

**TABLE NO. 3**
**CODE REQUIRED PARKING SUMMARY**

| BUILDING | PROPOSED USES | SIZE | ZONE | CODE REQUIRED PARKING RATIO | REQUIRED SPACES |
|---|---|---|---|---|---|
| MAIN STREET BUILDING | RESIDENTIAL (87 UNITS TOTAL) | 23 UNITS | PID-HC | 0 SPACES/UNIT | 0 |
| | | 64 UNITS | PID-UV | 0.5 SPACES/UNIT | 32 |
| | | | | 1 VISITOR SPACE/10 UNITS | 7 |
| | RETAIL | 3,331 SQ. FT. | PID-UV | 0 SPACES/SQ. FT. | 0 |
| CATHARINE STREET BUILDING | RESIDENTIAL | 60 UNITS | PID-HC | 0 SPACES/UNIT | 0 |
| | DAYCARE | 10,197 SQ. FT/ 7 CLASSROOMS. | | 1 SPACE PER CLASSROOM (1) | 7 |
| WALLACE BUILDING | RESIDENTIAL | 67 UNITS | PID-HC | 0 SPACES/UNIT | 0 |
| | RETAIL | 3,085 SQ. FT. | | 0 SPACES/SQ. FT. | 0 |
| | FITNESS CENTER | 29,000 SQ. FT. | | 0.96 SPACES/1,000 SQ. FT. (1) | 28 |
| | | | | **TOTAL** | **74** |

**NOTES:**
1) THE CITY OF POUGHKEEPSIE ZONING CODE DOES NOT IDENTIFY SPECIFIC PARKING REQUIREMENTS FOR DAYCARE AND FITNESS CENTER USES WITHIN THE PID-HC ZONE. PARKING NEEDS FOR THESE USES ARE DISCUSSED FURTHER BELOW.

As indicated above, the City of Poughkeepsie Zoning Code does not identify specific parking space requirements for the Daycare or Community Fitness Center/Climbing Gym within the PID Zone. For these uses an appropriate parking demand requirement is to be determined by the Planning Board during the Site Plan review. As part of our parking analysis we provide the following information related to the determination of appropriate parking requirements for these uses.

- ***Daycare:*** It is noted that the City of Poughkeepsie Zoning Code General Parking Standards (Section 19-4.3) does identify a parking requirement for Daycare uses under the general zoning standards which requires one (1) space per daycare staff member and one (1) space per classroom. The daycare will provide seven (7) classrooms, however since the operator of this facility is not currently known, the number of employees cannot be determined, however it is anticipated that a minimum of one employee per classroom would be required, which would equate to a minimum of 14 parking spaces required for the facility based on the City's general parking standards. However, these general parking standards for daycare uses it do not account for the characteristics of the PID zone in which personal vehicle usage is known to be lower than other areas of the City. Based on information provided in the ***Poughkeepsie Downtown Parking Improvement Plan – Analysis of Further Parking Demand*** prepared by Nelson Nygaard dated April 2018 a 30% internal capture credit was identified Poughkeepsie Downtown area. Furthermore, a multi-modal trip credit of 35% was identified based on census data which indicates that 37% of households within the study area do not have access to a personal vehicle. If these same credits were applied to the City's general parking standards for a daycare use in order to account for internal capture and multi-modal use within the PID zone the total parking demand would be reduced to 7 parking spaces.

  Furthermore, data published by Institute of Transportation Engineers (ITE) in their publication entitled ***Parking Generation Manual***, 5th Edition dated January 2019. provides parking data for daycare facilities in Dense Multi-Use Urban areas similar to the site location area. The ITE data identifies a parking ratio of 1.18 spaces per 1,000 sq. ft. equating to 13 parking spaces for the daycare facility. Applying similar credits for internal capture and multi-modal use within the PID Zone, the total parking demand would be reduced to 6 parking spaces. Based on this information, it is the opinion of Maser Consulting that a parking requirement of 1 space per classroom equating to seven total spaces for the proposed daycare is appropriate for use in determining the overall parking requirements for the Wallace Campus development, given the Site's location.

- ***Community Fitness Center/Climbing Gym:*** The City of Poughkeepsie Zoning Code General Parking Standard does not provide parking requirements for this use. The nearest use in the Zoning Code is for indoor/outdoor tennis facilities and racquet facilities/similar court games, however these do not accurately represent the proposed community fitness center/climbing gym use. Therefore, ITE data was referenced in order to identify an appropriate parking supply ratio for the proposed Community Fitness Center/Climbing Gym. Based on a review of the ITE data and the anticipated proposed use of the space, it is the opinion of Maser Consulting that ITE Land Use Category – 495 – Community Recreational Center provides the data most comparable to the proposed use.

  This use identifies an average parking demand ratio of 2.07 spaces per 1,000 sq. ft., which would equate to 60 required parking spaces. However, the ITE data is for a General Urban/Suburban location, which is not typically representative of the downtown urban location of the proposed Wallace Campus development. Therefore, utilizing the same

internal capture and multi-modal trip credits as identified in the Nelson Nygaard study, the total parking demand for this use would be reduced to 28 parking spaces or 0.97 spaces per 1,000 sq. ft. It should be noted that this reduced parking ratio for this use is further supported by the anticipated usage of the Community Fitness Center/Climbing Gym facility by the residents of the Wallace Campus development who will be permitted access to the facility for a reduced fee compared with the general public.

It should also be noted that the Zoning Code does not attribute a parking demand to publicly accessible private Greenspace such as the Wallace Green or to seating areas within such a passive space. Based on the anticipated use of this space as a passive park, it is the opinion of Maser Consulting that this space will not generate any additional parking demand, but rather will draw people who are already within the proposed development and immediate surrounding neighborhood to utilize the space.

**SHARED PARKING ANALYSIS**

Part of the project proposal includes upgrading the parking areas, which have been located on the property for many years and consolidating access points along the Mill Street frontage. Both purposes are served by proposals for shared parking with four (4) immediately abutting lots. These shared parking agreements, in addition to providing for shared parking, allow the consolidating of entry points from Mill Street for the 302, 304 & 306 Mill Street parcels, and eliminating two narrow driveway curb cuts, creating better access through existing larger driveways allowing safe access to on-site parking. The three Mill Street parcels require 12 parking spaces, as determined in the 2020 Site Plan approvals for those parcels and associated Shared Parking agreement among the three parcels to allow tenants of any of the buildings to park in any of the spaces provided. The 12 required parking spaces for the 302, 304 and 306 Mill Street residential uses are proposed to become part of the Wallace Campus parking lot through a shared parking agreement and easements, which provides better overall circulation and access to the parking spaces. The consolidation of the entrances on Mill Street allows the driveways from Mill Street to the 302, 304 & 306 Mill Street properties to also return to grassed/landscaped area. Together with the 74 parking spaces required for the Wallace Campus development, as identified in Table No. 3 above, the total parking demand for the proposed development and the 302, 304 and 306 Mill Street properties is 86 parking spaces.

The Shared Parking agreement with the adjacent HRH property substantially improves the conditions for the HRH parcel. This lot presently has no legal access to parking in the rear of the lot, and the rear of the lot is not conducive to efficient parking layout. The Shared Parking/Access agreement with Wallace Campus Manager LLC will provide HRH with lawful access to the rear of its property and to and from Mill Street through the Wallace Campus Drives. The Wallace consolidated lot will provide HRH with six (6) reserved parking spaces on the Wallace Property during weekday office hours only (8 AM to 6 PM) for employee and client parking. These spaces would be available to Wallace Campus residents and visitors for parking outside these hours. The total parking demand for the development during these office hours is 92 parking spaces.

The City of Poughkeepsie PID Zoning provisions also allow for a reduction of these parking requirements by up to 40% based on a joint use of parking between or among participants in the shared parking arrangement located within 600 feet of each other, when the Planning Board, in its sole discretion, determines that the shared use of the parking will be in the best interest and welfare of the City and its residents. Section 19-3.37 (13) (f) provides that off-street parking requirements may be met with off-site, shared off-street parking or on-site parking shared by more than one tenant.

In order to identify the potential for shared parking amongst the proposed uses on the Site and the adjoining lots, a shared parking analysis was conducted based on data provided by the Institute of Transportation Engineers (ITE) in their publication entitled ***Parking Generation Manual***, 5th Edition dated January 2019 as well as the Urban Land Institutes publication entitled ***Shared Parking***, 3rd Edition dated 2020. This analysis utilizes the City of Poughkeepsie Code parking requirements as well as those identified for the Daycare and Community Fitness Center/Climbing Gym as identified in Table No. 3 above. The ITE and ULI data was then utilized to determine hourly variations in parking utilization for each of the proposed uses in order to generate an overall hourly parking demand for the development. This shared parking analysis is summarized below in Table No. 4 for a typical Weekday and Table No. 5 for a Weekend.

The shared parking analysis identified in Tables No. 4 and 5 below provides that the 12 parking spaces for the 302, 304 and 306 Mill Street properties are fully reserved for those properties and therefore cannot be utilized for shared parking. Similarly, the 6 reserved spaces for the HRH property are assumed to be fully occupied during the hours of 8 AM to 6 PM on Weekdays and therefore not utilized for shared parking during these hours. Finally, the two reserved Daycare drop-off/pick-up spaces are assumed to be fully occupied during the hours of 6 AM and 8 PM on Weekdays and therefore are not available for shared parking during these hours. In addition, it assumed that these 2 spaces are required for the daycare use in addition to the 7 spaces identified to be required for the daycare in Table No. 3 above.

| 11:00-12:00 | 97 | 38 | 0 | 0 | 10 | 0 | 0 | 0 | 100 | 12 | 0 | 0 | 50 |
| | | | | | | | | | | | PEAK PARKING DEMAND | | 80 |

NOTES:

1) DEMAND FACTORS AND HOURLY DEMAND DISTRIBUTIONS ARE BASED ON CITY OF POUGHKEEPSIE CODE REQUIREMNTS AND DATA PROVIDED BY THE INSTITUTE OF TRANSPORTATION ENGINEERS (ITE) IN THEIR PUBLICATION ENTITLED PARKING GENERATION MANUAL, 5TH EDITION DATED JANUARY 2019 AS WELL AS THE URBAN LAND INSTITUTES PUBLICATION ENTITLED SHARED PARKING, 3RD EDITION DATED

2) THE DAYCARE CENTER PARKING INCLUDES TWO (2) RESERVED DROP-OFF/PICK-UP PARKING SPACES THAT WILL BE EXLUSIVELY FOR THE DAYCARE USE DURING WEEKDAYS (6AM TO 8PM) AND THEREFORE WILL NOT BE AVAILABLE FOR SHARED PARKING. THESE TWO (2) SPACES HAVE BEEN ADDED TO THE HOURLY REQUIRED PARKING DEMAND FOR THE DAYCARE IN THE ABOVE TABLE AND ARE ASSUMED TO BE IN ADDITION TO THE SEVEN SPACES REQUIRED FOR THIS USE AS IDENTIFIED IN TABLE NO. 3.

3) THE MILL STREET PROPERTIES WILL BE PROVIDED 12 RESERVED PARKING SPACES WITHIN THE WALLACE CAMPUS PARKING AREA. THESE 12 SPACES HAVE BEEN ASSUMED TO BE OCCUPIED AT ALL TIMES DURING THE DAY AND THEREFORE WILL NOT BE AVAILABLE FOR SHARED PARKING. SIMILARLY THE HUDSON RIVER HOUSING PROPERTY WILL BE PROVIDED SIX (6) RESERVED PARKING SPACES DURING WEEKDAY OFFICE HOURS (8AM TO 6PM) EXLCUSIVELY FOR EMPLOYEE AND CLIENT PARKING. THESE 6 PARKING SPACES HAVE BEEN ASSUMED TO BE OCCUPIED AT ALL TIMES DURING THESE WEEDKAY HOURS AND THEREFORE NOT AVAILABLE FOR SHARED PARKING DURING THESE TIMES.

| 11:00-12:00 | 90 | 36 | 0 | 0 | 15 | 0 | 0 | 0 | 100 | 12 | 0 | 0 | 48 |
| | | | | | | | | | | | PEAK PARKING DEMAND | | 70 |

NOTES:

1) DEMAND FACTORS AND HOURLY DEMAND DISTRIBUTIONS ARE BASED ON CITY OF POUGHKEEPSIE CODE REQUIREMNTS AND DATA PROVIDED BY THE INSTITUTE OF TRANSPORTATION ENGINEERS (ITE) IN THEIR PUBLICATION ENTITLED PARKING GENERATION MANUAL, 5TH EDITION DATED JANUARY 2019 AS WELL AS THE URBAN LAND INSTITUTES PUBLICATION ENTITLED SHARED PARKING, 3RD EDITION DATED

2) THE DAYCARE CENTER AS ASSUMED TO CLOSED DURING THE WEEKEND AND THEREFORE DOES NOT GENERATE ANY PARKING DEMAND.

3) THE MILL STREET PROPERTIES WILL BE PROVIDED 12 RESERVED PARKING SPACES WITHIN THE WALLACE CAMPUS PARKING AREA. THESE 12 SPACES HAVE BEEN ASSUMED TO BE OCCUPIED AT ALL TIMES DURING THE DAY AND THEREFORE WILL NOT BE AVAILABLE FOR SHARED PARKING. THE HUDSON RIVER HOUSING PROPERTY WILL ONLY BE PROVIDED SIX (6) RESERVED PARKING SPACES DURING WEEKDAY OFFICE HOURS (8AM TO 6PM) SINCE THIS SPACE IS CLOSED ON WEEKENDS, THEREFORE THESE 6 PARKING SPACES HAVE BEEN ASSUMED TO BE AVAILABLE FOR SHARED PARKING DURING THE WEEEKEND

1/28/2021

JOB NO. 20003474A

As identified by the shared parking analysis summarized in Tables No. 4 and 5 above and based on the zoning parking requirements for the Poughkeepsie Innovation District zone and the additional parking requirements for the Daycare and Community Fitness Center/Climbing Gym, the total parking demand for the development is reduced to 80 parking spaces on a Weekday and 70 parking spaces on a Weekend. These totals include those spaces reserved for the 302, 304, and 306 Mill Street properties, the HRH property and the reserved daycare drop-off spaces. Including these reserved spaces, the Wallace Campus Site proposes to provide 62 parking spaces, which leaves 18 parking spaces that would need to be accommodated by public parking in the vicinity of the Site under the waiver with fee-in-lieu provision of the PID Zoning District, Section 19-3.37 (13), (e).

The study has considered the constraints that prohibit the landowner from providing required parking on-site. The ability to locate parking on the site has been optimized by the arrangements and parking layout in cooperation with the Shared Parking agreement participants of the adjoining parcels. It has also considered the proximity of municipal parking facilities and the availability of sufficient parking in the identified municipal parking facilities. Based on the above analysis, Table No. 6 below provides a comparison of the peak parking demand of the development to the available parking spaces throughout the course of the day. This comparison indicates that there is sufficient public parking supply within 600 ft. of the site to accommodate the excess parking of the Wallace Campus development.

**TABLE NO. 6**
**EXISTING AND PROPOSED PUBLIC PARKING SUPPLY**
**WITHIN 600 FT. OF WALLACE CAMPUS DEVELOPMENT**

| TIME PERIOD | AVAILABLE PUBLIC PARKING SPACES | DEVELOPMENT PEAK PARKING DEMAND | AVAILABLE ON-SITE GENERAL USE PARKING SPACES | PARKING DEMAND TO BE ACCOMMODATED BY AREA PUBLIC PARKING | REMAINING AVAILABLE PUBLIC PARKING SPACES |
|---|---|---|---|---|---|
| **WEEKDAY** | | | | | |
| **10AM – 12PM** | 249 | 80 | 62 | 18 | 231 |
| **12PM – 2PM** | 249 | 71 | 62 | 9 | 240 |
| **6PM – 8PM** | 557 | 75 | 62 | 13 | 544 |
| **WEEKEND** | | | | | |
| **12PM – 2PM** | 547 | 60 | 62 | --- | 547 |
| **6PM – 8PM** | 547 | 48 | 62 | --- | 547 |

It should be noted that parking is prohibited along both sides of Catherine Street between Mill Street and Main Street. However, a review of the existing signing along Catherine Street indicates that there is limited signing indicating that parking is prohibited. In fact, the first No Parking sign on the west side of Catherine Street is located approximately 250 south of Mill Street. On the east side of Catherine Street, the only No Parking sign is posted approximately 340 feet south of Mill Street. Since the proposed development is anticipated to generate additional parking demand in this area the installation of additional No Parking signs along both sides of the roadway should be considered to reinforce the parking prohibition along this roadway.

***Consideration of Tiered Seating Area Public Performances/Community Gatherings***

As previously indicated Wallace Green will also include an approximately 1,250 sq. ft. tiered seating area to be located at the south end of the Wallace Green (back of the 7-story Main Street Building). This seating area has been materially reduced in size in response to comments from the City consultants. It no longer extends a full story below grade and is no longer accompanied by backstage accommodations within the basement of the Main Street Building. The overall size of the seating area and the number of seating tiers has also been reduced. In general, the Wallace Green and seating area will be open to the public seven days a week during daylight hours and is geared towards daily use by people who live and/or work in downtown Poughkeepsie as an area for socializing, an outdoor eating area and other related activities typical of a passive park. The outdoor primary function of the tiered seating will be as a sitting area and small gathering space for Poughkeepsie residents and visitors who are enjoying the Wallace Green during open hours. As indicated previously, under typical conditions it is not anticipated that the Wallace Green will generate additional parking demand.

As a secondary function, the tiered seating area will also allow for a small performance area to be used occasionally for small performances and community gatherings, which could include spoken word poetry, dance and acoustic musical performances. These performances and gatherings, which are anticipated to be short duration (approximately 1-2 hours), would typically be expected to occur seasonally (during warmer months) on Weekday evenings or Weekends. Considering the planned local advertising of these performances/gatherings, it is anticipated that a significant portion of the attendees will be attracted from the surrounding area and will arrive via non-vehicular means of transportation.

In order to determine a peak parking demand associated with the occasional events at the tiered seating area, ITE data for Land Use Category 441 – Live Theater was referenced, which includes outdoor theaters. It should be noted that this is the most comparable use for which data is available, but that the proposed space will not contain facilities that are typical of a live theater as categorized by ITE including a backstage area, dressing rooms and individual seats and therefore, this category provides a very conservative analysis of peak parking demand associated with these events. Typical comfortable seating space for attendees in this type of setting is between 10 and 15 sq. ft. per person. Assuming the lower end of this range the 1,250 sq. ft. seating area could accommodate approximately 125 persons. While it is anticipated that many of these performances or gatherings would attract a much lower number of attendees, for the purposes of determining a potential parking demand, the maximum anticipated occupancy has been analyzed. Based on the ITE data,

a performance or community gathering attended by 125 persons would require approximately 48 parking spaces.

As indicated above, during the Weekday evening and Weekend time periods when it is anticipated that these events would occur, there are in excess of 500 available parking spaces in the vicinity of the Site, which would be able to accommodate the parking demand for these short duration events. Furthermore, it is expected that similar internal capture and multi-modal trip credits can be expected to attend these events based on the anticipated attendance by people in the Downtown Poughkeepsie area. This would further reduce the required parking demand for these events to approximately 22 parking spaces. It is the opinion of Maser Consulting that based on the seasonality and infrequency of these events, the short duration, the anticipated local attendance requiring less reliance on personal vehicles and the surplus of parking available in the area during the times of these events, that these events will not create any additional parking impact and that these events should not be considered as part of the overall parking requirements of the Wallace Campus development.

**REVIEW OF TRAFFIC IMPACTS, SITE ACCESS AND INTERNAL CIRCULATION**

In addition to the detailed parking analysis discussed above, Maser Consulting has also conducted a review of the interface of the Site with the surrounding road system, and potential impacts relating to access to the Site along the Mill Street arterial, as well as issues relating to internal circulation on the Site. The subject property is currently accessed via two long existing driveway connections to Mill Street (U.S. Route 44/NYS Route 55). Under current conditions these two driveways are not connected internally, however as part of the proposed development these driveways will be connected by an internal parking area providing for internal circulation between the driveways.

Mill Street, which is also known as U.S. Route 44/NYS Route 55, is a three-lane roadway that accommodates only westbound traffic in the vicinity of the Site. The roadway is under the jurisdiction of the New York State Department of Transportation (NYSDOT). Any modifications to the proposed driveways including, repaving, signing, striping and concrete sidewalk modifications along the Mill Street Site frontage will require a Highway Work Permit to be obtained from the NYSDOT. This also includes any work within the NYSDOT Right-of-Way associated with the closure of the existing driveways to 302, 304 and 306 Mill Street. It should be noted that the consolidation of driveways to Mill Street associated with these properties and the Wallace Campus property is considered a benefit of the project as it ultimately reduces vehicle conflicts associated with entering and exiting movements to and from Mill Street resulting in more efficient and safer traffic flow in this area of Mill Street.

***Development Traffic Generation & Traffic Related Impacts***

Estimates of the amount of traffic to be generated by the proposed Wallace Campus development during each of the peak hours were developed based on information published by the Institute of Transportation Engineers (ITE) as contained in the report entitled ***Trip Generation***, 10th Edition, 2017, based on Land Use Categories; 223 - Affordable Housing; 434 - Rock Climbing Gym; 411 - Public Park; 565 - Day Care Center and; 820 - Retail. It should be noted that where applicable ITE data For Dense Multi-Use Urban Locations was referenced to reflect traffic generation rates commensurate with the downtown location of the proposed development.

Similar to the parking analysis discussed above, based on information provided in the ***Poughkeepsie Downtown Parking Improvement Plan – Analysis of Further Parking Demand*** prepared by Nelson Nygaard dated April 2018 a 30% internal capture percentage was applied for each of the land uses to account for the existing and proposed land use mix in the area as well as within the proposed development. Furthermore, a multi-modal trip credit of 35% was applied to each of the land uses based on census data, which indicates that 37% of households within the study area do not have access to a personal vehicle. The resulting Site Generated External Vehicle Traffic Volumes are summarized in Table No. 7 below for the Weekday Peak AM, Weekday Peak PM and Saturday Peak Hours.

**TABLE NO. 7**

| PEAK AM HOUR | - | - | 72 | - | - | 58 |
| PEAK PM HOUR | - | - | 71 | - | - | 63 |
| SATURDAY PEAK HOUR | - | - | 54 | - | - | 56 |

NOTES:

1) THE HOURLY TRIP GENERATION RATES (HTGR) ARE BASED ON DATA PUBLISHED BY THE INSTITUTE OF TRANSPORTATION ENGINEERS (ITE) AS CONTAINED IN THE TRIP GENERATION HANDBOOK, 10TH EDITION, 2017. ITE LAND USE CODE - 223 - AFFORDABLE HOUSING, ITE LAND USE CODE - 434 - ROCK CLIMBING GYM, ITE LAND USE CODE - 411 - PUBLIC PARK, ITE LAND USE CODE - 565 - DAY CARE CENTER AND ITE LAND USE CODE - 820 - RETAIL. NOTE WHERE APPLICABLE DATA ITE DATA FOR DENSE MULTI-USE URBAN LOCATIONS WAS REFERENCED. THE DAYCARE USE IS PROPOSED TO BE OPERATIONAL MONDAY THROUGH FRIDAY ONLY, THEREFORE NO TRAFFIC GENERATION HAS BEEN ASSUMED FOR THIS USE ON SATURDAY.

2) "EXTERNAL VEHICL TRIPS" INCLUDE A 30% INTERNAL CAPTURE TRIP CREDIT FOR ALL LAND USES AS WELL AS A 35% MULTI-MODAL TRIP CREDIT TO ACCOUNT FOR INTERNAL TRIPS WITHIN THE DEVELOPMENT AND BETWEEN THE DEVELOPMENT AND OTHER NEARBAY USES AS WELL AS NON-PERSONAL VEHICLE TRIPS TO THE SITE. THESE CREDITS ARE BASED ON DATA PROVIDED IN THE POUGHKEEPSIE DOWNTOWN PARKING IMPROVEMENT PLAN - ANALYSIS OF FUTURE PARKING DEMAND PREPARED BY NELSON NYGAARD DATED APRIL, 2018.

Based on the above traffic generation estimates the proposed development is expected to generate less than 100 entering vehicle trips during each of the peak hours analyzed and a portion will be attracted from the existing traffic stream along Mill Street as pass-by and/or diverted link trips. ITE and NYSDOT guidelines indicate that developments generating less than 100 entering vehicle trips will not result in a significant impact in surrounding area traffic impacts. It should also be noted that no credit has been taken for existing traffic generation of the existing buildings and/or possible occupancies of these spaces.

Furthermore, the above traffic generation estimates were compared to available traffic volume data for the Mill Street corridor in the vicinity of the Site obtained from the NYSDOT Traffic Data Viewer website (https://gis.dot.ny.gov/html5viewer/?viewer=tdv). The latest available traffic volume data for the Mill Street corridor is from 2015. This data was increased by a growth rate of 2.0% per year in order to project the volumes to the 2020 analysis period. Table No. 7 below summarizes the 2015 traffic volumes per the available NYSDOT data, the estimated 2020 traffic volumes and a comparison of the 2020 traffic volumes to the site generated traffic volumes during each of the peak hours.

**TABLE NO. 8**
**COMPARISON OF MILL STREET EXISTING TRAFFIC VOLUMES**
**TO TOTAL SITE GENERATED TRAFFIC VOLUMES**

| TIME PERIOD | 2015 NYSDOT TRAFFIC VOLUMES | 2020 ESTIMATED TRAFFIC VOLUMES | SITE GENERATED TRAFFIC ENTRY VOLUMES |
|---|---|---|---|
| AM PEAK HOUR (8AM -9AM) | 1,857 | 2,050 | 72 |
| PM PEAK HOUR (5PM – 6PM) | 1,670 | 1,843 | 71 |
| SATURDAY PEAK HOUR (12PM – 1PM) | 1,186 | 1,309 | 54 |

As indicated above, the proposed development generated traffic will not result in a significant increase in traffic volumes during any of the peak hours and equates to less than a 5% increase in traffic along Mill Street in the vicinity of the Site. This percentage increase in traffic volumes is not considered to be significant especially considering the three-lane configuration of Mill Street in the vicinity of the Site. This further supports the conclusion that the proposed development will not have a significant impact on traffic operations in the vicinity of the Site. It should also be noted that the Saturday background traffic volumes along Mill Street are significantly lower than during the Weekday commuter peak hours.

Furthermore, the performances/community gatherings planned for the tiered seating area within the Wallace Green are planned to occur outside to the peak hours of traffic in the area of the development and therefore are not anticipated to have a significant impact on traffic operations in the area. As previously indicated these events are proposed to be locally advertised events and thus a significant portion of the attendees are anticipated to arrive via non-vehicular means, which will further reduce the traffic associated with these events.

***Site Access and Internal Circulation***

The proposed Site Plans prepared by LRC Group have been revised since our initial report in November 2020, which made several recommendations to improve site access and internal circulation. In addition, further revisions have been made to the plans based on comments from the City and its Consultants. We have conducted a review of the latest site plans relative to site access and onsite circulation and note the following:

- The eastern Site access driveway has been modified to be an entry only access driveway with appropriate one-way signage as previously recommended. Furthermore, parking along both sides of this one-way drive is now proposed as 60-degree angled parking to further support the one-way nature of the driveway.
- The two-way nature of the western Site access driveway has been maintained. This will provide an alternate means of entry in the event that the eastern driveway is missed by entering vehicles and will also provide an alternate means of entry during the Daycare drop-off-and pick-up periods, which will minimize the possibility of any queuing out onto Mill Street.
- The two-way nature of the internal parking circulation roadway has also been maintained and provides full access to all parking areas within the Site.
- A dedicated daycare drop-off lane has been added to the eastern driveway eliminating the previously proposed striped daycare drop-off space. See further discussion of daycare drop-off/pick-up operations below.
- The two (2) dedicated daycare drop-off spaces are currently proposed to be signed as 15-minute drop-off spaces. It is our opinion that this time period is excessive and note necessary, and that these should be no more than 5-minute drop-off spaces to facilitate higher turnover of these spaces during the drop-off/pick-up periods and to ensure that these spaces are not used for visitors to other portions of the proposed development.
- Bicycle parking is planned to be provided on the Site per the requirements for long-term and sort term bicycle parking as specified in Table 3.37-6 of the City of Poughkeepsie Code (Section 19-3.37.(13).(h)).
- The tandem parking configuration previously proposed to accommodate parking for the Hudson River Housing property has been eliminated which also has facilitated inclusion of an improved pedestrian pathway between Mill Street and the Wallace Green as well as other portions of the development, and also allowed for improvements to the layout of the parking areas and on-site circulation in this area.

As previously indicated, the project will also enhance pedestrian connectivity between Mill Street and Main Street via the Wallace Green Walkway through the development. This walkway will provide a direct pedestrian connection between Mill Street and Main Street, providing direct access to Mill Street near Conklin Street. Mill Street provides connections to the Catharine Street/Mill Street intersection and to the Crannel Street public parking lot. Mill Street also provides pedestrian access to the west to Garden Street and to the Garden Street public parking lot. Additional pedestrian connectivity to the Garden Street public parking lot will also be provided via the onsite walkways with a gated fence between the Wallace Campus property and the Garden Street lot. These multiple options for pedestrian accommodations will improve overall pedestrian connectivity in and around the Site for both residents and visitors of the project as well as the general public who will be able to utilize these connections for passage between Mill Street and Main Street.

***Daycare Drop-Off /Pick-Up***

In addition to the above, we have also conducted a review of the Site Plans relative to the operation of the Daycare drop-off and pick-up operations. As indicated in Table No. 7 above, the Daycare facility is anticipated to generate approximately 28 vehicle trips to the Site during the AM and PM Peak Hours, which equates to approximately 1 vehicle every 2 minutes. Maser Consulting has conducted observations of other existing daycare facilities, one located in the Town of Yorktown, New York and a second located in Paramus, New Jersey. These observations indicated average typical daycare drop-off and pick-up times to be approximately 2-3 minutes per vehicle at the Yorktown, NY location and approximately 5-6 minutes per vehicle at the Paramus, NJ location. It is our experience that the time frame for the drop-off/pick-up of students is generally dependent on the specific daycare operations. For instance, the Yorktown, NY location observed by our office generally had daycare personnel meet all students at their vehicles and then escorting them into the facility, which allows for a quicker drop-off/pick-up operation. Although the operator of the daycare is not currently known at this time, it is reasonable to expect that the Owner can require that the daycare tenant facilitate the efficiency of drop-off/pick-up operations by providing the following:

- Daycare employees will be required to park offsite in the available public parking areas surrounding the Site increasing the likelihood of available parking spaces during the drop-off/pick-up periods.
- Staggering of daycare times by age group or class will help to spread out the arrival and departure times of students over the morning and afternoon periods and help to alleviate queuing concerns on the driveway related to the drop-off/pick-up operations.
- Students will be met at the designated pick-up/drop-off locations (i.e. parking space/drive aisle) by daycare teachers and escorted to the daycare facility to limit the need for parents to enter the daycare facility.
- If parents do need to enter the daycare facility during drop-off/pick-up times, they will not be permitted to use the drop off spaces, but will be instructed and directed by the daycare personnel to utilize other available parking onsite or in the surrounding area. This includes utilization of nearby public parking areas within approximately 400 ft. of the proposed

daycare facility, including the Garden Street Lot and the Crannell Lot, to further reducing potential queuing on the Site.

Furthermore, it is anticipated that a significant portion of the daycare students will be attending from the immediate surrounding area within walking distance of the Site and even from the residential properties within the Wallace Campus development, which will reduce the number of vehicles during the drop-off/pick-up periods, as compared to statistical norms. This is supported by discussions with other existing daycare facilities in the area, which have indicated that a majority of their families/students arrive either from the surrounding neighborhood, and thus walk to the facility, or arrive via the nearby Dutchess County bus transit hub.

Notably, the one-way entry only driveway pattern for the eastern driveway and the 24 ft. width of this driveway provide the ability for vehicles to bypass any queued vehicles waiting to drop-off/pick-up at the daycare. To further support this the Site plan has been modified to provide a dedicated striped daycare drop-off/pick-up lane. Furthermore, vehicles dropping off and picking up children at the daycare will be able to utilize any other free spaces on the proposed Site and surrounding area, in addition to the two (2) spaces designated for drop-off/pick-up. It should be noted that the proximity of Catherine Street to the daycare facility entrance may invite people to temporarily park on Catherine Street in order to drop-off or pick-up students at the daycare facility. The installation of additional No Parking signs along Catharine Street is recommended in order to reinforce the existing parking prohibition along the roadway.

Finally, there will be approximately 120 ft. between the daycare drop-off/pick-up area and the Mill Street intersection, which will be able to accommodate 4-5 queued vehicles before any queues impact Mill Street. Based on standard queuing theory concepts, calculations indicate that an average vehicle processing time of approximately 6 minutes per vehicle will result in a queue of 5 vehicles during peak drop-off and pick-up time periods (see attached queuing calculations). Therefore, in order to accommodate the daycare facility, the operator will need to ensure a student pick-up and arrival processing time of 6 minutes per vehicle or less. Staggering of student arrivals and departures, as recommended above will also help to minimize the queues on the driveway. Based on this information, in conjunction with the other items noted above as well as the expectation of a significant number of walking trips to the daycare, it is our opinion that the proposed development can accommodate the proposed daycare drop-off and pick-up without significant impact to Mill Street or to the on-site circulation.

## CONCLUSIONS

The proposed shared parking plan amongst the Wallace Campus Development, Hudson River Housing and the 302, 304 & 306 Mill Street parcels provides a benefit to each of these properties as well as the overall area. This shared parking plan allows for consolidation of driveways to Mill Street, improved access to parking to all involved properties, additional green space and most significantly much improved mid-block pedestrian access between Mill Street and Main Street. In consideration of these benefits, it is the opinion of Maser Consulting that the shared parking plan amongst the various properties should be approved by the City.

Based on the above analysis, and in consideration of the shared parking plan, the required parking for the proposed Wallace Campus development and adjoining parcels will exceed the proposed parking supply by 18 vehicles. The analysis demonstrates that these excess vehicles can be accommodated by the off-site public parking in the vicinity of the Site and therefore the Applicant is requesting a waiver be granted by the Planning Board for these excess parking spaces under the waiver with fee-in-lieu provision of the PID Zoning District, section 19-3.37 (13) (e).

In addition, the parking needs associated with the proposed occasional seasonal public performances and community gatherings at the tiered seating area within the Wallace Green can be accommodated during both the Weekday evening and Weekend periods, when there is anticipated to be in excess of 500 available public parking spaces in the vicinity of the Site, and there should be no additional parking demand attributed either to the Wallace Green passive park space or to the tiered seating.

Furthermore, the proposed development is not anticipated to have any significant traffic related impacts on the surrounding area intersections and with the recommended modifications to facilitate internal circulation and the Daycare drop-off/pick-up, there will not be any traffic related impacts associated with the proposed development.

As previously indicated, the proposed modifications to the two Site access driveway connections to Mill Street as well as the closure of the existing driveways to 302, 304 and 306 Mill Street will require a NYSDOT Highway Work Permit to be obtained prior to implementation of these modifications.

Very truly yours,

## DEMOLITION NOTES:

1. CONTRACTOR SHALL NOTIFY "DIG SAFELY NEW YORK" AT 1-800-962-7692 AT LEAST TWO FULL WORKING DAYS PRIOR TO COMMENCEMENT OF ANY WORK IN ACCORDANCE WITH UFPO CODE RULE 53, 16 NYCRR PART 753.
2. ANY ITEM THAT MAY CONFLICT WITH SITE DEVELOPMENT AND IS NOT IDENTIFIED ON THIS PLAN SHALL BE BROUGHT TO THE ATTENTION OF THE OWNER AND DESIGN ENGINEER AS SOON AS POSSIBLE.
3. ADDITIONAL UNDERGROUND FACILITIES MAY BE PRESENT WITHIN THE LIMITS OF THE PROPOSED WORK. THE CONTRACTOR SHALL CONTACT ANY AND ALL PERSONNEL RESPONSIBLE FOR DETERMINING THE LOCATIONS.
4. PRIOR TO DEMOLISHING ANY BUILDINGS/STRUCTURES, THE CONTRACTOR SHALL PERFORM A PRE-DEMOLITION SURVEY IN ACCORDANCE WITH STATE AND FEDERAL REGULATIONS. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS AND APPROVALS BY THE AUTHORITY HAVING JURISDICTION.
5. CONFORM TO APPLICABLE CODE FOR DEMOLITION OF STRUCTURES, SAFETY OF ADJACENT STRUCTURES, DUST CONTROL, RUNOFF CONTROL, AND HAULING, DISPOSAL AND STORAGE OF DEBRIS.
6. PROVIDE, ERECT, AND MAINTAIN TEMPORARY BARRIERS AND SECURITY DEVICES.
7. MAINTAIN EXISTING UTILITIES TO REMAIN IN SERVICE AND PROTECT THEM AGAINST DAMAGE DURING SELECTIVE DEMOLITION OPERATIONS. DO NOT INTERRUPT EXISTING UTILITIES SERVING OPERATING FACILITIES, EXCEPT WHEN AUTHORIZED IN WRITING BY OWNER AND AUTHORITIES HAVING JURISDICTION.
8. WHEN DISTURBED, EXISTING FACILITIES SHALL BE REPAIRED OR REPLACED IN KIND AND IN ACCORDANCE WITH THE REQUIREMENTS OR THE DIRECTION OF THE AUTHORITY HAVING JURISDICTION. ASSOCIATED COSTS SHALL BE BORNE BY THE CONTRACTOR.
9. NOTIFY ADJACENT OWNERS OF WORK THAT MAY AFFECT THEIR PROPERTY, POTENTIAL NOISE, UTILITY OUTAGE, OR DISRUPTION. COORDINATE WITH OWNER.
10. PREVENT MOVEMENT OR SETTLEMENT OF ADJACENT STRUCTURES. PROVIDE BRACING AND SHORING.
11. LOCATE AND IDENTIFY ALL EXISTING UTILITIES WITHIN THE CONSTRUCTION AREA. DISCONNECT AND SEAL OR CAP OFF UTILITY SERVICES THAT WILL BE AFFECTED BY THIS PROJECT. NOTIFY AFFECTED UTILITY COMPANIES BEFORE STARTING WORK AND COMPLY WITH THEIR REQUIREMENTS. VERIFY THAT UTILITIES HAVE BEEN DISCONNECTED AND CAPPED. ABANDONMENT AND DISCONNECTION OF THE EXISTING WATER LINE MUST BE COORDINATED WITH THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. ABANDONMENT AND DISCONNECTION OF THE EXISTING SEWER LINE MUST BE COORDINATED WITH THE CITY OF POUGHKEEPSIE SEWER DEPARTMENT.
12. DEMOLISH AND REMOVE COMPONENTS IN AN ORDERLY AND CAREFUL MANNER.
13. PROTECT EXISTING FEATURES THAT ARE NOT TO BE DEMOLISHED.
14. CONDUCT OPERATIONS WITH MINIMUM INTERFERENCE TO PUBLIC OR PRIVATE ACCESS WAY.
15. MAINTAIN EGRESS AND ACCESS AT ALL TIMES. DO NOT CLOSE OR OBSTRUCT ROADWAYS, OR SIDEWALKS WITHOUT PERMITS.
16. CEASE OPERATIONS IMMEDIATELY IF ADJACENT STRUCTURES APPEAR TO BE IN DANGER. NOTIFY AUTHORITY HAVING JURISDICTION.
17. ROUGH GRADE AND COMPACT AREAS AFFECTED BY DEMOLITION TO MAINTAIN SITE GRADES AND CONTOURS.
18. FIELD VERIFY EXISTING CONDITIONS AND CORRELATE WITH REQUIREMENTS INDICATED ON DEMOLITION PLAN TO DETERMINE EXTENT OF SELECTIVE DEMOLITION REQUIRED.
19. MAINTAIN EXISTING UTILITIES TO REMAIN IN SERVICE AND PROTECT THEM AGAINST DAMAGE DURING SELECTIVE DEMOLITION OPERATION.
20. CONDUCT DEMOLITION OPERATIONS TO PREVENT INJURY TO PEOPLE AND DAMAGE TO ADJACENT BUILDINGS AND FACILITIES TO REMAIN. ENSURE SAFE PASSAGE OF PEOPLE AROUND SELECTIVE DEMOLITION AREA.
21. USE WATER MIST, TEMPORARY ENCLOSURES AND OTHER SUITABLE METHODS TO LIMIT THE SPREAD OF DUST AND DIRT. COMPLY WITH GOVERNING ENVIRONMENTAL PROTECTION REGULATIONS. DO NOT USE WATER WHEN IT MAY DAMAGE EXISTING CONSTRUCTION, SUCH AS ICE, FLOODING, OR POLLUTION.
22. REMOVE, TRANSPORT AND REMOVE DEBRIS IN A MANNER THAT WILL PREVENT SPILLAGE ON ADJACENT SURFACES AND AREAS AND MEET ALL APPROPRIATE DISPOSAL AND TRUCKING LAWS.
23. CLEAN ADJACENT STRUCTURES AND IMPROVEMENTS OF DUST, DIRT AND DEBRIS CAUSED BY SELECTIVE DEMOLITION OPERATIONS. RETURN ADJACENT AREAS TO CONDITION EXISTING BEFORE START OF SELECTIVE DEMOLITION.
24. PROMPTLY DISPOSE OF DEMOLISHED MATERIALS. ALL DEBRIS RESULTING FROM DEMOLITION ACTIVITIES SHALL BE DISPOSED OF OFF-SITE AT A FACILITY APPROVED TO RECEIVE THE DEBRIS. DO NOT ALLOW DEMOLISHED MATERIALS TO ACCUMULATE ON-SITE. DO NOT BURN DEMOLISHED MATERIALS ON-SITE.
25. NO BLASTING IS PROPOSED FOR THE PROJECT.
26. A MINIMUM OF TEN FEET OF EXISTING PIPE SHALL BE REMOVED AROUND ALL EXISTING MANHOLES, WHERE NEW PIPES ARE PROPOSED TO CONNECT.
27. IF ANY STORM DRYWELLS OR PREVIOUSLY UNIDENTIFIED UNDERGROUND STRUCTURES ARE IDENTIFIED AND EXHIBIT A SEWAGE/SEPTIC ODOR NOTIFY SITE ENGINEER AND TREAT AS SANITARY WASTE FOR DISPOSAL.
28. EXISTING SANITARY SEWER FOR SOUTH BUILDINGS TAKEN FROM HISTORICAL DATA.
29. THE CONTRACTOR SHALL COORDINATE WITH ARLINGTON FIRE DEPARTMENT FOR ACCESS LOCATIONS TO THE SITE DURING DEMOLITION / CONSTRUCTION.
30. THE ABANDONMENT, REMOVAL & DECOMMISSIONING OF ALL EXISTING SUBSURFACE DISPOSAL SYSTEMS AND SANITARY LINE COMPONENTS MAY BE CONSIDERED HAZARDOUS WASTE AND MUST BE REMOVED IN ACCORDANCE WITH THE PROCEDURES APPROVED BY THE DUTCHESS COUNTY DEPARTMENT OF HEALTH AND NYSDEC AND CERTIFIED BY A NYS PROFESSIONAL ENGINEER.
31. ALL EXISTING MONITORING WELLS ONSITE, ARE TO BE CUT AND CAPPED 4' BELOW GRADE AND FILLED WITH GROUT. WELLS ARE TO BE ABANDONED SHALL BE IN ACCORDANCE WITH DUTCHESS COUNTY DEPARTMENT OF HEALTH REGULATIONS.
32. KNOX BOX LOCKS ARE TO INSTALLED ON EACH OF THE EMERGENCY ACCESS POINTS OF THE TEMPORARY CHAIN LINK FENCE AND DAISY CHAINED TO THE CONTRACTORS PAD LOCK.
33. PRIOR TO THE START OF CONSTRUCTION OR EXCAVATION, TREE'S TO BE RETAINED SHALL BE PROTECTED BY SILT FENCE, SNOW FENCE, CONSTRUCTION FENCE, OR EQUAL, WHICH WILL BE PLACED AT THE DRIP LINE OR SEVERAL FEET BEYOND. HOWEVER, THE FENCING SHALL NOT CROSS PUBLIC SIDEWALKS. NO STORAGE OR STOCKPILING OF CONSTRUCTION MATERIALS, DEBRIS OR EQUIPMENT SHALL OCCUR WITHIN THE FENCED AREA.

## GENERAL MAP NOTE:

ACCESS, SHARED PARKING, AND LANDSCAPING IMPROVEMENTS WITH ADJOINING PARCELS:

THE WALLACE CAMPUS DRAWING SETS FORTH THE BOUNDARIES OF THE WALLACE CAMPUS CONSOLIDATED LOT AND SHOWS THE SITE PLAN FOR THAT LOT. FOUR ADJOINING PARCELS OUTSIDE THE WALLACE CAMPUS ARE ALSO SHOWN ON THE DRAWING SET, FOR THE LIMITED PURPOSE OF DEPICTING THE OFF-SITE IMPROVEMENTS TO BE MADE ON THOSE PROPERTIES PURSUANT TO SHARED PARKING AND EASEMENT AGREEMENTS, AND TO SHOW THE MANNER IN WHICH THOSE PHYSICAL IMPROVEMENTS AND ACCESS PROVISIONS WILL IMPROVE PEDESTRIAN AND VEHICULAR CIRCULATION IN THE NEIGHBORHOOD, AS WELL AS LANDSCAPING, LIGHTING, AND COMMUNITY CHARACTER. THE PROJECT SPONSOR WILL ENTER INTO SHARED PARKING AND PERMANENT ACCESS EASEMENT AGREEMENTS WITH THE OWNERS OF THESE ADJOINING PARCELS, WHICH WILL BE APPROVED BY THE PLANNING BOARD AS PART OF THE PROJECT APPROVALS. THE DRAWING SET DEPICTS THE OFF-SITE WORK TO BE PERFORMED BY THE PROJECT SPONSOR ON THESE PARCELS TO IMPLEMENT THE SHARED PARKING AND ACCESS AGREEMENTS. THE WORK ON 302, 304 AND 306 MILL STREET ("THE 3 MILL STREET LOTS") WOULD ELIMINATE TWO EXISTING CURB CUTS ON MILL STREET (BETWEEN 302 AND 304 MILL AND BETWEEN 304 AND 306 MILL), AND PROVIDE ADDITIONAL GREEN SPACE ON THOSE LOTS, INCLUDING ALONG THE MILL STREET FRONTAGE TO REPLACE THOSE DRIVEWAYS. THE WALLACE CAMPUS OWNER WILL PROVIDE A PERMANENT ACCESS EASEMENT TO THE OWNER OF THE 3 MILL STREET LOTS FOR THE BENEFIT OF OWNERS AND TENANTS, TO ACCESS THE PARKING AREAS LOCATED ON THESE LOTS VIA THE WALLACE CAMPUS ACCESS DRIVES. THE SHARED PARKING AGREEMENT WOULD MAINTAIN THE ALLOCATION OF DEDICATED PARKING (12 SPACES) TO THE 3 MILL STREET LOTS IN COMPLIANCE WITH THE PID ZONING. LIGHTING IMPROVEMENTS, PEDESTRIAN WALKWAYS, AND STORMWATER IMPROVEMENTS WILL BE PROVIDED TO SERVE THE OFFSITE SHARED PARKING AREAS IN THE SAME MANNER AS THE PARKING AREAS ON THE WALLACE CAMPUS PARCEL. PURSUANT TO A SEPARATE SHARED PARKING AGREEMENT WITH THE HUDSON RIVER HOUSING ("HRH") PROPERTY, THE PROJECT SPONSOR WILL BE GRANTED A PERMANENT EASEMENT TO CONSTRUCT PEDESTRIAN SIDEWALK PATHS WITHIN THE HUDSON RIVER HOUSING PROPERTY CONNECTING TO MILL STREET AND PROVIDING ACCESS FROM THAT PARKING AREA TO THE REAR ENTRANCE TO THE HRH OFFICE BUILDING, AND PARKING IMPROVEMENTS ALONG THE HRH LOT SOUTHERLY BOUNDARY THAT INTEGRATE WITH THE WALLACE CAMPUS PARKING AREA. LIGHTING IMPROVEMENTS AND LANDSCAPING WILL BE INSTALLED AS SHOWN ON THE DRAWING SET. THE PROJECT SPONSOR WILL PROVIDE HRH WITH A PERMANENT ACCESS EASEMENT TO USE THE TWO WALLACE CAMPUS MILL STREET ENTRANCES AND EXITS FOR ACCESS TO, AND USE OF, 6 PARKING SPACES WHICH ARE LOCATED ON WALLACE CAMPUS PROPERTY DIRECTLY ABUTTING THE WESTERLY BOUNDARY OF HRH'S PROPERTY (AS SHOWN ON THE DRAWING SET), WHICH SPACES WILL BE RESERVED FOR USE BY HRH EMPLOYEES DURING WORKING HOURS 8 AM TO 6 PM MONDAY TO FRIDAY. THE 6 SPACES TO BE AVAILABLE FOR WALLACE CAMPUS PARKING OUTSIDE OF THOSE HOURS.

## SIGN LEGEND

## SURVEY MAP NOTE:

SURVEY BASED ON ENTITLED "MAP OF SURVEY PREPARED FOR URBAN GREEN EQUITIES LLC" PREPARED BY J. WILLIAM KOMISAR, LLS DATED FEBRUARY 7, 2020.

NOTES:
1. THERE ARE NO EXISTING EASEMENTS OF RECORD.
2. PROPERTY IS NOT LOCATED WITHIN THE FALLKILL CREEK WATERSHED
3. NO WATERCOURSE, MARSHES, WOODED AREA, ROCK OUTCROPS, ISOLATED TREES PRESENT.
4. NO AREAS SUBJECT TO STORM OVERFLOWS. (NOT IN FEMA 100 YEAR FLOOD PLANE)

## COMPACTION AND BACKFILL NOTES

UNLESS OTHERWISE SPECIFIED OR APPROVED BY THE SITE ENGINEER, ALL SITE SUBGRADE AND BACKFILL FOR ALL STRUCTURES INCLUDING, BUT NOT LIMITED TO, PARKING LOT SUBGRADE, ROAD SUBGRADE, CONCRETE PADS AND SIDEWALKS, WATER LINES AND STRUCTURES, SEWER LINES AND STRUCTURES, STORM LINES AND STRUCTURES, TRASH PADS/ENCLOSURES, AND SITE ELECTRICAL AND CONDUIT, SHALL BE COMPACTED IN ACCORDANCE WITH THE FOLLOWING STANDARD.

METHODS OF CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION (NYSDOT) STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED MAY 1, 2008, AND ALL ADDENDA THERETO

## GRADING AND DRAINAGE NOTES

1. ALL EXISTING STRUCTURES NOTED TO BE REMOVED, FENCING, TREES, ETC., WITHIN CONSTRUCTION AREA SHALL BE REMOVED & DISPOSED OF OFF SITE. ANY BURNING ON SITE SHALL BE SUBJECT TO LOCAL ORDINANCES.
2. CONTRACTOR SHALL NOTIFY ALL UTILITY COMPANIES HAVING UNDERGROUND UTILITIES ON SITE OR IN RIGHT-OF-WAY PRIOR TO EXCAVATION. CONTRACTOR SHALL CONTACT UTILITY LOCATING COMPANY AND LOCATE ALL UTILITIES PRIOR TO GRADING START.
3. SITE GRADING SHALL NOT PROCEED UNTIL EROSION CONTROL MEASURES HAVE BEEN INSTALLED.

# CITY OF POUGHKEEPSIE WATER NOTES

1. ALL WATER MAINS SHALL BE CEMENT LINED DUCTILE IRON PIPE, CLASS 52 PUSH-ON JOINT, UNLESS OTHERWISE SPECIFIED BY OR APPROVED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. JOINTING SHALL EMPLOY "MEGALUG" CONNECTIONS, FIELD LOCK GASKET, OR AS ALTERNATIVELY SPECIFIED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. ALL WATER PIPING CONSTRUCTION SHALL BE TO THE SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. WET TAP OF PUBLIC WATER SYSTEM SHALL BE APPROVED AND SUPERVISED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. TAPPING SLEEVE SHALL BE STAINLESS STEEL OR APPROVED EQUAL. ALL MAINLINE VALVES SHALL BE RESILIENT WEDGE OR APPROVED EQUAL.

2. THE WATER LINE MAY BE FLEXED WITHIN PIPE SPECIFICATIONS OR LAID DEEPER IN AREAS WHERE A CROSSING WITH A SANITARY LINE OCCURS, TO ACHIEVE THE REQUIRED 1.5' VERTICAL SEPARATION DISTANCE. IF THIS DISTANCE CANNOT BE REASONABLY ACHIEVED, THE CONTRACTOR SHALL USE PRESSURE RATED SANITARY PIPE OF EQUAL OR GREATER RATING THAN THE PRESSURE CLASS FOR THE WATER LINE.

3. MINIMUM VERTICAL SEPARATION BETWEEN WATER MAINS AND SEWER PIPE SHALL BE 18 INCHES MEASURED FROM THE OUTSIDE OF THE PIPES AT THE POINT OF CROSSING. ONE FULL STANDARD LAYING LENGTH OF WATER MAIN SHALL BE CENTERED UNDER OR OVER THE SEWER SO THAT BOTH JOINTS WILL BE AS FAR FROM THE SEWER LINE AS POSSIBLE. IN ADDITION, WHEN THE WATER MAIN PASSES UNDER A SEWER, ADEQUATE STRUCTURAL SUPPORT (COMPACTED SELECT FILL) SHALL BE PROVIDED FOR THE SEWER TO PREVENT EXCESSIVE DEFLECTION OF JOINTS AND SETTLING OF THE SEWER PIPE ON THE WATER MAIN. MINIMUM HORIZONTAL SEPARATION BETWEEN PARALLEL WATER MAINS AND SEWER PIPES (INCLUDING MANHOLES AND VAULTS) SHALL BE 10 FEET MEASURED FROM THE OUTSIDE OF THE PIPES, MANHOLES, OR VAULTS.

4. ALL WATER MAINS SHALL HAVE A MINIMUM OF (5) FIVE FEET OF COVER FROM THE TOP OF THE MAIN TO FINISHED GRADE. THE CONTRACTOR SHALL CHECK ALL FINISHED GRADE STAKES BEFORE TRENCHING TO ENSURE THAT ALL INSTALLED WATER MAINS WILL HAVE THE REQUIRED COVER.

5. THE SUPPLIER OF WATER MUST RECEIVE AT LEAST 48-HOUR ADVANCE NOTIFICATION REQUESTING SAMPLING SERVICES. SAMPLING WILL NOT BE PERFORMED PRIOR TO RECEIPT FROM A NEW YORK STATE LICENSED OR REGISTERED DESIGN PROFESSIONAL (ENGINEER, ARCHITECT, OR LAND SURVEYOR WITH A SPECIAL EXEMPTION UNDER SECTION 7208(N) OF THE EDUCATION LAW) CERTIFYING THAT THE WATER SUPPLY IMPROVEMENTS, TESTING AND DISINFECTION PROCEDURES WERE COMPLETED IN ACCORDANCE WITH THE APPROVED PLANS, REPORTS, SPECIFICATIONS, AND ANY APPROVED AMENDMENTS. A NYSDOH CERTIFIED LABORATORY WILL COLLECT SAMPLES FOR FREE CHLORINE RESIDUAL, TOTAL, AND FECAL COLIFORM AND 24-HOUR BACTERIAL PLATE COUNT. THE CERTIFICATE OF COMPLIANCE, TESTING, AND SAMPLING RESULTS SHALL BE PROVIDED TO THE CITY WATER MAINTENANCE SUPERVISOR AND DUTCHESS COUNTY DEPARTMENT OF HEALTH AS A CONDITION OF APPROVAL FOR OPERATION.

6. THE CONTRACTOR SHALL COORDINATE THE TESTING WITH THE WATER DEPARTMENT SO AS TO MAINTAIN THE AMOUNT OF SERVICE INTERRUPTION TO EXISTING USERS TO THE LEAST EXTENT PRACTICABLE. WATER MAIN INSTALLATION AND TESTING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE PROJECT ENGINEER OR HIS DESIGNEE AS NECESSARY TO MEET CONDITIONS IN NOTE 5 ABOVE.

7. THE WATER MAIN SHALL BE PRESSURE LEAKAGE TESTED IN ACCORDANCE WITH THE MINIMUM REQUIREMENTS OF THE AWWA STANDARD C600 (LATEST REVISION) OR IN ACCORDANCE WITH MORE STRINGENT REQUIREMENTS IMPOSED BY THE SUPPLIER OF WATER. TEST TO FIRST VALVE WITHIN BUILDING.

8. THE WATER MAIN SHALL BE DISINFECTED EQUAL TO AWWA STANDARD FOR DISINFECTING WATER MAINS DESIGNATION C651 (LATEST REVISION). FOLLOWING DISINFECTION, THE WATER MAIN SHALL BE FLUSHED UNTIL THE CHLORINE CONCENTRATION IN THE WATER LEAVING THE MAIN IS NO HIGHER THAN THAT GENERALLY PREVAILING IN THE SYSTEM. THE PROJECT ENGINEER OR HIS DESIGNEE SHALL ALSO WITNESS DISINFECTION AND FLUSHING.

9. ALL WATER MAIN FITTINGS NOT RECEIVING 24-HOUR CHLORINE DISINFECTION CONTACT TIME MUST BE SWAB-DISINFECTED 30 MINUTES PRIOR TO INSTALLATION.

10. THE SAMPLING POINT(S) MUST BE DECONTAMINATED BY FLAMING.

11. FIRE HYDRANTS ARE NOT ACCEPTABLE SAMPLING POINTS, UNLESS OTHERWISE APPROVED BY SITE ENGINEER AND CITY OF POUGHKEEPSIE WATER DEPARTMENT.

12. FIRE HYDRANT WEEP HOLES (DRAINS) SHALL BE PLUGGED WHEN GROUND WATER IS ENCOUNTERED WITHIN SEVEN FEET OF THE FINISHED GRADE. WHEN DRAINS ARE PLUGGED, THE BARREL'S MUST BE PUMPED DRY AFTER USE DURING FREEZING WEATHER. SUCH HYDRANTS SHALL BE IDENTIFIED BY MARKINGS AS APPROVED BY THE CITY OF POUGHKEEPSIE.

13. PROPOSED WATER METERS LOCATED WITHIN THE METER PIT OR BUILDING SHALL BE A COMPATIBLE REMOTE STYLE TYPE (SENSUS), AND SHALL BE APPROVED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT PRIOR TO INSTALLATION. WATER METER SHALL BE EQUIPPED WITH (RADIO TYPE REMOTE READER) TRANSCEIVER PROVIDED BY METER MANUFACTURER AND INSTALLED AND PROGRAMMED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT.

14. THE WATER LINE SHALL BE INSTALLED AT A CONTINUOUS GRADE WITH NO ABRUPT HIGH POINTS OR LOW POINTS.

15. FINAL WATER DISTRIBUTION SYSTEM AND CERTIFICATION IS SUBJECT TO REVIEW, REVISION AND APPROVAL BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT AND THE DCDOH PRIOR TO APPROVAL TO OPERATE.

16. ALL WATER MAINS AND RELATED APPURTENANCES SHALL BE CONSTRUCTED TO THE LATEST STANDARDS AND SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE.

17. THE WATER MAIN SHALL NOT BE PLACED INTO SERVICE UNTIL SO AUTHORIZED BY THE CITY OF POUGHKEEPSIE.

18. ALL WATER SERVICE CONSTRUCTION SHALL BE SUBJECT TO INSPECTION BY THE CITY WATER DEPARTMENT PRIOR TO BACKFILLING. BEDDING AND PIPE ZONE MATERIAL SHALL BE COMPOSED OF CRUSHED STONE OR LIGHT GRAVEL HAVING A GRADATION LIMIT OF 3/4" MINUS. AN ACCEPTABLE MATERIAL SHALL MEET THE FOLLOWING REQUIREMENT:

| SIEVE DESIGNATION | % PASSING |
|---|---|
| 3/4" | 100 |
| NO.40 | 0-70 |
| NO. 200 | 0-10 |

19. TRENCH BACKFILL SHALL BE WELL-GRADED SOIL AND GRAVEL MATERIAL. ALL PARTICLES SHALL HAVE A GRADATION OF 2" OR LESS. AN ACCEPTABLE MATERIAL SHALL MEET THE FOLLOWING REQUIREMENT:

| SIEVE DESIGNATION | % PASSING |
|---|---|
| 2 INCH | 100 |
| 1/4 INCH | 30-65 |
| NO. 40 | 5-40 |
| NO. 200 | 0-15 |

20. BEDDING AND BACKFILL MATERIAL SHALL BE STOCKPILED IN AMOUNTS NECESSARY FOR REASONABLE BACKFILLING REQUIREMENTS. A SIEVE ANALYSIS OF BEDDING OR BACKFILL MAY BE REQUIRED AT THE REQUEST OF THE CITY OF POUGHKEEPSIE.

21. THE SITE UTILITY CONTRACTOR SHALL BE RESPONSIBLE FOR ALL BURIED PIPING TO THE LOCATION OF THE PROPOSED BUILDING CONNECTION POINT (I.E. INSIDE THE BUILDING). THIS INCLUDES THE TESTING AND CERTIFICATION OF ALL WATER SERVICE WORK FROM THE CITY WATER CONNECTION POINT TO THE PROPOSED BUILDINGS INTERIOR CONNECTION POINT.

22. INDICATOR TAPE SHALL BE PLACED 12" BELOW FINISHED GRADE DIRECTLY ABOVE ALL WATERLINES.

23. ALL COPPER WATER SERVICE PIPING INSTALLATION, BACKFILL AND TESTING SHALL BE REVIEWED AND APPROVED BY THE CITY OF POUGHKEEPSIE WATER MAINTENANCE SUPERVISOR OR HIS DESIGNEE. BEDDING, PIPE ZONE, AND BACKFILL MATERIAL MUST BE SAND ONLY.

24. THE PIPE SUPPORTS FOR THE METER PIT SHALL BE MADE OF GALVANIZED STEEL AND SHALL BE ADJUSTABLE. THE SUPPORTS ARE TO BE PLACED ONLY BENEATH SPOOL PIECES AND NOT UNDER CRITICAL EQUIPMENT, METERS, ETC.

25. THREE AS-BUILT DRAWINGS WHICH INCLUDE VERIFICATION OF THE WATER INFRASTRUCTURE WILL BE PROVIDED TO THE PLANNING DEPARTMENT FOR DISSEMINATION TO THE ENGINEERING AND WATER DEPARTMENTS PRIOR TO ANY EASEMENT DEDICATION TO THE CITY.

# CITY OF POUGHKEEPSIE SANITARY SEWER NOTES

1. FLOOR DRAINS, IF CONSTRUCTED, SHALL BE CONNECTED TO THE SANITARY SEWER. FLOOR DRAINS DO NOT INCLUDE FOUNDATION/FOOTER DRAIN: ALL DISCHARGES TO THE SANITARY SEWER SHALL COMPLY WITH THE EFFLUENT LIMITS OF THE LOCAL AND/OR DUTCHESS COUNTY SANITARY CODE.

2. DEFLECTION TESTS SHALL BE PERFORMED ON ALL FLEXIBLE PIPES. THE TESTS SHALL BE CONDUCTED AFTER FINAL BACKFILL HAS BEEN IN PLACE AT LEAST 5 DAYS. NO PIPE SHALL EXCEED A DEFLECTION OF 5%. IF THE DEFLECTION TEST IS TO BE RUN USING A RIGID BALL OR MANDREL, IT SHALL HAVE A DIAMETER EQUAL TO 95% OF THE INSIDE DIAMETER OF THE PIPE. THE TEST SHALL BE PERFORMED WITHOUT MECHANICAL PULLING DEVICES.

3. SANITARY SEWERS AND APPURTENANCES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE LATEST STANDARDS AND SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE. ALL SANITARY SEWER SYSTEM COMPONENTS SHALL BE INSTALLED BY OR UNDER THE SUPERVISION OF A CITY OF POUGHKEEPSIE LICENSED PLUMBER IN ACCORDANCE WITH THE CITY PLUMBING CODE.

4. MAJOR EARTHWORK SHALL BE COMPLETED PRIOR TO INSTALLATION OF ANY SANITARY SEWER MAINS AND APPURTENANCES. AIR CONNECTING SEWER LINES SHALL BE FLUSHED BEFORE TESTED.

5. MAXIMUM ALLOWABLE INFILTRATION OR EXFILTRATION SHALL NOT EXCEED 100 GALLONS PER INCH DIAMETER PER MILE OF PIPE PER DAY FOR THE SANITARY SEWER. IF AN AIR TEST IS USED, THE TEST, AS A MINIMUM, SHALL CONFORM TO THE PROCEDURE DESCRIBED IN THE ASTM -F-1417 (1992) ENTITLED "STANDARD PRACTICE FOR INSTALLATION ACCEPTANCE OF GRAVITY SEWER LINES USING LOW PRESSURE AIR" (RE-APPROVED 1998). SANITARY MANHOLES SHALL BE VISUALLY INSPECTED AND TESTED FOR LEAKAGE BY EXFILTRATION OR VACUUM. VACUUM TESTING OF MANHOLES SHALL COMPLY WITH THE METHOD OUTLINED IN THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION TECHNICAL INFORMATION PAMPHLET (TIP) NO.15 (REVISED).

6. SANITARY SEWER MAINS ARE TO BE POLYVINYL CHLORIDE (PVC) AND SANITARY LATERALS SHALL BE PVC, SDR-35, UNLESS OTHERWISE NOTED.

7. FINAL SEWER COLLECTION SYSTEM LAYOUT IS SUBJECT TO REVIEW, REVISION AND APPROVAL BY THE CITY OF POUGHKEEPSIE SEWER DEPARTMENT.

8. ALL SANITARY PIPE AND/OR MANHOLES SHALL BE A MINIMUM OF TEN (10) HORIZONTAL FEET FROM THE WATER MAIN. SANITARY PIPE SHALL HAVE A MINIMUM 18" SEPARATION FROM ANY WATER MAIN OR WATER SERVICE LINE. IF FOR SOME REASON THIS SEPARATION CANNOT BE ACHIEVED, SANITARY SEWER PIPE IN THE AREA SHALL BE SDR-26 PRESSURE RATED PIPE, (OR BE ENCASED PER THE DETAIL ON DN-3) AND ONE FULL LENGTH OF WATER MAIN SHALL BE CENTERED UNDER OR OVER THE SEWER. ALL SANITARY SEWER CONSTRUCTION SHALL BE TO SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE SEWER DEPARTMENT.

9. ALL SANITARY TESTING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE PROJECT ENGINEER, AND CERTIFICATES OF COMPLIANCE WITH THE INSTALLATION SPECIFICATIONS, TEST STANDARDS, APPROVED PLANS OR APPROVED AMENDMENTS SHALL BE PROVIDED TO THE APPROPRIATE SEWER AUTHORITY AND THE DCDOH AS A CONDITION OF APPROVAL FOR OPERATION.

10. ALL SANITARY SEWER CONSTRUCTION SHALL BE SUBJECT TO INSPECTION BY THE CITY SEWER SUPERINTENDENT PRIOR TO BACKFILLING. PIPE BEDDING AND PIPE ZONE MATERIAL SHALL BE COMPOSED OF CRUSHED STONE OR GRAVEL, FREE OF SOFT NONDURABLE PARTICLES WITH THE FOLLOWING GRADATION REQUIREMENTS:

| SIEVE DESIGNATION | % PASSING |
|---|---|
| 3/4" | 100 |
| NO.40 | 0-70 |
| NO. 200 | 0-10 |

ALL TRENCH BACKFILL MATERIAL SHALL BE APPROVED BY THE SUPERINTENDENT OF SEWERS AND MUST MEET THE FOLLOWING GRADATION REQUIREMENT:

| SIEVE DESIGNATION | % PASSING |
|---|---|
| 2 INCH | 100 |
| 1/4 INCH | 30-65 |
| NO.40 | 5-40 |
| NO. 200 | 0-15 |

BEDDING AND BACKFILL MATERIAL SHALL BE STOCKPILED IN AMOUNTS NECESSARY FOR REASONABLE BACKFILLING REQUIREMENTS. A SIEVE ANALYSIS OF BEDDING OR BACKFILL MAY BE REQUIRED AT THE REQUEST OF THE CITY OF POUGHKEEPSIE.

11. ALL NEW SANITARY SEWER MANHOLE COVERS SHALL BE NOMINAL 26" DIAMETER CAST IRON AND SHALL READ "SANITARY SEWER". FRAMES SHALL BE 8" IN HEIGHT AND THE FRAME AND COVER SHALL BE SYRACUSE CASTINGS NO.1 009 OR AN APPROVED EQUAL.

12. INDICATOR TAPE SHALL BE PLACED 12" BELOW FINISHED GRADE DIRECTLY ABOVE ALL SANITARY LINES.

13. LOCATION OF SEWER LATERAL CLEAN OUTS ARE TO BE PLACED AS SHOWN ON THE APPROVED SITE PLAN AND NOT TO EXCEED EVERY 75' MEASURED FROM THE SEWER MAIN CONNECTION OR AS DETERMINED BY THE CITY OF POUGHKEEPSIE SUPERINTENDENT OF SEWERS WHERE LOCATIONS ARE NOT SPECIFICALLY SHOWN.

14. EXTERNAL DROP MANHOLES SHALL BE USED FOR SEWERS ENTERING AT AN ELEVATION OF 24 INCHES OR HIGHER AT THE INLET OF A SEWER MANHOLE.

15. THREE AS-BUILT DRAWINGS WHICH INCLUDE VERIFICATION OF THE SEWER INFRASTRUCTURE INCLUDING RIMS AND INVERTS WILL BE PROVIDED TO THE PLANNING DEPARTMENT FOR DISSEMINATION TO THE ENGINEERING AND SEWER DEPARTMENTS PRIOR TO ANY EASEMENT DEDICATION TO THE CITY.

# COMPACTION AND BACKFILL NOTES

UNLESS OTHERWISE SPECIFIED OR APPROVED BY THE SITE ENGINEER, ALL SITE SUBGRADE AND BACKFILL FOR ALL STRUCTURES INCLUDING, BUT NOT LIMITED TO, PARKING LOT SUBGRADE, ROAD SUBGRADE, CONCRETE PADS AND SIDEWALKS, WATER LINES AND STRUCTURES, SEWER LINES AND STRUCTURES, STORM LINES AND STRUCTURES, TRASH PADS/ENCLOSURES, AND SITE ELECTRICAL AND CONDUIT, SHALL BE COMPACTED IN ACCORDANCE WITH THE FOLLOWING STANDARD.

METHODS OF CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION (NYSDOT) STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED MAY 1, 2008, AND ALL ADDENDA THERETO

## DECOMPACTION OF SOILS IN RECLAIMED AREAS:

THESE PROCEDURES SHALL BE FOLLOWED PRIOR TO INSTALLATION OF TOP SOIL OR INFILTRATION PRACTICES IN ANY AREA PREVIOUSLY IMPERVIOUS OR COMPACTED BY COSTRUCTION EQUIPMENT. FOR ALL AREAS TO BE RECLAIMED FOR STORMWATER INFILTRATION, THE AREA SHALL BE MARKED OFF WITH ORANGE SAFETY FENCE AFTER DEMOLITION AND PRIOR TO DECOMPACTION TO PREVENT FURTHER COMPACTION OF THE UNDERLYING SOILS.

AREAS RECLAIMED AS TOP SOIL:

A. APPLY 3" OF COMPOST OVER SUBSOIL AFTER SUBGRADE LEVELS HAVE BEEN REACHED AND IMMEDIATELY PRIOR TO PLACING PLANTING SOILS.

B. THE ENTIRE SUBGRADE AREA SHALL BE LOOSENED TO A MINIMUM DEPTH OF 12 INCHES UTILIZING THE BUCKET OF A BACK HOE, CAT MOUNTED RIPPER, TILLER, OR EQUIVALENT EQUIPMENT. ROCK PICK ONLY UNTIL UPLIFTED STONE/ROCK MATERIAL OF FOUR INCHES AND LARGER SIZE HAVE BEEN CLEARED FROM THE SITE.

C. ANY SUBGRADE AREAS WHICH HAVE BECOME HEAVILY COMPACTED (DEFINED AS EXCEEDING 86%-88% COMPACTION ASTM 698 STANDARD PROCTOR) INCLUDING, BUT NOT LIMITED TO, TEMPORARY PARKING AREAS, MATERIAL STOCKPILE AREAS, TEMPORARY ROADWAYS, CONSTRUCTION AREAS AND AREAS AROUND THE BUILDING, OTHER CONSTRUCTION AREAS, AREAS SHOWN ON THE PLANS, OR AREAS IDENTIFIED BY THE DESIGN PROFESSIONAL SHALL BE DEEP-SCARIFIED. IMMEDIATELY PRIOR TO PLACING SOILS, HEAVILY COMPACTED AREAS SHALL BE LOOSENED TO A MINIMUM DEPTH OF 18 INCHES USING THE TEETH OF A BACK HOE OR OTHER SUITABLE EQUIPMENT. FREQUENCY OF COMPACTION TESTS SHALL BE ONE PER 500 SQUARE FEET.

D. CONFIRM THAT THE SUBGRADE IS AT THE PROPER ELEVATION AND THAT NO FURTHER EARTHWORK IS REQUIRED TO BRING THE SUBGRADE TO PROPER ELEVATIONS. PROVIDE A REPORT TO THE DESIGN PROFESSIONAL THAT THE SUBGRADE HAS BEEN PLACED TO THE REQUIRED ELEVATIONS, HAS BEEN DECOMPACTED ACCORDING TO THE CONTRACT DOCUMENTS AND IS READY FOR INSPECTION AT LEAST 3 DAYS PRIOR TO PLACING PLANTING SOIL. PERFORM NO WORK OF PLACING AND SPREADING PLANTING MIXED UNTIL ELEVATIONS HAVE BEEN CONFIRMED AND THE AREA HAS BEEN ACCEPTED BY THE OWNER'S REPRESENTATIVE.

E. AFTER THE SOILS HAVE BEEN LOOSENED AND INSPECTED, TOPSOIL MAY BE SPREAD BY USING A WIDE-TRACK BULLDOZER SIZE D-5 OR SMALLER OR MAY BE DUMPED AND SPREAD WITH THE BUCKET OF A BACKHOE FROM THE EDGE OF THE LOOSENED AREA. NO RUBBER-TIRED EQUIPMENT OR HEAVY EQUIPMENT EXCEPT FOR A SMALL BULLDOZER SHALL PASS OVER THE SUBSOILS (SUBGRADE) AFTER THEY HAVE BEEN LOOSENED. IF THE CONTRACTOR PLANS TO UTILIZE SUCH AREAS FOR ANY USE OF HEAVY EQUIPMENT, THIS SHOULD BE CARRIED OUT PRIOR TO BEGINNING THE PROCESS OF LOOSENING SOILS OR FILLING IN THAT AREA, OR IT WILL HAVE TO BE RESCARIFIED AND MEET THIS SPECIFICATION REQUIREMENT.

AREAS RECLAIMED FOR STORMWATER INFILTRATION PRACTICES:

A. EXCAVATE AREA TO THE DEPTH OF THE PROPOSED BOTTOM OF THE INFILTRATION PRACTICE.

B. THE ENTIRE SUBGRADE AREA SHALL BE LOOSENED TO A MINIMUM DEPTH OF 12 INCHES BELOW PROPOSED SUBGRADE UTILIZING THE BUCKET OF A BACK HOE, CAT MOUNTED RIPPER, TILLER, OR EQUIVALENT EQUIPMENT. ROCK PICK UNTIL UPLIFTED STONE/ROCK MATERIAL OF FOUR INCHES AND LARGER SIZE HAVE BEEN CLEARED FROM THE SITE.

C. ANY SUBGRADE AREAS WHICH REMAIN HEAVILY COMPACTED (DEFINED AS EXCEEDING 86%-88% COMPACTION ASTM 698 STANDARD PROCTOR), AS SHOWN ON THE PLANS, OR AREAS IDENTIFIED BY THE DESIGN PROFESSIONAL SHALL BE DEEP-SCARIFIED. IMMEDIATELY PRIOR TO PLACING SOILS, HEAVILY COMPACTED AREAS SHALL BE LOOSENED TO A MINIMUM DEPTH OF 18 INCHES USING THE TEETH OF A BACK HOE OR OTHER SUITABLE EQUIPMENT. FREQUENCY OF COMPACTION TESTS SHALL BE ONE PER 500 SQUARE FEET.

D. CONFIRM THAT THE SUBGRADE IS AT THE PROPER ELEVATION AND THAT NO FURTHER EARTHWORK IS REQUIRED TO BRING THE SUBGRADE TO PROPER ELEVATIONS. PROVIDE A REPORT TO THE DESIGN PROFESSIONAL THAT THE SUBGRADE HAS BEEN PLACED TO THE REQUIRED ELEVATIONS, HAS BEEN DECOMPACTED ACCORDING TO THE CONTRACT DOCUMENTS AND IS READY FOR INSPECTION AT LEAST 3 DAYS PRIOR TO PLACING INFILTRATION PRACTICES. PERFORM NO WORK UNTIL ELEVATIONS HAVE BEEN CONFIRMED AND THE AREA HAS BEEN ACCEPTED BY THE OWNER'S REPRESENTATIVE.

E. AFTER THE SOILS HAVE BEEN LOOSENED AND INSPECTED, INFILTRATION PRACTICES MAY BE INSTALLED USING A WIDE-TRACK BULLDOZER SIZE D-5 OR SMALLER OR MAY BE PLACED, DUMPED, OR SPREAD WITH THE BUCKET OF A BACKHOE FROM THE EDGE OF THE LOOSENED AREA. NO RUBBER-TIRED EQUIPMENT OR HEAVY EQUIPMENT EXCEPT FOR A SMALL BULLDOZER SHALL PASS OVER THE SUBSOILS (SUBGRADE) AFTER THEY HAVE BEEN LOOSENED. IF THE CONTRACTOR PLANS TO UTILIZE SUCH AREAS FOR ANY USE OF HEAVY EQUIPMENT, THIS SHOULD BE CARRIED OUT PRIOR TO BEGINNING THE PROCESS OF LOOSENING SOILS OR FILLING IN THAT AREA, OR IT WILL HAVE TO BE RESCARIFIED AND MEET THIS SPECIFICATION REQUIREMENT.

F. WHEN INFILTRATION PRACTICES ARE LOCATED BELOW PAVEMENT THE AREA SHALL REMAIN FREE OF LARGE VEHICLES UNTIL THE PAVEMENT SUBBASE HAS BEEN INSTALLED.

G. FOR REFERENCE OF DECOMPACTION NOTES, SEE NYS DESIGN MANUAL SECTION 5.1.6 FOR DEEP RIPPING AND DECOMPACTION OF EXISTING AREAS THAT ARE PROPOSED FOR RESTORATION.

# CITY OF POUGHKEEPSIE EROSION AND SILTATION CONTROL NOTES

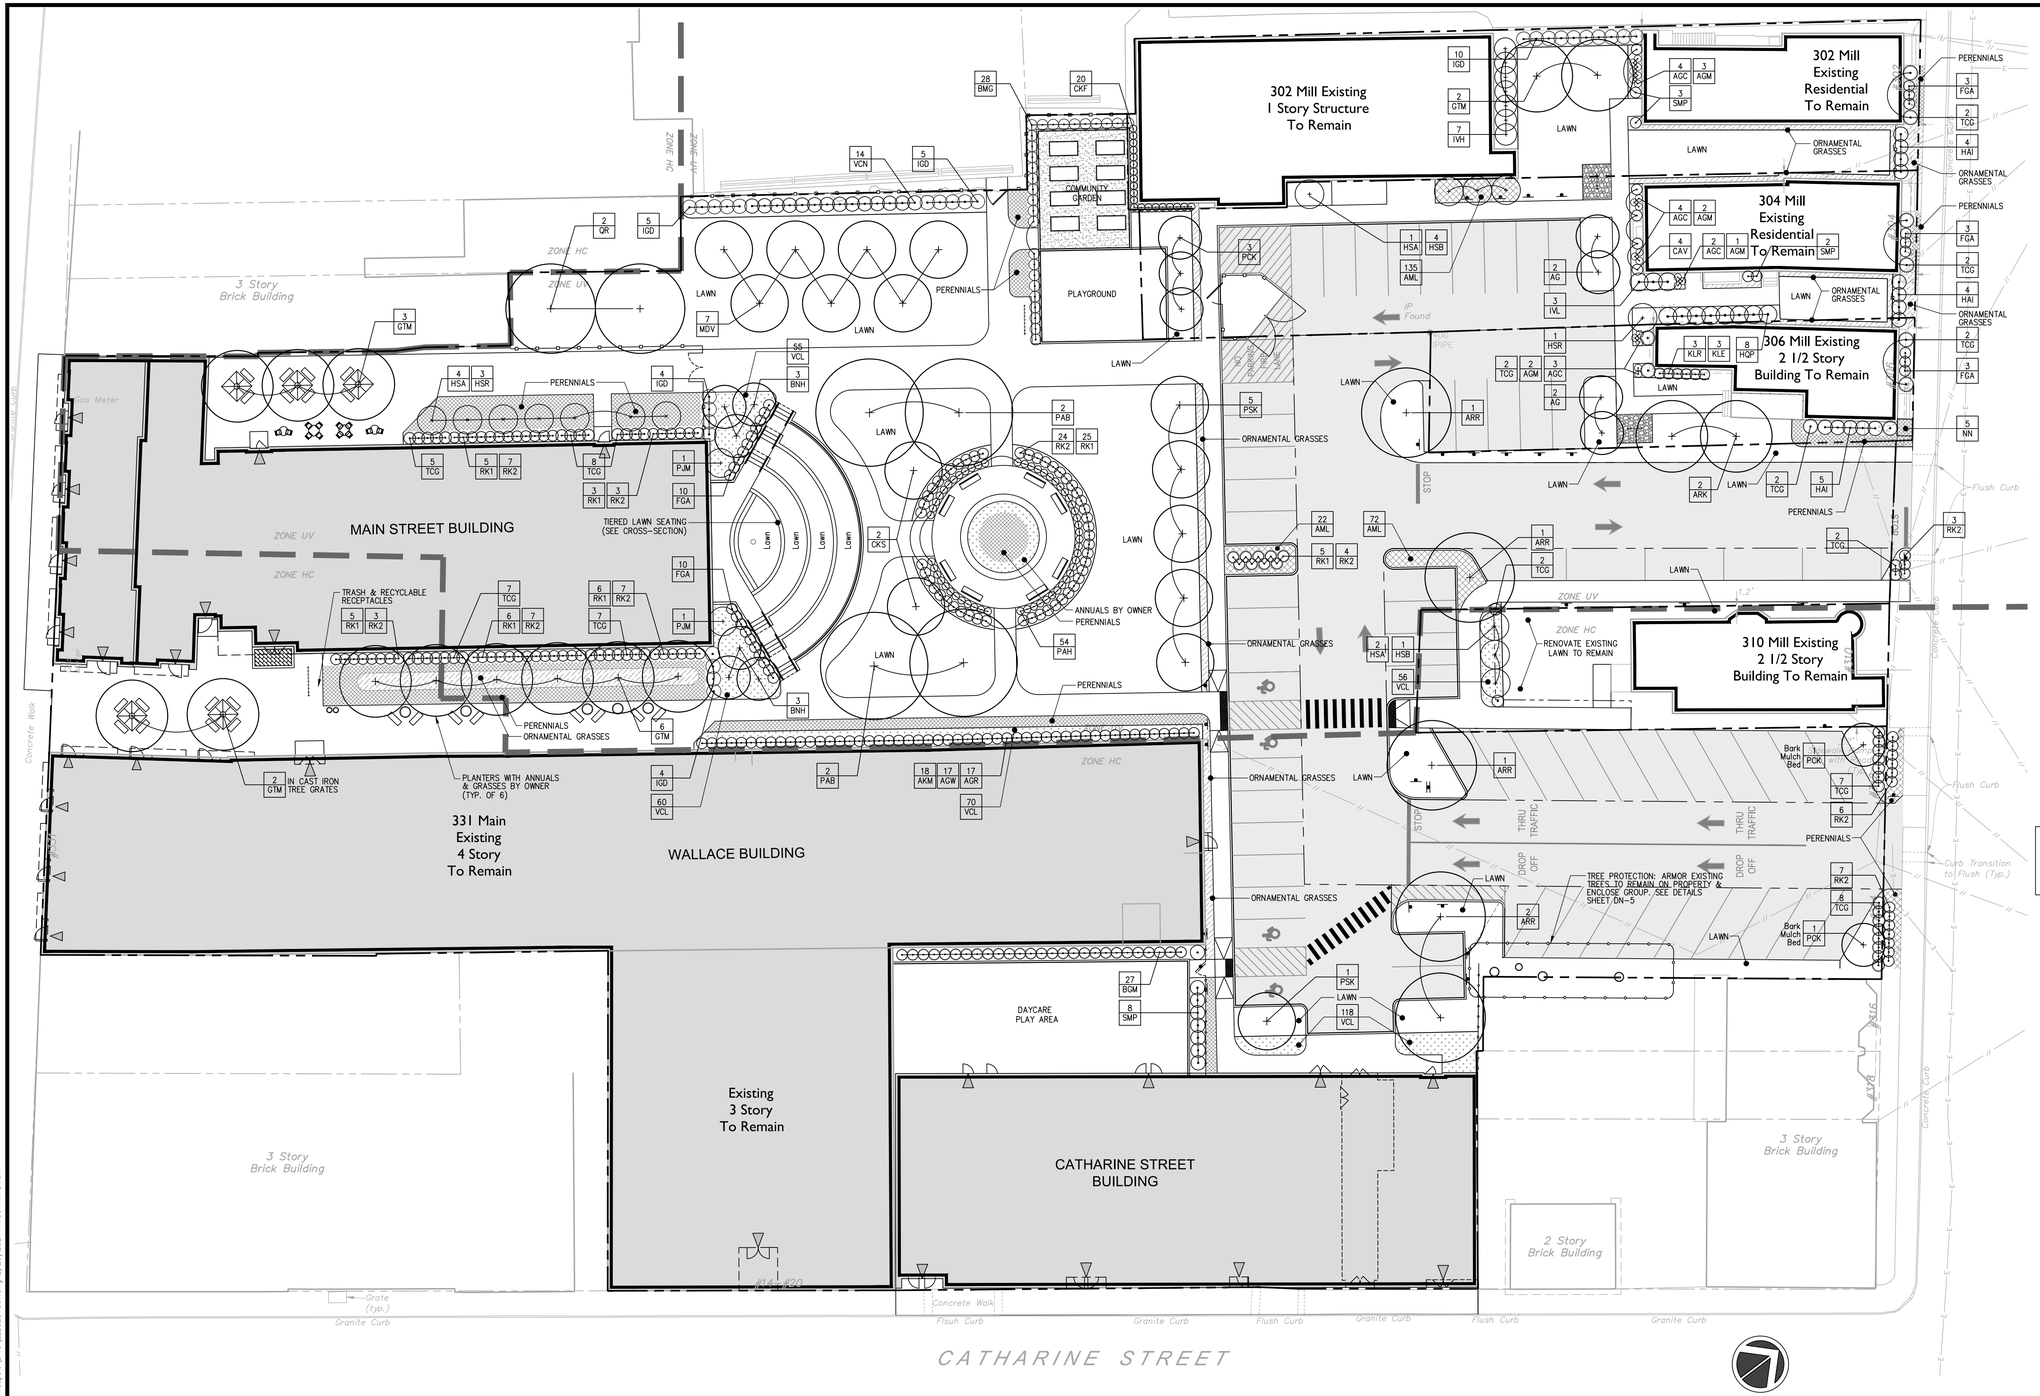
1. All unvegetated areas in excess of 10%, per direction of the Engineer, shall have temporary seeding of fast germinating rye, 10 to 15 #'s per 1,000 sq. ft.
2. Graded areas - upper elevations: Provide temporary drainage swales, 1% grade min., to direct runoff away from construction sites. Discharge areas to be acceptable to the Engineer.
3. Graded areas - lower elevations: Provide drainage swales, 1% min. grades, with staked and secured hay bale siltation. Location of hay bales and discharge areas per approval of Engineer.
4. Permanent seeded areas for erosion control: Mixture of perennial rye and blue and red fescue grasses (50/50), 15 to 25 #'s per 1,000 sq. ft., mulching at 5#'s per 1,000 sq. ft., fertilizer - 5.10.5 at 5#'s per 1,000 sq. ft. (if determined necessary by Engineer), with pegging and netting for grades in excess of 15%.
5. All permanent drainage interceptor swales to be seeded per Item 4 also.
6. All erosion control shall be in accordance with the latest "Urban Erosion and Sediment Control Guidebook" of the Dutchess County Soil and Water Conservation District.
7. All areas shall be seeded and mulched as soon as possible.
8. Grade as needed and feasible to permit the use of conventional equipment for seed bed preparation, seeding and mulch application.
9. Scarify all compacted soils prior to applying topsoil.
10. Apply topsoil per Standard #6 Table 6.1 of the Soil Erosion Control Guide Book.
11. Seed mix shall be as follows:
    Ky. Blue grass 20 lbs/ac.
    Creeping Red Fescue 40 lbs/ac.

# GENERAL NOTES

1. ALL CONSTRUCTION SHALL COMPLY WITH CITY OF POUGHKEEPSIE REQUIREMENTS AND SPECIFICATIONS.
2. THE CONTRACTOR IS RESPONSIBLE FOR OBTAINING ALL NECESSARY PERMITS REQUIRED BY GOVERNMENT AGENCIES PRIOR TO CONSTRUCTION. THE CONTRACTOR SHALL POST ALL BONDS, PAY ALL FEES, PROVIDE PROOF OF INSURANCE AND PROVIDE TRAFFIC CONTROL NECESSARY FOR THIS WORK.
3. REFER TO OTHER PLANS AND DETAIL SHEETS FOR ADDITIONAL INFORMATION. THE CONTRACTOR SHALL VERIFY ALL SITE CONDITIONS IN THE FIELD AND CONTACT THE SITE ENGINEER IF THERE ARE ANY QUESTIONS OR CONFLICTS REGARDING THE CONSTRUCTION DOCUMENTS AND/OR FIELD CONDITIONS SO THAT APPROPRIATE REVISIONS CAN BE MADE PRIOR TO BIDDING. ANY CONFLICT BETWEEN DRAWINGS AND THE SPECIFICATIONS SHALL BE CONFIRMED WITH THE LOCAL CONSTRUCTION MANAGER PRIOR TO BIDDING.
4. REFER TO THE DETAIL SHEETS FOR PAVEMENT, CURBING, AND SIDEWALK INFORMATION.
5. ALTERNATIVE METHODS AND PRODUCTS OTHER THAN THOSE SPECIFIED MAY BE USED IF REVIEWED AND APPROVED BY THE SITE ENGINEER, AND THE APPROPRIATE REGULATORY AGENCIES PRIOR TO INSTALLATION.
6. THE CONTRACTOR SHALL RESTORE ANY OF THE FOLLOWING IF THEY ARE NOTED TO REMAIN: UTILITY STRUCTURE, PIPE, UTILITY, PAVEMENT, CURBS, SIDEWALKS, OR LANDSCAPED AREAS DISTURBED DURING CONSTRUCTION TO THEIR ORIGINAL CONDITION OR BETTER TO THE SATISFACTION OF THE CITY OF POUGHKEEPSIE.
7. TRAFFIC CONTROL MEASURES SHALL BE UTILIZED IN ACCORDANCE WITH CITY OF POUGHKEEPSIE AND NYSDOT.
8. PAVEMENT MARKINGS SHALL BE FAST DRYING TYPE IN ACCORDANCE WITH CITY OF POUGHKEEPSIE SPECIFICATIONS.
9. THE CONTRACTOR SHALL SUBMIT SHOP DRAWINGS OF ALL PRODUCTS, MATERIALS AND PLANT SPECIFICATIONS TO THE SITE ENGINEER AND OWNER FOR REVIEW AND APPROVAL PRIOR TO FABRICATION OR DELIVERY TO THE SITE. ALLOW A MINIMUM OF 14 WORKING DAYS FOR REVIEW. APPROVED SHOP DRAWINGS WILL BE PROVIDED BY THE ENGINEER AND COPIED TO THE CITY OF POUGHKEEPSIE.
10. THE CONTRACTOR SHALL PROVIDE AND MAINTAIN TRAFFIC DEVICES FOR PROTECTION OF VEHICLES AND PEDESTRIANS CONSISTING OF DRUMS, BARRIERS, SIGNS, LIGHTS, FENCES AND UNIFORMED TRAFFIC MEN AS REQUIRED OR ORDERED BY THE ENGINEER OR REQUIRED BY THE LOCAL GOVERNING AUTHORITIES. CONTRACTOR SHALL MAINTAIN ALL TRAFFIC LANES AND PEDESTRIAN WALKWAYS AT ALL TIMES UNLESS WRITTEN APPROVAL FROM THE CITY AND GOVERNING AUTHORITIES IS GRANTED.
11. THE PROJECT DRAWINGS ARE GENERALLY DIAGRAMMATIC IN INDICATING THE PRESENCE OF EXISTING UNDERGROUND UTILITIES. INFORMATION ON EXISTING UTILITIES HAS BEEN COMPILED FROM AVAILABLE INFORMATION INCLUDING UTILITY COMPANY AND MUNICIPAL RECORD MAPS AND FIELD SURVEY AND IS NOT GUARANTEED TO BE CORRECT OR COMPLETE. UTILITIES ARE SHOWN TO ALERT THE CONTRACTOR OF THEIR PRESENCE AND THE CONTRACTOR IS SOLELY RESPONSIBLE FOR DETERMINING ACTUAL LOCATIONS AND ELEVATIONS OF ALL UTILITIES AND SERVICES. WHEN THE UTILITIES ARE TO BE LEFT IN PLACE, THE CONTRACTOR SHALL PROVIDE ADEQUATE MEANS OF SUPPORT AND PROTECTION DURING THE EXCAVATION AND BACKFILLING OPERATIONS.
12. PRIOR TO DEMOLITION OR CONSTRUCTION THE CONTRACTOR SHALL CONTACT "CALL BEFORE YOU DIG" AT 1-800-962-7962 AT LEAST 72 HOURS BEFORE COMMENCEMENT OF WORK TO VERIFY ALL UTILITY LOCATIONS. CONTRACTOR SHALL NOT INTERRUPT EXISTING UTILITIES SERVICING FACILITIES OCCUPIED AND USED BY THE OWNER OR OTHERS DURING OCCUPIED HOURS.
13. IF ANY UNCHARTED OR INCORRECTLY CHARTED EXISTING PIPING OR OTHER UTILITY IS UNCOVERED DURING EXCAVATION, THE CONTRACTOR SHALL CONSULT THE SITE ENGINEER IMMEDIATELY FOR DIRECTIONS BEFORE PROCEEDING FURTHER WITH THE WORK.
14. STORAGE OF FLAMMABLE AND HAZARDOUS MATERIALS SHALL BE IN COMPLIANCE WITH THE NYS FIRE AND BUILDING CODE.
15. CONTRACTOR TO PROVIDE SITE ENGINEER WITH SUBMITTALS. ONCE APPROVED, COPIES WILL BE SUPPLIED TO CITY ENGINEER AND APPROPRIATE CITY DEPARTMENTS.
16. NO HERBICIDES OR PESTICIDES WILL BE USED DURING THE OPERATION OF THE SITE.

# EROSION AND SEDIMENT CONTROL PLAN

1. LAND DISTURBANCE WILL BE KEPT TO A MINIMUM; RESTABILIZATION WILL BE SCHEDULED AS SOON AS PRACTICABLE.
2. SILTATION FENCE WILL BE INSTALLED AT ALL CULVERT OUTLETS AND ALONG THE TOE OF ALL CRITICAL CUT AND FILL SLOPES.
3. ALL EROSION AND SEDIMENTATION CONTROL MEASURES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE STANDARDS AND SPECIFICATIONS OF THE NEW YORK STATE EROSION & SEDIMENT CONTROL "BLUE BOOK" 2005.
4. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE INSTALLED PRIOR TO CONSTRUCTION WHENEVER POSSIBLE.
5. ALL CONTROL MEASURES SHALL BE MAINTAINED IN EFFECTIVE CONDITION THROUGHOUT THE CONSTRUCTION PERIOD.
6. ADDITIONAL CONTROL MEASURES SHALL BE INSTALLED DURING THE CONSTRUCTION PERIOD, IF NECESSARY OR REQUIRED.
7. SEDIMENT REMOVED FROM CONTROL STRUCTURES WILL BE DISPOSED OF IN A MANNER WHICH IS CONSISTENT WITH THE INTENT OF THE PLAN.
8. DUST CONTROL AND ANTI-TRACKING MAINTENANCE TO BE ADDRESSED AND RESOLVED ON A DAILY BASIS.



# INSTALLATION OF SEDIMENTATION AND EROSION CONTROL MEASURES

## I. SILTATION FENCE

A. DIG A SIX INCH TRENCH ON THE UPHILL SIDE OF THE DESIGNATED FENCE LINE LOCATION.

B. POSITION THE POST AT THE BACK OF THE TRENCH (DOWNHILL SIDE), AND HAMMER THE POST AT LEAST 2.0 FEET INTO THE GROUND.

C. LAY THE BOTTOM SIX INCHES OF THE FABRIC INTO TH

# PLANTING NOTES:

1. THE LANDSCAPE PLAN AND RELATED DETAILS ARE FOR LANDSCAPING INFORMATION ONLY. PLEASE REFER TO THE SITE, GRADING & EROSION CONTROL PLANS FOR ALL OTHER INFORMATION.
2. THE CONTRACTOR SHALL GUARANTEE THAT ALL PLANTS, TREES, AND SHRUBS SHALL BE HEALTHY AND FREE OF DISEASE FOR A PERIOD OF ONE YEAR AFTER SUBSTANTIAL COMPLETION AND ACCEPTANCE BY OWNER OR LANDSCAPE ARCHITECT. CONTRACTOR SHALL REPLACE ANY DEAD OR UNHEALTHY PLANTS AT CONTRACTOR'S EXPENSE. PLANT MATERIAL REPLACEMENTS SHALL BE GUARANTEED FOR ONE FULL YEAR FROM DATE OF REPLACEMENT. FINAL ACCEPTANCE SHALL BE MADE IF ALL PLANTS MEET THE GUARANTEE REQUIREMENTS INCLUDING MAINTENANCE. MAINTENANCE RESPONSIBILITIES INCLUDE CULTIVATING, SPRAYING, WEEDING, WATERING, TIGHTENING GUYS, PRUNING, FERTILIZING, MULCHING, AND ANY OTHER OPERATIONS NECESSARY TO MAINTAIN PLANT VIABILITY. MAINTENANCE SHALL BEGIN IMMEDIATELY AFTER PLANTING AND CONTINUE UNTIL THE END OF THE ONE YEAR GUARANTEE PERIOD.
3. THE CONTRACTOR SHALL SUPPLY ALL LABOR, PLANTS, AND MATERIALS IN QUANTITIES SUFFICIENT TO COMPLETE THE WORK SHOWN ON THE DRAWINGS AND LISTED IN THE PLANT SCHEDULE. IN THE EVENT OF A DISCREPANCY BETWEEN QUANTITIES SHOWN IN THE PLANT SCHEDULE AND THOSE REQUIRED BY THE DRAWINGS, THE LARGER SHALL APPLY.
4. ALL SHRUB MASSINGS SHALL BE MULCHED TO A DEPTH OF 4" WITH SHREDDED HARDWOOD BARK MULCH.
5. NO PLANT SHALL BE PLACED IN THE GROUND BEFORE ROUGH GRADING HAS BEEN COMPLETED AND APPROVED BY ENGINEER. STAKING THE LOCATION OF ALL TREES AND SHRUBS SHALL BE COMPLETED PRIOR TO PLANTING FOR APPROVAL BY THE OWNER OR LANDSCAPE ARCHITECT. STAKING OF THE INSTALLED TREE MUST BE COMPLETED THE SAME DAY AS IT IS INSTALLED. ALL TREES SHALL BE STAKED OR GUYED PER DETAIL. SEE SHEET DN-1 FOR PLANTING DETAILS.
6. COORDINATE PLANT MATERIAL LOCATIONS WITH SITE UTILITIES. SEE SITE LAYOUT, GRADING AND UTILITY DRAWINGS FOR STORM, SANITARY AND WATER LINES. SEE LIGHTING PLAN FOR ELECTRICAL AND LIGHTING LAYOUT AND DETAILS. UTILITY LOCATIONS ARE APPROXIMATE. EXERCISE CARE WHEN DIGGING IN AREAS OF POTENTIAL CONFLICT WITH UNDERGROUND OR OVERHEAD UTILITIES. THE CONTRACTOR IS RESPONSIBLE FOR ANY DAMAGE DUE TO CONTRACTOR'S NEGLIGENCE AND SHALL REPLACE OR REPAIR ANY DAMAGE AT CONTRACTOR'S EXPENSE.
7. LANDSCAPE PLANTING PITS MUST BE FREE DRAINING. PAVEMENT, COMPACTED SUBGRADE, AND BLASTED ROCK SHALL BE REMOVED FROM WITHIN TRAFFIC ISLANDS TO BE LANDSCAPED TO A DEPTH OF 2' OR TO A GREATER DEPTH IF REQUIRED BY PLANTING DETAILS OR SPECIFICATIONS. REPLACE SOIL WITHIN ISLANDS WITH MODERATELY COMPACTED LOAM OR SANDY LOAM FREE FROM STONES AND RUBBISH 1" OR GREATER IN DIAMETER AND ANY OTHER MATERIAL HARMFUL TO PLANT GROWTH AND DEVELOPMENT. PLANTING INSTALLATION WITHIN ISLANDS SHALL BE AS DETAILED AND CONTAIN PLANTING MIX AS SPECIFIED.
8. TIME OF PLANTING: NEW PLANT MATERIALS SHALL BE INSTALLED BETWEEN APRIL 1 AND JUNE 1, OR AFTER SEPTEMBER 15TH AND NO LATER THAN OCTOBER 31ST.
9. PLANTING SOIL MIXTURE FOR TREES AND SHRUBS:
   - 1 PART PEAT MOSS
   - 3 PARTS TOPSOIL
   - FERTILIZER/LIME (APPLY AS RECOMMENDED BY SOIL ANALYSIS)
   - MYCORHIZA INOCULANT – "TRANSPLANT 1–STEP" AS MANUFACTURED BY ROOTS, INC. OR APPROVED EQUAL.
     USE PER MANUFACTURER'S RECOMMENDATIONS FOR TREES AND SHRUBS.
10. TOPSOIL SHALL BE INSTALLED AT A MINIMUM DEPTH OF 6" IN LAWN AREAS. CONTRACTOR SHALL SUBMIT TOPSOIL TO A CERTIFIED TESTING LABORATORY TO DETERMINE pH, FERTILITY, ORGANIC CONTENT AND MECHANICAL COMPOSITION. THE CONTRACTOR SHALL SUBMIT THE TEST RESULTS FROM REGIONAL EXTENSION OFFICE OF USDA TO THE OWNER OR LANDSCAPE ARCHITECT FOR REVIEW AND APPROVAL. CONTRACTOR SHALL INCORPORATE AMENDMENTS FOR GOOD PLANT GROWTH AND PROPER SOIL ACIDITY RECOMMENDED FROM THE TOPSOIL TEST.
11. LAWN SEEDING MIXTURE:

    15% KENTUCKY BLUEGRASS (POA PRATENSIS – SINGLE VARIETY)
    15% PERENNIAL RYEGRASS (LOLIUM PERENNE)
    30% CREEPING RED FESCUE (FESTUCA RUBRA)
    25% CHEWINGS FESCUE (FESCTUCA RUBRA "JAMESTOWN II")
    15% HARD FESCUE (FESTUCA OVINA "RELIANT II")

    SEEDING RATE: 4.5 LBS PER 1,000 S.F. (ADD 10% TO QUANTITY IF HYDROSEEDED).

    SEEDING DATES: AUGUST 15 – OCTOBER 1 AND APRIL 15 – JUNE 15 UNLESS OTHERWISE APPROVED BY THE OWNER OR LANDSCAPE ARCHITECT.
12. ALL SLOPES GREATER THAN 3:1 RECEIVING A GRASS SEEDING MIXTURE SHALL BE COVERED WITH AN EROSION CONTROL BLANKET.
13. ALL DISTURBED AREAS NOT OTHERWISE DEVELOPED SHALL BE SEEDED WITH THE LAWN SEEDING MIXTURE.
14. TREE PROTECTION: PRIOR TO THE START OF CONSTRUCTION OR EXCAVATION, TREES TO BE RETAINED SHALL BE PROTECTED BY SILT FENCE, SNOW FENCE, CONSTRUCTION FENCE, OR EQUAL, WHICH WILL BE PLACED AT THE DRIP LINE OR SEVERAL FEET BEYOND. HOWEVER, THE FENCING SHALL NOT CROSS PUBLIC SIDEWALKS. NO STORAGE OR STOCKPILING OF CONSTRUCTION MATERIALS, DEBRIS OR EQUIPMENT SHALL OCCUR WITHIN THE FENCED AREA."

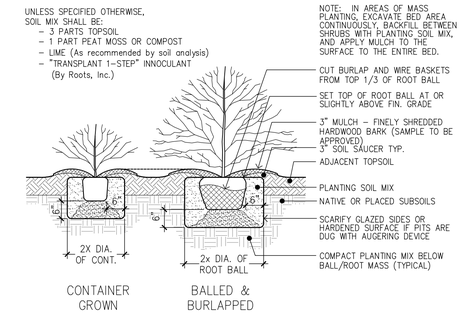
## TREE PLANTING
Scale 1/2" = 1'–0"



SECTION THROUGH PERENNIAL BED

PERENNIAL NOTES:
1. BULB/CORM PERENNIALS TO BE PLANTED IN FALL. POTTED PERENNIALS MAY BE PLANTED APRIL 15 TO OCTOBER 1.
2. ROTOTILL FERTILIZER AND LIME INTO SOIL PRIOR TO PLANTING AND IN ACCORDANCE TO SOIL ANALYSIS RECOMMENDATIONS.
3. DO NOT OVER COMPACT PLANTING BED. WATER THOROUGHLY AFTER PLANTING BULBS.
4. ADJUST PLANTING DEPTH AS RECOMMENDED BY BULB SUPPLIER.
5. PROVIDE DRAINAGE AS REQUIRED (PERF PIPE 4" ADS) WHEN SUBGRADE IS CLASSIFIED AS A HEAVY SOIL OR EXCESSIVELY COMPACTED.

UNLESS SPECIFIED OTHERWISE, PERENNIAL BED SOIL MIX SHALL BE:
– 3 PARTS TOPSOIL
– 1 PART MANURE (WEED FREE)
– 1 PART PEAT MOSS OR COMPOST
– LIME (As recommended by soil analysis)
– "MILORGANITE" AT 5 LBS. PER 100 SF.

## S1 - Soft Light

8" LED Downlight
**LC8SL**
1000/1400/1800 Lumens
120V-277V, 347V
0-10V Dimming

**APPLICATIONS:**
LiteFrame Commercial LC8SL is a 8" commercial grade LED downlight with available outputs between 1000-1800 lumens. This is suitable to replace most CFL downlighting applications, while realizing substantial energy and maintenance savings. Rated for a minimum of 50,000 hours life (70% lumen maintenance) with ambient plenum temperatures up to 33°C. Free Air Flow around the fixture is required for optimal life performance. This product is not recommended for use with 3rd party "FIREHAT" or insulation barriers.

**HOUSING:**
Onepiece 22 gauge non-corrosive steel platform. Prewired J-box with snap-on cover for easy access. Snap-in connection from driver compartment allows easy installation of light engine/trim assembly and can be upgraded to accommodate technology improvements. Approved for 8 (4 in/4 out) No. 12 AWG conductors rated for 90°C through wiring.

**REFLECTOR:**
High purity aluminum, Alzak, iridescence suppressed, semi-diffuse reflector. Self-trim standard. Painted white self-trim (WT) available as option.

**LED LIGHT ENGINE:**
The LC8SL uses mid power Nichia LEDs, specifically mixed to provide a minimum of 80 CRI with 3 SDCM color consistency. The use of multiple mid power LEDs allows for optimal thermal management by effectively spreading the heat over a larger area and eliminating hot spots on the LEDs. A diffuse, yet highly transmissive lens obscures the view of the LEDs and creates a smooth, even look from below. The light engine is available in multiple Kelvin temperatures and the system is designed to provide optimal life and lumen maintenance (50,000 hours at 70% lumen maintenance). The reflector/light engine assembly is hermetically retained to the housing.

**LED DRIVER:**
The LC8SL utilizes a constant current LED driver. This same driver is capable of running all three different lumen outputs, resulting in a reduction of housing stock and simplified specification. The driver is UL8750, Class II compliant and universal 120V-277V.

**DIMMING:**
Comes standard with flicker-free 0-10V dimming to 10%. 0-10V to 1% dimming option is also available. See list of compatible dimmers on page 3. For the sizing of the control circuit, the dimming circuit may require up to 2mA of sink current.

**INSTALLATION:**
Light commercial bar hangers included. Universal adjustable mounting brackets also accept ½" EMT conduit or 1½" or ¾" baffling channel (by others) or Prescolite 24" bar hangers (B24 or B6).

**CERTIFICATIONS:**
CSA certified to US and Canadian safety standards. Suitable for wet locations (EM and EMR damp location). ENERGY STAR Qualified.
This product qualifies as a "designated country construction material" per FAR 52.225-11 Buy American-Construction. Materials under Trade Agreements effective 6/10/2020. See Buy American Solutions.

**WARRANTY:**
5 year warranty. See www.prescolite.com for details.

## Specifications

J-box in wall by others
**Shallow Cutoff Face Surface Mount**

**WF23 with LED**

Light distribution
Shallow Cutoff Face

**Surface Mount:** Die-cast, low copper (<0.6% Cu) aluminum alloy with double side walls. Zinc plated steel mounting plate supplied for mounting to standard 3" or 4" junction box.

**Face Plate:** Die-cast, low copper (<0.6% Cu) aluminum alloy with vertical and horizontal double ribs covering the full hemisphere. Ribs are minimum ⅝" depth and ⅜" thickness. Secures to housing with four stainless steel captive socket head screws.

**Shallow Cutoff Face:** Solid upper half protruding 3⅛" from housing and concave lower half.

**Lens:** Flat tempered glass, ⅛" minimum thickness with internal sandblast. Retained in face plate and sealed with a one-piece silicone gasket.

**LED Optical System:** A total of 9 LED emitters configured in a rectangular array comprised together as a module. One (1) module for 9 LED version and two (2) modules for 18 LED version. Available in 580lms, 3000K, 4200K and 5100K.

**LED Driver:** Rated for 9 or 18 LED. Universal voltage from 120 to 277V with a ±10% tolerance. -40ºF starting temperature. All drivers are Underwriters Laboratories recognized.

**Finish:** Each luminaire receives a fade and abrasion resistant, electrostatically applied, thermally cured. triglycidal isocyanurate (TGIC) polyester powdercoat finish. Standard colors include (BL) Black, (DB) Dark Bronze, (WH) White, (PS) Platinum Silver, (SG) Stealth Gray, (LG) Light Gray, and (CC) Custom Color (Include RAL#).

**Finishing Items:** Electrical modules and face plates. Each set of finishing items shall be in one container, clearly marked with the fixture catalog number.

**CAUTION:** Fixtures must be grounded in accordance with national, state, and/or local electrical codes. Failure to do so may result in serious personal injury.

### SPECIFICATIONS

**CONSTRUCTION**
- Low copper aluminum alloy die-casting is designed as one-piece with internal cooling fins.
- Solid, cast aluminum wall creates a thermal barrier between the optical and electrical compartments.
- Molded silicone gasket throughout insures the sealing between the two compartments and provides ingress protection.
- Housing is designed with integral LED heat sink utilized for thermal transfer and for securing the location of each LED module.
- IK09 rated enclosure protects electrical equipment against external mechanical impacts.
- All external fasteners are stainless steel.
- One-piece low copper aluminum alloy die-cast lens frame is secured to housing with 6 screws.

**OPTICS**
- LEDs mount to a metal printed circuit board assembly (MCPCB).
- Optical lenses are clear injection molded PMMA acrylic.
- Optional Backlight Control on each LED module to completely control unwanted backlight.

**INSTALLATION**
- Fixtures must be grounded in accordance with national, state and/or local electrical codes. Failure to do so may result in serious personal injury.

**ELECTRICAL**
- Universal voltage, 120 through 277V with a ±10% tolerance. Driver is Underwriters Laboratories listed.
- High voltage configurations, 347/480. Driver has a 0-10V dimming interface for multi-level illumination options. Driver is Underwriters Laboratories listed.
- "Thermal Shield", secondary side, thermistor provides protection for the sustainable life of LED module and electronic components
- Drivers shall have greater than a 0.9 power factor, less than 20% harmonic distortion, and be suitable for operation in -40°C to 40°C ambient environments.
- Luminaire shall be capable of operating at 100% brightness in a 40°C environment. Both driver and optical array have integral thermal protection that will dim the luminaire upon detection of temperatures in excess of 85°C.
- Surge protection: 10,000k in parallel, 20,000k in series
- Wiring: No. 18AWM rated 105°C, wet rating.

**CONTROLS**
**7PR**
- Fully gasketed and wired 7-pin receptacle option. Easy access location above the electrical compartment. 7-pin construction allows for a user-defined interface and provides a controlled definition of operational performance. ANSI twist-lock control module by-others.

Standard customer operation modes:
- Traditional on/off photoelectric control
- 5-pin wireless photoelectric control for added dimming feature.
- 7-pin wireless photoelectric control for for dimming and additional I/O connections for customer use.

7PR OPTION

- Molded silicone gasket throughout insures the sealing between the two compartments and provides ingress protection.
- IK09 rated enclosure protects electrical equipment against external mechanical impacts.
- All external fasteners are stainless steel.
- Cover is secured to Lens frame by the latch and hinge.

**OPTICS**
- LEDs mount to a metal printed circuit board assembly (MCPCB).
- Optical lenses are clear injection molded PMMA acrylic.
- Optional Backlight Control on each LED module to completely control unwanted backlight.
- Optional fixture finish optical surfaces will not exceed BUG ratings of the standard white finish.

**INSTALLATION**
- Fixtures must be grounded in accordance with national, state and/or local electrical codes. Failure to do so may result in serious personal injury.

**ELECTRICAL**
- Universal voltage, 120 through 277V with a ±10% tolerance. Driver is Underwriters Laboratories listed.
- High voltage configurations, 347/480. Driver has a 0-10V dimming interface for multi-level illumination options. Driver is Underwriters Laboratories listed.
- "Thermal Shield", secondary side, thermistor provides protection for the sustainable life of LED module and electronic components
- Drivers shall have greater than a 0.9 power factor, less than 20% harmonic distortion, and be suitable for operation in -40°C to 40°C ambient environments.
- Luminaire shall be capable of operating at 100% brightness in a 40°C environment. Both driver and optical array have integral thermal protection that will dim the luminaire upon detection of temperatures in excess of 85°C.
- Surge protection: 10,000k in parallel, 20,000k in series
- Wiring: No. 18AWM rated 105°C, wet rating.

**CONTROLS**
**7PR**
- Fully gasketed and wired 7-pin receptacle option. Easy access location above the electrical compartment. 7-pin construction allows for a user-defined interface and provides a controlled definition of operational performance. ANSI twist-lock control module by-others.

Standard customer operation modes:
- Traditional on/off photoelectric control
- 5-pin wireless photoelectric control for added dimming feature.
- 7-pin wireless photoelectric control for for dimming and additional I/O connections for customer use.

7-Pin receptacle placement

NOTES:
1. THE DETAILS PROVIDED ARE NOT DRAWN TO SCALE, THE QUANTITY OF DOMES DEPICTED ON THE DETECTABLE WARNING UNIT (THE DOMES AND THE ENTIRE 24" LEVEL SURFACE) IS FOR ILLUSTRATION ONLY.
2. THE SIZE OF THE DETECTABLE WARNING FIELD SHALL BE 24" IN THE DIRECTION OF TRAVEL AND SHALL EXTEND THE FULL WIDTH OF THE CURB RAMP OR FLUSH SURFACE.
3. THE ROWS OF DOMES SHALL BE ALIGNED TO BE PERPENDICULAR OR RADIAL TO THE GRADE BREAK BETWEEN THE RAMP LANDING OR CURB RAMP AND THE STREET.
4. WHERE DOMES ARE ARRAYED RADIALLY THEY MAY DIFFER IN DOME DIAMETER AND CENTER-TO- CENTER SPACING WITHIN THE RANGES SPECIFIED ON THIS SHEET.
5. THE DETECTABLE WARNING FIELD SHALL BE THE COLOR SPECIFIED IN THE CONTRACT DOCUMENTS OR MEET THE REQUIREMENTS OF THE STANDARD SPECIFICATIONS.
6. DETECTABLE WARNING SHALL BE LOCATED SO THAT THE EDGE OR CORNER OF THE WARNING FIELD NEAREST TO THE ROADWAY IS 5" TO 9" FROM THE FRONT OF THE CURB OR THE ROADWAY EDGE (12" WHERE TRAVERSABLE CURB IS USED). INSTALL THE DETECTABLE WARNING FIELD BEHIND THE FLUSH CURB.
7. THE EDGE OF THE DETECTABLE WARNING FIELD NEAREST TO A RAILROAD CROSSING SHALL BE 6'–0" MINIMUM AND 15'–0" MAXIMUM FROM THE CENTERLINE OF THE NEAREST RAIL.

## DETECTABLE WARNING STRIP

## CONSTRUCTION SPECIFICATIONS

1. STONE SIZE – USE 3"–4" ANGULAR STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT.
2. LENGTH – NOT LESS THAN 50 FEET (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY).
3. THICKNESS – NOT LESS THAN SIX (6) INCHES.
4. WIDTH – TWELVE (12) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY–FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.
5. FILTER CLOTH – WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER – ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE – THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS–OF–WAY, ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACTED ONTO PUBLIC RIGHTS–OF–WAY MUST BE REMOVED IMMEDIATELY.
8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON A AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

NEW YORK STATE SOIL & WATER CONSERVATION COMMITTEE

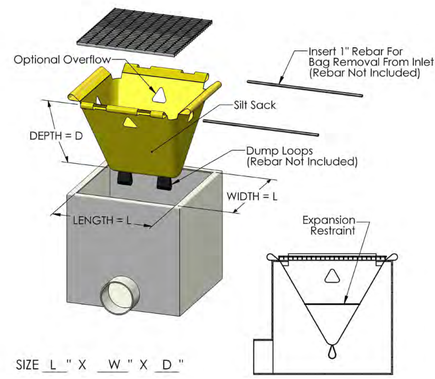
**SILT FENCE**

NOTES:

1. AREA CHOSEN FOR STOCKPILING OPERATIONS SHALL BE DRY AND STABLE.
2. MAXIMUM SLOPE OF STOCKPILE SHALL BE 1V:2H.
3. UPON COMPLETION OF SOIL STOCKPILING, EACH PILE SHALL BE SURROUNDED WITH SILT FENCING, THEN STABILIZED WITH VEGETATION OR COVERED.
4. SEE SPECIFICATIONS FOR INSTALLATION OF SILT FENCE.
5. HAYBALES OR SILT SOCKS TO BE USED WHERE STOCKPILES ARE LOCATED ON PAVED AREAS.

MATERIALS STOCKPILE
NOT TO SCALE



NOTES:

1. CONCRETE WASHOUT SIGN TO BE INSTALLED WITHIN 30 FEET OF THE TEMPORARY CONCRETE WASHOUT FACILITY.
2. REMOVE HARDENED CONCRETE WHEN WITHIN 4" FROM TOP OF STRUCTURE.
3. CONSTRUCT NEW FACILITIES ONCE CURRENT FACILITIES ARE TWO–THIRDS FULL. IF CONCRETE HAS NOT HARDENED CONSTRUCT NEW FACILITIES ONCE CURRENT FACILITY IS TWO–THIRDS FULL.
4. LINERS, HAYBALES, ET.C SHALL BE INSPECTED FOR DAMAGE. ANY DAMAGE SHALL BE REPAIRED PROMPTLY.
5. SEPARATE FACILITIES TO BE USED FOR VEHICLE WASHING IF NEEDED.
6. NO CONCRETE IS TO BE WASHOUT OUT ON THE GROUND IN ANY LOCATION.

ABOVE GROUND TEMPORARY CONCRETE/VEHICLE WASHOUT FACILITY

Re: Wallace Campus: 9/28/21 Reduced Size Plan/PID Building Standards

Dear Ms. Quinn:

Included in the Applicant's submission today is the SLCE Architectural Drawing Set. This plan set illustrates compliance with the PID building design standards. Additionally, this letter briefly summarizes compliance with those standards.

PID Building Design Standards: 19-3.37 (10):

(a) FRONT FAÇADE TRANSPARENCY REQUIREMENTS:

1. There is no mirrored, reflective or darkly tinted glass. Glass used in the three buildings to be transparent low-e, double pane argon filled insulated glass. See Z-001 for extent of glass.

2. No security grills are proposed at any of the buildings.

3. No curtains, blinds, or posters are proposed at the ground floor for any of the buildings. See Z-001 for transparency percentages.

(b) FRONTAGES: SLCE has chosen a Shopfront Type C Frontage Type for all three buildings. See sheets A-200A thru A-200E

(c) DESIGN AND ARCHITECTURE:

1. Entrance Orientation: All 3 buildings have main entrance or entrances on the front façade. Maximum distance between entrances is attained. See Site Plan SP-1

2. Shopfront entrance orientation: Principal pedestrian entrances for all 3 buildings are directly connected to the sidewalk. Principal entrances to shopfronts are highlighted with architectural features.

3. Historic rehabilitation: SLCE Architects engaged in substantial research to assure that their proposed new construction reflects the traditional

architecture of Main Street in building and roof forms, window proportions, materials, colors and details.

With our site in the heart of the historic core, our proposal seeks to take its cues from the existing and historical fabric of Main Street, creating a gateway which reinforces the pedestrian connection from Main Street to Mill Street, near its intersection with Conklin, and passing through a new greenspace (Wallace Green) centrally located on the proposed campus. This new pedestrian connection is designed to be similar in scale to the pedestrian connection between Main Street and Mill Street via Garden St. further west on Main Street.

The existing urban fabric on Main Street is characterized by a finer grain of buildings interrupted by medium and larger scale lots, with our site spanning between the medium scale of the existing Wallace building and the finer grain of main mall row. Our proposal for Main Street mediates between the large scale and stoic quality of the existing Wallace and Luckey Platt buildings and the refined ornament and articulation of the buildings on Main Mall Row.

We were particularly interested in the Cast Iron Building - the way it turns the corner from Main Street to Garden St. by continuing the Main St. façade material and terminating at a setback, giving the effect of a thickened façade, as well as division of the facade into a clear base, middle, & top w/ a highly articulated cornice.

In the historical images of the Wallace building and Windsor hotel, a few things struck us. One was the way the canopy at the storefront level really begins to help activate the street level. We also found the rhythmic structure of the Windsor hotel piers successful at creating continuity along the storefront edge as it turns the corner from Catharine to Main Street. And in the Morgan house hotel photo where the canopies and window shades create a remarkable streetscape.

In Plan, the Main Street building forms a tee pushed to the western edge of the site. At the connection of the tee SLCE introduced a recess in the plan to visually separate the building into two volumes, and allow the stem of the tee to realign with the kink in the Wallace Building and prevent the path from narrowing toward the park while the volume on Main Street remains parallel to Main. It also provides a clear termination to the commercial spaces which wrap into the pedestrian walkway encouraging the pedestrian connection and shortening the perceived distance to the park. The façade is predominately brick with cast stone accents, a precast base, and precast cornice. The windows run in a regular grid with deep returns and articulation of the brick achieved through corbeling. The windows terminate with arched openings at the upper floor to accentuate the building top, similar to the historical buildings on Main Street.

The precast base is conceived as a series of structural piers continuing the rhythm of the Windsor hotel. Between the piers are inserted metal panel canopies and aluminum storefronts, defining the pedestrian edge. We are also introducing ornamental relief to the precast base inspired by the pressed tin ceilings of the existing Wallace building.

The Main street building cornice mimics the depth and section profile of the Cast Iron Building Cornice, while following the stepped silhouette of 311 Main Street. This gives the façade a proportion that is more in keeping with the proportions of the historical buildings on Main Street.

Our design for the Catharine Street building is intended to complement the Wallace building extension facing Catharine Street. The building is divided into three zones with precast structural piers and aluminum storefront along the base, a center zone of brick (taking its material cue from the existing Wallace building extension), ornamental precast, and articulated cornice. The upper zone is conceived as an enlarged cornice with a change to white brick and inserting a spandrel panel and accent mullion, unifying the openings. SLCE is using the same spandrel treatment at the 4th floor and ornamental precast at the remaining slab edges to give a hierarchy of scales to the façade. The remaining windows are separated by a small brick pier which is mirrored around each of the structural columns. These small piers add a secondary rhythm to the façade while keeping the windows proportional to the openings found in the historical district. The ground floor incorporates canopies and the structural piers to open and activate the street level.

4. Blank walls: No visible façade of any of the buildings is blank. We have paid particular attention to the sides of the buildings that face the Wallace Green Walkway and the Green. These are also important facades that frame the view from Mill Street, which will form an important entrance to the side for both vehicles and pedestrians. See building elevations.

5. Façade articulation: Facades along all three buildings are broken up with divisions in materials, separate entrances and windows. Awnings are also used. Building articulation continues to wrap around the corners of Main Street and Wallace buildings to invite patrons and visitors into the pedestrian mid-block connector and provide access to residential entrances. The façade of the Catharine Street building has multiple doors and window treatments. See elevations.

6. Awnings: Awnings for the three buildings are to be Aluminum Composite Panels over a recessed entry and extend 3’-4’ beyond the building face. Scale drawings are provided to show height. See A-200A through A-200E.

7. Roofs: All roofs have been designed to conceal mechanical equipment. See detailed elevations and roof plans in the March 2021 submission set, and

accompanying diagrams demonstrating that neither rooftop bulkheads nor rooftop mechanicals will be visible from the street or adjoining properties. Mechanicals will be low in height and will be totally screened. Attached diagrams show limited hatched area within which mechanicals can be located (A-104A Main Street Bldg.; A-103B Catharine Street Bldg.; A104C Wallace Bldg) and showing that the mechanicals as so screened will not be visible from the street or adjacent properties. (Z-002)

Main St Building – The roof will be a high albedo built-up roof system. Proposed elevator/stair and boiler room bulkheads for the building are located within the section of the building that is located within the PID-UV zoning sub-district. These cover 1,563 sf (11.6%) of the horizontal area of the roof and are set-back from Main Street 42'-8" from the face of the building (see A-104A). Mechanical equipment on the roof, required for the proposed residential units, will be limited to placement within the hatched area shown on A-103C. The overall height of the mechanical units, including any concrete pad or dunnage required for support, will be @ 5'-6" max., and will be screened using a 6'-0" high perforated metal screen, as depicted in the attached drawings. Please see the sightline analysis (drawing 1&3 on Z-002) demonstrating that both the mechanical equipment and screen will not be visible from adjacent properties and streets.

Catharine Street Building - The roof will be a high albedo built-up roof system. The roof plan of the Catherine Street building shows proposed elevator/stair and boiler room bulkheads which cover 1,636 sf (17%) of the horizontal area of the roof and sit 30'-8" from Catharine Street, and from the face of the building (see A-103B). Mechanical equipment on the roof required for the proposed residential units, will be limited to placement within the hatched area shown on A-103C. The overall height of the mechanical units, including any concrete pad or dunnage required for support, will be @ 5'-6" max., and will be screened using a 6'-0" high perforated metal screen, as depicted in the attached drawings. Please see the sightline analysis (drawing 2 on Z-002) demonstrating that both the mechanical equipment and screen will not be visible from view from adjacent properties and streets.

Wallace Building – The existing roof of the Wallace building will be replaced and repaired to match the existing roof as required. No new additions to the roof are proposed. Any mechanical equipment on the roof required for the proposed residential units and to be placed on the roof of either the Wallace building or the Wallace building extension, will be limited to within the hatched area shown on Drawing A-103C. The overall height of the mechanical units , including any concrete pad or dunnage required for support, will be @ 5'-6" maximum, and will be screened using a 6'-0" high perforated metal screen, as depicted in the attached drawings. Please

see the sightline analysis (drawings 1 & 5 on Z-002) demonstrating that both the mechanical equipment and screen will not be visible from adjacent properties and streets.

8. Screening: Roof Screening will be a perforated metal screen finished to match the metal of the window frames of the buildings. Mechanical equipment will be located away from the edge of the buildings to further shield from view. See drawings referred to in previous section.

   As noted, the submitted drawings support the compliance of our buildings. We are happy to discuss any questions you may have in this regard.

Very truly yours,

SLCE Architects

Wallace Campus Development City of Poughkeepsie, Dutchess County, New York
Colliers Engineering & Design Project No. 20003474A

Dear Natalie,

Colliers Engineer & Design (formerly Maser Consulting) has conducted a review of the reduced size proposed development plan for the Wallace Campus Development ("the Reduced Size Project") as it relates to the potential traffic and parking impacts of the Project. The prior development plan ("7-Story/Daycare Project"), which was previously analyzed in our February 27, 2021 letter report, was formerly proposed to consist of 214 mixed income affordable housing units, a 10,197 sq. ft. daycare facility, an approximately 29,000 sq. ft. community fitness center/climbing gym, 6,416 sq. ft of retail/commercial space and an approximately 1-acre privately owned, but publicly accessible green space ("Wallace Green").

The Reduced Size Project is now proposed to consist of 187 mixed income affordable housing units, 14,235 sq. ft. of retail/commercial space along with the Wallace Green. The fitness center/climbing gym and daycare facility are no longer part of the development.

The Reduced Size Project also includes changes to the onsite parking and circulation patterns resulting from the elimination of the previously proposed daycare facility and the associated drop-off/pick-up areas. A total of 63 parking spaces are proposed under this modified development plan as compared to the 62 parking spaces under the previously proposed plan.

The following provides a detailed discussion of the potential traffic and parking impacts of the Project based on this modified development plan as well as a comparison to the previously proposed development plan where appropriate.

## Reduced Size Project Parking Demand

As previously identified in our February 27, 2021 letter report, the Project falls within the Poughkeepsie Innovation District Historic Core (PID-HC) and Urban Village (PID-UV) zones. The City of Poughkeepsie Zoning Code (Section 19-3.37.(13)) identifies the minimum parking requirements for the proposed uses within the development. These parking requirements and the total number of required parking spaces for the Reduced Size Project are identified in the Table No. 1 below.

### Table No. 1 – Code Required Parking Summary – Reduced Size Project

| Building | Proposed Use | Size | Zone | Code Required Parking Ratio | Required Spaces |
|---|---|---|---|---|---|
| Main Street Building | Residential (69 Units Total) | 17 Units | PID-HC | 0 Spaces/Unit | 0 |
| | | 52 Units | PID-UV | 0.5 Spaces/Unit | 26 |
| | | | | 1 Visitor Space/10 Units | 6 |
| | Retail | 3,331 Sq. Ft. | PID-UV | 0 Spaces/ Sq. Ft. | 0 |
| Catharine Street Building | Residential | 49 Units | PID-HC | 0 Spaces/Unit | 0 |
| | Retail | 3,255 Sq. Ft. | | 0 Spaces/ Sq. Ft. | 0 |
| Wallace Building | Residential | 69 Units | PID-HC | 0 Spaces/Unit | 0 |
| | Retail | 7,649 Sq. Ft. | | 0 Spaces/ Sq. Ft. | 0 |
| | | | | Total | 32 |

As indicated in the table above, per the City Code parking requirements, the Reduced Size Project is required to provide a total of 32 off-street parking spaces. The total of 32 required parking spaces is less than half of the required number of parking spaces under the 7-Story/Daycare Project, which was required to provide approximately 90 total parking spaces prior to accounting for shared parking amongst the uses.

The shared parking accommodations for the 302, 304 & 306 Mill Street parcels, which will be provided 12 dedicated parking spaces, will still remain within the overall Wallace Campus parking lot. Similarly, The Wallace consolidated lot will continue to provide the adjacent Hudson River Housing (HRH) with six (6) reserved parking spaces on the Wallace Property during weekday office hours only (8 AM to 6 PM) for employee and client parking. These spaces would be available to Wallace Campus residents and visitors for parking outside these hours. Together with the 32 spaces required for the Reduced Size Project, the total required parking spaces is 50 spaces during HRH office hours and 44 spaces all other times on Weekdays and all day on Weekends.

As previously indicated, the Site Plan for the Reduced Size Project will provide 63 off-street parking spaces, which will accommodate the total parking requirements of the Wallace Campus, 302, 304 & 306 Mill Street Parcels and the HRH facility. Furthermore, as identified in our February 27, 2021 study, there is also sufficient available on-street parking in the vicinity of the Site to accommodate any potential excess parking demand that may be generated by the Project. It is the intent of the PID zone to leverage this availability of underutilized surplus parking in the PID downtown area for future development.

It should also be noted that the typical use of the Wallace Green is proposed to remain as a passive green space for both residents and visitors. As indicated in our prior study, it is the opinion of Colliers Engineer and Design that this space will not generate any additional parking demand, but rather will draw patrons who are already within the proposed development and immediate surrounding neighborhood to utilize the space.

The Reduced Size Project will also hold occasional Public Performances/Community Gatherings within the Wallace Green & Tiered Seating area. The parking accommodations for these performances/gatherings can be accommodated by available on-street parking in the area of the Site as previously identified in our February 27, 2021 study.

## Reduced Size Project Traffic Generation & Traffic Related Impacts

In order to assess the potential traffic related impacts of the Project, estimates of the amount of traffic to be generated by the modified Wallace Campus development during each of the peak hours (Weekday AM, Weekday PM and Saturday) were developed based on information published by the Institute of Transportation Engineers (ITE) as contained in the report entitled ***Trip Generation***, 10th Edition, 2017, based on Land Use Categories; 223 - Affordable Housing; 411 - Public Park and; 820 - Retail. It should be noted that where applicable ITE data For Dense Multi-Use Urban Locations was referenced to reflect traffic generation rates commensurate with the downtown location of the proposed development.

Table No. 2, below, provides a summary of the traffic generation estimates for the Reduced Size Proejct based on the ITE data. This table also takes similar internal and multi-modal credits as identified in our February 27, 2021 report, which are based on the credits identified in the ***Poughkeepsie Downtown Parking Improvement Plan – Analysis of Further Parking Demand*** prepared by Nelson Nygaard dated April 2018.

Colliers Engineering & Design

## Table No. 2 – Anticipated Site Generated Traffic Volumes for Reduced Size Project

| Time Period | Entry | | | Exit | | |
|---|---|---|---|---|---|---|
| | HTGR[1] | Volume | External Vehicle Trips[2] | HTGR[1] | Volume | External Vehicle Trips[2] |

Notes:

1. The Hourly Trip Generation Rates (HTGR) are based on data published by the Institute of Transportation Engineers (ITE) as contained in the Trip Generation Handbook, 10th Edition, 2017. ITE Land Use Code - 223 - Affordable Housing, ITE Land Use Code - 411 - Public Park and ITE Land Use Code - 820 - Retail. Note where applicable ITE data for dense multi-use urban locations was referenced.
2. "External Vehicle Trips" include a 30% internal capture trip credit for all land uses as well as a 35% multi-modal trip credit to account for internal trips within the development and between the development and other nearby uses as well as non-personal vehicle trips to the Site. These credits are based on data provided in the Poughkeepsie Downtown Parking Improvement Plan - Analysis of Future Parking Demand prepared by Nelson Nygaard dated April 2018.

Table No. 3 below provides a comparison of the above traffic generation estimates for the Reduced Size Project to the previously proposed 7-Story/Daycare Project. The trip generation estimates for the 7-Story/Daycare Project were identified in Table No. 7 of our February 27, 2021 report.

Colliers Engineering & Design

**Table No. 3 – Traffic Generation Comparison – 7-Story/Daycare Project vs. Reduced Size Project**

| Time Period | 7-Story/Daycare Project | | | Reduced Size Project | | |
|---|---|---|---|---|---|---|
| | Entry Volume | Exit Volume | Total Volume | Entry Volume | Exit Volume | Total Volume |
| Peak AM Hour | 72 | 58 | 130 | 39 | 22 | 61 |
| Peak PM Hour | 71 | 63 | 134 | 40 | 32 | 72 |
| Saturday Peak Hour | 54 | 56 | 110 | 46 | 45 | 91 |

As indicated in the above table, the Reduced Size Project is generally anticipated to generate less traffic than the previously proposed 7-Story/Daycare Project. This is attributable to the reduction in the number of residential units as well as the elimination of the daycare and fitness center/climbing gym uses.

Based on the above traffic generation estimates, the Reduced Size Project is expected to generate less than 100 entering vehicle trips during each of the peak hours analyzed and a portion of these trips are anticipated to be attracted from the existing traffic stream along Mill Street as pass-by and/or diverted link trips. As indicated in our February 27, 2021 report, ITE and NYSDOT guidelines indicate that developments generating less than 100 entering vehicle trips will not result in a significant impact to the surrounding area traffic operations. It should also be noted that no credit has been taken for the existing traffic generation of the existing buildings and/or possible re-occupancies of these spaces.

## Reduced Size Project Site Access and Internal Circulation

The elimination of the proposed Daycare facility from the development plan has allowed for the elimination of the previously proposed drop-off area on the eastern one-way entry driveway. This has also allowed for a reconfiguration of the on-site parking areas to maximize the number of parking spaces provided. As a result of these changes, the driveways have been modified to be a one-way pair, with the western driveway to be one-way entering and the eastern driveway to be one-way exiting. This configuration provides the greatest Site distance for exiting vehicles onto Mill Street. Appropriate “One-Way” and “Do Not Enter” signage should be provided at each of the driveway locations as well as internally at the driveway connections to the internal east-west parking aisle.

## Conclusions

Based on the data discussed herein, it is the opinion of Colliers Engineering & Design that the Reduced Size Project will not have a significant impact on traffic and parking conditions in the vicinity of the Site. It should also be noted that based on the parking calculations identified above the previous request for a waiver to be granted by the Planning Board for excess parking spaces under the waiver with fee-in-lieu provision of the PID Zoning District, section 19-3.37 (13) (e) is no longer required.

It is also noted, as indicated in our February 27, 2021 report, the proposed modifications to the two (2) Site access driveway connections to Mill Street, as well as the closure of the existing driveways to 302, 304 and 306 Mill Street, will require a NYSDOT Highway Work Permit to be obtained prior to implementation of these modifications.

Sincerely,

Colliers Engineering & Design CT, P.C.

(e.g., laundromat, drycleaner, beauty parlor, travel agency, banks)

B) Number of Employees: _____

C) Number of Washing Machines (for laundromat): _____

D) Days/Hours of Operation: _____

**XII. MERCANTILE PROPOSALS** (Retail _____ Wholesale _____)

A) Type of Mercantile (specify): _____

B) Number of Employees: _____

C) Days/Hours of Operation: _____

**XIII. STANDARD RESTAURANT/FAST FOOD RESTAURANT/COFFEE SHOP/DONUT SHOP/NIGHTCLUB/DISCOTHEQUE/BAR PROPOSALS**

A) Specify Use: _____

B) Number of seats (excluding bar stools and outdoor seating):_____

C) Meals served (i.e., breakfast, lunch, dinner): _____

D) Type of Menu: _____

E) Days/Hours of Operation: _____

F) Entertainment (live and/or recorded):_____

G) Will the restaurant contain a bar/lounge?: _____ Yes _____ No

H) If yes, how many seats at the bar? _____

I) Is a drive-through window proposed? _____

J) Is a walk-up window proposed? _____

K) Is an outdoor seating area proposed? _____

L) If yes, how many seats are proposed? _____

M) If yes, is outdoor cooking proposed? _____

**XIV. INDUSTRIAL/COMMERCIAL PROPOSALS** (Automobile repair, taxi, motor vehicle sales, warehouse, manufacturing, animal hospital, research facilities, etc.)

A) Specify Use: _____

B) Number of shifts (if any): _____

C) Number of employees: _____
(If shifts are proposed, list number of employees per shift)

E) Number of work bays (if automobile repair): _____

F) Days/Hours of operation: _____

**XV. EDUCATIONAL/INSTITUTIONAL/RECREATIONAL PROPOSALS** (e.g., Museums, Theatres, Conference Centers, Hotels, Motels, Hospitals, Nursing Homes, Assisted Living Facilities, Nursery Schools, Private Schools, Day Care Centers, Places of Worship, Marinas, Membership Clubs, etc.)

A) Specify: _____

B) Number of shifts (if any): _____

C) Number of employees: _____
(If shifts are proposed, list number of employees per shift)

D) Number of beds (hospitals, nursing homes, etc): _____

E) Number of seats in largest assembly space: _____

F) Number of classrooms (schools): _____

G) Number of rental units (hotels, motels, etc.) _____

H) Number of boat slips/courts (e.g., tennis, handball, etc.), alleys: _____

I) Days/Hours of Operation: _____

**XVI. PROPOSALS NOT MENTIONED ABOVE** (Please be specific):

Project Director, Scenic Hudson
Authorized representative for Northside Junction LLC

## COVER LETTER

In 2020, Northside Junction, LLC, an affiliate of Scenic Hudson, acquired the property and has begun transforming it into a sustainable building and landscape. Scenic Hudson envisions rehabilitation of the structures, in particular historic restoration of its exterior, to create workspace for its staff and outdoor public space to meet community needs, potentially including: community gatherings, meetings, events, and educational activities. The architecture firm MASS Design Group, which has worked with Scenic Hudson on other revitalization efforts in downtown Poughkeepsie, is also a partner. Currently, the degraded site is undergoing remediation under New York State's Brownfield Cleanup Program as well as certification on the National Register of Historic Places.

58 Parker Ave. is located adjacent to Walkway Over the Hudson, Dutchess Rail Trail, Fall Kill Creek and the future Urban Trail. The vision is to make it a welcoming space for all Northside residents and visitors to learn, grow, play, and celebrate together. It can also support the city's ongoing efforts to enhance economic opportunity and equality, putting the health and well-being of local residents and the environment at the forefront.

We thank the Director and Planning Board for their consideration of our proposal.

# September 21, 2021 Additions / Responses:

**Letter of Support from Linda Cooper, Taconic Region Director for New York State OPRHP**

This cover letter includes a letter of support from from Linda Cooper, Taconic Region Director for New York State OPRHP. As discussed in the meeting, we intend to provide free parking on non-working hours at the north portion of the Scenic Hudson parking areas. This will supplement the already available parking in the area for public use. We have been working closely with the state since the inception of the project and will continue to do so.

**Memorandum requesting parking waiver was added**

As discussed, our project operations will require fewer parking spaces than the count expressed in the code. This memorandum is submitted as supplemental material.

**Façade / Window detail sheets included**

At the request of the planning board, we have included further façade detail drawings in the elevation package, file *58 Parker Ave_4_Elevations_10-4-2021* sheets A7.00 – A7.04.

**Note to Department of Engineering (and Public Works, if applicable):**

Further detail on municipal connections in design:
Since our last submission, as discussed, a utility field survey was performed enabling the civil engineers from Chazen to locate existing offsite structures. This means that while the overall civil design approach has not changed, we are providing further detail on these connection points.

Specifically, these changes are apparent on

- On drawings C1.40 – C1.41: the catch basins, inverts and pipe slopes have been added.
- On drawing C1.60 – C1.61, additional detail of stormwater drainage and sanitary connection points have been added.
- A detail sheet for sanitary sewer was added, sheet C5.41.
- A detail sheet for erosion sediment control was added, sheet C5.50

Further information on proposed crosswalk:
Further, we have provided more information on the proposed crosswalk at Parker Ave.

- Signage for the crosswalk has been added on sheet C1.30
- We have provided a memorandum providing further written description of the proposed crosswalk in the supplemental material.

SWPPP Provided
As required for DEC general permit, we have provided a SWPPP in accordance with DEC guidelines for areas of disturbance exceeding 1 acre, with the city serving as the MS-4. This is included in the supplemental material.

# August 17, 2021 Responses:

**Note to Department of Engineering and Department of Public Works**

This project calls for the creation of a crosswalk at Parker Ave. It also calls to move a utility pole at the west of the 58 Parker property to allow for a relocated curb cut into the parking area. Please reference the drawings for more detail on these items. We look forward to answering your questions.

**Overall Comment Response for City of Poughkeepsie**

I. **APPLICATION REQUIREMENTS AND GENERAL SITE PLAN INFORMATION**

- Date, north arrow, written graphic scale C1.00

**Response**: A graphic scale has been added to the plan sheet C1.00

II. **EXISTING SITE CONDITIONS**

a. Location, width and purpose of all existing easements, rights-of-way, setbacks, reservations and rears dedicated to public use, outline of existing covenants and deed restrictions within adjacent or otherwise pertaining to the property.

**Response**: Easements (61 Parker) and notes are included in the existing conditions survey maps. SV1 and SV

b. Approximate boundaries of any areas subject to stormwater overflows

**Response**: A letter from FEMA regarding floodplain has been provided under separate cover.

III. **PROPOSED SITE IMPROVEMENTS**

a. Location of any fire alarm boxes and/or connections to the city fire alarm system.

**Response**: The location of the proposed Knox box (fire) is indicated on drawing sheet C1.31

b. A determination of storm water quality requirements based on NYSDEC Phase II requirements. Further, ANY improvements within the Fallkill Creek watershed, which has been declared a 303(d) impaired watershed, require full stormwater treatment as per NYSDEC.

**Response**: A stormwater pollution prevention plan is be prepared in accordance with the NYS DEC SPDES Stormwater General Permit GP-0-020-001

A fence detail was also added to sheet C530 number 24.

September 21, 2021

Poughkeepsie Planning Board
Via email to nquinn@cityofpoughkeepsie.com

Dear Members of the Planning Board:

My name is Linda Cooper, and I am the Regional Director for a four-county region of New York State Parks known as the Taconic Region. The region covers those state parks, trails, and historic sites in Westchester, Putnam Dutchess and Columbia counties. Walkway Over the Hudson is one of our state historic parks in the City of Poughkeepsie.

Tonight, you have before you a proposal regarding 58 Parker Avenue that abuts the Walkway Over the Hudson. I am here representing our agency and region to offer support for that project. We are excited about the reuse and revitalization of this long defunct building and acreage. We anticipate engagement with Scenic Hudson in the neighborhood will only lead to good outcomes with the various rail trails that converge in this area and the linkage they all have to the State's Empire State Trail.

The dirt lot adjacent to the State's pay for parking lot will have parking for Scenic Hudson employees during the day and will be available for the visiting public on evenings and weekends when it is most needed.

We support the request be able to use some that parking area for greenspace to make a more aesthetically pleasing entrance to the area and to the Walkway. State Parks continues to improve the visitor experience to the Walkway, facilitating connections with the Dutchess Rail Trail, Fall Kill and other local assets including the upcoming Urban Trail.

We believe there is adequate parking provided in the State's paid lot along with auxiliary parking at Pulaski Park and street parking on Brookside Avenue. These free parking sites, along with the Orchard Place staircase to the Dutchess Welcome Center, are currently underutilized. State Parks, through continuing work in the area and in partnership with Scenic Hudson, will ensure that all these parking options are understood and better utilized. We appreciate Scenic Hudson making parking available in the evening and weekends for free public use, even if it impacts our own revenue stream.

I am here to support this application before the Planning Board and happy to entertain any questions you may have with respect to impacts on the neighboring State Park.

Thank you.

Sincerely,

*Linda G. Cooper*
Regional Director

July 30, 2021

**Subject: Financial Capacity Letter – 58 Parker Ave, Poughkeepsie, NY**

Northside Junction, LLC has the financial capacity to complete the proposed project at 58 Parker Avenue, Poughkeepsie through support from non-profit affiliate The Scenic Hudson Land Trust, Inc. ("the Land Trust") and anticipated tax credit equity through various NYS and federal programs. In addition, the Land Trust brings to bear its full professional and development expertise along with local partnerships in the City of Poughkeepsie in collaboration with MASS Design Group to ensure a successful project.

Regards,

Jason Camporese (Jul 30, 2021 20:19 EDT)

**PROJECT DESCRIPTION:**

THIS DOCUMENT IS FOR THE PROPOSED SCENIC HUDSON HEADQUARTERS TO BE LOCATED INPOUGHKEEPSIE, NY. THE SCOPE OF WORK INCLUDES A FULL RENOVATION OF THE EXISTING, UNOCCUPIED SPACES LOCATED AT 58 PARKER STREET AND UPGRADE THE EXISTING PARKING LOT AT 61 PARKER.THE EXISTING STRUCTURE AT 58 PARKER STREET IS COMPRISED OF MULTIPLE INTERCONNECTED BUILDINGS THAT PREVIOUSLY FUNCTIONED AS AN INDUSTRIAL SPACE UNTIL APPROXIMATELY 2002. THE EXISTING STRUCTURE CAN BE DESCRIBED WITH FIVE SUB-STRUCTURES (A, B, C, D, AND E) WHICH WILL BE OUTLINED IN THIS DOCUMENT. FOR THE PURPOSES OF THIS DOCUMENT, THE EXISTING BUILDING WILL BE CONSIDERED TWO STORIES IN HEIGHT WITH A PARTIAL BASEMENT BELOW GRADE. THE BUILDING IS APPROXIMATELY 42,800 GROSS SQUARE FEET.

THE PROJECT ENTAILS THE RENOVATION OF THE EXISTING STRUCTURES TO CREATE AN OFFICE/COLLABORATIVE SPACE AS WELL AS A WORKSHOP SPACE FOR SCENIC HUDSON. THEBUILDING WILL PRIMARILY CONTAIN OFFICE/AMENITY SPACES BUTIS EXPECTED TO CONTAIN SMALL ASSEMBLY CONFERENCE/MEETING SPACES AS WELL AS A WORKSHOP AREAFOR VEHICLES.A PORTION OF THE ROOF WILL SERVE AS A DEDICATED ROOFTOP GARDEN WITH THE POTENTIAL FOR ASSEMBLY SEATING.

**GENERAL NOTE:**
THE SITE IS SUBJECT TO AN ENVIRONMENTAL EASEMENT, AND ANY SITE REDEVELOPMENT, USE, AND MONITORING ACTIVITIES MUST COMPLY WITH THE NYSDEC-APPROVED SITE MANAGEMENT PLAN (SMP). THE SITE REMEDY INCLUDES IMPACTED SOIL THAT IS BENEATH A 2-FOOT SOIL COVER OR PAVEMENT SECTION AND THE NEED TO ASSESS AND ADDRESS SOIL VAPOR MITIGATION FOR BUILDING CONSTRUCTION. INTERIOR OF BERMS HAVE BEEN DESIGN WITH 2-FOOT SOIL COVER AS PUBLIC ACCESS IS ANTICIPATED AND EXTERIOR OF BERM FACING CSX ACCESS HAS BEEN DESIGNED WITH NO PUBLIC ACCESS AND A 1-FOOT OF ENGINEERED MATERIAL FOR PLANTING THE LIVING WALL.

## DEMOLITION NOTES:

1. 58 PARKER AVENUE IS IDENTIFIED AS A BROWNFIELD SITE SUBJECT TO A NYSDEC BROWNFIELD CLEANUP AGREEMENT. ALL REMEDIAL AND SITE EXCAVATION WORK SHALL BE CONDUCTED IN ACCORDANCE WITH THE BROWNFIELD CLEANUP AGREEMENT AND REMEDIAL ACTION WORK PLAN.
2. REFER TO REQUIREMENTS OUTLINED IN THE MATERIALS MANAGEMENT, HEALTH AND SAFETY, AND EROSION & SEDIMENT CONTROL PLANS & NOTES PRIOR TO COMMENCEMENT OF WORK.
3. CONFORM TO APPLICABLE CODE FOR SAFETY OF ADJACENT STRUCTURES, DUST CONTROL, RUNOFF CONTROL, AND HAULING, DISPOSAL AND STORAGE OF DEBRIS.
4. PROVIDE, ERECT, AND MAINTAIN TEMPORARY BARRIERS AND SECURITY DEVICES.
5. MAINTAIN EXISTING UTILITIES TO REMAIN IN SERVICE AND PROTECT THEM AGAINST DAMAGE DURING SELECTIVE DEMOLITION OPERATIONS. DO NOT INTERRUPT EXISTING UTILITIES SERVING OPERATING FACILITIES, EXCEPT WHEN AUTHORIZED IN WRITING BY OWNER AND AUTHORITIES HAVING JURISDICTION.
6. NOTIFY ADJACENT OWNERS OF WORK THAT MAY AFFECT THEIR PROPERTY, POTENTIAL NOISE, UTILITY OUTAGE, OR DISRUPTION. COORDINATE WITH OWNER.
7. PREVENT MOVEMENT OR SETTLEMENT OF ADJACENT STRUCTURES. PROVIDE BRACING AND SHORING.
8. LOCATE AND IDENTIFY ALL EXISTING UTILITIES WITHIN THE CONSTRUCTION AREA. DISCONNECT AND SEAL OR CAP OFF UTILITY SERVICES THAT WILL BE AFFECTED BY THIS PROJECT. NOTIFY AFFECTED UTILITY COMPANIES BEFORE STARTING WORK AND COMPLY WITH THEIR REQUIREMENTS. VERIFY THAT UTILITIES HAVE BEEN DISCONNECTED AND CAPPED.
9. DEMOLISH AND REMOVE COMPONENTS IN AN ORDERLY AND CAREFUL MANNER.
10. PROTECT EXISTING FEATURES THAT ARE NOT TO BE DEMOLISHED.
11. CONDUCT OPERATIONS WITH MINIMUM INTERFERENCE TO PUBLIC OR PRIVATE ACCESSES.
12. MAINTAIN EGRESS AND ACCESS AT ALL TIMES. DO NOT CLOSE OR OBSTRUCT ROADWAYS, OR SIDEWALKS WITHOUT PERMITS. COORDINATE W/ AUTHORITY HAVING JURISDICTION.
13. CEASE OPERATIONS IMMEDIATELY IF ADJACENT STRUCTURES APPEAR TO BE IN DANGER. NOTIFY AUTHORITY HAVING JURISDICTION.
14. ROUGH GRADE AND COMPACT AREAS AFFECTED BY DEMOLITION TO MAINTAIN SITE GRADES AND CONTOURS.
15. FIELD VERIFY EXISTING CONDITIONS AND CORRELATE WITH REQUIREMENTS INDICATED ON DEMOLITION PLAN TO DETERMINE EXTENT OF SELECTIVE DEMOLITION REQUIRED.
16. CONDUCT DEMOLITION OPERATIONS AND REMOVE DEBRIS TO ENSURE MINIMUM INTERFERENCE WITH SELECTIVE DEMOLITION OPERATIONS.
17. CONDUCT DEMOLITION OPERATIONS TO PREVENT INJURY TO PEOPLE AND DAMAGE TO ADJACENT BUILDINGS AND FACILITIES TO REMAIN. ENSURE SAFE PASSAGE OF PEOPLE AROUND SELECTIVE DEMOLITION AREA.
18. USE WATER MIST, TEMPORARY ENCLOSURES AND OTHER SUITABLE METHODS TO LIMIT THE SPREAD OF DUST AND DIRT. COMPLY WITH GOVERNMENTAL ENVIRONMENTAL PROTECTION REGULATIONS. DO NOT USE WATER WHEN IT MAY DAMAGE EXISTING CONSTRUCTION, SUCH AS CAUSING ICING, FLOODING, AND TRANSPORTING POLLUTANTS.
19. REMOVE AND TRANSPORT DEBRIS IN A MANNER THAT WILL PREVENT SPILLAGE ON ADJACENT SURFACES AND AREAS.
20. CLEAN ADJACENT STRUCTURES AND IMPROVEMENTS OF DUST, DIRT AND DEBRIS CAUSED BY SELECTIVE DEMOLITION OPERATIONS. RETURN ADJACENT AREAS TO CONDITION EXISTING BEFORE START OF SELECTIVE DEMOLITION.
21. PROMPTLY DISPOSE OF DEMOLISHED MATERIALS. ALL DEBRIS RESULTING FROM DEMOLITION ACTIVITIES SHALL BE DISPOSED OF OFF-SITE AT A FACILITY APPROVED TO ACCEPT THE DEBRIS. DO NOT ALLOW DEMOLISHED MATERIALS TO ACCUMULATE ON-SITE. DO NOT BURN DEMOLISHED MATERIALS ON-SITE.
22. PRIOR TO THE START OF CONSTRUCTION OR EXCAVATION, TREES TO BE RETAINED SHALL BE PROTECTED WITH SILT FENCE, SNOW FENCE, CONSTRUCTION FENCE, OR EQUAL, WHICH WILL BE PLACED AT THE DRIP LINE OR SEVERAL FEET BEYOND. HOWEVER, THE FENCING SHALL NOT CROSS PUBLIC SIDEWALKS. INCLUDING BROKEN PARTS FROM CLEARING EQUIPMENT, SHALL BE REMOVED AND DISPOSED OF IN ACCORDANCE WITH FEDERAL AND STATE GUIDELINES.
23. THE CONTRACTOR IS RESPONSIBLE FOR COMPLIANCE WITH LOCAL DUST CONTROL AND/OR MONITORING ORDINANCES, IF ANY EXIST.

## STRIPING REMOVAL NOTES:

1. REMOVAL OF EXISTING PAVEMENT STRIPING SHALL BE ACCOMPLISHED EITHER BY WATERBLASTING OR DRY SANDBLASTING. THE WORK SHALL BE PERFORMED IN SUCH A MANNER THAT THE FINISHED PAVEMENT IS NOT DAMAGE OR LEFT IN A PATTERN THAT WILL MISLEAD OR MISDIRECT THE MOTORISTS. WHEN THESE OPERATIONS ARE COMPLETED THE PAVEMENT SURFACE SHALL FIRST BE POWER BROOMED AND THEN BLOWN OFF WITH COMPRESSED AIR TO REMOVE RESIDUE AND DEBRIS RESULTING FROM THE WORK. ALL SUCH DEBRIS THAT REMAINS ON THE ROADWAY, INCLUDING BROKEN PARTS FROM CLEANING EQUIPMENT, SHALL BE REMOVED AND DISPOSED OF IN ACCORDANCE WITH FEDERAL AND STATE GUIDELINES.
2. THE CONTRACTOR SHALL CONDUCT THE REMOVAL AND CLEANING WORK IN SUCH A MANNER AS TO MINIMIZE AIRBORNE DUST AND SMALLER DEBRIS, SO AS TO PREVENT A HAZARD TO MOTOR VEHICLE OPERATION OR NUISANCE TO PROPERTY OWNERS.

## SITE PLAN NOTES:

### GENERAL CONSTRUCTION NOTES:

1. THE CONTRACTOR SHALL PROTECT EXISTING PROPERTY LINE MONUMENTATION. ANY MONUMENTATION DISTURBED OR DESTROYED, AS JUDGED BY THE ENGINEER OR OWNER, SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE AND UNDER THE SUPERVISION OF A NEW YORK STATE LICENSED LAND SURVEYOR.
2. ALL PAVEMENT RESTORATION SHALL MEET AND MATCH EXISTING GRADES.
3. ALL SAWCUT LINES SHALL BE PARALLEL AND CURVILINEAR TO EXISTING OR PROPOSED CURBING AND SHALL BE A CONSTANT DISTANCE OF 18" MIN AWAY.
4. NOTIFY ENGINEER 48 HOURS PRIOR TO INITIALIZATION OF ANY WORK ON SITE.
5. THE ENGINEER SHALL BE NOTIFIED IN WRITING OF ANY CONDITIONS THAT VARY FROM THOSE SHOWN ON THE PLANS. THE CONTRACTOR'S WORK SHALL NOT VARY FROM THE PLANS WITHOUT PRIOR REVIEW FROM THE ENGINEER.
6. CONTRACTOR IS RESPONSIBLE FOR EMPLOYING AND MAINTAINING ALL TRAFFIC CONTROL AND SAFETY MEASURES DURING CONSTRUCTION.
7. CONTRACTOR IS RESPONSIBLE FOR PROPERLY & SAFELY MAINTAINING AREA BETWEEN ALL ADJOINING PROPERTIES.
8. NO WORK, STORAGE OR TRESPASS SHALL BE PERMITTED BEYOND THE SITE PROPERTY LINES OR PUBLIC RIGHT-OF-WAY. ADJACENT PROPERTY OWNED BY THE DEVELOPER MAY BE BE USED FOR EQUIPMENT STORAGE DURING CONSTRUCTION OF THE PROPERTY.
9. ALL EXISTING LAWN AREA, CURBING, PAVING, SIDEWALKS, CULVERTS OR OTHER PUBLIC OR PRIVATE PROPERTY DAMAGED BY TRENCHING OR EXCAVATION OPERATIONS SHALL BE REPLACED OR REPAIRED TO A CONDITION EQUAL TO EXISTING, AS DESCRIBED IN CONTRACT DOCUMENTS OR AS ORDERED BY ENGINEER (ADBE). MAILBOXES, SIGN POSTS, ETC SHALL BE PROTECTED OR REMOVED AND REPLACED EXACTLY AS THEY WERE BEFORE BEING DISTURBED. REMOVE AND REPLACE AFFECTED CURBING AND SIDEWALK TO NEAREST JOINT. REMOVE PAVEMENT AND REPLACE TO SAW CUT LINE, SAW CUT IN STRAIGHT LINE TO POINT NEEDED TO BLEND GRADE, REMOVE LAWN AND REPLACE TO MINIMUM LIMIT OF EXCAVATION.

### LAYOUT NOTES:

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATING ALL FIELD LAYOUT. THE CONTRACTOR SHALL TAKE TIES TO ALL UTILITY CONNECTIONS AND PROVIDE MARKED-UP AS BUILT PLANS FOR ALL UTILITIES SHOWING TIES TO CONNECTIONS, BENDS, VALVES, LENGTHS OF LINES AND INVERTS. AS-BUILT PLANS SHALL BE REVIEWED BY THE OWNER AND THE ENGINEER. THE CONTRACTOR SHALL PROVIDE ANY CORRECTION OR ADDITIONS TO THE SATISFACTION OF THE OWNER AND THE ENGINEER BEFORE UTILITIES WILL BE ACCEPTED.
2. BUILDING DIMENSIONS TO BE TAKEN FROM ARCHITECTURAL BUILDING PLANS. NOTIFY THE ENGINEER OF ANY DEVIATION FROM CONDITIONS SHOWN ON THIS PLAN.
3. PRIOR TO THE START OF CONSTRUCTION OR EXCAVATION, TREES TO BE RETAINED SHALL BE PROTECTED BY SILT FENCE, SNOW FENCE, CONSTRUCTION FENCE, OR EQUAL, WHICH WILL BE PLACED AT THE DRIP LINE OR SEVERAL FEET BEYOND.
4. FENCING SHALL NOT CROSS PUBLIC SIDEWALKS.
5. NO STORAGE OR STOCKPILING OF CONSTRUCTION MATERIALS, DEBRIS, OR EQUIPMENT SHALL OCCUR WITHIN THE FENCED AREA.
6.

### ROCK REMOVAL NOTES:

ROCK REMOVAL, BY MECHANICAL MEANS ONLY, IS ANTICIPATED FOR THE INSTALLATION OF THE PROPOSED WORK. BLASTING IS NOT PERMITTED.

### PAVING NOTES:

1. NO VEHICULAR TRAFFIC OF ANY SORT SHALL BE PERMITTED ON THE SURFACE OF SUBBASE COURSE MATERIAL ONCE IT HAS BEEN FINE GRADED, COMPACTED, AND IS READY FOR PAVING. SUBBASE MATERIAL SO PREPARED FOR PAVING SHALL BE PAVED WITHIN THREE DAYS OF PREPARATION.
2. SUBBASE MATERIAL AND THE VARIOUS ASPHALT CONCRETE MATERIALS CALLED FOR IN THESE DRAWINGS SHALL CONFORM WITH THE REFERENCED SECTION OF THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED 2017. CONSTRUCTION SHALL BE AS FURTHER SET FORTH IN THOSE SPECIFICATIONS AND AS OTHERWISE PROVIDED FOR IN THESE DRAWINGS.
3. PLACE ASPHALT CONCRETE MIXTURE ON PREPARED SURFACE, SPREAD AND STRIKE-OFF USING A SELF-PROPELLED PAVING MACHINE, WITH VIBRATING SCREED. PLACEMENT IN INACCESSIBLE AND SMALL AREAS MAY BE BY HAND.
4. PROVIDE JOINTS BETWEEN OLD AND NEW PAVEMENTS OR BETWEEN SUCCESSIVE DAY'S WORK.
5. TACK COAT WHEN SPECIFIED OR CALLED OUT ON THE DRAWINGS OR REQUIRED BY THE REFERENCED SPECIFICATION SHALL CONFORM WITH THE FOLLOWING:
   A. TACK COAT SHALL MEET THE MATERIAL REQUIREMENTS OF 702-90 ASPHALT EMULSION FOR TACK COAT OF THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED 2017, SHALL BE APPLIED IN ACCORDANCE WITH SECTION 407 - TACK COAT SHALL BE IN ACCORDANCE WITH THOSE SPECIFICATIONS AND AS OTHERWISE PROVIDED FOR IN THESE DRAWINGS.
   B. REMOVE LOOSE AND FOREIGN MATERIAL FROM ASPHALT SURFACE BEFORE PAVING NEXT COURSE. USE POWER BROOMS, BLOWERS OR HAND BROOM.
   C. APPLY TACK COAT TO ASPHALT PAVEMENT SURFACES & AND SURFACES OF CURBS, GUTTERS, MANHOLES, AND OTHER STRUCTURES PROJECTING INTO OR ABUTTING PAVEMENT. DRY TO A "TACKY" CONSISTENCY BEFORE PAVING.
   D. TACK COAT ENTIRE VERTICAL SURFACE OF ABUTTING EXISTING PAVEMENT.
6. AFTER COMPLETION OF PAVING AND SURFACING OPERATIONS, CLEAN SURFACES OF EXCESS OR SPILLED ASPHALT, GRAVEL OR STONE MATERIALS TO THE SATISFACTION OF THE ENGINEER.

### GRADING NOTES:

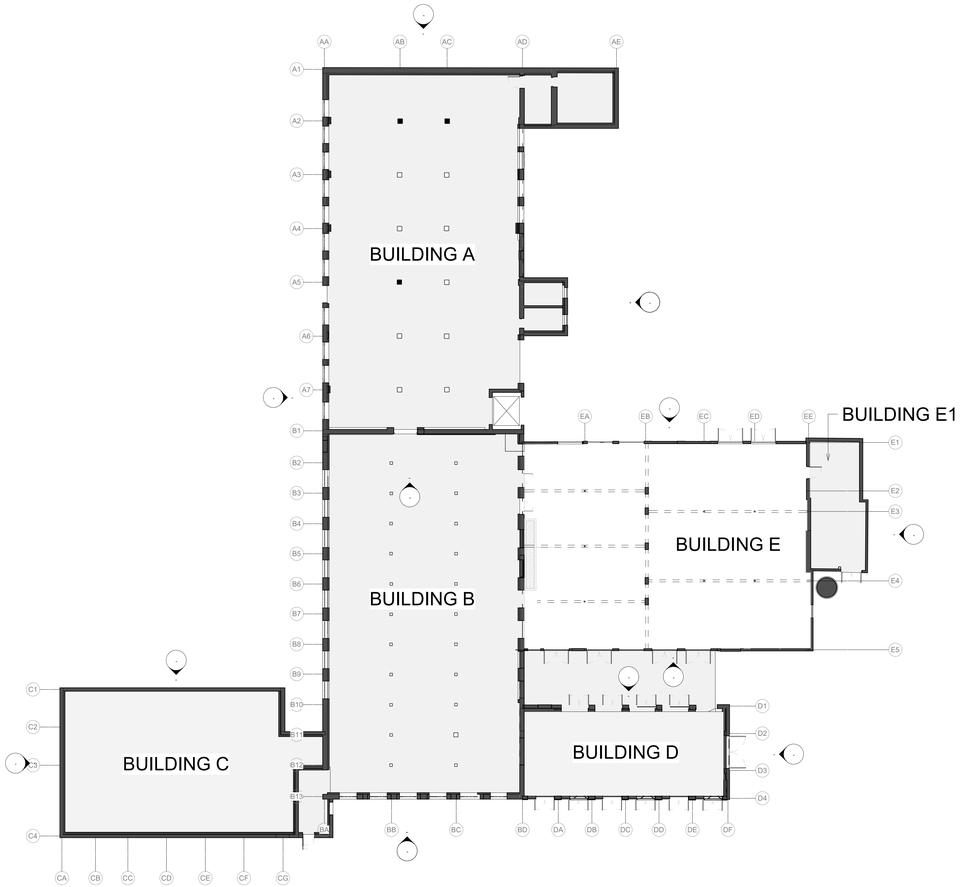
1. PRIOR TO SITE DISTURBANCE, CONTRACTOR TO INSTALL EROSION & SEDIMENT CONTROL MEASURES.
2. BOX ALL TREES AND HOUSE ALL SHRUBS AND HEDGES BEFORE PLACING EARTH AGAINST OR NEAR THEM. ORNAMENTAL TREES, SHRUBS AND HEDGES WHICH MUST BE REMOVED DURING CONSTRUCTION SHALL BE HEALED IN AND RE-PLANTED IN AS GOOD A CONDITION AS THEY WERE BEFORE THEIR REMOVAL. ANY DAMAGED TREES, SHRUBS, AND/OR HEDGES SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE.
3. ALL EARTHWORK SHALL BE SMOOTHLY AND EVENLY BLENDED INTO EXISTING CONDITIONS. NO WORK, STORAGE OR TRESPASS SHALL BE PERMITTED BEYOND THE BOUNDARIES OF ANY EASEMENT OR PROPERTY LINE.
4. REMOVE ALL VEGETATION, TREES, STUMPS, GRASSES, ORGANIC SOILS, DEBRIS AND DELETERIOUS MATERIALS WITHIN THE AREAS SLATED FOR CONSTRUCTION.
5. IF PREVIOUSLY UNKNOWN CULTURAL, ARCHEOLOGICAL, OR HISTORIC REMAINS OR ARTIFACTS ARE DISCOVERED IN THE COURSE OF CONSTRUCTION OF THIS PROJECT, THE PROJECT SPONSORS SHALL SUSPEND CONSTRUCTION OPERATIONS IN THE PERTINENT AREA AND SHALL NOTIFY THE PROJECT ENGINEER. CONSTRUCTION IN THAT AREA SHALL RESUME ONLY AFTER COMPLETION OF FEDERAL, TRIBAL, AND STATE COORDINATION TO DETERMINE WHETHER PROTECTION OR RECOVERY OF THE REMAINS IS WARRANTED, OR WHETHER THE SITE IS ELIGIBLE FOR LISTING IN THE NATIONAL REGISTER OF HISTORIC PLACES.

## UTILITY PLAN NOTES:

### GENERAL CONSTRUCTION NOTES:

1. ALL UNDERGROUND UTILITIES ARE SHOWN IN THEIR RELATIVE POSITION AND ARE FOR INFORMATIONAL PURPOSES ONLY. CONTRACTOR TO VERIFY THEIR ACTUAL LOCATION IN THE FIELD PRIOR TO THE COMMENCEMENT OF CONSTRUCTION.
2. ANY CONDITION ENCOUNTERED IN THE FIELD DIFFERING FROM THOSE SHOWN HEREON, SHALL BE REPORTED TO THE DESIGN ENGINEER BEFORE CONSTRUCTION IS TO PROCEED.
3. SEWER MAINS IN RELATION TO WATER MAINS: WHERE POSSIBLE, SEWERS SHALL BE LAID AT LEAST 10 (TEN) FEET HORIZONTALLY FROM ANY EXISTING OR PROPOSED WATER MAIN. VERTICAL SEPARATION SHALL BE MAINTAINED TO PROVIDE 18 (EIGHTEEN) INCHES BETWEEN THE TOP OF SEWER AND BOTTOM OF THE WATER MAIN AT UTILITY CROSSINGS. WHEN NOT POSSIBLE TO OBTAIN THE PROPER VERTICAL SEPARATION, SEWER PIPE SHALL BE PRESSURE RATED TO 150psi, AND 10 (TEN) FEET ON EACH SIDE OF THE WATER MAIN BEING CROSSED.
4. ALL PROPOSED UTILITIES SHALL TERMINATE 5 FEET FROM ANY PROPOSED BUILDING FACE. CONTRACTOR TO COORDINATE WITH BUILDING PLANS FOR ANY CONNECTIONS.
5. ALL STORM SEWER SHALL BE SMOOTH INTERIOR HDPE UNLESS OTHERWISE SPECIFIED.
6. ALL GRAVITY SANITARY SEWER SHALL BE SDR 21 PVC UNLESS OTHERWISE SPECIFIED.
7. ALL WATER PIPE SHALL BE CL52 DUCTILE IRON PIPE UNLESS OTHERWISE SPECIFIED.
8. CONTRACTOR TO VERIFY STATUS OF ALL UTILITY SERVICES PRIOR TO INTERRUPTION.
9. EXPLORATORY EXCAVATIONS SHALL BE PERFORMED BY THE CONTRACTOR AT ALL UTILITY CONNECTION LOCATIONS AND AS NEEDED TO VERIFY EXISTING CONDITIONS PRIOR TO PERFORMING WORK.
10. BEFORE CONSTRUCTING LINES TO CONNECT TO EXISTING UTILITIES, VERIFY EXISTING UTILITY INVERTS AND NOTIFY THE ENGINEER IF ANY VARIATION FROM THE PLAN IS REQUIRED.
11. THE CONTRACTOR SHALL COMPLY WITH ALL REQUIRED PERMITS AND ASSOCIATED CONDITIONS.
12. CONTRACTOR SHALL BE RESPONSIBLE FOR DEWATERING UTILITY TRENCHES AND EXCAVATIONS AND FOR THE MAINTENANCE OF SURFACE DRAINAGE DURING THE COURSE OF THE WORK.
13. IF ROCK REMOVAL BY BLASTING IS REQUIRED, THE CONTRACTOR SHALL OBTAIN ALL NECESSARY APPROVALS AND PERMITS REQUIRED BY THE AUTHORITY HAVING JURISDICTION.
14. REDUCE PRESSURE ZONE VALVE TO BE PROVIDED ON FIRE SUPPLY AND DOUBLE CHECK VALVE ON DOMESTIC SUPPLY AT EACH LOCATION WHERE WATER LINE ENTERS THE BUILDING. BACKFLOW ASSEMBLIES SHALL BE LISTED IN UNIVERSITY OF SOUTHERN CALIFORNIA LIST OF APPROVED BACKFLOW PREVENTION ASSEMBLIES.
15. ALL BACKFLOW PREVENTION AND METER PITS SHALL BE LOCATED INSIDE THE NEW BUILDING.
16. CONTRACTOR SHALL PROVIDE AN AS-BUILT PLAN OF THE PROPOSED IMPROVEMENTS BY A LICENSED NEW YORK STATE PROFESSIONAL ENGINEER. THIS INCLUDES BUT NOT BE LIMITED TO BUILDINGS, ROADWAYS, WALLS, UTILITIES (INCLUDING INVERTS, RIMS, PIPE SIZE AND DIMENSIONS), SIDEWALKS, ROADWAY RAMPS, CURBING, PARKING LOTS (INCLUDING STRIPING), LANDSCAPE AREAS, ETC. HARDCOPY AND ELECTRONIC COPIES SHALL BE PROVIDED TO OWNER AND PROJECT ENGINEER.
17. UNDERGROUND ELECTRIC SHOWN ON THIS PLAN FOR REFERENCE ONLY. REFER TO MEP PLANS.

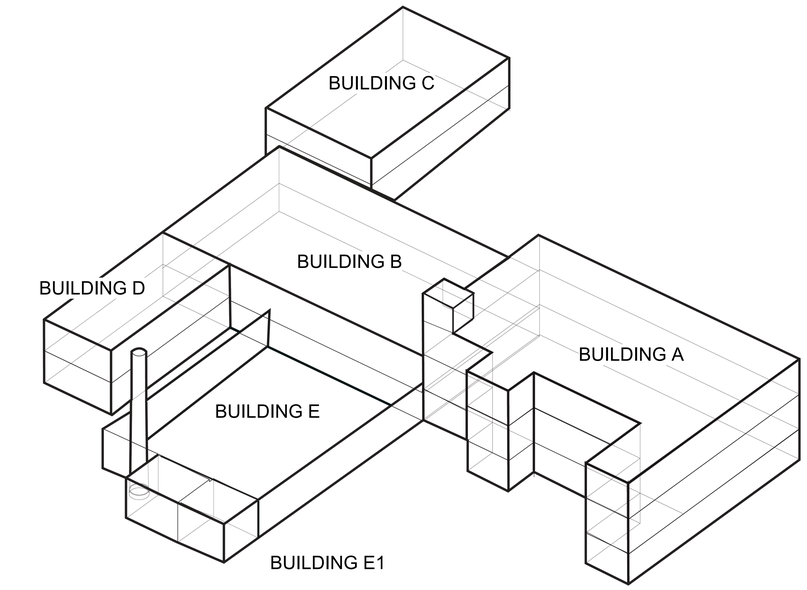
### CITY OF POUGHKEEPSIE PLANNING BOARD - SANITARY & SEWER NOTES.



1. FLOOR DRAINS, IF CONSTRUCTED, SHALL BE CONNECTED TO THE SANITARY SEWER SYSTEM. FLOOR DRAINS DO NOT INCLUDE FOUNDATION/FOOTER DRAIN. ALL DISCHARGES TO THE SANITARY SEWER SHALL COMPLY WITH THE EFFLUENT LIMITS ESTABLISHED BY THE DUTCHESS COUNTY SANITARY CODE.
2. SANITARY SEWERS AND APPURTENANCES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE LATEST STANDARDS AND SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE. ALL SANITARY SEWER SYSTEM COMPONENTS SHALL BE INSTALLED BY OR UNDER THE SUPERVISION OF A CITY OF POUGHKEEPSIE LICENSED PLUMBER IN ACCORDANCE WITH THE CITY PLUMBING CODE.
3. MAJOR EARTHWORK SHALL BE COMPLETED PRIOR TO INSTALLATION OF ANY SANITARY SEWER MAINS AND APPURTENANCES. ALL CONNECTING SEWER LINES SHALL BE FLUSHED BEFORE TESTED.
4. CITY SANITARY SEWER MAINS ARE TO BE POLYVINYL CHLORIDE (PVC) SDR-21. PROJECT SANITARY LATERALS SHALL BE PVC, SDR-35, UNLESS OTHERWISE NOTED.
5. FINAL SEWER COLLECTION SYSTEM LAYOUT IS SUBJECT TO REVIEW, REVISION AND APPROVAL BY THE MUNICIPAL SEWER DEPARTMENT.
6. ALL SANITARY PIPE AND/OR MANHOLES SHALL BE A MINIMUM OF TEN (10) HORIZONTAL FEET FROM THE WATER MAIN. SANITARY PIPE SHALL HAVE A MINIMUM 18" SEPARATION FROM ANY WATER MAIN CROSSING. HOWEVER, IF FOR SOME REASON THIS SEPARATION CANNOT BE ACHIEVED, SANITARY SEWER PIPE IN THE AREA SHALL BE SDR-21 PRESSURE RATED PIPE, AND ONE FULL LENGTH OF WATER MAIN SHALL BE CENTERED UNDER OR OVER THE SEWER. ALL SANITARY SEWER CONSTRUCTION SHALL BE TO SPECIFICATIONS OF THE MUNICIPAL SEWER DEPARTMENT.
7. ALL SANITARY TESTING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE PROJECT ENGINEER, AND, CERTIFICATES OF COMPLIANCE WITH THE INSTALLATION SPECIFICATIONS, TEST STANDARDS, APPROVED PLANS OR APPROVED AMENDMENTS SHALL BE PROVIDED TO THE APPROPRIATE SEWER AUTHORITY AS A CONDITION OF APPROVAL FOR OPERATION.
8. ALL SANITARY SEWER CONSTRUCTION SHALL BE SUBJECT TO INSPECTION BY THE MUNICIPAL SEWER SUPERINTENDENT PRIOR TO BACKFILLING. PIPE BEDDING AND PIPE ZONE MATERIAL SHALL BE IN ACCORDANCE WITH THIS SHEET.
9. ALL NEW SANITARY SEWER MANHOLE COVERS SHALL BE MINIMUM NOMINAL 24" DIAMETER CAST IRON AND SHALL READ "SANITARY SEWER". FRAMES SHALL BE 8-INCHES IN HEIGHT.
10. INDICATOR TAPE SHALL BE PLACED 12" BELOW FINISHED GRADE DIRECTLY ABOVE ALL SANITARY LINES.
11. LOCATION OF SEWER LATERAL CLEAN OUTS ARE TO BE PLACED AS SHOWN ON THE APPROVED SITE PLAN AND NOT TO EXCEED EVERY 75' MEASURED FROM THE SEWER MAIN CONNECTION OR AS DETERMINED BY THE MUNICIPAL SUPERINTENDENT OF SEWERS WHERE LOCATIONS ARE NOT SPECIFICALLY SHOWN.
12. EXTERNAL DROP MANHOLES SHALL BE USED FOR SEWERS ENTERING AT AN ELEVATION OF 24 INCHES OR HIGHER AT THE INLET OF A SEWER MANHOLE.
13. THREE AS-BUILT DRAWINGS PREPARED BY A LICENSED NYS SURVEYOR, WHICH INCLUDE VERIFICATION OF THE SEWER INFRASTRUCTURE INCLUDING RIMS AND INVERTS WILL BE PROVIDED TO THE PLANNING DEPARTMENT FOR DISSEMINATION TO THE ENGINEERING AND SEWER DEPARTMENTS PRIOR TO ANY EASEMENT DEDICATION TO THE TOWN.

## WATER NOTES:

1. USE RESTRAINED JOINT PIPE AND FITTINGS FOR PROPER RESTRAINT OF WATER MAIN PIPE.
2. ALL WATER LINES SHALL BE CEMENT LINED DUCTILE IRON PIPE, CLASS 52, UNLESS OTHERWISE SPECIFIED BY OR APPROVED BY THE ENGINEER.
3. THE WATER LINE MAY BE FLEXED WITHIN PIPE SPECIFICATIONS OR LAID DEEPER IN AREAS WHERE CROSSINGS WITH THE SANITARY LINE OCCUR, TO ACHIEVE THE REQUIRED 1.5' VERTICAL SEPARATION DISTANCE. (SEE WATERLINE OFFSET DETAIL FOR FURTHER INFORMATION).
4. ALL NEW WATER MAIN INSTALLATIONS SHALL BE HYDROSTATICALLY TESTED IN ACCORDANCE WITH AWWA STANDARD C-600(LATEST REVISION) AT A PRESSURE OF 150 PSI, OR 1.5 TIMES (AS REFERENCED ABOVE) THE WORKING PRESSURE OF THE SYSTEM AS A MINIMUM. ALLOWABLE LEAKAGE OF THIS TEST SHALL BE AS DEFINED IN SECTION 4.2 OF SAID AWWA SPECIFICATION.
5. APPROVED AND TESTED WATER MAIN SHALL BE DISINFECTED PER AWWA SECTION C 651 (AS REFERENCED ABOVE), AS DIRECTED BY ENGINEER.
6. THE WATER MAIN IS TO BE INSTALLED AT A CONTINUOUS GRADE WITH NO ABRUPT HIGH OR LOW POINTS.
7. ALL BURIED PIPE FITTINGS AND APPURTENANCES SHALL BE RESTRAINED WITH AN APPROVED DUCTILE IRON RESTRAINED JOINT SYSTEM. ALL BENDS, TEES, CROSSES AND DEAD ENDS SHALL BE "TYTON" PUSH-ON FITTINGS PROVIDED WITH "FIELD LOK 350" JOINT RESTRAINT RUBBER GASKET AS MANUFACTURED BY "U.S. PIPE" OR MECHANICAL JOINT FITTINGS PROVIDED WITH "MEGALUG" JOINT RESTRAINT AS MANUFACTURED BY "EBAA IRON". ALL VALVES FOR UNDERGROUND SERVICE SHALL BE PROVIDED WITH MJ END CONNECTIONS AND RESTRAINED WITH "MEGALUG" SERIES 1100 MECHANICAL JOINT RESTRAINT AND RODDING.
8. ALL PUSH-ON PIPE JOINTS ALONG LENGTHS OF PIPE TO BE RESTRAINED ON EITHER SIDE OF FITTINGS SHALL BE PROVIDED WITH "FIELD LOK 350" JOINT RESTRAINT GASKET.
9. PIPE BEND FITTINGS SHOWN ON THE DRAWINGS ARE INDICATIVE OF PROBABLE DIRECTIONAL CHANGES IN THE PROPOSED WATER MAIN ALIGNMENT. THE CONTRACTOR SHALL PROVIDE AND INSTALL ALL FITTINGS, EITHER SHOWN OR FIELD REQUIRED, AS PART OF THE CONTRACTOR'S CONTRACT AT NO ADDITIONAL COST TO THE OWNER.
10. THE CONTRACTOR SHALL PROVIDE AND INSTALL BRASS WEDGES ACROSS ALL PIPE JOINTS TO ENSURE ELECTRICAL CONDUCTIVITY. THE LOCATION AND THE NUMBER OF WEDGES TO BE PROVIDED SHALL BE ACCORDING TO THE PIPE MANUFACTURER'S RECOMMENDATIONS AND THE SPECIFICATIONS.
11. SHEETING AND EXCAVATION BRACING FOR THE WATERMAIN INSTALLATION SHALL BE PROVIDED IN ACCORDANCE WITH OSHA REQUIREMENTS TO SUIT EXISTING SOIL CONDITIONS. SHEETING, IF REQUIRED, SHALL BE TIGHT WOOD SHEETING AND SHALL BE LEFT IN PLACE, AND AFTER BACKFILLING SHALL BE CUT AT GROUND LEVEL OR AS ORDERED BY THE OWNER'S REPRESENTATIVE.
12. TWO CONSECUTIVE SETS OF ACCEPTABLE SAMPLES, TAKEN AT LEAST 24 HOURS APART SHALL BE COLLECTED AS SPECIFIED IN AWWA STANDARD C-651. IF EXAMINATION DETERMINES THAT THE WATER IS UNFIT FOR CONSUMPTION, THE DISINFECTION PROCESS SHALL BE REPEATED AT THE CONTRACTOR'S EXPENSE UNTIL POTABLE SAMPLES ARE ACHIEVED.
13. MATERIALS USED IN CONSTRUCTION THAT WILL CONTACT POTABLE WATER SHALL BE ANSI/NSF 61 CERTIFIED OR EQUIVALENT.



## TESTING GRAVITY SEWER SYSTEM:

1. CONTRACTOR SHALL INSPECT AND TEST THE INSTALLATIONS AS REQUIRED BY THE AUTHORITY HAVING JURISDICTION WHEN WORK IS READY FOR TESTING. AFTER ALL TESTS HAVE BEEN PERFORMED, EVIDENCE OF COMPLIANCE SHALL BE FORWARDED TO OWNER/ENGINEER AND THE AUTHORITY HAVING JURISDICTION PRIOR TO ACCEPTANCE.
2. THE CONTRACTOR SHALL TEST AND INSPECT FOR ALIGNMENT OF ALL SANITARY SEWERS.
3. EACH MANHOLE-TO-MANHOLE SECTION SHALL BE REJECTED OR ACCEPTED BASED ONLY ON RESULTS OF ITS OWN INDEPENDENT SECTION TEST AND NOT ON RESULTS OF ANY ONE TEST RUN SIMULTANEOUSLY OVER MORE THAN ONE CONNECTED MANHOLE-TO-MANHOLE SECTION. IN NO EXCEPTION SHALL BE MADE IN ACCEPTING SEVERAL CONSECUTIVE MANHOLE-TO-MANHOLE SECTIONS BASED ON ONE COMBINED SECTION TEST INDICATING ZERO OR MINIMAL LEAKAGE.
4. LOW PRESSURE AIR TESTING SHALL BE PERFORMED UNDER DIRECTION OF ENGINEER ACCORDING TO ASTM F1417. LOW PRESSURE AIR TEST IS A COMPARISON OF THE MEASURED TIME NECESSARY FOR ONE (1) PSIG PRESSURE DROP TO OCCUR, IF AT ALL, WITH MINIMUM ALLOWABLE TIME FOR THAT PRESSURE DROP TO OCCUR DETERMINED BY METHODS INDICATED IN ASTM F1417. IF THE ONE (1) PSIG PRESSURE DROP OCCURS FASTER THAN ALLOWABLE TIME, SECTION IS UNACCEPTABLE.
5. AN AIR TEST SHALL NOT BE RUN UNTIL SECTION OF LINE TO BE TESTED HAS BEEN CLEANED OF ALL FOREIGN MATERIAL BY FLUSHING AND HAS BEEN VISUALLY INSPECTED AND APPROVED BY THE ENGINEER. CERTAIN PIPE MATERIALS PRODUCE MORE CONSISTENT RESULTS WHEN INTERIOR OF PIPE IS WETTED PRIOR TO TESTING.
6. WHERE FLEXIBLE PIPE IS USED, CONTRACTOR SHALL TEST ALL MAINLINE PIPE FOR MAXIMUM ALLOWABLE DEFLECTION OF 5% OF OUTSIDE DIAMETER. DEFLECTION TESTS SHALL BE PERFORMED USING A CIRCULAR STEEL BALL ON SLED 1/16-INCH OR DIAMETER SMALLER THAN ALLOWABLE INSIDE DIAMETER OF FLEXIBLE PIPE WHEN DEFLECTED A MAXIMUM OF 5% OF OUTSIDE DIAMETER. DEFLECTION TESTS SHALL NOT BE PERFORMED SOONER THAN 30 DAYS AFTER DATE OF INSTALLATION OF PIPE SECTION UNLESS WRITTEN EXCEPTION.
7. SEWERS SHALL BE LAID WITH STRAIGHT ALIGNMENT BETWEEN MANHOLES. STRAIGHT ALIGNMENT SHALL BE CONFIRMED BY USE OF LIGHTED BOARD OR LAMPING. TESTING SHALL COMPLY WITH REQUIREMENTS OF THE AUTHORITY HAVING JURISDICTION.
8. MANHOLES, WHICH CANNOT BE PROPERLY AIR TESTED, SHOULD BE VISUALLY INSPECTED AND LEAKAGE-TESTED USING INTERNAL OR EXTERNAL HYDROSTATIC PRESSURE. LEAKAGE TESTING SHALL COMPLY WITH REQUIREMENTS OF THE AUTHORITY HAVING JURISDICTION.
9. IN AREAS WHERE CONVENTIONAL TESTING IS IMPRACTICAL (I.E. AREAS DESIGNATED BY ENGINEER WHERE EXISTING SERVICES ARE TIED INTO NEW LINE IMMEDIATELY ANY EXCAVATION WOULD RESULT IN A SERVICE OUTAGE), NEW LINES SHALL BE BACKFILLED UNTIL EACH PIPE SECTION AND CONNECTION IS INSPECTED APPROVED.
10. WHERE SEWERS ARE CONSTRUCTED OF PRESSURE-RATED PIPE AND INSTALLED WITH LESS THAN 18 INCHES VERTICAL SEPARATION FROM EXISTING OR PROPOSED WATER MAINS, SEWER PIPE SHALL BE PRESSURE-TESTED WITH WATER TO ASSURE WATER TIGHTNESS. HYDROSTATIC ACCEPTANCE TESTS SHALL BE CONDUCTED WITH THE PIPELINE UNDER A TEST HEAD OF 4 FEET. TEST TESTING MAY BE PERFORMED WITH THE PIPE SECTION PARTIALLY BACK-FILLED.
11. IF THE ALLOWABLE RATE OF AIR LEAKAGE IS EXCEEDED, THE CONTRACTOR SHALL LOCATE SOURCES OF EXCESSIVE LEAKAGE AND SHALL PROMPTLY CORRECT, REPAIR, AND BRING SYSTEM UP TO THE STANDARD. COSTS OF ALL SUCH REPAIRS AND CORRECTIVE WORK AND RETESTING COSTS OF REPAIRS THUS SHALL BE BORNE BY CONTRACTOR, THE SEWER LINE SECTION (INCLUDING MANHOLES AND BUILDING SERVICES) UNDER TEST SHALL NOT BE ACCEPTED UNTIL THESE TEST CRITERIA ARE MET.
12. SANITARY MANHOLES SHALL BE VACUUM TESTED IN ACCORDANCE WITH ASTM C1244. A VACUUM OF 10 INCHES OF Hg SHOULD BE DRAWN ON THE MANHOLE AFTER THE HOLES ARE PLUGGED, AND INLETS/OUTLETS ARE TEMPORARILY PLUGGED AND SECURED. THE TIME IS MEASURED FOR THE VACUUM TO DROP TO 9 INCHES (Hg). MANHOLE IS ACCEPTED IF THE MEASURED TIME FOR DROP EXCEEDS THE VALVES PRESENTED IN TABLE 1 OF ASTM C1244. IF THE M

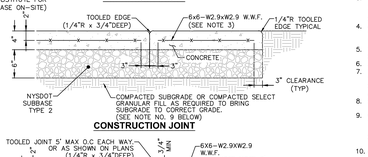
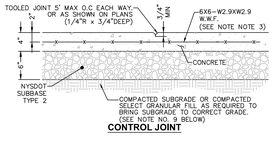
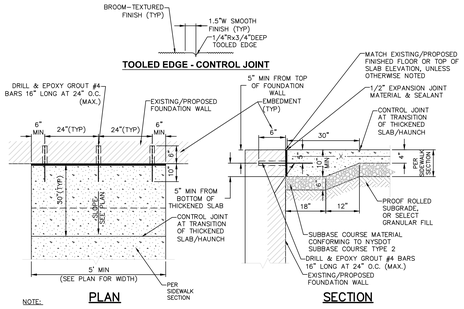
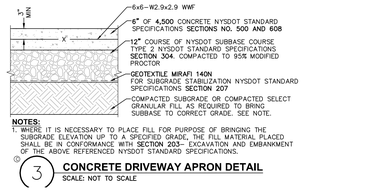
**C1.61**
AS NOTED



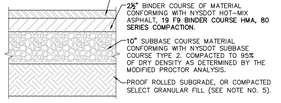




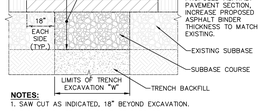


① **CONCRETE SIDEWALK DETAIL**
SCALE: NOT TO SCALE

**NOTES:**
1. MATERIAL AND METHODS OF CONSTRUCTION SHALL BE IN CONFORMANCE WITH THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION (NYSDOT) STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED "CURRENT VERSION", AND ALL ADDENDA THERE TO.
2. ALL CONCRETE SHALL BE **4,500** CONCRETE, CONCRETE MATERIALS, PLACEMENT, AND CONSTRUCTION SHALL CONFORM WITH **SECTION 500** OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
3. REINFORCING STEEL FOR CONCRETE SHALL CONFORM WITH SECTION 556 – REINFORCING STEEL FOR CONCRETE STRUCTURES OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS AND AS SPECIFICALLY CALLED OUT IN THE DRAWINGS.
4. ALL EXPOSED SURFACES SHALL HAVE A BROOM TEXTURED FINISH & TOOLED EDGES. TOOL SHALL PROVIDE MAX 1-1/2" WIDE SMOOTH TROWEL FINISH AT JOINT.
5. EXPANSION JOINTS SHALL BE LOCATED A MAXIMUM OF 20' ON CENTER, OR AS INDICATED ON PLANS.
6. JOINTS SHALL NOT BE SAW CUT.
7. EXPOSED CONCRETE SURFACES SHALL BE TREATED WITH **"SUREBOND" 1100 RESIN-BASED, WATER EMULSION CONCRETE CURING COMPOUND,** OR EQUAL. RATE AND METHOD OF APPLICATION SHALL BE IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS.
8. SUBBASE MATERIAL SHALL CONFORM WITH **SECTION 304** OF THE ABOVE REFERENCED NYSDOT STANDARD.
9. WHERE IT IS NECESSARY TO PLACE FILL FOR PURPOSE OF BRINGING THE SUBGRADE ELEVATION UP TO A SPECIFIED GRADE, THE FILL MATERIAL PLACED SHALL BE IN ACCORDANCE WITH SECTION 203–EXCAVATION AND EMBANKMENT OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
10. ALL WORK SHALL CONFORM WITH **SECTION 608**–SIDEWALK, DRIVEWAYS, AND BICYCLE PATHS OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
11. ALL WORK SHALL CONFORM WITH AASHTO GEOMETRIC DESIGN OF HIGHWAYS AND STREET 2011, ICC A117.1 2009, OR LATEST EDITION.
12. SIDEWALK WIDTH SHOWN ON THE PLANS IS TO BE MEASURED FROM THE BACK OF THE CURB.
13. SIDEWALKS SHALL HAVE A CROSS SLOPE OF 1.5% MAX. UNLESS OTHERWISE NOTED ON PLAN.
14. INSTALL EXPANSION JOINT WITH PREMOLDED RESILIENT JOINT FILLER & SEALANT AT ALL EXISTING SIDEWALKS, CURBS, FIXED OBJECTS, ETC., INCLUDING THOSE PLACED ON PREVIOUS DAYS.

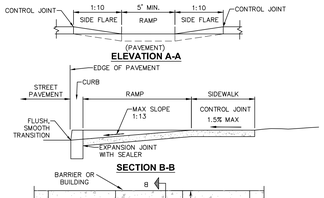


NOTE:
1. THICKENED (HAUNCH) & ADDITIONALLY REINFORCED CONCRETE SIDEWALK ENDS ARE REQUIRED AT ALL EXISTING/PROPOSED BUILDING ENTRANCES.
2. SEE CONCRETE SIDEWALK DETAIL FOR ADDITIONAL DETAILS & NOTES.

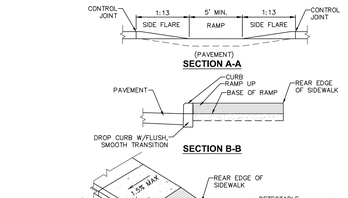


② **CONCRETE SIDEWALK AT BUILDING ENTRANCES**
SCALE: NOT TO SCALE

**NOTES:**
1. WHERE IT IS NECESSARY TO PLACE FILL FOR PURPOSE OF BRINGING THE SUBGRADE ELEVATION UP TO A SPECIFIED GRADE, THE FILL MATERIAL PLACED SHALL BE IN CONFORMANCE WITH **SECTION 203**– EXCAVATION AND EMBANKMENT OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.



③ **CONCRETE DRIVEWAY APRON DETAIL**
SCALE: NOT TO SCALE

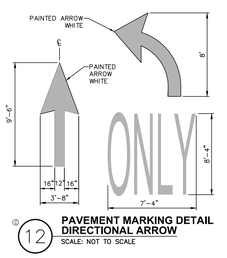


**NOTES:**
1. MATERIALS AND METHODS OF CONSTRUCTION SHALL BE IN CONFORMANCE WITH THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION (NYSDOT) STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED **"CURRENT VERSION"**, AND ALL ADDENDA THERE TO.
2. SUBBASE MATERIAL SHALL CONFORM WITH **SECTION 304** – SUBBASE COURSE OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS AND THE TYPE CALLED OUT IN THESE DRAWINGS.
3. HOT MIX ASPHALT (HMA) PAVEMENT SHALL CONFORM WITH **SECTION 400**–HOT MIX ASPHALT OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS AND THE TYPE CALLED OUT IN THESE DRAWINGS. ALTHOUGH **SECTION 400** IN ITS ENTIRETY IS REFERENCED, THE HOT MIX ASPHALT (HMA) PAVEMENT(S) SPECIFIED FOR THIS CONTRACT SHALL BE AS SPECIFIED UNDER **SECTION 402**–HOT MIX ASPHALT (HMA) PAVEMENTS.
4. TACK COAT WHEN SPECIFIED OR CALLED OUT IN THESE DRAWINGS OR REQUIRED BY THE REFERENCED SPECIFICATIONS SHALL CONFORM WITH **SECTION 407**–TACK COAT OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
5. WHERE IT IS NECESSARY TO PLACE FILL FOR PURPOSES OF BRINGING THE SUBGRADE ELEVATION UP TO A SPECIFIED GRADE, THE FILL MATERIAL PLACED SHALL BE IN CONFORMANCE WITH **SECTION 203**–EXCAVATION AND EMBANKMENT OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
6. PAVEMENT SECTION SHOWN IS PRELIMINARY. PRIOR TO BIDDING AND COMMENCEMENT OF CONSTRUCTION, THE FINAL DESIGN OF THE PAVEMENT SECTION MUST BE PREPARED BY A NYS LICENSED PROFESSIONAL ENGINEER AND MUST BE BASED ON A CURRENT GEOTECHNICAL REPORT PREPARED FOR THIS PROJECT.

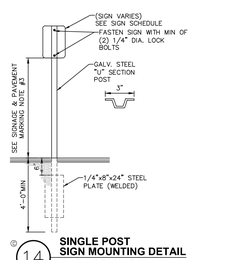
⑨ **TRENCH SURFACE RESTORATION IN ASPHALT PAVEMENT**
SCALE: NOT TO SCALE

**NOTES:**
1. ALL WORK SHALL CONFORM WITH THE NYSDOT STANDARD SPECIFICATION FOR CONSTRUCTION AND MATERIALS DATED, **"CURRENT VERSION"**, AND ALL ADDENDA THERE TO; SPECIFICALLY **SECTION 608**– SIDEWALKS, DRIVEWAYS, AND BICYCLE PATHS.
2. SLOPE RAMP AND SIDE FLARES AS INDICATED IN THE PLANS OR AS ORDERED BY THE ENGINEER.
3. DETECTABLE WARNING UNITS SHALL BE PROVIDED ON ALL RAMPS IN ACCORDANCE W/ ADA REQUIREMENTS.
4. WHERE THIS DIMENSION IS LESS THAN 4'–0", THE SIDE FLARES SHALL HAVE A SLOPE OF 1:13 OR FLATTER.

④ **PEDESTRIAN RAMP WITH FLARED SLOPES**
SCALE: NOT TO SCALE

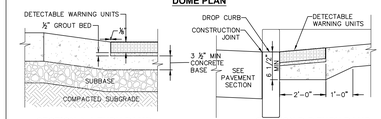


**NOTES:**
1. ALL WORK SHALL CONFORM WITH THE NYSDOT STANDARD SPECIFICATION FOR CONSTRUCTION AND MATERIALS DATED, **"CURRENT VERSION"**, AND ALL ADDENDA THERE TO; SPECIFICALLY **SECTION 608**– SIDEWALKS, DRIVEWAYS, AND BICYCLE PATHS.
2. SLOPE RAMP AND SIDE FLARES AS INDICATED IN THE PLANS OR AS ORDERED BY THE ENGINEER.
3. DETECTABLE WARNING UNITS SHALL BE PROVIDED ON ALL RAMPS IN ACCORDANCE W/ ADA REQUIREMENTS.



⑤ **PEDESTRIAN RAMP SECTION - DROP CURB**
SCALE: NOT TO SCALE

**STRIPING NOTES:**
1. ALL STRIPING SHALL CONFORM TO THE LATEST EDITION OF THE NYSDOT STANDARD SPECIFICATIONS, **SECTION 640** AND THE "NATIONAL MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES" – **2009 EDITION** AND THE "NYS SUPPLEMENT."
2. STRIPE PAVEMENT AS INDICATED ON THE PLANS AND/OR IN ACCORDANCE WITH ALL APPLICABLE LOCAL, STATE AND FEDERAL REQUIREMENTS.
3. STRIPING WORK WILL BE REVIEWED AND ACCEPTED BY THE AUTHORITY HAVING JURISDICTION.
4. COLOR: DRIVE LANE DIVIDERS – WHITE OR AOBE
NO PARKING ZONE WARNINGS – WHITE OR AOBE
PARKING DIVIDERS – WHITE OR AOBE.
WALKING LINES – WHITE OR AOBE
ACCESSIBLE PARKING LINES & SYMBOL – BLUE

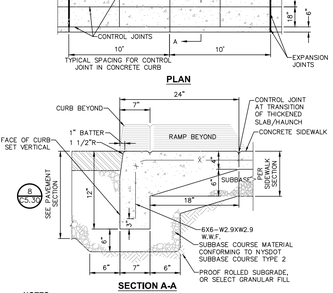


**SIGNAGE NOTES:**
1. ALL SIGNS SHALL CONFORM TO THE LATEST EDITION OF THE NYSDOT STANDARD SPECIFICATIONS, **SECTION 645** AND THE "NATIONAL MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES" – **2009 EDITION** AND THE "NYS SUPPLEMENT."
2. SIGN MOUNTING HEIGHT SHALL BE A MINIMUM OF 7'. MINIMUM MOUNTING HEIGHT MAY BE ADJUSTED ONLY IN ACCORDANCE WITH PROVISIONS OUTLINED IN THE "NATIONAL MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES" – **2009 EDITION** AND THE "NYS SUPPLEMENT."
3. SIGN POST SHALL BE IN ACCORDANCE W/ NYSDOT STANDARD SPECS **SECTION 730.**

⑫ **PAVEMENT MARKING DETAIL DIRECTIONAL ARROW**
SCALE: NOT TO SCALE

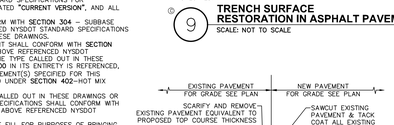
⑭ **SINGLE POST SIGN MOUNTING DETAIL**
SCALE: NOT TO SCALE

**SECTION A-A THRU RAMP**



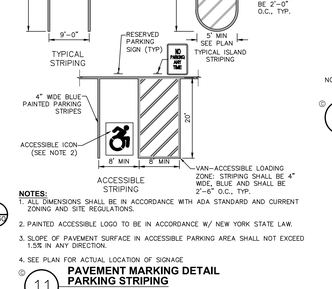
**SECTION B-B THRU RAMP**

**NOTES:**
1. COORDINATE W/ OWNER FOR COLOR.
2. DETECTABLE WARNING UNIT SHALL BE ADA COMPLIANT, AND SHALL CONTRAST VISUALLY WITH ADJOINING SURFACES.
3. MATERIALS: UNIT SHALL BE 24-INCH DETECTABLE WARNING ADA PAVERS, DOME STRAIGHT ROW SPACING PATTERN ADA-2 OR ADA-3, ADA COMPLIANT WARNING PAVER AS MANUFACTURED BY WAUSAU TILE OR CAST IRON, CAST IN PLACE ADA COMPLIANT WARNING PLATE A MANUFACTURED BY TRUNTILE OR EQUAL.



**ALTERNATIVE NOTE 3: SEE SPECIFICATION SECTION 32000000X FOR DETECTABLE WARNING ADA PAVERS.**

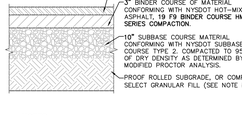
⑥ **DETECTABLE WARNING UNITS FOR RAMPS**
SCALE: NOT TO SCALE



**NOTES**
1. CONCRETE CURB SHALL BE INSTALLED IN ACCORDANCE WITH NYSDOT STANDARD SPECIFICATION **SECTION 609.**
2. SEE CONCRETE SIDEWALK DETAIL FOR ADDITIONAL DETAILS & NOTES.

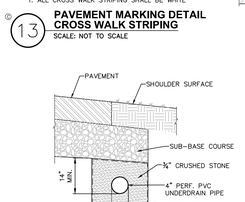
⑦ **INTEGRAL CONCRETE CURB & SIDEWALK @ DROP CURB**
SCALE: NOT TO SCALE

⑧ **PAVEMENT SECTION DETAIL**
SCALE: NOT TO SCALE

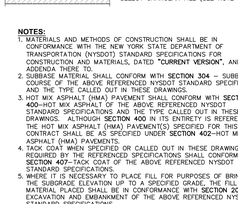


**NOTES:**
1. ALL DIMENSIONS SHALL BE IN ACCORDANCE WITH ADA STANDARD AND CURRENT ZONING AND SITE REGULATIONS.
2. PAINTED ACCESSIBLE LOGO TO BE IN ACCORDANCE W/ NEW YORK STATE LAW.
3. SLOPE OF PAVEMENT SURFACE IN ACCESSIBLE PARKING AREA SHALL NOT EXCEED 1.5% IN ANY DIRECTION.
4. SEE PLAN FOR ACTUAL LOCATION OF SIGNAGE

⑪ **PAVEMENT MARKING DETAIL PARKING STRIPING**
SCALE: NOT TO SCALE

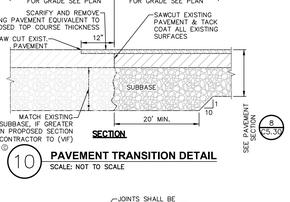


⑬ **PAVEMENT MARKING DETAIL CROSS WALK STRIPING**
SCALE: NOT TO SCALE



**NOTES:**
1. MATERIALS AND METHODS OF CONSTRUCTION SHALL BE IN CONFORMANCE WITH THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION (NYSDOT) STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED **"CURRENT VERSION"**, AND ALL ADDENDA THERE TO.
2. SUBBASE MATERIAL SHALL CONFORM WITH **SECTION 304** – SUBBASE COURSE OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS AND THE TYPE CALLED OUT IN THESE DRAWINGS. ALTHOUGH **SECTION 400** IN ITS ENTIRETY IS REFERENCED, THE HOT MIX ASPHALT (HMA) PAVEMENT(S) SPECIFIED FOR THIS CONTRACT SHALL BE AS SPECIFIED UNDER **SECTION 402**–HOT MIX ASPHALT (HMA) PAVEMENTS.
3. TACK COAT WHEN SPECIFIED OR CALLED OUT IN THESE DRAWINGS OR REQUIRED BY THE REFERENCED SPECIFICATIONS SHALL CONFORM WITH **SECTION 407**–TACK COAT OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
4. WHERE IT IS NECESSARY TO PLACE FILL FOR PURPOSES OF BRINGING THE SUBGRADE ELEVATION UP TO A SPECIFIED GRADE, THE FILL MATERIAL PLACED SHALL BE IN CONFORMANCE WITH **SECTION 203**–EXCAVATION AND EMBANKMENT OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.

⑩ **PAVEMENT TRANSITION DETAIL**
SCALE: NOT TO SCALE

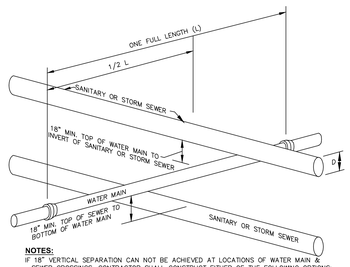


㉒ **UNDER DRAIN**
SCALE: NOT TO SCALE

**NOTES**
1. CONCRETE CURB SHALL BE INSTALLED IN ACCORDANCE WITH NYSDOT STANDARD SPECIFICATION **SECTION 609.**
2. PRECAST CONCRETE CURB MAY BE SUBSTITUTED, WHEN ALTERNATE CONSTRUCTION DETAILS ARE SUBMITTED BY THE CONTRACTOR AND APPROVED BY THE ENGINEER. ALTERNATE CURB SHALL BE INSTALLED IN ACCORDANCE WITH NYSDOT SPEC **SECTION 609.**

⑰ **CAST IN PLACE CONCRETE CURB AT SIDEWALK**
SCALE: NOT TO SCALE

**NOTES**
1. CONCRETE CURB SHALL BE INSTALLED IN ACCORDANCE WITH NYSDOT STANDARD SPECIFICATION **SECTION 609.**
2. PRECAST CONCRETE CURB MAY BE SUBSTITUTED, WHEN ALTERNATE CONSTRUCTION DETAILS ARE SUBMITTED BY THE CONTRACTOR AND APPROVED BY THE ENGINEER. ALTERNATE CURB SHALL BE INSTALLED IN ACCORDANCE WITH NYSDOT SPEC **SECTION 609.**



⑱ **CAST IN PLACE CONCRETE CURB**
SCALE: NOT TO SCALE

**NOTES:**
1. THE BOTTOM OF THE PRACTICE IS TO BE LEVEL TO EQUALIZE THE INFILTRATION RATE THROUGHOUT THE ENTIRE PRACTICE.
2. KEEP THE POROUS ASPHALT PAVEMENT FREE OF CONTAMINATION FROM THE CONSTRUCTION OPERATIONS. TAKE PRECAUTIONS AS NECESSARY SUCH AS WASHING TRUCK TIRES, INSTALLATION OF SILT FENCE, TARPS ON HEAVILY TRAVELED AREAS, ETC. STAGE THE PLACEMENT OF THE POROUS ASPHALT PAVEMENT AFTER THE SURROUNDING AREAS HAVE BEEN FINAL GRADED AND STABILIZED TO MINIMIZE POTENTIAL SEDIMENT LADEN WATER FROM REACHING THE PAVEMENT SURFACE.
3. ACCEPTABLE IN-PLACE DENSITY GAUGE READINGS AT EACH TEST LOCATION WILL BE BETWEEN 95% AND 105% OF THE PTD. ACCEPTABLE IN-PLACE DENSITIES OF THE PAVEMENT AS DETERMINED BY THE DENSITY GAUGE OPERATOR AND THE ENGINEER.
4. POROSITY TEST. ALLOW A MINIMUM OF 24 HOURS AFTER COMPLETION OF THE TOP COURSE, BEFORE TESTING. PERFORM A POROSITY TEST AT 3 LOCATIONS CHOSEN BY THE ENGINEER. AT EACH LOCATION, TEST THE POROSITY FOR A MINIMUM OF 3 MINUTES. THE TEST IS ACCOMPLISHED BY APPLYING CLEAN WATER AT A MEASURED RATE OF AT LEAST 5 GAL/MIN OVER THE SURFACE, USING A HOSE OR OTHER DISTRIBUTION DEVICE. WATER USED FOR THE TEST SHALL BE CLEAN, FREE FROM SUSPENDED SOLIDS AND DELETERIOUS MATERIALS AND WILL BE PROVIDED AT NO ADDITIONAL COST. ALL APPLIED WATER SHALL INFILTRATE DIRECTLY, WITHOUT PUDDLE FORMATION OR SURFACE RUNOFF, AND SHALL BE OBSERVED BY THE ENGINEER.

㉗ **POROUS PAVEMENT CROSS SECTION**

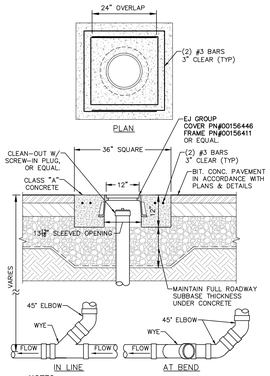
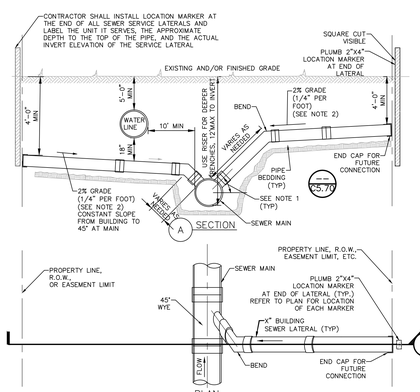
SUBBASE COURSE MATERIAL CONFOR

**NOTES:**
IF 18" VERTICAL SEPARATION CAN NOT BE ACHIEVED AT LOCATIONS OF WATER MAIN & SEWER CROSSINGS, CONTRACTOR SHALL CONSTRUCT EITHER OF THE FOLLOWING OPTIONS:
1. CONSTRUCT SEWER OF PVC WATERWORKS GRADE PRESSURE PIPE MATERIAL 10' ON EACH SIDE OF THE WATER MAIN AND TEST TO 150PSI TO ASSURE TIGHTNESS.



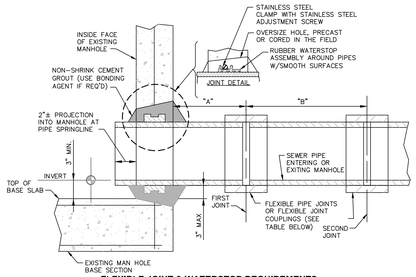
2.EITHER THE WATER MAIN OR THE SEWER LINE MAY BE ENCASED IN A WATER TIGHT CARRIER PIPE WHICH EXTENDS 10 FEET ON BOTH SIDES OF THE CROSSING. THE CARRIER PIPE SHALL BE OF MATERIAL APPROVED FOR THE USE IN WATER MAIN CONSTRUCTION.

## 1 SECTION WATER/SEWER SEPARATION REQUIREMENTS
SCALE: NOT TO SCALE



**NOTES:**
1. SEWER PIPE FITTINGS TO BE ASTM D-3033 OR D-3034 SDR-35.
2. TO BE USED FOR GRAVITY PORTION OF SANITARY SYSTEM AS WELL AS THE STORM ROOF DRAINAGE SYSTEM.

## 3 CLEAN OUT - NON TRAFFIC AREAS
SCALE: NOT TO SCALE

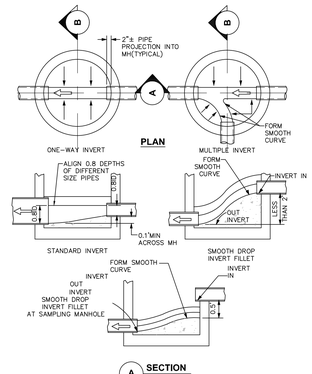


**NOTES:**
1. PIPE AND FITTINGS TO MATCH SERVICE LINE PER PLAN.
2. TO BE USED FOR GRAVITY PORTION OF SANITARY SYSTEM AS WELL AS THE STORM DRAINAGE SYSTEM.

## 2 CLEAN OUT - TRAFFIC AREAS
SCALE: NOT TO SCALE

**NOTES:**
1. OPTIMUM ANGLE IS 45°. THE ENGINEER MAY CALL FOR OTHER ANGLES TO SUIT JOB CONDITIONS.
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR INSTALLING THE SEWER LATERAL AS CONFIGURED AT THE SLOPE SPECIFIED, AND FOR ESTABLISHING THE ELEVATION AT THE TERMINATION POINT OF THE LATERAL. IF EXISTING UTILITIES OR OTHER FEATURES PREVENT INSTALLATION IN THAT MANNER, THE ENGINEER SHALL BE CONSULTED PRIOR TO INSTALLATION.

## 4 STANDARD SEWER SERVICE CONNECTION PLAN
SCALE: NOT TO SCALE



**FLEXIBLE JOINT & WATERSTOP REQUIREMENTS**

| SEWER PIPE TYPE | FLEXIBLE JOINT TYPE IN & OUT | "A"DISTANCE (FEET) | "B"DISTANCE (FEET) | MH WATER STOP REQD |
|---|---|---|---|---|
| DUCTILE IRON | STD RUBBER GASKET PIPE JOINT ONLY | 10'MAX | NO LIMIT | YES |
| PVC | SPECIAL FLEXIBLE JOINT COUPLING | 1'MAX | 3'MAX | YES |

**NOTES:**
1. THIS DETAIL SHALL BE USED AT NO EXTRA COST IN PLACE OF EITHER OF THE PIPE-TO-MANHOLE CONNECTION DETAILS ONLY WHEN CONNECTING TO EXISTING MANHOLES THAT HAVE NO FLEXIBLE RUBBER BOOT PROVIDED.
2. REFERENCE MANHOLE DETAIL(S) FOR REQUIRED INVERT CHANNEL CONFIGURATION.

## 5 PIPE CONNECTION TO EXISTING MANHOLE- CEMENT GROUT SEAL WITH WATER STOP
SCALE: NOT TO SCALE

**NOTE:**
INLET AND OUTLET OF PIPES SHOWN ON PLAN VIEW OF BASE ARE NOT NECESSARILY TYPICAL OF ALL MANHOLES. REFER TO UTILITY PLAN FOR INLET AND OUTLET DIRECTIONS.

## 6 INVERT, CHANNEL AND BENCHWALLS

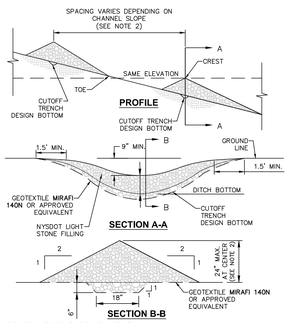
AS NOTED

PLAN VIEW

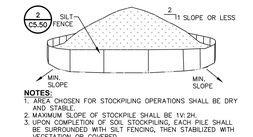


SECTION

NOTES:
1. WOVEN WIRE FENCE TO BE FASTENED SECURELY TO FENCE POSTS WITH WIRE TIES OR STAPLES. POSTS SHALL BE STEEL "T" OR "U" TYPE OR HARDWOOD.
2. FILTER FABRIC TO BE FASTENED SECURELY TO WOVEN WIRE FENCE WITH TIES SPACED EVERY 24" AT TOP AND MID SECTION. FENCE SHALL BE WOVEN WIRE, 6" MAX MESH OPENING.
3. WHEN TWO SECTIONS OF FILTER FABRIC ADJOIN EACH OTHER THEY SHALL BE OVERLAPPED BY 6" AND FOLDED.
4. MAINTENANCE SHALL BE PERFORMED AS NEEDED AND MATERIALS REMOVED WHEN "BULGES" DEVELOP IN THE SILT FENCE.
5. MAXIMUM DRAINAGE AREA FOR OVERLAND FLOW TO A SILT FENCE SHALL NOT EXCEED 1/4 ACRE PER 100 FEET OF FENCE.
6. SILT FENCE SHALL BE USED WHERE EROSION COULD OCCUR IN THE FORM OF SHEET EROSION.
7. SILT FENCE SHALL NOT BE USED WHEN A CONCENTRATION OF WATER IS FLOWING TO THE BARRIER.
8. MAXIMUM ALLOWABLE SLOPE LENGTHS CONTRIBUTING RUN-OFF TO A SILT FENCE ARE:

| SLOPE STEEPNESS | MAXIMUM SLOPE LENGTH(FT) |
|---|---|
| 2:1 | 25 |
| 3:1 | 50 |
| 4:1 | 75 |
| 5:1 OR FLATTER | 100 |

① 1 **STABILIZED CONSTRUCTION ACCESS DETAIL**
SCALE: NOT TO SCALE

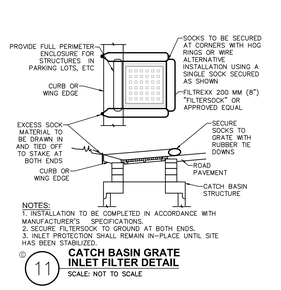


CONSTRUCTION SPECIFICATIONS:
1. STONE SHALL BE PLACED ON A FILTER FABRIC FOUNDATION TO THE LINES, GRADES AND LOCATIONS SHOWN ON THE PLAN.
2. SET SPACING OF CHECK DAMS IN ACCORDANCE W/ THE FOLLOWING:
   CHECK DAM SPACING INCREMENT 2'-6" DEEP DITCH/SWALE W/ 1'-9" HIGH CHECK DAM (SPACING = MAXIMUM DISTANCE BETWEEN TOE OF UPSTREAM DAM AND TOP OF DOWNSTREAM DAM)

| SLOPE: | SPACING: | SLOPE: | SPACING: |
|---|---|---|---|
| 0.5% | 300' | 6% | 29' |
| 1% | 175' | 7% | 25' |
| 2% | 87' | 8% | 21' |
| 3% | 58' | 9% | 19' |
| 4% | 44' | 10% | 17' |
| 5% | 35' | | |

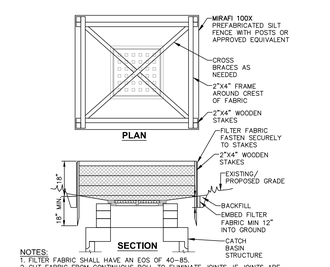
   CONTRACTOR TO ADJUST SPACING ACCORDINGLY BASED ON ACTUAL DEPTH & SLOPE OF DITCH.
3. EXTEND THE STONE A MINIMUM OF 1.5 FEET BEYOND THE DITCH BANKS TO PREVENT CUTTING AROUND THE DAM.
4. PROTECT THE CHANNEL DOWNSTREAM OF THE LOWEST CHECK DAM FROM SCOUR AND EROSION WITH STONE OR LINER AS APPROPRIATE.
5. ENSURE THAT CHANNEL APPURTENANCES SUCH AS CULVERT ENTRANCES BELOW CHECK DAM ARE NOT SUBJECT TO DAMAGE OR BLOCKAGE FROM DISPLACED STONE.
6. MAXIMUM DRAINAGE AREA IS 2 ACRES.

⑧ 8 **STONE CHECK DAM DETAIL**
SCALE: NOT TO SCALE



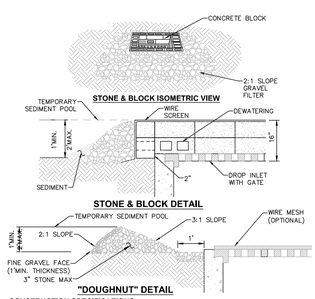
NOTES:
1. AREA CHOSEN FOR STOCKPILING OPERATIONS SHALL BE DRY AND STABLE.
2. MAXIMUM SLOPE OF STOCKPILE SHALL BE 1V:2H.
3. UPON COMPLETION OF SOIL STOCKPILING, EACH PILE SHALL BE SURROUNDED WITH SILT FENCING, THEN STABILIZED WITH VEGETATION OR COVERED.
4. SEE SPECIFICATIONS FOR INSTALLATION OF SILT FENCE.

⑨ 9 **TEMPORARY SOIL STOCKPILE DETAIL**
SCALE: NOT TO SCALE



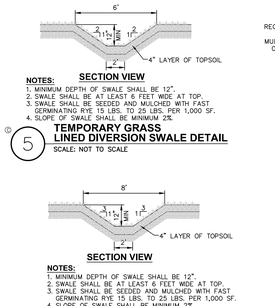
⑩ 10 **SILT SACK DETAIL**
SCALE: NOT TO SCALE

NOTES:
1. INSTALLATION TO BE COMPLETED IN ACCORDANCE WITH MANUFACTURER'S SPECIFICATIONS.
2. SECURE FILTERSOCK TO GROUND AT BOTH ENDS.
3. INLET PROTECTION SHALL REMAIN IN-PLACE UNTIL SITE HAS BEEN STABILIZED.



⑪ 11 **CATCH BASIN GRATE INLET FILTER DETAIL**
SCALE: NOT TO SCALE

SECTION

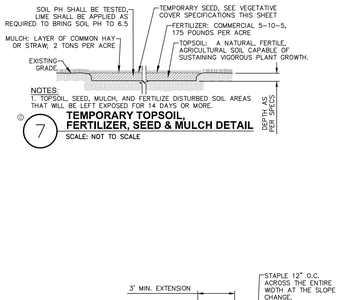


NOTES:
1. FILTER FABRIC SHALL HAVE AN EOS OF 40–85.
2. CUT FABRIC FROM CONTINUOUS ROLL TO ELIMINATE JOINTS. IF JOINTS ARE NEEDED, OVERLAP TO THE NEXT STAKE.
3. STAKE MATERIALS WILL BE STANDARD 2"x4" WOOD OR EQUIVALENT, WITH A MINIMUM LENGTH OF 3 FEET.
4. SPACE STAKES EVENLY AROUND INLET 3 FEET APART AND DRIVE MINIMUM 18" DEEP. SPANS GREATER THAN 3 FEET MAY BE BRIDGED WITH THE USE OF WIRE MESH BEHIND FABRIC FOR SUPPORT.
5. FABRIC SHALL BE EMBEDDED 1 FOOT MINIMUM BELOW GROUND AND BACKFILLED. IT SHALL BE SECURELY FASTENED TO THE STAKES AND FRAME.
6. A 2"x4" WOOD FRAME SHALL BE COMPLETED AROUND THE CREST OF THE FABRIC FOR OVERFLOW STABILITY.
7. MAXIMUM DRAINAGE AREA IS 1 ACRE.
8. INLET PROTECTION SHALL REMAIN IN-PLACE UNTIL SITE HAS BEEN STABILIZED.

③ 3 **TEMPORARY OUT OF PAVEMENT FILTER FABRIC DROP INLET PROTECTION DETAIL**
SCALE: NOT TO SCALE

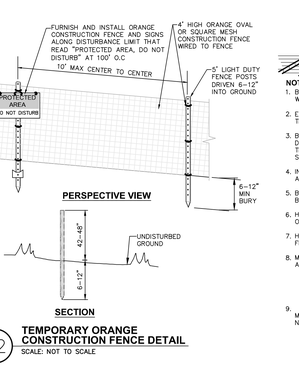
CONSTRUCTION SPECIFICATIONS:
1. LAY ONE BLOCK ON EACH SIDE OF THE STRUCTURE ON ITS SIDE FOR DEWATERING. FOUNDATION SHALL BE 2 INCHES MINIMUM BELOW REST OF INLET AND BLOCKS SHALL BE PLACED AGAINST INLET FOR SUPPORT.
2. HARDWARE FABRIC OR 1/2" WIRE MESH SHALL BE PLACED OVER BLOCK OPENINGS TO SUPPORT STONE.
3. USE NYSDOT #4 CRUSHED STONE FILLING PLACED 2 INCHES BELOW TOP OF THE BLOCK ON A 2:1 SLOPE OR FLATTER.
4. FOR STONE STRUCTURES ONLY, A 1 FOOT THICK LAYER OF THE FILTER STONE WILL BE PLACED AGAINST THE 3 INCH STONE AS SHOWN ON THE DRAWINGS.
5. MAXIMUM DRAINAGE AREA IS 1 ACRE.
6. MAXIMUM DRAINAGE AREA IS 1 ACRE.

④ 4 **CATCH BASIN STONE AND BLOCK INLET PROTECTION DETAIL**
SCALE: NOT TO SCALE



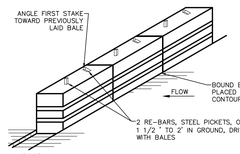
NOTES:
1. MINIMUM DEPTH OF SWALE SHALL BE 12".
2. SWALE SHALL BE AT LEAST 6 FEET WIDE AT TOP.
3. SWALE SHALL BE SEEDED AND MULCHED WITH FAST GERMINATING RYE 15 LBS. TO 25 LBS. PER 1,000 SF.
4. SLOPE OF SWALE SHALL BE MINIMUM 2%

⑤ 5 **TEMPORARY GRASS LINED DIVERSION SWALE DETAIL**
SCALE: NOT TO SCALE



NOTES:
1. MINIMUM DEPTH OF SWALE SHALL BE 12".
2. SWALE SHALL BE AT LEAST 6 FEET WIDE AT TOP.
3. SWALE SHALL BE SEEDED AND MULCHED WITH FAST GERMINATING RYE 15 LBS. TO 25 LBS. PER 1,000 SF.
4. SLOPE OF SWALE SHALL BE MINIMUM 2%

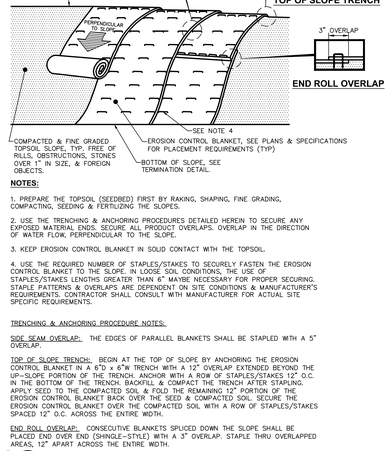
⑥ 6 **PERMANENT GRASS LINED DIVERSION SWALE DETAIL**
SCALE: NOT TO SCALE



NOTES:
1. TOPSOIL, SEED, MULCH, AND FERTILIZE DISTURBED SOIL AREAS THAT WILL BE LEFT EXPOSED FOR 14 DAYS OR MORE.

⑦ 7 **TEMPORARY TOPSOIL, FERTILIZER, SEED & MULCH DETAIL**
SCALE: NOT TO SCALE

⑫ 12 **TEMPORARY ORANGE CONSTRUCTION FENCE DETAIL**
SCALE: NOT TO SCALE



NOTES:
1. BALES SHALL BE PLACED AT THE TOE OF A SLOPE OR ON THE CONTOUR AND IN A ROW WITH ENDS TIGHTLY ABUTTING THE ADJACENT BALES.
2. EACH BALE SHALL BE EMBEDDED IN THE SOIL A MINIMUM OF (4)INCHES AND PLACED SO THE BINDINGS ARE HORIZONTAL.
3. BALES SHALL BE SECURELY ANCHORED IN PLACE BY EITHER TWO STAKES OR RE-BARS DRIVEN THROUGH THE BALE. THE FIRST STAKE IN EACH BALE SHALL BE DRIVEN TOWARD THE PREVIOUSLY LAID BALE AT AN ANGLE TO FORCE THE BALES TOGETHER. STAKES SHALL BE DRIVEN FLUSH WITH THE BALE.
4. INSPECTION SHALL BE FREQUENT AND REPAIR REPLACEMENT SHALL BE MADE PROMPTLY AS NEEDED.
5. BALES SHALL BE REMOVED WHEN THEY HAVE SERVED THEIR USEFULNESS SO AS NOT TO BLOCK OR IMPEDE STORM FLOW OR DRAINAGE.
6. HAY OR STRAW BALE DIKES SHALL BE USED WHERE EROSION COULD OCCUR IN THE FORM OF SHEET EROSION.
7. HAY OR STRAW BALE DIKES SHALL NOT BE USED WHEN A CONCENTRATION OF WATER IS FLOWING TO THE BARRIER.
8. MAXIMUM ALLOWABLE SLOPE LENGTHS CONTRIBUTING TO A HAY OR STRAW BALE DIKE ARE:

| SLOPE STEEPNESS | MAXIMUM SLOPE LENGTH(FT) |
|---|---|
| 2:1 | 25 |
| 3:1 | 50 |
| 4:1 | 75 |
| <4:1 | 100 |

9. MAXIMUM DRAINAGE AREA FOR OVERLAND FLOW TO A HAY OR STRAW BALE DIKE SHALL NOT EXCEED 0.25 ACRES PER 100 FEET OF DIKE FOR SLOPES < 25%.

⑬ 13 **HAY OR STRAW BALE DIKE DETAIL**
SCALE: NTS

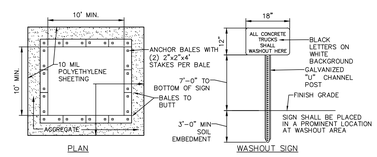
NOTES:

1. PREPARE THE TOPSOIL (SEEDBED) FIRST BY RAKING, SHAPING, FINE GRADING, COMPACTING, SEEDING & FERTILIZING THE SLOPES.

2. USE THE TRENCHING & ANCHORING PROCEDURES DETAILED HEREIN TO SECURE ANY EXPOSED MATERIAL ENDS. SECURE ALL PRODUCT OVERLAPS. OVERLAP IN THE DIRECTION OF WATER FLOW, PERPENDICULAR TO THE SLOPE.

3. KEEP EROSION CONTROL BLANKET IN SOLID CONTACT WITH THE TOPSOIL.

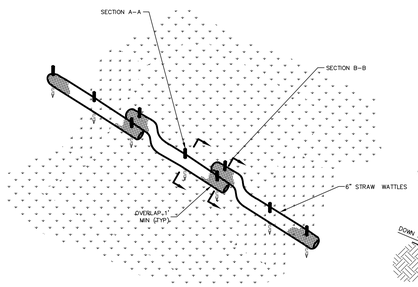
4. USE THE REQUIRED NUMBER OF STAPLES/STAKES TO SECURELY FASTEN THE EROSION CONTROL BLANKET TO THE SLOPE. IN LOOSE SOIL CONDITIONS, THE USE OF STAPLES/STAKES LENGTHS GREATER THAN 6" MAYBE NECESSARY FOR PROPER SECURING. STAPLE PATTERNS & OVERLAPS ARE DEPENDENT ON SITE CONDITIONS & MANUFACTURER'S REQUIREMENTS. CONTRACTOR SHALL CONSULT WITH MANUFACTURER FOR ACTUAL SITE SPECIFIC REQUIREMENTS.



TRENCHING & ANCHORING PROCEDURE NOTES:

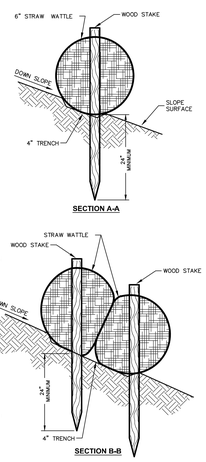
SIDE SEAM OVERLAP: THE EDGES OF PARALLEL BLANKETS SHALL BE STAPLED WITH A 5" OVERLAP.

TOP OF SLOPE TRENCH: BEGIN AT THE TOP OF SLOPE BY ANCHORING THE EROSION CONTROL BLANKET IN A 6"D x 6"W TRENCH WITH A 12" OVERLAP EXTENDED BEYOND THE UP-SLOPE PORTION OF THE TRENCH. ANCHOR WITH A ROW OF STAPLES/STAKES 12" O.C. IN THE BOTTOM OF THE TRENCH. BACKFILL & COMPACT THE TRENCH AFTER STAPLING. APPLY SEED TO THE COMPACTED SOIL & FOLD THE REMAINING 12" PORTION OF THE EROSION CONTROL BLANKET BACK OVER THE SEED & COMPACTED SOIL. SECURE THE EROSION CONTROL BLANKET OVER THE COMPACTED SOIL WITH A ROW OF STAPLES/STAKES SPACED 12" O.C. ACROSS THE ENTIRE WIDTH.

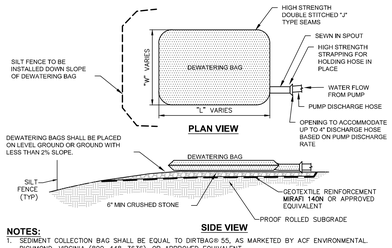


END ROLL OVERLAP: CONSECUTIVE BLANKETS SPLICED DOWN THE SLOPE SHALL BE PLACED END OVER END (SHINGLE-STYLE) WITH A 3" OVERLAP. STAPLE THRU OVERLAPPED AREAS, 12" APART ACROSS THE ENTIRE WIDTH.

⑭ 14 **EROSION CONTROL BLANKET INSTALLATION DETAIL**
SCALE: NTS



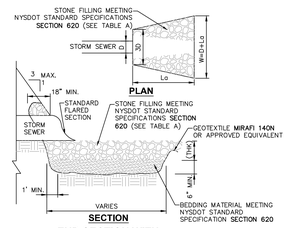
NOTES:
1. CONTAINMENT MUST BE STRUCTURALLY SOUND AND LEAK FREE AND CONTAIN ALL LIQUID WASTES.
2. CONTAINMENT DEVICES MUST BE OF SUFFICIENT QUANTITY OR VOLUME TO COMPLETELY CONTAIN THE LIQUID WASTES GENERATED.
3. WASHOUT MUST BE CLEANED OR NEW FACILITIES CONSTRUCTED AND READY TO USE ONCE WASHOUT IS 75% FULL. THIS INCLUDES REPLACEMENT OF THE 10 MIL POLYETHLENE SHEETING.
4. WASHOUT AREA(S) SHALL BE INSTALLED IN A LOCATION EASILY ACCESSIBLE BY CONCRETE TRUCKS.
5. ONE OR MORE AREAS MAY BE INSTALLED ON THE CONSTRUCTION SITE AND MAY BE RELOCATED AS CONSTRUCTION PROGRESSES.
6. AT LEAST WEEKLY, REMOVE ACCUMULATION OF SAND AND AGGREGATE AND DISPOSE OF PROPERLY.



⑮ 15 **CONCRETE WASHOUT AREA DETAIL**
SCALE: NOT TO SCALE

STRAW WATTLE NOTES:
1. PLACE STRAW WATTLES AS INDICATED ON PLANS.
2. DIG SMALL TRENCHES ACROSS THE SLOPE ON CONTOUR TO PLACE ROLLS IN. START BUILDING TRENCHES AND INSTALL ROLLS FROM THE BOTTOM OF THE SLOPE AND WORK UP. IT IS CRITICAL THAT ROLLS ARE INSTALLED PERPENDICULAR TO WATER MOVEMENT, PARALLEL TO THE SLOPE CONTOUR. LAY THE ROLL ALONG THE TRENCHES FITTING IT SNUGLY AGAINST THE SOIL. MAKE SURE NO GAPS EXIST BETWEEN THE SOIL AND THE STRAW WATTLE.

⑯ 16 **STRAW WATTLE DETAIL**
SCALE: NOT TO SCALE



NOTES:
1. SEDIMENT COLLECTION BAG SHALL BE EQUAL TO DIRTBAG® 55, AS MARKETED BY ACF ENVIRONMENTAL. RICHMOND, VIRGINIA (800–448–3636), OR APPROVED EQUIVALENT.
2. SEDIMENT COLLECTION BAG SHALL BE A NONWOVEN BAG SEWN WITH HIGH STRENGTH THREAD. THE SEAMS SHALL BE HIGH STRENGTH, DOUBLE STITCHED, "J" TYPE SEAMS.
3. BAGS SHALL HAVE SEWN IN FILL SPOUT LARGE ENOUGH TO ACCOMMODATE UP TO A 4" DISCHARGE HOSE. FILL SPOUT SHALL HAVE HIGH STRENGTH STRAPPING TO HOLD HOSE IN PLACE AND PREVENT PUMPED WATER FROM ESCAPING WITHOUT BEING FILTERED.
4. SEDIMENT COLLECTION BAGS SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURERS INSTRUCTIONS, OR AS DIRECTED BY THE ENGINEER.
5. SEDIMENT COLLECTED SHALL BE DISPOSED OF AT AN APPROPRIATE FACILITY.
6. SEDIMENT COLLECTION BAGS SHALL BE REMOVED AND REPLACED UNDER ANY OF THE FOLLOWING CONDITIONS:
   - WHEN BAGS ARE FULL.
   - WHEN BAGS HAVE BEEN IN PLACE FOR MORE THAN 30 DAYS (REMOVAL REQUIRED DUE TO ULTRAVIOLET DETERIORATION).
   - WHEN BAGS ARE DAMAGED.
4. ALL SEDIMENT COLLECTION BAGS SHALL BE INSPECTED DAILY BY THE CONTRACTOR.
5. CARE SHALL BE TAKEN DURING REMOVAL TO MINIMIZE LOSS OF ENTRAPPED SEDIMENT.

EROSION & SEDIMENT CONTROL DETAILS

TRUE NORTH

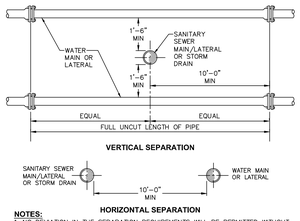
C5.50
AS NOTED

PIPE TYPE & SIZE VARIES. SEE PLAN

**NOTES:**

1. PIPE BEDDING & PIPE ZONE BACKFILL SHALL BE A NATURAL RUN–OF–BANK (R.O.B.) SAND OR A MIXTURE OF CRUSHED STONE AND GRAVEL, FREE OF SOFT, NONDURABLE PARTICLES, ORGANIC MATERIALS AND ELONGATED PARTICLES, AND SHALL BE WELL GRADED FROM FINE TO COARSE PARTICLES. BEDDING GRADATIONS SHALL BE APPROVED BY THE ENGINEER AND SHALL MEET THE FOLLOWING GRADATION REQUIREMENTS:

| SIEVE DESIGNATION | % PASSING |
|---|---|
| 3/4" | 100% |
| NO. 40 | 0–70% |
| NO. 200 | 0–10% |



2. TRENCH BACKFILL SHALL BE A NATURAL RUN–OF–BANK (R.O.B.) OR PROCESSED GRAVEL, OR EXCAVATED MATERIAL FREE OF SOFT, NONDURABLE PARTICLES, ORGANIC MATERIALS AND ELONGATED PARTICLES, AND SHALL BE WELL GRADED FROM FINE TO COARSE PARTICLES. TRENCH BACKFILL GRADATIONS SHALL BE APPROVED BY THE ENGINEER AND SHALL MEET THE FOLLOWING GRADATION REQUIREMENTS:

| SIEVE DESIGNATION | % PASSING |
|---|---|
| 4" | 100% |
| NO. 40 | 0–70% |
| NO. 200 | 0–10% |

IN NON–TRAFFIC UNPAVED AREAS TRENCH BACKFILL CAN BE MATERIALS EXCAVATED FROM THE TRENCH AS APPROVED BY THE ENGINEER AND COMPACTED TO 90% MODIFIED PROCTOR.

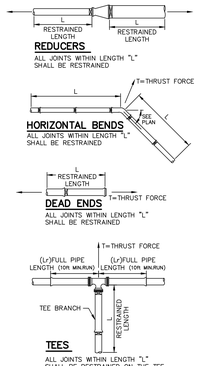
3. INSTALL CONTINUOUS DETECTABLE MARKING TAPE DURING BACKFILLING OF TRENCH FOR UNDERGROUND PIPING. LOCATE TAPE 12" BELOW FINISHED GRADE, DIRECTLY OVER PIPING, EXCEPT 6" BELOW SUBGRADE UNDER PAVEMENTS & SLAB.
4. TRENCHING SHALL BE IMPLEMENTED IN ACCORDANCE WITH O.S.H.A. STANDARDS.
5. 5'–0" MIN COVER SHALL BE APPLIED TO WATER MAIN OR SANITARY SEWER FORCE MAINS ONLY.
6. WIDTH DIFFERS WHERE WATER LINE IS PLACED IN ROCK BELOW FIVE–FEET. REFER TO TECHNICAL SPECIFICATIONS.

**1 PIPE TRENCH DETAIL (TYPICAL)**
SCALE: NOT TO SCALE

**NOTES:**

1. NO DEVIATION IN THE SEPARATION REQUIREMENTS WILL BE PERMITTED WITHOUT THE EXPRESS APPROVAL OF THE NYS HEALTH DEPARTMENT. OFFSETTING OF WATERLINE SHALL BE REQUIRED WHERE SEPARATION DISTANCES CANNOT BE MAINTAINED.
2. WHEN IT IS IMPOSSIBLE TO OBTAIN VERTICAL SEPARATION AS INDICATED ABOVE, BOTH THE WATER MAIN AND THE SEWER MAIN SHALL BE CONSTRUCTED OF MECHANICAL JOINT, DUCTILE IRON PIPE OR PVC WATER WORKS GRADE PRESSURE PIPE FOR 10' EACH SIDE OF CROSSING AND SHALL BE PRESSURE TESTED TO **150psi** TO ASSURE WATER TIGHTNESS.

**2 SANITARY/STORM SEWER AND WATERMAIN SEPARATION DETAIL**
SCALE: NOT TO SCALE



SCHEDULE OF JOINT RESTRAINT– (PVC OR POLYWRAPPED DIP)
(LENGTH OF PIPE EACH SIDE OF FITTING TO BE RESTRAINED IN FEET "L")

| PIPE SIZE (INCHES) | FITTING TYPE 90° | 45° | 22½ | 11¼ | TEE | VALVE | REDUCER 24" | 18" | 16" | 14" | 12" | 10" | 8" | 6" | 4" |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 30" | 241 | 100 | 48 | 24 | 202 | 206 | 206 | 72 | 130 | 145 | 159 | | | | |
| 24" | 196 | 82 | 39 | 20 | 163 | 166 | 166 | | 72 | 91 | 108 | 123 | 136 | | |
| 18" | 149 | 62 | 30 | 15 | 122 | 125 | 125 | | | 26 | 49 | 68 | 85 | 99 | |

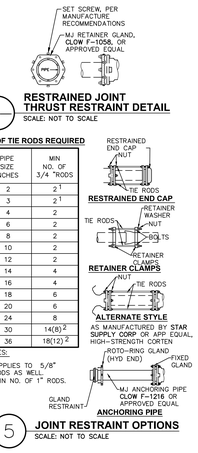
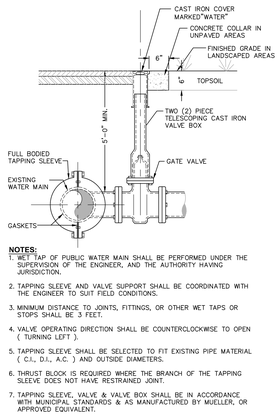
| 14" | 118 | 49 | 24 | 12 | 95 | 98 | 98 | | | | | 26 | 47 | 64 | 79 | 89 |
| 12" | 102 | 43 | 21 | 11 | 82 | 85 | 85 | | | | | | 25 | 45 | 62 | 74 |
| 10" | 86 | 36 | 17 | 9 | 68 | 71 | 71 | | | | | | | 25 | 44 | 58 |
| 8" | 71 | 30 | 15 | 7 | 56 | 59 | 59 | | | | | | | | 25 | 43 |
| 6" | 54 | 22 | 11 | 6 | 41 | 44 | 44 | | | | | | | | | 23 |
| 4" | 38 | 16 | 8 | 4 | 28 | 31 | 31 | | | | | | | | | |



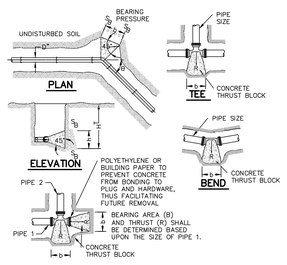
**NOTES:**

1. THE LENGTH OF PIPE REQUIRING RESTRAINT IS BASED UPON THE FOLLOWING ASSUMPTIONS:
   A. BEDDING TYPE 2 – FLAT BOTTOM TRENCH, BACKFILL LIGHTLY CONSOLIDATED TO CENTER LINE OF PIPE.
   B. SOIL TYPE CLAY 1 – CLAY OF MEDIUM TO LOW PLASTICITY, LL<50, <25% COURSE PARTICLES [CL & CL–ML]
      CL – INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY GRAVELY CLAYS, SANDY CLAYS, SILTY CLAYS. LEAN CLAYS
      ML – INORGANIC SILTS, VERY FINE SAND, ROCK FLOUR, SILTY OR CLAYEY FINE SANDS.
   C. PIPE TABLE CALCULATION IS BASED ON PVC OR POLYWRAPPED DIP
   D. DEPTH TO TOP OF PIPE 5'–0" MINIMUM
   E. MAXIMUM OPERATING PRESSURE OF 150 PSI
   F. FACTOR OF SAFETY OF 1.5
2. FOR END PLUGS, USE RESTRAIN PIPE LENGTH GIVEN FOR DEAD END FITTING.
3. THE LENGTH ("L") OF NEW PIPE TO BE RESTRAINED IS THE LENGTH FOR EACH SIDE OF THE FITTING.
4. THE ABOVE INFORMATION WAS PROVIDED USING THE THRUST RESTRAINT PROGRAM ISSUED BY THE DUCTILE IRON PIPE RESEARCH ASSOCIATION (DIPRA) AND IS BASED ON THE ASSUMPTIONS LISTED IN NOTE 1. RESTRAINED LENGTH REQUIREMENTS FOR FIELD CONDITIONS AND PIPE SIZES DIFFERING FROM THOSE LISTED ABOVE SHOULD BE EVALUATED SEPARATELY.
5. RESTRAINED JOINT PIPE AND FITTINGS SHALL BE USED ONLY AS ALLOWED BY THE PROJECT PLANS AND/OR SPECIFICATION. (IF THRUST BLOCKS ARE USED SEE THRUST BLOCK DETAIL)
6. TEE FITTINGS: PIPE SIZE SHOWN FOR THE TEE IS THE SIZE OF THE RUN. THE RESTRAINED LENGTH SHOWN IS FOR THE BRANCH. THE VALUE OF THE RESTRAINED LENGTH ASSUMES THAT THE SIZE OF THE BRANCH IS EQUAL TO OR LESS THAN THE RUN. THE VALUE OF THE L=×USED IN THE TABLE IS TO FEET. (L=× TOTAL LENGTH BETWEEN FIRST JOINTS ON EITHER SIDE OF THE TEE ON THE RUN.)



**3 JOINT RESTRAINT SCHEDULE AND NOTES**
SCALE: NOT TO SCALE

**4 RESTRAINED JOINT PIPE DIAGRAMS**
SCALE: NOT TO SCALE



**5 JOINT RESTRAINT OPTIONS**
SCALE: NOT TO SCALE

**NOTES:**

1. WET TAP OF PUBLIC WATER MAIN SHALL BE PERFORMED UNDER THE SUPERVISION OF THE ENGINEER, AND THE AUTHORITY HAVING JURISDICTION.
2. TAPPING SLEEVE AND VALVE SUPPORT SHALL BE COORDINATED WITH THE ENGINEER TO SUIT FIELD CONDITIONS.
3. MINIMUM DISTANCE TO JOINTS, FITTINGS, OR OTHER WET TAPS OR STOPS SHALL BE 3 FEET.
4. VALVE OPERATING DIRECTION SHALL BE COUNTERCLOCKWISE TO OPEN ( TURNING LEFT ).
5. TAPPING SLEEVE SHALL BE SELECTED TO FIT EXISTING PIPE MATERIAL ( C.I., D.I., A.C. ) AND OUTSIDE DIAMETERS.
6. THRUST BLOCK IS REQUIRED WHERE THE BRANCH OF THE TAPPING SLEEVE DOES NOT HAVE RESTRAINED JOINT.
7. TAPPING SLEEVE, VALVE & VALVE BOX SHALL BE IN ACCORDANCE WITH MUNICIPAL STANDARDS & AS MANUFACTURED BY MUELLER, OR APPROVED EQUIVALENT.

**6 TAPPING SLEEVE AND VALVE DETAIL**
SCALE: NOT TO SCALE

BEARING AREA (B) AND THRUST (R) SHALL BE DETERMINED BASED UPON THE SIZE OF PIPE 2.

**TEE WITH PLUG**

**REQUIRED BEARING AREAS –B (SQFT) FOR BEARING BLOCKS***

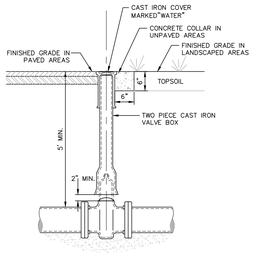
| PIPE SIZE (INCHES) | TEE | 90° BEND | 45° BEND | 22 1/2 ° 11 1/4 ° BEND |
|---|---|---|---|---|
| 4 | 2.0 | 2.8 | 1.5 | 0.8 0.4 |
| 6 | 4.2 | 5.9 | 3.2 | 1.6 0.8 |
| 8 | 7.2 | 10.1 | 5.5 | 2.8 1.4 |
| 10 | 10.9 | 15.4 | 8.3 | 4.2 2.1 |
| 12 | 15.4 | 21.8 | 11.8 | 6.0 3.0 |
| 14 | 20.6 | 29.1 | 15.8 | 8.0 4.0 |
| 16 | 26.8 | 37.9 | 20.5 | 10.4 5.2 |
| 18 | 33.6 | 47.5 | 25.7 | 13.1 6.6 |
| 20 | 41.2 | 58.2 | 31.5 | 16.1 8.1 |
| 24 | 58.8 | 83.1 | 45.0 | 22.9 11.5 |
| 30 | 90.5 | 128.0 | 69.2 | 35.3 17.7 |
| 36 | 129.6 | 183.3 | 99.1 | 50.5 25.4 |

*FACTOR OF SAFETY=1.5 SOIL BEARING OF 3,000 PSF 225 PSI DESIGN PRESSURE

*BEARING AREA (B) = b×h

**NOTES:**

1. CONCRETE SHALL NOT TO OVERLAP ANY JOINT.
2. THRUST BLOCKS SHALL BE CONFIGURED IN A MANNER THAT DOES NOT INTERFERE WITH REMOVAL OR INSTALLATION OF ANY JOINTING COMPONENTS.
3. FOR REDUCERS, USE MECHANICAL JOINT FITTINGS WITH RETAINER GLANDS.
4. BEARING SURFACE SHALL, WHERE POSSIBLE, BE PLACED AGAINST UNDISTURBED SOIL. WHERE THAT IS NOT POSSIBLE, THE FILL BETWEEN THE BEARING SURFACE AND UNDISTURBED SOIL MUST BE COMPACTED TO AT LEAST 90% STANDARD PROCTOR DENSITY.
5. BLOCK HEIGHT (h) SHALL BE EQUAL TO OR LESS THAN ONE–HALF THE TOTAL DEPTH TO THE BOTTOM OF THE BLOCK, (HT), BUT NOT LESS THAN THE PIPE DIAMETER (D).
6. BLOCK HEIGHT (h) SHALL BE ESTABLISHED SUCH THAT THE CALCULATED BLOCK WIDTH (b) VARIES BETWEEN ONE AND TWO TIMES THE HEIGHT.
7. VALUES FOR TEES APPLY TO TEES, END PLUGS, CAPS, AND TAPPING SLEEVES.
8. REQUIRED BEARING AREAS ARE DEVELOPED TO RESIST THRUSTS RESULTING FROM 150 PSI WORKING PRESSURE PLUS 50%(75 PSI) SURGE ALLOWANCE RESULTING IN 225 PSI TOTAL INTERNAL PRESSURE. REQUIRED BEARING AREAS ARE BASED UPON AN ALLOWABLE SOIL BEARING CAPACITY OF 3,000 POUNDS PER SQUARE FOOT. IN RESPONSE TO OTHER SOIL CONDITIONS ENCOUNTERED, BEARING AREAS REQUIRED MAY BE MODIFIED BY THE ENGINEER.

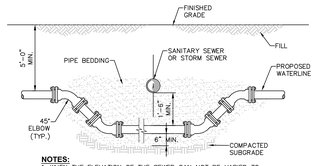


| SOIL | BEARING STRENGTH Sa (LB/SQ FT) |
|---|---|
| MUCK | 0 |
| SOFT CLAY | 1,000 |
| SILT | 1,500 |
| SANDY SILT | 3,000 |
| SAND | 4,000 |
| SANDY CLAY | 6,000 |
| HARD CLAY | 9,000 |

9. IN MUCK, PEAT, OR RECENTLY PLACED FILL, ALL THRUSTS SHALL BE RESISTED BY PILES OR TIE RODS TO SOLID FOUNDATIONS, OR BY REMOVAL OF SUCH UNSTABLE MATERIAL AND REPLACEMENT WITH BALLAST OF SUFFICIENT STABILITY TO RESIST THE THRUSTS; ALL AS REQUIRED BY THE ENGINEER.
10. CONCRETE THRUST BLOCK SHALL BE USED ONLY AS ALLOWED BY THE PROJECT PLANS AND/OR SPECIFICATION. (IF RESTRAINED JOINT PIPE IS TO BE USED SEE SCHEDULE OF JOINT RESTRAINED PIPE.)

**7 CONCRETE THRUST BLOCK DETAILS**
SCALE: NOT TO SCALE

**GENERAL CONSTRUCTION NOTES:**



1. ALL UTILITY WORK INVOLVING CONNECTION TO EXISTING MUNICIPAL WATER MAIN SHALL BE COORDINATED WITH OWNER AND OWNER'S REPRESENTATIVE. NOTIFY OWNER AND THE OWNER'S REPRESENTATIVE 3 WORKING DAYS BEFORE CONNECTION IS MADE.
2. THE CONTRACTOR SHALL VERIFY THE PRESENCE OF AND EXACT LOCATION OF ALL UTILITIES PRIOR TO COMMENCING ANY EXCAVATION WORK AS THE EXACT LOCATION OF UTILITIES MAY DIFFER FROM THE LOCATION SHOWN, AND ADDITIONAL UTILITIES MAY EXIST.
3. THE CONTRACTOR SHALL REVIEW ALL FIELD UTILITY MARKOUT INFORMATION AND BRING ANY CONFLICTS TO THE ATTENTION OF THE PROJECT ENGINEER PRIOR TO COMMENCING ANY WORK OPERATIONS. TEST PITS MAY BE REQUIRED BY THE CONTRACTOR TO VERIFY ACTUAL UTILITY LOCATIONS AND/OR DEPTHS. TEST PIT OPERATIONS WILL MEET ALL NECESSARY REQUIREMENTS AS SET FORTH IN THESE PLANS, DETAILS, FEDERAL/STATE/LOCAL REGULATIONS AND ANY SPECIFIC PERMIT REQUIREMENTS.
4. THE CONTRACTOR SHALL PERFORM EXPLORATORY EXCAVATIONS AT ALL UTILITY CONNECTION LOCATIONS AND AS NEEDED TO VERIFY EXISTING CONDITIONS PRIOR TO PERFORMING WORK. THE CONTRACTOR SHALL NOTIFY THE OWNER AND OWNER'S REPRESENTATIVE 3 WORKING DAYS PRIOR TO SUCH EXCAVATIONS TO ENSURE THEIR PRESENCE.
5. THE CONTRACTOR SHALL EXERCISE CAUTION WHEN EXCAVATING FOR THE PROPOSED STRUCTURES AND WATER LINES AS THE EXACT LOCATION OF UNDERGROUND STRUCTURES AND UTILITIES ARE NOT KNOWN. ANY DAMAGE TO EXISTING STRUCTURES/UTILITIES ABOVE OR BELOW GRADE, CAUSED BY THE CONTRACTOR SHALL BE REPAIRED IMMEDIATELY BY THE CONTRACTOR AT HIS OWN EXPENSE.

**NOTES:**

1. NON–RISING STEM GATE VALVE, OPERATING DIRECTION SHALL BE COUNTERCLOCKWISE TO OPEN.
2. MINIMUM DISTANCE TO JOINTS, FITTINGS, OR OTHER WET TAPS OR STOPS SHALL BE 3 FEET.
3. RESTRAIN VALVE WITH MEGALUG CONNECTION.
4. DIRECT BURY VALVE SHALL BE MODEL A–2360 RESILIENT WEDGE GATE VALVE WITH MECHANICAL JOINT ENDS AS MANUFACTURED BY MUELLER CO. OR APPROVED EQUIVALENT. VALVE SHALL COMPLY WITH AWWA C–509 AND NSF/ANSI 61 STANDARDS.
5. VALVE BOX SHALL BE 2–PIECE SLIDING TYPE WITH 5 ¼" SHAFT EXTENSION SERIES 6850 AS MANUFACTURED BY TYLER/UNION OR APPROVED EQUIVALENT.

**8 TYPICAL GATE VALVE DETAIL**
SCALE: NOT TO SCALE

**NOTES:**

1. WHEN THE ELEVATION OF THE SEWER CAN NOT BE VARIED TO MEET THE ABOVE REQUIREMENTS, THE WATER MAIN SHALL BE RELOCATED TO PROVIDE THIS REQUIRED SEPARATION.
2. WHEN IT IS IMPOSSIBLE TO OBTAIN VERTICAL SEPARATION AS INDICATED ABOVE, BOTH THE WATER MAIN AND THE SEWER MAIN SHALL BE CONSTRUCTED OF MECHANICAL JOINT DUCTILE IRON PIPE OR PVC WATER WORKS GRADE PRESSURE PIPE FOR 10' EACH SIDE OF CROSSING AND SHALL BE PRESSURE TESTED TO **150psi** TO ASSURE WATER TIGHTNESS.

**9 WATERLINE OFFSET DETAIL**

PLANTING SCHEDULE

TRUE NORTH

L1.50

1 PRELIMINARY PLANTING PLAN- NORTH
1"=20'-0"

SCALE 1" = 20'
0 10' 20' 40'

PLANTING GENERAL REQUIREMENTS

- ALL PLANTING SUBSTITUTIONS SHALL BE APPROVED BY THE LANDSCAPE ARCHITECT. PLANT MATERIALS AND LOCATIONS SHALL BE INSPECTED BY THE LANDSCAPE ARCHITECT PRIOR TO INSTALLATION. CONSTRUCTION MANAGER SHALL BE NOTIFIED AT LEAST THREE (3) WORKING DAYS IN ADVANCE FOR INSPECTION.
- PRIOR TO VEGETATIVE STABILIZATION, TOPSOIL SHALL BE APPLIED FOR ALL DISTURBED AREAS. THIS SHALL BE IN ACCORDANCE WITH THE SPECIFICATIONS.
- PLANTS SHALL BE TYPICAL OF THEIR SPECIES AND VARIETY; HAVE NORMAL GROWTH HABITS, WELL-DEVELOPED DENSELY FOLIATED BRANCHES, AND VIGOROUS ROOT SYSTEMS; AND BE FREE FROM DEFECTS AND INJURIES.
- PLANTS SHALL BE PLANTED ON THE DAY OF DELIVERY IF/WHEN PRACTICAL. IN THE EVENT THAT THIS IS NOT POSSIBLE, THE CONTRACTOR SHALL PROTECT STOCK NOT PLANTED. PLANTS SHALL NOT REMAIN UNPLANTED FOR LONGER THAN A THREE-DAY PERIOD AFTER DELIVERY. ANY PLANTS NOT INSTALLED DURING THIS PERIOD SHALL BE REJECTED, UNLESS OWNER AND CONTRACTOR PROVIDE OTHERWISE BY WRITTEN AGREEMENT.
- PLANTS SHALL NOT BE BOUND WITH WIRE OR ROPE AT ANY TIME SO AS TO DAMAGE THE BARK OR BREAK BRANCHES. PLANTS SHALL BE HANDLED FROM THE BOTTOM OF THE ROOT BALL ONLY.
- IF THE MOISTURE CONTENT OF THE SOIL SHOULD REACH SUCH A LEVEL THAT WORKING IT WOULD DESTROY SOIL STRUCTURE, SPREADING AND GRADING OPERATIONS SHALL BE SUSPENDED UNTIL, IN THE OPINION OF THE LANDSCAPE ARCHITECT, THE MOISTURE CONTENT IS INCREASED OR REDUCED TO ACCEPTABLE LEVELS AND THE DESIRED RESULTS ARE LIKELY TO BE OBTAINED.
- ACTUAL PLANTING SHALL BE PERFORMED DURING THOSE PERIODS WHEN WEATHER AND SOIL CONDITIONS ARE SUITABLE IN ACCORDANCE WITH LOCALLY ACCEPTED HORTICULTURAL PRACTICE AS APPROVED BY THE LANDSCAPE ARCHITECT. CONTRACTOR SHALL ONLY INSTALL AS MANY PLANTS PER DAY AS CAN BE PLANTED AND WATERED ON THE SAME DAY.
- ALL SCALED DIMENSIONS ARE APPROXIMATE. BEFORE PROCEEDING WITH ANY WORK THE CONTRACTOR SHALL CAREFULLY CHECK AND VERIFY ALL DIMENSIONS AND SHALL IMMEDIATELY INFORM THE LANDSCAPE ARCHITECT OF ANY DISCREPANCY BETWEEN THE DRAWINGS AND/OR SPECIFICATIONS AND ACTUAL CONDITIONS.
- PLANT MATERIAL QUANTITIES SHOWN ARE FOR CONVENIENCE ONLY. VERIFY COUNT AND PROVIDE NUMBER TO FULFILL INTENT OF DRAWINGS PRIOR TO ORDERING FROM NURSERIES.
- PROTECTION OF EXISTING STREET TREES, SHRUBS AND GROUNDCOVER: SEE THE DEMOLITION AND TREE PROTECTION PLAN L-030.

DEEP WATER LEACHING

- FILL IN ALL DEPRESSIONS, VOIDS, EROSION SCARS, OR SETTLED TRENCHES. FINISH GRADES BY DEEP LEACHING WITH CONDITIONED SOIL, LEAVING A FINAL GRADE SMOOTH AND EVEN.

FINAL GRADES

- MINOR MODIFICATIONS TO GRADE MAY BE REQUIRED TO ESTABLISH THE FINAL GRADES.
- ALL UNDULATIONS AND IRREGULARITIES IN THE PLANTING SURFACES RESULTING FROM TILLAGE, ROTOTILLING, AND ALL OTHER OPERATIONS SHALL BE LEVELED AND FLOATED OUT BEFORE PLANTING.
- THE CONTRACTOR SHALL TAKE EVERY PRECAUTION TO PROTECT AND AVOID DAMAGE TO SPRINKLER HEADS, IRRIGATION LINES, AND OTHER UNDERGROUND UTILITIES DURING GRADING AND PLANTING OPERATIONS.
- CONTRACTOR SHALL COORDINATE ALL DRAINAGE WORK WITH ALL OTHER TRADES, ESTABLISHED SITE DRAINAGE SHALL BE MAINTAINED BY CONTRACTOR DURING ALL PHASES OF LANDSCAPE CONSTRUCTION.
- FINAL FINISH GRADES SHALL INSURE POSITIVE DRAINAGE OF THE SITE WITH ALL SURFACE DRAINAGE AWAY FROM BUILDINGS AND WALLS AND TOWARD DRAINS AND CATCH BASINS.
- FINAL GRADES SHALL BE APPROVED IN WRITING BY THE LANDSCAPE ARCHITECT BEFORE PLANTING OPERATIONS WILL BE ALLOWED TO BEGIN.

PERCOLATION TESTING AND DRAINAGE

- PER THE SPECIFICATIONS, SOIL PERCOLATION TEST SHALL BE PERFORMED BY FILLING TREE PLANTING PITS (SEE PLANS FOR APPROPRIATE SIZE OF THE TREE PIT) WITH WATER, WAITING 12 HOURS AND THEN COMPLETELY REFILLING. IF ALL THE WATER IS NOT ABSORBED WITH 12 HOURS OF THE SECOND FILLING IT HAS FAILED THE TEST. UPON FAILURE, CONTACT LANDSCAPE ARCHITECT FOR REMEDIAL MEASURES.
- BID PRICE SHALL BE BASED ON TREE PLANTING PIT DETAILS SHOW ON THE PLANS AND PER THE SPECIFICATIONS.

WEED CONTROL

- PRIOR TO PLANTING, ERADICATE WEEDS WITHIN THE LIMITS OF WORK IN THE FOLLOWING ORDER:

A. IRRIGATE TWICE EACH DAY FOR APPROXIMATELY 5 TO 10 MINUTES EACH WATERING TIME (AS APPROPRIATE TO SITE CONDITIONS) FOR A PERIOD OF 30 CALENDAR DAYS.
B. APPLY POST EMERGENT HERBICIDE (SUCH AS ROUND-UP PRO) AS APPROVED BY THE OWNER AND PER STATE LICENSED PEST CONTROL ADVISOR AND ACCORDING TO THE MANUFACTURER'S RECOMMENDATIONS. TAKE CARE TO PROTECT EXISTING PLANT MATERIAL AND HARDSCAPE TO REMAIN AS SHOWN ON THE PLANS.
C. WAIT THE REQUIRED PERIOD FOR THE HERBICIDE TO TAKE EFFECT (APPROXIMATELY 7-14 DAYS).
D. PHYSICALLY REMOVE WEEDS DEAD OR ALIVE WITHIN THE LIMITS.

SOIL CONDITIONING AND FERTILIZING

- CLEAN, GRUB AND ROTOTILL ALL PLANTING AREAS TO A DEPTH OF TWELVE (12) INCHES REMOVING ALL WEEDS, DEBRIS, ROCKS OR OTHER DELETERIOUS MATTER 1 INCH DIAMETER OR LARGER FROM THE SITE (UNLESS SPECIFIED OTHERWISE). THEN BLEND IN SOIL AMENDMENTS PER THE SPECIFICATIONS AND BASED ON THE SOILS REPORT.

GENERAL PLANTING

- PRUNING SHALL NOT BE DONE EXCEPT BY A CERTIFIED ARBORIST AT APPROVAL OF THE LANDSCAPE ARCHITECT.
- PLANT LOCATIONS SHALL BE CHECKED FOR POSSIBLE INTERFERENCE WITH EXISTING UNDERGROUND PIPING, PRIOR TO EXCAVATION OF HOLES. IF UNDERGROUND CONSTRUCTION OR UTILITY LINES ARE ENCOUNTERED IN THE EXCAVATION OF PLANTING AREAS, NOTIFY THE OWNER. EXPENSE FOR REPAIR OF DAMAGE TO EXISTING UTILITIES SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR.

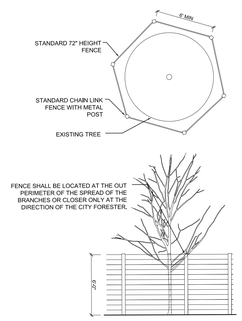
- ALL EXCAVATED HOLES SHALL HAVE VERTICAL SIDES WITH A ROUGHENED SURFACE AD SHALL BE OF THE MINIMUM SIZES INDICATED ON THE DRAWINGS. HOLES SHALL BE IN ALL CASES LARGE ENOUGH TO PERMIT HANDLING AND TO THE SPECIFICATIONS AND PLANS FOR SPECIAL CONDITIONS SUCH AS STRUCTURAL SOIL.

TREES, SHRUBS, AND VINES

- EACH TREE AND SHRUB SHALL BE PLACED IN THE CENTER OF THE HOLE AND SHALL BE SET PLUMB AND HELD RIGID IN POSITION UNTIL THE PLANTING BACKFILL HAS BEEN TAMPED DOWN AROUND EACH ROOTBALL.
- ALL PLANTS SHALL BE SET AT SUCH A LEVEL THAT AFTER SETTLING THEY ARE 2 INCHES HIGHER THAN SURROUNDING FINISH GRADE UNLESS OTHERWISE NOTED IN THE DRAWINGS OR SPECIFICATIONS.
- ALL PLANTS SHALL BE THOROUGHLY WATERED INTO THE FULL DEPTH OF EACH PLANTING HOLE IMMEDIATELY AFTER PLANTING.
- TREES LARGER THAN 24 INCH BOX (2.5" CALIPER) SHALL BE SPOTTED AND PLANTED WITH A CRANE. ALL BOX TREES SHALL BE STAKED PER THE DETAILS UNLESS OTHERWISE NOTED IN THE DRAWINGS OR SPECIFICATIONS.
- INJURED ROOTS SHALL BE PRUNED TO CLEAN ENDS BEFORE PLANTING WITH CLEAN, SHARP TOOLS. THE LEADER OF TREES SHALL NOT BE CUT BACK.
- TREES 2" OR GREATER IN CALIPER SHALL BE SUPPORTED IMMEDIATELY AFTER PLANTING. ALL TREES 6" AND GREATER IN CALIPER SHALL BE GUYED OR STABLED WITH DEADMAN TREE ANCHORING SYSTEM. SMALLER TREES SHALL BE STAKED. GUYING WIRES AND STAKES SHALL BE INSTALLED AS INDICATED. CONTRACTORS WILL ADVISE THEIR CLIENTS TO REMOVE STAKING, GUYING AND TREE WRAP AT THE END OF ONE YEAR.
- ALL PLANTING BEDS SHALL BE MULCHED WITH 2"-3" LAYER OF DOUBLE SHREDDED HARDWOOD BARK MULCH OR LEAF COMPOST.
- NEW PLANTING AREAS AND SOD SHALL BE ADEQUATELY IRRIGATED OR WATERED TO ESTABLISH THE PROPOSED PLANTS AND LAWN.
- ALL DISTURBED AREAS SHALL BE TREATED WITH 4" TOP SOIL OR COMPOST AND SEEDED IN ACCORDANCE WITH PERMANENT STABILIZATION METHODS INDICATED ON SOIL EROSION AND SEDIMENT CONTROL SHEET.

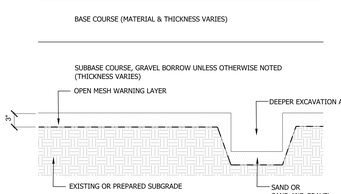
PLANTING MAINTENANCE PERIOD

- LANDSCAPE AREAS SHALL BE KEPT FREE OF WEEDS, NOXIOUS GRASS AND ALL OTHER UNDESIRED VEGETATIVE GROWTH AND DEBRIS.
- PLANT MATERIALS SHALL BE KEPT IN A HEALTHY OPTIMUM GROWING CONDITION AND IN A VISUALLY PLEASING APPEARANCE BY WATERING PRUNING, MOWING, FERTILIZING, RESTAKING, PEST AND DISEASE CONTROLLING, SPRAYING, WEEDING, CLEAN-UP AND ANY MAINTENANCE OPERATION NECESSARY TO INSURE A HEALTHY, VIGOROUS STAND OF PLANTS AT THE TIME OF FINAL INSPECTION.
- SEE SPECIFICATIONS FOR APPLICATION RATES FOR POST PLANTING FERTILIZER.
- CONTRACTOR IS RESPONSIBLE FOR THE LANDSCAPE MAINTENANCE OF THE PLANTING AND/OR IRRIGATED AREAS SHOWN ON THE PLANS FOR THE INITIAL 180 DAY MAINTENANCE PERIOD.



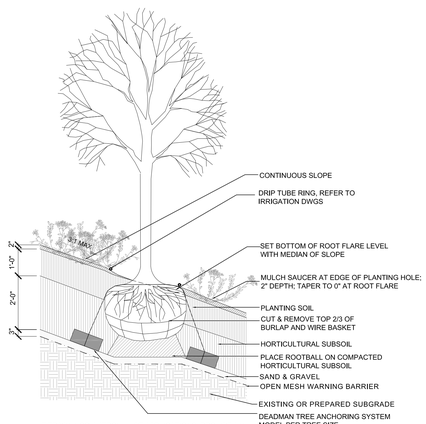
PLANT AVAILABILITY

- THE ACT OF PROVIDING A BID FOR THIS PROJECT ESTABLISHES THE CONTRACTORS UNDERSTANDING THAT THE PLANTS SPECIFIED HEREIN MAY BE UNUSUAL AND MORE DIFFICULT TO LOCATE THAN THE INDUSTRY STANDARD AND THAT THE CONTRACTOR AGREES TO THE FOLLOWING.



A. WITHIN TWENTY-ONE (21) DAYS AFTER AWARD OF THE CONTRACT CONTRACTOR SHALL SUBMIT A PLANT LIST WITH NURSERY SOURCES. PLANT QUANTITIES AND PLANT SIZES; PLANT LIST SHALL INDICATE ALL UNAVAILABLE PLANS AND WHICH NURSERIES WERE CONTACTED DURING CONTRACTORS SEARCH (LANDSCAPE ARCHITECT SHALL SUGGEST PLANT SUBSTITUTION BASED UPON INFORMATION IN CONTRACTOR SUBMITTAL)

B. UPON ACCEPTANCE OF CONTRACTOR PLANT LIST BY THE LANDSCAPE ARCHITECT, THE CONTRACTOR SHALL SECURE PLANTS WITHIN FIVE (5) DAYS AND ARRANGE FOR DELIVERY FROM NURSERIES.



- PRIOR TO THE START OF CONSTRUCTION OR EXCAVATION, TREES TO BE RETAINED SHALL BE PROTECTED BY SILT FENCE, SNOW FENCE, CONSTRUCTION FENCE, OR EQUAL, WHICH WILL BE PLACED AT THE DRIP LINE SEVERAL FEET BEYOND, NO STORAGE OR STOCKPILING OF CONSTRUCTION MATERIALS, DEBRIS, OR EQUIPMENT SHALL OCCUR WITHIN THE FENCED AREA.

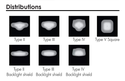
## Type X1 - Rectangular LED Head mounted on a 12' pole - Type IV optics & 10,000 lm board

**Specification Sheet** — **lumenblade** Small BLDS

Project Name _____ Qty _____

Type _____ Catalog / Part Number _____



Side and front views

Bottom view
L120 or L140 (3 boards) shown

**Distributions**

**Colors and Color Temperatures**

**Control**

ON/OFF 0-10V

**Motion detector options**

**Rating**

IP66 (optical chamber)

**Certifications**

**Description**

The Lumenpulse Lumenblade Small is an outdoor LED luminaire that uses a rectilinear version of the Lumencentro light engine to create a continuous line of light. Its seen-but-not-seen, minimalist design is sustainable, blends with both contemporary and heritage architectures, provides a high level of security, and is sensitive to the natural environment. The Lumenblade Small is available in several lengths, a number of distributions and output options, and provides a stellar quality of light that brings the night to life.

**Features**

| | |
|---|---|
| **Mounting** | Side mounting |
| **Color and Color Temperature** | 2200K, 2700K, 3000K, 3500K, 4000K, 5700K |
| **Distributions** | Type II, Type III or Type IV (with or without backlight shield), Type II square |
| **1.5G Vibration Rated** | Meets 1.5G ANSI C136.31 - 2010 vibration standard for Roadway applications |
| **Options** | Corrosion-resistant coating for hostile environments, Surge protector, 5-pin receptacles with and without starting cap, 7-pin receptacles with and without starting cap, Motion detector |
| **Pole Mounting Adaptor** | Straight pole and Mueller pole adaptor (round and square poles) 4 in<br>Lumentech pole adaptor (square and round poles) 6 in |
| **Warranty** | 5-year limited warranty |

**Performance**

| | |
|---|---|
| **Output (nominal lumens)** | Minimum 4000lm (1 board) / Maximum 14000lm (3 boards) |
| **Efficacy** | Up to 95 lm/W (Type II square, 4000K, 14850 lumen output) |
| **Color Rendering** | 3 SDCM for CRI 70+ and 2 SDCM for CRI 80+ |
| **Lumen Maintenance** | TM-21 L95 57,000 hrs (reported). To 25 °C (77 °F)<br>L70 > 120,000 hrs (projected). To 25 °C (77 °F)) |

**Specification Sheet** — **lumenblade** Small BLDS

| | |
|---|---|
| **Dark Sky** | Dark sky compliant (2200K, 2700K and 3000K color temperatures, BUG rating of U0) |

**Physical**

| | |
|---|---|
| **Housing Material** | Extruded aluminum 6000 alloy series |
| **Lens Material** | Clearsite lens |
| **Surface Finish** | Super Durable resistant exterior polyester powder coating meets AAMA 2604-98 requirements (5 years Florida exposure), a Corrosion resistant finish (CRC) pre-finish is available to meet ASTM-B-117 & ASTM D-1654 (salt spray resistance) and ASTM D-2247 requirements (humidity resistance). |
| **Weight** | 1 board: 10 lbs; 2 boards: 12.5 lbs; 3 boards: 15 lbs. Refer to fixture Weights Table in complete specification sheet for fixture weights with motion detector installed and double configurations |

**Electrical and control**

| | |
|---|---|
| **Voltage** | 120 volts, 208 volts, 240 volts, 277 volts, 347 volts, 480 volts |
| **Control** | On/Off control, 0-10V dimming |

**Environmental**

| | |
|---|---|
| **Storage Temperature** | -40°C [-40 °F] to 50°C [122 °F] (device must reach start-up temperature value before operating) |
| **Operating Temperature** | -40°C [-40 °F] to 50°C [122 °F] |
| **Start-up Temperature** | -25°C [-13 °F] to 50°C [122 °F] |
| **Ingress Protection Rating** | IP66 (optical chamber), Wet location rated |
| **Environment** | Dry / damp / wet location |

**Specification Sheet** — **lumenblade** Small BLDS

**Notes:**

1. Product comes in for a single fixture only (S1) configurations. For double configuration (S2), a second product code must be completed.
2. Consult factory for full fixture spec option. Available for S60lm (2 boards), S80lm (2 boards) and T80lm (3 boards) outputs.
3. Motion detector options add 1.46 lbs to total weight of fixture.
4. Available up to 277V.
5. Available for CRI 80 only.
6. Binning within a 3-step ellipse/MacAdam ellipse, with the exception of 2200K and 5700K.
7. Binning within a 2-step ellipse/MacAdam ellipse, with the exception of 5700K.
8. Specific P/N number followed by "TW" for textured finish (ex: RLSTP70) or "STW" for Satellite finish (ex: RLSTP70S). Textured or Satellite finishes are not recommended for the durability of aluminum. It is thick is not specified with the P/N, number (ex: RLSTP7). A glossy finish will be provided. Please consult factory for other RAL textures and glosses, or to match alternate color charts. Prices color matching results may vary.
9. Changes apply for thin, color. Consult factory for details.
10. Longer lead times can be expected for custom RAL color finishes.
11. Dim control can be used on NO-DIM control for status required.
12. Use only when exposed to salt spray and harsh chemicals. Re-lubricant is not required for normal outdoor exposure.
13. Use only when exposed to salt spray and harsh chemicals. Re-lubricant is not required for normal outdoor exposure.
14. Pole mount selects for programming can be modified on site. A remote is required. Later assembly. See Remote section in the specification sheet for details.
15. Consult Pole mounting Adaptor section for standard available configurations.

**Notes:**

1. Product comes in for a single fixture only (S1) configurations. For double configuration (S2), a second product code must be completed.
2. Consult factory for full fixture spec option. Available for S60lm (2 boards), S80lm (2 boards), T80lm (3 boards) and T120lm (4 boards) outputs.
3. Motion detector options add 1.46 lbs to total weight of fixture.
4. Available up to 277V.
5. Available for CRI 80 only.
6. Binning within a 3-step ellipse/MacAdam ellipse, with the exception of 2200K and 5700K.
7. Binning within a 2-step ellipse/MacAdam ellipse, with the exception of 5700K.
8. Specific P/N number followed by "TW" for textured finish (ex: RLSTP70) or "STW" for Satellite finish (ex: RLSTP70S). Textured or Satellite finishes are not recommended for the durability of aluminum. It is thick is not specified with the P/N, number (ex: RLSTP7). A glossy finish will be provided. Please consult factory for other RAL textures and glosses, or to match alternate color charts. Prices color matching results may vary.
9. Changes apply for thin, color. Consult factory for details.
10. Longer lead times can be expected for custom RAL color finishes.
11. Dim control can be used on NO-DIM control for status required.
12. Use only when exposed to salt spray and harsh chemicals. Re-lubricant is not required for normal outdoor exposure.
13. Use only when exposed to salt spray and harsh chemicals. Re-lubricant is not required for normal outdoor exposure.
14. Pole mount selects for programming can be modified on site. A remote is required. Later assembly. See Remote section in the specification sheet for details.
15. Consult Pole mounting Adaptor section for standard available configurations.

## Type X3 - Rectangular LED Head mounted to existing wood poles on Brookside Ave. - Type II optics & 10,000 lm board

**Description**

The Lumenpulse Lumenblade Medium is an outdoor LED luminaire that uses a rectilinear version of the Lumencentro light engine to create a continuous line of light. Its seen-but-not-seen, minimalist design is sustainable, blends with both contemporary and heritage architectures, provides a high level of security, and is sensitive to the natural environment. The Lumenblade Small is available in several lengths, a number of distributions and output options, and provides a stellar quality of light that brings the night to life.

**Features**

| | |
|---|---|
| **Mounting** | Side mounting |
| **Color and Color Temperature** | 2200K, 2700K, 3000K, 3500K, 4000K, 5700K |
| **Distributions** | Type II, Type III or Type IV (with or without backlight shield), Type II square |
| **1.5G Vibration Rated** | Meets 1.5G ANSI C136.31 - 2010 vibration standard for Roadway applications |
| **Options** | Corrosion-resistant coating for hostile environments, Surge protector, 5-pin receptacles with and without starting cap, 7-pin receptacles with and without starting cap, Motion detector |
| **Pole Mounting Adaptor** | Straight pole and Mueller pole adaptor (round and square poles) 4 in<br>Lumentech pole adaptor (square and round poles) 6 in |
| **Warranty** | 5-year limited warranty |

**Performance**

| | |
|---|---|
| **Output (nominal lumens)** | Minimum 4000lm (1 board) / Maximum 20000lm (4 boards) |
| **Efficacy** | Up to 107 lm/W (Type II square, 4000K, 14850 lumen output) |
| **Color Rendering** | 3 SDCM for CRI 70+ and 2 SDCM for CRI 80+ |
| **Lumen Maintenance** | TM-21 L95 57,000 hrs (reported). To 25 °C (77 °F))<br>L70 > 120,000 hrs (projected). To 25 °C (77 °F)) |

**Specification Sheet** — **lumenblade** Medium BLDM

| | |
|---|---|
| **Dark Sky** | Dark sky compliant (2200K, 2700K and 3000K color temperatures, BUG rating of U0) |

**Physical**

| | |
|---|---|
| **Housing Material** | Extruded aluminum 6000 alloy series |
| **Lens Material** | Clearsite lens |
| **Surface Finish** | Super Durable resistant exterior polyester powder coating meets AAMA 2604-98 requirements (5 years Florida exposure), a Corrosion resistant finish (CRC) pre-finish is available to meet ASTM-B-117 & ASTM D-1654 (salt spray resistance) and ASTM D-2247 requirements (humidity resistance). |
| **Weight** | 1 board: 12.5 lbs; 2 boards: 16 lbs; 3 boards: 21 lbs; 4 boards: 25 lbs. Refer to Fixture Weights Table in complete specification sheet for fixture weights with motion detector installed and double configurations |

**Electrical and control**

| | |
|---|---|
| **Voltage** | 120 volts, 208 volts, 240 volts, 277 volts, 347 volts, 480 volts |
| **Control** | On/Off control, 0-10V dimming |

**Environmental**

| | |
|---|---|
| **Storage Temperature** | -40°C [-40 °F] to 50°C [122 °F] (device must reach start-up temperature value before operating) |
| **Operating Temperature** | -40°C [-40 °F] to 50°C [122 °F] |
| **Start-up Temperature** | -25°C [-13 °F] to 50°C [122 °F] |
| **Ingress Protection Rating** | IP66 (optical chamber), Wet location rated |
| **Environment** | Dry / damp / wet location |

## Photometric Summary

**Symmetric**

| | Delivered output (lm) | Intensity (peak cd) |
|---|---|---|
| XN (4°) | 3073 | 290,070 |
| VN (6°) | 3013* | 156,978* |
| NS (10°) | 5039* | 75,098* |
| NF (20°) | 5157* | 48,366* |
| M (30°) | 4735* | 25,678* |
| FL (40°) | 4225* | 10,426* |
| WFL (60°) | 4205* | 4252* |

**Asymmetric**

| | Delivered output (lm) | Intensity (peak cd) |
|---|---|---|
| NAS | 3352* | 51,627*(82.5°) |
| WW | 4131* | 12,658*(80°) |

Based on 4000K configuration.
Photometric performance is measured in compliance with IESNA LM-79-08.
*Estimated. Consult website for the latest photometric files.

## Optics

XN (4°) VN (6°) NS (10°) NF (20°) M (30°)

FL (40°) WFL (60°) NAS WW

## Description

The Lumenbeam Large is an IP64-rated luminaire for lighting landscapes, trees, columns, monuments, and architectural details. It has numerous options, including optics for flood or accent lighting, a choice of color temperatures and colors, as well as various accessories, spread lenses, and controls. The luminaire also has an anti-corrosion option for use in harsh, chemical, or coastal environments.

## Features

| | |
|---|---|
| **Color and Color Temperature** | 2200K, 2700K, 3000K, 3500K, 4000K, 5700K, Red, Green, Blue |
| **Optics (nominal distribution)** | XN (4°), VN (6°), NS (10°), NF (20°), M (30°), FL (40°), WFL (60°), NAS (Narrow Asymmetric), WW (Asymmetric Wallwash) |
| **Optical Option** | Linear spread lens horizontal distribution, Linear spread lens vertical distribution |
| **Mounting Option** | Short Yoke, 3G ANSI C136.31-2010 Vibration Rating for bridge applications, Corrosion-resistant coating for hostile environments |
| **Cable Color** | Black, White |
| **Power Consumption** | 50 W |
| **Warranty** | 5-year limited warranty |

## Performance

| | |
|---|---|
| **Maximum Delivered Output** | 5157 lm (4000K, NF 20°) |
| **Maximum Delivered Intensity** | 295,070 cd at nadir (4000K, XN 4°) |
| **Illuminance at Distance** | Minimum 1 fc at 54.9 ft (4000K, XN 4°) |
| **Color Consistency** | 3 SDCM |
| **Color Rendering** | Minimum CRI 80 |
| **Lumen Maintenance** | L70 > 250,000 hrs (Ta 25 °C) (> 80,000 hrs for XN 4°, VN 6°, NAS optics only) |

## Physical

| | |
|---|---|
| **Housing Material** | Low-copper content high pressure die-cast aluminum |
| **Yoke Material** | Heavy aluminum (standard yoke included) |
| **Lens Material** | Clear tempered glass |
| **Hardware Material** | Stainless steel |
| **Gasket Material** | Silicone |
| **Surface Finish** | Electrostatically applied polyester powder coat |
| **Weight** | 12 lbs |
| **EPA** | Front = 0.64 sq ft, Side = 0.21 sq ft |

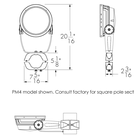
## Electrical and control

| | |
|---|---|
| **Voltage** | 120 to 277 volts |
| **Fixture Cable** | Power and data in one cable |
| **Conductors** | 3C #16-3 (HO, LT control), 5C #16-5 (DMX, DALI, ES control), 6C #14-3/ #24-3 (DMX/RDM control) |
| **Control** | On/Off control, Lumentalk, 0-10V dimming, DALI dimming, Lutron® EcoSystem® Enabled dimming, DMX/RDM enabled |
| **Resolution (DMX/RDM)** | Per fixture, 8-bit or 16-bit |

## Environmental

| | |
|---|---|
| **Storage Temperature** | -40 °F to 158 °F (device must reach start-up temperature value before operating) |
| **Start-up Temperature** | -13 °F to 122 °F |
| **Operating Temperature** | -40 °F to 122 °F |
| **Ingress Protection Rating** | IP66, Wet location rated |
| **Impact Resistance Rating** | IK10 |

## Accessories (order separately)



| | |
|---|---|
| **Optical Accessories** | Snoot, Snoot wide, Visor, Linear Spread Lens Adjustable, Wire guard |
| **Control Boxes** | DMX/RDM-enabled (daisy chain or star configuration), Ethernet enabled (daisy chain or star configuration) |
| **Control Systems** | Lumentalk™ 2, PharaDALI kit |
| **Diagnostic and Addressing Tools** | LumenID, LumenMAD |

**Specification Sheet** — lumenbeam Large LBL — WHITE AND STATIC COLORS

## Mounting accessories (order separately)

**Round pole mounting accessory**

PH4 model shown. Consult factory for square pole section.

**PM4-1, PM4.5-1, PM5-1** - Round pole mounting accessory - single fixture

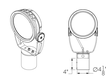
**PM4-2, PM4.5-2, PM5-2** - Round pole mounting accessory - twin fixtures
*One bracket assembly is supplied per 2 fixtures unless otherwise specified.

| | PM4 | PM4.5 | PM5 |
|---|---|---|---|
| **for pole Ø** | 4" | 4.5" | 5" |

Consult factory for other pole diameters.

**UY - Universal yoke for Lumentech pole**

Square Lumentech profile shown. Refer to Lumentech specification sheet and installation instructions for more details.

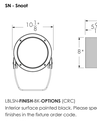


The mounting holes used for this fixture are shown in gray.

**Tenon adapter**

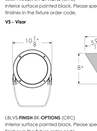
**TN2** - Tenon adapter to fit on 2-3/8 in O.D. tenon
Vertical mounting only. Consult factory for horizontal mounting.

**TN4** - Tenon adapter to fit on 4 in O.D. tenon
Vertical mounting only. Consult factory for horizontal mounting.



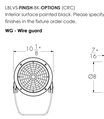
**Specification Sheet** — lumenbeam Large LBL — WHITE AND STATIC COLORS

## Optical accessories (order separately)



Installed optical accessories will affect the maximum pivot limits for each mounting option, consult factory for details.

**SN - Snoot**

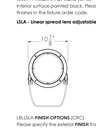


LBLSN-**FINISH**-BK-**OPTIONS** (CRC)
Interior surface painted black. Please specify the exterior **FINISH** from the list of finishes in the fixture order code.

**VS - Visor**

LBLVS-**FINISH**-BK-**OPTIONS** (CRC)
Interior surface painted black. Please specify the exterior **FINISH** from the list of finishes in the fixture order code.

**WG - Wire guard**



LBLWG-**FINISH-OPTIONS** (CRC)
Please specify the exterior **FINISH** from the list of finishes in the fixture order code.

**SNW - Snoot wide**

LBLSW-**FINISH**-BK-**OPTIONS** (CRC)
Interior surface painted black. Please specify the exterior **FINISH** from the list of finishes in the fixture order code.

**LSLA - Linear spread lens adjustable**

LBLSLA-**FINISH-OPTIONS** (CRC)
Please specify the exterior **FINISH** from the list of finishes in the fixture order code.

**Accessory combinations**

| + | Snoot | Snoot wide | Visor |
|---|---|---|---|
| Linear spread lens adjustable | LBLSNSLA | N/A* | LBLVSSLA |
| Wire guard | LBLSNWG | N/A | LBLVSWG |

Accessory combinations must be ordered together on a single line
Ex: A snoot + wire guard combination order code is LBLSNWG-**FINISH**-BK-**OPTIONS**. A maximum of two accessories can be combined per fixture.
*Consult factory for a linear spread lens adjustable + snoot wide combination.

**Specification Sheet** — lumenbeam Large LBL — WHITE AND STATIC COLORS

**Notes:**
[1] Select options for availability of static Black/Blue, Amber, 4,000K and RGB+CW.
[2] Order Linear mode to order B-K models.
[3] Factory installed, not field changeable on site.
[4] Cable length is approximate and may be changed in the field.
[5] Field adjustable sometimes sold as a source available, order separately.
[6] Not available with Linear spread lens options.
[7] Luminaires offers a wide selection of NA, CLASSIC BCT colors with a smooth texture and high gloss finish. Please consult factory for availability of standard 7 colors, other fine textures and glosses, or for metallic/alternate color finish, from color matching studio (RAL or NCS).
[8] Minus changes apply for NA, Lisbon. Consult factory for details.
[9] Longer lead times can be expected for custom RAL color finishes.
[10] A custom texture (-CSTX) and unlimited LEDS finish are specified for Luminaire applications. Consult Lumenbeam 2 and Lumentalk wiring and specification sheets for details.
[11] Not available with Class A versatile business options.
[12] Not available with Class A versatile business options. Only.
[13] A minimum of 0.5 cable length for class 2 low-limit applications with CM-DS.
[14] Standard white cable is RAL 9003 signal white. Consult factory for other standard RAL color requests.

[5] Field adjustable sometimes sold as a source available, order separately.
[6] Not available with Linear spread lens options.
[7] Luminaires offers a wide selection of NA, CLASSIC BCT colors with a smooth texture and high gloss finish. Please consult factory for availability of standard 7 colors, other fine textures and glosses, or for metallic/alternate color finish, from color matching studio (RAL or NCS).
[8] Minus changes apply for NA, Lisbon. Consult factory for details.
[9] Longer lead times can be expected for custom RAL color finishes.
[10] A custom texture (-CSTX) and unlimited LEDS finish are specified for Luminaire applications. Consult Lumenbeam 2 and Lumentalk wiring and specification sheets for details.
[11] Not available with Class A versatile business options.
[12] Not available with Class A versatile business options. Only.
[13] A minimum of 0.5 cable length for class 2 low-limit applications with CM-DS.
[14] Standard white cable is RAL 9003 signal white. Consult factory for other standard RAL color requests.

# Type X5 - Tree-Mounted Adjustable LED Cylinder - 25 degree optics & 3,200 lm board

**HUME LED** — IP66 RATED

DATE: _____ PROJECT: _____ TYPE: _____

Accessories *(Configure separately)*:

## SPECIFICATIONS

| | | |
|---|---|---|
| ELECTRICAL | WATTAGE | 34W & 36W LED |
| | WIRING | 18GA Stranded XLPE, 150°C, 600V wire. |
| | DRIVER | With one (1) 900mA, Class II, constant current integral driver. 50/60Hz. >0.9 Power Factor,5A in-rush current (typical at 120VAC), 0.20%THD (nominal at 120VAC full load). Output over-voltage, over-current, and short circuit protection with auto-recovery. Dimming driver for use with 0-10V, Incandescent, Standard TRIAC, or ELV dimmers. 1-100% range. *TRIAC/ELV dimming at 120VAC only. |
| PHYSICAL | OPTICS | Interchangeable OPTIMIT modules permit optical field changes. |
| | MATERIALS | Furnished in copper-free aluminum (6061-T6). |
| | BODY | Umbody design with enclosed, water-proof wireway and integral heat sink is fully machined from solid billet. Anti-condensation and corrosion vent equalizes fixture pressure and eliminates potential for damage to internal components. |
| | KNUCKLE | 360HD Mounting System features a mechanical tapelock, allowing full 180° vertical adjustment without the use of aim-limiting serrated teeth. High temperature, silicone 'O' Ring provides water-tight seal and compressive resistance to maintain fixture position. Design withstands 73 lbs. static load prior to movement for optical alignment with a ½" pipe thread for mounting. Sweat source control additionally provides 360° horizontal rotation in addition to vertical adjustment. Aim & Lock technology allows precision adjustment without the need for tightening or loosening of knuckle screw. 360HD hardware is stainless steel with black oxide treatment for additional corrosion resistance. |
| | CAP | Fully machined and accommodates two (2) tens or louver media. Offered with both tool-less and tamper-resistant options. |
| | FINISH | StarGuard, our 15-stage chromate-free process cleans and conversion coats aluminum components prior to application of Class 'A' TGIC polyester powder coating and is RoHS compliant. |
| | WARRANTY | 5-year limited warranty. |
| | CERTIFICATION & LISTING | UL tested to 8139/4 | IP 79, UL Listed, Certified to CAN/CSA/ANSI Standards. RoHS compliant. Suitable for indoor or outdoor use, in wet locations, and for installation within 4' of the ground. IP66 Rated. Made in the USA with sustainable processes. |

## Description

The Lumenbeam Small is a compact, IP64-rated luminaire for lighting landscapes, trees, columns, monuments, and architectural details. It has numerous options, including optics for flood or accent lighting, a choice of color temperatures and colors, as well as various accessories, spread lenses, and controls. The luminaire also has an anti-corrosion option for use in harsh, chemical, or coastal environments.

## Features

| | |
|---|---|
| **Color and Color Temperature** | 2200K, 2700K, 3000K, 3500K, 4000K, 5700

# PROJECT NARRATIVE

# 1.0 INTRODUCTION

## 1.1 Project Summary

The Applicant, Northside Junction, LLC is seeking site plan approval for the proposed adaptive reuse of the former 58,000 SF Standard Gage and Coal Storage manufacturing building for a new approximately 48,000 square-foot (SF) Workspace (Workspace) and 28 surface parking spaces for Scenic Hudson located at 58 Parker Avenue. The project also includes construction of 54 surface parking spaces (including three accessible spaces) on the adjacent lot north of Parker Avenue (North Parker Lot) that is currently occupied by a gravel parking lot. Vehicular access to the new Workspace will be modified from the existing location and provided at the west side of the property. Pedestrian access is provided at grade across the site and amongst elevated walkways between buildings. Access to the North Parker Lot will be accessible via a single access drive, reducing existing accesses from four to one. New York State Office of Parks Recreation and Historic Preservation (NYSOPRHP) maintains an existing access easement on the western side of the North Parker Lot for means of access. A walkway and a crosswalk over Parker Avenue will provide access for visitors and staff traveling to and from the Workspace. The North Parker Lot will be available for public parking on the weekends.

The total project site area is comprised of approximately 3.03 acres and is zoned Gateway Commercial (G-CM), which is part of the Walkway-Gateway District (W-G). The project site is comprised of two parcels (see Figures 1 and 2), identified as follows:

- Tax parcel 6162-62-148369 (58 Parker Avenue, approximately 2.1 ac.)
- Tax parcel 6162-54-125385 (Parker Ave, 0.93 ac.)

The site is part of the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program and is classified as “A,” which is assigned to non-registry (non-State Superfund sites) sites where work is underway and not yet complete. The site had several former manufacturing uses, including the Standard Gage and Coal Storage building which operated on site for more than 50 years until approximately 2001. The company was a generator of ignitable waste, corrosive waste, halogenated solvents, wastewater treatment sludge from electroplating operations, spent cyanide, plating bath residues, spent stripping and cleaning bath solutions, quenching bath residues, quenching wastewater treatment sludges and soluble cyanide salts. Reportedly spent solvents were discharged into a former floor drain in the southeastern corner of a storage room (north of transformer room). A Remedial Investigation Work Plan (RIWP), which identifies the investigation methodology and site-related contamination was approved by NYSDEC on December 17, 2020. The Remedial Investigation was completed and documented in a March 11, 2021 Report and a Remedial Action Work Plan (RAWP) is proposed to remediate the site using a combination of removal of contaminated soils and clean soil cover or hardscape over the landscape to prevent contact with contaminated soils. The Applicant is currently working with the NYSDEC on the RAWP.

Demolition to portions of the existing former manufacturing building will be undertaken affecting the southeast corner of the building (proposed demolition of two, one-story additions on three story building (three story building to remain)) and the east edge of the building (two-story wood frame building, one-story garage, and two steel buildings).

The proposed Workspace will include:

- Buildings A and B (totaling 35,230) will provide for the 22,010 SF Workspace serving 80 staff. The buildings will be fully renovated per historic preservation best practices. These buildings will also include an additional 13,220 SF, which may be used as community coworking and event space, also shared with Scenic Hudson staff. This area may include coworking, canteen, event space, gym, and support spaces (i.e., mech, electrical, water, locker rooms).

- Building C will provide approximately 3,210 SF of space for Scenic Hudson Parks Shop, including a solar array canopy attached to the existing building. The ground floor will be used for tool repair, parks maintenance projects, materials storage (lumber, seed mix, fence, plumbing) and a wood/metal woodshop. Outdoor storage will be provided in trailers. This building will be fully renovated per historic preservation best practices.

- Building D 3,445 SF will receive core and shell/exterior historic preservation. Building proposed for future community partner fit out.

- Building E 5,540 SF to receive core and shell/exterior historic preservation. Building proposed for future community partner fit out.

- Building E1 and Smokestack totaling 745 SF to receive core and shell/exterior historic preservation. Building proposed for outdoor classroom space for approximately 90 students.

- A photovoltaic (PV) canopy will be provided in the 28-space parking area to the west side of the building.

The overall site will be designed with an undulating landscape allowing for a reduction in the total soil proposed to be removed from the site and resulting in reduced visibility of the North Parker Lot and provision of engaging spaces accessible to the public. Connections to nearby Fall Kill Creek Walkway, future Dutchess Rail Trail, and the Walkway will be possible across the site.

## 1.2 Anticipated Permits/Approvals

Table 1 provides a list of the approvals/permits that are anticipated for the project.

**Table 1: Anticipated Approvals/Permits**

| AGENCY | APPROVAL/PERMIT |
|---|---|
| City of Poughkeepsie Planning Board | Site plan approval |
| City of Poughkeepsie Zoning Board of Appeals | Area Variances |
| City of Poughkeepsie – Zoning Administrator | Floodplain development permit for grading (pending potential FEMA changes) |
| City of Poughkeepsie – Water and Sewer Department | Water and Sewer Connections |
| Dutchess County Department of Planning and Development | GML 239m referral |
| New York State Department of Environmental Conservation (NYSDEC) | GP-0-20-001<br>SPDES General Permit for Discharges during Construction Activities, Remedial Action Work Plan |
| City of Poughkeepsie DPW | Highway Work Permit |
| NYS OPRHP | Historic Consult |

## 2.0 LAND USE, ZONING, AND PUBLIC POLICY

The site is surrounded by a mix of land uses, including residential, commercial, industrial, residential, community services, parks and recreation, and vacant areas, see Figure 3. The site abuts the Walkway to the north and the future Dutchess County Rail Trail to the east. There is residential development abutting the site to the west and south, commercial development to the north and east and the County Jail is located to the east. The Fallkill Creek is located to the south. The project site is not within the City's Local Waterfront Revitalization (LWRP) and therefore is not subject to a coastal consistency review.

According to the City of Poughkeepsie Comprehensive Land Use and Zoning Ordinance, Section 19-3.25, "the purpose of the W-G District is to revitalize this mixed industrial and residential area of the City so that it becomes a vibrant and attractive walkable mixed-use neighborhood where people will want to live, shop and invest. An additional purpose of this District is to encourage visitors to the Walkway and the Dutchess Rail-Trail to visit surrounding areas, before or after their visit, in order to help revitalize the neighborhood." Specifically, the W-G District includes the following specific intentions:

> (a) Enhance the quality of the City's built environment and promote site layout and architectural design that is compatible with the historic character of the community and the national prominence of the Walkway Over the Hudson State Historic Park.
>
> (b) Provide for the safety and comfort of pedestrians through an interconnected network of sidewalks and trails so that work, shopping, schools, and recreation will be within walking distance of each other, allowing independence to those who do not drive.

(c) Provide an interconnected network of streets, bicycle routes, and bicycle lanes to disperse traffic so that the City's vehicular system will be easy to navigate for both bicyclists and drivers.

(d) Promote the development of new residential and mixed uses at densities sufficient to encourage public transit use for residents and visitors.

(e) Strengthen the economic base of the City by providing expanded opportunities for residential and commercial mixed-use development, removing barriers to adaptive reuse of former industrial buildings, facilitating remediation of distressed properties, and encouraging the use of open and vacant lands for community gardens and landscaping.

(f) Incorporate green infrastructure and green development practices for stormwater management and renewable energy into the development review process.

(g) In mixed-use buildings, encourage ground floor uses that generate and serve pedestrian traffic, such as retail, personal services and restaurants.

(h) Facilitate the preservation, renovation, and adaptive reuse of historic buildings.

(i) Provide for a range of visually and physically accessible civic spaces within the District including parks, plazas, playgrounds, squares and greenways for the enjoyment of residents and visitors and for the creation of comfortable and sociable spaces for celebrations and events.

(j) Encourage the continued use of factory buildings for viable light manufacturing uses, which provide local jobs for residents, when such uses are compatible with nearby residential and tourism-oriented uses.

(k) Implement the goals and recommendations of the City's Comprehensive Plan and the Hudson River Valley Greenway Compact.

The W-G District consists of three subdistricts: the Gateway Residential Mixed-Use (G-RM) Subdistrict, the Gateway Commercial Mixed-Use (G-CM) Subdistrict and the Gateway Office Manufacturing (G-OM) Subdistrict. The G-CM Subdistrict is described as an area with traditional neighborhood retail and other small-scale commercial uses that adjoin residential neighborhoods, primarily at intersections and near the Walkway entrances on Parker Avenue. The G-CM Subdistrict is intended to encourage vertical mixed-use shop-front buildings with first floor retail, personal service, and entertainment uses and second and third stories used primarily for offices, hospitality uses and apartments.

The proposed Workspace (anticipated to be defined as an office use in the G-CM District) and accessory parking lot are permitted uses in the G-CM District. Buildings proposed for future community partner fit out are anticipated to include permitted uses. Parking on the North Parker Lot will be located at the rear of the lot and will be only minimally visible due to the undulating landscaping design. Demonstration of compliance with bulk and dimensional standards and supplemental regulations applicable to the project is included on the site plan. Required parking for office uses is 2.5 spaces per 1,000 SF of floor area. The Project is anticipated to require area variances to allow a reduced number of parking spaces. There are a

number of pre-existing nonconforming conditions, including less than minimum frontage occupancy requirement on Parker Street and less than minimum required lot width.

The proposed project is consistent with the purpose and intent of the W-G District for the following reasons:

- The project includes adaptive reuse of the historic Standard Gage and Coal Storage manufacturing building.
- The adaptive reuse of the building will include renovation and historic preservation to the highest standards.
- The site design will use innovative and engaging landscape design that reuses on-site natural materials to the greatest extent possible.
- The site design includes pedestrian connections that will enhance public access to cultural and recreational resources located nearby, including Fallkill Creek Walkway, future Dutchess Rail Trail, and the Walkway.
- The introduction of 80 Scenic Hudson staff and visitors to the Workspace and future community partner uses will revitalize the area.
- The project incorporates green infrastructure into stormwater management.
- The project includes solar panels that will be placed on the roof and canopies to provide electric service.
- The project may include geothermal wells.

For the reasons noted above, the proposed project is anticipated to be consistent with the City's zoning and public policy and will not result in significant adverse impacts.

# 3.0 SOILS AND WATER RESOURCES

## 3.1 Soils

Figure 4 shows the soil types that are expected to be present on the project site, and Table 2 provides characteristics of these soil types, according to the Dutchess County Soil Survey information available in GIS and the Natural Resource Conservation Service website.

**Table 2: Characteristics of Soil Types within Project Area**

| % of SITE | SOIL SYMBOL | SOIL TYPE | SLOPES | DRAINAGE | DEPTH TO WATER TABLE (FEET) | DEPTH TO BEDROCK (INCHES) |
|---|---|---|---|---|---|---|
| 100 | (DwB) Dutchess-Cardigan-Urban land complex, undulating, rocky | Dutchess (40%) | 1 to 6% | well | >6 | >80 |
| | | Cardigan (30%) | | well | >6 | 20 to 40 |

Rock encountered during the construction will be removed by mechanical methods (ripping), when possible. If blasting is determined to be necessary, all blasting operations will adhere to New York State and local ordinances governing the use of explosives. Proper program guidelines will be established between New York State, the City of Poughkeepsie and the blasting contractor prior to undertaking this activity. If blasting is required, it will be performed in accordance with New York State Department of Transportation (NYSDOT) Geotechnical Engineering Manual #22 "Procedures for Blasting" latest edition.

Based on this information, the proposed project will not result in any significant adverse impacts related to soils.

## 3.2 Water Resources

According to NYSDEC wetland and stream information available through GIS (Figure 5), the EAF Mapper, and Environmental Resource Map (Figure 6), there are no NYSDEC or federally regulated wetlands or streams located on the project site. There is a NYSDEC Class C stream, Fallkill Creek (Regulation 862-393) that travels along the southern side of Brookside Avenue near to the property. The National Wetland Inventory (NWI) identifies the Fallkill Creek as riverine (R3UBH).

No impact to the Fallkill Creek is proposed as part of the project. With the implementation of the Stormwater Pollution Prevention Plan (SWPPP) and drainage improvements there will be no significant adverse impact to the stream.

## 3.3 Floodplain

The southeastern portion of the site, in the vicinity of proposed adaptive reused Buildings B and D, is located within the 100-year floodplain. Some grading (no construction) may occur within the 100-year floodplain; therefore, a floodplain development permit may be sought. However, the Applicant has submitted a Letter of Map Amendment (LOMA) to Federal Emergency Management Agency (FEMA) to remove the project site, including the building, from the floodplain.

# 4.0 UTILITIES

## 4.1 Water and Wastewater

Municipal water and sewer service currently serve the project site. All sanitary discharge from the project will be via gravity. The site will be connected to the municipal sewer in Brookside Avenue.

According to the New York State Department of Environmental Conservation (NYSDEC) *Design Standards for Intermediate Sized Wastewater Treatment Systems,* March 2014, the proposed project is expected to require water usage of 1,200± gallons per day (gpd) (15 gpd multiplied by 80 staff) for Scenic Hudson staff. According to the Development Impact Assessment Handbook, Urban Land Institute, 1994, an office use employs an average of 3 persons per 1,000 SF. For the remaining area proposed for community partner fit out (approximately 9,730 SF) a total of 30 employees are estimated, requiring 450 gpd, for a total water demand of 1,650 gpd. It is anticipated that the City's municipal water system and wastewater treatment plant has capacity to serve the proposed use.

## 4.2 Stormwater

The project development will require ground disturbance in excess of one acre; therefore, a SWPPP is being prepared pursuant to NYSDEC SPDES General Permit for Stormwater Discharges from Construction Activity (GP-0-20-001). Stormwater quality will be enhanced through the implementation of temporary and permanent erosion and sediment control measures, the proposed stormwater management facilities, and other construction-phase pollution controls. The North Parker Lot will include a bioretention area and reduction in impervious area. The Workspace site will include a sand filter system and reduction in impervious area. New catch basins will be constructed on the overall site, a new catch basin and manhole will be constructed within Parker Avenue, and a new conveyance system will be constructed on the eastern portion of the property connecting the overall site for stormwater management to Garden Street. The existing drainage in the vicinity of the site along Parker Avenue will be disconnected from the City of Poughkeepsie sanitary system and will be rerouted to the new City drainage line being conveyed to Garden Street. With the implementation of the new drainage system and the SWPPP, no adverse impacts related to stormwater will occur. Additionally, the Applicant will be redirecting approximately 0.9 acres of runoff from the City's sanitary system, which contributes to the City's sanitary sewer system inflow and infiltration issues.

# 5.0 TRAFFIC

The *Trip Generation Manual, 10th Edition* published by the Institute of Transportation Engineers (ITE) is the industry-standard resource for estimating the traffic generated by various types of land uses and it was used to estimate the site generated trips for this project. Based on data for General Office Building (Land Use Code 710), the proposed project will generate 52 total trips in the weekday morning and 53 total trips in the evening peak periods, See Table 5.

**Table 3: Estimated Traffic Generation**

| **Land Use** | **General Office Building Land Use Code 710** |
|---|---|
| AM Peak Hour Trips Entering the Site | 43 |
| AM Peak Hour Trips Exiting the Site | 9 |

| | |
|---|---|
| **Total AM Peak Trips added to Adjacent Street Traffic** | **52** |
| PM Peak Hour Trips Entering the Site | 10 |
| PM Peak Hour Trips Exiting the Site | 43 |
| **Total PM Peak Trips added to Adjacent Street Traffic** | **53** |

Note: Analysis uses 110 employees and the fitted curve equation in the ITE Manual (10th Edition) to determine the AM and PM peak hour trip generation.

According to the NYSDEC guidance on how to assess traffic impacts a general office building with less than 67,000 SF is not likely result in 100 peak hour trips, which is a threshold provided by NYSDEC to assist in determinations of significant increases to traffic. As demonstrated above in Table 5, the ITE trip generation data indicates that the project (assuming total office use) would result in less than 100 trips during the AM and PM peak hours. For the reasons stated above, no significant adverse impacts related to traffic are anticipated to occur.

## 6.0 ENDANGERED, THREATENED, AND RARE SPECIES AND SIGNIFICANT HABITAT

According to the NYSDEC, there are no known occurrences of endangered, threatened or rare species or a Significant Natural Community on or in the vicinity of the project site. According to the US Fish and Wildlife Service (USFWS) information for planning and consultation (IPAC), there is potential for the Indiana Bat species on or in the vicinity of the project site. The site is fully developed within an urban area. It is recommended that tree clearing occur between October 31st and March 31st to ensure no potential take of the Indiana bat. With the clearing restriction and considering that removal of trees is less than ten acres, no significant adverse impacts to the Indiana Bat are anticipated to occur.

## 7.0 HISTORIC AND ARCHEOLOGICAL RESOURCES

According to the NYS Office of Parks, Recreation, and Historic Preservation (NYSOPRHP) Cultural Resource Information System (CRIS) mapping (Figure 7), the project site does not contain and is not adjacent to any National or State Historic Register site. The project is pursuing Historic Rehabilitation Tax Credits and consultation with NYSOPRHP has indicated that the Standard Gage Company Plant may be eligible for listing in the State and National Registers of Historic Places. Consultation in ongoing with NYSOPRHP and the National Park Service regarding eligibility. The rehabilitation work proposed to the Standard Gage Company Plant will be done in accordance with the Secretary of the Interior's Standards.

## 8.0 ENVIRONMENTAL CONTAMINATION

As described in the introduction, the site is part of the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program and is classified as "A," which is assigned to non-registry (non-State Superfund sites) sites where work is underway and not yet complete.

The site had several former manufacturing uses, including the Standard Gage and Coal Storage building which operated on site for more than 50 years until approximately 2001. The company was a generator

of ignitable waste, corrosive waste, halogenated solvents, wastewater treatment sludge from electroplating operations, spent cyanide, plating bath residues, spent stripping and cleaning bath solutions, quenching bath residues, quenching wastewater treatment sludges and soluble cyanide salts. Reportedly spent solvents were discharged into a former floor drain in the southeastern corner of a storage room (north of transformer room).

A Remedial Investigation Work Plan (RIWP), which identifies the investigation methodology and site-related contamination was approved by NYSDEC on December 17, 2020. The Remedial Investigation was completed and documented in a March 11, 2021 Report and a Remedial Action Work Plan is proposed for approval to remediate the site using a combination of removal of contaminated soils and clean soil cover or hardscape over the landscape to prevent contact with contaminated soils.

An environmental easement will be required for remedial activities associated with 58 Parker Avenue as it relies upon one or more institutional and/or engineering controls. The Environmental Easement will run with the land in favor of the State (NYSDEC), subject to the provisions of ECL Article 71, Title 36, and will contains use restriction(s) and/or any prohibition(s) on the use of land in a manner inconsistent with engineering controls. The placement of an Environmental Easement will; provide an effective and enforceable means of encouraging the reuse and redevelopment of a controlled property, at a level that has been determined to be safe for a specific use, while ensuring the performance of operation, maintenance, and/or monitoring requirements. With these measures in place, no significant adverse impacts to public health will occur.

# FULL ENVIRONMENTAL ASSESSMENT FORM (FEAF) PART 1 FORM

## Instructions for Completing Part 1

**Part 1 is to be completed by the applicant or project sponsor.** Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1is accurate and complete.

**A. Project and Applicant/Sponsor Information.**

| | | |
|---|---|---|
| Name of Action or Project:<br>Scenic Hudson Workspace and Parking | | |
| Project Location (describe, and attach a general location map):<br>58 Parker Avenue and 61 Parker Avenue, Poughkeepsie NY 12601 (vacant Standard Gage facility and accessory lot) | | |
| Brief Description of Proposed Action (include purpose or need):<br>The Applicant, Northside Junction, LLC is seeking site plan approval for the proposed adaptive reuse of the former 58,000 SF Standard Gage and Coal Storage manufacturing building for a new approximately 48,000 square-foot (SF) workspace (Workspace) and 28 surface parking spaces for Scenic Hudson located at 58 Parker Avenue. The project also includes construction of 54 surface parking spaces (including three accessible spaces) on the adjacent lot north of Parker Avenue (North Parker Lot) that is currently occupied by a gravel parking lot. The total project site area is comprised of approximately 3.03 acres and is zoned Gateway Commercial (G-CM), which is part of the Walkway-Gateway District (W-G). The project site is comprised of two parcels: Tax parcel 6162-62-148369 (58 Parker Avenue, approximately 2.1 ac.) and Tax parcel 6162-54-125385 (Parker Ave, 0.93 ac.). Buildings A and B will provide Workspace space and may include coworking, event space, canteen, and a gym. Building C will include the Parks Maintenance Shop, with a solar array canopy. Buildings D and E are proposed to include future community partners. Building E1 will provide outdoor classroom space. Buildings A - C will be renovated and historically preserved, Buildings D - E will receive core and shell/exterior historic preservation. The overall site will be designed with an undulating landscape allowing for natural materials to remain on site and resulting in reduced visibility of the North Parker Lot. | | |
| Name of Applicant/Sponsor:<br>Northside Junction, LLC, Caroline Alsup, Project Manager | Telephone: 845-473-4440<br>E-Mail: calsup@scenichudson.org | |

**B. Government Approvals**

**B. Government Approvals, Funding, or Sponsorship.** ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

| Government Entity | If Yes: Identify Agency and Approval(s) Required | Application Date (Actual or projected) |
|---|---|---|
| a. City Counsel, Town Board, or Village Board of Trustees ☐Yes ☑No | | |
| b. City, Town or Village Planning Board or Commission ☑Yes ☐No | Planning Board: Site Plan Approval | Summer 2021 |
| c. City, Town or Village Zoning Board of Appeals ☑Yes ☐No | Zoning Board of Appeals: Area Variances | Fall 2021 |
| d. Other local agencies ☑Yes ☐No | Zoning Admin - floodplain grading permit (pending potential FEMA changes); Water/Sewer PW Dept. | Winter 2021, Fall 2021 |
| e. County agencies ☑Yes ☐No | GML 239M Referral | Fall 2021 |
| f. Regional agencies ☐Yes ☑No | | |
| g. State agencies ☑Yes ☐No | NYSDEC SPDES GP-0-20-001 and Remedial Action Plan; OPRHP consultation | Winter 2021, Winter 2021, Winter 2021 |
| h. Federal agencies ☐Yes ☑No | | |

i. Coastal Resources.

*i.* Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes ☑No

*ii.* Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes ☑No

*iii.* Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No

**C. Planning and Zoning**

**C.1. Planning and zoning actions.**

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes ☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

**C.2. Adopted land use plans.**

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes ☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☑Yes ☐No City's 1998 Comprehensive Plan: Site is included within the Cottage Street Business Park Study Area. Site rezoned to Walkway - Gateway District in 2013.

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway; Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☑Yes ☐No

If Yes, identify the plan(s):

Remediaton Sites:C314131 Tax Parcel: 148369

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No

If Yes, identify the plan(s):

**C.3. Zoning**

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
Walkway-Gateway Overlay District (W-G): Gateway Commercial Mixed-Use (G-CM)

b. Is the use permitted or allowed by a special or conditional use permit? ☑ Yes ☐ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
*i.* What is the proposed new zoning for the site? _____

**C.4. Existing community services.**

a. In what school district is the project site located? City of Poughkeepsie School District

b. What police or other public protection forces serve the project site?
City of Poughkeepsie Police Department with support from the Dutchess County Sheriff's Department and NYS Police

c. Which fire protection and emergency medical services serve the project site?
City of Poughkeepsie Fire Department

d. What parks serve the project site?
Walkway over the Hudson NYS Park, Dutchess Rail Trail, Fallkill Creek walkway

**D. Project Details**

**D.1. Proposed and Potential Development**

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Office and Education

b. a. Total acreage of the site of the proposed action? 3.03 acres
b. Total acreage to be physically disturbed? 2.44 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 3.39 acres Applicant owns Tax Parcel: 177385, which is not part of the proposed project.

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
*i.* If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☐ Yes ☑ No
If Yes,
*i.* Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
*ii.* Is a cluster/conservation layout proposed? ☐ Yes ☑ No
*iii.* Number of lots proposed? _____
*iv.* Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will the proposed action be constructed in multiple phases? ☐ Yes ☑ No
*i.* If No, anticipated period of construction: 18 months
*ii.* If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

f. Does the project include new residential uses? ☐ Yes ☑ No

If Yes, show numbers of units proposed.

| | One Family | Two Family | Three Family | Multiple Family (four or more) |
|---|---|---|---|---|
| Initial Phase | | | | |
| At completion of all phases | | | | |

g. Does the proposed action include new non-residential construction (including expansions)? ☐ Yes ☑ No

If Yes,

*i.* Total number of structures _____

*ii.* Dimensions (in feet) of largest proposed structure: _____height; _____width; and _____ length

*iii.* Approximate extent of building space to be heated or cooled: _____ square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☐ Yes ☑ No

If Yes,

*i.* Purpose of the impoundment: _____

*ii.* If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☐ Other specify:

_____

*iii.* If other than water, identify the type of impounded/contained liquids and their source.

_____

*iv.* Approximate size of the proposed impoundment. Volume: _____ million gallons; surface area: _____ acres

*v.* Dimensions of the proposed dam or impounding structure: _____ height; _____ length

*vi.* Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete):

_____

**D.2. Project Operations**

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? ☑ Yes ☐ No
(Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite)

If Yes:

*i* .What is the purpose of the excavation or dredging? Removal of existing gravel parking lot as well as contaminated fill site-wide

*ii.* How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards): 2,200 CY
- Over what duration of time? three months

*iii.* Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

Removal of contaminated soils and clean soil cover or hardscape over the landscape to prevent contact with contaminated soils. The overall site will be designed with an undulating landscape allowing for a reduction in the total soil proposed to be removed from the site.

i*v.* Will there be onsite dewatering or processing of excavated materials? ☐ Yes ☑ No

If yes, describe. _____

_____

*v.* What is the total area to be dredged or excavated? 2.31 acres

*vi.* What is the maximum area to be worked at any one time? ~~1.5~~ acres

*vii.* What would be the maximum depth of excavation or dredging? ~~2.5~~ feet

*viii.* Will the excavation require blasting? ☐ Yes ☑ No

*ix.* Summarize site reclamation goals and plan: _____

On-site materials will be used to supplement for imported fill wherever possible. Initial remediation efforts indicate various levels of PCBs in the soils which may make reclamation difficult.

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐ Yes ☑ No

If Yes:

*i.* Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): _____

_____

*ii.* Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

_____

_____

_____

_____

*iii.* Will the proposed action cause or result in disturbance to bottom sediments? ☐ Yes ☐ No

If Yes, describe: _____

*iv.* Will the proposed action cause or result in the destruction or removal of aquatic vegetation? ☐ Yes ☐ No

If Yes:

- acres of aquatic vegetation proposed to be removed: _____
- expected acreage of aquatic vegetation remaining after project completion: _____
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access): _____

_____

- proposed method of plant removal: _____
- if chemical/herbicide treatment will be used, specify product(s): _____

*v.* Describe any proposed reclamation/mitigation following disturbance: _____

_____

c. Will the proposed action use, or create a new demand for water? ☑ Yes ☐ No

If Yes:

*i.* Total anticipated water usage/demand per day: 1,650 gallons/day

*ii.* Will the proposed action obtain water from an existing public water supply? ☑ Yes ☐ No

If Yes:

- Name of district or service area: City of Poughkeepsie
- Does the existing public water supply have capacity to serve the proposal? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No
- Do existing lines serve the project site? ☑ Yes ☐ No

*iii.* Will line extension within an existing district be necessary to supply the project? ☐ Yes ☑ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

_____

- Source(s) of supply for the district: _____

*iv.* Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☑ No

If, Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- Proposed source(s) of supply for new district: _____

*v.* If a public water supply will not be used, describe plans to provide water supply for the project: _____

_____

*vi.* If water supply will be from wells (public or private), what is the maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑ Yes ☐ No

If Yes:

*i.* Total anticipated liquid waste generation per day: 1,650 gallons/day

*ii.* Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each): _____

Sanitary wastewater

_____

*iii.* Will the proposed action use any existing public wastewater treatment facilities? ☑ Yes ☐ No

If Yes:

- Name of wastewater treatment plant to be used: City of Poughkeepsie Sewage Treatment Plant
- Name of district: City of Poughkeepsie
- Does the existing wastewater treatment plant have capacity to serve the project? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No

- Do existing sewer lines serve the project site? ☑ Yes ☐ No
- Will a line extension within an existing district be necessary to serve the project? ☐ Yes ☑ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

*iv.* Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐ Yes ☑ No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

*v.* If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge or describe subsurface disposal plans):

_____

*vi.* Describe any plans or designs to capture, recycle or reuse liquid waste: _____

None.

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☑ Yes ☐ No

If Yes:

*i.* How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or 1.14 acres (impervious surface)

_____ Square feet or 3.03 acres (parcel size)

*ii.* Describe types of new point sources. Catch basins

*iii.* Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

Site stormwater will be directed to a series of on-site stormwater management facilities and conveyed to the City municipal storm sewer.

- If to surface waters, identify receiving water bodies or wetlands: N/A
- Will stormwater runoff flow to adjacent properties? 4,000 gallon cistern will capture all water from roof runoff to be reused for toilets. ☐ Yes ☑ No

*iv.* Does the proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☑ Yes ☐ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☑ Yes ☐ No

If Yes, identify:

*i.* Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

None

*ii.* Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

Temporary sources during construction

*iii.* Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

Boilers, electric generation

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐ Yes ☑ No

If Yes:

*i.* Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐ Yes ☐ No

*ii.* In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide ($CO_2$)
- _____Tons/year (short tons) of Nitrous Oxide ($N_2O$)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride ($SF_6$)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

*i.* Estimate methane generation in tons/year (metric): _____

*ii.* Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☐Yes ☑No

If Yes:

*i.* When is the peak traffic expected (Check all that apply): ☑ Morning ☑ Evening ☐Weekend ☐ Randomly between hours of _____ to _____.

*ii.* For commercial activities only, projected number of truck trips/day and type (e.g., semi trailers and dump trucks): None

*iii.* Parking spaces: Existing 111 Proposed 82 Net increase/decrease _____

*iv.* Does the proposed action include any shared use parking? ☑Yes ☐No

*v.* If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe: Modification of existing curb cut/entrance along Parker Avenue

*vi.* Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☑Yes ☐No

*vii* Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☑Yes ☐No

*viii.* Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☑Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☑Yes ☐No

If Yes:

*i.* Estimate annual electricity demand during operation of the proposed action: 287 MWh per year

*ii.* Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other): Local Grid and Solar Arrays

*iii.* Will the proposed action require a new, or an upgrade, to an existing substation? ☐Yes ☑No

l. Hours of operation. Answer all items which apply.

*i.* During Construction:

- Monday - Friday: Approximately 6:30 AM to 9:00 PM
- Saturday: Approximately 6:30 AM to 9:00 PM
- Sunday: None
- Holidays: None

*ii.* During Operations:

- Monday - Friday: 8 AM - 5 PM
- Saturday: TBD
- Sunday: TBD
- Holidays: TBD

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☑ Yes ☐ No

If yes:

*i.* Provide details including sources, time of day and duration:

Temporary noise sources during construction compliant with City Code.

*ii.* Will the proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☑ No

Describe: Tree/brush areas located within the site will be removed. However, new landscaping will be installed in conformance with City Code, and will be provided to the Planning Board for review.

n. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

*i.* Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

Lighting will be in compliance with City Code and other applicable codes and regulations.

*ii.* Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☑ No

Describe: _____

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

*i.* Product(s) to be stored _____

*ii.* Volume(s) _____ per unit time _____ (e.g., month, year)

*iii.* Generally, describe the proposed storage facilities: _____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☑ Yes ☐ No

If Yes:

*i.* Describe proposed treatment(s):

Pest control may be required after occupation of the building. Application would be by licensed applicators using minimal levels of application required.

*ii.* Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☑ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☑ Yes ☐ No

If Yes:

*i.* Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: TBD tons per TBD (unit of time)
- Operation : 0.065 tons per day (unit of time)

*ii.* Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: Demolition and construction waste may be recycled at the discretion of the contractor.
- Operation: Recyclables will be separated and stored for recycling.

*iii.* Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: Construction and demolition debris will be hauled away by a licensed solid waste hauler for disposal at a demolition debris landfill or other licensed facility.
- Operation: Solid waste will be collected and hauled away regularly by a licensed solid waste hauler for disposal at the Dutchess County Resource Recovery Agency facility or other licensed facility.

Per Environmental Engineering by Joseph A. Salvat, 4th Edition, 1992, an office worker is proposed to generate 1.5 pounds (lbs) of waste per day. Therefore, 110 employees would generate 165 lbs per day or 0.0625 tons per day.

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

*i.* Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

*ii.* Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

*iii.* If landfill, anticipated site life: _____ years

t. Will the proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☑ Yes ☐ No

If Yes:

*i.* Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: None.

*ii.* Generally describe processes or activities involving hazardous wastes or constituents: A Remedial Action Work Plan is proposed for approval to remediate the site using a combination of removal of contaminated soils and clean soil cover or hardscape over the landscape to prevent contact with contaminated soils.

*iii.* Specify amount to be handled or generated 2,640 tons/month One time removal of material

*iv.* Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: The overall site will be designed with an undulating landscape allowing for a reduction in the total soil proposed to be removed from the site.

*v.* Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☑ Yes ☐ No

If Yes: provide name and location of facility: Materials removed from the site will be carted by licensed contractors and disposed of at a licensed facility.

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

## E. Site and Setting of Proposed Action

### E.1. Land uses on and surrounding the project site

a. Existing land uses.

*i.* Check all uses that occur on, adjoining and near the project site.

☐ Urban ☑ Industrial ☑ Commercial ☑ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☑ Other (specify): Gravel Parking lot, Community uses

*ii.* If mix of uses, generally describe:

b. Land uses and covertypes on the project site.

| Land use or Covertype | Current Acreage | Acreage After Project Completion | Change (Acres +/-) |
|---|---|---|---|
| • Roads, buildings, and other paved or impervious surfaces | 1.26 | 1.73 | +0.48 |
| • Forested | 0.05 | 0.05 | 0.00 |
| • Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural) | 0.93 | 1.25 | +0.32 |
| • Agricultural (includes active orchards, field, greenhouse etc.) | 0.00 | 0.00 | 0.00 |
| • Surface water features (lakes, ponds, streams, rivers, etc.) | 0.00 | 0.00 | 0.00 |
| • Wetlands (freshwater or tidal) | 0.00 | 0.00 | 0.00 |
| • Non-vegetated (bare rock, earth or fill) | 0.00 | 0.00 | 0.00 |
| • Other Describe: Gravel Parking Lot | 0.79 | 0.00 | -0.79 |

c. Is the project site presently used by members of the community for public recreation? ☑ Yes ☐ No

*i.* If Yes: explain: Existing gravel lot serves as overflow lot for the Walkway Over the Hudson

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☐ Yes ☑ No

If Yes,

*i.* Identify Facilities:

Though not listed above, the County Jail and a domestic abuse treatment residential facility are located within 500 feet of the project site.

e. Does the project site contain an existing dam? ☐ Yes ☑ No

If Yes:

*i.* Dimensions of the dam and impoundment:

- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

*ii.* Dam's existing hazard classification: _____

*iii.* Provide date and summarize results of last inspection:

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☑ No

If Yes:

*i.* Has the facility been formally closed? ☐ Yes ☐ No

- If yes, cite sources/documentation: _____

*ii.* Describe the location of the project site relative to the boundaries of the solid waste management facility:

*iii.* Describe any development constraints due to the prior solid waste activities: _____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☑ Yes ☐ No

If Yes:

*i.* Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

Former manufacturing uses operated on site for more than 50 years until approximately 2001. Ignitable waste, corrosive waste, halogenated solvents, wastewater treatment sludge from electroplating operations, spent cyanide, plating bath residues, spent stripping and cleaning bath solutions, quenching bath residues, quenching wastewater treatment sludges and soluble cyanide salts were generated at the site. Reportedly spent solvents were discharged into a former floor drain in the southeastern corner of a storage room (north of transformer room) near of a storage room (north of transformer room).

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☑ Yes ☐ No

If Yes:

*i.* Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☑ Yes ☐ No

☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____

☑ Yes – Environmental Site Remediation database — Provide DEC ID number(s): C314131

☐ Neither database

*ii.* If site has been subject of RCRA corrective activities, describe control measures:

The site is in the Brownfield Cleanup Program

*iii.* Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☑ Yes ☐ No

If yes, provide DEC ID number(s): B00036, C314131, B00020, 314122, 314074

*iv.* If yes to (i), (ii) or (iii) above, describe current status of site(s):

C314131 is the Brownfield Cleanup Program remediation project on the project site currently underway. B00036 is located offsite at 28 Orchard Street and has been remediated. B00020 is located offsite at 166 -186 North Hamilton Street has been remediated and has an environmental easement.

314074 is located at 70 Fairview Avenue and contaminated materials have been removed from the site and no additional action is proposed by the USEPA at this time.

*v.* Is the project site subject to an institutional control limiting property uses? ☑ Yes ☐ No

- If yes, DEC site ID number: C314131
- Describe the type of institutional control (e.g., deed restriction or easement): Anticipated environmental easement
- Describe any use limitations: To be determined
- Describe any engineering controls: To be determined
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☑ No
- Explain: The remediation work plan is currently under review by regulatory agencies.

**E.2. Natural Resources On or Near Project Site**

a. What is the average depth to bedrock on the project site? 1 feet

b. Are there bedrock outcroppings on the project site? ☑ Yes ☐ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? < 1 %

c. Predominant soil type(s) present on project site:

| | |
|---|---|
| Dutchess-Cardigan Urban Land Complex | 100 % |
| | % |
| | % |

d. What is the average depth to the water table on the project site? Average: > 6 feet

e. Drainage status of project site soils:

| | | |
|---|---|---|
| ☑ | Well Drained: | 100 % of site |
| ☐ | Moderately Well Drained: | % of site |
| ☐ | Poorly Drained | % of site |

f. Approximate proportion of proposed action site with slopes:

| | | |
|---|---|---|
| ☑ | 0-10%: | 100 % of site |
| ☐ | 10-15%: | % of site |
| ☐ | 15% or greater: | % of site |

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe:

h. Surface water features.

*i.* Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☐ Yes ☑ No

*ii.* Do any wetlands or other waterbodies adjoin the project site? ☑ Yes ☐ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

*iii.* Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☑ Yes ☐ No

*iv.* For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name Fallkill (Tax Parcel 148369) Classification C
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name _____ Approximate Size _____
- Wetland No. (if regulated by DEC) _____

*v.* Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☑ No

If yes, name of impaired water body/bodies and basis for listing as impaired:

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100-year Floodplain? Tax Parcel 148369 ☑ Yes ☐ No

k. Is the project site in the 500-year Floodplain? ☐ Yes ☑ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:

*i.* Name of aquifer:

m. Identify the predominant wildlife species that occupy or use the project site:

Common Dutchess County Species

n. Does the project site contain a designated significant natural community? ☐ Yes ☑ No

If Yes:

*i.* Describe the habitat/community (composition, function, and basis for designation):

*ii.* Source(s) of description or evaluation:

*iii.* Extent of community/habitat:

- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐ Yes ☑ No

NYSDEC Automated answer - Answer should be yes

If Yes:

*i.* Species and listing (endangered or threatened):

NYSDEC: None; USFWS: Indiana Bat

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐ Yes ☑ No

If Yes:

*i.* Species and listing:

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐ Yes ☑ No

If yes, give a brief description of how the proposed action may affect that use:

**E.3. Designated Public Resources On or Near Project Site**

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐ Yes ☑ No

If Yes, provide county plus district name/number:

b. Are agricultural lands consisting of highly productive soils present? ☐ Yes ☑ No

*i.* If Yes: acreage(s) on project site?

*ii.* Source(s) of soil rating(s):

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐ Yes ☑ No

If Yes:

*i.* Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature

*ii.* Provide brief description of landmark, including values behind designation and approximate size/extent:

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐ Yes ☑ No

If Yes:

*i.* CEA name:

*ii.* Basis for designation:

*iii.* Designating agency and date:

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? ☑ Yes ☐ No

If Yes:

*i.* Nature of historic/archaeological resource: ☐ Archaeological Site ☑ Historic Building or District

*ii.* Name: Standard Gage Company Plant

*iii.* Brief description of attributes on which listing is based:

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☑ Yes ☐ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

*i.* Describe possible resource(s):

*ii.* Basis for identification:

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☑ Yes ☐ No

If Yes:

*i.* Identify resource: varies

*ii.* Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): Municipal, County, State, Federal Recreation resources, State and National Historic Sites, Scenic Byways

*iii.* Distance between project and resource: 1 - 5 miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

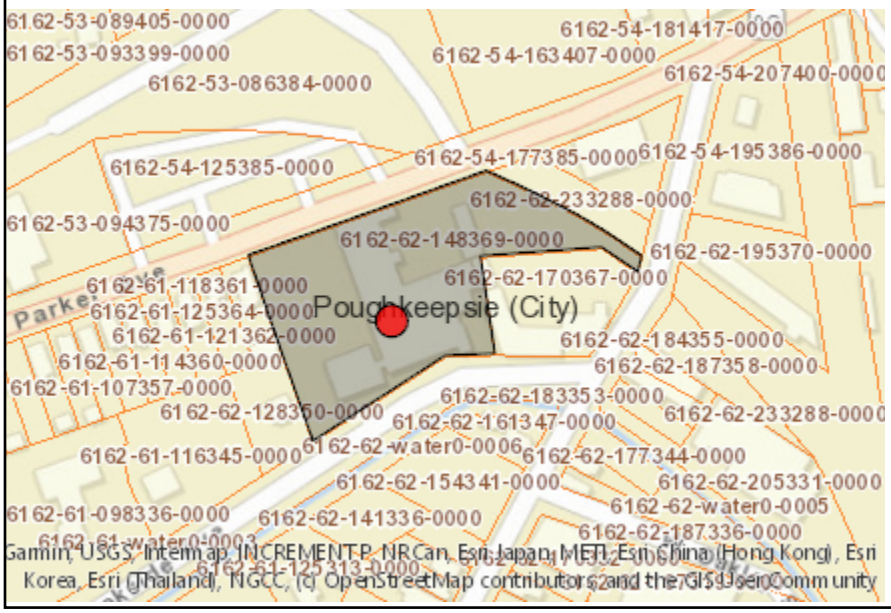
*i.* Identify the name of the river and its designation:

*ii.* Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

**F. Additional Information**

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.



**G. Verification**

I certify that the information provided is true to the best of my knowledge.

# MEMMORANDUM: Parking Count

9/30/2021

To: Natalie Quinn, Planning Director
City of Poughkeepsie

From: Caroline Alsup
Project Director for Scenic Hudson
Authorized Representative for Northside Junction, LLC

Dear Natalie,

Thank you for the Planning Boards' guidance on our 58 Parker Avenue project. As we have discussed, our parking needs are lower than the parking count described in the zoning code. This is due to current and future projected occupancy as well as available alternate modes of transportation staff and others will utilize to commute to the space.

In summary, we are proposing 87 parking spaces. With the current staff of 65, this will be more than adequate for our needs as well as allow for growth. 87 spaces represents a reduction of 26 in the amount of parking required by the ratio in Section 19-3.25, #13 (B) of the zoning code. The code also permits a further reduction of required parking for bike parking spaces provided, please see below, which we also plan to utilize. This breakdown is also on the cover sheet of the site plan drawing set.

**PARKING REQUIREMENTS**

| BUILDING | TOTAL BLDG AREA | PROPOSED USE | SPACES/1000 SF OFFICE - 2.5 spaces/1000 SF RETAILS - 3 Spaces/ 1000 SF | REQUIRED # OF PARKING | PROPOSED VEHICULAR PARKING | PROPOSED BIKE PARKING |
|---|---|---|---|---|---|---|
| BLDG A | 22,010 | OFFICE SPACE | 2.5 | 55.0 | | |
| BLDG B | 13,220 | OFFICE SPACE | 2.5 | 33.1 | | |
| BLDG C | 6,410 | OFFICE SPACE | 2.5 | 16.0 | | |
| BLDG D | 3445 | OFFICE SPACE | 2.5 | 8.6 | | |
| BLDG E | 5540 (*1) | UNCOVERED EXTERIOR SPACE | N/A | N/A | | |
| TOTAL APPLICABLE AREA FOR PARKING COUNTS | 38,675 | | | | | |
| | | TOTAL REQUIRED # OF PARKING SPACES | | 113 | | |
| | | TOTAL PROPOSED # OF PARKING SPACES | | 87 | 82 | 10 * |
| | | DELTA | | 26 | | |

* - TWO BICYCLE SPACES MAY BE USED TO REDUCE THE REQUIRED PARKING BY ONE PARKING SPACE

SCENIC HUDSON, INC.
One Civic Center Plaza,
Suite 200
Poughkeepsie, NY 12601-3157
Tel: 845 473 4440
Fax: 845 473 2648
ScenicHudson.org

For the sake of clarity, we have additionally copied the relevant language from the W-G district zoning code below to demonstrate how our proposed parking count is in conformance with allowed parking quantity changes.

Section 19-3.25 **Walkway-Gateway District (W-G). #13** *Off-street parking.*

**(b)** Unless modified in accordance with Section 19-3.25.(13)(d) herein, the on-site parking spaces required shall be as follows:

2. Office and non-retail commercial: 2 1/2 spaces per 1,000 square feet of floor area.

**(d)** The requirements in Section 19-3.25(13)(b) and (c) above may be modified through a waiver granted by the Planning Board, in its discretion, based upon information submitted by the applicant or otherwise made available in the public record. The Planning Board shall consider the following factors in granting waivers to the off-street parking requirements of this section and may incorporate such reasonable conditions as will, in its judgment, substantially secure the objectives of the requirements so waived. No waiver may be deemed approved or granted by implication. All waivers must be expressly set forth in the minutes of the Board:

**2.** That the projected operational characteristics of the proposed use require a different amount of parking. The actual current and future operational characteristics of Scenic Hudson and any other compatible function to Scenic Hudson will require a lower parking count than that expressed elsewhere in this zoning code.

**4.** That public transit is readily available to serve the needs of the residents or users or the proposed use to reduce anticipated vehicular travel demand. The availability of public transit, as well as the proximity to the Walkway over the Hudson, Dutchess County Rail Trail, and future Urban trail also create a significant opportunity for users to utilize alternate modes of transportation such as walking and biking. This reduces anticipated vehicular travel demand.

Appendix K: Project Evaluation and Design Calculations

# 1.0 EXECUTIVE SUMMARY

This Stormwater Pollution Prevention Plan (SWPPP) has been prepared for major activities associated with construction of Scenic Hudson Workspace in the City of Poughkeepsie. This SWPPP includes the elements necessary to comply with the national baseline general permit for construction activities enacted by the U.S. Environmental Protection Agency (EPA) under the National Pollutant Discharge Elimination System (NPDES) program and all local governing agency requirements. This SWPPP must be implemented and permit coverage must be obtained prior to the commencement of construction activity.

This SWPPP has been developed in accordance with the "New York State Department of Environmental Conservation (NYSDEC) State Pollutant Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Construction Activity," Permit No. GP-0-20-001, effective January 29, 2020 through January 28, 2025. The SWPPP and accompanying plans identify and detail stormwater management, pollution prevention, and erosion and sediment control measures necessary during and following completion of construction.

This SWPPP and the accompanying plans entitled "58 Parker Avenue" have been submitted as a set. These engineering drawings are considered an integral part of this SWPPP. Therefore, this SWPPP is not considered complete without them. References made herein to "the plans" or to a specific "sheet" refer to these drawings.

This report considers the impacts associated with the intended development with the purpose of:

1. Maintaining existing drainage patterns as much as possible while continuing the conveyance of upland watershed runoff;
2. Controlling increases in the rate of stormwater runoff resulting from the proposed development so as not to adversely alter downstream conditions; and
3. Mitigating potential stormwater quality impacts and preventing soil erosion and sedimentation resulting from stormwater runoff generated both during and after construction.

The analysis and design completed and documented in this report is intended to be part of the application made for a commercial redevelopment project with no increase in impervious area completed on behalf of the Owner/Operator.

## 1.1 Project Description

The Applicant, Northside Junction, LLC is seeking site plan approval for the proposed adaptive reuse of the former 58,000 SF Standard Gage and Coal Storage manufacturing building for a new approximately 48,000 square-foot (SF) Workspace (Workspace) and 28 surface parking spaces for Scenic Hudson located at 58 Parker Avenue. The project also includes construction of 54 surface parking spaces (including three accessible spaces) on the adjacent lot north of Parker Avenue (North Parker Lot) that is currently occupied by a gravel parking lot. Vehicular access to the new Workspace will be modified from the existing location and provided at the west side of the property. Pedestrian access is provided at grade across the site and amongst elevated walkways between buildings. Access to the North Parker Lot will be accessible via a single access drive, reducing existing accesses from four to one. New York State Office of Parks Recreation and Historic Preservation (NYSOPRHP) maintains an existing access easement on the western side of the North Parker Lot for means of access. A walkway and a crosswalk over Parker Avenue will provide access for visitors

and staff traveling to and from the Workspace. The North Parker Lot will be available for public parking on the weekends.

The total project site area is comprised of approximately 3.03 acres and is zoned Gateway Commercial (G-CM), which is part of the Walkway-Gateway District (W-G). The project site is comprised of two parcels, identified as follows:

- Tax parcel 6162-62-148369 (58 Parker Avenue, approximately 2.1 ac.)
- Tax parcel 6162-54-125385 (Parker Ave, 0.93 ac.)

The site is part of the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program and is classified as "A," which is assigned to non-registry (non-State Superfund sites) sites where work is underway and not yet complete. The site had several former manufacturing uses, including the Standard Gage and Coal Storage building which operated on site for more than 50 years until approximately 2001. The company was a generator of ignitable waste, corrosive waste, halogenated solvents, wastewater treatment sludge from electroplating operations, spent cyanide, plating bath residues, spent stripping and cleaning bath solutions, quenching bath residues, quenching wastewater treatment sludges and soluble cyanide salts. Reportedly spent solvents were discharged into a former floor drain in the southeastern corner of a storage room (north of transformer room). A Remedial Investigation Work Plan (RIWP), which identifies the investigation methodology and site-related contamination was approved by NYSDEC on December 17, 2020. The Remedial Investigation was completed and documented in a March 11, 2021 Report and a Remedial Action Work Plan (RAWP) is proposed to remediate the site using a combination of removal of contaminated soils and clean soil cover or hardscape over the landscape to prevent contact with contaminated soils. The Applicant is currently working with the NYSDEC on the RAWP.

A Site Location Map has been provided in Appendix G, as Figure 1.

This type of project is included in Table 2 of Appendix B of GP-0-20-001; and the project site is not located in one of the watersheds listed in Appendix C of GP-0-20-001. Therefore, this SWPPP includes post-construction stormwater management practices, as well as erosion and sediment controls.

This project is located within the City of Poughkeepsie regulated, traditional land use control Municipal Separate Stormwater Sewer System (MS4). Therefore, an MS4 SWPPP Acceptance Form is required to accompany NOIs submitted to the NYSDEC.

Runoff from the project site will discharge to the Fallkill Creek, which is included in the list of Section 303(d) water bodies included in Appendix E of GP-0-20-001.

Project construction activities will consist primarily of site grading, paving, building construction, and the installation of storm drainage, water supply, and sanitary sewer infrastructure necessary to support the proposed redevelopment project with no increase in impervious area. Construction phase pollutant sources anticipated at the site are disturbed (exposed) soil, vehicle fuels and lubricants, chemicals associated with building construction, and building materials. Without adequate control there is the potential for each type of pollutant to be transported by stormwater.

### 1.2 Stormwater Pollution Controls

The stormwater pollution controls outlined herein have been designed and evaluated in accordance with the following standards and guidelines:

- New York State Stormwater Management Design Manual, dated January 2015 (Design Manual).
- New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016 (SSESC).

Stormwater quality will be enhanced through the implementation of temporary and permanent erosion and sediment control measures, the proposed stormwater management practices, and other construction-phase pollution controls outlined herein.

The proposed stormwater management approach consisting of on-site stormwater management practices will adequately collect, treat, and convey the stormwater runoff.

A bioretention area, underground infiltrators, hydrodynamic separators, and a green roof will be used to manage and treat stormwater runoff generated by the proposed redevelopment project with no increase in impervious area.

Pre- and post-development surface runoff rates have been evaluated for the 1-, 10-, and 100-year 24-hour storm events. Comparison of pre- and post-development watershed conditions demonstrates that the peak rate of runoff from the project site will not be increased.

The post-construction stormwater management practices will be privately owned by then Northside Junction, LLC. Deed restrictions will be in place, which require operation and maintenance of the practices in accordance with the operation and maintenance plan.

### 1.3 Conclusion

This project is subject to the requirements of the City of Poughkeepsie regulated MS4, and this SWPPP has been prepared in conformance with the current Design Manual and SSESC. As such, GP-0-20-001 coverage will be effective five (5) business days from the date the NYSDEC receives the electronically submitted eNOI and signed “MS4 SWPPP Acceptance” form, or ten (10) business days from the date the NYSDEC receives the complete paper NOI and signed “MS4 SWPPP Acceptance” form.

## 2.0 SWPPP IMPLEMENTATION RESPONSIBILITIES

A summary of the responsibilities and obligations of all parties involved with compliance with the NYSDEC SPDES General Permit GP-0-20-00 conditions is outlined in the subsequent sections. For a complete listing of the definitions, responsibilities, and obligations, refer to the SPDES General Permit GP-0-20-001 presented in Appendix A.

### 2.1 Definitions

1. “General SPDES Permit” means a SPDES permit issued pursuant to 6 NYCRR Part 750-1.21 authorizing a category of discharges.

2. "Owner" or "Operator" means the person, persons, or legal entity which owns or leases the property on which the *construction activity* is occurring; and/or an entity that has operational control over the construction plans and specifications, including the ability to make modifications to the plans and specifications. There may be occasions during the course of a project in which there are multiple Owners/Operators, all of which will need to file and maintain the appropriate SWPPP documents and plans, including without limitation, the Notice of Intent (NOI) and Notice of Termination (NOT).

3. "Owner's/Operator's Engineer" means the person or entity retained by an Owner/Operator to design and oversee the implementation of the SWPPP.

4. "Contractor" means the person or entity identified as such in the construction contract with the Owner/Operator. The term "Contractor" shall also include the Contractor's authorized representative, as well as any and all subcontractors retained by the Contractor.

5. "Qualified Inspector" means a person that is knowledgeable in the principles and practices of erosion and sediment control, such as licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, or other Department endorsed individual(s).

   It can also mean someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided that person has training in the principles and practices of erosion and sediment control. Training in the principles and practices of erosion and sediment control means that an individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect has received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect shall receive four (4) hours of training every three (3) years.

   It can also mean a person that meets the *Qualified Professional* qualifications in addition to the *Qualified Inspector* qualifications.

   Note: Inspections of any post-construction stormwater management practices that include structural components, such as a dam for an impoundment, shall be performed by a licensed Professional Engineer.

6. "Qualified Professional" means a person that is knowledgeable in the principles and practices of stormwater management and treatment, such as a licensed Professional Engineer, Registered Landscape Architect, or other Department endorsed individual(s). Individuals preparing SWPPPs that require the post-construction stormwater management practice component must have an understanding of the principles of hydrology, water quality management practice design, water quantity control design, and, in many cases, the principles of hydraulics. All components of the SWPPP that involve the practice of engineering, as defined by the NYS Education Law (see Article 145), shall be prepared by, or under the direct supervision of, a professional engineer licensed to practice in the State of New York.

7. "Trained Contractor" means an employee from a contracting (construction) company, identified in Part III.A.6., that has received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the *Trained Contractor* shall receive four (4) hours of training every three (3) years.

   It can also mean an employee from a contracting (construction) company, identified in Part III.A.6.,that meets the *Qualified Inspector* qualifications (e.g. licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, or someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity.

   The "Trained Contractor(s)" will be responsible for the day to day implementation of the SWPPP.

## 2.2 Owner's/Operator's Responsibilities

1. Ensure that control measures are selected, designed, installed, implemented and maintained to minimize the discharge of pollutants and prevent a violation of the water quality standards, meeting the non-numeric effluent limitations in Part I.B.1.(a)-(f) of the SPDES General Permit and in accordance with the New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016.

2. Ensure that practices are selected, designed, installed, and maintained to meet the performance criteria in the Design Manual. Practices must be designed to meet the applicable sizing criteria in Part I.C.2.a., b., c. or d. of GP-0-20-001.

3. Retain the services of a "Qualified Inspector" or "Qualified Professional" as defined under Section 2.1, to provide the services outlined in Section 2.5 "Qualified Inspector's/Qualified Professional's Responsibilities."

4. Retain the services of a "Qualified Professional," as defined under Section 2.1, to provide the services outlined in Section 2.3 "Owner's/Operator's Engineers Responsibilities."

5. Have an authorized corporate officer sign the completed NOI. A copy of the completed NOI is included in Appendix B.

6. Submit the electronic version of the NOI (eNOI) along with the MS4 SWPPP acceptance form using the NYSDEC's website (http://www.dec.ny.gov/chemical/43133.html).

7. Pay the required initial and annual fees upon receipt of invoices from NYSDEC. These invoices are generally issued in the fall of each year. The initial fee is calculated as $110.00 per acre disturbed plus $675.00 per acre of net increase in impervious cover, and the annual fee is $110.00.

8. Prior to the commencement of construction activity, identify the contractor(s) and subcontractor(s) that will be responsible for implementing the erosion and sediment control measures and stormwater management practices described in this SWPPP. Have each of these contractors and subcontractors identify at least one "Trained Contractor", as defined under Section 2.1 that will be

responsible for the implementation of the SWPPP. Ensure that the Contractor has at least one "Trained Contractor" on site on a daily basis when soil disturbance activities are being performed.

9. Schedule a pre-construction meeting which shall include the City of Poughkeepsie representative, Owner's/Operator's Engineer, Contractor, and their sub-contractors to discuss responsibilities as they relate to the implementation of this SWPPP.

10. Retain the services of an independent certified materials testing and inspection firm operating under the direction of a licensed Professional Engineer to perform regular tests, inspections, and certifications of the construction materials used in the construction of all post-construction stormwater management practices.

11. Retain the services of a NYS licensed land surveyor to perform an as-built topographic survey of the completed post-construction stormwater management facilities.

12. Require the Contractor to fully implement the SWPPP prepared for the site by the Owner/Operator's Engineer to ensure that the provisions of the SWPPP are implemented from the commencement of construction activity until all areas of disturbance have achieved final stabilization and the Notice of Termination (NOT) has been submitted to the NYSDEC.

13. Forward a copy of the NOI Acknowledgement Letter received from the regulatory agency to the Owner's/Operator's Engineer for project records, and to the Contractor for display at the construction site.

14. Maintain a copy of the General Permit (GP-0-20-001), NOI, NOI Acknowledgement Letter, SWPPP, MS4 SWPPP Acceptance Form, inspection reports, Spill Prevention, Countermeasures, Cleanup ("SPCC") Plan, and all documentation in accordance with Part I.F.8.a.-d of GP-0-20-001 necessary to demonstrate eligibility with the permit at the construction site, until all disturbed areas have achieved final stabilization and the NOT has been submitted to the NYSDEC. Place documents in a secure location that must be accessible during normal business hours to an individual performing a compliance inspection.

15. Prior to submitting a Notice of Termination, ensure for post-construction stormwater management practice(s) that are privately owned, the Owner/Operator has a deed restriction in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan.

16. Submit a Notice of Termination (NOT) form (see Appendix B) within 48 hours of receipt of the Owner's/Operator's Engineer's certification of final site stabilization to the following:

    NOTICE OF TERMINATION
    NYS DEC, Bureau of Water Permits
    625 Broadway, 4th Floor
    Albany, New York 12233-3505

    City of Poughkeepsie
    62 Civic Plaza
    Poughkeepsie, NY 12601

17. Request and receive all SWPPP records from the Owner's/Operator's Engineer and archive those records for a minimum of five (5) years after the NOT is filed.

18. Implement the Post-Construction Inspections and Maintenance procedures outlined in Appendix F.

19. The NOI, SWPPP, and inspection reports required by GP-0-20-001 are public documents that the Owner/Operator must make available for review and copying by any person within five (5) business days of the Owner/Operator receiving a written request by any such person to review the NOI, SWPPP, or inspection reports. Copying of documents will be done at the requester's expense.

20. The Owner/Operator must keep the SWPPP current at all times. At a minimum, the Owner/Operator shall amend the SWPPP:
    a) Whenever the current provisions prove to be ineffective in minimizing pollutants in stormwater discharges from the project site;
    b) Whenever there is a change in design, construction, or operation at the construction site that has or could have an effect on the discharge of pollutants; and
    c) To address issues or deficiencies identified during an inspection by the "Qualified Inspector," the Department, or other Regulatory Authority.
    d) To document the final construction conditions.

## 2.3 Owner's/Operator's Engineer's Responsibilities

1. Prepare the SWPPP using good engineering practices, best management practices, and in compliance with all federal, state, and local regulatory requirements.

2. Prepare the Notice of Intent (NOI) form (see Appendix B), sign the "SWPPP Preparer Certification" section of the NOI, and forward to Owner/Operator for signature.

3. Provide copies of the SWPPP to the City of Poughkeepsie once all signatures and attachments are complete.

4. Enter Contractor's information in Section 2.5 "SWPPP Participants" once a Contractor is selected by the Owner/Operator.

5. Update the SWPPP each time there is a significant modification to the pollution prevention measures or a change of the principal Contractor working on the project who may disturb site soil.

## 2.4 Contractor's Responsibilities

1. Sign the SWPPP Contractor's Certification Form contained within Appendix C and forward to the Owner's/Operator's Engineer for inclusion in the Site Log Book.

2. Identify at least one Trained Contractor that will be responsible for implementation of this SWPPP. Ensure that at least one Trained Contractor is on site on a daily basis when soil disturbance activities are being performed. The Trained Contractor shall inspect the erosion and sediment control practices and pollution prevention measures being implemented within the active work area daily

to ensure that they are being maintained in effective operating conditions at all times. If deficiencies are identified, the contractor shall begin implementing corrective actions within one business day and shall complete the corrective actions in a reasonable time frame.

3. Provide the names and addresses of all subcontractors working on the project site. Require all subcontractors who will be involved with construction activities that will result in soil disturbance to identify at least one Trained Contractor that will be on site on a daily basis when soil disturbance activities are being performed; and to sign a copy of the Subcontractor's Certification Form contained within Appendix C, then forward to the Owner's/Operator's Engineer for inclusion into the Site Log Book. This information must be retained as part of the Site Log Book.

4. Maintain a Spill Prevention and Response Plan in accordance with requirements outlined in Section 5 of this SWPPP. This plan shall be provided to the Owner's/Operator's Engineer for inclusion in the Site Log Book, prior to mobilization on-site.

5. Participate in a pre-construction meeting which shall include the City of Poughkeepsie representative, Owner/Operator, Owner's/Operator's Engineer, and all subcontractors to discuss responsibilities as they relate to the implementation of this SWPPP.

6. If Contractor plans on utilizing adjacent properties for material, waste, borrow, or equipment storage areas, or if Contractor plans to engage in industrial activity other than construction (such as operating asphalt and/or concrete plants) at the site, Contractor shall submit appropriate documentation to the Owner's/Operator's Engineer so that the SWPPP can be modified accordingly.

7. Implement site stabilization, erosion and sediment control measures, and other requirements of the SWPPP.

8. In accordance with the requirements in the most current version of the NYS Standards and Specifications for Erosion and Sediment Control, conduct inspections of erosion and sediment control measures installed at the site to ensure that they remain in effective operating condition at all times. Prepare and retain written documentation of inspections as well as of all repairs/maintenance activities performed. This information must be retained as part of the Site Log Book.

9. Begin implementing corrective actions within one (1) business day of receipt of notification by the Qualified Inspector/Qualified Professional that deficiencies exist with the erosion and sediment control measures employed at the site. Corrective actions shall be completed within a reasonable time frame.

10. Maintain a record of the date(s) and location(s) that soil restoration is performed in accordance with the accompanying plans and NYSDEC Division of Water's publication "Deep-Ripping and Decompaction," dated April 2008. A copy of this is publication is provided in Appendix E. The record that is to be maintained shall be a copy of the overall site grading plan delineating the area(s) and date(s) that the soil was restored.

11. Upon completion of all construction at the site, the contractor responsible for overall SWPPP Compliance shall sign the certification on their Contractor Certification Form indicating that: a.) all temporary erosion and sediment control measures have been removed from the site, b.) the on-site soils disturbed by construction activity have been restored in accordance with the SWPPP and

the NYSDEC Division of Water's publication "Deep-Ripping and Decompaction," and c.) all permanent stormwater management practices required by the SWPPP have been installed in accordance with the contract documents.

## 2.5 Qualified Inspector's/Qualified Professional's Responsibilities

1. Participate in a pre-construction meeting with the City of Poughkeepsie representative, Owner/Operator, Contractor, and their subcontractors to discuss responsibilities as they relate to the implementation of this SWPPP.

2. Conduct an initial assessment of the site prior to the commencement of construction and certify in an inspection report that the appropriate erosion and sediment control measures described within this SWPPP have been adequately installed and implemented to ensure overall preparedness of the site.

3. Provide on-site inspections to determine compliance with the SWPPP. Because this project site directly discharges to one of the 303(d) segments listed in Appendix E of GP-0-20-001 or is located in one of the watersheds listed in Appendix C of GP-0-20-001, site inspections shall occur at an interval of at least twice every seven calendar days, with the inspections separated by a minimum of at least two full calendar days. A written inspection report shall be provided to the Owner/Operator and general contractor within one business day of the completion of the inspection, with any deficiencies identified. A sample inspection form is provided in Appendix D.

4. Prepare an inspection report subsequent to each and every inspection that shall include/address the items listed in Part IV.C.4.a-k of GP-0-20-001. Sign all inspection reports and maintain on site with the SWPPP.

5. Notify the owner/operator and appropriate contractor or subcontractor of any corrective actions that need to be taken.

6. Prepare a construction Site Log Book to be used as a record of all inspection reports generated throughout the duration of construction. Ensure that the construction Site Log Book is maintained and kept up-to-date throughout the duration of construction.

7. Review the Contractor's SWPPP records on a periodic basis to ensure compliance with the requirements for daily reports, soil restoration, inspections, and maintenance logs.

8. Based on the as-built survey and material testing certifications performed by others, perform evaluations of the completed stormwater management practices to determine whether they were constructed in accordance with this SWPPP.

9. Conduct a final site assessment and prepare a certification letter to the Owner/Operator indicating that, upon review of the material testing and inspection reports prepared by the firm retained by the Owner/Operator, review of the completed topographic survey, and evaluation of the completed stormwater management facilities, the stormwater management facilities have been constructed substantially in accordance with the contract documents and should function as designed.

10. Prepare the Notice of Termination (NOT). Sign the NOT Certifications VI (Final Stabilization) and VII (Post-construction Stormwater Management Practices), and forward the NOT to the Owner/Operator for signature on Certification VIII (Owner/Operator Certification).

11. Transfer the SWPPP documents, along with all NOI's, permit certificates, NOT's, construction Site Log Book, and written records required by the General Permit to the Owner/Operator for archiving.

## 2.6 SWPPP Participants

1. Owner's/Operator's Engineer: Christopher Lapine, P.E. - Director
   The Chazen Companies
   21 Fox Street
   Poughkeepsie, NY 12601
   Phone: (845) 454-3980

2. Owner/Operator: Northside Junction, LLC
   1 Civic Center Plaza #200
   Poughkeepsie, NY, 12601

3. Contractor[2]: Name and Title: _____

   Company Name: _____

   Mailing Address: _____

   _____

   Phone: _____

   Fax: _____

[2] *Contractor's information to be entered once the Contractor has been selected.*

# 3.0 SITE CHARACTERISTICS

## 3.1 Land Use and Topography

The project site is located within the Gateway Commercial (G-CM) zoning district, which is part of the Walkway-Gateway District (W-G). The site is surrounded by a mix of land uses, including residential, commercial, industrial, residential, community services, parks and recreation, and vacant areas, see Figure 3. The site abuts the Walkway to the north and the future Dutchess County Rail Trail to the east. There is residential development abutting the site to the west and south, commercial development to the north and east and the County Jail is located to the east. The Fallkill Creek is located to the south. The proposed Workspace (anticipated to be defined as an office use in the G-CM District) and accessory parking lot are permitted uses in the G-CM District. Buildings proposed for future community partner fit out are anticipated to include permitted uses. Parking on the North Parker Lot will be located at the rear of the lot and will be only minimally visible due to the undulating landscaping design.

The overall site is extremely sloping, with slopes ranging from 3 to 70 percent. Site elevations range from approximately 151 feet above mean sea level (MSL) to 182 feet MSL. The parking lot north of Parker Ave slopes south east. The headquarters site south of Parker Ave all slopes, slope south towards Brookside Ave with high points in the northwest corner of lot.

## 3.2 Soils and Groundwater

The US Department of Agriculture (USDA) Web Soil Survey (http://websoilsurvey.nrcs.usda.gov/app/) was used to obtain surficial soil conditions for the study area, as follows:

**Table 1: USDA Soil Data**

| Map Symbol & Description | Hydrologic Soil Group | Permeability (inches/hour) | Erosion Factor K | Depth to Water Table (feet) | Depth to Bedrock (feet) |
|---|---|---|---|---|---|
| DxB – Dutchess-Cardigan-Urban land complex, undulating, rocky | D | 0.06 | N/A | > 6.0 | > 6.0 |

Upon review of the soil data presented in Table 1, the project site contains soils with a soil slope phase of D with a map unit name that inclusive of slopes greater than 25%, and does not contain soils with a soil slope phase of E or F.

The Soil Conservation Service defines the hydrologic soil groups as follows:

- Type D Soils: Soils having a very low infiltration rate and high runoff potential when thoroughly wet. These soils consist chiefly of clays that have high shrink-swell potential, soils that have a permanent high water table, soils that have a clay pan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very low rate of water transmission.

The soils map for the study area is presented in Appendix G, as Figure 2.

## 3.3 Watershed Designation

The project site is not located in a restricted watershed identified in Appendix C of GP-0-20-001.

## 3.4 Receiving Water Bodies

The nearest natural classified water body into which runoff from the project site will discharge is the Fallkill Creek.

The Fallkill Creek is classified by NYSDEC as a Class C water course, and is included in the Section 303(d) list of impaired waters found in Appendix E of GP-0-20-001.

## 3.5 Aquifer Designation

The project site is not located over a US EPA designated Sole Source aquifer; nor is it located over a Primary or Principal aquifer listed in the NYSDEC Technical and Operational Guidance Series (TOGS) 2.1.3 (1980).

## 3.6 Wetlands

A search on the NYSDEC Environmental Resource Mapper on August 13, 2021, and a review of GIS data, determined that no regulated wetlands are located on or in the vicinity of the project site.

## 3.7 Flood Plains

The southeastern portion of the site, in the vicinity of proposed adaptive reused Buildings B and D, was previously located within the Special Flood Hazard Area or 100-year floodplain. The Applicant submitted a Letter of Map Amendment (LOMA) to Federal Emergency Management Agency (FEMA) to remove the project site, including the building, from the floodplain. The Letter of Map Amendment was approved by FEMA (submitted separately). Therefore, approximately 95% of the project site is located in Zone X (not a Special Flood Hazard Area or 100-year floodplain). The remaining area, located within the southwestern corner of the property, remains in Zone A (Special Flood Hazard Area or 100-year floodplain). No ground disturbance is proposed for the project site area located within Zone A.

## 3.8 Listed, Endangered, or Threatened Species

A search was performed on the NYSDEC Environmental Resource Mapper on August 13, 2021, and determined that the project site does not contain any threatened or endangered species, or critical habitat. An Environmental Resource Map has been provided in Appendix G, as Figure 4.

## 3.9 Historic Places

According to the NYS Office of Parks, Recreation, and Historic Preservation (NYSOPRHP) Cultural Resource Information System (CRIS) mapping (Figure 3), the project site does not contain and is not adjacent to any National or State Historic Register site. The project is pursuing Historic Rehabilitation Tax Credits and consultation with NYSOPRHP has indicated that the Standard Gage Company Plant may be eligible for listing in the State and National Registers of Historic Places. Consultation in ongoing with NYSOPRHP and the

National Park Service regarding eligibility. The rehabilitation work proposed to the Standard Gage Company Plant will be done in accordance with the Secretary of the Interior's Standards.

## 3.10 Rainfall Data

Rainfall data utilized in the modeling and analysis was obtained from the Cornell University online Extreme Precipitation in New York & New England website (http://precip.eas.cornell.edu/). A local IDF file was imported, and specific mass curves were generated, in HydroCAD to evaluate the pre- and post-development stormwater runoff characteristics. Rainfall data specific to the portion of Dutchess County under consideration, for various 24-hour storm events, is presented in the following Table:

**Table 2: Rainfall Data**

| Storm Event Return Period | 24-Hour Rainfall (inches) |
|---|---|
| 1-year | 2.61 |
| 10-year | 4.67 |
| 100-year | 8.22 |

## 4.0 CONSTRUCTION SEQUENCE

This project encompasses less than five acres of land and disturbance of additional off-site properties to facilitate construction is not anticipated. Therefore, written approval from City of Poughkeepsie allowing the disturbance of more than five acres of land at any one time is not required. If the Contractor's construction sequence requires the disturbance of more than five acres at any one time, written approval must be obtained from City of Poughkeepsie prior to disturbing more than five acres at once.

The "Erosion and Sediment Control Plan" in the accompanying drawings identifies the major construction activities that are the subject of this SWPPP. The order (or sequence) in which the major activities are expected to begin is presented on the accompanying drawings, though each activity will not necessarily be completed before the next begins. In addition, these activities could occur in a different order if necessary to maintain adequate erosion and sediment control. If this is the case, the contractor shall notify the Owner's/Operator's Engineer overseeing the implementation of the SWPPP.

The Contractor will be responsible for implementing the erosion and sediment control measures identified on the plans. The Contractor may designate these tasks to certain subcontractors as they see fit, but the ultimate responsibility for implementing these controls and ensuring their proper function remains with the Contractor.

Refer to the accompanying plans for details and specifications regarding the construction sequencing schedule.

# 5.0 CONSTRUCTION-PHASE POLLUTION CONTROL

The SWPPP and accompanying plans identify the temporary and permanent erosion and sediment control measures that have been incorporated into the design of this project. These measures will be implemented during construction, to minimize soil erosion and control sediment transport off-site, and after construction, to control the quality and quantity of stormwater runoff from the developed site.

Erosion control measures, designed to minimize soil loss, and sediment control measures, intended to retain eroded soil and prevent it from reaching water bodies or adjoining properties, have been developed in accordance with the following documents:

- NYSDEC SPDES General Permit for Stormwater Discharges From Construction Activity, Permit No. GP-0-20-001 (effective January 29, 2020 through January 28, 2025)
- New York State Standards and Specifications for Erosion and Sediment Control, NYSDEC (November 2016)

The SWPPP and accompanying plans outline the construction scheduling for implementing the erosion and sediment control measures. These documents include limitations on the duration of soil exposure, criteria and specifications for placement and installation of the erosion and sediment control measures, a maintenance schedule, and specifications for the implementation of erosion and sediment control practices and procedures.

Temporary and permanent erosion and sediment control measures that shall be applied during construction generally include:

1. Minimizing soil erosion and sedimentation by stabilization of disturbed areas and by removing sediment from construction site discharges.
2. Preservation of existing vegetation to the greatest extent practical. Following the completion of construction activities in any portion of the site, permanent vegetation shall be established on all exposed soils.
3. Site preparation activities to minimize the area and duration of soil disruption.
4. Establishment of permanent traffic corridors to ensure that “routes of convenience” are avoided.

## 5.1 Temporary Erosion and Sediment Control Measures

The temporary erosion and sediment control measures described in the following sections are included as part of the construction documents.

### *5.1.1 Stabilized Construction Access*

Prior to construction, stabilized construction access(es) will be installed, per accompanying plans, to reduce the tracking of sediment onto public roadways.

Construction traffic must enter and exit the site at the stabilized construction access(es). The intent is to trap dust and mud that would otherwise be carried off-site by construction traffic.

The access(es) shall be maintained in a condition, which will control tracking of sediment onto public rights-of-way or streets. When necessary, additional aggregate will be placed atop the filter fabric to assure the

minimum thickness is maintained. All sediment and/or soil spilled, dropped, or washed onto public rights-of-way must be removed immediately. Periodic inspection and needed maintenance shall be provided after each substantial rainfall event.

### *5.1.2 Dust Control*

Water trucks shall be used as needed during construction to reduce dust generated on-site. Dust control must be provided by the Contractor(s) to a degree that is acceptable to the Owner, and in compliance with the applicable local and state dust control requirements.

### *5.1.3 Temporary Soil Stockpile*

Materials, such as topsoil, will be temporarily stockpiled (if necessary) on the site during the construction process. Stockpiles shall be located in an area away from storm drainage, water bodies and/or courses, and will be properly protected from erosion by a surrounding silt fence barrier.

### *5.1.4 Silt Fencing*

Prior to the initiation of and during construction activities, a geotextile filter fabric (or silt fence) will be established downgradient of all disturbed areas. These barriers may extend into non-impact areas to provide adequate protection of adjacent lands.

Clearing and grubbing will be performed only as necessary for the installation of the sediment control barrier. To facilitate effectiveness of the silt fencing, daily inspections and inspections immediately after significant storm events will be performed by the Contractor(s). Maintenance of the fence will be performed as needed.

### *5.1.5 Temporary Seeding*

Because this site directly discharges to one of the 303(d) segments listed in Appendix E or is located in one of the watersheds listed in Appendix C of GP-0-20-001, temporary soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the soil disturbance activity has temporarily ceased.

### *5.1.1 Manufactured Insert Inlet Protection*

Install insert inlet protection beneath the grate of all catch basins, to prevent sediment from entering the catch basins and storm sewer system. Remove sediment accumulation and repair or replace insert as necessary to ensure proper function.

### *5.1.2 Filter Fabric Drop Inlet Protection*

Install filter fabric or silt fence with wooden stakes at the perimeter of existing or proposed catch basins located in lawn areas, to prevent sediment from entering the catch basins and storm sewer system. Remove sediment accumulation and repair or replace fabric as necessary to ensure proper function.

### *5.1.3 Erosion Control Blanket*

Erosion control blankets shall be installed in accordance with manufacturer's requirements on all slopes exceeding 3:1. Erosion control blankets provide temporary erosion protection, rapid vegetative establishment, and long-term erosion resistance to shear stresses generated by high runoff flow velocities associated with steep slopes.

### *5.1.4 Stone Check Dams*

Stone check dams will be installed within drainage ditches to reduce the velocity of stormwater runoff, promote settling of sediment, and reduce sediment transport off-site.

Sediment accumulated behind the stone check dam will be removed as needed to maintain flow through the stone check dam and prevent large flows from carrying sediment over or around the dam. Stones shall be replaced as needed to maintain the design cross section of the structures.

### *5.1.5 Temporary Diversion Swales*

Temporary diversion swales shall be used to divert off-site runoff around the construction site and divert runoff from stabilized areas around disturbed areas. If Applicable – Temporary diversion swales can be used to direct runoff from disturbed areas into sediment traps.

### *5.1.6 Dewatering Operations*

Dewatering will be used to intercept sediment-laden stormwater or pumped groundwater and allow it to settle out of the pumped discharge prior to being discharged from the site. Water from dewatering operations shall be treated to eliminate the discharge of sediment and other pollutants. Water resulting from dewatering operations shall be directed to temporary sediment traps or dewatering devices. Temporary sediment traps and dewatering bags will be provided, installed, and maintained at downgradient locations to control sediment deposits to downstream surfaces.

### *5.1.7 Fiber Roll*

Prior to the initiation of and during construction activities, fiber rolls (12” minimum diameter) will be established downgradient of all disturbed areas to reduce sheet flow on slopes. These rolls may extend into non-impact areas to provide adequate protection of adjacent lands. Spacing will conform to NYSDEC specification for straw bale dike.

Clearing and grubbing will be performed only as necessary for the installation of the fiber rolls. To facilitate effectiveness, daily inspections and inspections immediately after significant storm events will be performed by the Contractor(s) and maintenance will be performed as needed.

### *5.1.8 Compost Filter Sock*

Prior to the initiation of and during construction activities, a compost filter sock (or silt sock) will be established downgradient of all disturbed areas. These filters may extend into non-impact areas to provide adequate protection of adjacent lands. The spacing of the compost filter sock, which will depend on the ground slope and diameter of the sock, shall be based upon New York State or EPA guidance.

Clearing and grubbing will be performed only as necessary for the installation of the sediment control filter; and unlike sediment control barriers, trenching is not required. The ends of the filter sock should be directed upslope, to prevent stormwater from running around the end of the sock. The preferred anchoring method is to drive stakes through the center of the sock at regular intervals; alternatively, stakes can be placed on the downstream side of the sock. To facilitate effectiveness of the compost filter sock, daily inspections and inspections immediately after significant storm events will be performed by the Contractor(s) to ensure that they are intact and the area behind the sock is not filled with sediment. Maintenance of the sock will be performed as needed.

## 5.2 Permanent Erosion and Sediment Control Measures

The permanent erosion and sediment control measures described in the following sections are included as part of the construction documents.

### *5.2.1 Establishment of Permanent Vegetation*

Disturbed areas that will be vegetated must be seeded in accordance with the contract documents. The type of seed, mulch, and maintenance measures as described in the contract documents shall also be followed.

Because this site directly discharges to one of the 303(d) segments listed in Appendix E or is located in one of the watersheds listed in Appendix C of GP-0-20-001, permanent soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the soil disturbance activity has permanently ceased.

Final site stabilization is achieved when all soil-disturbing activities at the site have been completed and a uniform, perennial vegetative cover with a density of 80 percent has been established or equivalent stabilization measures (such as the use of mulches or geotextiles) have been employed on all unpaved areas and areas not covered by permanent structures.

### *5.2.2 Rock Outlet Protection*

Rock outlet protection shall be installed at the locations as indicated and detailed on the accompanying plans. The installation of rock outlet protection will reduce the velocity and energy of water, such that the flow will not erode downstream surfaces.

### *5.2.3 Permanent Turf Reinforcement*

Permanent turf reinforcement mats (TRMs) provide long-term erosion protection and vegetation establishment assistance while permanently reinforcing vegetation. TRMs shall be installed on slopes/channels where specified. TRM's provide two key advantages. First, their unique fiber shape and 3-D pattern create a thick matrix of voids that trap seed, soil, and water in place for quicker, thicker vegetation growth. Secondly, they provide additional reinforcement that doubles the vegetation's natural erosion protection abilities by remaining a permanent part of the application and anchoring mature plants to the soil for superior, long-term erosion resistance.

## 5.3 Other Pollutant Controls

Other necessary pollutant controls are listed below:

### *5.3.1 Solid and Liquid Waste Disposal*

No solid or liquid waste materials, including building materials, shall be discharged from the site with stormwater. All solid waste, including disposable materials incidental to any construction activities, must be collected and placed in containers. The containers shall be emptied periodically by a licensed trash disposal service and hauled away from the site.

Substances that have the potential for polluting surface and/or groundwater must be controlled by whatever means necessary in order to ensure that they do not discharge from the site. As an example, special care must be exercised during equipment fueling and servicing operations. If a spill occurs, it must

be contained and disposed of so that it will not flow from the site or enter groundwater, even if this requires removal, treatment, and disposal of soil. In this regard, potentially polluting substances should be handled in a manner consistent with the impact they represent.

#### *5.3.2 Sanitary Facilities*

Temporary sanitary facilities will be provided by the Contractor throughout the construction phase. They must be utilized by all construction personnel and will be serviced by a licensed commercial Contractor. These facilities must comply with state and local sanitary or septic system regulations.

#### *5.3.3 Water Source*

Non-stormwater components of site discharge must be clean water. Water used for construction, which discharges from the site, must originate from a public water supply or private well approved by the Health Department. Water used for construction that does not originate from an approved public supply must not discharge from the site; such water can be retained in temporary ponds/sediment traps until it infiltrates and/or evaporates.

### 5.4 Construction Housekeeping Practices

During the construction phase, the Contractor(s) will implement the following measures:

#### *5.4.1 Material Stockpiles*

Material resulting from clearing and grubbing operations that will be stockpiled on-site, must be adequately protected with downgradient erosion and sediment controls.

#### *5.4.2 Equipment Cleaning and Maintenance*

The Contractor(s) will designate areas for equipment cleaning, maintenance, and repair. The Contractor(s) and subcontractor(s) will utilize those areas. The areas will be protected by a temporary perimeter berm.

#### *5.4.3 Detergents*

The use of detergents for large-scale washing is prohibited (i.e., vehicles, buildings, pavement surfaces, etc.)

#### *5.4.4 Spill Prevention and Response*

A Spill Prevention and Response Plan shall be developed for the site by the Contractor(s). The plan shall detail the steps required in the event of an accidental spill and shall identify contact names and phone numbers of people and agencies that must be notified.

The plan shall include Safety Data Sheets (SDS) for all materials to be stored on-site. All workers on-site will be required to be trained on safe handling and spill prevention procedures for all materials used during construction. Regular tailgate safety meetings shall be held and all workers that are expected on the site during the week shall be required to attend.

#### *5.4.5 Concrete Washout Areas*

A temporary concrete washout area shall be provided for every project where concrete will be poured or otherwise formed on-site, and shall consist of an excavated or above-ground lined construction pit where concrete trucks or equipment can be washed out after their loads have been discharged. Waste generated

from concrete wash water that shall not be allowed to flow into drainage ways, inlets, receiving waters, highway right-of-way, or any location other than the designated concrete washout area(s). Proper signage shall be placed adjacent to the facility to designate the "Concrete Washout Area". Locate the facility a minimum of 100-feet from drainage swales, storm drain inlets, wetlands, streams, and other surface waters. Prevent surface water from entering the washout area.

The hardened residue from the concrete wash areas will be disposed of in the same manner as other non-hazardous construction waste materials. Maintenance of the washout area shall include removal of hardened material when 75% of the storage capacity is filled, and a minimum freeboard of 12 inches shall be maintained. The Contractor will be responsible for seeing that these procedures are followed. The project may require the use of multiple concrete washout areas based on the frequency of concrete pours.

### *5.4.6 Material Storage*

Construction materials shall be stored in a dedicated staging area. The staging area shall be located in an area that prevents negative impacts of construction materials on stormwater quality.

Chemicals, paints, solvents, fertilizers, and other toxic material must be stored in waterproof containers. Except during application, the contents must be kept in trucks or within storage facilities. Runoff containing such material must be collected, removed from the site, treated, and disposed of at an approved solid waste or chemical disposal facility.

# 6.0 STORMWATER MANAGEMENT PLANNING

Chapter 3 of the Design Manual outlines a six-step planning process for site planning and selection of stormwater management practices that must be implemented for both new development and redevelopment projects. This process is intended to develop a design that maintains pre-construction hydrologic conditions through the application of environmentally sound development principles, as well as treatment and control of runoff discharges from the site. The following sections outline the step-by-step process and how it has been applied to this project.

The goals of this Stormwater Management Plan are to analyze the peak rate of runoff under pre- and post-development conditions, to maintain the pre-development rate of runoff in order to minimize impacts to adjacent or downstream properties, and to minimize the impact to the quality of runoff exiting the site.

The Design Manual provides both water quality and water quantity objectives to be met by projects requiring a "Full SWPPP". These objectives will be met by applying stormwater control practices to limit peak runoff rates and improve the quality of runoff leaving the developed site.

## 6.1 STEP 1 – Site Planning

During the Site Planning process, the project site is evaluated for implementation of the green infrastructure planning measures identified in Table 3.1 of the Design Manual, in order to preserve natural resources and reduce impervious cover. Table A of Appendix K provides a description of each green infrastructure planning measure, along with a project specific evaluation.

## 6.2 STEP 2 - Determine Water Quality Treatment Volume (WQv)

Stormwater runoff from impervious surfaces is recognized as a significant contributor of pollution that can adversely affect the quality of receiving water bodies. Therefore, treatment of stormwater runoff is important since most runoff related water quality contaminants are transported from land, particularly the impervious surfaces, during the initial stages of storm events.

### *6.2.1 NYSDEC Requirements for New Development*

The Design Manual requires that water quality treatment be provided for the initial flush of runoff from every storm. The NYSDEC refers to the amount of runoff to be treated as the "Water Quality Volume" (WQv). Section 4.2 of the Design Manual defines the Water Quality Volume as follows:

$$WQv = \frac{[(P)(R_V)(A)]}{12}$$

Where: P = 90% Rainfall Event Number
$R_v$ = 0.05 + 0.009 (I)
I = Impervious Cover (Percent)
A = Contributing Area in Acres

This definition ensures that, all other things being equal, the Water Quality Volume will increase along with the impervious cover percentage.

### *6.2.2 NYSDEC Requirements for Redevelopment Projects*

Chapter 9 of the Design Manual outlines alternative WQv treatment objectives for redevelopment projects.

According to Section 9.2.1.B.IV, redevelopment activities can achieve the water quality treatment objective through a combination of impervious cover reduction, standard SMPs, and alternative SMPs that provide a weighted average of the method as calculated as follows:

%WQv treatment by Alternative Practice = (25-(% IC reduction + % WQv treatment by Standard Practice + % runoff reduction)) x 3

This redevelopment project is proposing a combination of impervious cover reduction, standard, and alternative practice(s) for a calculated %WQv treatment. The calculation is show in Table B of Appendix K.

### *6.2.3 Methodology*

The Water Quality Volume equation has been applied to the drainage area tributary to each of the stormwater quality practices proposed for this project. The practices have been sized to accommodate the Water Quality Volume, as per the performance criteria presented in Chapter 6 and/or Chapter 9 of the Design Manual. Water quality volume calculations for each of the proposed practices are presented in Table B of Appendix K.

## 6.3 STEP 3 – Apply Runoff Reduction Techniques and Standard SMPs with RRv Capacity to Reduce Total WQv

Land use change and development in the watershed increases the volume of runoff. As such, reductions in the amount of runoff from new development, accomplished through the implementation of a stormwater management plan for the site, will play an important role in the success or failure of the watershed-wide stormwater management plan. Runoff reduction techniques can be applied to manage, reduce, and treat stormwater, while maintaining and restoring natural hydrology through infiltration, evapo-transpiration, and the capture and reuse of stormwater. Volume reduction techniques by themselves typically are not sufficient to provide adequate attenuation of stormwater runoff, but they can decrease the size of the peak runoff rate reduction facilities.

### *6.3.1 NYSDEC Requirements for New Development*

The Design Manual states that runoff reduction shall be achieved through infiltration, groundwater recharge, reuse, recycle, and/or evaporation/evapotranspiration of 100-percent of the post-development water quality volume to replicate pre-development hydrology. Runoff control techniques provide treatment in a distributed manner before runoff reaches the collection system, by maintaining pre-construction infiltration, peak runoff flow, discharge volume, as well as minimizing concentrated flow. This can be accomplished by applying a combination of Runoff Reduction Techniques, standard Stormwater Management Practices (SMPs) with RRv capacity, and good operation and maintenance.

### *6.3.2 NYSDEC Requirements for Redevelopment*

Section 3.2 of the Design Manual indicates, “Although encouraged, meeting the RRv criteria is not required for redevelopment activities that meet the criteria in Chapter 9 of this manual.” This project involves the

reconstruction of existing impervious area on a site that has poor draining soil conditions, which renders implementation of many RR techniques and SMPs infeasible.

Although not required, a bioretention area, underground infiltration system, and a green roof are proposed for this project and will provide both WQv and RRv at the site.

### *6.3.3 Methodology*

In order to reduce the required WQv and meet the RRv criteria, a site specific evaluation must be performed to determine the most practical means of reducing runoff volume by application of a combination of RR techniques and standard SMPs with RRv capacity.

### *6.3.4 Application of RR Techniques*

The following Table demonstrates a summary of the RR technique being applied for this project, and both the water quality and runoff reduction volumes it provides. The RR Technique has been designed in accordance with Chapter 5 of the Design Manual. Refer to the contract drawings for practice dimensions, material specifications, and installation details. Practice specific calculations are presented in Appendix K.

**Table 3: Summary of RR Techniques being Applied**

| RR Technique | Design Variant | WQv Required (CF) | WQv Provided (CF) | RRv Capacity | RRv Provided (CF) |
|---|---|---|---|---|---|
| Green Roof | RR-10 | 408 | 408 | 100% | 408 |

### *6.3.5 Application of Standard Stormwater Management Practices (SMPs) with RRv Capacity*

The following Table demonstrates a summary of the standard SMP with RRv capacity that has been incorporated into the stormwater management plan for this project. The standard SMP with RRv capacity has been designed in accordance with Chapter 6 of the Design Manual. Refer to the contract drawings for practice dimensions, material specifications, and installation details. Practice specific calculations are presented in Appendix K.

**Table 4: Summary of Standard SMPs with RRv Capacity being Applied**

| Standard SMP with RRv Capacity | Design Variant | WQv Required (CF) | WQv Provided (CF) | Pretreatment Volume Required (% of WQv) | Pretreatment Volume Required (CF) | Pretreatment Volume Provided (CF) | RRv Capacity | RRv Provided (CF) |
|---|---|---|---|---|---|---|---|---|
| Bioretention (with underdrain) | F-5 | 253 | 543 | 25% | 136 | 253 | 40% | 217 |
| Underground Infiltration System | I-4 | 405 | 658 | 100% | 405 | 405 | 100% | 405 |

#### *6.3.5.1 Bioretention (F-5)*

Bioretention filters are shallow landscaped depressions commonly located in parking lot islands or within small pockets in residential areas that receive stormwater runoff. Stormwater flows into the bioretention area, ponds on the surface, and is gradually infiltrated into the soil bed. Pollutants are removed by a number of processes, such as adsorption, filtration, volatilization, ion exchange, and decomposition. Filtered runoff can either be allowed to infiltrate into the surrounding soil, functioning as an infiltration basin or rainwater garden or collected by an under drain system and discharged to the storm sewer system or directly to receiving waters, functioning like a surface sand filter. Runoff from larger storms is generally diverted past the bioretention area to the stormwater collection and conveyance system.

The Bioretention filter (F-5) was designed according to the criteria set forth in Section 6.4 "Stormwater Filtering Systems" of the Design Manual.

#### *6.3.5.2 Underground Infiltration System (I-4)*

Most proprietary underground infiltration systems operate similarly to traditional infiltration basins (NYSDEC design variant I-2). These practices reduce runoff volume, remove fine sediment and associated pollutants, recharge groundwater, and provide partial attenuation of peak flows for storm events equal to or less than the design storm. Infiltration practices are appropriate for small drainage areas, but can also be used for larger multiple lot applications, in contrast to rain gardens and dry wells, which are primarily intended for single lots.

Proprietary underground infiltration systems are designed to capture and infiltrate the water quality volume, but do not retain a permanent pool. These systems are typically designed to infiltrate the water quality volume as well as to provide detention above the infiltration zone to attenuate peak volumes of larger storm events to meet flood control requirements.

### *6.3.6 RRv Performance Summary*

A summary of the RRv provided is presented in the following table:

**Table 5: RRv Summary**

| RRv Required = WQv Required (CF) | RRv Provided (CF) | % RRv Provided |
|---|---|---|
| 6,202 | 1,030 | 17% |

As indicated in the above table, the RRv provided is not greater than or equal to the RRv required for the project site. A good faith effort has been made to reduce runoff to the greatest extent practical. However, the project site has shallow depth to bedrock and soils with an infiltration rate less than 0.5 in/hr, which prevents reduction of the total WQv. As such, Table C of Appendix K provides a project specific evaluation for each RR technique and standard SMP with RRv capacity, demonstrating why these practices are infeasible.

## 6.4 STEP 4 – Determine the Minimum RRv Required

As previously discussed, meeting the RRv criteria is not required for redevelopment activities with no increase in impervious, that meet the criteria in Chapter 9 of the Design Manual.

## 6.5 STEP 5 – Apply Standard Stormwater Management Practices to Address Remaining Water Quality Volume

If the entire Water Quality Volume is not treated through implementation of RR techniques and standard SMPs with RRv capacity, then the design must achieve the remaining WQv through the standard SMPs listed in Table 3.3 of the Design Manual or the Alternative Practices outlined in Section 9.4 of the Design Manual for redevelopment.

**Table 6: Summary of WQv Required**

| Step 2<br>WQv Required (CF) | Step 3<br>WQv Reduction by RR Techniques & Standard SMPs w/ RRv Capacity (CF) | Step 5<br>Reduced WQv to be Treated by Alternative Practice (CF) |
|---|---|---|
| 6,202 | 1030 | 4,274 |

Based upon the results listed in the above Table, the entire WQv has not been treated by application of RR techniques and standard SMPs with RRv capacity. As such, the standard SMPs or the Alternative Practices (without RRv capacity) described in the following sections, have been incorporated into the stormwater management plan for this project, to meet the WQv objective.

### *6.5.1 Hydrodynamic Separators*

Hydrodynamic separators accelerate the separation of floating and settling pollutants from stormwater through the use of a vortex. These pre-fabricated devices come in the form of an underground manhole or vault. The devices have no moving parts and are typically fabricated from concrete and marine grade aluminum.

During operation, stormwater runoff enters the unit tangentially to promote a gentle swirling motion in a treatment chamber. As stormwater circles within the chamber, settable solids fall into a sump and are retained. Buoyant debris, oil, and grease rise to the surface and are separated from the water as it flows under a baffle wall. Finally, treated water exits the treatment chamber through a flow control orifice located behind the baffle wall.

During low-flow conditions all runoff is diverted into the treatment chamber by a flow partition. At higher flow rates, a portion of the runoff spills over the flow partition and is diverted around the treatment chamber to prevent re-suspension and washout of previously trapped pollutants. Water that spills over the partition flows into a head equalization chamber above the treatment chamber outlet. As the head equalization chamber fills, the head differential driving flow through the treatment chamber collapses. The result is that flow rates in the treatment chamber remain relatively constant even as total flow rates increase substantially. This configuration further reduces the potential for re-suspension or washout.

According to Chapter 9 of the Design Manual, hydrodynamic separators of the type proposed for this project have been approved for use as a pretreatment system in new and redevelopment projects or as a primary treatment system on redevelopment projects.

**Table 7: Summary of WQv Provided**

| Step 2<br>WQv Required (CF) | Step 3<br>WQv Reduction by RR Techniques & Standard SMPs w/ RRv Capacity (CF) | Step 5<br>Reduced WQv to be Treated by Alternative Practice (CF) | WQv Provided by Alternative Practice (CF) |
|---|---|---|---|
| 6,202 | 1030 | 4,272 | 5,304 |

Based upon the results listed in the above Table, the entire WQv has been treated by the additional application of the Alternative Practice.

## 6.6 STEP 6 - Apply Volume and Peak Rate Control

This report presents the pre-development and post-development features and conditions associated with the rate of surface water runoff within the study area. For both cases, the drainage patterns, drainage structures, soil types, and ground cover types are considered in this study.

### *6.6.1 NYSDEC Requirements for New Development*

Chapter 4 of the Design Manual requires that projects meet three separate stormwater quantity criteria:

1. The Channel Protection (CPv) requirement is designed to protect stream channels from erosion. This is accomplished by providing 24 hours of extended detention for the 1-year, 24-hour storm event. The Manual defines the CPv detention time as the center of mass detention time through each stormwater management practice.

2. The Overbank Flood Control (Qp) requirement is designed to prevent an increase in the frequency and magnitude of flow events that exceed the bank-full capacity of a channel, and therefore must spill over into the floodplain. This is accomplished by providing detention storage to ensure that, at each design point, the post-development 10-year 24-hour peak discharge rate does not exceed the corresponding pre-development rate.

3. The Extreme Flood Control (Qf) requirement is designed to prevent the increased risk of flood damage from large storm events, to maintain the boundaries of the pre-development 100-year floodplain, and to protect the physical integrity of stormwater management practices. This is accomplished by providing detention storage to ensure that, at each design point, the post-development 100-year 24-hour peak discharge rate does not exceed the corresponding pre-development rate.

### *6.6.2 NYSDEC Requirements for Redevelopment*

Chapter 9 of the Design Manual provides alternatives to the above quantity criteria, which may be applied to redevelopment projects. As indicated in Section 9.3.2, if redevelopment results in no increase in impervious area or changes to hydrology that increase the discharge rate from the site, then the 10-year and 100-year criteria for quantity control do not apply. In addition, if the hydraulic study shows that the post-construction 1-year 24-hr discharge rate and velocity are less than or equal to the pre-construction discharge rate, then providing 24-hr detention of the 1-year storm to meet channel protection criteria is not required.

The project proposes an 17% decrease in impervious area and will not result in changes to hydrology that increase the discharge rate from the site. Additionally, based upon the hydrologic analysis performed, the discharge rate from the site has been reduced from pre- to post-development conditions for the 1-year storm event. Therefore, the stormwater quantity criteria have been met and stormwater quantity control practices have not been provided for this project. The following Section describes the methodology behind this hydrologic analysis.

### *6.6.3 Methodology*

In order to demonstrate that the NYSDEC detention requirements are being met, the Design Manual requires that a hydrologic and hydraulic analysis of the pre- and post-development conditions be performed using the Natural Resources Conservation Service Technical Release 20 (TR-20) and Technical Release 55 (TR-55) methodologies. HydroCAD, developed by HydroCAD Software Solutions LLC of Tamworth, New Hampshire, is a Computer-Aided-Design (CAD) program for analyzing the hydrologic and hydraulic characteristics of a given watershed and associated stormwater management facilities. HydroCAD uses the TR-20 algorithms and TR-55 methods to create and route runoff hydrographs.

HydroCAD has the capability of computing hydrographs (which represent discharge rates characteristic of specified watershed conditions, precipitation, and geologic factors) combining hydrographs and routing flows though pipes, streams and ponds. HydroCAD can also calculate the center of mass detention time for various hydraulic features. Documentation for HydroCAD can be found on their website: http://www.hydrocad.net/.

For this analysis, the watershed and drainage system was broken down into a network consisting of three types of components as described below:

1. Subcatchment: A relatively homogeneous area of land, which produces a volume and rate of runoff unique to that area.
2. Reach: Uniform streams, channels, or pipes that convey stormwater from one point to another.
3. Pond: Natural or man-made impoundment, which temporarily stores stormwater runoff and empties in a manner determined by its geometry and the hydraulic structure located at its outlets.

Subcatchments, reaches, and ponds are represented by hexagons, squares, and triangles, respectively, on the watershed routing diagrams provided with the computations included in Appendix I and Appendix J.

The analysis of hydrologic and hydraulic conditions and proposed stormwater management facilities, servicing the study area, was performed by dividing the tributary watershed into relatively homogeneous subcatchments. The separation of the watershed into subcatchments was dictated by watershed conditions, methods of collection, conveyance, and points of discharge. Watershed characteristics for each subcatchment were then assessed from United States Geological Service (USGS) 7.5-minute topographic maps, aerial photographs, a topographical survey, soil surveys, site investigations, and land use maps.

Proposed stormwater management practices were designed and evaluated in accordance with the Design Manual and local regulatory requirements. The hydrologic and hydraulic analysis considered the SCS, Type III 24-hour storm events identified in the following Table.

**Table 8: Design Events**

| Facility | 24-hour Storm Event |
|---|---|
| Storm Sewer | 10- year |
| Stormwater Management Practice(s) | 1-year |
| | 10-year |
| | 100-year |
| Flood Conditions | 100-year |

### *6.6.4 Description of Design Points*

The study area consists of an overall watershed that encompasses approximately 3.96 acres and contains the 3.04 acre project site. The overall watershed was broken down into smaller watersheds, or subcatchments, to allow for analysis of runoff conditions at several locations throughout the study area. Each of these locations was defined as a Design Point (DP) in order to compare the effects resulting from stormwater management facilities proposed as part of the project. Descriptions of each of the selected design points are provided below.

- Design Point 1: Off-site design point is located along curb line which leads to a storm sewer located to the west of the project limits on Parker Ave. There is a high point on Parker Ave located 150 feet from west limits of project, directing run off from northern section of job site east or west.
- Design Point 2: Off-site design point is a catch basin located along curb line on the northside of Parker Ave. In existing conditions, this catch basin connects to a combined sewer and storm system. In proposed conditions, the catch basin will disconnect from the combined system and tie into a new stormwater drainage system.
- Design Point 3: Off-site design point is a catch basin located along curb line on the southside of Parker Ave. In existing conditions, this catch basin connects to a combined sewer and storm system. In proposed conditions, the catch basin will disconnect from the combined system and tie into a new stormwater drainage system.
- Design Point 4: Off-site design point is road south of the project site, Brookside Ave.

### *6.6.5 Pre-development Watershed Conditions*

The pre-development project site is covered predominantly gravel (impervious) and small sections of grass north of Parker Ave. South of Parker Ave mostly brush, buildings, and small sections of pavement. Analysis of pre-development conditions considered existing drainage patterns, soil types, ground cover, and topography. The Pre-Development Watershed Delineation Map has been provided in Appendix G, as Figure 4.

The results of the computer modeling used to analyze the overall watershed under pre-development conditions are presented in Appendix I. A summary of the pre-development watershed runoff rates at each design point is presented in Table 10.

Subcatchment one is a 0.52 ± acre watershed consisting of impervious pavement, gravel and small sections of grass. Runoff flows south to southwest overland via sheet flow for the first 100 feet and then shallow flow the rest of the way past the western project limits on Parker Ave. This subcatchment is tributary to Design Point (DP) 1.

Subcatchment two is a 1.02 ± acre watershed consisting of impervious and small sections of grass. Runoff flows south to southeast overland via sheet flow for the first 100 feet and then shallow flow the rest of the way toward eastern project limits to an existing catch basin in the north side of Parker Ave, which is connected to a combined sanitary and stormwater network. This subcatchment is tributary to Design Point (DP) 2.

Subcatchment three is a 0.40 ± acre watershed consisting of brush, small sections of impervious, and buildings. Runoff flows in a south to southwest overland via sheet flow for the first 100 feet and then shallow flow the rest of the way past the western project limits then follows the road to Brookside Ave. This subcatchment is tributary to Design Point (DP) 4.

Subcatchment four is a 1.84 ± acre watershed consisting of brush. Runoff flows in a southeast overland via sheet flow for the first 100 feet and then shallow flow the rest of the way toward the south of the site to Brookside Ave. This subcatchment is tributary to Design Point (DP) 4.

Subcatchment five is a 0.17 ± acre watershed consisting of pavement and grass. Runoff flows east via sheet flow for the first 100 feet and then shallow flow the rest of the way toward to an existing catch basin in the south part of Parker Ave, which is connected to a combined sanitary and stormwater network. This subcatchment is tributary to Design Point (DP) 3.

### *6.6.6 Post-development Watershed Conditions*

The post-development project site is covered predominantly by impervious and grass north of Parker Ave. South of Parker Ave pavement, buildings, and grass. The analysis of post-development conditions considered existing drainage patterns, soil types, ground cover to remain, planned site development, site grading and, stormwater management facilities proposed as part of site improvements. The Post-Development Watershed Delineation Map has been provided in Appendix G, as Figure 5.

The results of the computer modeling used to analyze the overall watershed under post-development conditions are presented in Appendix J. A summary of the post-development watershed runoff rates at each design point is presented in Table 11.

There are numerous locations and methods for providing controls of off-site discharge of stormwater from the project site. Each has been designed to provide the above quantity controls by attenuating stormwater runoff and releasing runoff to off-site locations at a rate equal to or less than that which existed prior to development of the site. Each device is detailed on the accompanying plans.

### *6.6.7 Performance Summary*

A comparison of the pre- and post-development watershed conditions was performed for all design points and storm events evaluated herein. For all design points and design storms, this comparison demonstrates that the peak rate of runoff will not be increased. Therefore, the project will not have a significant adverse impact on the adjacent or downstream properties or receiving water courses.

The results of the computer modeling used to analyze the pre- and post-development watersheds are presented in Appendix I and Appendix J, respectively. The following Table summarizes the results of this analysis.

**Table 9: Summary of Pre- and Post-Development Peak Discharge Rates**

| Pre- vs. Post-Development Discharge Rate (cfs) | | | | | | |
|---|---|---|---|---|---|---|
| **Design Point (DP)** | **1-year 24-hour storm event** | | **10-year 24-hour storm event** | | **100-year 24-hour storm event** | |
| | **Pre** | **Post** | **Pre** | **Post** | **Pre** | **Post** |
| 1 | 1.20 | 0.76 | 2.29 | 1.48 | 4.12 | 2.69 |
| 2 | 2.40 | 1.94 | 4.48 | 3.89 | 8.01 | 7.98 |
| 3 | 0.40 | 0.40 | 0.74 | 0.74 | 1.33 | 1.33 |
| 4 | 4.19 | 4.02 | 8.34 | 8.14 | 15.40 | 15.18 |

# 7.0 INSPECTIONS, MAINTENANCE, AND REPORTING

## 7.1 Inspection and Maintenance Requirements

### *7.1.1 Pre-Construction Inspection and Certification*

Prior to the commencement of construction, the Qualified Inspector/Qualified Professional shall conduct an assessment of the site and certify that the appropriate erosion and sediment control measures have been adequately installed and implemented. The Contractor shall contact the Qualified Inspector/Qualified Professional once the erosion and sediment control measures have been installed.

### *7.1.2 Construction Phase Inspections and Maintenance*

A Qualified Inspector/Qualified Professional, as defined in Appendix A of the General Permit GP-0-20-001, shall conduct regular site inspections between the time this SWPPP is implemented and final site stabilization. Because this project site directly discharges to one of the 303(d) segments listed in Appendix E of GP-0-20-001 or is located in one of the watersheds listed in Appendix C of GP-0-20-001, site inspections shall occur at an interval of at least twice every seven (7) calendar days, with the inspections separated by a minimum of at least two (2) full calendar days.

The purpose of site inspections is to assess performance of pollutant controls. Based on these inspections, the Qualified Inspector/Qualified Professional will decide whether it is necessary to modify this SWPPP, add or relocate sediment barriers, or whatever else may be needed in order to prevent pollutants from leaving the site via stormwater runoff. The general contractor has the duty to cause pollutant control measures to be repaired, modified, maintained, supplemented, or whatever else is necessary in order to achieve effective pollutant control.

Examples of particular items to evaluate during site inspections are listed below. This list is not intended to be comprehensive. During each inspection the inspector must evaluate overall pollutant control system performance as well as particular details of individual system components. Additional factors should be considered as appropriate to the circumstances.

1. Locations where vehicles enter and exit the site must be inspected for evidence of off-site sediment tracking. A stabilized construction entrance will be constructed where vehicles enter and exit. This entrance will be maintained or supplemented as necessary to prevent sediment from leaving the site on vehicles.
2. Sediment barriers must be inspected and, if necessary, they must be enlarged or cleaned in order to provide additional capacity. All material from behind sediment barriers will be stockpiled on the up slope side. Additional sediment barriers must be constructed as needed.
3. Inspections will evaluate disturbed areas and areas used for storing materials that are exposed to rainfall for evidence of, or the potential for, pollutants entering the drainage system. If necessary, the materials must be covered or original covers must be repaired or supplemented. Also, protective berms must be constructed, if needed, in order to contain runoff from material storage areas.
4. Grassed areas will be inspected to confirm that a healthy stand of grass is maintained. The site has achieved final stabilization once all areas are covered with building foundation or pavement, or have a stand of grass with at least 80 percent density. The density of 80 percent or greater must be

maintained to be considered as stabilized. Areas must be watered, fertilized, and reseeded as needed to achieve this goal.

5. All discharge points must be inspected to determine whether erosion control measures are effective in preventing significant impacts to receiving waters.

The inspection reports must be completed entirely and additional remarks should be included if needed to fully describe a situation. An important aspect of the inspection report is the description of additional measures that need to be taken to enhance plan effectiveness. The inspection report must identify whether the site was in compliance with the SWPPP at the time of inspection and specifically identify all incidents of non-compliance.

Within one (1) business day of the completion of an inspection, the *Qualified Inspector/Qualified Professional* shall notify the Owner/Operator and appropriate contractor or subcontractor of any corrective actions that need to be taken. The contractor or subcontractor shall begin implementing the corrective actions within one (1) business day of the notification and shall complete the corrective actions in a reasonable time frame.

In addition to the inspections performed by the *Qualified Inspector/Qualified Professional*, the Contractor shall perform routine inspections that include a visual check of all erosion and sediment control measures. All inspections and maintenance shall be performed in accordance with the inspection and maintenance schedule provided on the accompanying plans. Sediment removed from erosion and sediment control measures will be exported from the site, stockpiled for later use, or used immediately for general non-structural fill.

It is the responsibility of the general contractor to assure the adequacy of site pollutant discharge controls. Actual physical site conditions or contractor practices could make it necessary to install more structural controls than are shown on the accompanying plans. (For example, localized concentrations of runoff could make it necessary to install additional sediment barriers, sediment traps, etc.) Assessing the need for additional controls and implementing them or adjusting existing controls will be a continuing aspect of this SWPPP until the site achieves final stabilization.

### *7.1.3 Temporary Suspension of Construction Activities*

For construction sites where soil disturbance activities have been temporarily suspended (e.g. Winter shutdown) and temporary stabilization measures have been applied to all disturbed areas, the frequency of Qualified Inspector/Qualified Professional inspections can be reduced to once every 30 calendar days. Prior to reducing the frequency of inspections, the Owner/Operator shall notify the NYSDEC Region X stormwater contact person and the City of Poughkeepsie in writing.

### *7.1.4 Partial Project Completion*

For construction sites where soil disturbance activities have been shut down with partial project completion, all areas disturbed as of the project shutdown date have achieved final stabilization, and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational, the inspections by the Qualified Inspector/Qualified Professional can stop. Prior to the shutdown, the Owner/Operator shall notify the NYSDEC Region 3 stormwater contact person and the City of Poughkeepsie in writing.

If soil disturbance activities have not resumed within two years from the date of shutdown, a Notice of Termination (NOT) shall be properly completed and submitted to the NYSDEC.

### *7.1.5 Post-Construction Inspections and Maintenance*

Inspections and maintenance of final stabilization measures and post-construction stormwater management practices shall be performed in accordance with Appendix F, once all disturbed areas are stabilized and all stormwater management systems are in place and operable.

## 7.2 Reporting Requirements

### *7.2.1 Inspection Reports*

Pursuant to Part IV.C of GP-0-20-001, inspection reports shall be prepared for the duration of construction, as outlined herein, and shall be signed by the *Qualified Inspector* or *Qualified Professional*. A sample inspection form is provided in Appendix D.

At a minimum, each inspection report shall record the following information:

1. Date and time of inspection.
2. Name and title of person(s) performing inspection.
3. A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection.
4. A description of the condition of the runoff at all points of discharge from the construction site. This shall include identification of any discharges of sediment from the construction site. Include discharges from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow.
5. A description of the condition of all natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the construction site which receive runoff from disturbed areas. This shall include identification of any discharges of sediment to the surface waterbody.
6. Identification of all erosion and sediment control practices and pollution prevention measures that need repair or maintenance.
7. Identification of all erosion and sediment control practices and pollution prevention measures that were not installed properly or are not functioning as designed and need to be reinstalled or replaced.
8. Description and sketch of areas with active soil disturbance activity, areas that have been disturbed but are inactive at the time of the inspection, and areas that have been stabilized (temporary and/or final) since the last inspection.
9. Indication of the current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards.
10. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices and pollution prevention measures; and to correct deficiencies identified with the construction of the post-construction stormwater management practice(s).
11. Identification and status of all corrective actions that were required by previous inspection.

12. Color photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The *Qualified Inspector/Qualified Professional* shall attach paper color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The *Qualified Inspector/Qualified Professional* shall also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The *Qualified Inspector/Qualified Professional* shall attach the paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.

### *7.2.2 Site Log Book*

Pursuant to Part II.D.2 of GP-0-20-001, the Owner/Operator shall retain a copy of the General Permit, NOI, NOI Acknowledgment Letter, MS4 SWPPP Acceptance Form (if applicable), inspection reports, contractor and subcontractor certification forms, and all documentation necessary to demonstrate eligibility under the permit, at the construction site from commencement of construction activity until the date that all areas of disturbance have achieved final stabilization and the Notice of Termination has been submitted to the NYSDEC.

The Site Log Book shall be maintained on-site in a secure location (i.e. job trailer, on-site construction office, or mailbox with lock) and must be accessible during normal business hours to an individual performing a compliance inspection.

### *7.2.3 Post Construction Records and Archiving*

Following construction, the Owner/Operator shall retain copies of the SWPPP, the complete construction Site Log Book, and records of all data used to complete the NOI to be covered by this permit, for a period of at least five years from the date that the site is finally stabilized. This period may be extended by the NYSDEC, at its sole discretion, at any time upon written notification.

Records shall be maintained of all post construction inspections and maintenance work performed in accordance with the requirements outlined in Appendix F.

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

SPDES GENERAL PERMIT
FOR STORMWATER DISCHARGES

From

**CONSTRUCTION ACTIVITY**

Permit No. GP- 0-20-001

Issued Pursuant to Article 17, Titles 7, 8 and Article 70

of the Environmental Conservation Law

Effective Date: January 29, 2020 Expiration Date: January 28, 2025

John J. Ferguson

Chief Permit Administrator

1-23-20

Authorized Signature Date

Address: NYS DEC
Division of Environmental Permits
625 Broadway, 4th Floor
Albany, N.Y. 12233-1750

**PREFACE**

Pursuant to Section 402 of the Clean Water Act ("CWA"), stormwater *discharges* from certain *construction activities* are unlawful unless they are authorized by a *National Pollutant Discharge Elimination System ("NPDES")* permit or by a state permit program. New York administers the approved State Pollutant Discharge Elimination System (SPDES) program with permits issued in accordance with the New York State Environmental Conservation Law (ECL) Article 17, Titles 7, 8 and Article 70.

An *owner or operator* of a *construction activity* that is eligible for coverage under this permit must obtain coverage prior to the *commencement of construction activity*. Activities that fit the definition of "*construction activity*", as defined under 40 CFR 122.26(b)(14)(x), (15)(i), and (15)(ii), constitute construction of a *point source* and therefore, pursuant to ECL section 17-0505 and 17-0701, the *owner or operator* must have coverage under a SPDES permit prior to *commencing construction activity*. The *owner or operator* cannot wait until there is an actual *discharge* from the *construction site* to obtain permit coverage.

***Note: The italicized words/phrases within this permit are defined in Appendix A.**

## Part 1. PERMIT COVERAGE AND LIMITATIONS

### A. Permit Application

This permit authorizes stormwater *discharges* to *surface waters of the State* from the following *construction activities* identified within 40 CFR Parts 122.26(b)(14)(x), 122.26(b)(15)(i) and 122.26(b)(15)(ii), provided all of the eligibility provisions of this permit are met:

1. *Construction activities* involving soil disturbances of one (1) or more acres; including disturbances of less than one acre that are part of a *larger common plan of development or sale* that will ultimately disturb one or more acres of land; excluding *routine maintenance activity* that is performed to maintain the original line and grade, hydraulic capacity or original purpose of a facility;

2. *Construction activities* involving soil disturbances of less than one (1) acre where the Department has determined that a *SPDES* permit is required for stormwater *discharges* based on the potential for contribution to a violation of a *water quality standard* or for significant contribution of *pollutants* to *surface waters of the State.*

3. *Construction activities* located in the watershed(s) identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

### B. Effluent Limitations Applicable to Discharges from Construction Activities

*Discharge*s authorized by this permit must achieve, at a minimum, the effluent limitations in Part I.B.1. (a) – (f) of this permit. These limitations represent the degree of effluent reduction attainable by the application of best practicable technology currently available.

1. Erosion and Sediment Control Requirements - The *owner or operator* must select, design, install, implement and maintain control measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. The selection, design, installation, implementation, and maintenance of these control measures must meet the non-numeric effluent limitations in Part I.B.1.(a) – (f) of this permit and be in accordance with the New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, using sound engineering judgment. Where control measures are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must include in the *Stormwater Pollution Prevention Plan* ("SWPPP") the reason(s) for the

deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

a. **Erosion and Sediment Controls.** Design, install and maintain effective erosion and sediment controls to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such controls must be designed, installed and maintained to:

   (i) *Minimize* soil erosion through application of runoff control and soil stabilization control measure to *minimize pollutant discharge*s;

   (ii) Control stormwater *discharge*s, including both peak flowrates and total stormwater volume, to *minimize* channel and *streambank* erosion and scour in the immediate vicinity of the *discharge* points;

   (iii) *Minimize* the amount of soil exposed during *construction activity*;

   (iv) *Minimize* the disturbance of *steep slopes*;

   (v) *Minimize* sediment *discharge*s from the site;

   (vi) Provide and maintain *natural buffer*s around surface waters, direct stormwater to vegetated areas and maximize stormwater infiltration to reduce *pollutant discharge*s, unless *infeasible*;

   (vii) *Minimize* soil compaction. Minimizing soil compaction is not required where the intended function of a specific area of the site dictates that it be compacted;

   (viii) Unless *infeasible*, preserve a sufficient amount of topsoil to complete soil restoration and establish a uniform, dense vegetative cover; and

   (ix) *Minimize* dust. On areas of exposed soil, *minimize* dust through the appropriate application of water or other dust suppression techniques to control the generation of pollutants that could be discharged from the site.

b. **Soil Stabilization**. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within fourteen (14) days from the date the current soil disturbance activity ceased. For construction sites that *directly discharge* to one of the 303(d) segments

listed in Appendix E or is located in one of the watersheds listed in Appendix C, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. See Appendix A for definition of *Temporarily Ceased*.

c. **Dewatering**. *Discharge*s from *dewatering* activities, including *discharge*s from *dewatering* of trenches and excavations, must be managed by appropriate control measures.

d. **Pollution Prevention Measures**. Design, install, implement, and maintain effective pollution prevention measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such measures must be designed, installed, implemented and maintained to:

(i) *Minimize* the *discharge* of *pollutants* from equipment and vehicle washing, wheel wash water, and other wash waters. This applies to washing operations that use clean water only. Soaps, detergents and solvents cannot be used;

(ii) *Minimize* the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste, hazardous and toxic waste, and other materials present on the site to precipitation and to stormwater. Minimization of exposure is not required in cases where the exposure to precipitation and to stormwater will not result in a *discharge* of *pollutants*, or where exposure of a specific material or product poses little risk of stormwater contamination (such as final products and materials intended for outdoor use) ; and

(iii) Prevent the *discharge* of *pollutants* from spills and leaks and implement chemical spill and leak prevention and response procedures.

e. **Prohibited *Discharges*.** The following *discharge*s are prohibited:

(i) Wastewater from washout of concrete;

(ii) Wastewater from washout and cleanout of stucco, paint, form release oils, curing compounds and other construction materials;

(iii) Fuels, oils, or other *pollutants* used in vehicle and equipment operation and maintenance;

(iv) Soaps or solvents used in vehicle and equipment washing; and

(v) Toxic or hazardous substances from a spill or other release.

f. Surface Outlets. When discharging from basins and impoundments, the outlets shall be designed, constructed and maintained in such a manner that sediment does not leave the basin or impoundment and that erosion at or below the outlet does not occur.

**C. Post-construction Stormwater Management Practice Requirements**

1. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must select, design, install, and maintain the practices to meet the *performance criteria* in the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015, using sound engineering judgment. Where post-construction stormwater management practices ("SMPs") are not designed in conformance with the *performance criteria* in the Design Manual, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must design the practices to meet the applicable *sizing criteria* in Part I.C.2.a., b., c. or d. of this permit.

**a. Sizing Criteria for New Development**

(i) Runoff Reduction Volume ("RRv"): Reduce the total Water Quality Volume ("WQv") by application of RR techniques and standard SMPs with RRv capacity. The total WQv shall be calculated in accordance with the criteria in Section 4.2 of the Design Manual.

(ii) Minimum RRv and Treatment of Remaining Total WQv: Construction activities that cannot meet the criteria in Part I.C.2.a.(i) of this permit due to site limitations shall direct runoff from all newly constructed impervious areas to a RR technique or standard SMP with RRv capacity unless infeasible. The specific site limitations that prevent the reduction of 100% of the WQv shall be documented in the SWPPP.

For each impervious area that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered infeasible.

**In no case shall the runoff reduction achieved from the newly constructed impervious areas be less than the Minimum RRv as calculated using the criteria in Section 4.3 of the Design Manual.** The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

(iii) Channel Protection Volume ("Cpv"): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
(1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
(2) The site discharges directly to tidal waters, or fifth order or larger streams.

(iv) *Overbank* Flood Control Criteria ("Qp"): Requires storage to attenuate the post-development 10-year, 24-hour peak discharge rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
(1) the site discharges directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

(v) Extreme Flood Control Criteria ("Qf"): Requires storage to attenuate the post-development 100-year, 24-hour peak discharge rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
(1) the site discharges directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

**b. *Sizing Criteria* for *New Development* in Enhanced Phosphorus Removal Watershed**

(i) Runoff Reduction Volume (RRv): Reduce the total Water Quality Volume (WQv) by application of RR techniques and standard SMPs with RRv capacity. The total WQv is the runoff volume from the 1-year, 24 hour design storm over the post-developed watershed and shall be

calculated in accordance with the criteria in Section 10.3 of the Design Manual.

(ii) Minimum RRv and Treatment of Remaining Total WQv: *Construction activities* that cannot meet the criteria in Part I.C.2.b.(i) of this permit due to *site limitations* shall direct runoff from all newly constructed *impervious areas* to a RR technique or standard SMP with RRv capacity unless *infeasible*. The specific *site limitations* that prevent the reduction of 100% of the WQv shall be documented in the SWPPP. For each *impervious area* that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered *infeasible*.

**In no case shall the runoff reduction achieved from the newly constructed *impervious areas* be less than the Minimum RRv as calculated using the criteria in Section 10.3 of the Design Manual.** The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

(iii) Channel Protection Volume (Cpv): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
(1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
(2) The site *discharge*s directly to tidal waters, or fifth order or larger streams.

(iv) *Overbank* Flood Control Criteria (Qp): Requires storage to attenuate the post-development 10-year, 24-hour peak *discharge* rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
(1) the site *discharge*s directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

(v) Extreme Flood Control Criteria (Qf): Requires storage to attenuate the post-development 100-year, 24-hour peak *discharge* rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
(1) the site *discharge*s directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

**c. Sizing Criteria for Redevelopment Activity**

(i) Water Quality Volume (WQv): The WQv treatment objective for *redevelopment activity* shall be addressed by one of the following options. *Redevelopment activities* located in an Enhanced Phosphorus Removal Watershed (see Part III.B.3. and Appendix C of this permit) shall calculate the WQv in accordance with Section 10.3 of the Design Manual. All other *redevelopment activities* shall calculate the WQv in accordance with Section 4.2 of the Design Manual.

(1) Reduce the existing *impervious cover* by a minimum of 25% of the total disturbed, *impervious area*. The Soil Restoration criteria in Section 5.1.6 of the Design Manual must be applied to all newly created pervious areas, or

(2) Capture and treat a minimum of 25% of the WQv from the disturbed, *impervious area* by the application of standard SMPs; or reduce 25% of the WQv from the disturbed, *impervious area* by the application of RR techniques or standard SMPs with RRv capacity., or

(3) Capture and treat a minimum of 75% of the WQv from the disturbed, *impervious area* as well as any additional runoff from tributary areas by application of the alternative practices discussed in Sections 9.3 and 9.4 of the Design Manual., or

(4) Application of a combination of 1, 2 and 3 above that provide a weighted average of at least two of the above methods. Application of this method shall be in accordance with the criteria in Section 9.2.1(B) (IV) of the Design Manual.

If there is an existing post-construction stormwater management practice located on the site that captures and treats runoff from the *impervious area* that is being disturbed, the WQv treatment option selected must, at a minimum, provide treatment equal to the treatment that was being provided by the existing practice(s) if that treatment is greater than the treatment required by options 1 – 4 above.

(ii) Channel Protection Volume (Cpv): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.

(iii) *Overbank* Flood Control Criteria (Qp): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.

(iv) Extreme Flood Control Criteria (Qf): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site

**d. Sizing Criteria for Combination of Redevelopment Activity and New Development**

Construction projects that include both New Development and Redevelopment Activity shall provide post-construction stormwater management controls that meet the sizing criteria calculated as an aggregate of the Sizing Criteria in Part I.C.2.a. or b. of this permit for the New Development portion of the project and Part I.C.2.c of this permit for Redevelopment Activity portion of the project.

**D. Maintaining Water Quality**

The Department expects that compliance with the conditions of this permit will control *discharge*s necessary to meet applicable *water quality standards*. It shall be a violation of the *ECL* for any discharge to either cause or contribute to a violation of *water quality standards* as contained in Parts 700 through 705 of Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York, such as:

1. There shall be no increase in turbidity that will cause a substantial visible contrast to natural conditions;

2. There shall be no increase in suspended, colloidal or settleable solids that will cause deposition or impair the waters for their best usages; and

3. There shall be no residue from oil and floating substances, nor visible oil film, nor globules of grease.

If there is evidence indicating that the stormwater *discharge*s authorized by this permit are causing, have the reasonable potential to cause, or are contributing to a violation of the *water quality standards*; the *owner or operator* must take appropriate corrective action in accordance with Part IV.C.5. of this general permit and document in accordance with Part IV.C.4. of this general permit. To address the *water quality standard* violation the *owner or operator* may need to provide additional information, include and implement appropriate controls in the SWPPP to correct the problem, or obtain an individual SPDES permit.

If there is evidence indicating that despite compliance with the terms and conditions of this general permit it is demonstrated that the stormwater *discharge*s authorized by this permit are causing or contributing to a violation of *water quality standards*, or if the Department determines that a modification of the permit is necessary to prevent a violation of *water quality standards*, the authorized *discharge*s will no longer be eligible for coverage under this permit. The Department may require the *owner or operator* to obtain an individual SPDES permit to continue discharging.

**E. Eligibility Under This General Permit**

1. This permit may authorize all *discharges* of stormwater from *construction activity* to *surface waters of the State* and *groundwaters* except for ineligible *discharges* identified under subparagraph F. of this Part.

2. Except for non-stormwater *discharges* explicitly listed in the next paragraph, this permit only authorizes stormwater *discharge*s; including stormwater runoff, snowmelt runoff, and surface runoff and drainage, from *construction activities*.

3. Notwithstanding paragraphs E.1 and E.2 above, the following non-stormwater discharges are authorized by this permit: those listed in 6 NYCRR 750-1.2(a)(29)(vi), with the following exception: "Discharges from firefighting activities are authorized only when the firefighting activities are emergencies/unplanned"; waters to which other components have not been added that are used to control dust in accordance with the SWPPP; and uncontaminated *discharge*s from *construction site* de-watering operations. All non-stormwater discharges must be identified in the SWPPP. Under all circumstances, the *owner or operator* must still comply with *water quality standards* in Part I.D of this permit.

4. The *owner or operator* must maintain permit eligibility to *discharge* under this permit. Any *discharges* that are not compliant with the eligibility conditions of this permit are not authorized by the permit and the *owner or operator* must either apply for a separate permit to cover those ineligible *discharges* or take steps necessary to make the *discharge* eligible for coverage.

**F. Activities Which Are Ineligible for Coverage Under This General Permit**

All of the following are **not** authorized by this permit:

1. *Discharge*s after *construction activities* have been completed and the site has undergone *final stabilization*;

2. *Discharge*s that are mixed with sources of non-stormwater other than those expressly authorized under subsection E.3. of this Part and identified in the SWPPP required by this permit;

3. *Discharges* that are required to obtain an individual SPDES permit or another SPDES general permit pursuant to Part VII.K. of this permit;

4. *Construction activities* or *discharges* from *construction activities* that may adversely affect an *endangered or threatened species* unless the *owner or*

*operator* has obtained a permit issued pursuant to 6 NYCRR Part 182 for the project or the Department has issued a letter of non-jurisdiction for the project. All documentation necessary to demonstrate eligibility shall be maintained on site in accordance with Part II.D.2 of this permit;

5. *Discharges* which either cause or contribute to a violation of *water quality standards* adopted pursuant to the *ECL* and its accompanying regulations;

6. *Construction activities* for residential, commercial and institutional projects:

   a. Where the *discharge*s from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and

   b. Which are undertaken on land with no existing *impervious cover*; and

   c. Which disturb one (1) or more acres of land designated on the current United States Department of Agriculture ("USDA") Soil Survey as Soil Slope Phase "D", (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase "E" or "F" (regardless of the map unit name), or a combination of the three designations.

7. *Construction activities* for linear transportation projects and linear utility projects:

   a. Where the *discharge*s from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and

   b. Which are undertaken on land with no existing *impervious cover*; and

   c. Which disturb two (2) or more acres of land designated on the current USDA Soil Survey as Soil Slope Phase "D" (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase "E" or "F" (regardless of the map unit name), or a combination of the three designations.

8. *Construction activities* that have the potential to affect an *historic property*, unless there is documentation that such impacts have been resolved. The following documentation necessary to demonstrate eligibility with this requirement shall be maintained on site in accordance with Part II.D.2 of this permit and made available to the Department in accordance with Part VII.F of this permit:

   a. Documentation that the *construction activity* is not within an archeologically sensitive area indicated on the sensitivity map, and that the *construction activity* is not located on or immediately adjacent to a property listed or determined to be eligible for listing on the National or State Registers of Historic Places, and that there is no new permanent building on the *construction site* within the following distances from a building, structure, or object that is more than 50 years old, or if there is such a new permanent building on the *construction site* within those parameters that NYS Office of Parks, Recreation and Historic Preservation (OPRHP), a Historic Preservation Commission of a Certified Local Government, or a qualified preservation professional has determined that the building, structure, or object more than 50 years old is not historically/archeologically significant.

      - 1-5 acres of disturbance - 20 feet
      - 5-20 acres of disturbance - 50 feet
      - 20+ acres of disturbance - 100 feet, or

   b. DEC consultation form sent to OPRHP, and copied to the NYS DEC Agency Historic Preservation Officer (APO), and
      (i) the State Environmental Quality Review (SEQR) Environmental Assessment Form (EAF) with a negative declaration or the Findings Statement, with documentation of OPRHP's agreement with the resolution; or
      (ii) documentation from OPRHP that the *construction activity* will result in No Impact; or
      (iii) documentation from OPRHP providing a determination of No Adverse Impact; or
      (iv) a Letter of Resolution signed by the owner/operator, OPRHP and the DEC APO which allows for this *construction activity* to be eligible for coverage under the general permit in terms of the State Historic Preservation Act (SHPA); or

   c. Documentation of satisfactory compliance with Section 106 of the National Historic Preservation Act for a coterminous project area:

      (i) No Affect
      (ii) No Adverse Affect
      (iii) Executed Memorandum of Agreement, or

   d. Documentation that:

      (i) SHPA Section 14.09 has been completed by NYS DEC or another state agency.

9. *Discharge*s from *construction activities* that are subject to an existing SPDES individual or general permit where a SPDES permit for *construction activity* has been terminated or denied; or where the *owner or operator* has failed to renew an expired individual permit.

## Part II. PERMIT COVERAGE

### A. How to Obtain Coverage

1. An *owner or operator* of a *construction activity* that is not subject to the requirements of a regulated, traditional land use control MS4 must first prepare a SWPPP in accordance with all applicable requirements of this permit and then submit a completed Notice of Intent (NOI) to the Department to be authorized to discharge under this permit.

2. An *owner or operator* of a *construction activity* that is subject to the requirements of a *regulated, traditional land use control MS4* must first prepare a SWPPP in accordance with all applicable requirements of this permit and then have the SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department. The *owner or operator* shall have the "MS4 SWPPP Acceptance" form signed in accordance with Part VII.H., and then submit that form along with a completed NOI to the Department.

3. The requirement for an *owner or operator* to have its SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department does not apply to an *owner or operator* that is obtaining permit coverage in accordance with the requirements in Part II.F. (Change of *Owner or Operator*) or where the *owner or operator* of the *construction activity* is the *regulated, traditional land use control MS4* . This exemption does not apply to *construction activities* subject to the New York City Administrative Code.

**B. Notice of Intent (NOI) Submittal**

1. Prior to December 21, 2020, an owner or operator shall use either the electronic (eNOI) or paper version of the NOI that the Department prepared. Both versions of the NOI are located on the Department's website (http://www.dec.ny.gov/ ). The paper version of the NOI shall be signed in accordance with Part VII.H. of this permit and submitted to the following address:

   **NOTICE OF INTENT**
   **NYS DEC, Bureau of Water Permits**
   **625 Broadway, 4th Floor**
   **Albany, New York 12233-3505**

2. Beginning December 21, 2020 and in accordance with EPA's 2015 NPDES Electronic Reporting Rule (40 CFR Part 127), the *owner or operator* must submit the NOI electronically using the *Department's* online NOI.

3. The *owner or operator* shall have the SWPPP preparer sign the "SWPPP Preparer Certification" statement on the NOI prior to submitting the form to the Department.

4. As of the date the NOI is submitted to the Department, the *owner or operator* shall make the NOI and SWPPP available for review and copying in accordance with the requirements in Part VII.F. of this permit.

**C. Permit Authorization**

1. An *owner or operator* shall not *commence construction activity* until their authorization to *discharge* under this permit goes into effect.

2. Authorization to *discharge* under this permit will be effective when the *owner or operator* has satisfied all of the following criteria:

   a. project review pursuant to the State Environmental Quality Review Act ("SEQRA") have been satisfied, when SEQRA is applicable. See the Department's website (http://www.dec.ny.gov/) for more information,

   b. where required, all necessary Department permits subject to the *Uniform Procedures Act ("UPA")* (see 6 NYCRR Part 621), or the equivalent from another New York State agency, have been obtained, unless otherwise notified by the Department pursuant to 6 NYCRR 621.3(a)(4). *Owners or operators* of *construction activities* that are required to obtain *UPA* permits

must submit a preliminary SWPPP to the appropriate DEC Permit Administrator at the Regional Office listed in Appendix F at the time all other necessary *UPA* permit applications are submitted. The preliminary SWPPP must include sufficient information to demonstrate that the *construction activity* qualifies for authorization under this permit,

   c. the final SWPPP has been prepared, and

   d. a complete NOI has been submitted to the Department in accordance with the requirements of this permit.

3. An *owner or operator* that has satisfied the requirements of Part II.C.2 above will be authorized to *discharge* stormwater from their *construction activity* in accordance with the following schedule:

   a. For *construction activities* that are not subject to the requirements of a *regulated, traditional land use control MS4*:

      (i) Five (5) business days from the date the Department receives a complete electronic version of the NOI (eNOI) for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.; or

      (ii) Sixty (60) business days from the date the Department receives a complete NOI (electronic or paper version) for *construction activities* with a SWPPP that has not been prepared in conformance with the design criteria in technical standard referenced in Part III.B.1. or, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C., the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, or;

      (iii) Ten (10) business days from the date the Department receives a complete paper version of the NOI for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.

b. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*:

(i) Five (5) business days from the date the Department receives both a complete electronic version of the NOI (eNOI) and signed "*MS4* SWPPP Acceptance" form, or

(ii) Ten (10) business days from the date the Department receives both a complete paper version of the NOI and signed "MS4 SWPPP Acceptance" form.

4. Coverage under this permit authorizes stormwater *discharges* from only those areas of disturbance that are identified in the NOI. If an *owner or operator* wishes to have stormwater *discharges* from future or additional areas of disturbance authorized, they must submit a new NOI that addresses that phase of the development, unless otherwise notified by the Department. The *owner or operator* shall not *commence construction activity* on the future or additional areas until their authorization to *discharge* under this permit goes into effect in accordance with Part II.C. of this permit.

**D. General Requirements For Owners or Operators With Permit Coverage**

1. The *owner or operator* shall ensure that the provisions of the SWPPP are implemented from the *commencement of construction activity* until all areas of disturbance have achieved *final stabilization* and the Notice of Termination ("NOT") has been submitted to the Department in accordance with Part V. of this permit. This includes any changes made to the SWPPP pursuant to Part III.A.4. of this permit.

2. The *owner or operator* shall maintain a copy of the General Permit (GP-0-20-001), NOI, *NOI Acknowledgment Letter*, SWPPP, MS4 SWPPP Acceptance form, inspection reports, responsible contractor's or subcontractor's certification statement (see Part III.A.6.), and all documentation necessary to demonstrate eligibility with this permit at the *construction site* until all disturbed areas have achieved *final stabilization* and the NOT has been submitted to the Department. The documents must be maintained in a secure location, such as a job trailer, on-site construction office, or mailbox with lock. The secure location must be accessible during normal business hours to an individual performing a compliance inspection.

3. The *owner or operator* of a *construction activity* shall not disturb greater than five (5) acres of soil at any one time without prior written authorization from the Department or, in areas under the jurisdiction of a *regulated, traditional land*

*use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*). At a minimum, the *owner or operator* must comply with the following requirements in order to be authorized to disturb greater than five (5) acres of soil at any one time:

a. The *owner or operator* shall have a *qualified inspector* conduct **at least** two (2) site inspections in accordance with Part IV.C. of this permit every seven (7) calendar days, for as long as greater than five (5) acres of soil remain disturbed. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

b. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. The soil stabilization measures selected shall be in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016.

c. The *owner or operator* shall prepare a phasing plan that defines maximum disturbed area per phase and shows required cuts and fills.

d. The *owner or operator* shall install any additional site-specific practices needed to protect water quality.

e. The *owner or operator* shall include the requirements above in their SWPPP.

4. In accordance with statute, regulations, and the terms and conditions of this permit, the Department may suspend or revoke an *owner's or operator's* coverage under this permit at any time if the Department determines that the SWPPP does not meet the permit requirements or consistent with Part VII.K..

5. Upon a finding of significant non-compliance with the practices described in the SWPPP or violation of this permit, the Department may order an immediate stop to all activity at the site until the non-compliance is remedied. The stop work order shall be in writing, describe the non-compliance in detail, and be sent to the *owner or operator*.

6. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*, the *owner or operator* shall notify the

*regulated, traditional land use control MS4* in writing of any planned amendments or modifications to the post-construction stormwater management practice component of the SWPPP required by Part III.A. 4. and 5. of this permit. Unless otherwise notified by the *regulated, traditional land use control MS4*, the *owner or operator* shall have the SWPPP amendments or modifications reviewed and accepted by the *regulated, traditional land use control MS4* prior to commencing construction of the post-construction stormwater management practice.

**E. Permit Coverage for Discharges Authorized Under GP-0-15-002**

1. Upon renewal of SPDES General Permit for Stormwater Discharges from *Construction Activity* (Permit No. GP-0-15-002), an *owner or operator* of *a construction activity* with coverage under GP-0-15-002, as of the effective date of GP- 0-20-001, shall be authorized to *discharge* in accordance with GP- 0-20-001, unless otherwise notified by the Department.

   An *owner or operator* may continue to implement the technical/design components of the post-construction stormwater management controls provided that such design was done in conformance with the technical standards in place at the time of initial project authorization. However, they must comply with the other, non-design provisions of GP-0-20-001.

**F. Change of Owner or Operator**

1. When property ownership changes or when there is a change in operational control over the construction plans and specifications, the original *owner or operator* must notify the new *owner or operator*, in writing, of the requirement to obtain permit coverage by submitting a NOI with the Department. For *construction activities* subject to the requirements of a *regulated, traditional land use control MS4,* the original *owner or operator* must also notify the MS4, in writing, of the change in ownership at least 30 calendar days prior to the change in ownership.

2. Once the new *owner or operator* obtains permit coverage, the original *owner or operator* shall then submit a completed NOT with the name and permit identification number of the new *owner or operator* to the Department at the address in Part II.B.1. of this permit. If the original *owner or operator* maintains ownership of a portion of the *construction activity* and will disturb soil, they must maintain their coverage under the permit.

3. Permit coverage for the new *owner or operator* will be effective as of the date the Department receives a complete NOI, provided the original *owner or*

*operator* was not subject to a sixty (60) business day authorization period that has not expired as of the date the Department receives the NOI from the new *owner or operator*.

## Part III. STORMWATER POLLUTION PREVENTION PLAN (SWPPP)

**A. General SWPPP Requirements**

1. A SWPPP shall be prepared and implemented by the *owner or operator* of each *construction activity* covered by this permit. The SWPPP must document the selection, design, installation, implementation and maintenance of the control measures and practices that will be used to meet the effluent limitations in Part I.B. of this permit and where applicable, the post-construction stormwater management practice requirements in Part I.C. of this permit. The SWPPP shall be prepared prior to the submittal of the NOI. The NOI shall be submitted to the Department prior to the *commencement of construction activity*. A copy of the completed, final NOI shall be included in the SWPPP.

2. The SWPPP shall describe the erosion and sediment control practices and where required, post-construction stormwater management practices that will be used and/or constructed to reduce the *pollutants* in stormwater *discharges* and to assure compliance with the terms and conditions of this permit. In addition, the SWPPP shall identify potential sources of pollution which may reasonably be expected to affect the quality of stormwater *discharges*.

3. All SWPPPs that require the post-construction stormwater management practice component shall be prepared by a *qualified professional* that is knowledgeable in the principles and practices of stormwater management and treatment.

4. The *owner or operator* must keep the SWPPP current so that it at all times accurately documents the erosion and sediment controls practices that are being used or will be used during construction, and all post-construction stormwater management practices that will be constructed on the site. At a minimum, the *owner or operator* shall amend the SWPPP, including construction drawings:

   a. whenever the current provisions prove to be ineffective in minimizing *pollutants* in stormwater *discharges* from the site;

b. whenever there is a change in design, construction, or operation at the *construction site* that has or could have an effect on the *discharge* of *pollutants*;

c. to address issues or deficiencies identified during an inspection by the *qualified inspector,* the Department or other regulatory authority; and

d. to document the final construction conditions.

5. The Department may notify the *owner or operator* at any time that the SWPPP does not meet one or more of the minimum requirements of this permit. The notification shall be in writing and identify the provisions of the SWPPP that require modification. Within fourteen (14) calendar days of such notification, or as otherwise indicated by the Department, the *owner or operator* shall make the required changes to the SWPPP and submit written notification to the Department that the changes have been made. If the *owner or operator* does not respond to the Department's comments in the specified time frame, the Department may suspend the *owner's or operator's* coverage under this permit or require the *owner or operator* to obtain coverage under an individual SPDES permit in accordance with Part II.D.4. of this permit.

6. Prior to the *commencement of construction activity*, the *owner or operator* must identify the contractor(s) and subcontractor(s) that will be responsible for installing, constructing, repairing, replacing, inspecting and maintaining the erosion and sediment control practices included in the SWPPP; and the contractor(s) and subcontractor(s) that will be responsible for constructing the post-construction stormwater management practices included in the SWPPP. The *owner or operator* shall have each of the contractors and subcontractors identify at least one person from their company that will be responsible for implementation of the SWPPP. This person shall be known as the *trained contractor.* The *owner or operator* shall ensure that at least one *trained contractor* is on site on a daily basis when soil disturbance activities are being performed.

   The *owner or operator* shall have each of the contractors and subcontractors identified above sign a copy of the following certification statement below before they commence any *construction activity*:

   "I hereby certify under penalty of law that I understand and agree to comply with the terms and conditions of the SWPPP and agree to implement any corrective actions identified by the *qualified inspector* during a site inspection. I also understand that the *owner or operator* must comply with

the terms and conditions of the most current version of the New York State Pollutant Discharge Elimination System ("SPDES") general permit for stormwater *discharge*s from *construction activities* and that it is unlawful for any person to cause or contribute to a violation of *water quality standards*. Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations"

In addition to providing the certification statement above, the certification page must also identify the specific elements of the SWPPP that each contractor and subcontractor will be responsible for and include the name and title of the person providing the signature; the name and title of the *trained contractor* responsible for SWPPP implementation; the name, address and telephone number of the contracting firm; the address (or other identifying description) of the site; and the date the certification statement is signed. The *owner or operator* shall attach the certification statement(s) to the copy of the SWPPP that is maintained at the *construction site*. If new or additional contractors are hired to implement measures identified in the SWPPP after construction has commenced, they must also sign the certification statement and provide the information listed above.

7. For projects where the Department requests a copy of the SWPPP or inspection reports, the *owner or operator* shall submit the documents in both electronic (PDF only) and paper format within five (5) business days, unless otherwise notified by the Department.

**B. Required SWPPP Contents**

1. Erosion and sediment control component - All SWPPPs prepared pursuant to this permit shall include erosion and sediment control practices designed in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Where erosion and sediment control practices are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must demonstrate *equivalence* to the technical standard. At a minimum, the erosion and sediment control component of the SWPPP shall include the following:

   a. Background information about the scope of the project, including the location, type and size of project

b. A site map/construction drawing(s) for the project, including a general location map. At a minimum, the site map shall show the total site area; all improvements; areas of disturbance; areas that will not be disturbed; existing vegetation; on-site and adjacent off-site surface water(s); floodplain/floodway boundaries; wetlands and drainage patterns that could be affected by the *construction activity*; existing and final contours ; locations of different soil types with boundaries; material, waste, borrow or equipment storage areas located on adjacent properties; and location(s) of the stormwater *discharge*(s);

c. A description of the soil(s) present at the site, including an identification of the Hydrologic Soil Group (HSG);

d. A construction phasing plan and sequence of operations describing the intended order of *construction activities*, including clearing and grubbing, excavation and grading, utility and infrastructure installation and any other activity at the site that results in soil disturbance;

e. A description of the minimum erosion and sediment control practices to be installed or implemented for each *construction activity* that will result in soil disturbance. Include a schedule that identifies the timing of initial placement or implementation of each erosion and sediment control practice and the minimum time frames that each practice should remain in place or be implemented;

f. A temporary and permanent soil stabilization plan that meets the requirements of this general permit and the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, for each stage of the project, including initial land clearing and grubbing to project completion and achievement of *final stabilization*;

g. A site map/construction drawing(s) showing the specific location(s), size(s), and length(s) of each erosion and sediment control practice;

h. The dimensions, material specifications, installation details, and operation and maintenance requirements for all erosion and sediment control practices. Include the location and sizing of any temporary sediment basins and structural practices that will be used to divert flows from exposed soils;

i. A maintenance inspection schedule for the contractor(s) identified in Part III.A.6. of this permit, to ensure continuous and effective operation of the erosion and sediment control practices. The maintenance inspection

schedule shall be in accordance with the requirements in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016;

j. A description of the pollution prevention measures that will be used to control litter, construction chemicals and construction debris from becoming a *pollutant* source in the stormwater *discharges*;

k. A description and location of any stormwater *discharges* associated with industrial activity other than construction at the site, including, but not limited to, stormwater *discharges* from asphalt plants and concrete plants located on the *construction site*; and

l. Identification of any elements of the design that are not in conformance with the design criteria in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Include the reason for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. Post-construction stormwater management practice component – The *owner or operator* of any construction project identified in Table 2 of Appendix B as needing post-construction stormwater management practices shall prepare a SWPPP that includes practices designed in conformance with the applicable *sizing criteria* in Part I.C.2.a., c. or d. of this permit and the *performance criteria* in the technical standard, New York State Stormwater Management Design Manual dated January 2015

   Where post-construction stormwater management practices are not designed in conformance with the *performance criteria* in the technical standard, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

   The post-construction stormwater management practice component of the SWPPP shall include the following:

   a. Identification of all post-construction stormwater management practices to be constructed as part of the project. Include the dimensions, material specifications and installation details for each post-construction stormwater management practice;

b. A site map/construction drawing(s) showing the specific location and size of each post-construction stormwater management practice;

c. A Stormwater Modeling and Analysis Report that includes:
   (i) Map(s) showing pre-development conditions, including watershed/subcatchments boundaries, flow paths/routing, and design points;

   (ii) Map(s) showing post-development conditions, including watershed/subcatchments boundaries, flow paths/routing, design points and post-construction stormwater management practices;

   (iii) Results of stormwater modeling (i.e. hydrology and hydraulic analysis) for the required storm events. Include supporting calculations (model runs), methodology, and a summary table that compares pre and post-development runoff rates and volumes for the different storm events;

   (iv) Summary table, with supporting calculations, which demonstrates that each post-construction stormwater management practice has been designed in conformance with the *sizing criteria* included in the Design Manual;

   (v) Identification of any *sizing criteria* that is not required based on the requirements included in Part I.C. of this permit; and

   (vi) Identification of any elements of the design that are not in conformance with the *performance criteria* in the Design Manual. Include the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the Design Manual;

d. Soil testing results and locations (test pits, borings);

e. Infiltration test results, when required; and

f. An operations and maintenance plan that includes inspection and maintenance schedules and actions to ensure continuous and effective operation of each post-construction stormwater management practice. The plan shall identify the entity that will be responsible for the long term operation and maintenance of each practice.

3. Enhanced Phosphorus Removal Standards - All construction projects identified in Table 2 of Appendix B that are located in the watersheds identified in Appendix C shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the applicable *sizing criteria* in Part I.C.2. b., c. or d. of this permit and the *performance criteria,* Enhanced Phosphorus Removal Standards included in the Design Manual. At a minimum, the post-construction stormwater management practice component of the SWPPP shall include items 2.a - 2.f. above.

**C. Required SWPPP Components by Project Type**

Unless otherwise notified by the Department, *owners or operators* of *construction activities* identified in Table 1 of Appendix B are required to prepare a SWPPP that only includes erosion and sediment control practices designed in conformance with Part III.B.1 of this permit. *Owners or operators* of the *construction activities* identified in Table 2 of Appendix B shall prepare a SWPPP that also includes post-construction stormwater management practices designed in conformance with Part III.B.2 or 3 of this permit.

## Part IV. INSPECTION AND MAINTENANCE REQUIREMENTS

**A. General Construction Site Inspection and Maintenance Requirements**

1. The *owner or operator* must ensure that all erosion and sediment control practices (including pollution prevention measures) and all post-construction stormwater management practices identified in the SWPPP are inspected and maintained in accordance with Part IV.B. and C. of this permit.

2. The terms of this permit shall not be construed to prohibit the State of New York from exercising any authority pursuant to the ECL, common law or federal law, or prohibit New York State from taking any measures, whether civil or criminal, to prevent violations of the laws of the State of New York or protect the public health and safety and/or the environment.

**B. Contractor Maintenance Inspection Requirements**

1. The *owner or operator* of each *construction activity* identified in Tables 1 and 2 of Appendix B shall have a *trained contractor* inspect the erosion and sediment control practices and pollution prevention measures being implemented within the active work area daily to ensure that they are being maintained in effective operating condition at all times. If deficiencies are identified, the contractor shall

begin implementing corrective actions within one business day and shall complete the corrective actions in a reasonable time frame.

2. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *trained contractor* can stop conducting the maintenance inspections. The *trained contractor* shall begin conducting the maintenance inspections in accordance with Part IV.B.1. of this permit as soon as soil disturbance activities resume.

3. For construction sites where soil disturbance activities have been shut down with partial project completion, the *trained contractor* can stop conducting the maintenance inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational.

**C. Qualified Inspector Inspection Requirements**

The *owner or operator* shall have a *qualified inspector* conduct site inspections in conformance with the following requirements:

[Note: The *trained contractor* identified in Part III.A.6. and IV.B. of this permit **cannot** conduct the *qualified inspector* site inspections unless they meet the *qualified inspector* qualifications included in Appendix A. In order to perform these inspections, the *trained contractor* would have to be a:

- licensed Professional Engineer,
- Certified Professional in Erosion and Sediment Control (CPESC),
- New York State Erosion and Sediment Control Certificate Program holder
- Registered Landscape Architect, or
- someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity].

1. A *qualified inspector* shall conduct site inspections for all *construction activities* identified in Tables 1 and 2 of Appendix B, with the exception of:

   a. the construction of a single family residential subdivision with 25% or less *impervious cover* at total site build-out that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located

in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

   b. the construction of a single family home that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

   c. construction on agricultural property that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres; and

   d. *construction activities* located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

2. Unless otherwise notified by the Department, the *qualified inspector* shall conduct site inspections in accordance with the following timetable:

   a. For construction sites where soil disturbance activities are on-going, the *qualified inspector* shall conduct a site inspection at least once every seven (7) calendar days.

   b. For construction sites where soil disturbance activities are on-going and the *owner or operator* has received authorization in accordance with Part II.D.3 to disturb greater than five (5) acres of soil at any one time, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

   c. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *qualified inspector* shall conduct a site inspection at least once every thirty (30) calendar days. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to reducing the frequency of inspections.

d. For construction sites where soil disturbance activities have been shut down with partial project completion, the *qualified inspector* can stop conducting inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to the shutdown. If soil disturbance activities are not resumed within 2 years from the date of shutdown, the *owner or operator* shall have the *qualified inspector* perform a final inspection and certify that all disturbed areas have achieved *final stabilization,* and all temporary, structural erosion and sediment control measures have been removed*;* and that all post-construction stormwater management practices have been constructed in conformance with the SWPPP by signing the "*Final Stabilization*" and "Post-Construction Stormwater Management Practice" certification statements on the NOT. The *owner or operator* shall then submit the completed NOT form to the address in Part II.B.1 of this permit.

e. For construction sites that directly *discharge* to one of the 303(d) segments listed in Appendix E or is located in one of the watersheds listed in Appendix C, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

3. At a minimum, the *qualified inspector* shall inspect all erosion and sediment control practices and pollution prevention measures to ensure integrity and effectiveness, all post-construction stormwater management practices under construction to ensure that they are constructed in conformance with the SWPPP, all areas of disturbance that have not achieved *final stabilization,* all points of *discharge* to natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site*, and all points of *discharge* from the *construction site*.

4. The *qualified inspector* shall prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report shall include and/or address the following:

a. Date and time of inspection;

b. Name and title of person(s) performing inspection;

c. A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection;

d. A description of the condition of the runoff at all points of *discharge* from the *construction site*. This shall include identification of any *discharges* of sediment from the *construction site*. Include *discharges* from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow;

e. A description of the condition of all natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site* which receive runoff from disturbed areas. This shall include identification of any *discharges* of sediment to the surface waterbody;

f. Identification of all erosion and sediment control practices and pollution prevention measures that need repair or maintenance;

g. Identification of all erosion and sediment control practices and pollution prevention measures that were not installed properly or are not functioning as designed and need to be reinstalled or replaced;

h. Description and sketch of areas with active soil disturbance activity, areas that have been disturbed but are inactive at the time of the inspection, and areas that have been stabilized (temporary and/or final) since the last inspection;

i. Current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards;

j. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices and pollution prevention measures; and to correct deficiencies identified with the construction of the post-construction stormwater management practice(s);

k. Identification and status of all corrective actions that were required by previous inspection; and

l. Digital photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The *qualified inspector* shall also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.

5. Within one business day of the completion of an inspection, the *qualified inspector* shall notify the *owner or operator* and appropriate contractor or subcontractor identified in Part III.A.6. of this permit of any corrective actions that need to be taken. The contractor or subcontractor shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.

6. All inspection reports shall be signed by the *qualified inspector.* Pursuant to Part II.D.2. of this permit, the inspection reports shall be maintained on site with the SWPPP.

## Part V. TERMINATION OF PERMIT COVERAGE

### A. Termination of Permit Coverage

1. An *owner or operator* that is eligible to terminate coverage under this permit must submit a completed NOT form to the address in Part II.B.1 of this permit. The NOT form shall be one which is associated with this permit, signed in accordance with Part VII.H of this permit.

2. An *owner or operator* may terminate coverage when one or more the following conditions have been met:

   a. Total project completion - All *construction activity* identified in the SWPPP has been completed; and all areas of disturbance have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices have been constructed in conformance with the SWPPP and are operational;

   b. Planned shutdown with partial project completion - All soil disturbance activities have ceased; and all areas disturbed as of the project shutdown date have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational;

   c. A new *owner or operator* has obtained coverage under this permit in accordance with Part II.F. of this permit.

   d. The *owner or operator* obtains coverage under an alternative SPDES general permit or an individual SPDES permit.

3. For *construction activities* meeting subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *qualified inspector* perform a final site inspection prior to submitting the NOT. The *qualified inspector* shall, by signing the "*Final Stabilization*" and "Post-Construction Stormwater Management Practice certification statements on the NOT, certify that all the requirements in Part V.A.2.a. or b. of this permit have been achieved.

4. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4* and meet subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *regulated, traditional land use control MS4* sign the "MS4 Acceptance" statement on the NOT in accordance with the requirements in Part VII.H. of this permit. The *regulated, traditional land use control MS4* official, by signing this statement, has determined that it is acceptable for the *owner or operator* to submit the NOT in accordance with the requirements of this Part. The *regulated, traditional land use control MS4* can make this determination by performing a final site inspection themselves or by accepting the *qualified inspector*'s final site inspection certification(s) required in Part V.A.3. of this permit.

5. For *construction activities* that require post-construction stormwater management practices and meet subdivision 2a. of this Part, the *owner or operator* must, prior to submitting the NOT, ensure one of the following:

   a. the post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain such practice(s) have been deeded to the municipality in which the practice(s) is located,

b. an executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s),

c. for post-construction stormwater management practices that are privately owned, the *owner or operator* has a mechanism in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the *owner or operator's* deed of record,

d. for post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university, hospital), government agency or authority, or public utility; the *owner or operator* has policy and procedures in place that ensures operation and maintenance of the practices in accordance with the operation and maintenance plan.

## Part VI. REPORTING AND RETENTION RECORDS

### A. Record Retention

The *owner or operator* shall retain a copy of the NOI, NOI Acknowledgment Letter, SWPPP, MS4 SWPPP Acceptance form and any inspection reports that were prepared in conjunction with this permit for a period of at least five (5) years from the date that the Department receives a complete NOT submitted in accordance with Part V. of this general permit.

### B. Addresses

With the exception of the NOI, NOT, and MS4 SWPPP Acceptance form (which must be submitted to the address referenced in Part II.B.1 of this permit), all written correspondence requested by the Department, including individual permit applications, shall be sent to the address of the appropriate DOW Water (SPDES) Program contact at the Regional Office listed in Appendix F.

## Part VII. STANDARD PERMIT CONDITIONS

### A. Duty to Comply

The *owner or operator* must comply with all conditions of this permit. All contractors and subcontractors associated with the project must comply with the terms of the SWPPP. Any non-compliance with this permit constitutes a violation of the Clean Water

Act (CWA) and the ECL and is grounds for an enforcement action against the *owner or operator* and/or the contractor/subcontractor; permit revocation, suspension or modification; or denial of a permit renewal application. Upon a finding of significant non-compliance with this permit or the applicable SWPPP, the Department may order an immediate stop to all *construction activity* at the site until the non-compliance is remedied. The stop work order shall be in writing, shall describe the non-compliance in detail, and shall be sent to the *owner or operator*.

If any human remains or archaeological remains are encountered during excavation, the *owner or operator* must immediately cease, or cause to cease, all *construction activity* in the area of the remains and notify the appropriate Regional Water Engineer (RWE). *Construction activity* shall not resume until written permission to do so has been received from the RWE.

### B. Continuation of the Expired General Permit

This permit expires five (5) years from the effective date. If a new general permit is not issued prior to the expiration of this general permit, an *owner or operator* with coverage under this permit may continue to operate and *discharge* in accordance with the terms and conditions of this general permit, if it is extended pursuant to the State Administrative Procedure Act and 6 NYCRR Part 621, until a new general permit is issued.

### C. Enforcement

Failure of the *owner or operator,* its contractors, subcontractors, agents and/or assigns to strictly adhere to any of the permit requirements contained herein shall constitute a violation of this permit. There are substantial criminal, civil, and administrative penalties associated with violating the provisions of this permit. Fines of up to $37,500 per day for each violation and imprisonment for up to fifteen (15) years may be assessed depending upon the nature and degree of the offense.

### D. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for an *owner or operator* in an enforcement action that it would have been necessary to halt or reduce the *construction activity* in order to maintain compliance with the conditions of this permit.

**E. Duty to Mitigate**

The *owner or operator* and its contractors and subcontractors shall take all reasonable steps to *minimize* or prevent any *discharge* in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

**F. Duty to Provide Information**

The *owner or operator* shall furnish to the Department, within a reasonable specified time period of a written request, all documentation necessary to demonstrate eligibility and any information to determine compliance with this permit or to determine whether cause exists for modifying or revoking this permit, or suspending or denying coverage under this permit, in accordance with the terms and conditions of this permit. The NOI, SWPPP and inspection reports required by this permit are public documents that the *owner or operator* must make available for review and copying by any person within five (5) business days of the *owner or operator* receiving a written request by any such person to review these documents. Copying of documents will be done at the requester's expense.

**G. Other Information**

When the *owner or operator* becomes aware that they failed to submit any relevant facts, or submitted incorrect information in the NOI or in any of the documents required by this permit , or have made substantive revisions to the SWPPP (e.g. the scope of the project changes significantly, the type of post-construction stormwater management practice(s) changes, there is a reduction in the sizing of the post-construction stormwater management practice, or there is an increase in the disturbance area or *impervious area*), which were not reflected in the original NOI submitted to the Department, they shall promptly submit such facts or information to the Department using the contact information in Part II.A. of this permit. Failure of the *owner or operator* to correct or supplement any relevant facts within five (5) business days of becoming aware of the deficiency shall constitute a violation of this permit.

**H. Signatory Requirements**

1. All NOIs and NOTs shall be signed as follows:

   a. For a corporation these forms shall be signed by a responsible corporate officer. For the purpose of this section, a responsible corporate officer means:

   (i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or

   (ii) the manager of one or more manufacturing, production or operating facilities, provided the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

   b. For a partnership or sole proprietorship these forms shall be signed by a general partner or the proprietor, respectively; or

   c. For a municipality, State, Federal, or other public agency these forms shall be signed by either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal agency includes:

   (i) the chief executive officer of the agency, or

   (ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of EPA).

2. The SWPPP and other information requested by the Department shall be signed by a person described in Part VII.H.1. of this permit or by a duly authorized representative of that person. A person is a duly authorized representative only if:

   a. The authorization is made in writing by a person described in Part VII.H.1. of this permit;

   b. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field,

superintendent, position of *equivalent* responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position) and,

c. The written authorization shall include the name, title and signature of the authorized representative and be attached to the SWPPP.

3. All inspection reports shall be signed by the *qualified inspector* that performs the inspection.

4. The MS4 SWPPP Acceptance form shall be signed by the principal executive officer or ranking elected official from the *regulated, traditional land use control MS4,* or by a duly authorized representative of that person.

   It shall constitute a permit violation if an incorrect and/or improper signatory authorizes any required forms, SWPPP and/or inspection reports.

**I. Property Rights**

The issuance of this permit does not convey any property rights of any sort, nor any exclusive privileges, nor does it authorize any injury to private property nor any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations. *Owners or operators* must obtain any applicable conveyances, easements, licenses and/or access to real property prior to *commencing construction activity*.

**J. Severability**

The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit shall not be affected thereby.

**K. Requirement to Obtain Coverage Under an Alternative Permit**

1. The Department may require any owner or operator authorized by this permit to apply for and/or obtain either an individual SPDES permit or another SPDES general permit. When the Department requires any discharger authorized by a general permit to apply for an individual SPDES permit, it shall notify the discharger in writing that a permit application is required. This notice shall

include a brief statement of the reasons for this decision, an application form, a statement setting a time frame for the owner or operator to file the application for an individual SPDES permit, and a deadline, not sooner than 180 days from owner or operator receipt of the notification letter, whereby the authorization to discharge under this general permit shall be terminated. Applications must be submitted to the appropriate Permit Administrator at the Regional Office. The Department may grant additional time upon demonstration, to the satisfaction of the Department, that additional time to apply for an alternative authorization is necessary or where the Department has not provided a permit determination in accordance with Part 621 of this Title.

2. When an individual SPDES permit is issued to a discharger authorized to *discharge* under a general SPDES permit for the same *discharge*(s), the general permit authorization for outfalls authorized under the individual SPDES permit is automatically terminated on the effective date of the individual permit unless termination is earlier in accordance with 6 NYCRR Part 750.

**L. Proper Operation and Maintenance**

The *owner or operator* shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the *owner or operator* to achieve compliance with the conditions of this permit and with the requirements of the SWPPP.

**M. Inspection and Entry**

The *owner or operator* shall allow an authorized representative of the Department, EPA, applicable county health department, or, in the case of a *construction site* which *discharges* through an *MS4*, an authorized representative of the *MS4* receiving the discharge, upon the presentation of credentials and other documents as may be required by law, to:

1. Enter upon the owner's or operator's premises where a regulated facility or activity is located or conducted or where records must be kept under the conditions of this permit;

2. Have access to and copy at reasonable times, any records that must be kept under the conditions of this permit; and

3. Inspect at reasonable times any facilities or equipment (including monitoring and control equipment), practices or operations regulated or required by this permit.

4. Sample or monitor at reasonable times, for purposes of assuring permit compliance or as otherwise authorized by the Act or ECL, any substances or parameters at any location.

**N. Permit Actions**

This permit may, at any time, be modified, suspended, revoked, or renewed by the Department in accordance with 6 NYCRR Part 621. The filing of a request by the *owner or operator* for a permit modification, revocation and reissuance, termination, a notification of planned changes or anticipated noncompliance does not limit, diminish and/or stay compliance with any terms of this permit.

**O. Definitions**

Definitions of key terms are included in Appendix A of this permit.

**P. Re-Opener Clause**

1. If there is evidence indicating potential or realized impacts on water quality due to any stormwater discharge associated with construction activity covered by this permit, the owner or operator of such discharge may be required to obtain an individual permit or alternative general permit in accordance with Part VII.K. of this permit or the permit may be modified to include different limitations and/or requirements.

2. Any Department initiated permit modification, suspension or revocation will be conducted in accordance with 6 NYCRR Part 621, 6 NYCRR 750-1.18, and 6 NYCRR 750-1.20.

**Q. Penalties for Falsification of Forms and Reports**

In accordance with 6NYCRR Part 750-2.4 and 750-2.5, any person who knowingly makes any false material statement, representation, or certification in any application, record, report or other document filed or required to be maintained under this permit, including reports of compliance or noncompliance shall, upon conviction, be punished in accordance with ECL §71-1933 and or Articles 175 and 210 of the New York State Penal Law.

**R. Other Permits**

Nothing in this permit relieves the *owner or operator* from a requirement to obtain any other permits required by law.

## APPENDIX A – Acronyms and Definitions

**Acronyms**

APO – Agency Preservation Officer
BMP – Best Management Practice
CPESC – Certified Professional in Erosion and Sediment Control
Cpv – Channel Protection Volume
CWA – Clean Water Act (or the Federal Water Pollution Control Act, 33 U.S.C. §1251 et seq)
DOW – Division of Water
EAF – Environmental Assessment Form
ECL - Environmental Conservation Law
EPA – U. S. Environmental Protection Agency
HSG – Hydrologic Soil Group
MS4 – Municipal Separate Storm Sewer System
NOI – Notice of Intent
NOT – Notice of Termination
NPDES – National Pollutant Discharge Elimination System
OPRHP – Office of Parks, Recreation and Historic Places
Qf – Extreme Flood
Qp – Overbank Flood
RRv – Runoff Reduction Volume
RWE – Regional Water Engineer
SEQR – State Environmental Quality Review
SEQRA - State Environmental Quality Review Act
SHPA – State Historic Preservation Act
SPDES – State Pollutant Discharge Elimination System
SWPPP – Stormwater Pollution Prevention Plan
TMDL – Total Maximum Daily Load
UPA – Uniform Procedures Act
USDA – United States Department of Agriculture
WQv – Water Quality Volume

**Definitions**

All definitions in this section are solely for the purposes of this permit.

**Agricultural Building –** a structure designed and constructed to house farm implements, hay, grain, poultry, livestock or other horticultural products; excluding any structure designed, constructed or used, in whole or in part, for human habitation, as a place of employment where agricultural products are processed, treated or packaged, or as a place used by the public.

**Agricultural Property** –means the land for construction of a barn, *agricultural building*, silo, stockyard, pen or other structural practices identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State" prepared by the Department in cooperation with agencies of New York Nonpoint Source Coordinating Committee (dated June 2007).

**Alter Hydrology from Pre to Post-Development Conditions -** means the post-development peak flow rate(s) has increased by more than 5% of the pre-developed condition for the design storm of interest (e.g. 10 yr and 100 yr).

**Combined Sewer -** means a sewer that is designed to collect and convey both "sewage" and "stormwater".

**Commence (Commencement of) Construction Activities -** means the initial disturbance of soils associated with clearing, grading or excavation activities; or other construction related activities that disturb or expose soils such as demolition, stockpiling of fill material, and the initial installation of erosion and sediment control practices required in the SWPPP. See definition for "*Construction Activity(ies)*" also.

**Construction Activity(ies) -** means any clearing, grading, excavation, filling, demolition or stockpiling activities that result in soil disturbance. Clearing activities can include, but are not limited to, logging equipment operation, the cutting and skidding of trees, stump removal and/or brush root removal. Construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility.

**Construction Site** – means the land area where *construction activity(ies)* will occur. See definition for "*Commence (Commencement of) Construction Activities"* and "*Larger Common Plan of Development or Sale" also.*

**Dewatering** – means the act of draining rainwater and/or groundwater from building foundations, vaults or excavations/trenches.

**Direct Discharge (to a specific surface waterbody) -** means that runoff flows from a *construction site* by overland flow and the first point of discharge is the specific surface waterbody, or runoff flows from a *construction site* to a separate storm sewer system

and the first point of discharge from the separate storm sewer system is the specific surface waterbody.

**Discharge(s) -** means any addition of any pollutant to waters of the State through an outlet or *point source*.

**Embankment** –means an earthen or rock slope that supports a road/highway.

**Endangered or Threatened Species** – see 6 NYCRR Part 182 of the Department's rules and regulations for definition of terms and requirements.

**Environmental Conservation Law (ECL)** - means chapter 43-B of the Consolidated Laws of the State of New York, entitled the Environmental Conservation Law.

**Equivalent (Equivalence)** – means that the practice or measure meets all the performance, longevity, maintenance, and safety objectives of the technical standard and will provide an equal or greater degree of water quality protection.

**Final Stabilization -** means that all soil disturbance activities have ceased and a uniform, perennial vegetative cover with a density of eighty (80) percent over the entire pervious surface has been established; or other equivalent stabilization measures, such as permanent landscape mulches, rock rip-rap or washed/crushed stone have been applied on all disturbed areas that are not covered by permanent structures, concrete or pavement.

**General SPDES permit** - means a SPDES permit issued pursuant to 6 NYCRR Part 750-1.21 and Section 70-0117 of the ECL authorizing a category of discharges.

**Groundwater(s) -** means waters in the saturated zone. The saturated zone is a subsurface zone in which all the interstices are filled with water under pressure greater than that of the atmosphere. Although the zone may contain gas-filled interstices or interstices filled with fluids other than water, it is still considered saturated.

**Historic Property** – means any building, structure, site, object or district that is listed on the State or National Registers of Historic Places or is determined to be eligible for listing on the State or National Registers of Historic Places.

**Impervious Area (Cover) -** means all impermeable surfaces that cannot effectively infiltrate rainfall. This includes paved, concrete and gravel surfaces (i.e. parking lots, driveways, roads, runways and sidewalks); building rooftops and miscellaneous impermeable structures such as patios, pools, and sheds.

**Infeasible** – means not technologically possible, or not economically practicable and achievable in light of best industry practices.

**Larger Common Plan of Development or Sale -** means a contiguous area where multiple separate and distinct *construction activities* are occurring, or will occur, under one plan. The term "plan" in "larger common plan of development or sale" is broadly defined as any announcement or piece of documentation (including a sign, public notice or hearing, marketing plan, advertisement, drawing, permit application, State Environmental Quality Review Act (SEQRA) environmental assessment form or other documents, zoning request, computer design, etc.) or physical demarcation (including boundary signs, lot stakes, surveyor markings, etc.) indicating that *construction activities* may occur on a specific plot.

For discrete construction projects that are located within a larger common plan of development or sale that are at least 1/4 mile apart, each project can be treated as a separate plan of development or sale provided any interconnecting road, pipeline or utility project that is part of the same "common plan" is not concurrently being disturbed.

**Minimize** – means reduce and/or eliminate to the extent achievable using control measures (including best management practices) that are technologically available and economically practicable and achievable in light of best industry practices.

**Municipal Separate Storm Sewer (MS4)** - a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

(i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, stormwater, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to surface waters of the State*;*
(ii) Designed or used for collecting or conveying stormwater;
(iii) Which is not a *combined sewer*; and
(iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

**National Pollutant Discharge Elimination System (NPDES)** - means the national system for the issuance of wastewater and stormwater permits under the Federal Water Pollution Control Act (Clean Water Act).

**Natural Buffer** –means an undisturbed area with natural cover running along a surface water (e.g. wetland, stream, river, lake, etc.).

**New Development** – means any land disturbance that does not meet the definition of Redevelopment Activity included in this appendix.

**New York State Erosion and Sediment Control Certificate Program** – a certificate program that establishes and maintains a process to identify and recognize individuals who are capable of developing, designing, inspecting and maintaining erosion and sediment control plans on projects that disturb soils in New York State. The certificate program is administered by the New York State Conservation District Employees Association.

**NOI Acknowledgment Letter** - means the letter that the Department sends to an owner or operator to acknowledge the Department's receipt and acceptance of a complete Notice of Intent. This letter documents the owner's or operator's authorization to discharge in accordance with the general permit for stormwater discharges from *construction activity*.

**Nonpoint Source** - means any source of water pollution or pollutants which is not a discrete conveyance or *point source* permitted pursuant to Title 7 or 8 of Article 17 of the Environmental Conservation Law (see ECL Section 17-1403).

**Overbank** –means flow events that exceed the capacity of the stream channel and spill out into the adjacent floodplain.

**Owner or Operator** - means the person, persons or legal entity which owns or leases the property on which the *construction activity* is occurring; an entity that has operational control over the construction plans and specifications, including the ability to make modifications to the plans and specifications; and/or an entity that has day-to-day operational control of those activities at a project that are necessary to ensure compliance with the permit conditions.

**Performance Criteria** – means the design criteria listed under the "Required Elements" sections in Chapters 5, 6 and 10 of the technical standard, New York State Stormwater Management Design Manual, dated January 2015. It does not include the Sizing Criteria (i.e. WQv, RRv, Cpv, Qp and Qf ) in Part I.C.2. of the permit.

**Point Source** - means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, vessel or other floating craft, or landfill leachate collection system from which *pollutants* are or may be discharged.

**Pollutant** - means dredged spoil, filter backwash, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand and industrial, municipal, agricultural waste and ballast discharged into water; which may cause or might reasonably be expected to cause pollution of the waters of the state in contravention of the standards or guidance values adopted as provided in 6 NYCRR Parts 700 et seq .

**Qualified Inspector** - means a person that is knowledgeable in the principles and practices of erosion and sediment control, such as a licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder or other Department endorsed individual(s).

It can also mean someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided that person has training in the principles and practices of erosion and sediment control. Training in the principles and practices of erosion and sediment control means that the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect has received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect shall receive four (4) hours of training every three (3) years.

It can also mean a person that meets the *Qualified Professional* qualifications in addition to the *Qualified Inspector* qualifications.

Note: Inspections of any post-construction stormwater management practices that include structural components, such as a dam for an impoundment, shall be performed by a licensed Professional Engineer.

**Qualified Professional -** means a person that is knowledgeable in the principles and practices of stormwater management and treatment, such as a licensed Professional Engineer, Registered Landscape Architect or other Department endorsed individual(s). Individuals preparing SWPPPs that require the post-construction stormwater management practice component must have an understanding of the principles of hydrology, water quality management practice design, water quantity control design, and, in many cases, the principles of hydraulics. All components of the SWPPP that involve the practice of engineering, as defined by the NYS Education Law (see Article 145), shall be prepared by, or under the direct supervision of, a professional engineer licensed to practice in the State of New York.

**Redevelopment Activity(ies)** – means the disturbance and reconstruction of existing impervious area, including impervious areas that were removed from a project site within five (5) years of preliminary project plan submission to the local government (i.e. site plan, subdivision, etc.).

**Regulated, Traditional Land Use Control MS4 -** means a city, town or village with land use control authority that is authorized to discharge under New York State DEC's

SPDES General Permit For Stormwater Discharges from Municipal Separate Stormwater Sewer Systems (MS4s) or the City of New York's Individual SPDES Permit for their Municipal Separate Storm Sewer Systems (NY-0287890).

**Routine Maintenance Activity -** means *construction activity* that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility, including, but not limited to:

- Re-grading of gravel roads or parking lots,
- Cleaning and shaping of existing roadside ditches and culverts that maintains the approximate original line and grade, and hydraulic capacity of the ditch,
- Cleaning and shaping of existing roadside ditches that does not maintain the approximate original grade, hydraulic capacity and purpose of the ditch if the changes to the line and grade, hydraulic capacity or purpose of the ditch are installed to improve water quality and quantity controls (e.g. installing grass lined ditch),
- Placement of aggregate shoulder backing that stabilizes the transition between the road shoulder and the ditch or *embankment*,
- Full depth milling and filling of existing asphalt pavements, replacement of concrete pavement slabs, and similar work that does not expose soil or disturb the bottom six (6) inches of subbase material,
- Long-term use of equipment storage areas at or near highway maintenance facilities,
- Removal of sediment from the edge of the highway to restore a previously existing sheet-flow drainage connection from the highway surface to the highway ditch or *embankment*,
- Existing use of Canal Corp owned upland disposal sites for the canal, and
- Replacement of curbs, gutters, sidewalks and guide rail posts.

**Site limitations** – means site conditions that prevent the use of an infiltration technique and or infiltration of the total WQv. Typical site limitations include: seasonal high groundwater, shallow depth to bedrock, and soils with an infiltration rate less than 0.5 inches/hour. The existence of site limitations shall be confirmed and documented using actual field testing (i.e. test pits, soil borings, and infiltration test) or using information from the most current United States Department of Agriculture (USDA) Soil Survey for the County where the project is located.

**Sizing Criteria** – means the criteria included in Part I.C.2 of the permit that are used to size post-construction stormwater management control practices. The criteria include; Water Quality Volume (WQv), Runoff Reduction Volume (RRv), Channel Protection Volume (Cpv), *Overbank* Flood (Qp), and Extreme Flood (Qf).

**State Pollutant Discharge Elimination System (SPDES)** - means the system established pursuant to Article 17 of the ECL and 6 NYCRR Part 750 for issuance of permits authorizing discharges to the waters of the state.

**Steep Slope** – means land area designated on the current United States Department of Agriculture ("USDA") Soil Survey as Soil Slope Phase "D", (provided the map unit name is inclusive of slopes greater than 25%) , or Soil Slope Phase E or F, (regardless of the map unit name), or a combination of the three designations.

**Streambank** – as used in this permit, means the terrain alongside the bed of a creek or stream. The bank consists of the sides of the channel, between which the flow is confined.

**Stormwater Pollution Prevention Plan (SWPPP)** – means a project specific report, including construction drawings, that among other things: describes the construction activity(ies), identifies the potential sources of pollution at the *construction site*; describes and shows the stormwater controls that will be used to control the pollutants (i.e. erosion and sediment controls; for many projects, includes post-construction stormwater management controls); and identifies procedures the *owner or operator* will implement to comply with the terms and conditions of the permit. See Part III of the permit for a complete description of the information that must be included in the SWPPP.

**Surface Waters of the State** - shall be construed to include lakes, bays, sounds, ponds, impounding reservoirs, springs, rivers, streams, creeks, estuaries, marshes, inlets, canals, the Atlantic ocean within the territorial seas of the state of New York and all other bodies of surface water, natural or artificial, inland or coastal, fresh or salt, public or private (except those private waters that do not combine or effect a junction with natural surface waters), which are wholly or partially within or bordering the state or within its jurisdiction. Waters of the state are further defined in 6 NYCRR Parts 800 to 941.

**Temporarily Ceased** – means that an existing disturbed area will not be disturbed again within 14 calendar days of the previous soil disturbance.

**Temporary Stabilization** - means that exposed soil has been covered with material(s) as set forth in the technical standard, New York Standards and Specifications for Erosion and Sediment Control, to prevent the exposed soil from eroding. The materials can include, but are not limited to, mulch, seed and mulch, and erosion control mats (e.g. jute twisted yarn, excelsior wood fiber mats).

**Total Maximum Daily Loads** (TMDLs) - A TMDL is the sum of the allowable loads of a single pollutant from all contributing point and *nonpoint sources*. It is a calculation of the maximum amount of a pollutant that a waterbody can receive on a daily basis and still meet *water quality standards*, and an allocation of that amount to the pollutant's sources. A TMDL stipulates wasteload allocations (WLAs) for *point source* discharges, load allocations (LAs) for *nonpoint sources*, and a margin of safety (MOS).

**Trained Contractor -** means an employee from the contracting (construction) company, identified in Part III.A.6., that has received four (4) hours of Department endorsed

training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the *trained contractor* shall receive four (4) hours of training every three (3) years.

It can also mean an employee from the contracting (construction) company, identified in Part III.A.6., that meets the *qualified inspector* qualifications (e.g. licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder, or someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity).

The *trained contractor* is responsible for the day to day implementation of the SWPPP.

**Uniform Procedures Act (UPA) Permit** - means a permit required under 6 NYCRR Part 621 of the Environmental Conservation Law (ECL), Article 70.

**Water Quality Standard** - means such measures of purity or quality for any waters in relation to their reasonable and necessary use as promulgated in 6 NYCRR Part 700 et seq.

## APPENDIX B – Required SWPPP Components by Project Type

**Table 1**
**Construction Activities that Require the Preparation of a SWPPP That Only Includes Erosion and Sediment Controls**

| |
|---|
| **The following construction activities that involve soil disturbances of one (1) or more acres of land, but less than five (5) acres:**<br>• Single family home not located in one of the watersheds listed in Appendix C or not *directly discharging* to one of the 303(d) segments listed in Appendix E<br>• Single family residential subdivisions with 25% or less impervious cover at total site build-out and not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E<br>• Construction of a barn or other *agricultural building*, silo, stock yard or pen. |
| **The following construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land:**<br>All construction activities located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land. |
| **The following construction activities that involve soil disturbances of one (1) or more acres of land:**<br>• Installation of underground, linear utilities; such as gas lines, fiber-optic cable, cable TV, electric, telephone, sewer mains, and water mains<br>• Environmental enhancement projects, such as wetland mitigation projects, stormwater retrofits and stream restoration projects<br>• Pond construction<br>• Linear bike paths running through areas with vegetative cover, including bike paths surfaced with an impervious cover<br>• Cross-country ski trails and walking/hiking trails<br>• Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are not part of residential, commercial or institutional development;<br>• Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that include incidental shoulder or curb work along an existing highway to support construction of the sidewalk, bike path or walking path.<br>• Slope stabilization projects<br>• Slope flattening that changes the grade of the site, but does not significantly change the runoff characteristics |

**Table 1 (Continued) CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT ONLY INCLUDES EROSION AND SEDIMENT CONTROLS**

**The following construction activities that involve soil disturbances of one (1) or more acres of land:**

- Spoil areas that will be covered with vegetation
- Vegetated open space projects (i.e. recreational parks, lawns, meadows, fields, downhill ski trails) excluding projects that *alter hydrology from pre to post development* conditions,
- Athletic fields (natural grass) that do not include the construction or reconstruction of *impervious area* and do not *alter hydrology from pre to post development* conditions
- Demolition project where vegetation will be established, and no redevelopment is planned
- Overhead electric transmission line project that does not include the construction of permanent access roads or parking areas surfaced with *impervious cover*
- Structural practices as identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State", excluding projects that involve soil disturbances of greater than five acres and construction activities that include the construction or reconstruction of impervious area
- Temporary access roads, median crossovers, detour roads, lanes, or other temporary impervious areas that will be restored to pre-construction conditions once the construction activity is complete

**Table 2**
**CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES**

**The following construction activities that involve soil disturbances of one (1) or more acres of land:**

- Single family home located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family home that disturbs five (5) or more acres of land
- Single family residential subdivisions located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family residential subdivisions that involve soil disturbances of between one (1) and five (5) acres of land with greater than 25% impervious cover at total site build-out
- Single family residential subdivisions that involve soil disturbances of five (5) or more acres of land, and single family residential subdivisions that involve soil disturbances of less than five (5) acres that are part of a larger common plan of development or sale that will ultimately disturb five or more acres of land
- Multi-family residential developments; includes duplexes, townhomes, condominiums, senior housing complexes, apartment complexes, and mobile home parks
- Airports
- Amusement parks
- Breweries, cideries, and wineries, including establishments constructed on agricultural land
- Campgrounds
- Cemeteries that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Commercial developments
- Churches and other places of worship
- Construction of a barn or other *agricultural building* (e.g. silo) and structural practices as identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State" that include the construction or reconstruction of *impervious area*, excluding projects that involve soil disturbances of less than five acres.
- Golf courses
- Institutional development; includes hospitals, prisons, schools and colleges
- Industrial facilities; includes industrial parks
- Landfills
- Municipal facilities; includes highway garages, transfer stations, office buildings, POTW's, water treatment plants, and water storage tanks
- Office complexes
- Playgrounds that include the construction or reconstruction of impervious area
- Sports complexes
- Racetracks; includes racetracks with earthen (dirt) surface
- Road construction or reconstruction, including roads constructed as part of the construction activities listed in Table 1

**Table 2 (Continued)**

**CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES**

**The following construction activities that involve soil disturbances of one (1) or more acres of land:**

- Parking lot construction or reconstruction, including parking lots constructed as part of the construction activities listed in Table 1
- Athletic fields (natural grass) that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Athletic fields with artificial turf
- Permanent access roads, parking areas, substations, compressor stations and well drilling pads, surfaced with *impervious cover,* and constructed as part of an over-head electric transmission line project, wind-power project, cell tower project, oil or gas well drilling project, sewer or water main project or other linear utility project
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a residential, commercial or institutional development
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a highway construction or reconstruction project
- All other construction activities that include the construction or reconstruction of *impervious area* or *alter the hydrology from pre to post development* conditions, and are not listed in Table 1

## APPENDIX C – Watersheds Requiring Enhanced Phosphorus Removal

**Watersheds where *owners or operators* of construction activities identified in Table 2 of Appendix B must prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the Enhanced Phosphorus Removal Standards included in the technical standard, New York State Stormwater Management Design Manual ("Design Manual").**

- Entire New York City Watershed located east of the Hudson River - Figure 1
- Onondaga Lake Watershed - Figure 2
- Greenwood Lake Watershed -Figure 3
- Oscawana Lake Watershed – Figure 4
- Kinderhook Lake Watershed – Figure 5

**Figure 1 - New York City Watershed East of the Hudson**

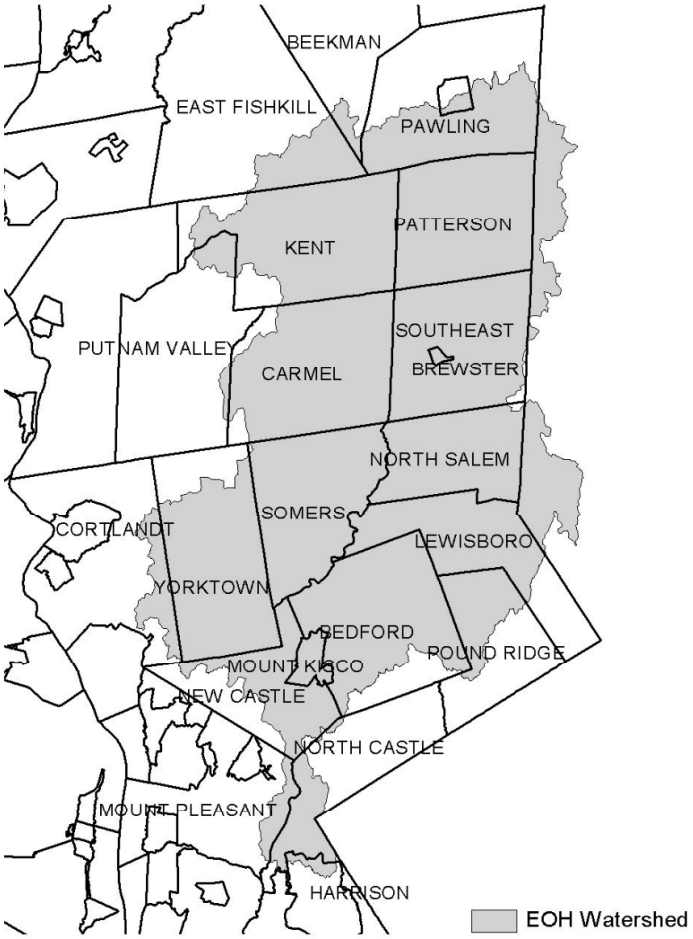

**Figure 2 - Onondaga Lake Watershed**

**Figure 3 - Greenwood Lake Watershed**

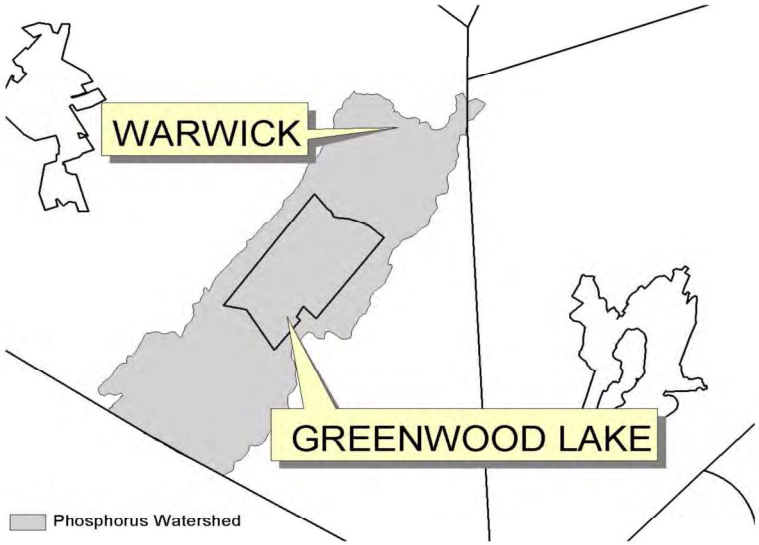

**Figure 4 - Oscawana Lake Watershed**

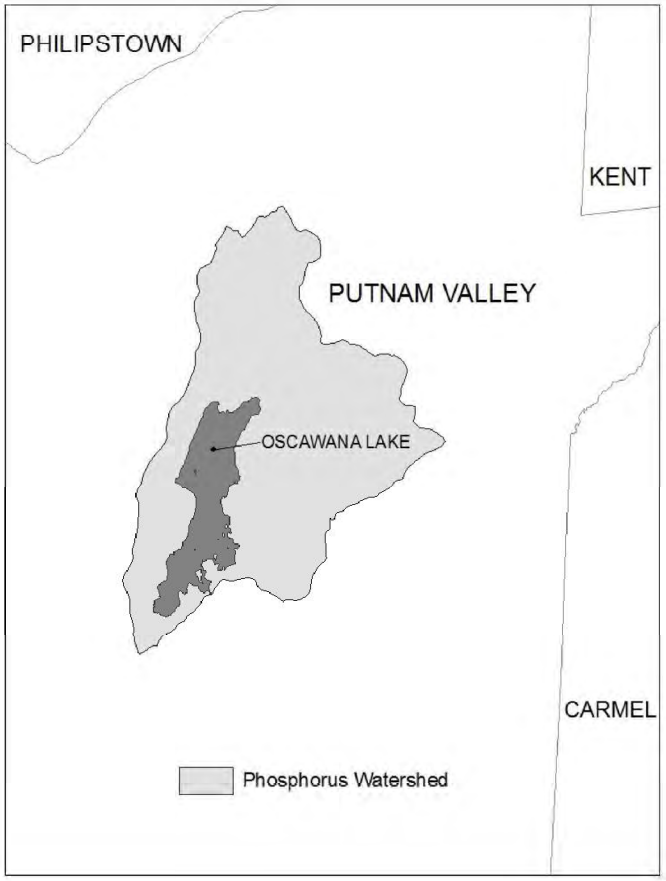

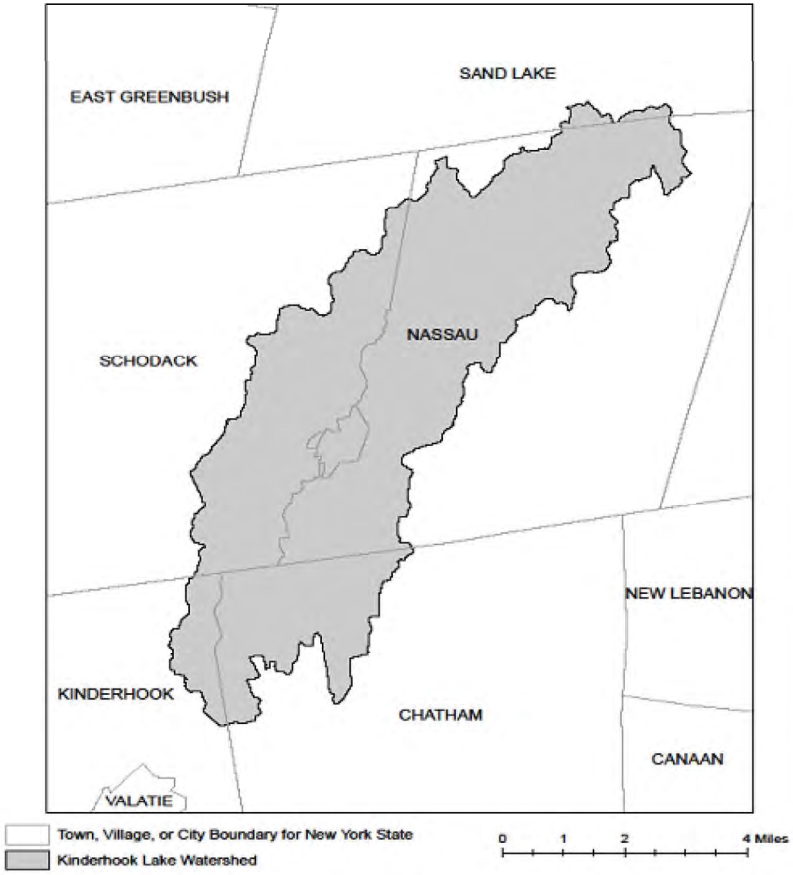

**Figure 5 - Kinderhook Lake Watershed**

## APPENDIX D – Watersheds with Lower Disturbance Threshold

**Watersheds where *owners or operators* of construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land must obtain coverage under this permit.**

| |
|---|
| Entire New York City Watershed that is located east of the Hudson River - See Figure 1 in Appendix C |

## APPENDIX E – 303(d) Segments Impaired by Construction Related Pollutant(s)

List of 303(d) segments impaired by pollutants related to *construction activity* (e.g. silt, sediment or nutrients). The list was developed using "The Final New York State 2016 Section 303(d) List of Impaired Waters Requiring a TMDL/Other Strategy" dated November 2016. *Owners or operators* of single family home and single family residential subdivisions with 25% or less total impervious cover at total site build-out that involve soil disturbances of one or more acres of land, but less than 5 acres, and *directly discharge* to one of the listed segments below shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015.

| COUNTY | WATERBODY | POLLUTANT |
|---|---|---|
| Albany | Ann Lee (Shakers) Pond, Stump Pond | Nutrients |
| Albany | Basic Creek Reservoir | Nutrients |
| Allegany | Amity Lake, Saunders Pond | Nutrients |
| Bronx | Long Island Sound, Bronx | Nutrients |
| Bronx | Van Cortlandt Lake | Nutrients |
| Broome | Fly Pond, Deer Lake, Sky Lake | Nutrients |
| Broome | Minor Tribs to Lower Susquehanna (north) | Nutrients |
| Broome | Whitney Point Lake/Reservoir | Nutrients |
| Cattaraugus | Allegheny River/Reservoir | Nutrients |
| Cattaraugus | Beaver (Alma) Lake | Nutrients |
| Cattaraugus | Case Lake | Nutrients |
| Cattaraugus | Linlyco/Club Pond | Nutrients |
| Cayuga | Duck Lake | Nutrients |
| Cayuga | Little Sodus Bay | Nutrients |
| Chautauqua | Bear Lake | Nutrients |
| Chautauqua | Chadakoin River and tribs | Nutrients |
| Chautauqua | Chautauqua Lake, North | Nutrients |
| Chautauqua | Chautauqua Lake, South | Nutrients |
| Chautauqua | Findley Lake | Nutrients |
| Chautauqua | Hulburt/Clymer Pond | Nutrients |
| Clinton | Great Chazy River, Lower, Main Stem | Silt/Sediment |
| Clinton | Lake Champlain, Main Lake, Middle | Nutrients |
| Clinton | Lake Champlain, Main Lake, North | Nutrients |
| Columbia | Kinderhook Lake | Nutrients |
| Columbia | Robinson Pond | Nutrients |
| Cortland | Dean Pond | Nutrients |

| | | |
|---|---|---|
| Dutchess | Fall Kill and tribs | Nutrients |
| Dutchess | Hillside Lake | Nutrients |
| Dutchess | Wappingers Lake | Nutrients |
| Dutchess | Wappingers Lake | Silt/Sediment |
| Erie | Beeman Creek and tribs | Nutrients |
| Erie | Ellicott Creek, Lower, and tribs | Silt/Sediment |
| Erie | Ellicott Creek, Lower, and tribs | Nutrients |
| Erie | Green Lake | Nutrients |
| Erie | Little Sister Creek, Lower, and tribs | Nutrients |
| Erie | Murder Creek, Lower, and tribs | Nutrients |
| Erie | Rush Creek and tribs | Nutrients |
| Erie | Scajaquada Creek, Lower, and tribs | Nutrients |
| Erie | Scajaquada Creek, Middle, and tribs | Nutrients |
| Erie | Scajaquada Creek, Upper, and tribs | Nutrients |
| Erie | South Branch Smoke Cr, Lower, and tribs | Silt/Sediment |
| Erie | South Branch Smoke Cr, Lower, and tribs | Nutrients |
| Essex | Lake Champlain, Main Lake, South | Nutrients |
| Essex | Lake Champlain, South Lake | Nutrients |
| Essex | Willsboro Bay | Nutrients |
| Genesee | Bigelow Creek and tribs | Nutrients |
| Genesee | Black Creek, Middle, and minor tribs | Nutrients |
| Genesee | Black Creek, Upper, and minor tribs | Nutrients |
| Genesee | Bowen Brook and tribs | Nutrients |
| Genesee | LeRoy Reservoir | Nutrients |
| Genesee | Oak Orchard Cr, Upper, and tribs | Nutrients |
| Genesee | Tonawanda Creek, Middle, Main Stem | Nutrients |
| Greene | Schoharie Reservoir | Silt/Sediment |
| Greene | Sleepy Hollow Lake | Silt/Sediment |
| Herkimer | Steele Creek tribs | Silt/Sediment |
| Herkimer | Steele Creek tribs | Nutrients |
| Jefferson | Moon Lake | Nutrients |
| Kings | Hendrix Creek | Nutrients |
| Kings | Prospect Park Lake | Nutrients |
| Lewis | Mill Creek/South Branch, and tribs | Nutrients |
| Livingston | Christie Creek and tribs | Nutrients |
| Livingston | Conesus Lake | Nutrients |
| Livingston | Mill Creek and minor tribs | Silt/Sediment |
| Monroe | Black Creek, Lower, and minor tribs | Nutrients |
| Monroe | Buck Pond | Nutrients |
| Monroe | Cranberry Pond | Nutrients |

## 303(d) Segments Impaired by Construction Related Pollutant(s)

| | | |
|---|---|---|
| Monroe | Lake Ontario Shoreline, Western | Nutrients |
| Monroe | Long Pond | Nutrients |
| Monroe | Mill Creek and tribs | Nutrients |
| Monroe | Mill Creek/Blue Pond Outlet and tribs | Nutrients |
| Monroe | Minor Tribs to Irondequoit Bay | Nutrients |
| Monroe | Rochester Embayment - East | Nutrients |
| Monroe | Rochester Embayment - West | Nutrients |
| Monroe | Shipbuilders Creek and tribs | Nutrients |
| Monroe | Thomas Creek/White Brook and tribs | Nutrients |
| Nassau | Beaver Lake | Nutrients |
| Nassau | Camaans Pond | Nutrients |
| Nassau | East Meadow Brook, Upper, and tribs | Silt/Sediment |
| Nassau | East Rockaway Channel | Nutrients |
| Nassau | Grant Park Pond | Nutrients |
| Nassau | Hempstead Bay | Nutrients |
| Nassau | Hempstead Lake | Nutrients |
| Nassau | Hewlett Bay | Nutrients |
| Nassau | Hog Island Channel | Nutrients |
| Nassau | Long Island Sound, Nassau County Waters | Nutrients |
| Nassau | Massapequa Creek and tribs | Nutrients |
| Nassau | Milburn/Parsonage Creeks, Upp, and tribs | Nutrients |
| Nassau | Reynolds Channel, west | Nutrients |
| Nassau | Tidal Tribs to Hempstead Bay | Nutrients |
| Nassau | Tribs (fresh) to East Bay | Nutrients |
| Nassau | Tribs (fresh) to East Bay | Silt/Sediment |
| Nassau | Tribs to Smith/Halls Ponds | Nutrients |
| Nassau | Woodmere Channel | Nutrients |
| New York | Harlem Meer | Nutrients |
| New York | The Lake in Central Park | Nutrients |
| Niagara | Bergholtz Creek and tribs | Nutrients |
| Niagara | Hyde Park Lake | Nutrients |
| Niagara | Lake Ontario Shoreline, Western | Nutrients |
| Niagara | Lake Ontario Shoreline, Western | Nutrients |
| Oneida | Ballou, Nail Creeks and tribs | Nutrients |
| Onondaga | Harbor Brook, Lower, and tribs | Nutrients |
| Onondaga | Ley Creek and tribs | Nutrients |
| Onondaga | Minor Tribs to Onondaga Lake | Nutrients |
| Onondaga | Ninemile Creek, Lower, and tribs | Nutrients |
| Onondaga | Onondaga Creek, Lower, and tribs | Nutrients |
| Onondaga | Onondaga Creek, Middle, and tribs | Nutrients |

303(d) Segments Impaired by Construction Related Pollutant(s)

| | | |
|---|---|---|
| Onondaga | Onondaga Lake, northern end | Nutrients |
| Onondaga | Onondaga Lake, southern end | Nutrients |
| Ontario | Great Brook and minor tribs | Silt/Sediment |
| Ontario | Great Brook and minor tribs | Nutrients |
| Ontario | Hemlock Lake Outlet and minor tribs | Nutrients |
| Ontario | Honeoye Lake | Nutrients |
| Orange | Greenwood Lake | Nutrients |
| Orange | Monhagen Brook and tribs | Nutrients |
| Orange | Orange Lake | Nutrients |
| Orleans | Lake Ontario Shoreline, Western | Nutrients |
| Orleans | Lake Ontario Shoreline, Western | Nutrients |
| Oswego | Lake Neatahwanta | Nutrients |
| Oswego | Pleasant Lake | Nutrients |
| Putnam | Bog Brook Reservoir | Nutrients |
| Putnam | Boyd Corners Reservoir | Nutrients |
| Putnam | Croton Falls Reservoir | Nutrients |
| Putnam | Diverting Reservoir | Nutrients |
| Putnam | East Branch Reservoir | Nutrients |
| Putnam | Lake Carmel | Nutrients |
| Putnam | Middle Branch Reservoir | Nutrients |
| Putnam | Oscawana Lake | Nutrients |
| Putnam | Palmer Lake | Nutrients |
| Putnam | West Branch Reservoir | Nutrients |
| Queens | Bergen Basin | Nutrients |
| Queens | Flushing Creek/Bay | Nutrients |
| Queens | Jamaica Bay, Eastern, and tribs (Queens) | Nutrients |
| Queens | Kissena Lake | Nutrients |
| Queens | Meadow Lake | Nutrients |
| Queens | Willow Lake | Nutrients |
| Rensselaer | Nassau Lake | Nutrients |
| Rensselaer | Snyders Lake | Nutrients |
| Richmond | Grasmere Lake/Bradys Pond | Nutrients |
| Rockland | Congers Lake, Swartout Lake | Nutrients |
| Rockland | Rockland Lake | Nutrients |
| Saratoga | Ballston Lake | Nutrients |
| Saratoga | Dwaas Kill and tribs | Silt/Sediment |
| Saratoga | Dwaas Kill and tribs | Nutrients |
| Saratoga | Lake Lonely | Nutrients |
| Saratoga | Round Lake | Nutrients |
| Saratoga | Tribs to Lake Lonely | Nutrients |

## 303(d) Segments Impaired by Construction Related Pollutant(s)

| | | |
|---|---|---|
| Schenectady | Collins Lake | Nutrients |
| Schenectady | Duane Lake | Nutrients |
| Schenectady | Mariaville Lake | Nutrients |
| Schoharie | Engleville Pond | Nutrients |
| Schoharie | Summit Lake | Nutrients |
| Seneca | Reeder Creek and tribs | Nutrients |
| St.Lawrence | Black Lake Outlet/Black Lake | Nutrients |
| St.Lawrence | Fish Creek and minor tribs | Nutrients |
| Steuben | Smith Pond | Nutrients |
| Suffolk | Agawam Lake | Nutrients |
| Suffolk | Big/Little Fresh Ponds | Nutrients |
| Suffolk | Canaan Lake | Silt/Sediment |
| Suffolk | Canaan Lake | Nutrients |
| Suffolk | Flanders Bay, West/Lower Sawmill Creek | Nutrients |
| Suffolk | Fresh Pond | Nutrients |
| Suffolk | Great South Bay, East | Nutrients |
| Suffolk | Great South Bay, Middle | Nutrients |
| Suffolk | Great South Bay, West | Nutrients |
| Suffolk | Lake Ronkonkoma | Nutrients |
| Suffolk | Long Island Sound, Suffolk County, West | Nutrients |
| Suffolk | Mattituck (Marratooka) Pond | Nutrients |
| Suffolk | Meetinghouse/Terrys Creeks and tribs | Nutrients |
| Suffolk | Mill and Seven Ponds | Nutrients |
| Suffolk | Millers Pond | Nutrients |
| Suffolk | Moriches Bay, East | Nutrients |
| Suffolk | Moriches Bay, West | Nutrients |
| Suffolk | Peconic River, Lower, and tidal tribs | Nutrients |
| Suffolk | Quantuck Bay | Nutrients |
| Suffolk | Shinnecock Bay and Inlet | Nutrients |
| Suffolk | Tidal tribs to West Moriches Bay | Nutrients |
| Sullivan | Bodine, Montgomery Lakes | Nutrients |
| Sullivan | Davies Lake | Nutrients |
| Sullivan | Evens Lake | Nutrients |
| Sullivan | Pleasure Lake | Nutrients |
| Tompkins | Cayuga Lake, Southern End | Nutrients |
| Tompkins | Cayuga Lake, Southern End | Silt/Sediment |
| Tompkins | Owasco Inlet, Upper, and tribs | Nutrients |
| Ulster | Ashokan Reservoir | Silt/Sediment |
| Ulster | Esopus Creek, Upper, and minor tribs | Silt/Sediment |
| Warren | Hague Brook and tribs | Silt/Sediment |

## 303(d) Segments Impaired by Construction Related Pollutant(s)

| | | |
|---|---|---|
| Warren | Huddle/Finkle Brooks and tribs | Silt/Sediment |
| Warren | Indian Brook and tribs | Silt/Sediment |
| Warren | Lake George | Silt/Sediment |
| Warren | Tribs to L.George, Village of L George | Silt/Sediment |
| Washington | Cossayuna Lake | Nutrients |
| Washington | Lake Champlain, South Bay | Nutrients |
| Washington | Tribs to L.George, East Shore | Silt/Sediment |
| Washington | Wood Cr/Champlain Canal and minor tribs | Nutrients |
| Wayne | Port Bay | Nutrients |
| Westchester | Amawalk Reservoir | Nutrients |
| Westchester | Blind Brook, Upper, and tribs | Silt/Sediment |
| Westchester | Cross River Reservoir | Nutrients |
| Westchester | Lake Katonah | Nutrients |
| Westchester | Lake Lincolndale | Nutrients |
| Westchester | Lake Meahagh | Nutrients |
| Westchester | Lake Mohegan | Nutrients |
| Westchester | Lake Shenorock | Nutrients |
| Westchester | Long Island Sound, Westchester (East) | Nutrients |
| Westchester | Mamaroneck River, Lower | Silt/Sediment |
| Westchester | Mamaroneck River, Upper, and minor tribs | Silt/Sediment |
| Westchester | Muscoot/Upper New Croton Reservoir | Nutrients |
| Westchester | New Croton Reservoir | Nutrients |
| Westchester | Peach Lake | Nutrients |
| Westchester | Reservoir No.1 (Lake Isle) | Nutrients |
| Westchester | Saw Mill River, Lower, and tribs | Nutrients |
| Westchester | Saw Mill River, Middle, and tribs | Nutrients |
| Westchester | Sheldrake River and tribs | Silt/Sediment |
| Westchester | Sheldrake River and tribs | Nutrients |
| Westchester | Silver Lake | Nutrients |
| Westchester | Teatown Lake | Nutrients |
| Westchester | Titicus Reservoir | Nutrients |
| Westchester | Truesdale Lake | Nutrients |
| Westchester | Wallace Pond | Nutrients |
| Wyoming | Java Lake | Nutrients |
| Wyoming | Silver Lake | Nutrients |

## APPENDIX F – List of NYS DEC Regional Offices

| Region | Covering the following counties: | DIVISION OF ENVIRONMENTAL PERMITS (DEP) Permit Administrators | DIVISION OF WATER (DOW) Water (SPDES) Program |

**New York State Department of Environmental Conservation**
**Division of Water**
**625 Broadway, 4th Floor**
**Albany, New York 12233-3505**

NYR _____
(for DEC use only)

**Stormwater Discharges Associated with Construction Activity Under State Pollutant Discharge Elimination System (SPDES) General Permit # GP-0-20-001**

**All sections must be completed unless otherwise noted**. Failure to complete all items may result in this form being returned to you, thereby delaying your coverage under this General Permit. Applicants must read and understand the conditions of the permit and prepare a Stormwater Pollution Prevention Plan prior to submitting this NOI. Applicants are responsible for identifying and obtaining other DEC permits that may be required.

1. Provide the Geographic Coordinates for the project site in NYTM Units. To do this you **must** go to the NYSDEC Stormwater Interactive Map on the DEC website at:

**www.dec.ny.gov/imsmaps/stormwater/viewer.htm**

Zoom into your Project Location such that you can accurately click on the centroid of your site. Once you have located your project site, go to the tool boxes on the top and choose "i"(identify). Then click on the center of your site and a new window containing the X, Y coordinates in UTM will pop up. Transcribe these coordinates into the boxes below. For problems with the interactive map use the help function.

**X Coordinates (Easting)**: 589212

**Y Coordinates (Northing)**: 4664422334411

2. What is the nature of this construction project?

○ **New Construction**

○ **Redevelopment with increase in impervious area**

● **Redevelopment with no increase in impervious area**

3. Select the predominant land use for both pre and post development conditions.
**SELECT ONLY ONE CHOICE FOR EACH**

**Pre-Development Existing Land Use**

- ○ FOREST
- ○ PASTURE/OPEN LAND
- ○ CULTIVATED LAND
- ○ SINGLE FAMILY HOME
- ○ SINGLE FAMILY SUBDIVISION
- ○ TOWN HOME RESIDENTIAL
- ○ MULTIFAMILY RESIDENTIAL
- ○ INSTITUTIONAL/SCHOOL
- ○ INDUSTRIAL
- ○ COMMERCIAL
- ○ ROAD/HIGHWAY
- ○ RECREATIONAL/SPORTS FIELD
- ○ BIKE PATH/TRAIL
- ○ LINEAR UTILITY
- ○ PARKING LOT
- ● OTHER

Parking/Storage

**Post-Development Future Land Use**

- ○ SINGLE FAMILY HOME
- ○ SINGLE FAMILY SUBDIVISION — Number of Lots
- ○ TOWN HOME RESIDENTIAL
- ○ MULTIFAMILY RESIDENTIAL
- ○ INSTITUTIONAL/SCHOOL
- ○ INDUSTRIAL
- ○ COMMERCIAL
- ○ MUNICIPAL
- ○ ROAD/HIGHWAY
- ○ RECREATIONAL/SPORTS FIELD
- ○ BIKE PATH/TRAIL
- ○ LINEAR UTILITY (water, sewer, gas, etc.)
- ○ PARKING LOT
- ○ CLEARING/GRADING ONLY
- ○ DEMOLITION, NO REDEVELOPMENT
- ○ WELL DRILLING ACTIVITY *(Oil, Gas, etc.)
- ● OTHER

Parking/Commerc

***Note**: for gas well drilling, non-high volume hydraulic fractured wells only

4. In accordance with the larger common plan of development or sale, enter the total project site area; the total area to be disturbed; existing impervious area to be disturbed (for redevelopment activities); and the future impervious area constructed within the disturbed area. (Round to the nearest tenth of an acre.)

| Total Site Area | Total Area To Be Disturbed | Existing Impervious Area To Be Disturbed | Future Impervious Area Within Disturbed Area |
|---|---|---|---|
| 4.2 | 2.9 | 1.2 | 2.6 |

5. Do you plan to disturb more than 5 acres of soil at any one time? ○ **Yes** ● **No**

6. Indicate the percentage of each Hydrologic Soil Group(HSG) at the site.

| A | B | C | D |
|---|---|---|---|
| 0% | 0% | 0% | 100% |

7. Is this a phased project? ○ **Yes** ● **No**

8. Enter the planned start and end dates of the disturbance activities.

**Start Date** / / — **End Date** / /

9. Identify the nearest surface waterbody(ies) to which construction site runoff will discharge.

Name

Fishkill Creek

9a. Type of waterbody identified in Question 9?

- ○ Wetland / State Jurisdiction On Site (Answer 9b)
- ○ Wetland / State Jurisdiction Off Site
- ○ Wetland / Federal Jurisdiction On Site (Answer 9b)
- ○ Wetland / Federal Jurisdiction Off Site
- ○ Stream / Creek On Site
- ● Stream / Creek Off Site
- ○ River On Site
- ○ River Off Site
- ○ Lake On Site
- ○ Lake Off Site
- ○ Other Type On Site
- ○ Other Type Off Site

9b. How was the wetland identified?

- ○ Regulatory Map
- ○ Delineated by Consultant
- ○ Delineated by Army Corps of Engineers
- ○ Other (identify)

10. Has the surface waterbody(ies) in question 9 been identified as a 303(d) segment in Appendix E of GP-0-20-001? ● **Yes** ○ **No**

11. Is this project located in one of the Watersheds identified in Appendix C of GP-0-20-001? ○ **Yes** ● **No**

12. Is the project located in one of the watershed areas associated with AA and AA-S classified waters? ○ **Yes** ● **No**
**If no, skip question 13.**

13. Does this construction activity disturb land with no existing impervious cover and where the Soil Slope Phase is identified as an E or F on the USDA Soil Survey? ○ **Yes** ○ **No**
**If Yes, what is the acreage to be disturbed?**

14. Will the project disturb soils within a State regulated wetland or the protected 100 foot adjacent area? ○ **Yes** ● **No**

15. Does the site runoff enter a separate storm sewer system (including roadside drains, swales, ditches, culverts, etc)? ◉ **Yes** ○ **No** ○ **Unknown**

16. What is the name of the municipality/entity that owns the separate storm sewer system?

City of Poughkeepsie

17. Does any runoff from the site enter a sewer classified as a Combined Sewer? ◉ **Yes** ○ **No** ○ **Unknown**

18. Will future use of this site be an agricultural property as defined by the NYS Agriculture and Markets Law? ○ **Yes** ◉ **No**

19. Is this property owned by a state authority, state agency, federal government or local government? ◉ **Yes** ○ **No**

20. Is this a remediation project being done under a Department approved work plan? (i.e. CERCLA, RCRA, Voluntary Cleanup Agreement, etc.) ○ **Yes** ○ **No**

21. Has the required Erosion and Sediment Control component of the SWPPP been developed in conformance with the current NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book)? ◉ **Yes** ○ **No**

22. Does this construction activity require the development of a SWPPP that includes the post-construction stormwater management practice component (i.e. Runoff Reduction, Water Quality and Quantity Control practices/techniques)? ◉ **Yes** ○ **No**
**If No, skip questions 23 and 27-39.**

23. Has the post-construction stormwater management practice component of the SWPPP been developed in conformance with the current NYS Stormwater Management Design Manual? ◉ **Yes** ○ **No**

24. The Stormwater Pollution Prevention Plan (SWPPP) was prepared by:

- ● **Professional Engineer (P.E.)**
- ○ **Soil and Water Conservation District (SWCD)**
- ○ **Registered Landscape Architect (R.L.A)**
- ○ **Certified Professional in Erosion and Sediment Control (CPESC)**
- ○ **Owner/Operator**
- ○ **Other**

**SWPPP Preparer Certification**

I hereby certify that the Stormwater Pollution Prevention Plan (SWPPP) for this project has been prepared in accordance with the terms and conditions of the GP-0-20-001. Furthermore, I understand that certifying false, incorrect or inaccurate information is a violation of this permit and the laws of the State of New York and could subject me to criminal, civil and/or administrative proceedings.

**First Name**
Christopher

**MI**

**Last Name**
Lapine

**Signature**

**Date** / /

25. Has a construction sequence schedule for the planned management practices been prepared? ● Yes ○ No

26. Select **all** of the erosion and sediment control practices that will be employed on the project site:

## Temporary Structural

- ● Check Dams
- ○ Construction Road Stabilization
- ● Dust Control
- ○ Earth Dike
- ○ Level Spreader
- ○ Perimeter Dike/Swale
- ○ Pipe Slope Drain
- ○ Portable Sediment Tank
- ○ Rock Dam
- ○ Sediment Basin
- ○ Sediment Traps
- ● Silt Fence
- ● Stabilized Construction Entrance
- ● Storm Drain Inlet Protection
- ○ Straw/Hay Bale Dike
- ○ Temporary Access Waterway Crossing
- ○ Temporary Stormdrain Diversion
- ○ Temporary Swale
- ○ Turbidity Curtain
- ○ Water bars

## Biotechnical

- ○ Brush Matting
- ○ Wattling

## Vegetative Measures

- ○ Brush Matting
- ○ Dune Stabilization
- ○ Grassed Waterway
- ○ Mulching
- ○ Protecting Vegetation
- ○ Recreation Area Improvement
- ● Seeding
- ○ Sodding
- ● Straw/Hay Bale Dike
- ○ Streambank Protection
- ○ Temporary Swale
- ● Topsoiling
- ○ Vegetating Waterways

## Permanent Structural

- ○ Debris Basin
- ○ Diversion
- ○ Grade Stabilization Structure
- ○ Land Grading
- ○ Lined Waterway (Rock)
- ○ Paved Channel (Concrete)
- ○ Paved Flume
- ○ Retaining Wall
- ○ Riprap Slope Protection
- ● Rock Outlet Protection
- ○ Streambank Protection

**Other**

**Post-construction Stormwater Management Practice (SMP) Requirements**

**Important: Completion of Questions 27-39 is not required if response to Question 22 is No.**

27. Identify all site planning practices that were used to prepare the final site plan/layout for the project.

- ○ **Preservation of Undisturbed Areas**
- ○ **Preservation of Buffers**
- ○ **Reduction of Clearing and Grading**
- ○ **Locating Development in Less Sensitive Areas**
- ○ **Roadway Reduction**
- ● **Sidewalk Reduction**
- ○ **Driveway Reduction**
- ○ **Cul-de-sac Reduction**
- ● **Building Footprint Reduction**
- ○ **Parking Reduction**

27a. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6("Soil Restoration") of the Design Manual (2010 version).

- ● All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).
- ○ Compacted areas were considered as impervious cover when calculating the **WQv Required**, and the compacted areas were assigned a post-construction Hydrologic Soil Group (HSG) designation that is one level less permeable than existing conditions for the hydrology analysis.

28. Provide the total Water Quality Volume (WQv) required for this project (based on final site plan/layout).

**Total WQv Required**

0.142 **acre-feet**

29. Identify the RR techniques (Area Reduction), RR techniques(Volume Reduction) and Standard SMPs with RRv Capacity in Table 1 (See Page 9) that were used to reduce the Total WQv Required(#28).

Also, provide in Table 1 the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

**Note:** Redevelopment projects shall use Tables 1 and 2 to identify the SMPs used to treat and/or reduce the WQv required. If runoff reduction techniques will not be used to reduce the required WQv, skip to question 33a after identifying the SMPs.

**Table 1 - Runoff Reduction (RR) Techniques and Standard Stormwater Management Practices (SMPs)**

| | Total Contributing Area (acres) | | Total Contributing Impervious Area(acres) |
|---|---|---|---|
| **RR Techniques (Area Reduction)** | | | |
| ○ Conservation of Natural Areas (RR-1) | | and/or | |
| ○ Sheetflow to Riparian Buffers/Filters Strips (RR-2) | | and/or | |
| ○ Tree Planting/Tree Pit (RR-3) | | and/or | |
| ○ Disconnection of Rooftop Runoff (RR-4) | | and/or | |
| **RR Techniques (Volume Reduction)** | | | |
| ○ Vegetated Swale (RR-5) | | | |
| ○ Rain Garden (RR-6) | | | |
| ○ Stormwater Planter (RR-7) | | | |
| ○ Rain Barrel/Cistern (RR-8) | | | |
| ○ Porous Pavement (RR-9) | | | |
| ● Green Roof (RR-10) | | | 0.09 |
| **Standard SMPs with RRv Capacity** | | | |
| ○ Infiltration Trench (I-1) | | | |
| ○ Infiltration Basin (I-2) | | | |
| ○ Dry Well (I-3) | | | |
| ● Underground Infiltration System (I-4) | | | 0.09 |
| ● Bioretention (F-5) | | | 0.05 |
| ○ Dry Swale (O-1) | | | |
| **Standard SMPs** | | | |
| ○ Micropool Extended Detention (P-1) | | | |
| ○ Wet Pond (P-2) | | | |
| ○ Wet Extended Detention (P-3) | | | |
| ○ Multiple Pond System (P-4) | | | |
| ○ Pocket Pond (P-5) | | | |
| ○ Surface Sand Filter (F-1) | | | |
| ○ Underground Sand Filter (F-2) | | | |
| ○ Perimeter Sand Filter (F-3) | | | |
| ○ Organic Filter (F-4) | | | |
| ○ Shallow Wetland (W-1) | | | |
| ○ Extended Detention Wetland (W-2) | | | |
| ○ Pond/Wetland System (W-3) | | | |
| ○ Pocket Wetland (W-4) | | | |
| ○ Wet Swale (O-2) | | | |

**Table 2 - Alternative SMPs (DO NOT INCLUDE PRACTICES BEING USED FOR PRETREATMENT ONLY)**

| Alternative SMP | Total Contributing Impervious Area(acres) |
|---|---|
| ● Hydrodynamic ..... | 1.12 |
| ○ Wet Vault ..... | |
| ○ Media Filter ..... | |
| ○ Other _____ ..... | |

Provide the name and manufacturer of the Alternative SMPs (i.e. proprietary practice(s)) being used for WQv treatment.

Name

Manufacturer

**Note**: Redevelopment projects which do not use RR techniques, shall use questions 28, 29, 33 and 33a to provide SMPs used, total WQv required and total WQv provided for the project.

30. Indicate the Total RRv provided by the RR techniques (Area/Volume Reduction) and Standard SMPs with RRv capacity identified in question 29.

**Total RRv provided**

0.024 **acre-feet**

31. Is the Total RRv provided (#30) greater than or equal to the total WQv required (#28).

○ **Yes** ● **No**

**If Yes, go to question 36.**
**If No, go to question 32.**

32. Provide the Minimum RRv required based on HSG.
[Minimum RRv Required = (P)(0.95)(Ai)/12, Ai=(S)(Aic)]

**Minimum RRv Required**

0.000 **acre-feet**

32a. Is the Total RRv provided (#30) greater than or equal to the Minimum RRv Required (#32)?

● **Yes** ○ **No**

**If Yes, go to question 33.**
**Note**: Use the space provided in question #39 to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). A detailed evaluation of the specific site limitations and justification for not reducing 100% of the WQv required (#28) must also be included in the SWPPP.
**If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.**

33. Identify the Standard SMPs in Table 1 and, if applicable, the Alternative SMPs in Table 2 that were used to treat the remaining total WQv(=Total WQv Required in 28 - Total RRv Provided in 30).

Also, provide in Table 1 and 2 the total impervious area that contributes runoff to each practice selected.

**Note**: Use Tables 1 and 2 to identify the SMPs used on Redevelopment projects.

33a. Indicate the Total WQv provided (i.e. WQv treated) by the SMPs identified in question #33 and Standard SMPs with RRv Capacity identified in question 29.

**WQv Provided**

0.139 **acre-feet**

**Note**: For the standard SMPs with RRv capacity, the WQv provided by each practice = the WQv calculated using the contributing drainage area to the practice - RRv provided by the practice. (See Table 3.5 in Design Manual)

34. Provide the sum of the Total RRv provided (#30) and the WQv provided (#33a). 0.162

35. Is the sum of the RRv provided (#30) and the WQv provided (#33a) greater than or equal to the total WQv required (#28)? ● **Yes** ○ **No**

**If Yes, go to question 36.**
**If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.**

36. Provide the total Channel Protection Storage Volume (CPv) required and provided or select waiver (36a), if applicable.

**CPv Required** . **acre-feet**

**CPv Provided** . **acre-feet**

36a. The need to provide channel protection has been waived because:

○ Site discharges directly to tidal waters or a fifth order or larger stream.

● Reduction of the total CPv is achieved on site through runoff reduction techniques or infiltration systems.

37. Provide the Overbank Flood (Qp) and Extreme Flood (Qf) control criteria or select waiver (37a), if applicable.

**Total Overbank Flood Control Criteria (Qp)**

**Pre-Development** 8.34 **CFS**

**Post-development** 8.14 **CFS**

**Total Extreme Flood Control Criteria (Qf)**

**Pre-Development** 15.40 **CFS**

**Post-development** 15.18 **CFS**

37a. The need to meet the Qp and Qf criteria has been waived because:

- ○ Site discharges directly to tidal waters or a fifth order or larger stream.
- ○ Downstream analysis reveals that the Qp and Qf controls are not required

38. Has a long term Operation and Maintenance Plan for the post-construction stormwater management practice(s) been developed? ● **Yes** ○ **No**

If Yes, Identify the entity responsible for the long term Operation and Maintenance

Northside Junction, LLC

39. Use this space to summarize the specific site limitations and justification for not reducing 100% of WQv required(#28). (See question 32a) This space can also be used for other pertinent project information.

40. Identify other DEC permits, existing and new, that are required for this project/facility.

- ○ Air Pollution Control
- ○ Coastal Erosion
- ○ Hazardous Waste
- ○ Long Island Wells
- ○ Mined Land Reclamation
- ○ Solid Waste
- ○ Navigable Waters Protection / Article 15
- ○ Water Quality Certificate
- ○ Dam Safety
- ○ Water Supply
- ○ Freshwater Wetlands/Article 24
- ○ Tidal Wetlands
- ○ Wild, Scenic and Recreational Rivers
- ○ Stream Bed or Bank Protection / Article 15
- ○ Endangered or Threatened Species(Incidental Take Permit)
- ○ Individual SPDES
- ○ SPDES Multi-Sector GP [N][Y][R][ ][ ][ ][ ][ ][ ]
- ○ Other [ ][ ][ ][ ][ ][ ][ ][ ][ ][ ][ ][ ][ ][ ][ ][ ][ ][ ][ ][ ][ ][ ]
- ● None

41. Does this project require a US Army Corps of Engineers Wetland Permit? ○ **Yes** ● **No**
**If Yes, Indicate Size of Impact.** [ ][ ][ ][ ][ ][ ].[ ]

42. Is this project subject to the requirements of a regulated, traditional land use control MS4? ● **Yes** ○ **No**
**(If No, skip question 43)**

43. Has the "MS4 SWPPP Acceptance" form been signed by the principal executive officer or ranking elected official and submitted along with this NOI? ● **Yes** ○ **No**

44. If this NOI is being submitted for the purpose of continuing or transferring coverage under a general permit for stormwater runoff from construction activities, please indicate the former SPDES number assigned. [N][Y][R][ ][ ][ ][ ][ ][ ]

## Owner/Operator Certification

I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted.

## MS4 SWPPP Acceptance Form - continued

**V. Certification Statement - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative**

I hereby certify that the final Stormwater Pollution Prevention Plan (SWPPP) for the construction project identified in question 5 has been reviewed and meets the substantive requirements in the SPDES General Permit For Stormwater Discharges from Municipal Separate Storm Sewer Systems (MS4s). Note: The MS4, through the acceptance of the SWPPP, assumes no responsibility for the accuracy and adequacy of the design included in the SWPPP. In addition, review and acceptance of the SWPPP by the MS4 does not relieve the owner/operator or their SWPPP preparer of responsibility or liability for errors or omissions in the plan.

# NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity

**Please indicate your permit identification number:** NYR ___ ___ ___ ___ ___ ___

**I. Owner or Operator Information**

1. Owner/Operator Name: **Northsdie Junction, LLC**

2. Street Address: **1 Civic Center Plaza #200**

3. City/State/Zip: **Poughkeepsie, NY 12601**

4. Contact Person**: Caroline Alsup** | 4a.Telephone: **845-473-4440**

4b. Contact Person E-Mail: **calsup@scenichudson.com**

**II. Project Site Information**

5. Project/Site Name: **Scenic Hudson Workspace**

6. Street Address: **58 Parker Ave**

7. City/Zip: **Poughkeepsie, NY 12601**

8. County: **Dutchess**

**III. Reason for Termination**

9a. □ All disturbed areas have achieved final stabilization in accordance with the general permit and SWPPP. ***Date final stabilization completed** (month/year): _____

9b. □ Permit coverage has been transferred to new owner/operator. Indicate new owner/operator's permit identification number: NYR ___ ___ ___ ___ ___ ___
(Note: Permit coverage can not be terminated by owner identified in I.1. above until new owner/operator obtains coverage under the general permit)

9c. □ Other (Explain on Page 2)

**IV. Final Site Information**:

10a. Did this construction activity require the development of a SWPPP that includes post-construction stormwater management practices? □ yes □ no ( If no, go to question 10f.)

10b. Have all post-construction stormwater management practices included in the final SWPPP been constructed? □ yes □ no (If no, explain on Page 2)

10c. Identify the entity responsible for long-term operation and maintenance of practice(s)?

_____

## NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity - continued

10d. Has the entity responsible for long-term operation and maintenance been given a copy of the operation and maintenance plan required by the general permit? □ yes □ no

10e. Indicate the method used to ensure long-term operation and maintenance of the post-construction stormwater management practice(s):

□ Post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain practice(s) have been deeded to the municipality.

□ Executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s).

□ For post-construction stormwater management practices that are privately owned, a mechanism is in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the owner or operator's deed of record.

□ For post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university or hospital), government agency or authority, or public utility; policy and procedures are in place that ensures operation and maintenance of the practice(s) in accordance with the operation and maintenance plan.

10f. Provide the total area of impervious surface (i.e. roof, pavement, concrete, gravel, etc.) constructed within the disturbance area? _____ (acres)

11. Is this project subject to the requirements of a regulated, traditional land use control MS4? □ yes □ no

(If Yes, complete section VI - "MS4 Acceptance" statement

**V. Additional Information/Explanation:**

(Use this section to answer questions 9c. and 10b., if applicable)

**VI. MS4 Acceptance - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative** (Note: Not required when 9b. is checked -transfer of coverage)

I have determined that it is acceptable for the owner or operator of the construction project identified in question 5 to submit the Notice of Termination at this time.

# Appendix C:
# Contractor's Certification Form
# Subcontractor's Certification Form

This Page Intentionally Left Blank

**Stormwater Pollution Prevention Plan**
**Contractor Certification Statement**
**(Responsible for overall SWPPP Compliance)**

Scenic Hudson Workspace
58 Parker Ave, City of Poughkeepsie, Dutchess County, New York

This is to certify that the following contracting firm will be responsible for installing, constructing, repairing, inspecting and/or maintaining the erosion and sediment control practices and post-construction stormwater management control practices required by the SWPPP.

**Contracting Firm Information**

Name: _____

Address: _____

Telephone & Fax: _____

**Trained Contractor(s)[1] Responsible for SWPPP Implementation (**Provide name, title, and date of last training)

_____

_____

**Prior to commencement of construction activity, the following certification shall be issued:**

I hereby certify under penalty of law that I understand and agree to comply with the terms and conditions of the SWPPP and agree to implement any corrective actions identified by the *qualified inspector* during a site inspection. I also understand that the *owner or operator* must comply with the terms and conditions of the most current version of the New York State Pollutant Discharge Elimination System ("SPDES") general permit for stormwater *discharges* from *construction activities* and that it is unlawful for any person to cause or contribute to a violation of *water quality standards*. Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations.

Printed Name: _____

Title/Position: _____

Signature: _____ Date: _____

**Upon completion of construction activities, the following certification shall be issued, prior to issuance of the NOT:**

I hereby certify that that all permanent stormwater management practices required by the SWPPP have been installed in accordance with the contract documents. I further certify that all temporary erosion and sediment control measures have been removed from the site, and that the on-site soils disturbed by construction activity have been restored in accordance with the SWPPP and the NYSDEC Division of Water's publication "Deep-Ripping and Decompaction".

Printed Name: _____

Title/Position: _____

Signature: _____ Date: _____

[1] "Trained Contractor" means an employee from a contracting (construction) company that has received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the "trained contractor" shall receive four (4) hours of training every three (3) years. It can also mean an employee from the contracting (construction) company that meets the "qualified inspector" qualifications (e.g. licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, or someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity). The "Trained Contractor" will be responsible for the day to day implementation of the SWPPP.

[2] Signatory Requirements:

a. For a corporation, this form shall be signed by (i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principle business function, or any other person who performs similar policy or decision-making functions for the corporation; or (ii) the manager of one or more manufacturing, production or operating facilities, provided the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

b. For a partnership or sole proprietorship, this form shall be signed by a general partner or the proprietor, respectively.

c. For a municipality, State, Federal, or other public agency, this form shall be signed by either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal agency includes (i) the chief executive officer of the agency, or (ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g. Regional Administrators of EPA).

**Subcontractor Certification Statement**
**(whose work involves soil disturbance)**

Scenic Hudson Workspace

58 Parker Ave, City of Poughkeepsie, Dutchess County, New York

Each Subcontractor whose work will involve soil disturbance of any kind is required to complete and sign this Certification Statement before commencing any construction activity at the site. This completed Certification Statement(s) shall be maintained at the construction site in the Site Log Book.

**Subcontracting Firm Information**

Name: _____

Address: _____

_____

Telephone & Fax: _____

**Trained Contractor(s)[2] Responsible for SWPPP Implementation (**Provide name, title, and date of last training)

_____

_____

**Prior to commencement of construction activities, the following certification shall be issued:**

I hereby certify under penalty of law that I understand and agree to comply with the terms and conditions of the SWPPP and agree to implement any corrective actions identified by the *qualified inspector* during a site inspection. I also understand that the *owner or operator* must comply with the terms and conditions of the most current version of the New York State Pollutant Discharge Elimination System ("SPDES") general permit for stormwater *discharges* from *construction activities* and that it is unlawful for any person to cause or contribute to a violation of *water quality standards*. Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations.

Printed Name: _____

Title/Position: _____

Signature: _____ Date: _____

[2] "Trained Contractor" means an employee from a contracting (construction) company that has received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the "trained contractor" shall receive four (4) hours of training every three (3) years. It can also mean an employee from the contracting (construction) company that meets the "qualified inspector" qualifications (e.g. licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, or someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity). The "Trained Contractor" will be responsible for the day to day implementation of the SWPPP.

[2] Signatory Requirements:

a. For a corporation, this form shall be signed by (i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principle business function, or any other person who performs similar policy or decision-making functions for the corporation; or (ii) the manager of one or more manufacturing, production or operating facilities, provided the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

b. For a partnership or sole proprietorship, this form shall be signed by a general partner or the proprietor, respectively.

c. For a municipality, State, Federal, or other public agency, this form shall be signed by either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal agency includes (i) the chief executive officer of the agency, or (ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g. Regional Administrators of EPA).

_____

_____

[1] *A Qualified Inspector means a person that is knowledgeable in the principles and practices of erosion and sediment control, such as licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, or other Department endorsed individual(s). It can also mean someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided that person has training in the principles and practices of erosion and sediment control. Training in the principles and practices of erosion and sediment control means that the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect has received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect shall receive four (4) hours of training every three (3) years. It can also mean a person that meets the Qualified Professional qualifications in addition to the Qualified Inspector qualifications. Note: Inspections of any post-construction stormwater management practices that include structural components, such as a dam for an impoundment, shall be performed by a licensed Professional Engineer.*

4. **In the following table, provide a description of the condition of the runoff at all points of discharge from the construction site, including conveyance systems (pipes, culverts, ditches, etc.) and overland flow. Provide a description of the condition of all natural surface waterbodies located within the property boundaries of the construction site which receive runoff from disturbed areas. Identify any discharges of sediment from the construction site. Use additional sheets if necessary.**

Alternative Stormwater Management
Deep-Ripping and Decompaction

## Description

The two-phase practice of 1) “Deep Ripping;” and 2) “Decompaction” (deep subsoiling), of the soil material as a step in the cleanup and restoration/landscaping of a construction site, helps mitigate the physically induced impacts of soil compression; i.e.: soil compaction or the substantial increase in the bulk density of the soil material.

Deep Ripping and Decompaction are key factors which help in restoring soil pore space and permeability for water infiltration. Conversely, the physical actions of cut-and-fill work, land grading, the ongoing movement of construction equipment and the transport of building materials throughout a site alter the architecture and structure of the soil, resulting in: the mixing of layers (horizons) of soil materials, compression of those materials and diminished soil porosity which, if left unchecked, severely impairs the soil’s water holding capacity and vertical drainage (rainfall infiltration), from the surface downward.

In a humid climate region, compaction damage on a site is virtually guaranteed over the duration of a project. Soil in very moist to wet condition when compacted, will have severely reduced permeability. Figure 1 displays the early stage of the deep-ripping phase (Note that all topsoil was stripped prior to construction access, and it remains stockpiled until the next phase – decompaction – is complete). A heavy-duty tractor is pulling a three-shank ripper on the first of several series of incrementally deepening passes through the construction access corridor's densely compressed subsoil material. Figure 2 illustrates the approximate volumetric composition of a loam surface soil when conditions are good for plant growth, with adequate natural pore space for fluctuating moisture conditions.

Fig. 1. A typical deep ripping phase of this practice, during the first in a series of progressively deeper “rips” through severely compressed subsoil.

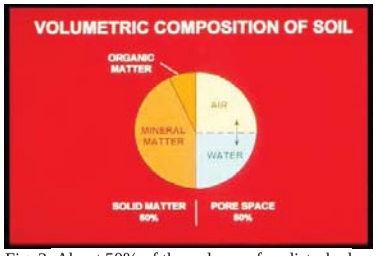

Fig. 2. About 50% of the volume of undisturbed loam surface soil is pore space, when soil is in good condition for plant growth. Brady, 2002.

## Recommended Application of Practice

Fig. 3. Construction site with significant compaction of the deep basal till subsoil extends 24 inches below this exposed cut-and-fill work surface.

The objective of Deep Ripping and Decompaction is to effectively fracture (vertically and laterallly) through the thickness of the physically compressed subsoil material (see Figure 3), restoring soil porosity and permeability and aiding infiltration to help reduce runoff. Together with topsoil stripping, the “two-phase” practice of Deep Ripping and Decompaction first became established as a “best management practice” through ongoing success on commercial farmlands affected by heavy utility construction right-of-way projects (transmission pipelines and large power lines).

Soil permeability, soil drainage and cropland productivity were restored. For broader construction application, the two-phase practice of Deep Ripping and Decompaction is best adapted to areas impacted with significant soil compaction, on contiguous open portions of large construction sites and inside long, open construction corridors used as temporary access over the duration of construction. Each mitigation area should have minimal above-and-below-ground obstructions for the easy avoidance and maneuvering of a large tractor and ripping/decompacting implements. Conversely, the complete two-phase practice is not recommended in congested or obstructed areas due to the limitations on tractor and implement movement.

## Benefits

Aggressive “deep ripping” through the compressed thickness of exposed subsoil before the replacement/respreading of the topsoil layer, followed by “decompaction,” i.e.: “sub-soiling,” through the restored topsoil layer down into the subsoil, offers the following benefits:

- Increases the project (larger size) area’s direct surface infiltration of rainfall by providing the open site’s mitigated soil condition and lowers the demand on concentrated runoff control structures
- Enhances direct groundwater recharge through greater dispersion across and through a broader surface than afforded by some runoff-control structural measures
- Decreases runoff volume generated and provides hydrologic source control
- May be planned for application in feasible open locations either alone or in

conjunction with plans for structural practices (e.g., subsurface drain line or infiltration basin) serving the same or contiguous areas

- Promotes successful long-term revegetation by restoring soil permeability, drainage and water holding capacity for healthy (rather than restricted) root-system development of trees, shrubs and deep rooted ground cover, minimizing plant drowning during wet periods and burnout during dry periods.

## Feasibility/Limitations

The effectiveness of Deep Ripping and Decompaction is governed mostly by site factors such as: the original (undisturbed) soil's hydrologic characteristics; the general slope; local weather/timing (soil moisture) for implementation; the space-related freedom of equipment/implement maneuverability (noted above in **Recommended Application of Practice**), and by the proper selection and operation of tractor and implements (explained below in **Design Guidance**). The more notable site-related factors include:

**Soil**
In the undisturbed condition, each identified soil type comprising a site is grouped into one of four categories of soil hydrology, Hydrologic Soil Group A, B, C or D, determined primarily by a range of characteristics including soil texture, drainage capability when thoroughly wet, and depth to water table. The natural rates of infiltration and transmission of soil-water through the undisturbed soil layers for Group A is "high" with a low runoff potential while soils in Group B are moderate in infiltration and the transmission of soil-water with a moderate runoff potential, depending somewhat on slope. Soils in Group C have slow rates of infiltration and transmission of soil-water and a moderately high runoff potential influenced by soil texture and slope; while soils in Group D have exceptionally slow rates of infiltration and transmission of soil-water, and high runoff potential.

In Figure 4, the profile displays the undisturbed horizons of a soil in Hydrologic Soil Group C and the naturally slow rate of infiltration through the subsoil. The slow rate of infiltration begins immediately below the topsoil horizon (30 cm), due to the limited amount of macro pores, e.g.: natural subsoil fractures, worm holes and root channels. Infiltration after the construction-induced mixing and compression of such subsoil material is virtually absent; but can be restored back to this natural level with the two-phase practice of deep ripping and decompaction, followed by the permanent establishment of an appropriate, deep taproot

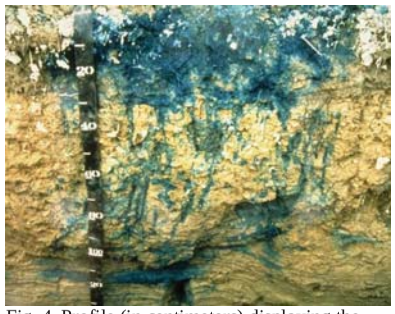

Fig. 4. Profile (in centimeters) displaying the infiltration test result of the natural undisturbed horizons of a soil in Hydrologic Soil Group C.

lawn/ground cover to help maintain the restored subsoil structure. Infiltration after construction-induced mixing and compression of such subsoil material can be notably rehabilitated with the Deep Ripping and Decompaction practice, which prepares the site for the appropriate long-term lawn/ground cover mix including deep taproot plants such as clover, fescue or trefoil, etc. needed for all rehabilitated soils.

Generally, soils in Hydrologic Soil Groups A and B, which respectively may include deep, well-drained, sandy-gravelly materials or deep, moderately well-drained basal till materials, are among the easier ones to restore permeability and infiltration, by deep ripping and decompaction. Among the many different soils in Hydrologic Soil Group C are those unique glacial tills having a natural fragipan zone, beginning about 12 to 18 inches (30 – 45cm), below surface. Although soils in Hydrologic Soil Group C do require a somewhat more carefully applied level of the Deep Ripping and Decompaction practice, it can greatly benefit such affected areas by reducing the runoff and fostering infiltration to a level equal to that of pre-disturbance.

Soils in Hydrologic Soil Group D typically have a permanent high water table close to the surface, influenced by a clay or other highly impervious layer of material. In many locations with clay subsoil material, the bulk density is so naturally high that heavy trafficking has little or no added impact on infiltration; and structural runoff control practices rather than Deep Ripping and Decompaction should be considered.

The information about Hydrologic Soil Groups is merely a general guideline. Site-specific data such as limited depths of cut-and-fill grading with minimal removal or translocation of the inherent subsoil materials (as analyzed in the county soil survey) or, conversely, the excavation and translocation of deeper, unconsolidated substratum or consolidated bedrock materials (unlike the analyzed subsoil horizons' materials referred to in the county soil survey) should always be taken into account.

Sites made up with significant quantities of large rocks, or having a very shallow depth to bedrock, are not conducive to deep ripping and decompation (subsoiling); and other measures may be more practical.

**Slope**
The two-phase application of 1) deep ripping and 2) decompaction (deep subsoiling), is most practical on flat, gentle and moderate slopes. In some situations, such as but not limited to temporary construction access corridors, inclusion areas that are moderately steep along a project's otherwise gentle or moderate slope may also be deep ripped and decompacted. For limited instances of moderate steepness on other projects, however, the post-construction land use and the relative alignment of the potential ripping and decompaction work in relation to the lay of the slope should be reviewed for safety and practicality. In broad construction areas predominated by moderately steep or steep slopes, the practice is generally not used.

**Local Weather/Timing/Soil Moisture**
Effective fracturing of compressed subsoil material from the exposed work surface, laterally and vertically down through the affected zone is achieved only when the soil material is moderately dry to moderately moist. Neither one of the two-phases, deep ripping nor decompaction (deep

subsoiling), can be effectively conducted when the soil material (subsoil or replaced topsoil) is in either a “plastic” or “liquid” state of soil consistency. Pulling the respective implements legs through the soil when it is overly moist only results in the “slicing and smearing” of the material or added “squeezing and compression” instead of the necessary fracturing. Ample drying time is needed for a “rippable” soil condition not merely in the material close to the surface, but throughout the material located down to the bottom of the physically compressed zone of the subsoil.

The “poor man’s Atterberg field test” for soil plasticity is a simple “hand-roll” method used for quick, on-site determination of whether or not the moisture level of the affected soil material is low enough for: effective deep ripping of subsoil; respreading of topsoil in a friable state; and final decompaction (deep subsoiling). Using a sample of soil material obtained from the planned bottom depth of ripping, e.g.: 20 - 24 inches below exposed subsoil surface, the sample is hand rolled between the palms down to a 1/8-inch diameter thread. (Use the same test for stored topsoil material before respreading on the site.) If the respective soil sample crumbles apart in segments no greater than 3/8 of an inch long, by the time it is rolled down to 1/8 inch diameter, it is low enough in moisture for deep ripping (or topsoil replacement), and decompaction. Conversely, as shown in Figure 5, if the rolled sample stretches out in increments greater than 3/8 of an inch long before crumbling, it is in a “plastic” state of soil consistency and is too wet for subsoil ripping (as well as topsoil replacement) and final decompaction.

Fig. 5. Augered from a depth of 19 inches below the surface of the replaced topsoil, this subsoil sample was hand rolled to a 1/8-inch diameter. The test shows the soil at this site stretches out too far without crumbling; it indicates the material is in a plastic state of consistence, too wet for final decompaction (deep subsoiling) at this time.

## Design Guidance

Beyond the above-noted site factors, a vital requirement for the effective Deep Ripping and Decompaction (deep subsoiling), is implementing the practice in its distinct, two-phase process:

1) Deep rip the affected thickness of exposed subsoil material (see Figure 10 and 11), aggressively fracturing it before the protected topsoil is reapplied on the site (see Figure 12); and

2) Decompact (deep subsoil), simultaneously through the restored topsoil layer and the upper half of the affected subsoil (Figure 13). The second phase, “decompaction,” mitigates the partial recompaction which occurs during the heavy process of topsoil spreading/grading. Prior to deep ripping and decompacting the site, all construction activity, including construction equipment and material storage, site cleanup and trafficking (Figure 14), should be finished; and the site closed off to further disturbance. Likewise, once the practice is underway and the area’s soil permeability and

rainfall infiltration are being restored, a policy limiting all further traffic to permanent travel lanes is maintained.

The other critical elements, outlined below, are: using the proper implements (deep, heavy-duty rippers and subsoilers), and ample pulling-power equipment (tractors); and conducting the practice at the appropriate speed, depth and pattern(s) of movement.

Note that an appropriate plan for the separate practice of establishing a healthy perennial ground cover, with deep rooting to help maintain the restored soil structure, should be developed in advance. This may require the assistance of an agronomist or landscape horticulturist.

**Implements**

Avoid the use of all undersize implements. The small-to-medium, light-duty tool will, at best, only “scarify” the uppermost surface portion of the mass of compacted subsoil material. The term “chisel plow” is commonly but incorrectly applied to a broad range of implements. While a few may be adapted for the moderate subsoiling of non-impacted soils, the majority are less durable and used for only lighter land-fitting (see Figure 6).

Fig. 6. A light duty chisel implement, not adequate for either the deep ripping or decompaction (deep subsoiling) phase.

Fig. 7. One of several variations of an agricultural ripper. This unit has long, rugged shanks mounted on a steel V-frame for deep, aggressive fracturing through Phase 1.

Use a “heavy duty” agricultural-grade, deep ripper (see Figures 7,9,10 and 11) for the first phase: the lateral and vertical fracturing of the mass of exposed and compressed subsoil, down and through, to the bottom of impact, prior to the replacement of the topsoil layer. (Any oversize rocks which are uplifted to the subsoil surface during the deep ripping phase are picked and removed.) Like the heavy-duty class of implement for the first phase, the decompaction (deep subsoiling) of Phase 2 is conducted with the heavy-duty version of the deep subsoiler. More preferable is the angled-leg variety of deep subsoiler (shown in Figures 8 and 13). It minimizes the inversion of the subsoil and topsoil layers while laterally and vertically fracturing the upper half of the previously ripped subsoil layer and all of the topsoil layer by delivering a momentary, wave-like “lifting and shattering” action up through the soil layers as it is pulled.

**Pulling-Power of Equipment**
Use the following rule of thumb for tractor horsepower (hp) whenever deep ripping and decompacting a significantly impacted site: For both types of implement, have at least 40 hp of tractor pull available for each mounted shank/ leg.

Using the examples of a 3-shank and a 5-shank implement, the respective tractors should have 120 and 200 hp available for fracturing down to the final depth of 20-to-24 inches per phase. Final depth for the deep ripping in Phase 1 is achieved incrementally by a progressive series of passes (see Depth and Patterns of Movement, below); while for Phase 2, the full operating depth of the deep subsoiler is applied from the beginning.

The operating speed for pulling both types of implement should not exceed 2 to 3 mph. At this slow and managed rate of operating speed, maximum functional performance is sustained by the tractor and the implement performing the soil fracturing. Referring to Figure 8, the implement is the 6-leg version of the deep angled-leg subsoiler. Its two outside legs are "chained up" so that only four legs will be engaged (at the maximum depth), requiring no less than 160 hp, (rather than 240 hp) of pull. The 4-wheel drive, articulated-frame tractor in Figure 8 is 174 hp. It will be decompacting this unobstructed, former construction access area simultaneously through 11 inches of replaced topsoil and the upper 12 inches of the previously deep-ripped subsoil. In constricted areas of Phase 1) Deep Ripping, a medium-size tractor with adequate hp, such as the one in Figure 9 pulling a 3-shank deep ripper, may be more maneuverable.

Fig. 8. A deep, angled-leg subsoiler, ideal for Phase 2 decompaction of after the topsoil layer is graded on top of the ripped subsoil.

Fig. 9. This medium tractor is pulling a 3-shank deep ripper. The severely compacted construction access corridor is narrow, and the 120 hp tractor is more maneuverable for Phase 1 deep ripping (subsoil fracturing), here.

Some industrial-grade variations of ripping implements are attached to power graders and bulldozers. Although highly durable, they are generally not recommended. Typically, the shanks or "teeth" of these rippers are too short and stout; and they are mounted too far apart to achieve the well-distributed type of lateral and vertical fracturing of the soil materials necessary to restore soil permeability and infiltration. In addition, the power graders and bulldozers, as pullers, are far less maneuverable for turns and patterns than the tractor.

**Depth and Patterns of Movement**
As previously noted both Phase 1 Deep Ripping through significantly compressed, exposed subsoil and Phase 2 Decompaction (deep subsoiling) through the replaced topsoil and upper subsoil need to be performed at maximum capable depth of each implement. With an implement's guide wheels attached, some have a "normal" maximum operating depth of 18 inches, while others may go deeper. In many situations, however, the tractor/implement operator must first remove the guide wheels and other non essential elements from the implement. This adapts the ripper or the deep subsoiler for skillful pulling with its frame only a few inches above surface, while the shanks or legs, fracture the soil material 20-to-24 inches deep.

There may be construction sites where the depth of the exposed subsoil's compression is moderate, e.g.: 12 inches, rather than deep. This can be verified by using a ¾ inch cone penetrometer and a shovel to test the subsoil for its level of compaction, incrementally, every three inches of increasing depth. Once the full thickness of the subsoil's compacted zone is finally "pieced" and there is a significant drop in the psi measurements of the soil penetrometer, the depth/thickness of compaction is determined. This is repeated at several representative locations of the construction site. If the thickness of the site's subsoil compaction is verified as, for example, ten inches, then the Phase 1 Deep Ripping can be correspondingly reduced to the implement's minimum operable depth of 12 inches. However, the Phase 2 simultaneous Decompation (subsoiling) of an 11 inch thick layer of replaced topsoil and the upper subsoil should run at the subsoiling implements full operating depth.

Fig. 10. An early pass with a 3-shank deep ripper penetrating only 8 inches into this worksite's severely compressed subsoil.

Fig. 11. A repeat run of the 3-shank ripper along the same patterned pass area as Fig. 9; here, incrementally reaching 18 of the needed 22 inches of subsoil fracture.

Typically, three separate series (patterns) are used for both the Phase 1 Deep Ripping and the Phase 2 Decompaction on significantly compacted sites. For Phase 1, each series begins with a moderate depth of rip and, by repeat-pass, continues until full depth is reached. Phase 2 applies the full depth of Decompation (subsoiling), from the beginning.

Every separate series (pattern) consists of parallel, forward-and-return runs, with each progressive

pass of the implement's legs or shanks evenly staggered between those from the previous pass. This compensates for the shank or leg-spacing on the implement, e.g., with 24-to-30 inches between each shank or leg. The staggered return pass ensures lateral and vertical fracturing actuated every 12 to 15 inches across the densely compressed soil mass.

**Large, Unobstructed Areas**
For larger easy areas, use the standard patterns of movement:

- The first series (pattern) of passes is applied lengthwise, parallel with the longest spread of the site; gradually progressing across the site's width, with each successive pass.

- The second series runs obliquely, crossing the first series at an angle of about 45 degrees.

- The third series runs at right angle (or 90 degrees), to the first series to complete the fracturing and shattering on severely compacted sites, and avoid leaving large unbroken blocks of compressed soil material. (In certain instances, the third series may be optional, depending on how thoroughly the first two series loosen the material and eliminate large chunks/blocks of material as verified by tests with a ¾-inch cone penetrometer.)

Fig. 12. Moderately dry topsoil is being replaced on the affected site now that Phase 1 deep ripping of the compressed subsoil is complete.

Fig. 13. The same deep, angled-leg subsoiler shown in Fig. 7 is engaged at maximum depth for Phase 2, decompaction (deep soiling), of the replaced topsoil and the upper subsoil materials.

**Corridors**
In long corridors of limited width and less maneuverability than larger sites, e.g.: along compacted areas used as temporary construction access, a modified series of pattern passes are used.

- First, apply the same initial lengthwise, parallel series of passes described above.

- A second series of passes makes a broad "S" shaped pattern of rips, continually and gradually alternating the "S" curves between opposite edges inside the compacted corridor.

- The third and final series again uses the broad, alternating S pattern, but it is "flip-flopped" to continually cross the previous S pattern along the corridor's centerline. This final series of the S pattern curves back along the edge areas skipped by the second series.

## Maintenance and Cost

Once the two-phase practice of Deep Ripping and Decompation is completed, two items are essential for maintaining a site's soil porosity and permeability for infiltration. They are: planting and maintaining the appropriate ground cover with deep roots to maintain the soil structure (see Figure 15); and keeping the site free of traffic or other weight loads.

Note that site-specific choice of an appropriate vegetative ground-cover seed mix, including the proper seeding ratio of one or more perennial species with a deep taproot system and the proper amount of lime and soil nutrients (fertilizer mix) adapted to the soil-needs, are basic to the final practice of landscaping, i.e: surface tillage, seeding/planting/fertilizing and culti-packing or mulching is applied. The "maintenance" of an effectively deep-ripped and decompacted area is generally limited to the successful perennial (long-term) landscape ground cover; as long as no weight-bearing force of soil compaction is applied.

Fig. 14. The severely compacted soil of a temporary construction yard used daily by heavy equipment for four months; shown before deep ripping, topsoil replacement, and decompaction.

Fig. 15. The same site as Fig. 14 after deep ripping of the exposed subsoil, topsoil replacement, decompaction through the topsoil and upper subsoil and final surface tillage and revegetation to maintain soil permeability and infiltration.

The Deep Ripping and Decompaction practice is, by necessity, more extensive than periodic subsoiling of farmland.The cost of deep ripping and decompacting (deep subsoiling), will vary according to the depth and severity of soil-material compression and the relative amount of tractor and implement time that is required. In some instances, depending on open maneuverability, two-to-three acres of compacted project area may be deep-ripped in one day. In other situations of more severe compaction and - or less maneuverability, as little as one acre may be fully ripped in a day. Generally, if the Phase 1) Deep Ripping is fully effective, the Phase 2) Decompaction should be completed in 2/3 to 3/4 of the time required for Phase 1.

Using the example of two acres of Phase 1) Deep Ripping in one day, at $1800 per day, the net cost is $900 per acre. If the Phase 2) Decompacting or deep subsoiling takes 3/4 the time as Phase 1, it costs $675 per acre for a combined total of $1575 per acre to complete the practice (these figures do not include the cost of the separate practice of topsoil stripping and replacement). Due to the many variables, it must be recognized that cost will be determined by the specific conditions or constraints of the site and the availability of proper equipment.

This Page Intentionally Left Blank

# Appendix F:
# Post-Construction Inspections and Maintenance

This Page Intentionally Left Blank

# POST CONSTRUCTION INSPECTIONS AND MAINTENANCE

## 1. SITE COVER

### a. Inspections

Site cover and associated structures and embankments should be inspected periodically for the first few months following construction and then on a biannual basis. Site inspections should also be performed following all major storm events. Items to check for include (but are not limited to):

i. Differential settlement of embankments, cracking or erosion.

ii. Lack of vigor and density of grass turf.

iii. Accumulation of sediments or litter on lawn areas, paved areas, or within catch basin sumps.

iv. Accumulation of pollutants, including oils or grease, in catch basin sumps.

v. Damage or fatigue of storm sewer structures or associated components.

### b. Mowing and Sweeping

Vegetated areas and landscaping should be maintained to promote vigorous and dense growth. Lawn areas should be mowed at least three times a year (more frequent mowing may be desired for aesthetic reasons). Resultant yard waste shall be collected and disposed of off-site.

Paved areas should be swept at least twice a year. Additional sweeping may be appropriate in the early spring for removal of deicing materials

### c. Debris and Litter Removal

Accumulation of litter and debris should be removed during each mowing or sweep operation.

### d. Structural Repair or Replacement

Components of the system which require repair or replacement should be addressed immediately following identification.

### e. Catch Basins

The frequency for cleanout of catch basin sumps will depend on the efficiency of mowing, sweeping, and debris and litter removal. Sumps should be cleaned when accumulation of sediments are within six inches of the catch basin outlet pipe.

Disposal of material from catch basins sumps, drainage manholes, and trench drains shall be in accordance with local, state, and federal guidelines.

**f. Rip-rap Dissipation structures**

Rip-rap used to dissipate energy from pipe outfalls shall be cleaned or replaced when it becomes overburdened with silt or sediment.

**g. Winter Maintenance**

To prevent impacts to storm water management facilities, the following winter maintenance limitations, restrictions, or requirements are recommended:

i. Remove snow and ice from inlet structures, basin inlet and outlet structures and away from culvert end sections.

ii. Snow removed from paved areas should not be piled at inlets/outlets of the storm water management basin.

iii. Use of deicing materials should be limited to sand and "environmentally friendly" chemical products. Use of salt mixtures should be kept to a minimum.

iv. Sand used for deicing should be clean, course material free of fines, silt, and clay.

v. Materials used for deicing should be removed during the early spring by sweeping and/ or vacuuming.

## 2. BIORETENTION FILTERS

**a. Inspection Schedule**

Bioretention filters should be inspected periodically for the first few months after construction and then on a monthly basis. Bioretention filters should be inspected after all major storm events.

**b. Inspection of Uphill Drainage Area**

Inspect areas that are uphill from the Bioretention filter.

i. Bare soil and/or erosion of the ground should be seeded and mulches to establish vegetation. Areas of erosion should be filled with soil, compacted, and seeded and strawed to establish vegetation.

ii. If a small channel(s) is forming, try to redirect water flowing to this area by creating a small berm or adding topsoil to areas that are heavily compacted.

iii. Piles of grass clippings, mulch, dirt, salt or other materials should be removed.

iv. Open containers of oil, grease, paint, or other substances should be covered and properly disposed of.

**c. Inspection of Inlets**

Stand in the Bioretention filter itself and inspect each location where water flows in.

i. Inlets should have a clear pathway for water to flow into the filter. Grit and debris or grass/weeds should be removed at curb inlets or openings.

ii. Clumps of growing grass or weeds and the associated soil or grit should be removed.

iii. Grass clippings, leaves, sticks, and other debris collecting at inlets should be removed.

iv. For pipes and ditches, sediment and debris partially blocking the pipe or ditch opening into the Bioretention filter should be removed.

v. All materials removed should be properly disposed in such a way that it may not re-enter the Bioretention filter.

vi. Small areas of erosion should be smoothed out and rock or stone applied to prevent further erosion. Reseeding and applying erosion-control matting can be used to prevent further erosion.

**d. Inspection of Ponding Area**

Examine the entire Bioretention surface and side slopes:

i. In areas where the mulch layer has decomposed or is less than 1-inch thick, new mulch should be added to a total depth of 2 to 3 inches. The mulch should be a shredded hardwood mulch that is less likely to float away during rainstorms. Avoid adding too much mulch so that inlets are obstructed, or certain areas become higher than the rest of the Bioretention surface.

ii. Excess sediment, grit, trash, or other debris that has accumulated on the bottom should be removed and disposed of in such a way that it cannot re-enter the Bioretention filter. If removing the material creates a hole or low area, fill in with a soil mix that matches the original mix and cover with mulch to create a flat surface.

iii. Eroded areas in the bottom or on the side slopes should be filled with clean topsoil or sand and covered with mulch. If the problem reoccurs, stone can be used to fill in the areas. If the erosion is on a side slope, fill in with clay that can be compacted and seed and mulch the area.

iv. The bottom of the Bioretention filter should be flat. The surface should be raked or mulch added to low spots to create a more level surface.

**e. Inspection of Vegetation**

Examine all Bioretention filter vegetation:

i. Weeds and dead and/or diseased plants should be removed and the mulch surrounding these replaced. Plants should be added to fill in areas that are not well vegetated.

ii. If bioretention filter utilized a vegetated seed mix, then grass areas shall be mowed to ensure that grass height does not exceed 6-inches.

iii. Undesirable trees and shrubs should be removed. Resultant yard wastes shall be collected and disposed of off-site

**f. Inspection of Outlets**

Examine the outlets that release water out of the Bioretention filter:

i. Stone should be added in areas of erosion at the outlet to reduce the impact from the water flowing out of the outlet pipe or weir during storms.

ii. Outlet obstructions should be removed and disposed of where it cannot re-enter the Bioretention filter.

**g. Debris, Trash and Litter Control**

Removal of debris and litter shall be accomplished during mowing operations. Inlet structures should be cleared of all debris and litter.

**h. Structural Repairs and Replacement**

Components of the bioretention filter, which require repair or replacement, should be addressed immediately following identification. This includes treating and or replacing diseased trees and shrub, fertilizing as necessary, replacing tree stakes and wires, replacing mulch where bare spots appear, replacing clogged underdrains, filter beds, and pea gravel diaphragm.

**i. Erosion and Sediment Control**

Sources of sedimentation, specifically eroded areas in upland drainage areas, should be stabilized immediately upon identification. Stabilization should be with vegetative practices or other erosion control practices when vegetative measures do not prove effective.

Soil slumpage, erosion of the embankments or around inlets/outlets, and cracking should be stabilized and repaired immediately upon identification.

**j. Sediment Removal**

Sediments that accumulate in the bioretention filter should be removed annually to prevent clogging of inlet or outlet structures. Disposal of material removed from bioretention filter shall be in accordance with local, state, and federal guidelines.

## 3. GREEN ROOF

**a. Inspection of Vegetation and Surface**

Visually inspect the surface and vegetation of the practice:

i. Wilting or nutrient-deprived vegetation should be watered or irrigated and dead or dying vegetation pruned or removed. Weeds should be removed by hand and lime should be applied to kill moss.

**b. Inspection of Overflows and Drains**

Remove the cover and inspect the ports:

i. Debris should be removed by hand or flushed through with a hose.

# 4. HYDRODYNAMIC DEVICE

The hydrodynamic device is a confined space environment and only properly trained personnel possessing the necessary safety equipment should enter the unit to perform maintenance or inspection.

**a. Inspection Schedule**

The hydrodynamic device shall be inspected every four months.

**b. Inspection Items**

The unit's internal components should be inspected for any signs of damage or any loosening of the bolts used to fasten the various components to the manhole structure and to each other.

Refer to attached Operations and Maintenance Guidelines, for the CDS-4 (2015) Hydrodynamic Device, for the manufacturer's detailed inspection and maintenance requirements.

**c. Debris, Trash and Litter Control**

The screen shall be power washed for the inspection. The floatables shall be removed and the sump cleaned when it has reached 50% capacity. The unit may require cleaning in the event of a spill of a toxic or foreign substance. At a minimum, the hydrodynamic device shall be pumped out at least once a year if the sump does not reach its 50% capacity.

**d. Sediment removal**

Disposal of material from the hydrodynamic device shall be in accordance with local, state, and federal guidelines.

# 5. POROUS WALKWAYS

**a. Inspection Schedule**

Porous pavement surfaces shall be inspected periodically after construction, and then on a monthly basis.

**b. Inspection of Uphill Drainage Area**

Look for areas that are uphill from the porous pavement

i. Bare soil should be seeded and strawed to establish vegetation. Areas of erosion should be filled in with soil, compacted, and seeded and strawed to establish vegetation. If a small channel(s) forms, water flowing to this area should be redirected by creating a small berm or add topsoil to areas that are heavily compacted.

ii. Piles of grass clippings, mulch, dirt, salt, or other materials should be removed.

iii. Open containers of oil, grease, paint, or other substances should be covered or properly disposed.

### c. Inspection of Surface

Examine the entire porous pavement surface:

i. Dirt and grit accumulation on the pavement surface should be removed utilizing a blower or sweeping the area. If dirt/grit remain in the joint areas, agitate with a rough brush and vacuum the surface with a wet/dry vac. Clogged blocks should be removed and replaced. Any material removed should be disposed where it cannot re-enter the system.

ii. If the paver type is not intended to be covered in vegetation, grass/weeds should be removed either mechanically or with an herbicide.

iii. Damaged pavers should be removed and replaced in areas of slumping, sinking, cracking, or breaking of the pavement surface. The fill in the underlying gravel should be checked and replaced with new materials if necessary.

## 6. UNDERGROUND INFILTRATION SYSTEM

### a. Inspection Schedule

Underground infiltration systems should be inspected periodically for the first few months after construction and then on an annual basis. Underground infiltration systems should be inspected after major storm events to ensure inlets and outlets remain clear.

### b. Inspection Items

Items to check for include (but are not limited to):

i. Measure the sediment buildup at each riser.

ii. Inspect each header, all laterals, inlets, and outlet pipes for sediment build up, obstructions or other problems. Cracking, erosion or seepage through embankments.

Refer to the attached Stormtech “Isolator Row Operations and Maintenance Manual” for the manufacturer’s inspection and maintenance requirements.

### c. Debris and Litter Control

Inlet and outlet structures should be cleared of all debris and litter.

### d. Structural repairs and Replacement

Components of the underground infiltration system, which require repair or replacement, should be addressed immediately following identification.

**e. Sedimentation Control**

Sources of sedimentation, specifically eroded areas in upland drainage areas, should be stabilized immediately upon identification. Stabilization should be with vegetative practices or other erosion control practices when vegetative measures do not prove effective.

**f. Sediment removal**

Sediments, which accumulate in the underground infiltration system, should be removed when it reaches 4% of the pipe diameter to prevent clogging of the outlet. A typical clean-out cycle should be between 5 to 10 years with more frequent cleanings near inlet and outlet structures. The unit may require cleaning in the event of a spill of a toxic or foreign substance. Disposal of material from the underground infiltration systems shall be in accordance with local, state, and federal guidelines.

Underground infiltration systems are confined space environment and only properly trained personnel possessing the necessary safety equipment should enter the systems to perform maintenance or inspection.

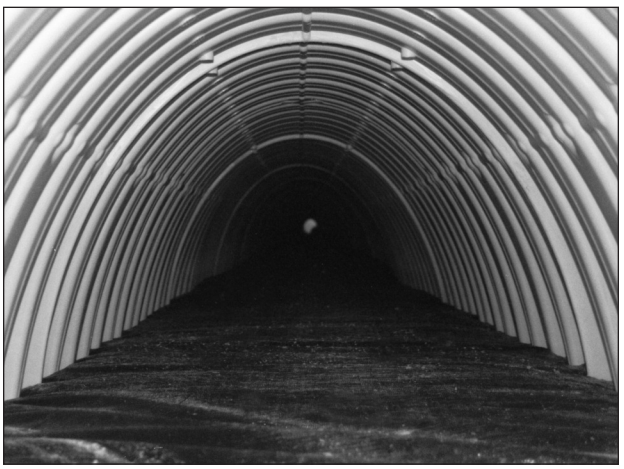
## Save Valuable Land and Protect Water Resources



# Isolator® Row O&M Manual

StormTech® Chamber System for Stormwater Management

# 1.0 The Isolator® Row

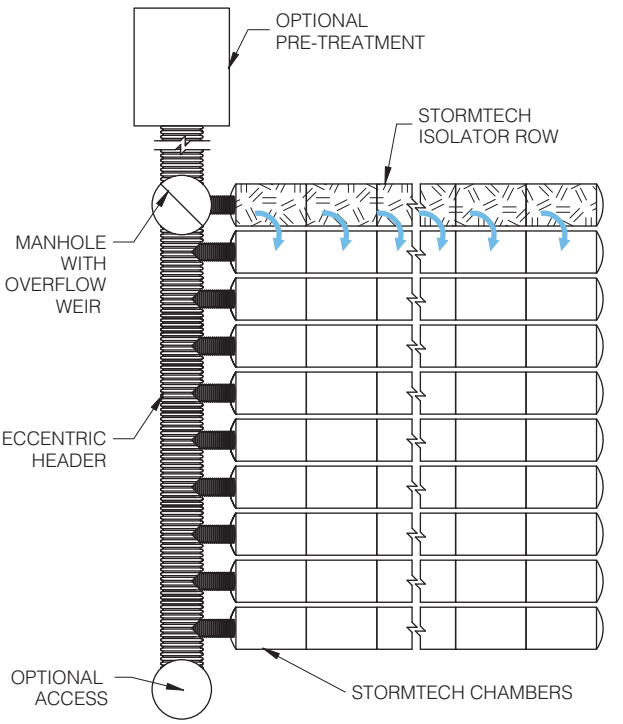
## 1.1 INTRODUCTION

An important component of any Stormwater Pollution Prevention Plan is inspection and maintenance. The StormTech Isolator Row is a patented technique to inexpensively enhance Total Suspended Solids (TSS) removal and provide easy access for inspection and maintenance.

*Looking down the Isolator Row from the manhole opening, woven geotextile is shown between the chamber and stone base.*

## 1.2 THE ISOLATOR ROW

The Isolator Row is a row of StormTech chambers, either SC-310, SC-310-3, SC-740, DC-780, MC-3500 or MC-4500 models, that is surrounded with filter fabric and connected to a closely located manhole for easy access. The fabric-wrapped chambers provide for settling and filtration of sediment as storm water rises in the Isolator Row and ultimately passes through the filter fabric. The open bottom chambers and perforated sidewalls (SC-310, SC-310-3 and SC-740 models) allow storm water to flow both vertically and horizontally out of the chambers. Sediments are captured in the Isolator Row protecting the storage areas of the adjacent stone and chambers from sediment accumulation.



Two different fabrics are used for the Isolator Row. A woven geotextile fabric is placed between the stone and the Isolator Row chambers. The tough geotextile provides a media for storm water filtration and provides a durable surface for maintenance operations. It is also designed to prevent scour of the underlying stone and remain intact during high pressure jetting. A non-woven fabric is placed over the chambers to provide a filter media for flows passing through the perforations in the sidewall of the chamber. The non-woven fabric is not required over the DC-780, MC-3500 or MC-4500 models as these chambers do not have perforated side walls.

The Isolator Row is typically designed to capture the "first flush" and offers the versatility to be sized on a volume basis or flow rate basis. An upstream manhole not only provides access to the Isolator Row but typically includes a high flow weir such that storm water flowrates or volumes that exceed the capacity of the Isolator Row overtop the over flow weir and discharge through a manifold to the other chambers.

The Isolator Row may also be part of a treatment train. By treating storm water prior to entry into the chamber system, the service life can be extended and pollutants such as hydrocarbons can be captured. Pre-treatment best management practices can be as simple as deep sump catch basins, oil-water separators or can be innovative storm water treatment devices. The design of the treatment train and selection of pretreatment devices by the design engineer is often driven by regulatory requirements. Whether pretreatment is used or not, the Isolator Row is recommended by StormTech as an effective means to minimize maintenance requirements and maintenance costs.

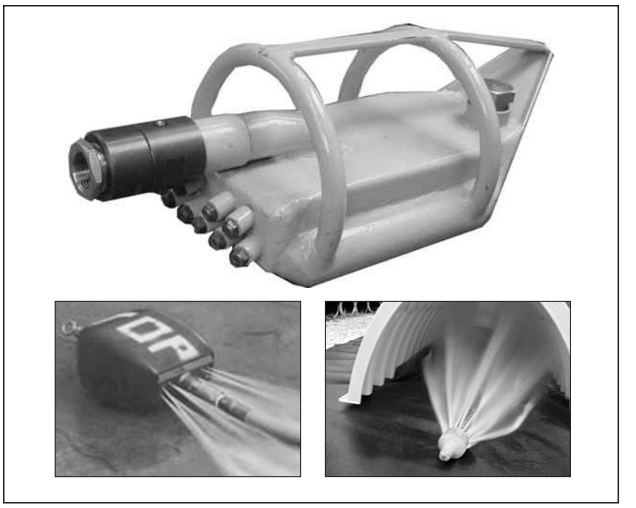
*Note: See the StormTech Design Manual for detailed information on designing inlets for a StormTech system, including the Isolator Row.*

**StormTech Isolator Row with Overflow Spillway**
(not to scale)

# 2.0 Isolator Row Inspection/Maintenance

## 2.1 INSPECTION

The frequency of Inspection and Maintenance varies by location. A routine inspection schedule needs to be established for each individual location based upon site specific variables. The type of land use (i.e. industrial, commercial, residential), anticipated pollutant load, percent imperviousness, climate, etc. all play a critical role in determining the actual frequency of inspection and maintenance practices.

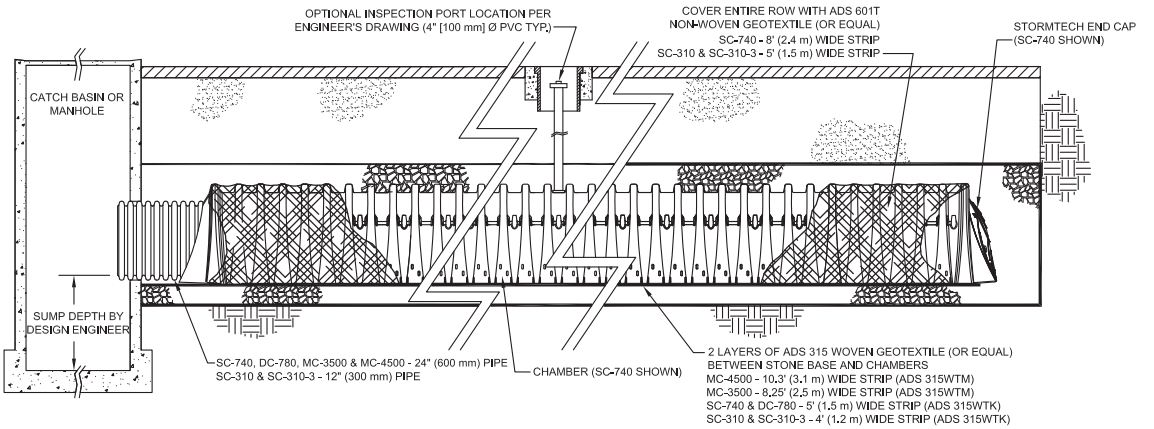


At a minimum, StormTech recommends annual inspections. Initially, the Isolator Row should be inspected every 6 months for the first year of operation. For subsequent years, the inspection should be adjusted based upon previous observation of sediment deposition.

The Isolator Row incorporates a combination of standard manhole(s) and strategically located inspection ports (as needed). The inspection ports allow for easy access to the system from the surface, eliminating the need to perform a confined space entry for inspection purposes.

If upon visual inspection it is found that sediment has accumulated, a stadia rod should be inserted to determine the depth of sediment. When the average depth of sediment exceeds 3 inches throughout the length of the Isolator Row, clean-out should be performed.

## 2.2 MAINTENANCE



The Isolator Row was designed to reduce the cost of periodic maintenance. By "isolating" sediments to just one row, costs are dramatically reduced by eliminating the need to clean out each row of the entire storage bed. If inspection indicates the potential need for maintenance, access is provided via a manhole(s) located on the end(s) of the row for cleanout. If entry into the manhole is required, please follow local and OSHA rules for a confined space entries.

*Examples of culvert cleaning nozzles appropriate for Isolator Row maintenance. (These are not StormTech products.)*

Maintenance is accomplished with the JetVac process. The JetVac process utilizes a high pressure water nozzle to propel itself down the Isolator Row while scouring and suspending sediments. As the nozzle is retrieved, the captured pollutants are flushed back into the manhole for vacuuming. Most sewer and pipe maintenance companies have vacuum/JetVac combination vehicles. Selection of an appropriate JetVac nozzle will improve maintenance efficiency. Fixed nozzles designed for culverts or large diameter pipe cleaning are preferable. Rear facing jets with an effective spread of at least 45" are best. Most JetVac reels have 400 feet of hose allowing maintenance of an Isolator Row up to 50 chambers long. **The JetVac process shall only be performed on StormTech Isolator Rows that have AASHTO class 1 woven geotextile (as specified by StormTech) over their angular base stone.**

**StormTech Isolator Row** (not to scale)

**NOTE:** NON-WOVEN FABRIC IS ONLY REQUIRED OVER THE INLET PIPE CONNECTION INTO THE END CAP FOR DC-780, MC-3500 AND MC-4500 CHAMBER MODELS AND IS NOT REQUIRED OVER THE ENTIRE ISOLATOR ROW.

# 3.0 Isolator Row Step By Step Maintenance Procedures

**Step 1)** Inspect Isolator Row for sediment

A) Inspection ports (if present)

i. Remove lid from floor box frame

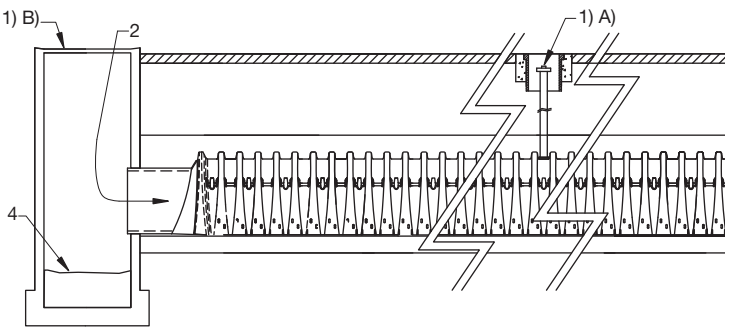
ii. Remove cap from inspection riser

iii. Using a flashlight and stadia rod, measure depth of sediment and record results on maintenance log.

iv. If sediment is at, or above, 3 inch depth proceed to Step 2. If not proceed to step 3.

B) All Isolator Rows

i. Remove cover from manhole at upstream end of Isolator Row



ii. Using a flashlight, inspect down Isolator Row through outlet pipe

1. Mirrors on poles or cameras may be used to avoid a confined space entry

2. Follow OSHA regulations for confined space entry if entering manhole

iii. If sediment is at or above the lower row of sidewall holes (approximately 3 inches) proceed to Step 2. If not proceed to Step 3.

**StormTech Isolator Row** (not to scale)

**Step 2)** Clean out Isolator Row using the JetVac process

A) A fixed culvert cleaning nozzle with rear facing nozzle spread of 45 inches or more is preferable

B) Apply multiple passes of JetVac until backflush water is clean

C) Vacuum manhole sump as required

**Step 3)** Replace all caps, lids and covers, record observations and actions

**Step 4)** Inspect & clean catch basins and manholes upstream of the StormTech system

**Sample Maintenance Log**

| Date | Stadia Rod Readings | | Sediment Depth (1) - (2) | Observations/Actions | Inspector |
|---|---|---|---|---|---|
| | Fixed point to chamber bottom (1) | Fixed point to top of sediment (2) | | | |
| 3/15/01 | 6.3 ft. | none | | New installation. Fixed point is CI frame at grade | djm |
| 9/24/01 | | 6.2 | 0.1 ft. | Some grit felt | sm |
| 6/20/03 | | 5.8 | 0.5 ft. | Mucky feel, debris visible in manhole and in Isolator row, maintenance due | rv |
| 7/7/03 | 6.3 ft. | | 0 | System jetted and vacuumed | djm |

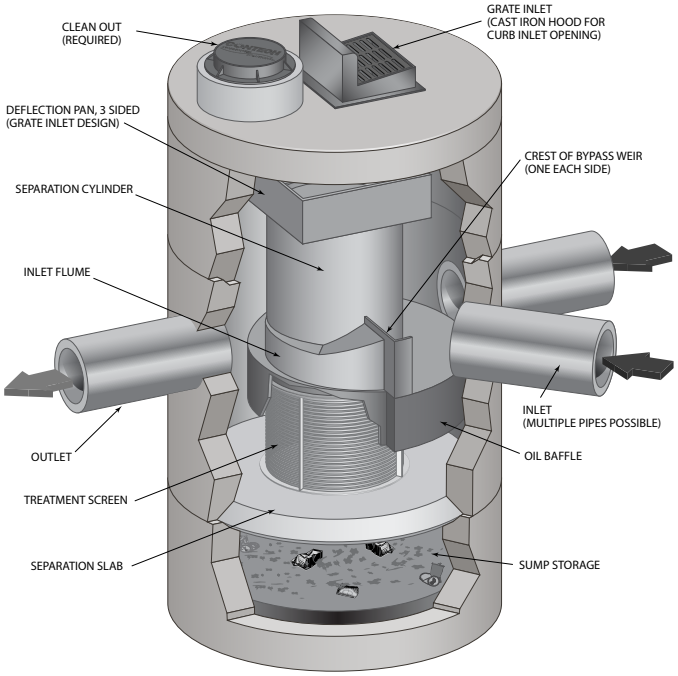
# CDS Guide
## Operation, Design, Performance and Maintenance

## CDS®

Using patented continuous deflective separation technology, the CDS system screens, separates and traps debris, sediment, and oil and grease from stormwater runoff. The indirect screening capability of the system allows for 100% removal of floatables and neutrally buoyant material without blinding. Flow and screening controls physically separate captured solids, and minimize the re-suspension and release of previously trapped pollutants. Inline units can treat up to 6 cfs, and internally bypass flows in excess of 50 cfs (1416 L/s). Available precast or cast-in-place, offline units can treat flows from 1 to 300 cfs (28.3 to 8495 L/s). The pollutant removal capacity of the CDS system has been proven in lab and field testing.



## Operation Overview

Stormwater enters the diversion chamber where the diversion weir guides the flow into the unit's separation chamber and pollutants are removed from the flow. All flows up to the system's treatment design capacity enter the separation chamber and are treated.

Swirl concentration and screen deflection force floatables and solids to the center of the separation chamber where 100% of floatables and neutrally buoyant debris larger than the screen apertures are trapped.

Stormwater then moves through the separation screen, under the oil baffle and exits the system. The separation screen remains clog free due to continuous deflection.

During the flow events exceeding the treatment design capacity, the diversion weir bypasses excessive flows around the separation chamber, so captured pollutants are retained in the separation cylinder.

## Design Basics

There are three primary methods of sizing a CDS system. The Water Quality Flow Rate Method determines which model size provides the desired removal efficiency at a given flow rate for a defined particle size. The Rational Rainfall Method™ or the and Probabilistic Method is used when a specific removal efficiency of the net annual sediment load is required.

Typically in the Unites States, CDS systems are designed to achieve an 80% annual solids load reduction based on lab generated performance curves for a gradation with an average particle size (d50) of 125 microns ($\mu$m). For some regulatory environments, CDS systems can also be designed to achieve an 80% annual solids load reduction based on an average particle size (d50) of 75 microns ($\mu$m) or 50 microns ($\mu$m).

### Water Quality Flow Rate Method

In some cases, regulations require that a specific treatment rate, often referred to as the water quality design flow (WQQ), be treated. This WQQ represents the peak flow rate from either an event with a specific recurrence interval, e.g. the six-month storm, or a water quality depth, e.g. 1/2-inch (13 mm) of rainfall.

The CDS is designed to treat all flows up to the WQQ. At influent rates higher than the WQQ, the diversion weir will direct most flow exceeding the WQQ around the separation chamber. This allows removal efficiency to remain relatively constant in the separation chamber and eliminates the risk of washout during bypass flows regardless of influent flow rates.

Treatment flow rates are defined as the rate at which the CDS will remove a specific gradation of sediment at a specific removal efficiency. Therefore the treatment flow rate is variable, based on the gradation and removal efficiency specified by the design engineer.

### Rational Rainfall Method™

Differences in local climate, topography and scale make every site hydraulically unique. It is important to take these factors into consideration when estimating the long-term performance of any stormwater treatment system. The Rational Rainfall Method combines site-specific information with laboratory generated performance data, and local historical precipitation records to estimate removal efficiencies as accurately as possible.

Short duration rain gauge records from across the United States and Canada were analyzed to determine the percent of the total annual rainfall that fell at a range of intensities. US stations' depths were totaled every 15 minutes, or hourly, and recorded in 0.01-inch increments. Depths were recorded hourly with 1-mm resolution at Canadian stations. One trend was consistent at all sites; the vast majority of precipitation fell at low intensities and high intensity storms contributed relatively little to the total annual depth.

These intensities, along with the total drainage area and runoff coefficient for each specific site, are translated into flow rates using the Rational Rainfall Method. Since most sites are relatively small and highly impervious, the Rational Rainfall Method is appropriate. Based on the runoff flow rates calculated for each intensity, operating rates within a proposed CDS system are

determined. Performance efficiency curve determined from full scale laboratory tests on defined sediment PSDs is applied to calculate solids removal efficiency. The relative removal efficiency at each operating rate is added to produce a net annual pollutant removal efficiency estimate.

### Probabilistic Rational Method

The Probabilistic Rational Method is a sizing program Contech developed to estimate a net annual sediment load reduction for a particular CDS model based on site size, site runoff coefficient, regional rainfall intensity distribution, and anticipated pollutant characteristics.

The Probabilistic Method is an extension of the Rational Method used to estimate peak discharge rates generated by storm events of varying statistical return frequencies (e.g. 2-year storm event). Under the Rational Method, an adjustment factor is used to adjust the runoff coefficient estimated for the 10-year event, correlating a known hydrologic parameter with the target storm event. The rainfall intensities vary depending on the return frequency of the storm event under consideration. In general, these two frequency dependent parameters (rainfall intensity and runoff coefficient) increase as the return frequency increases while the drainage area remains constant.

These intensities, along with the total drainage area and runoff coefficient for each specific site, are translated into flow rates using the Rational Method. Since most sites are relatively small and highly impervious, the Rational Method is appropriate. Based on the runoff flow rates calculated for each intensity, operating rates within a proposed CDS are determined. Performance efficiency curve on defined sediment PSDs is applied to calculate solids removal efficiency. The relative removal efficiency at each operating rate is added to produce a net annual pollutant removal efficiency estimate.

### Treatment Flow Rate

The inlet throat area is sized to ensure that the WQQ passes through the separation chamber at a water surface elevation equal to the crest of the diversion weir. The diversion weir bypasses excessive flows around the separation chamber, thus preventing re-suspension or re-entrainment of previously captured particles.

### Hydraulic Capacity

The hydraulic capacity of a CDS system is determined by the length and height of the diversion weir and by the maximum allowable head in the system. Typical configurations allow hydraulic capacities of up to ten times the treatment flow rate. The crest of the diversion weir may be lowered and the inlet throat may be widened to increase the capacity of the system at a given water surface elevation. The unit is designed to meet project specific hydraulic requirements.

## Performance

### Full-Scale Laboratory Test Results

A full-scale CDS system (Model CDS2020-5B) was tested at the facility of University of Florida, Gainesville, FL. This CDS unit was evaluated under controlled laboratory conditions of influent flow rate and addition of sediment.

Two different gradations of silica sand material (UF Sediment & OK-110) were used in the CDS performance evaluation. The particle size distributions (PSDs) of the test materials were analyzed using standard method "Gradation ASTM D-422 "Standard Test Method for Particle-Size Analysis of Soils" by a certified laboratory.

UF Sediment is a mixture of three different products produced by the U.S. Silica Company: "Sil-Co-Sil 106", "#1 DRY" and "20/40 Oil Frac". Particle size distribution analysis shows that the UF Sediment has a very fine gradation (d50 = 20 to 30 $\mu$m) covering a wide size range (Coefficient of Uniformity, C averaged at 10.6). In comparison with the hypothetical TSS gradation specified in the NJDEP (New Jersey Department of Environmental Protection) and NJCAT (New Jersey Corporation for Advanced Technology) protocol for lab testing, the UF Sediment covers a similar range of particle size but with a finer d50 (d50 for NJDEP is approximately 50 $\mu$m) (NJDEP, 2003).

The OK-110 silica sand is a commercial product of U.S. Silica Sand. The particle size distribution analysis of this material, also included in Figure 1, shows that 99.9% of the OK-110 sand is finer than 250 microns, with a mean particle size (d50) of 106 microns. The PSDs for the test material are shown in Figure 1.

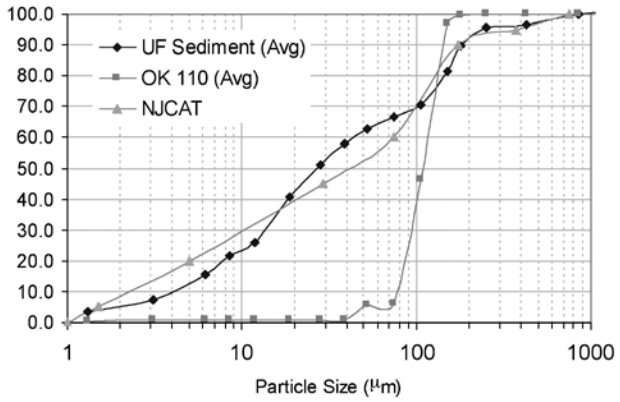


Figure 1. Particle size distributions

Tests were conducted to quantify the performance of a specific CDS unit (1.1 cfs (31.3-L/s) design capacity) at various flow rates, ranging from 1% up to 125% of the treatment design capacity of the unit, using the 2400 micron screen. All tests were conducted with controlled influent concentrations of approximately 200 mg/L. Effluent samples were taken at equal time intervals across the entire duration of each test run. These samples were then processed with a Dekaport Cone sample splitter to obtain representative sub-samples for Suspended Sediment Concentration (SSC) testing using ASTM D3977-97 "Standard Test Methods for Determining Sediment Concentration in Water Samples", and particle size distribution analysis.

## Results and Modeling

Based on the data from the University of Florida, a performance model was developed for the CDS system. A regression analysis was used to develop a fitting curve representative of the scattered data points at various design flow rates. This model, which demonstrated good agreement with the laboratory data, can then be used to predict CDS system performance with respect

to SSC removal for any particle size gradation, assuming the particles are inorganic sandy-silt. Figure 2 shows CDS predictive performance for two typical particle size gradations (NJCAT gradation and OK-110 sand) as a function of operating rate.

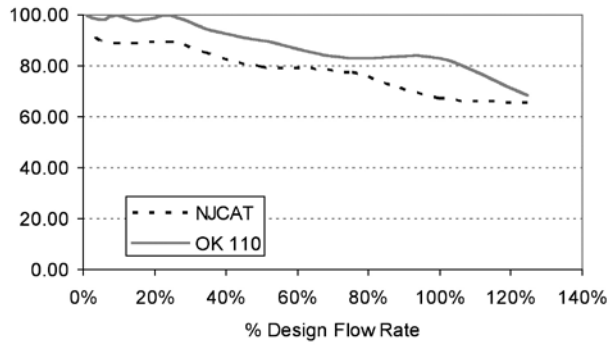

Figure 2. CDS stormwater treatment predictive performance for various particle gradations as a function of operating rate.

Many regulatory jurisdictions set a performance standard for hydrodynamic devices by stating that the devices shall be capable of achieving an 80% removal efficiency for particles having a mean particle size (d50) of 125 microns (e.g. Washington State Department of Ecology — WASDOE - 2008). The model can be used to calculate the expected performance of such a PSD (shown in Figure 3). The model indicates (Figure 4) that the CDS system with 2400 micron screen achieves approximately 80% removal at the design (100%) flow rate, for this particle size distribution (d50 = 125 $\mu$m).

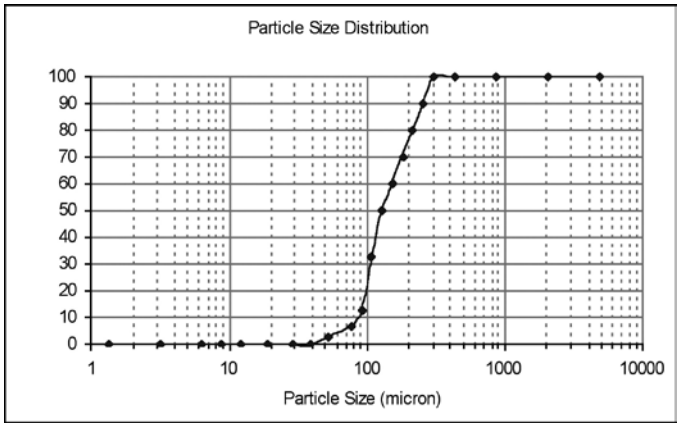

Figure 3. WASDOE PSD

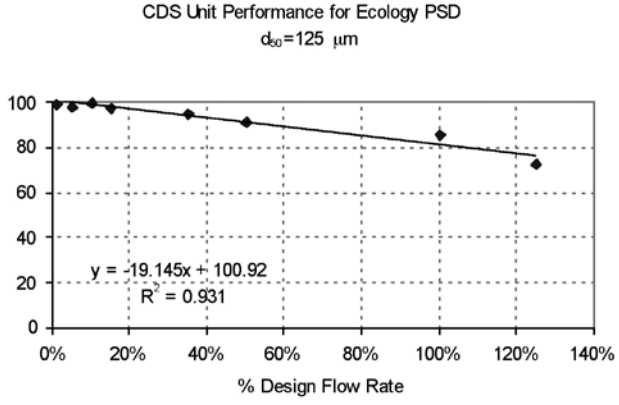

Figure 4. Modeled performance for WASDOE PSD.

## Maintenance

The CDS system should be inspected at regular intervals and maintained when necessary to ensure optimum performance. The rate at which the system collects pollutants will depend more heavily on site activities than the size of the unit. For example, unstable soils or heavy winter sanding will cause the grit chamber to fill more quickly but regular sweeping of paved surfaces will slow accumulation.

## Inspection

Inspection is the key to effective maintenance and is easily performed. Pollutant transport and deposition may vary from year to year and regular inspections will help ensure that the system is cleaned out at the appropriate time. At a minimum, inspections should be performed twice per year (e.g. spring and fall) however more frequent inspections may be necessary in climates where winter sanding operations may lead to rapid accumulations, or in equipment washdown areas. Installations should also be inspected more frequently where excessive amounts of trash are expected.

The visual inspection should ascertain that the system components are in working order and that there are no blockages or obstructions in the inlet and separation screen. The inspection should also quantify the accumulation of hydrocarbons, trash, and sediment in the system. Measuring pollutant accumulation can be done with a calibrated dipstick, tape measure or other measuring instrument. If absorbent material is used for enhanced removal of hydrocarbons, the level of discoloration of the sorbent material should also be identified

during inspection. It is useful and often required as part of an operating permit to keep a record of each inspection. A simple form for doing so is provided.

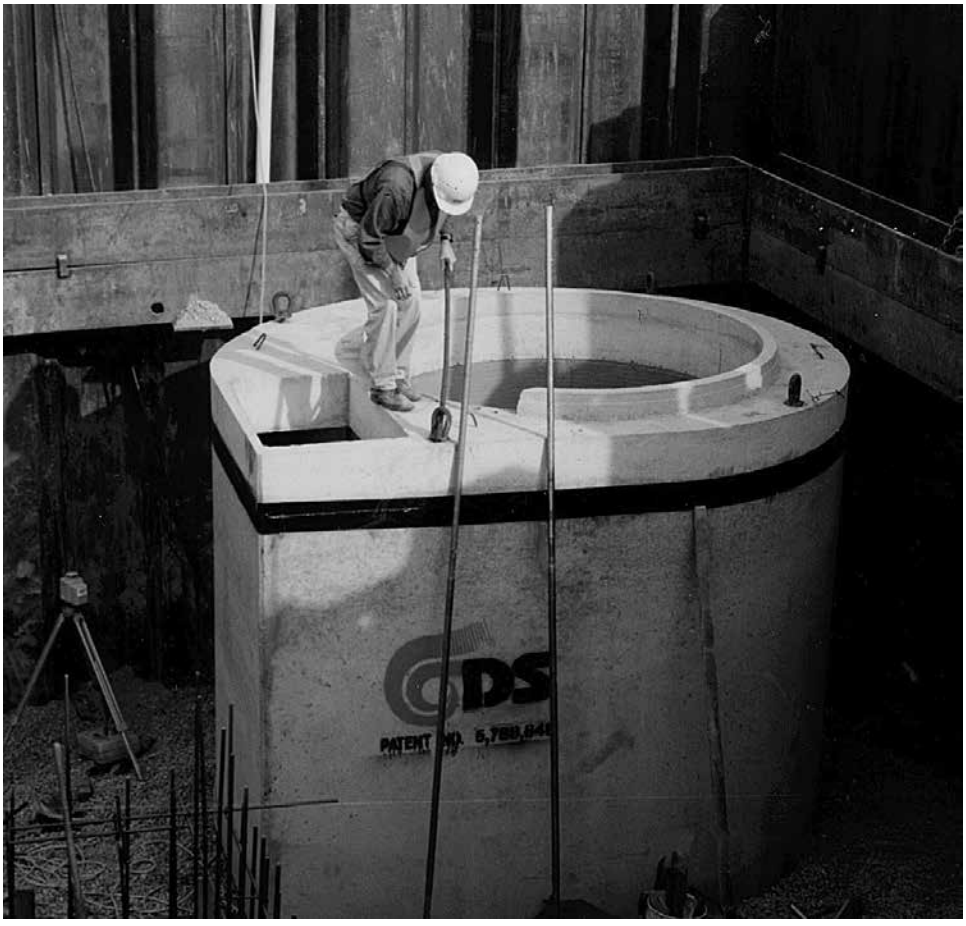
Access to the CDS unit is typically achieved through two manhole access covers. One opening allows for inspection and cleanout of the separation chamber (cylinder and screen) and isolated sump. The other allows for inspection and cleanout of sediment captured and retained outside the screen. For deep units, a single manhole access point would allows both sump cleanout and access outside the screen.

The CDS system should be cleaned when the level of sediment has reached 75% of capacity in the isolated sump or when an appreciable level of hydrocarbons and trash has accumulated. If absorbent material is used, it should be replaced when significant discoloration has occurred. Performance will not be impacted until 100% of the sump capacity is exceeded however it is recommended that the system be cleaned prior to that for easier removal of sediment. The level of sediment is easily determined by measuring from finished grade down to the top of the sediment pile. To avoid underestimating the level of sediment in the chamber, the measuring device must be lowered to the top of the sediment pile carefully. Particles at the top of the pile typically offer less resistance to the end of the rod than consolidated particles toward the bottom of the pile. Once this measurement is recorded, it should be compared to the as-built drawing for the unit to determine weather the height of the sediment pile off the bottom of the sump floor exceeds 75% of the total height of isolated sump.

## Cleaning

Cleaning of a CDS systems should be done during dry weather conditions when no flow is entering the system. The use of a vacuum truck is generally the most effective and convenient method of removing pollutants from the system. Simply remove the manhole covers and insert the vacuum hose into the sump. The system should be completely drained down and the sump fully evacuated of sediment. The area outside the screen should also be cleaned out if pollutant build-up exists in this area.

In installations where the risk of petroleum spills is small, liquid contaminants may not accumulate as quickly as sediment. However, the system should be cleaned out immediately in the event of an oil or gasoline spill. Motor oil and other hydrocarbons that accumulate on a more routine basis should be removed when an appreciable layer has been captured. To remove these pollutants, it may be preferable to use absorbent pads since they are usually less expensive to dispose than the oil/water emulsion that may be created by vacuuming the oily layer. Trash and debris can be netted out to separate it from the other pollutants. The screen should be cleaned to ensure it is free of trash and debris.



Manhole covers should be securely seated following cleaning activities to prevent leakage of runoff into the system from above and also to ensure that proper safety precautions have been followed. Confined space entry procedures need to be followed if physical access is required. Disposal of all material removed from the CDS system should be done in accordance with local regulations. In many jurisdictions, disposal of the sediments may be handled in the same manner as the disposal of sediments removed from catch basins or deep sump manholes. Check your local regulations for specific requirements on disposal.

| CDS Model | Diameter | | Distance from Water Surface to Top of Sediment Pile | | Sediment Storage Capacity | |

Table 1: CDS Maintenance Indicators and Sediment Storage Capacities

Note: To avoid underestimating the volume of sediment in the chamber, carefully lower the measuring device to the top of the sediment pile. Finer silty particles at the top of the pile may be more difficult to feel with a measuring stick. These finer particles typically offer less resistance to the end of the rod than larger particles toward the bottom of the pile.

# CDS Inspection & Maintenance Log

CDS Model: _____ Location: _____

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

1. The water depth to sediment is determined by taking two measurements with a stadia rod: one measurement from the manhole opening to the top of the sediment pile and the other from the manhole opening to the water surface. If the difference between these measurements is less than the values listed in table 1 the system should be cleaned out. **Note: to avoid underestimating the volume of sediment in the chamber, the measuring device must be carefully lowered to the top of the sediment pile**.

2. For optimum performance, the system should be cleaned out when the floating hydrocarbon layer accumulates to an appreciable thickness. In the event of an oil spill, the system should be cleaned immediately.

SUPPORT

- Drawings and specifications are available at www.ContechES.com.
- Site-specific design support is available from our engineers.

## Pond PP-1: Porous Pavement

This Page Intentionally Left Blank

# Appendix K:
# Project Evaluation and Design Calculations

**Appendix K - Table A**
**Step 1 - Evaluation of Green Infrastructure Planning Measures**

| Group | Practice | Description | Applicable | Project Specific Evaluation |
|---|---|---|---|---|
| Preservation of Natural Resources | **Preservation of Undisturbed Areas** | Delineate and place into permanent conservation undisturbed forests, native vegetated areas, riparian corridors, wetlands, and natural terrain. | **No** | The proposed site layout has been designed to limit land disturbance to the greatest extent practical. The project does not propose permanent conservation of this area at this time. |
| | **Preservation of Buffers** | Define, delineate and preserve naturally vegetated buffers along perennial streams, rivers, shorelines and wetlands. | **No** | There are no streams, rivers, shorelines, or wetlands on site. |
| | **Reduction of Clearing and Grading** | Limit clearing and grading to the minimum amount needed for roads, driveways, foundations, utilities and stormwater management facilities. | **No** | As a Redevelopment Project, the majority of the land in question had been previously cleared or graded for construction of the existing buildings, roadways, etc. Site clearing and grading required for redevelopment will be minor in nature. |
| | **Locating Development in Less Sensitive Areas** | Avoid sensitive resource areas such as floodplains, steep slopes, erodible soils, wetlands, mature forests and critical habitats by locating development to fit the terrain in areas that will create the least impact. | **No** | The site layout has been designed to avoid sensitive resource areas to the greatest extent practical. Portions of the existing development were constructed in areas containing steep slopes. |
| | **Open Space Design** | Use clustering, conservation design or open space design to reduce impervious cover, preserve more open space and protect water resources. | **Yes** | The minimum drive aisle and parking space dimensions have been used to reduce the amount of impervious area. This site reduces overall impervious area. |
| | **Soil Restoration** | Restore the original properties and porosity of the soil by deep till and amendment with compost to reduce the generation of runoff and enhance the runoff reduction performance of practices such as downspout disconnections, grass channels, filter strips, and tree clusters. | **Yes** | Full soil restoration is proposed for all areas of disturbance that will not become hardscape. All areas will be stabilized with seed & mulch, and landscaped areas will be provided. |
| Reduction of Impervious Cover | **Roadway Reduction** | Minimize roadway widths and lengths to reduce site impervious area | **N/A** | No roadway proposed. |
| | **Sidewalk Reduction** | Minimize sidewalk lengths and widths to reduce site impervious area | **Yes** | Sidewalk widths and lengths have been minimized to the greatest extent practical. |
| | **Driveway Reduction** | Minimize driveway lengths and widths to reduce site impervious area | **No** | No new driveways are proposed as part of this project. |
| | **Cul-de-sac Reduction** | Minimize the number of cul-de-sacs and incorporate landscaped areas to reduce their impervious cover. | **N/A** | No cul-de-sacs are proposed as part of this project. |
| | **Building Footprint Reduction** | Reduce the impervious footprint of residences and commercial buildings by using alternate or taller buildings while maintaining the same floor to area ratio. | **Yes** | This project removes multiple existing buildings and proposes one building with a smaller footprint than the combined footprint of the various existing buildings. |
| | **Parking Reduction** | Reduce imperviousness on parking lots by eliminating unneeded spaces, providing compact car spaces and efficient parking lanes, minimizing stall dimensions, using porous pavement surfaces in overflow parking areas, and using multi-storied parking decks where appropriate. | **No** | This porject includes the construction of a parking lot for the near by rail trail. |

**Appendix K - Table B**
**Step 2 - Determine Water Quality Treatment Volume (WQv)**

| Determine Pre- and Post-Development Impervious Cover Areas | | | | |
|---|---|---|---|---|
| Watershed Pre-Development Impervious Area: | 130,019 | sf = | 2.98 | ac |
| Watershed Post-Development Impervious Area: | 107,913 | sf = | 2.48 | ac |
| Total Area Within Work Limits: | 172,518 | sf = | 3.96 | ac |
| Existing Disturbed Impervious Area: | 51,671 | sf = | 1.19 | ac |
| New Development Impervious Area: | 0 | sf = | 0.00 | **ac** |
| Redevelopment Impervious Area: | 51,671 | sf = | **1.19** | **ac** |

| Determine the Initial Water Quality Volume (WQv) | | | | |
|---|---|---|---|---|
| WQv(acre-feet) = [(P)(Rv)(A)] /12 | | | | |
| Rv = 0.05+0.009(I) | | | | |
| I = Impervious Cover (%) | | | | |
| P = | 1.35 | *inch* | | |
| I = | 30% | | | |
| Rv = | 0.320 | | | |
| Initial WQv = | 6,202 | cf = | 0.142 | ac-ft |

## Appendix K - Table C
## Step 3 - Determine Minimum Required Runoff Reduction Volume (RRv)

Section 4.3 of the NYSDEC Stormwater Management Design Manual describes the Runoff Reduction Volume equation as:

**RRv = (P x Rv* x Ai) / 12**

where: RRv = Runoff Reduction Volume (acre-feet)
P = 90% Rainfall Event Number (inches) (interpolated from Design Manual Fig 4.1)
Rv = 0.05 + 0.009 (I), where I is 100% impervious = 0.95 constant
Ai = (S x Aic) = Impervious cover targeted for runoff reduction
Aic = Total area of new impervious cover (acres)
S = Hydrologic Soil Group (HSG) Specific Reduction Factor
where:

| | | | |
|---|---|---|---|
| HSG A= | 0.55 | HSG C= | 0.30 |
| HSG B= | 0.40 | HSG D= | 0.20 |

The following table presents the RRv calculations for each of the proposed stormwater management

**Enter the Soils Data for the site**

| Soil Group | Acres | S |
|---|---|---|
| A | 0.00 | 0.55 |
| B | 0.00 | 0.40 |
| C | 0.00 | 0.30 |
| D | 3.96 | 0.20 |
| Total Area | 3.96 | acres |

**Calculate the Minimum RRv**

| | | |
|---|---|---|
| S = | **0.20** | |
| Imperviou s = | 0.00 | *acre* |
| Precipitati on | 1.35 | *in* |
| Rv | 0.95 | |
| **Minimum RRv** | **0** | ***ft*** $^{3}$ |
| | 0.000 | af |

**Appendix K - Table D**
**Step 3 - Evaluation of Runoff Reduction Techniques and Standard SMPs with RRv Capacity**

| Design Variant | Practice | Description | Applicable | Project Specific Evaluation/Justification |
|---|---|---|---|---|
| *RR-1* | **Conservation of Natural Areas** | Retain the pre-development hydrologic and water quality characteristics of undisturbed natural areas, stream and wetland buffers by restoring and/or permanently conserving these areas on a site. | **No** | The project site does not contain any significant natural resources. The majority of the site has been previously disturbed. |
| *RR-2* | **Sheet flow to Riparian Buffers or Filter Strips** | Undisturbed natural areas such as forested conservation areas and stream buffers or vegetated filter strips and riparian buffers can be used to treat and control stormwater runoff from portions of development. | **No** | No untreated sheet flow is proposed to flow to the riparian areas from the proposed layout. |
| *RR-3* | **Tree Planting/ Tree Pit** | Plant or conserve trees to reduce stormwater runoff, increase nutrient uptake, and provide bank stabilization. Trees can be used for applications such as landscaping, stormwater management practice areas, and conservation areas. | **No** | The project proposes the preservation of existing mature trees, as well as the planting of trees throughout the site. However, credit for these trees will not be taken toward an area reduction in the RRv calculations. |
| *RR-4* | **Disconnection of Rooftop Runoff** | Direct runoff from residential rooftop areas and upland overland runoff flow to designated pervious areas to reduce runoff volumes and rates. | **No** | Rooftop disconnect is not applicable, since this is a commercial building project. |
| *RR-5* | **Vegetated Swale** | The natural drainage paths, or properly designed vegetated channels, can be used instead of constructing underground storm sewers or concrete open channels to increase time of concentration, reduce the peak discharge, and provide infiltration. | **No** | There is no adequate space in the disturbaed area for a vegetated swale. |
| *RR-6* | **Rain Garden** | Manage and treat small volumes of stormwater runoff using a conditioned planting soil bed and planting materials to filter runoff stored within a shallow depression. | **No** | Due to the limited tributary area to rain gardens (less than or equal to 1,000SF), a bioretention facility will be implemented instead of rain gardens. |
| *RR-7* | **Stormwater Planter** | Small landscaped stormwater treatment devices that can be designed as infiltration or filtering practices. Stormwater planters use soil infiltration and biogeochemical processes to decrease stormwater quantity and improve water quality. | **No** | The stormwater management approach for this project is intended to provide a more natural aesthetic. Since, stormwater planters have significant maintenance considerations and a more structured aesthetic, they have not been proposed for this project. |
| *RR-8* | **Rain Barrels/ Cisterns** | Capture and store stormwater runoff to be used for irrigation systems or filtered and reused for non-contact activities. | **No** | Rain Barrels/Cisterns are not proposed on-site due to the need for active management/maintenance and initial capital cost. In addition, the cold climate of the project area would require additional protection measures from freezing. |
| *RR-9* | **Porous Pavement** | Pervious types of pavements that provide an alternative to conventional paved surfaces, designed to infiltrate rainfall through the surface, thereby reducing stormwater runoff from a site and providing some pollutant uptake in the underlying soils. | **No** | Porous pavement is proposed as part of this project, however credit is not be taken. |
| *RR-10* | **Green Roof** | Capture runoff by a layer of vegetation and soil installed on top of a conventional flat or sloped roof. The rooftop vegetation allows evaporation and evapotranspiration processes to reduce volume and discharge rate of runoff entering conveyance system. | **Yes** | Green roofs are being used on-site, and have been included in the stormwater design. |

| | | | | |
|---|---|---|---|---|
| | **Stream Daylighting** | Stream Daylight previously-culverted/piped streams to restore natural habitats, better attenuate runoff by increasing the storage size, promoting infiltration, and help reduce pollutant loads. | **No** | No stream daylighting opportunities are present on this site. |
| *I-1* | **Infiltration Trench** | Excavated, stone-filled trenches designed to capture and temporarily store runoff in the stone reservoir to promote infiltration. Can be constructed as sheet flow to a ground surface depression or piped flow discharged directly into the trench. | **No** | Infiltration is not proposed due to poor draining soils. |
| *I-2* | **Infiltration Basin** | Vegetated excavations designed to capture and infiltrate the WQv. Can be designed off-line to bypass larger flows to downstream flood control facilities or as combined infiltration/flood control facilities by providing temporary detention ponding. | **No** | Infiltration is not proposed due to poor draining soils. |
| *I-3* | **Dry Wells** | Underground structures designed to capture, treat, and infiltrate runoff from small drainage areas (rooftop only) that have low sediment or pollutant loadings. Larger stormwater volumes can be bypassed directly to a flood control facility. | **No** | Infiltration is not proposed due to poor draining soils. |
| *I-4* | **Underground Infiltration Systems** | Underground, proprietary systems designed to capture and infiltrate the WQv, reduce runoff, remove fine sediment and associated pollutants, recharge groundwater, and attenuate peak flows. | **Yes** | Infiltration is proposed for some of the roof runoff. |
| *F-5* | **Bioretention** | Shallow landscaped depressions where stormwater flows into the practice, ponds at the surface, and gradually filters through the media to remove pollutants. Filtered runoff can either infiltrate into the surrounding soil, or be collected by an underdrain system and discharged to the storm sewer system or directly to receiving waters. | **Yes** | Bioretention has been applied to this project. |
| *O-1* | **Dry Swale** | Designed to temporarily hold the WQv in a pool or series of pools created by permanent check dams. The soil bed consists of native soils or highly permeable fill material, underlain by an underdrain system. Pollutants are removed through sedimentation, nutrient uptake, and infiltration. | **No** | Dry swales are not proposed. |

**Appendix K - Table E**

**Summary Table: Runoff Reduction Volume and Treated volumes**

| | Runoff Reduction Techiques/Standard SMPs | | Total Contributing Area | Total Contributing Impervious Area | WQv Reduced (RRv) | WQv Treated |
|---|---|---|---|---|---|---|
| | | | (acres) | (acres) | cf | cf |
| Area/Volume Reduction | Conservation of Natural Areas | RR-1 | 0.00 | 0.00 | | |
| | Sheetflow to Riparian Buffers/Filter Strips | RR-2 | 0.00 | 0.00 | | |
| | Tree Planting/Tree Pit | RR-3 | 0.07 | 0.00 | | |
| | Disconnection of Rooftop Runoff | RR-4 | 0.00 | 0.00 | | |
| | Vegetated Swale | RR-5 | 0.00 | 0.00 | 0 | |
| | Rain Garden | RR-6 | 0.00 | 0.00 | 0 | |

**Practice Specific Sizing Calculation Worksheet**

## BIORETENTION NO. 1 (BIO-1)

| Practice Proposed? | Yes |
|---|---|

**Enter Site Data For Drainage Area to be Treated by Practice**

| Catchment Number | Total Area (Acres) | Impervious Area (Acres) | Percent Impervious % | Rv | WQv ($ft^3$) | Precipitation (in) | Description |
|---|---|---|---|---|---|---|---|
| | 0.11 | 0.05 | 48% | 0.48 | 253 | 1.35 | Bioretention |
| Enter Impervious Area Reduced by Disconnection of Rooftops Within this Catchment: | | 0.00 | 48% | 0.48 | 253 | <<WQv after adjusting for Disconnected Rooftops | |
| Reduced by Tree Planting: | 0.00 | 0.00 | 48% | 0.48 | 253 | <<WQv after adjusting for Tree Planting | |
| Enter the portion of the WQv that is not reduced for all practices routed to this practice: | | | | | 0 | $ft^3$ | |

**Determine Required Water Quality Volume**

**WQv = (P/12) * Rv * A**

where: WQv = Water Quality Volume (acre-feet)
P = 1-year 24-hour design storm (inches)
Rv = 0.05 + 0.009 (I); min Rv = 0.2
I = Impervious Cover (%) within the drainage area contributing to the SWM practice
A = Drainage area (square feet) contributing to the SWM practice

| **WQv =** | **253** | **CF** |
|---|---|---|

**Value taken from Appendix K - Table B*

**Calculate Required Filter Bed Area**

**Af=(WQv)*(df)/[(k)*(hf+df)*(tf)]**

where: Af = Surface area of filter bed (SF)
WQv = Required Water Quality Volume (CF)
df = Filter bed depth (ft)
k = Coefficient of permeability of filter media (ft/day)
hf = Average height of water above filter bed (ft)
tf = Design filter bed drain time (days)

| SMP ID | WQv (cubic feet) | df (feet) | k (ft/day) | hf (feet) | tf (days) | Minimum Af (sq-ft) | Provided Af (sq-ft) |
|---|---|---|---|---|---|---|---|
| BIO-1 | 253 | 2.5 | 0.5 | 0.25 | 2.0 | 230 | 464 |

**Calculate Provided Water Quality Volume**

**WQv Provided Within Practice = Total volumes of soil media, mulch, and ponding**

WQv = $V_{SM} + V_M + V_{pond}$

| | | | |
|---|---|---|---|
| $V_{SM}$ = $Af * df * P_{SM}$ | = | 232 | cf. |
| $V_M$ = $Af * dm * P_M$ | = | 46 | cf. |
| $V_{POND}$ = $(Af * hf * 2) + (2 * S * hf^2 * Pf)$ | = | 265 | cf. |

where:

| | | | |
|---|---|---|---|
| $P_{SM}$ = | Porosity of soil media - 0.20 | 0.20 | |
| $P_M$ = | Porosity of mulch - 0.40 | 0.40 | |
| S = | Bioretention Side Slopes | 3.00 | :1 |
| Pf = | Bioretention Perimeter | 88 | LF |

| **WQv =** | **543** | **CF** |

## GREEN ROOF NO. 1 (GR1)

| Practice Proposed? | Yes |
|---|---|

**Enter Site Data For Drainage Area to be Treated by Practice**

| Catchment Number | Total Area *(Acres)* | Impervious Area *(Acres)* | Percent Impervious *%* | Rv | WQv *($ft^3$)* | Precipitation *(in)* | Description |
|---|---|---|---|---|---|---|---|
| PS 9B | 0.09 | 0.09 | 100% | 0.95 | 408 | 1.35 | |

**Enter Parameters for Proposed Green Roof**

| | | | | |
|---|---|---|---|---|
| Green Roof Surface Area | AGR | 3820 | $ft^2$ | |
| Depth of Soil Media | DSM | 0.25 | ft | 0.25-0.5 |
| Depth of Drainage Layer | DDL | 0.17 | ft | |
| Depth of Ponding Above Surface | DP | 0.42 | ft | |
| Porosity of Soil Media | nSM | 20% | | Max 20% |
| Porosity of Drainage Layer | nDL | 25% | | Max 25% |

**Calculate Storage Volume and Runoff Reduction Volume**

| | | | |
|---|---|---|---|
| Volume Provided in Soil Media | VSM | 191 | $ft^3$ |
| Volume Provided in Drainage Layer | VDL | 159 | $ft^3$ |
| Volume in Ponding Layer | | 1,592 | $ft^3$ |
| Storage Volume Provided in Green Roof | | 1,942 | $ft^3$ |
| Runoff Reduction Volume | RRv | 408 | $ft^3$ |

**Appendix K - Table H**

**Practice Specific Sizing Calculation Worksheet**

## SUBSURFACE INFILTRATION CHAMBERS

**Infiltrators 1:**

| WQv Required (cu ft) | Provided WQv (cu ft) | WQv Reduced (cu ft) | WQv Treated | Required Pretreatment | Provided Pretreatment | Description |
|---|---|---|---|---|---|---|
| 405 | 658 | 405 | 405 | 405 | 405 | Available storage above lowest overflow pipe |

**Appendix K - Table I**
**Practice Specific Sizing Calculation Worksheet**

## HYDRODYNAMIC SEPARATOR NO. 1 (HYDRO 1)

| | |
|---|---|
| Practice Proposed? | Yes |
| Treatment (Redevelopment) | Yes |

**Enter Site Data For Drainage Area to be Treated by Practice**

| Catchment Number | Total Area *(Acres)* | Impervious Area *(Acres)* | Percent Impervious % | Rv | WQv *($ft^3$)* | Precipitation *(in)* | Description |
|---|---|---|---|---|---|---|---|
| PS2 | 0.65 | 0.43 | 67% | 0.65 | 2,067 | 1.35 | Hydrodynamic Separator |

**Compute Peak Water Quality Discharge**

**Qp = qu * A * WQv**

where: qu = the unit peak discharge, in $cfs/mi^2/inch$
A = Drainage area (square miles) contributing to the SMP
WQv = Water Quality Volume (inches)

The unit peak discharge qu is obtained from TR-55 Exhibits 4-I through 4-III, depending on the NRCS rainfall distribution type. It is based on the time of concentration (Tc) in hours, the initial abstraction (Ia) in inches, and the precipitation (P) in inches. The initial abstraction (Ia) is obtained from TR-55 Table 4-1, and is based on the equivalent Curve Number for the water quality volume.

The equivalent Curve Number is calculated using the following equation:

**CN = 1000 / [10 + 5P + 10Q - 10 * (Q^2 + 1.25QP)^0.5]**

where: CN = Equivalent Curve Number
P = 90% Rainfall Event Number (inches) = 1.35 in
Q = Water Quality Volume (inches)

The following table presents the Water Quality Peak Flow calculations for each of the proposed stormwater management practices (SMPs):

| SMP ID | A (ac) | WQv (cf) | Q (inches) | Tc (hours) | CN | Ia (inches) | Ia/P | qu (cfs/sq.mi.-inch) | Qp (cfs) |
|---|---|---|---|---|---|---|---|---|---|
| PS2 | 0.65 | 2,067 | 0.88 | 0.10 | 95.1 | 0.104 | 0.077 | 680 | **0.60** |

**Size Flow Diversion Structure**

**Orifice Equation: Qp = CA(2gh)$^{0.5}$**

where: C = Orifice coefficient
A = Area of WQv orifice (sf)
g = acceleration due to gravity (feet/$second^2$)
h = depth of water to center of orifice (ft)
d = minimum diameter of WQv orifice
y = distance of overflow bipass above invert of water quality pipe (ft)

The following table presents the minimum diameter of the WQv orifice and distance of the overflow bipass above the invert of

| SMP ID | C | A ($ft^2$) | g ($ft/sec^2$) | h (ft) | d (ft) | d (in) | y (ft) |
|---|---|---|---|---|---|---|---|
| PS2 | 0.60 | | 32.2 | | | | |

## HYDRODYNAMIC SEPARATOR NO. 2 (HYDRO 2)

| | |
|---|---|
| Practice Proposed? | Yes |
| Treatment (Redevelopment) | Yes |

**Enter Site Data For Drainage Area to be Treated by Practice**

| Catchment Number | Total Area *(Acres)* | Impervious Area *(Acres)* | Percent Impervious % | Rv | WQv *($ft^3$)* | Precipitation *(in)* | Description |
|---|---|---|---|---|---|---|---|
| PS8 | 0.83 | 0.69 | 83% | 0.80 | 3,237 | 1.35 | Hydrodynamic Separator |

**Compute Peak Water Quality Discharge**

**Qp = qu * A * WQv**

where: qu = the unit peak discharge, in $cfs/mi^2/inch$
A = Drainage area (square miles) contributing to the SMP
WQv = Water Quality Volume (inches)

The unit peak discharge qu is obtained from TR-55 Exhibits 4-I through 4-III, depending on the NRCS rainfall distribution type. The equivalent Curve Number is calculated using the following equation:

**CN = 1000 / [10 + 5P + 10Q - 10 * (Q^2 + 1.25QP)^0.5]**

where: CN = Equivalent Curve Number
P = 90% Rainfall Event Number (inches) = 0.00 in
Q = Water Quality Volume (inches)

The following table presents the Water Quality Peak Flow calculations for each of the proposed stormwater management

| SMP ID | A (ac) | WQv (cf) | Q (inches) | Tc (hours) | CN | Ia (inches) | Ia/P | qu (cfs/sq.mi.-inch) | Qp (cfs) |
|---|---|---|---|---|---|---|---|---|---|
| PS8 | 0.83 | 3,237 | 1.07 | 0.10 | 97.4 | 0.054 | 0.040 | 650 | **0.90** |

APPLICATION TO THE PLANNING BOARD
CITY OF POUGHKEEPSIE, NEW YORK

# Application for Site Plan, Special Permit & Facade Approval

| OFFICE USE ONLY |
|---|
| CODE: PLSF |
| ID #_____ |
| FEE: _____ Total, from: $500, plus $_____ ($150 per 1000 square feet of floor area), plus $_____ ($35 per number of required parking spaces), plus $_____ ($500 for special permit, if applicable) |

I. **PROPERTY ADDRESS:** 584 MAIN STREET

II. **PROPERTY OWNER:** HOOKER 21, LLC (J. ALLEN BRITVAN)
**ADDRESS:** PO BOX 55

THORNWOOD, NY 10594 (state and zip code)

**PHONE NUMBER:** 914-456-9100 (include area code)

III. **NAME OF APPLICANT:** (Contract Vendee) WULF LUECKERATH / MARK LEHMAN

**ADDRESS:** 1397 SECOND AVENUE
SUITE 170
NEW YORK, NY 10021 (state and zip code)

**PHONE NUMBER:** 917-678-5966 (include area code)

**EMAIL ADDRESS:** wlueckerath@yahoo.com

(If applicant is NOT the owner, proof of owner's consent to the application MUST be provided.)

IV. **CONSULTANT:** LISCUM, McCORMACK VANVOORHIS (ARCHITECT)

**ADDRESS:** 181 CHURCH STREET

POUGHKEEPSIE, NY 12601 (state and zip code)

**PHONE NUMBER:** 845-452-2268 (include area code)

V. **PROPOSED USE or FAÇADE CHANGE** (Summarize proposed use or uses): GROUND FLOOR COMMERCIAL & RESIDENCES; partial GF RESIDENTIAL, 2nd & 3rd FL RESIDENCES

VI. **ZONING DISTRICT:** C-2A, MAIN STREET COMMERCIAL DISTRICT

***(Proceed to XVII for special permit & façade approval only)***

Revised January 2018: Previous Editions Obsolete

## PROJECT INFORMATION

New construction: _____(yes) X (no)

Change of use: X (yes) _____ (no)

Expansion/addition: X (yes) _____ (no)

Alteration: X (yes) _____ (no)

Cost of Construction: $ 3,500,000.—

**LOT AND BULK INFORMATION:**

Lot area: 0.2 (acres) 8,860 (square feet)

Building Footprint: 0 (proposed square feet for new construction)

5,995 (existing square feet for change of use/expansion)

2,225 (additional proposed square feet for expansion)

8,220 (total building footprint, square feet)

Lot Coverage: 93.7% (percentage, building coverage only)

Gross Floor Area: 0 (proposed square feet for new construction)

17,985 (existing square feet for change of use/expansion)

6,675 (additional proposed square feet for expansion)

24,660 (total gross floor area, square feet)

Building Height: 3 (stories) 30.5' (feet)

Floor Area Ratio: 2.03 (ratio of gross floor area divided by lot area)

**VIII. PROJECT PARKING INFORMATION**

A) Number of Off-Street Parking Spaces required: ~~49~~ 51

B) Number of Off-Street Parking Spaces provided: 10*

C) Waiver Requested: ✓ (Yes) _____ (No)

Is municipal parking available within 600 feet? ✓ (Yes) _____ (No)

* 10 on-site parking spaces to be located at 618 MAIN STR (Pete's Famous Restaurant)

If yes, name all such municipal facilities: 17 Palmer Avenue; East-West Arterial (between Lexington Ave & Manitou Ave)

(If a waiver is requested based on proximity to municipal facilities, a written request for such waiver, addressed to the City Planning Staff and the Chairman of the Planning Board, must be submitted with the application.)

If a private parking facility is to be utilized, is such facility within 600 feet?

X (Yes) _____ (No)

If yes, provide the address of the facility, name of the property owner, number of spaces in the lot, number of spaces available for lease, and length of lease. Attach copy of lease. Additional information may be required by the Planning Board): 618 MAIN STR (Petes Famous Restaurant) - 10 on-site parking spaces (pls. see attached letter).

## IX. RESIDENTIAL PROPOSALS

A) Type of Development: Multiple Residence Rental
(Townhouse, condominium, multiple residence rental, etc.)

B) Unit Breakdown:

Number of efficiency or "studio" units: 6

Number of one (1) bedroom units: 24

Number of two (2) bedroom unit's 0

Number with three or more bedrooms: 0

Total number of units: _____

C) Is funding public? ____ Yes X No

If yes, describe funding source: _____

## X. OFFICE PROPOSALS (____ Medical/Dental ____ Professional ____ Business)

A) Number of Employees: _____ TBD

B) Number of doctors/dentists/medical practitioners: _____

C) Days/Hours of Operation: _____

## XI. SERVICE BUSINESS PROPOSALS

A) Specify Business: _____ TBD
(e.g., laundromat, drycleaner, beauty parlor, travel agency, banks)

B) Number of Employees: _____

C) Number of Washing Machines (for laundromat): _____

D) Days/Hours of Operation: _____

## XII. MERCANTILE PROPOSALS (Retail _____ Wholesale _____)

A) Type of Mercantile (specify): _____ TBD

B) Number of Employees: _____

C) Days/Hours of Operation: _____

## XIII. STANDARD RESTAURANT/FAST FOOD RESTAURANT/COFFEE SHOP/DONUT SHOP/NIGHTCLUB/DISCOTHEQUE/BAR PROPOSALS

TBD

A) Specify Use: _____

B) Number of seats (excluding bar stools and outdoor seating):_____

C) Meals served (i.e., breakfast, lunch, dinner): _____

D) Type of Menu: _____

E) Days/Hours of Operation: _____

F) Entertainment (live and/or recorded):_____

G) Will the restaurant contain a bar/lounge?: _____ Yes _____ No

H) If yes, how many seats at the bar? _____

I) Is a drive-through window proposed? _____

J) Is a walk-up window proposed? _____

K) Is an outdoor seating area proposed? _____

L) If yes, how many seats are proposed? _____

M) If yes, is outdoor cooking proposed? _____

## XIV. INDUSTRIAL/COMMERCIAL PROPOSALS (Automobile repair, taxi, motor vehicle sales, warehouse, manufacturing, animal hospital, research facilities, etc.)

A) Specify Use: _____ N/A

B) Number of shifts (if any): _____

C) Number of employees: _____
(If shifts are proposed, list number of employees per shift)

E) Number of work bays (if automobile repair): _____

F) Days/Hours of operation: _____

**XV. EDUCATIONAL/INSTITUTIONAL/RECREATIONAL PROPOSALS** (e.g., Museums, Theatres, Conference Centers, Hotels, Motels, Hospitals, Nursing Homes, Assisted Living Facilities, Nursery Schools, Private Schools, Day Care Centers, Places of Worship, Marinas, Membership Clubs, etc.)

A) Specify: N/A

B) Number of shifts (if any): _____

C) Number of employees: _____
(If shifts are proposed, list number of employees per shift)

D) Number of beds (hospitals, nursing homes, etc): _____

E) Number of seats in largest assembly space: _____

F) Number of classrooms (schools): _____

G) Number of rental units (hotels, motels, etc.) _____

H) Number of boat slips/courts (e.g., tennis, handball, etc.), alleys: _____

I) Days/Hours of Operation: _____

**XVI. PROPOSALS NOT MENTIONED ABOVE** (Please be specific):

Occupancy of existing & expanded new addition of rear building portion. No basement occupancy.

**XVII. APPLICANT CERTIFICATION**

I, WULF LUECKERATH, certify that the this application has addressed the objectives outlined in the Zoning Ordinance with consideration given to the public health, safety and welfare; the comfort and convenience of the public in general or the residents or users of the proposed development and of the immediate neighborhood.

The applicant certifies that all information contained herein is accurate and complete as of the date of this application.

**Re: 584 Main Street, Poughkeepsie, NY**
**Applicant's Update**

To the City of Poughkeepsie Planning Board:

Per the Planning Board and Dutchess County Planning comments received in July 2021 and our follow-up presentation and workshop in September 2021 for the proposed project at 584 Main Street, we are pleased to provide you with the following narrative breakdown of the design changes and responses to design input received.

- All windows will mimic the original double hung, 6/6 windows, flat top in an arched opening.
- All shutters have been eliminated.
- Preservation of the existing brick façade has been incorporated in to the updated design. The original brick façade will remain exposed at the East elevation. At the West elevation, three sections of brick will have the stucco removed and be repointed, restored and exposed. Existing double rowlock brick arches over windows will be exposed. All brick masonry will be painted a dark gray, Sherwin Williams SW6257 Gibraltar, to contrast with the lighter James Hardies clapboard siding in Gray Slate. The clapboard siding will protrude approximately 2" from the face of the existing brick. Creating a vertical plane change with the material change. The combination of brick masonry and clapboard siding will also accentuate the differentiation between the existing building and the new addition.
- The existing 'Welcome to Middle Main' mural on the East elevation will be reinstalled at the same location, frames with flat stock and will be illuminated with (6) 48" LED low profile mural lights on a photocell controller.
- The residential entrance on Main Street will be accentuated with a canvas canopy and wall sconce lighting. The residential entrance on Palmer Avenue will be accentuated with a surround molding, a canvas canopy and wall sconce lighting to increase the pedestrian presence on Palmer Avenue.
- The service door on Palmer Avenue access the interior, common trash and recycling room. Commercial garbage containers will not be stored on the street or public way.

- The Main Street and Palmer Avenue streetscape elevations at the commercial/retail spaces will be detailed with traditional composite wood pilasters, recessed panel detailing, cornice board and protruding brackets and painted 'White'. Gooseneck lighting fixtures have been reduced in quantity to (11) LED Abolite fixtures.
- Wall mounted exterior lighting on the South elevation and East elevation (with the exception of the mural) is not proposed as the building is zero lot line and such fixtures would illuminate others properties and potentially create a visual nuisance to the residential bedrooms of the proposed development.
- A bicycle rack will be provided at the Main Street façade adjacent to the commercial space entries and at the Palmer Avenue residential entry. As these will be mounted in the public sidewalk, outside of the zero lot line, we will require approval from the City for these installations.
- Natural gas fuel is not intended to be utilized in the proposed development. Electric meters are intended to be installed in an interior First Floor electric room with remote exterior readers. If this is not acceptable to the utility company, the electric meters will be located on the left side of the south elevation.
- The proposed floor plan footprint has been modified to permit a 3' planting strip at the rear yard lot line off Palmer Avenue and arborvitae plantings are proposed in this space. Fencing enclosures are not proposed.
- Roof mounted air handlers and condenser units will be located in the center of the roof and enclosed with a 36" high metal screen. This enclosure will not be viewable from the pedestrian way on Main or Palmer.
- A restaurant or kitchen use is not planned for the First Floor commercial spaces and as such there are no planned exterior hood or combustion air vents shown or planned on the building facades.

We thank you for your contributions ad comments in this design process and we will be happy to discuss these comments with the City Planning Department at the next meeting. Thank you.

Sincerely,

LISCUM McCORMACK VANVOORHIS

# MEMORANDUM

To: City of Poughkeepsie Planning Board

From: 584 Main Street LLC

Date: September 5, 2021

Re: 584 Main Street, Poughkeepsie, NY 12601

**INTRODUCTION**

As owners of 584 Main Street we are seeking to convert the currently vacant, dilapidated commercial building into a newly gut-renovated, mixed-use building consisting of 30 residential apartments and 2,500 SF of ground floor commercial space.

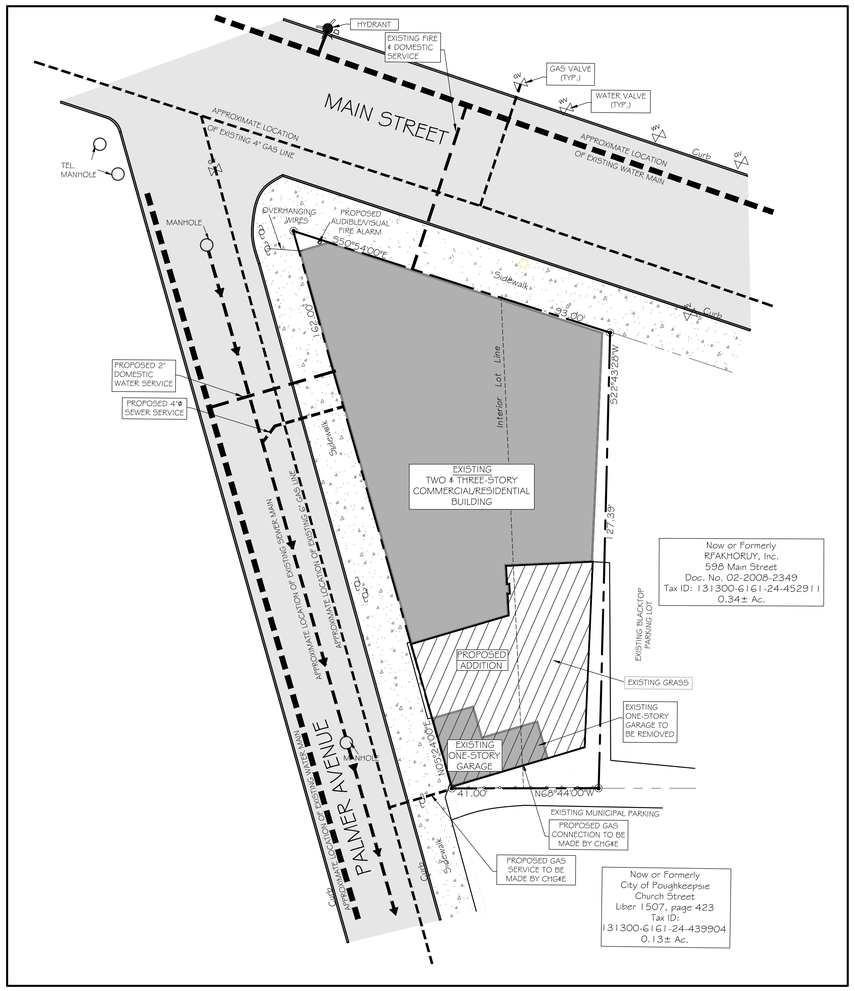
**STATUS**

As part of the approval process we secured approval from the Zoning Board of Appeals on 8/10/21 for the full expansion of the site to build those 30 apartments and two ground-floor commercial spaces. We also engaged EnviroClean and they successfully removed the 1,000-gallon underground oil tank. They tested the site and it came back clean (close-out letter available).

**SITE PLAN and ELEVATION REVISIONS**

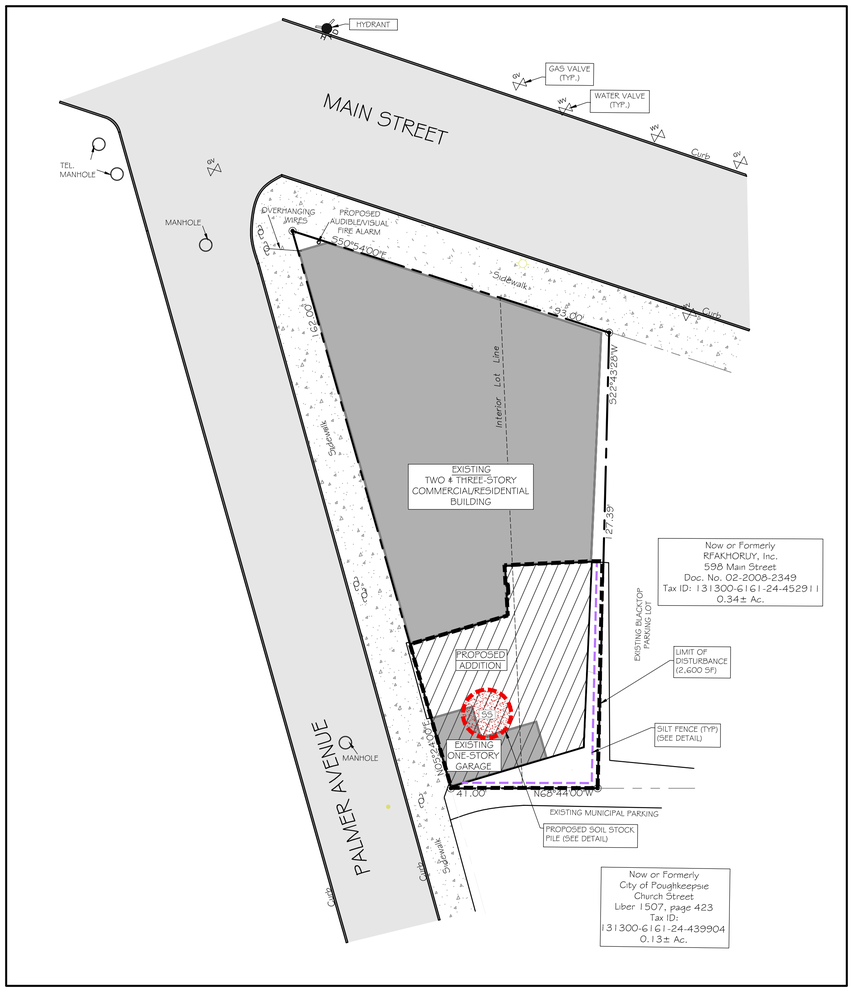
Here are the revisions we made to the site plan of 584 Main Street;

- Revised site plan by Cronin Engineering incorporating City of Poughkeepsie Civil Engineer comments.
- Updated property elevations and floorplans by our architect, Liscum McCormack VanVoorhis LLP. We incorporated ideas / suggestions from previous planning board meeting and comments from County Planning and the Board's architectural consultant (MAAD Architects).
- Additions / updates include: clapboard siding, LED gooseneck light fixture and number of light fixtures along northern and western facade, shutter style, canopy above residential door entrances, and interior garbage room.
- Existing wood mural to be re-installed (east elevation).
- Samples of Gray Slate colorway and clapboard siding by James Hardie to be provided at meeting.



Thank you for your consideration.

584 Main Street LLC



# SITE DEVELOPMENT PLAN
# FOR 584 MAIN STREET

## CITY OF POUGHKEEPSIE

### DUTCHESS COUNTY, NEW YORK

## UTILITY PLAN

## EROSION & SEDIMENT CONTROL PLAN

### ENGINEER'S NOTES TO OWNER/CONTRACTOR

1. A PRE-CONSTRUCTION SITE INSPECTION WITH CRONIN ENGINEERING, P.E., P.C. IS REQUIRED W/ THE OWNER AND CONTRACTOR PRESENT TO CONFIRM THE CONSTRUCTION PROCEDURE.
2. THERE SHALL BE NO MODIFICATION TO ANY ASPECT OF THIS PLAN WITHOUT FIRST CONTACTING CRONIN ENGINEERING, P.E., P.C. FOR APPROVAL.
3. PRIOR TO ANY EXCAVATION, THE OWNER AND/OR CONTRACTOR SHALL CALL THE UNDERGROUND LINE LOCATION SERVICE (CODE 53) AT (800)-962-7962. FOR MORE INFORMATION, VISIT WWW.DIGSAFELYNEWYORK.COM.
4. EROSION & SEDIMENT CONTROL MEASURES AS SHOWN IN THIS PLAN SET SHALL BE IN PLACE PRIOR TO THE COMMENCEMENT OF ANY SITE WORK. IF UNFORESEEN FIELD CONDITIONS ARE ENCOUNTERED WHICH PROHIBIT THE INSTALLATION OF CERTAIN EROSION & SEDIMENT CONTROL MEASURES AS SHOWN, IT SHALL BE THE OWNER AND/OR CONTRACTOR'S RESPONSIBILITY TO CONTACT CRONIN ENGINEERING, P.E., P.C. IMMEDIATELY TO DISCUSS ALTERNATIVE METHODS. IT SHALL BE THE OWNER AND/OR CONTRACTOR'S RESPONSIBILITY TO ENSURE THE INTEGRITY OF ALL EROSION & SEDIMENT CONTROL MEASURES AT ALL TIMES THROUGHOUT THE DURATION OF THE PROJECT.
5. CRONIN ENGINEERING, P.E., P.C. MAKES NO REPRESENTATIONS OR CERTIFICATIONS AS TO THE INTEGRITY, LOCATION OR EXISTENCE OF SUBSURFACE STRUCTURES OR SOIL CONDITIONS WITH RESPECT TO STABILITY AND SUITABILITY FOR THE INTENDED PURPOSE. IT IS THE RESPONSIBILITY OF THE OWNER AND/OR CONTRACTOR TO VERIFY ALL SUBSURFACE CONDITIONS AND INSURE THAT ALL IMPROVEMENTS ARE PLACED ON MATERIAL WITH A SUITABLE BEARING CAPACITY.
6. CRONIN ENGINEERING, P.E., P.C. MAKES NO REPRESENTATION OR CERTIFICATIONS AS TO THE QUANTITY OF MATERIAL NEEDED OR TO BE REMOVED FOR THE SUCCESSFUL CONSTRUCTION OF THE PROJECT. IT IS THE RESPONSIBILITY OF THE OWNER AND/OR CONTRACTOR TO VERIFY THE QUANTITY OF MATERIAL NEEDED OR TO BE REMOVED TO SUCCESSFULLY CONSTRUCT THE PROJECT.
7. IN THE EVENT THAT FIELD CONDITIONS ARE DIFFERENT THAN WHAT IS PRESENTED IN THIS PLAN SET, IT IS THE RESPONSIBILITY OF THE OWNER AND/OR CONTRACTOR TO NOTIFY CRONIN ENGINEERING, P.E., P.C. PRIOR TO CONTINUING WITH ANY FURTHER SITE WORK.
8. IF UNFORESEEN SUBSURFACE CONDITIONS ARE ENCOUNTERED (I.E. ROCK, GROUNDWATER, ETC.), THE OWNER AND/OR CONTRACTOR SHALL STOP WORK AND NOTIFY CRONIN ENGINEERING, P.E., P.C. ALL NECESSARY MODIFICATIONS OR CHANGES SHALL BE DISCUSSED WITH AND APPROVED BY CRONIN ENGINEERING, P.E., P.C. PRIOR TO CONTINUING WITH ANY FURTHER SITE WORK. FURTHERMORE, THE OWNER AND/OR CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ALL NECESSARY PERMITS IF BLASTING IS REQUIRED.
9. IT IS THE OWNER AND/OR CONTRACTOR'S SOLE RESPONSIBILITY TO FOLLOW OSHA, NYS AND ANY OTHER APPLICABLE CODES OR REQUIREMENTS THROUGHOUT THE DURATION OF THE PROJECT. THIS INCLUDES BUT IS NOT LIMITED TO PROVIDING ADEQUATE BRACING AND GUARANTEEING THE STABILITY OF EXCAVATIONS AND OTHER VICINITY STRUCTURES.
10. CRONIN ENGINEERING, P.E. P.C. MAKES NO REPRESENTATION AS TO THE QUALITY (I.E. CONTAMINATION), IF ANY, OF THE SOILS ON THIS SITE. THE OWNER AND/OR CONTRACTOR ARE RESPONSIBLE TO CONDUCT ANY AND ALL TESTING AS MAY BE REQUIRED TO ENSURE THE SITE HAS NO CONTAMINATED SOILS.
11. CRONIN ENGINEERING, P.E. P.C. MAKES NO REPRESENTATION AS TO THE SOIL BEARING CAPACITY OF THE SOILS ON SITE. THE OWNER AND/OR ARCHITECT ARE RESPONSIBLE TO CONDUCT ANY AND ALL TESTING AS MAY BE REQUIRED TO ENSURE THE CONSTRUCTION OF THE FOUNDATION MEETS THE REQUIREMENTS OF THE NEW YORK STATE BUILDING CODE AND THE BUILDING CODE OF THE VILLAGE OF CROTON-ON-HUDSON. FOUNDATION DESIGN IS NOT PROVIDED BY THIS OFFICE AND IS THE RESPONSIBILITY OF THE OWNER/ARCHITECT/BUILDER.
12. THE OWNER/BUILDER/ARCHITECT ARE RESPONSIBLE TO ENSURE THAT THE BUILDING FOUNDATION MEETS ALL CITY CODES AND THE NEW YORK STATE RESIDENTIAL BUILDING CODE. IF UNSUITABLE MATERIAL IS ENCOUNTERED, THE OWNER SHALL MAKE PROVISIONS (I.E. DEEPER FOOTING, SPREAD FOOTING, GRADE BEAMS, PILES, ETC.) AS NECESSARY TO ENSURE A CODE COMPLIANT FOUNDATION TO THE SATISFACTION OF THE CITY OF POUGHKEEPSIE BUILDING DEPARTMENT.

### EROSION CONTROL NOTES

1) CONTRACTOR SHALL BE RESPONSIBLE FOR COMPLIANCE WITH ALL SEDIMENT AND EROSION CONTROL PRACTICES. THE SEDIMENT AND EROSION CONTROL PRACTICES ARE TO BE INSTALLED PRIOR TO ANY MAJOR SOIL DISTURBANCES, AND MAINTAINED UNTIL PERMANENT PROTECTION IS ESTABLISHED.
2) TIMELY MAINTENANCE OF SEDIMENT CONTROL STRUCTURES IS THE RESPONSIBILITY OF THE CONTRACTOR. ALL STRUCTURES SHALL BE MAINTAINED IN GOOD WORKING ORDER AT ALL TIMES. THE SEDIMENT LEVEL IN ALL SEDIMENT TRAPS SHALL BE CLOSELY MONITORED AND SEDIMENT REMOVED PROMPTLY WHEN MAXIMUM LEVELS ARE REACHED OR AS ORDERED BY THE ENGINEER. ALL SEDIMENT CONTROL STRUCTURES SHALL BE INSPECTED WEEKLY, PRIOR TO EXPECTED RAIN EVENTS, AND AFTER EACH HEAVY RAIN TO INSURE PROPER OPERATION AS DESIGNED. AN INSPECTION SCHEDULE SHALL BE SET FORTH PRIOR TO THE START OF CONSTRUCTION.
3) THE LOCATIONS AND THE INSTALLATION TIMES OF THE SEDIMENT CAPTURING STANDARDS SHALL BE AS ORDERED BY THE ENGINEER, AND IN ACCORDANCE WITH ACCEPTED STANDARDS.
4) ALL TOPSOIL NOT TO BE USED FOR FINAL GRADING SHALL BE REMOVED FROM THE SITE IMMEDIATELY AND PLACED IN A STABILIZED STOCKPILE OR FILL AREA. ALL TOPSOIL REQUIRED FOR FINAL GRADING AND STORED ON SITE SHALL BE LIMED,FERTILIZED, TEMPORARILY SEEDED AND MULCHED WITHIN 14 DAYS.
5) ANY DISTURBED AREAS THAT WILL BE LEFT EXPOSED MORE THAN 21 DAYS AND NOT SUBJECT TO CONSTRUCTION TRAFFIC, SHALL IMMEDIATELY RECEIVE TEMPORARY SEEDING. MULCH SHALL BE USED IF THE SEASON PREVENTS THE ESTABLISHMENT OF A TEMPORARY COVER. DISTURBED AREAS SHALL BE LIMED AND FERTILIZED PRIOR TO TEMPORARY SEEDING.
6) ALL DISTURBED AREAS WITHIN 500 FEET OF AN INHABITED DWELLING SHALL BE WETTED AS NECESSARY TO PROVIDE DUST CONTROL.
7) THE CONTRACTOR SHALL KEEP THE ROADWAYS WITHIN THE PROJECT CLEAR OF SOIL
8) AND DEBRIS AND IS RESPONSIBLE FOR ANY STREET CLEANING NECESSARY DURING THE COURSE OF THE PROJECT.
9) SEDIMENT AND EROSION CONTROL STRUCTURES SHALL BE REMOVED AND THE AREA STABILIZED WHEN THE DRAINAGE AREA HAS BEEN PROPERLY STABILIZED BY PERMANENT MEASURES.
10) SOIL SEEDING AND FERTILIZER AMENDMENTS SHALL BE PERFORMED IN ACCORDANCE WITH THE CURRENT EDITION OF "NEW YORK GUIDELINES FOR URBAN EROSION AND SEDIMENT CONTROL".
11) ALL SEDIMENT AND EROSION CONTROL MEASURES SHALL BE INSTALLED IN ACCORDANCE WITH THE CURRENT EDITION OF "NEW YORK GUIDELINES FOR URBAN EROSION AND SEDIMENT CONTROL".

### GENERAL NOTES

1. SURVEY INFORMATION SHOWN HEREON IS BASED ON A MAP PREPARED BY SPENCER S. HALL LAND SURVEYOR, DATED MAY 5, 2021.
2. PARCEL TAX MAP DESIGNATION: SECTION: 131300, BLOCK: 24, LOT: 439917
3. TOTAL AREA OF LOT: 8,878 SQ. FT. (±0.20 ACRES)
4. PARCEL IS LOCATED IN THE CITY OF POUGHKEEPSIE C-2A (MAIN STREET COMMERCIAL) ZONING DISTRICT.
5. THERE SHALL BE NO MODIFICATION TO ANY ASPECT OF THIS PLAN WITHOUT CONTACTING THE DESIGN ENGINEER.
6. IT IS THE OWNERS RESPONSIBILITY TO ENSURE THAT ALL IMPROVEMENTS ARE PLACED ON MATERIAL WITH A SUITABLE BEARING CAPACITY.

INSTALLATION NOTES:

1. AREA CHOSEN FOR STOCK PILING OPERATIONS TO BE DRY AND STABLE.
2. MAXIMUM SLOPE OF PILE TO BE 1 VERTICAL ON 2 HORIZONTAL.
3. REFER TO STRAW BALE DIKE AND SILT FENCE INSTALLATION DETAILS IN THIS PLAN SET FOR INSTALLATION GUIDELINES.

* EITHER A STRAW BALE DIKE OR SILT FENCE MAY BE USED FOR STOCKPILE PROTECTION AS SPECIFIED BY QUALIFIED INSPECTOR.

## SOIL STOCKPILING CONSTRUCTION

N.T.S.

INSTALLATION NOTES:

1. EXCAVATE A 4 INCH X 4 INCH TRENCH ALONG THE LOWER SIDE OF A SLOPE AS SPECIFIED ON SITE PLAN.
2. UNROLL A SECTION AT A TIME AND POSITION THE POSTS AGAINST THE BACK (DOWNHILL) WALL OF THE TRENCH (NET SIDE AWAY FROM DIRECTION OF STORM WATER FLOW).
3. DRIVE THE POST INTO THE GROUND UNTIL THE NETTING IS APPROXIMATELY 2 INCHES FROM THE TRENCH BOTTOM.
4. LAY THE TOE-IN FLAP OF FABRIC FLAT IN THE BOTTOM OF THE TRENCH AND BACKFILL THE TRENCH AND TAMP THE SOIL OVER THE FLAP TO SECURELY HOLD THE FABRIC IN PLACE. STEEPER SLOPES REQUIRE AN INTERCEPT TRENCH.
5. JOIN SECTIONS AS SHOWN ABOVE
6. PREFABRICATED UNITS SHALL BE OF TYPE GEOFAB, ENVIROFENCE, OR APPROVED EQUIVALENT.

## SILT FENCE INSTALLATION

## Instructions for Completing

**Part 1 – Project Information. The applicant or project sponsor is responsible for the completion of Part 1.** Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification. Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information.

Complete all items in Part 1. You may also provide any additional information which you believe will be needed by or useful to the lead agency; attach additional pages as necessary to supplement any item.

**Part 1 – Project and Sponsor Information**

| | NO | YES |
|---|---|---|
| 1. Does the proposed action only involve the legislative adoption of a plan, local law, ordinance, administrative rule, or regulation? If Yes, attach a narrative description of the intent of the proposed action and the environmental resources that may be affected in the municipality and proceed to Part 2. If no, continue to question 2. | ☒ | ☐ |
| 2. Does the proposed action require a permit, approval or funding from any other government Agency? If Yes, list agency(s) name and permit or approval: Zoning board of appeals, planning board, bldg permit | ☐ | ☒ |

3. a. Total acreage of the site of the proposed action? 0.2 acres
   b. Total acreage to be physically disturbed? 0.03 acres
   c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 0.2 acres

4. Check all land uses that occur on, are adjoining or near the proposed action:
   ☑ Urban ☐ Rural (non-agriculture) ☐ Industrial ☑ Commercial ☑ Residential (suburban)
   ☐ Forest ☐ Agriculture ☐ Aquatic ☑ Other(Specify): mixed-use residential/ commercial
   ☐ Parkland

| | NO | YES | N/A |
|---|---|---|---|
| 5. Is the proposed action, | | | |
| a. A permitted use under the zoning regulations? | ☑ | ☐ | ☐ |
| b. Consistent with the adopted comprehensive plan? | ☐ | ☑ | ☐ |
| 6. Is the proposed action consistent with the predominant character of the existing built or natural landscape? | ☐ | ☑ | |
| 7. Is the site of the proposed action located in, or does it adjoin, a state listed Critical Environmental Area? If Yes, identify: _____ | ☑ | ☐ | |
| 8. a. Will the proposed action result in a substantial increase in traffic above present levels? | ☑ | ☐ | |
| b. Are public transportation services available at or near the site of the proposed action? | ☐ | ☑ | |
| c. Are any pedestrian accommodations or bicycle routes available on or near the site of the proposed action? | ☐ | ☑ | |
| 9. Does the proposed action meet or exceed the state energy code requirements? If the proposed action will exceed requirements, describe design features and technologies: PROPERTY WILL LOOK TO INCORPORATE ENERGY EFFICIENT WINDOWS AND BLOWN-IN INSULATION. WILL ALSO INCORPORATE SOLAR PANELS ON THE NEW ROOF FOR COMMON AREA ENERGY USAGE. | ☐ | ☑ | |
| 10. Will the proposed action connect to an existing public/private water supply? If No, describe method for providing potable water: _____ | ☐ | ☑ | |
| 11. Will the proposed action connect to existing wastewater utilities? If No, describe method for providing wastewater treatment: _____ | ☐ | ☑ | |
| 12. a. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? | ☑ | ☐ | |
| b. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? | ☑ | ☐ | |
| 13. a. Does any portion of the site of the proposed action, or lands adjoining the proposed action, contain wetlands or other waterbodies regulated by a federal, state or local agency? | ☑ | ☐ | |
| b. Would the proposed action physically alter, or encroach into, any existing wetland or waterbody? If Yes, identify the wetland or waterbody and extent of alterations in square feet or acres: _____ | ☑ | ☐ | |

14. Identify the typical habitat types that occur on, or are likely to be found on the project site. Check all that apply:

☐ Shoreline ☐ Forest ☐ Agricultural/grasslands ☐ Early mid-successional

☐ Wetland ☑ Urban ☑ Suburban

| | NO | YES |
|---|---|---|
| 15. Does the site of the proposed action contain any species of animal, or associated habitats, listed by the State or Federal government as threatened or endangered? | ☑ | ☐ |
| 16. Is the project site located in the 100-year flood plan? | ☑ | ☐ |
| 17. Will the proposed action create storm water discharge, either from point or non-point sources? | ☑ | ☐ |
| If Yes, | | |
| a. Will storm water discharges flow to adjacent properties? | ☐ | ☐ |
| b. Will storm water discharges be directed to established conveyance systems (runoff and storm drains)? | ☐ | ☐ |
| If Yes, briefly describe: | | |
| 18. Does the proposed action include construction or other activities that would result in the impoundment of water or other liquids (e.g., retention pond, waste lagoon, dam)? | ☑ | ☐ |
| If Yes, explain the purpose and size of the impoundment: | | |
| 19. Has the site of the proposed action or an adjoining property been the location of an active or closed solid waste management facility? | ☑ | ☐ |
| If Yes, describe: | | |
| 20. Has the site of the proposed action or an adjoining property been the subject of remediation (ongoing or completed) for hazardous waste? | ☑ | ☐ |
| If Yes, describe: | | |

# MEMORANDUM

To: City of Poughkeepsie Planning Board

From: 584 Main Street LLC

Date: September 29, 2021

Re: 584 Main Street, Poughkeepsie, NY 12601

As new owners of 584 Main Street we are seeking to convert the currently vacant, dilapidated commercial building into a newly gut-renovated, mixed-use building consisting of 30 residential apartments and 2,500 SF of ground floor commercial space. On 8/10/21, the ZBA approved a waiver for 41 out of the originally required 51 parking spaces. This determination required us to find 10 parking spaces within 600 feet of 584 Main Street. Attached hereto are signed leases which provide us with more than the minimum required 10 parking spaces, and an analysis which we believe supports our claim that more than 10 likely will not be necessary.

We currently own and manage 11 stabilized properties consisting of nearly 90 residential and commercial units in Poughkeepsie, and at one point 18 months ago owned and managed as many as 13 stabilized properties totaling approximately 150 residential and commercial units. We recently surveyed all of the tenants in our portfolio to determine who owns / leases cars and has need for local, on or off-street parking. As the attached spreadsheet shows, only 19 out of 76, or 25% of our tenants (and even lower given the fact that more than one person typically resides in an apartment) own or otherwise have cars and need parking. Based on the 30 units projected for 584 Main Street this would equate to fewer than eight (8) parking spaces needed for the newly-renovated building. *Please note that we are in extensive talks with Hudson River Housing whereby they would lease many of the units; none of their tenants own or lease cars.*

Attached are three fully-executed leases with the owners of Pete's Famous Restaurant at 618 Main Street, 12 Lexington Avenue, and 22 Lexington Avenue (Wulf Lueckerath and Mark Lehman) allowing limited use of their parking lots. These provide for up to 19 total parking spaces.

Furthermore, the per unit parking requirements along Main Street per existing zoning are antiquated and do not reflect what is realistic or necessary.

Thank you for your consideration.

## PARKING LOT LEASE AGREEMENT

**THIS PARKING LOT LEASE AGREEMENT** made this 16 day of June, 2021, by and between **Pete's Famous Restaurant LLC,** having its principal offices at 618 Main Street, Poughkeepsie, NY 12601, hereinafter called the **"Lessor"**, and **584 Main Street LLC**, a New York limited liability company, with a principal office located at 1397 Second Avenue, Suite 170, New York, NY 10021, hereinafter called **"Tenant".**

### W ITNESSETH:

**WHEREAS, Lessor** is the fee owner of property located in the City of Poughkeepsie, County of Dutchess, State of New York known as 618 Main Street; and

**WHEREAS, Lessor** is desirous of leasing "up to 10 parking spaces" ("Parking Spaces") to **Tenant** and **Tenant** is desirous of leasing the Parking Spaces from **Lessor** for the purpose of 584 Main Street tenant parking spaces in accordance with all the terms and conditions hereinafter set forth,

### NOW, THEREFORE,

**IN CONSIDERATION** of the mutual agreements, covenants and conditions as hereinafter set forth, the parties do agree as follows:

1. **Term**. The term of this Agreement will begin upon the signing of this Agreement (the, "Commencement Date") and shall end twelve months therefrom (the, "Term"). Actual occupancy of the parking spaces located at 618 Main Street will not commence until 584 Main Street is completely renovated and new Certificate of Occupancy is issued.

2. **Rent**. Tenant agrees to pay **Lessor** the sum of $250 per month (the, "Rent"). The rent must be paid on the first of the month at the Lessor's address listed above.

3. **Permitted Use**. The Parking Spaces shall be used by Tenant only for the purpose of accommodating 584 Main monthly tenant parking needs, and for no other use or purpose without the Landlord's prior written consent, which shall be granted or withheld in **Lessor's** sole and selective direction.

4. **Tenant Assignment**. Tenant shall not assign nor in any manner transfer this Agreement, or any interest therein, nor sublet the Property or any part or parts thereof, nor permit occupancy by anyone, except in connection with the Tenant's use and occupancy of the Property as a parking lot.

5. **Events of Default**. The following events shall be deemed to be events of default by Tenant under this Agreement ("Event of Default"):

(a) Tenant shall have failed to pay the rent or any other charge provided herein, or any portion thereof, within ten (10) days after written demand for same from **Lessor**;

(b) Tenant shall have failed to comply with any other provisions of this agreement and shall not cure such failure within thirty (30) days after **Lessor**, by written notice, has informed Tenant of such noncompliance;

(c) Tenant abandons property.

8. **Notice of Default.** In the event of a default pursuant to Paragraph "7" above, **Lessor** may, by serving ten (10) days written notice upon Tenant, terminate this Lease. If Landlord gives Tenant notice of Tenant's default and/or delivers to Tenant a Notice of Demand for Payment or Possession pursuant to applicable statute (either of which shall hereinafter be refereed to as a "Notice of Default"), the Notice of Default will not constitute an election to terminate this Agreement unless **Lessor** expressly states in the Notice of Default that it is exercising its right to terminate the Lease.

9. **Tenant's Right to Terminate.** Either the Lessor or the Tenant may cancel this lease upon 30 days' written notice to the other party at the address set forth at the beginning of the Agreement.

10. **Notice.** Any and all notices given in connection with this Agreement shall be deemed adequately given if in writing and addressed to the party for whom such notices are intended at the address set forth below. All notices shall be sent by personal delivery, FedEx or other overnight messenger service, or by first class certified mail, postage prepaid, return receipt requested. A written notice shall be deemed to have been given to the recipient party on the earlier of (a) the date it is delivered to the address required by this Agreement; (b) the date delivery is refused at the address required by the Agreement; or (c) with respect to notices by mail, the date as of which the postal service indicated such notice to be undeliverable at the address required by this Agreement. Any and all notices referred to in this Agreement, or that either party desires to give to the other, shall be addressed as follows:

For Lessor: Pete's Famous Restaurant
618 Main Street
Poughkeepsie, New York 12601

For Tenant: 584 Main Street LLC
1397 Second Avenue, Suite 170
New York, New York 10021

Any party hereto may, by notice given hereunder, designate any further or different addresses to which subsequent notices or other communications shall be sent.

12. **Miscellaneous.**

(a) This Agreement shall be interpreted according to and shall be governed by the laws of the State of New York and all parties agree any action to enforce this agreement shall be brought in a court of competent jurisdiction situated in the County of Dutchess.

(b) Any changes or modifications of this Agreement must be in writing, and signed by the parties hereto. This Agreement supersedes any previous understanding or agreement between the parties relating to the Property.

(c) Paragraph headings are for convenience only, and in no way define or limit the scope and content of this Agreement.

(d) No delay or failure by either party to enforce or exercise any rights or remedies hereunder shall constitute a waiver of such right or remedy, nor shall any single or partial exercise of a right or remedy preclude any other or further exercise of rights and remedies.

(e) This Agreement may be executed in multiple counterparts, and by use of counterpart signature pages, but all such counterparts shall constitute but one and the same agreement. Signature pages bearing facsimile signatures shall be effective for purposes of binding the parties to this Agreement.

(f) This Agreement shall be binding upon and inure to the benefit of the parties hereto and their respective successors and assigns, provided this paragraph shall not permit any assignment contrary to the provisions of this Agreement.

**IN WITNESS WHEREOF**, Lessor and Tenant have executed this Lease as of the day and year first above written.

# RENTAL PARKING AGREEMENT

Rental Amount: None

Parking Spaces: Up to Four

This **Rental Parking Agreement** made by and between

**TENANT:** 584 Main Street LLC ("Tenant")

**Leased Premises:** 584 Main Street, Poughkeepsie, NY 12601

**Tenant's Address:** 1397 Second Avenue, Suite 170, New York, NY 10021

**LANDLORD:** 22 Lexington Avenue LLC ("Landlord")

**Landlord's Address:** 1397 Second Avenue, Suite 170, New York, NY 10021

WITNESSETH: That for and in consideration of the mutual promises, covenants and conditions hereinafter set forth, Landlord and Tenant agree as follows:

1. TERM AND DESCRIPTION. Landlord does hereby lease to Tenant, and Tenant does hereby lease from Landlord, four (4) parking lot spaces ("Parking Spaces") situated in the back of the building located at 22 Lexington Avenue, Poughkeepsie, NY 12601 ("Property") in perpetuity, for so long as Landlord owns the Property, and continuing month-to-month, unless sooner terminated as hereinafter provided. This Agreement shall commence on the earlier to occur of: July 1, 2023 or the date on which 584 Main Street receives the certificate of occupancy.

2. RENT. None.

3. NON-LIABILITY OF LANDLORD. Landlord, its members, officers, agents and employees shall not be liable for any personal injury suffered by Tenant or Tenant's guests or for any damage to or destruction or loss of any of Tenant's personal property located or stored upon the Parking Spaces or Property unless such injury or loss is attributable solely to the intentional, willful or wanton act or gross negligence of Landlord. This provision includes but is not limited to acts of theft, burglary, vandalism, assault or other criminal activity. Tenant assumes all risk of loss or damage of Tenant's property in the Parking Spaces or on the Property that may be caused by fire, windstorm, explosion or other cause, or by the act, or omission of any other tenant at the Property. Tenant further agrees to indemnify Landlord, its members, officers, agents and employees, from and against liability for damage, injury or loss alleged to have been sustained by Tenant or Tenant's guests resulting from any cause whatsoever excepting only such damage, injury or loss caused solely by the grossly negligent or intentional acts of Landlord, its members, officers, agents or employees. Tenant accepts Parking Spaces "as is" and Tenant acknowledges that Landlord has not made and is not making any warranties whatsoever with respect to the Parking Space.

4. LISTING OF VEHICLE. Tenant agrees to provide to Landlord pertaining to any vehicle that may be parked in the Parking Space, a description including vehicle make, model, color and license plate number. Tenant agrees that any vehicle in the Parking Spaces that has not been listed with Landlord will be subject to being towed at the vehicle owner's expense.

5. VEHICLE REGULATIONS. The Tenant's vehicle must have a valid New York State or other State Vehicle Registration, valid New York State Inspection and current automobile insurance. The Tenant shall, at all times during the term of this Rental Parking Agreement, maintain automobile insurance as required by law. Tenant shall at all times while parking the car under this agreement maintain the car in compliance with all State and Local laws, rules, regulations and ordinances as they pertain to owning, maintaining and operating an automobile on public roads.

6. REASSIGNMENT OF PARKING SPACE. Landlord reserves the right to reassign tenant to alternate parking spaces on the Property without prior consent of the tenant upon 10 days prior written notice mailed or delivered to Tenant's Address.

7. TENANT'S USE and LOCATION. Tenant shall use the Parking Spaces only to park the Vehicles listed in this agreement, and shall park listed Vehicles only in the rear of the parking lot along back fence. Tenant shall not use the Parking Spaces to store anything, nor shall Tenant use any area outside the Parking Spaces except to come and go from the Parking Spaces.

8. LANDLORD'S USE OF PARKING SPACE. Landlord may use the Parking Space, if necessary, to make repairs or in cases of emergency, and for such purposes, Landlord may give Tenant a temporary alternate Parking Space.

9. TENANT'S COMPLIANCE WITH PARKING SPACE RULES. Tenant shall comply with all laws applicable to the Parking Space; shall keep the Parking Spaces free of debris and any other matter except for the car; shall not cause or permit any hazardous material or activity to remain at the Parking Space; shall not cause any nuisance at the Parking Space; and shall make no alterations, changes, decorations or any other way change or add to the Parking Space.

10. LANDLORD'S OBLIGATIONS. Landlord is responsible for maintaining Property, including snow removal, and generally ensuring that Property can be used for parking.

11. TERMINATION BY TENANT. Tenant may terminate this Rental Parking Agreement only upon Tenant's thirty- (30) day prior written notice of termination mailed or delivered to Landlord's Address. Upon said termination, Tenant shall receive a prorated refund of any prepaid rent, less a $25.00 termination fee.

12. TERMINATION BY LANDLORD. Landlord may terminate this Rental Parking Agreement at any time upon thirty (30) days prior written notice of termination mailed or delivered to Tenant's Address, whereupon this rental parking agreement shall be deemed cancelled and terminated and Tenant shall retain no further rights in the demised Parking Space. Any prepaid and unearned rent shall be returned to Tenant.

13. SALE OF PROPERTY: Should Landlord sell Property this Agreement shall become null and void and of no further force and effect. Tenant shall be responsible for locating up to four (4) parking spaces within 600 feet of 584 Main Street, Poughkeepsie, NY.

14. GOVERNING LAW. This Rental Parking Agreement is to be governed by the laws of New York State. If any of the conditions or terms hereof conflict with any such law, then such terms or conditions shall be deemed modified and amended to conform to such law.

15. HEADINGS. The heading preceding each paragraph herein is inserted merely as a matter of convenience, and shall not be deemed to be a part of the agreement terms.

16. SEVERABILITY. The invalidity of any provision of this agreement or of its application to any person or circumstance as determined by any governmental agency or court shall in no way affect the validity of any other provisions hereof and all other terms of this agreement shall be valid and enforceable to the fullest extent permitted by law.

17. MODIFICATION. The parties acknowledge that there are no representations and warranties with respect to this Rental Parking Agreement except as expressly stated herein. This lease may not be modified except in writing and signed by both parties.

# RENTAL PARKING AGREEMENT

Rental Amount: None

Parking Spaces: Up to Five

This **Rental Parking Agreement** made by and between

**TENANT:** 584 Main Street LLC ("Tenant")

**Leased Premises:** 584 Main Street, Poughkeepsie, NY 12601

**Tenant's Address:** 1397 Second Avenue, Suite 170, New York, NY 10021

**LANDLORD:** 12 Lexington Avenue LLC ("Landlord")

**Landlord's Address:** 3 Morgan Drive, Unit #362, Mount Kisco, NY 10549

WITNESSETH: That for and in consideration of the mutual promises, covenants and conditions hereinafter set forth, Landlord and Tenant agree as follows:

1. TERM AND DESCRIPTION. Landlord does hereby lease to Tenant, and Tenant does hereby lease from Landlord, up to five (5) parking lot spaces ("Parking Spaces") situated 12 Lexington Avenue, Poughkeepsie, NY 12601 ("Property") in perpetuity, for so long as Landlord owns the Property, and continuing month-to-month, unless sooner terminated as hereinafter provided. This Agreement shall commence on the earlier to occur of: July 1, 2023 or the date on which 584 Main Street receives the certificate of occupancy.

2. RENT. None.

3. NON-LIABILITY OF LANDLORD. Landlord, its members, officers, agents and employees shall not be liable for any personal injury suffered by Tenant or Tenant's guests or for any damage to or destruction or loss of any of Tenant's personal property located or stored upon the Parking Spaces or Property unless such injury or loss is attributable solely to the intentional, willful or wanton act or gross negligence of Landlord. This provision includes but is not limited to acts of theft, burglary, vandalism, assault or other criminal activity. Tenant assumes all risk of loss or damage of Tenant's property in the Parking Spaces or on the Property that may be caused by fire, windstorm, explosion or other cause, or by the act, or omission of any other tenant at the Property. Tenant further agrees to indemnify Landlord, its members, officers, agents and employees, from and against liability for damage, injury or loss alleged to have been sustained by Tenant or Tenant's guests resulting from any cause whatsoever excepting only such damage, injury or loss caused solely by the grossly negligent or intentional acts of Landlord, its members, officers, agents or employees. Tenant accepts Parking Spaces "as is" and Tenant acknowledges that Landlord has not made and is not making any warranties whatsoever with respect to the Parking Space.

4. LISTING OF VEHICLE. Tenant agrees to provide to Landlord pertaining to any vehicle that may be parked in the Parking Space, a description including vehicle make, model, color and license plate number. Tenant agrees that any vehicle in the Parking Spaces that has not been listed with Landlord will be subject to being towed at the vehicle owner's expense.

5. VEHICLE REGULATIONS. The Tenant's vehicle must have a valid New York State or other State Vehicle Registration, valid New York State Inspection and current automobile insurance. The Tenant shall, at all times during the term of this Rental Parking Agreement, maintain automobile insurance as required by law. Tenant shall at all times while parking the car under this agreement maintain the car in compliance with all State and Local laws, rules, regulations and ordinances as they pertain to owning, maintaining and operating an automobile on public roads.

6. REASSIGNMENT OF PARKING SPACE. Landlord reserves the right to reassign tenant to alternate parking spaces on the Property without prior consent of the tenant upon 10 days prior written notice mailed or delivered to Tenant's Address.

7. TENANT'S USE and LOCATION. Tenant shall use the Parking Spaces only to park the Vehicles listed in this agreement, and shall park listed Vehicles only in the rear of the parking lot along back fence. Tenant shall not use the Parking Spaces to store anything, nor shall Tenant use any area outside the Parking Spaces except to come and go from the Parking Spaces.

8. LANDLORD'S USE OF PARKING SPACE. Landlord may use the Parking Space, if necessary, to make repairs or in cases of emergency, and for such purposes, Landlord may give Tenant a temporary alternate Parking Space.

9. TENANT'S COMPLIANCE WITH PARKING SPACE RULES. Tenant shall comply with all laws applicable to the Parking Space; shall keep the Parking Spaces free of debris and any other matter except for the car; shall not cause or permit any hazardous material or activity to remain at the Parking Space; shall not cause any nuisance at the Parking Space; and shall make no alterations, changes, decorations or any other way change or add to the Parking Space.

10. LANDLORD'S OBLIGATIONS. Landlord is responsible for maintaining Property, including snow removal, and generally ensuring that Property can be used for parking.

11. TERMINATION BY TENANT. Tenant may terminate this Rental Parking Agreement only upon Tenant's thirty- (30) day prior written notice of termination mailed or delivered to Landlord's Address. Upon said termination, Tenant shall receive a prorated refund of any prepaid rent, less a $25.00 termination fee.

12. TERMINATION BY LANDLORD. Landlord may terminate this Rental Parking Agreement at any time upon thirty (30) days prior written notice of termination mailed or delivered to Tenant's Address, whereupon this rental parking agreement shall be deemed cancelled and terminated and Tenant shall retain no further rights in the demised Parking Space. Any prepaid and unearned rent shall be returned to Tenant.

13. SALE OF PROPERTY: Should Landlord sell Property this Agreement shall become null and void and of no further force and effect. Tenant shall be responsible for locating up to five (5) parking spaces within 600 feet of 584 Main Street, Poughkeepsie, NY.

14. GOVERNING LAW. This Rental Parking Agreement is to be governed by the laws of New York State. If any of the conditions or terms hereof conflict with any such law, then such terms or conditions shall be deemed modified and amended to conform to such law.

15. HEADINGS. The heading preceding each paragraph herein is inserted merely as a matter of convenience, and shall not be deemed to be a part of the agreement terms.

16. SEVERABILITY. The invalidity of any provision of this agreement or of its application to any person or circumstance as determined by any governmental agency or court shall in no way affect the validity of any other provisions hereof and all other terms of this agreement shall be valid and enforceable to the fullest extent permitted by law.

17. MODIFICATION. The parties acknowledge that there are no representations and warranties with respect to this Rental Parking Agreement except as expressly stated herein. This lease may not be modified except in writing and signed by both parties.

**Re: 584 Main Street, Poughkeepsie**

To whom it may concern:

Mr. Mark Lehman and Mr. Wulf Lueckerath have a long-standing relationship with The Community Preservation Corporation (CPC) and are considered highly valued clients. Over the past several years, CPC has financed the rehabilitation of over 10 properties in Poughkeepsie consisting of over 100 apartments and commercial spaces in which Mr. Lehman and Mr. Lueckerath have either substantially improved the quality or newly created safe affordable housing in the core of the City. They have always performed as expected and are currently in good standing with CPC.

CPC is both interested and excited to provide capital for multi-family redevelopment in Poughkeepsie and throughout New York State. CPC has been in discussion with Mr. Lehman and Mr. Lueckerath regarding financing for the redevelopment of 584 Main Street and we are excited to move forward with them once the approvals are in place. Upon notification of planning board approval, CPC will begin the process of loan approval for the redevelopment.

I look forward to working with Mr. Lehman and Mr. Lueckerath on this project as they seek to bring more safe and affordable housing to the City of Poughkeepsie.

Should you have any questions, please feel free to contact me.

Re: ***584 Main Street Parking Waiver***

Dear Ms. Quinn:

Corinthian Group, LLC (the "Buyer" – Wulf Lueckerath & Mark Lehman) is submitting the Planning Board package for 584 Main Street, Poughkeepsie, NY. The Buyer received a "Use Variance" approval from the Zoning Board of Appeals on 03/09/2021 to add Residential and Office uses.

584 Main Street is currently used as a furniture store (Ken's Furniture) with related storage space. The property is in disrepair, with several windows boarded up and material deferred maintenance to both the interior and exterior. Due to the existing conditions, we expect to demolish some of the ancillary structures and build an addition to make the full building three stories.

The existing buildings at 584 Main Street take up almost all of the existing lot. The main structure is located at the corner of Main Street and Palmer Avenue with a small one-story garage located on Palmer Avenue. There is a small patch of grass with a buried 1,000-gallon oil tank between the 2 structures (oil tank will be removed as part of redevelopment).

Due to the existing structures having been built to the lot line on Main Street and Palmer Avenue, and the small addition anticipated to be built in the back of the existing main building, we are asking for a Parking Waiver. There are two municipal parking lots located within close proximity of 584 Main Street. One, at 17 Palmer Avenue, is located directly behind our property. The second municipal lot is located on the eastbound East-West Arterial, between Lexington and Manitou Avenues. In addition, we have received written agreement from the owner of Pete's Famous Restaurant (at 618 Main Street) to allow the Buyer to use up to 10 of his on-site parking spaces (please see attached letter).

Feel free to contact either Mark or me with any questions or concerns in advance of the April Planning Board meeting. Thank you.

Regards,

Wulf Lueckerath

RE: 584 Main Street

Dear Council Members,

Hudson River Housing is once again interested in partnering with Wulf Lueckerath and Mark Lehman to create affordable housing in the City of Poughkeepsie. To date this partnership has created 23 units of housing that are guaranteed to have long term affordability. We look forward the creation of up to 29 more units at 584 Main Street.

Hudson River Housing plans to manage these units for very low-income individuals and families, something that continues to be of great need in the City. In addition, we plan to have a role in the commercial spaces created in this project by incorporating elements of our Workforce Training Programs.

We are in full support of this application to the City of Poughkeepsie Common Council and it is our hope that concessions can be made to help this project move forward. Please don't hesitate to contact me with any questions. Thank you.

Sincerely,

Mary Linge

Re: ***Parking for 584 Main Street***

Dear Wulf:

We understand that you are in contract to purchase 584 Main Street and seeking approvals from the City of Poughkeepsie for various improvements to such property.

This confirms that we can provide up to ten (10) parking spots at 618 Main Street for use by tenants at 584 Main Street once your entity has purchased 584 Main Street and completed all the renovations there.

We understand that you intend to provide this letter to the City of Poughkeepsie Common Council in support of your applications for approvals.

Sincerely:

Re: 584 Main Street

Dear J. Allen:

In connection with our contract with respect to 584 Main Street, Poughkeepsie, New York ("**584 Main**"), we will be making various submissions and filings to the City of Poughkeepsie's common council, planning board, zoning board of appeals and various other agencies and entities for 584 Main. We are required to obtain an authorization letter from Hooker 21, LLC, as owner, to make submissions and filings with respect to 584 Main. This letter serves as a formal request of authorization to make the submissions and filings described above with respect to 584 Main.

"Received ZBA - Use Variance approval on 03/09/21 for "Residential" & "Office" uses."

MEMORANDUM

To: Zoning Board of Appeals, City of Poughkeepsie

From: Wulf Lueckerath and Mark Lehman, Prospective Purchasers of 584 Main Street, Poughkeepsie, NY

Date: February 16, 2021

The majority of the Permitted Uses under the C-2A zoning code are now defunct and therefore do not apply to this new redevelopment, when you consider that this Property is located along Main Street in the City of Poughkeepsie. Under the current C-2A zoning code, residential and office uses are not permitted uses. Additionally, due to the Main Street location and the project's constrained property size, some of the C-2A permitted uses such as "cold storage plant, beverage distribution, baking and other food processing plant" are all more suited to, and belong in, an Industrial / Warehouse area. These industrial parcels would consist of larger floor plates and be more accessible to larger trucks with large parking lot requirements).

This stretch of Main Street in Poughkeepsie (and indeed most of Main Street in general), does not need another "deli, barber shop, used car sales lot" or auto repair shop. Main Street is already saturated with these uses, and delis and convenience stores cause trespassing and loitering. Currently almost all of the other uses along Main Street are gas stations, restaurants, and small retail storefronts. Moreover, the existing retail stores likely reflect the struggling brick and mortar retail industry overall as more consumers shop online.

Therefore, to develop this building to its maximum potential and highest and best use given its current configuration, lot size, and location, a complete gut-rehabilitation to create a mixed-use development with market-rate multifamily residential and ground-floor commercial is required. Similar properties we have recently gut-rehabbed with much success include 400 Maple Street and 12 South Hamilton Street.

# MEMORANDUM OF TRANSMITTAL

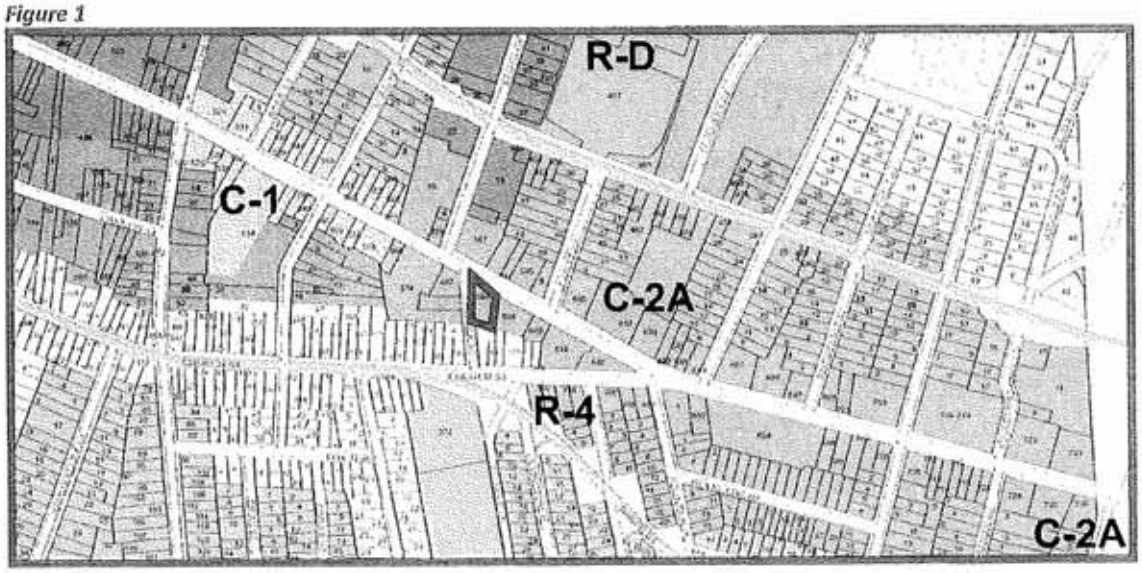
**To:** Common Council

**From** Natalie Quinn, Director of Planning

**Date:** January 11, 2021

**Re:** Rezoning Application for 584 Main Street

---



The property at 584 Main Street is currently zoned as Main Street Commercial (C-2A). The applicants, Mark Lehman and Wulf Lueckerath, request that the zoning code be amended to allow for professional office and multifamily residential to be developed on site. The C-2A district currently does not permit either use, whether standalone or mixed within a single structure.

Based on the applicant's request, there are two options the Common Council may consider. The Council may choose to investigate the possibility of a map change to rezone the single parcel in question to another zoning designation. Alternatively, the Common Council may choose to pursue a text amendment to add the proposed two uses as permitted uses within the C-2A district. It is the opinion of planning staff that a text amendment would avoid potential accusations of spot zoning by looking more holistically at the district, not just the single parcel, and would result in a more strategic and long term solution. Thus, the following analysis investigates the preferred option of a text amendment, but an investigation of other potentially appropriate zoning designations can be carried out upon request of the Common Council.

***LOCATION COMPATIBILITY***

The property at 584 Main Street is located in the only Main Street Commercial (C-2A) district within the city. The C-2A district is located on the central-eastern portion of the city, and it governs properties on either side of Main Street from mid-block between White Street and Pershing Avenue to the eastern boundary of the city. As illustrated in the map below, the properties bordering the proposed site to the north, east and west are zoned similarly as Main Street Commercial (C-2A). Properties to the south are zoned as Central Low Density Residential (R-2A).

*Figure 1*

Planning staff examined existing uses within the C-2A district to determine if the proposed multi-family residential and office uses are compatible with the existing character of the district. There are currently 53 parcels within the existing C-2A district. Nine (9) parcels contain residential uses ranging from two-family residential homes to multi-family residential buildings. Ten (10) parcels contain mixed-use buildings with commercial uses on the ground floor and residential uses on the second and third floors. Twenty-seven (27) parcels contain commercial uses, including banks, grocery stores, restaurants, fast food establishments, and cleaners, with ten parcels containing commercial businesses catering to automobiles, such as repair shops, rental facilities, and car washes. The remaining seven (7) parcels within the C-2A district include community services, such as places of worship and the Salvation Army, and vacant structures. It should be noted that a number of the ground floor commercial spaces in the mixed use buildings noted above may also be vacant. In summary, a number of pre-existing non-conforming residential units already exist within the district, and one office space exists within a mixed-use building.

Planning staff also examined permitted uses within the surrounding districts to determine if the proposed additions to the C-2A district would be incompatible with neighboring properties. Examining the C-2A district in its entirety, the district is abutted by Medium High-Density Residential (R-4) on a majority of its northern and southern boundaries. Smaller portions of the district are abutted by General Commercial (C-3), Neighborhood Commercial (C-1), Central Medium-Density Residential (R-3A), and Central Low-Density Residential (R-2A) on the western end of the district.

The predominately abutting R-4 district permits multi-family residential to be developed in standalone buildings, but the R-3A district only permits multi-family of up to four units to be developed in existing structures. The R-3A and R-2A districts also permit single-family and two-family residential construction. The abutting commercial districts, C-3 and C-1, both permit residential as a means of preserving existing buildings.

The abutting R-4 and C-1 districts do permit professional or business offices with certain requirements. The R-4 district permits offices as part of a multifamily dwelling, subject to specific requirements regarding the size and location of the office space on the first floor. The C-1 district permits offices in standalone buildings, but those uses must be 8,000 SF or less and serve the needs of the immediate neighborhood. Professional and business offices are not a permitted use in the abutting C-3, R-3A, or R-2A districts.

***INTENT AND OBJECTIVES OF THE PROPOSED REZONE DISTRICT***

The stated purpose of the C-2A Zoning District is to "provide for a wide range of commercial uses which would normally be located on roadways that experience high traffic volumes and that are located adjacent to or in close proximity to residential uses."[1] In the nearby C-1, C-2, and C-3 commercial zoning districts, residential uses are allowed by special permit in existing structures, while the C-2 district also allows for new multi-family construction. Furthermore, Section 19-3.21 contains a statement of intent for all commercial districts, which claims the intent "to provide for residential development, particularly small units, in appropriate locations within central and neighborhood commercial areas as a means of making existing structures viable, providing built-in support for businesses and providing additional housing supply."[2]

**COMPREHENSIVE PLAN**

The proposed parcel is included within the Main Street Economic Development Area within the City's 1998 Comprehensive Plan. The Upper Main Street section, Clinton Street to Grand Avenue, is identified as one of the three target areas along Main Street. With regards to potential uses and strategies for this portion of the Main Street, the Comprehensive Plan is relatively silent on uses, and instead focuses on the need for a building analysis and code enforcement to reduce the number of vacant and potentially dangerous structures on the 500 block. The Comprehensive Plan also recommends "streetscape improvements to complement that found on the 200 and 300 blocks and a façade improvement program" (Section 5.0, Page 5-10).

***ANALYSIS & CONCLUSION***

It is the opinion of the Planning Department that the addition of residential uses to the C-2A district would not negatively impact the surrounding neighborhood, and would be in line with the city's Comprehensive Plan. It is the opinion of the Planning Department that residential should be added as a special permit use, with the following language:

---

[1] https://ecode360.com/27016514
[2] https://ecode360.com/27016311

- Multiple dwellings in new structures at urban density (R-6), provided that the first floor is devoted to commercial use; and further provided that the usable open space requirements of Section 19-3.15(4)(i) are satisfied.
- As a means of preserving existing sound buildings, especially historically or architecturally significant structures, as well as to encourage population in the central business area and provide an additional housing resource, conversion of existing buildings that do not meet minimum lot size requirements to residential use or additional residential units, provided that:
  - (i) A building is in existence on the effective date of this Chapter.
  - (ii) All Main Street-facing ground floor uses shall be limited to nonresidential uses.
  - (iii) No dwelling unit shall contain more than two bedrooms.
  - (iv) The minimum floor area of a dwelling unit not containing a separate bedroom shall be 400 square feet.
  - (v) The minimum floor area of a one-bedroom dwelling unit shall be 600 square feet.
  - (vi) The minimum floor area of a two-bedroom dwelling unit shall be 750 square feet.
  - (vii) Off-street parking space shall be provided in accordance with the requirements of Section 19-4.3 of this chapter, and such space shall be located within 600 feet of the premises.

Furthermore, it is the opinion of the Planning Department that the addition of professional or business office uses to the C-2A district would not negatively impact the surrounding neighborhood, and would be in line with the city's Comprehensive Plan as a means of "reduc[ing]" the number of vacant and potentially dangerous structures" within the district. Professional and business offices are a permitted use in the C-1 district immediately west of the C-2A district, and there is one existing professional office use within the C-2A district. It is the opinion of the Planning Department that office should be added as a special permit use, with the following language:

- Business, professional or governmental offices.

**To:** Donald Petruncola <dpetruncola@lmvarchitects.com>
**Cc:** "wlueckerath@yahoo.com" <wlueckerath@yahoo.com>
**Subject: 584 Main Street**

The Planning Department is in receipt of additional materials relative to your zoning review request in conjunction with the possibility of converting the building at 584 min Street from a furniture store with associated storage to a mixed use building with commercial use (retail/restaurant/office) on the ground floor and apartments on the second and third floors. These materials include a preliminary site plan indicating demolition of out buildings and construction of a three story addition that will cover the entire lot (and including an addition to the existing two story portion of the building). This review supplements the discussion of our meeting on 7/1/20.

As you are aware, the property at 584 Main Street is located in an area of the City of Poughkeepsie zoned Main Street Commercial (C-2A) District.
The project has been reviewed for compliance with the permitted uses and the lot and bulk requirements of the Zoning Ordinance relative to that district, and the following deficiencies have been noted to exist:

1) Section 19-3-23.1(2) does not list residential uses as permitted uses. However, mixed use buildings are permitted, pursuant to the provisions of Section 19-3.23.1(2)(a))(18), which states that:

**(i)** All lot and bulk requirements for each use are satisfied.
**(ii)** Separate entrances and exits shall be provided for residential and nonresidential portions of the building.

While (ii) appears to imply that residential uses are allowed by referencing separate entrances, residential uses are not specifically permitted in the district, and there are no lot and bulk requirements provided for residential uses as there generally are in districts where such uses are specifically permitted. Therefore, it would not appear that residential uses are permitted.

2) Section 19-3.23.1(2) does not list offices among the uses permitted in the district;

3) Section 19-3.23.1(4)( c)(1) requires that ten (10) foot front yards be provided: the existing building appears to be set-back one to two feet from the both front property lines (Main Street and Palmer Avenue), and this set-back is proposed to be continued with addition along Palmer Avenue;

4) Section 19-3.23.1(4)(c )(2) requires that side yards of ten (10) feet be provided (please note that relative to corner lots, the Zoning Ordinance mandates that there are two front yards and that one of the other yards be deemed a rear yard and one a side yard): The

existing building has a minimal side yard set-back, no matter which yard is so designated, and there will be virtually no side yard at the addition. Additionally, it appears that an encroachment is existing and proposed;

5) Section 19-3.23.1(4)(c )(3) requires that rear yards of twenty (20) feet be provided (please note that relative to corner lots, the Zoning Ordinance mandates that there are two front yards and that one of the other yards be deemed a rear yard and one a side yard): The existing building has a minimal rear yard set-back, no matter which yard is so designated, and there will be virtually no side yard at the addition. Additionally, it appears that an encroachment is existing and proposed;

6) Section 19-3.23.1(4)(c ) also provides that where a use in a C-2A District is within 50 feet of an R-1 through R-6 District, a landscaped buffer of a least 20 feet shall be provided along the property line: The property abuts an R-2A Zoning District, and no landscape buffer is proposed;

7) Section 19-3.23.1(4)(d) allows a maximum FAR (Floor Area Ratio) of 2.0: The proposed FAR, based on the information provided, is 3.0;

8) Section 19-3.23.1(4)(e ) allows a maximum lot coverage of 60%: the proposed lot coverage is 100%;

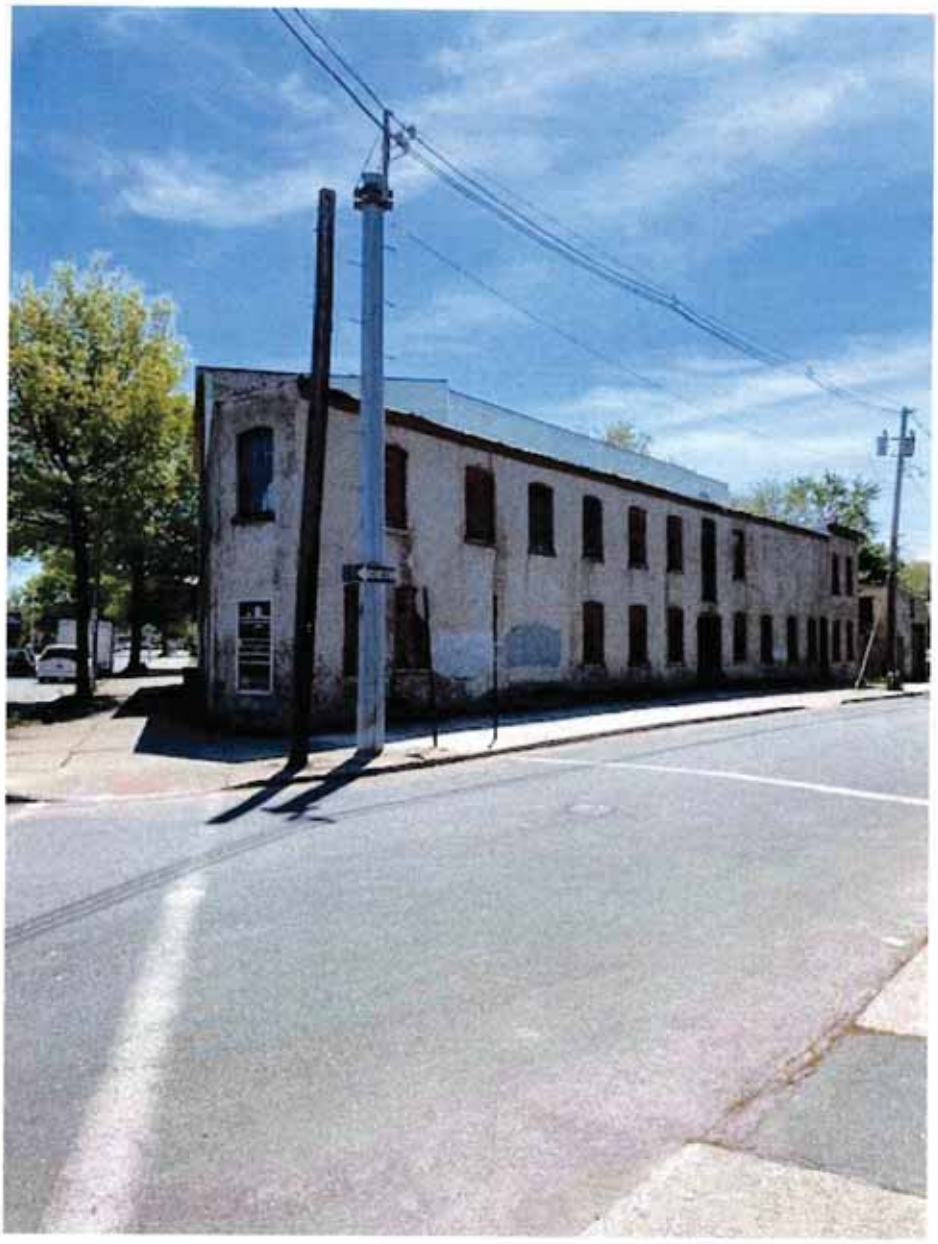
9) Section 19-4.3(11) requires that parking be provided as follows: 1 parking space for each 300 square feet of retail use, 1 parking space for each studio unit and 1.5 parking spaces for each 1 bedroom unit: based on the information provided on Sheet A100 (understanding that these numbers may shift as a result of our meeting), the number of spaces required would be 49: No parking is provided on site;

Therefore, the proposal is hereby denied. You may, if you wish, appeal the terms of this denial to the Zoning Board of Appeals, requesting that variances be granted.

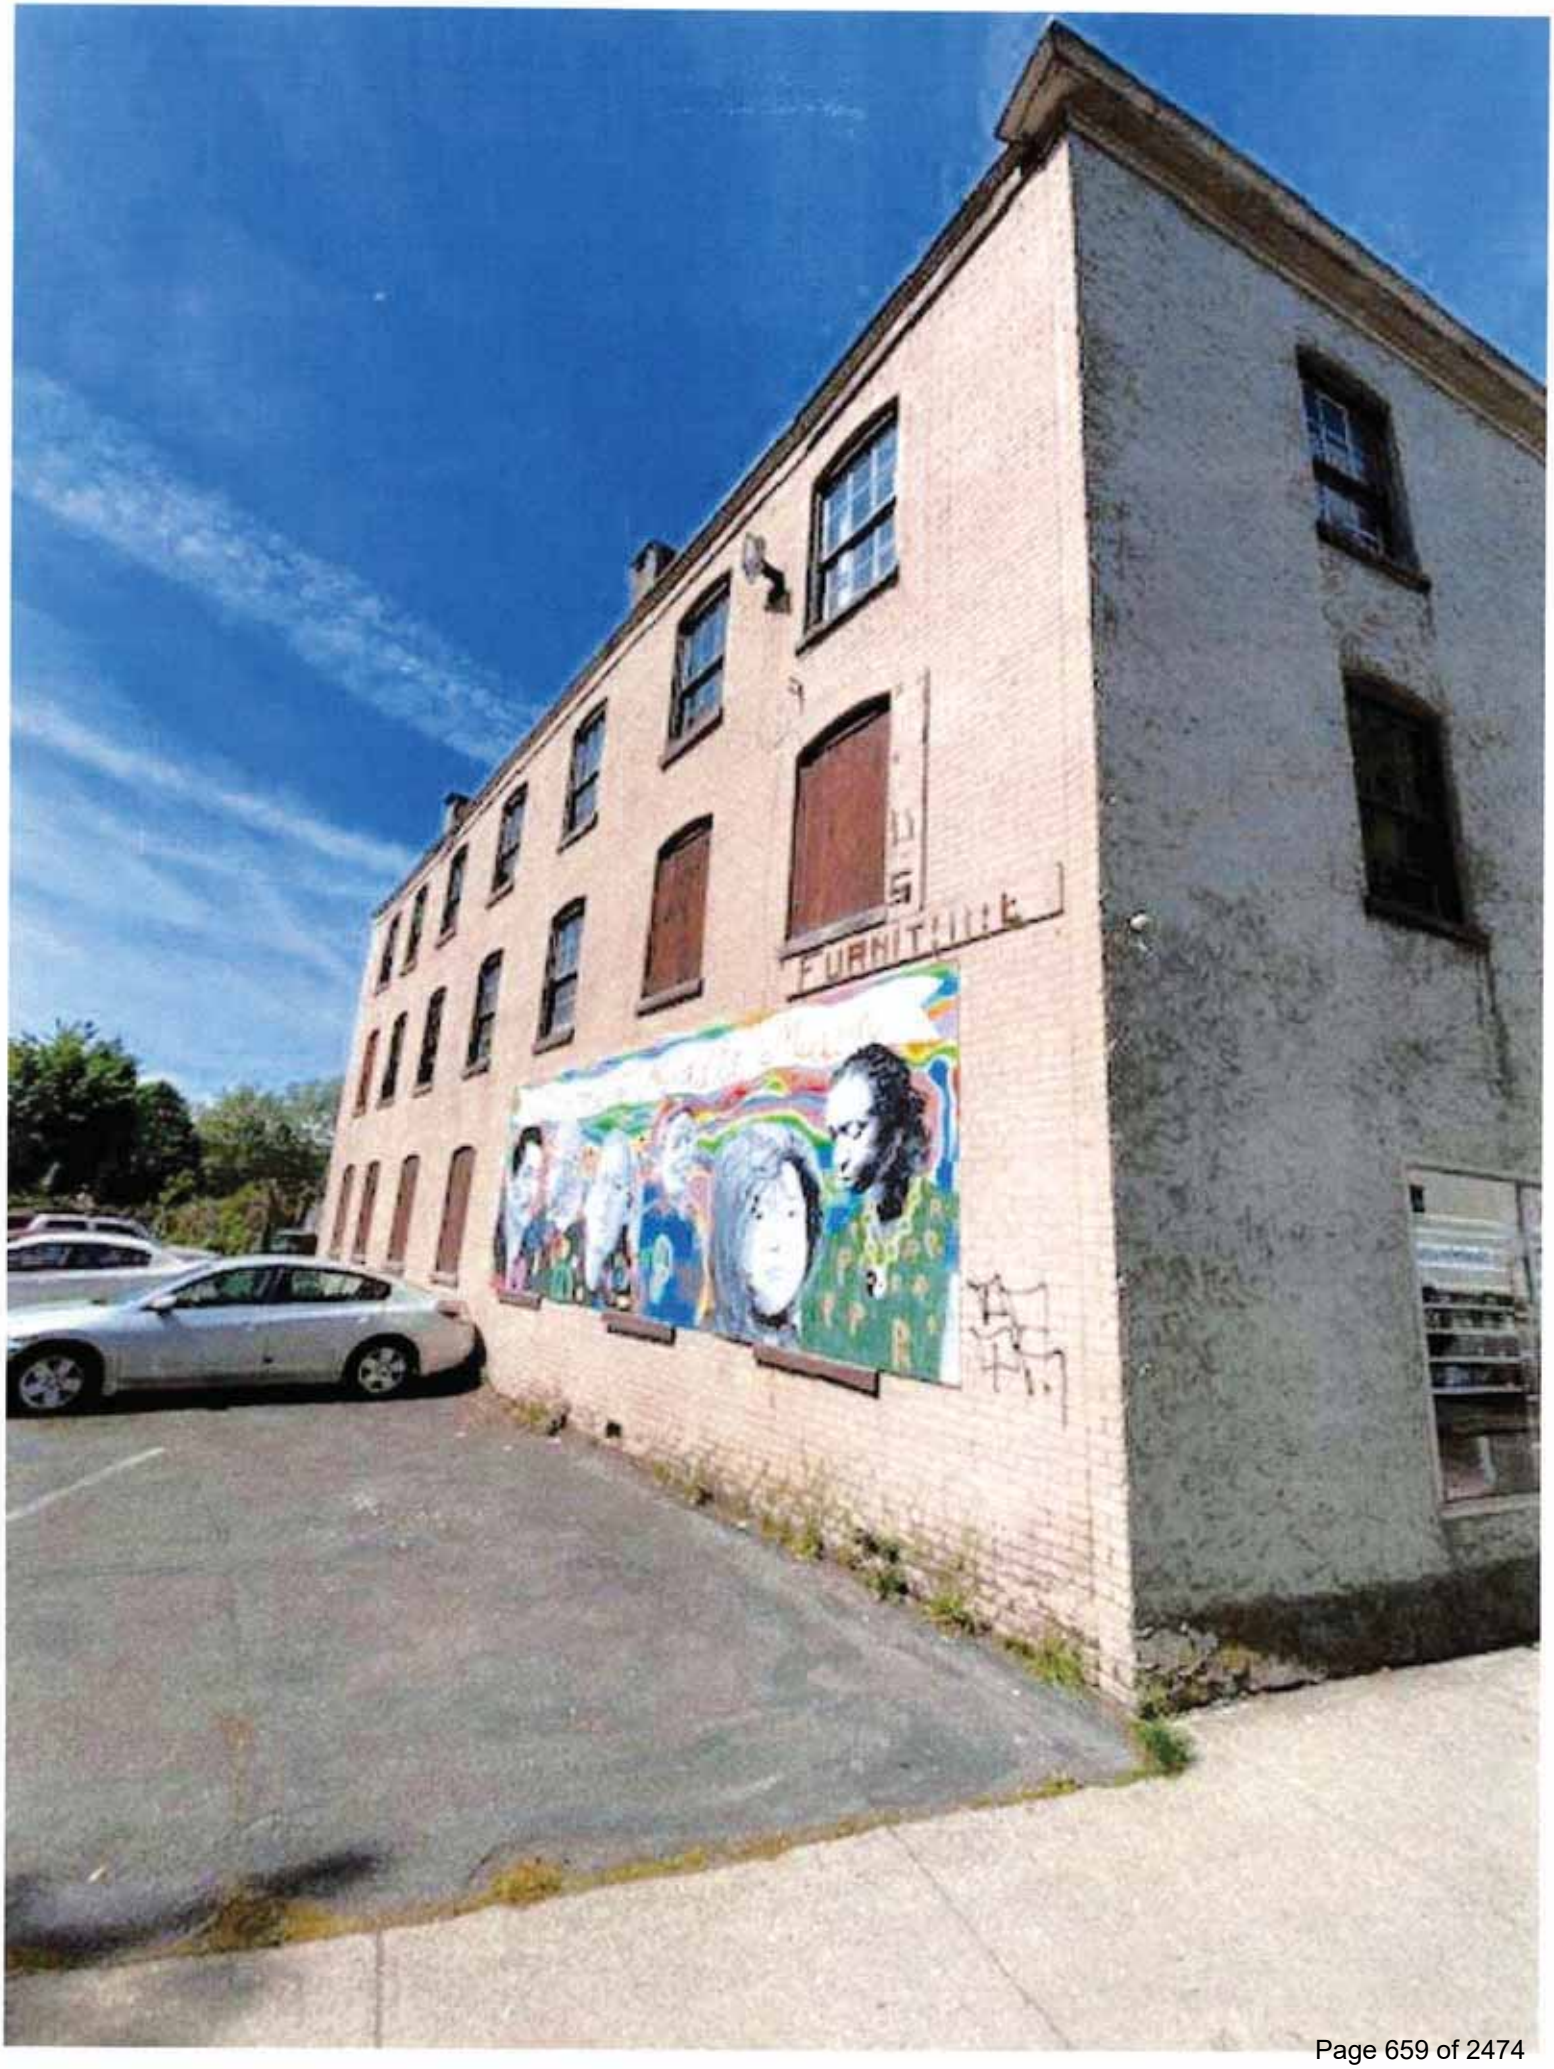
Relative to the proposed residential use, you would have three options:

1) File an application to the Zoning Board of Appeals requesting an interpretation as to whether or not residential uses are permitted, inasmuch as they are referenced by Section 19-3.23.1(2)(a)(18);
2) File an application to the Zoning Board of Appeals for a use variance to allow residential uses; or
3) File a request with the Common Council to amend the Zoning Ordinance to specifically permit residential uses in the C2-A Zoning District.

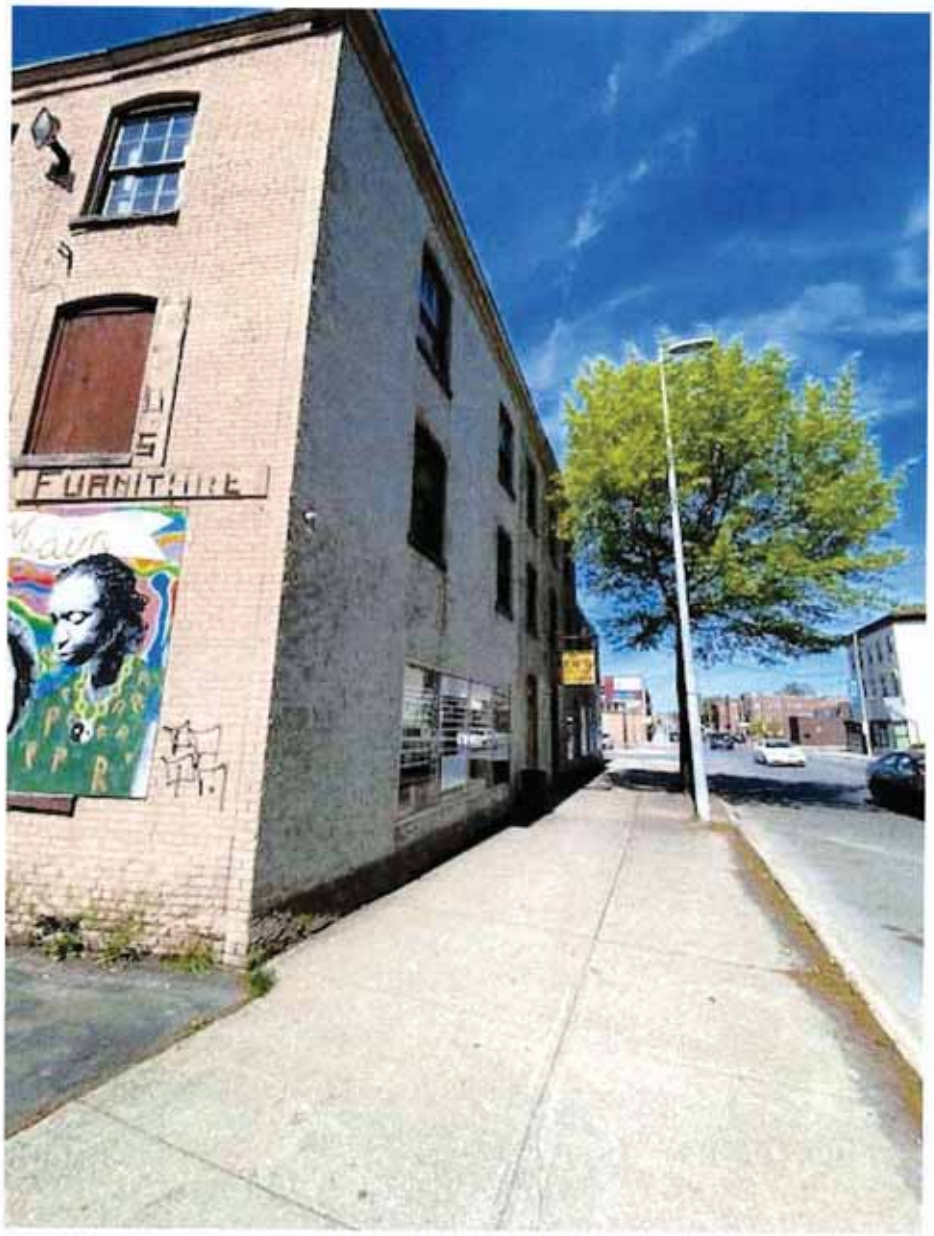
Relative to any proposed office use (other than accessory to another permitted use), you would have two options:



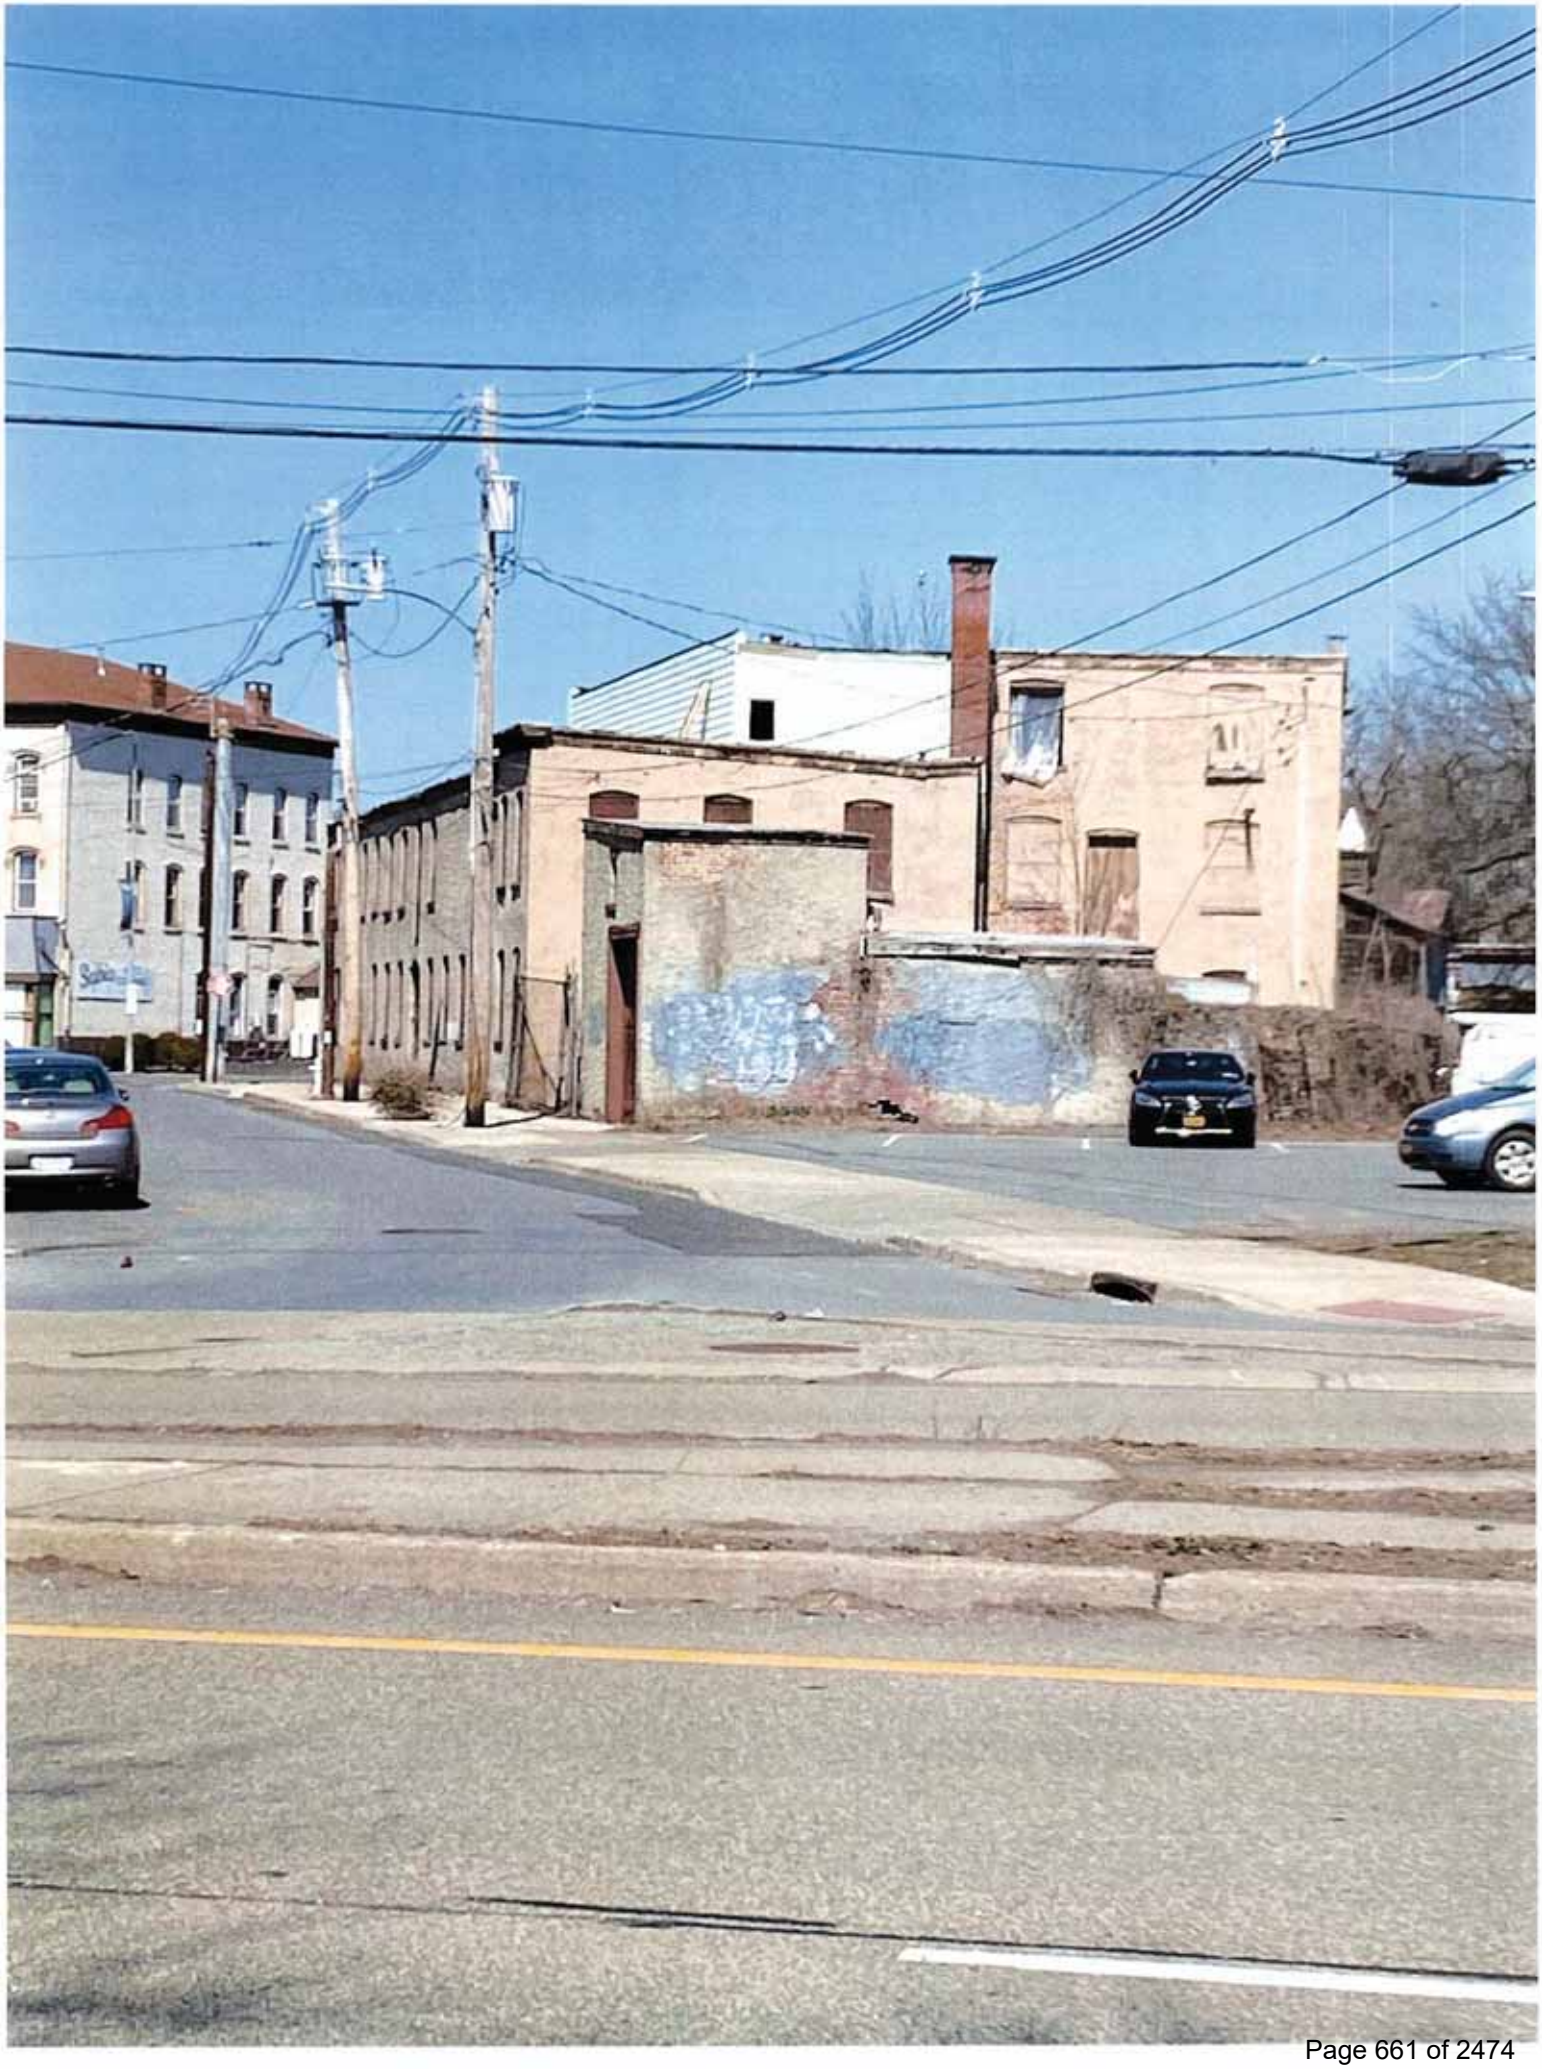
1) File an application to the Zoning Board of Appeals for a use variance to allow offices; or
2) File a request with the Common Council to amend the Zoning Ordinance to permit office uses in the C2-A Zoning District.



Please note that if variances are granted, and this is by no means guaranteed, it would then be necessary to obtain Site Plan and Special Permit approval from the Planning Board. Following that review, an application for building permit, plans and specifications by a licensed design professional, would be required. The permit would need to be issued, all work inspected and approved, and a new Certificate of Occupancy issued before the new uses could take place.



Please also note that as the proposal includes new construction, a survey will be required. It appears as though encroachments on to adjoining property exist and are proposed: this issue will also need to be adequately addressed.



Please feel free to contact me if you have any further questions in this regard.

Very truly yours,
Judith Knauss
Deputy Zoning Administrator

## MEMORANDUM

To: City of Poughkeepsie Planning Board

From: 584 Main Street LLC

Date: September 5, 2021

Re: 584 Main Street, Poughkeepsie, NY 12601

**INTRODUCTION**

As owners of 584 Main Street we are seeking to convert the currently vacant, dilapidated commercial building into a newly gut-renovated, mixed-use building consisting of 30 residential apartments and 2,500 SF of ground floor commercial space.

**STATUS**

As part of the approval process we secured approval from the Zoning Board of Appeals on 8/10/21 for the full expansion of the site to build those 30 apartments and two ground-floor commercial spaces. We also engaged EnviroClean and they successfully removed the 1,000-gallon underground oil tank. They tested the site and it came back clean (close-out letter available).

**SITE PLAN and ELEVATION REVISIONS**

Here are the revisions we made to the site plan of 584 Main Street;

- Revised site plan by Cronin Engineering incorporating City of Poughkeepsie Civil Engineer comments.
- Updated property elevations and floorplans by our architect, Liscum McCormack VanVoorhis LLP. We incorporated ideas / suggestions from previous planning board meeting and comments from County Planning and the Board's architectural consultant (MAAD Architects).
- Additions / updates include: clapboard siding, LED gooseneck light fixture and number of light fixtures along northern and western facade, shutter style, canopy above residential door entrances, and interior garbage room.
- Existing wood mural to be re-installed (east elevation).
- Samples of Gray Slate colorway and clapboard siding by James Hardie to be provided at meeting.

Thank you for your consideration.

# APPLICATION FOR SITE PLAN, SPECIAL PERMIT APPROVAL & FAÇADE REVIEW

The Zoning Ordinance of the City of Poughkeepsie requires site plan approval by the Planning Board for the following:

(a) The erection or enlargement of all buildings in all districts other than one, two- or three-family residences, except as part of a subdivision and except as provided hereinafter or uses accessory thereto;
(b) All uses of vacant land other than uses accessory to one, two- or three-family houses;
(c) Any change in use or intensity of use which will affect the characteristics of the site in terms of parking, loading, access, drainage or utilities;
(d) Any plan to alter or improve a building facade in any area designated by the Common Council as a landmark or a special historical, architectural or design improvement district;
(e) Any application for a special use permit;
(f) Any use or structure in a flood hazard area;
(g) Any amendment of a previously approved plan;
(h) Any modular construction, pursuant to Section 19-4.20 of the Zoning Ordinance.

Prior to any submission it is highly recommended that potential developers file a Zoning Review Request form and request a pre-submission conference by contacting the Building Planning and Zoning Department. For the Zoning Review Request form go to the Planning Board page on the City website (http://cityofpoughkeepsie.com/planning-board/), and look under *Applications*. The purpose of the form and pre-submission conference is to discuss the proposal so that necessary subsequent steps may be undertaken with a clear understanding of the city's requirements in matters relating to site development.

If Planning Board review is required, ONE (1) COPY of the application form and ONE (1) FULL-SIZE COPY of the proposed site plan must be submitted to the Building Planning & Zoning Department with the appropriate fees, in order to allow review and certification of completeness.

Once an application is deemed complete, six (6) full-size sets, four (4) 11”x17” copies, and one (1) electronic copy of the site plan will be requested by the Planning Department.

The site plan must be at a minimum scale of one (1) inch equals thirty (30) feet, prepared by an architect, landscape architect, civil engineer, surveyor, land planner or other competent person. The following information, in total, shall constitute the site plan:

(a) Legal data:

1. Name and address of the owner of record.
2. Name and address of person, firm or organization preparing the map.
3. Date, North arrow and written and graphic scale.
4. Names of owners of adjoining properties.
5. A statement indicating the financial capability of the applicant to carry out this proposed development.

(b) Natural features:

1. Existing contours with intervals of five (5) feet or less.
2. Approximate boundaries of any areas subject to flooding or storm water overflows.
3. Location of existing watercourses, marshes, wooded areas, rock outcrops, isolated trees with a diameter of eight (8) inches or more, measured three (3) feet above the base of the trunk, and any other significant existing natural features.
4. Indication of direction of scenic views.

(c) Existing structures and utilities:

1. Outlines of all structures and location of all uses not requiring structures.
2. Paved areas, walkways and vehicular access between the site and public streets.
3. Locations, dimensions, grades and flow direction of any existing sewers, culverts, water lines, as well as other underground and aboveground utilities within and adjacent to the property.
4. Other existing development, including fences, landscaping and screening.
5. Sufficient description or information to define precisely the boundaries of the property. All distances shall be in feet and tenths of a foot. All angles shall be given to the nearest ten (10) seconds or closer. The error of closure shall not exceed one (1) in ten thousand (10,000).
6. The locations and owners of all adjoining lands as shown on the latest tax records.
7. The locations, names and existing widths of adjacent streets and curb lines.
8. The location, width and purpose of all existing and proposed easements, setbacks, reservations and areas dedicated to public use within or adjacent to the property.
9. A complete outline of existing deed restrictions or covenants applying to the property.
10. Existing zoning.

(d) Proposed development:

1. The location of proposed buildings or structural improvements
2. The location and design of all uses not requiring structures (such as off-street parking and loading).
3. The location, direction, power and time of use for any outdoor lighting or public address systems.
4. The location and plans for any outdoor signs.

5. The location, arrangement and materials of proposed means of access and egress, including walkways, driveways or other paved areas. Profiles indicating grading and cross sections showing location and width of roadway and walkways. Any proposed direct pedestrian connection to public parking lots or structures will also be shown.
6. Proposed screening and other landscaping, in accordance with Section 19-4.11.
7. The location, size, direction of flow and connection to city facilities of all proposed water lines, valves and hydrants and of all sewer lines or alternate means of water supply and sewage disposal and treatment facilities.
8. Location of any fire alarm boxes and/or connections to the city fire alarm system.
9. An outline of any proposed easements, deed restrictions or covenants and a notation of any areas to be dedicated to a public agency.
10. Any contemplated public improvements on or adjoining the property.
11. Any proposed new grades, indicating clearly how such grades will meet existing grades of adjacent properties or the street.
12. Elevations of all proposed principal or accessory structures (such elevations should be detailed, noting all materials and colors).
13. Indication of how the site plan has considered energy consumption in the siting and layout of buildings and in proposed building services (heat, lighting, air conditioning, etc.).
14. If the site plan indicates a first stage, a supplementary plan shall indicate ultimate development.
15. Any other information deemed by the Planning Board necessary to determine conformity of the plan with the spirit and intent of this Chapter (including plans for storm water drainage and disposal).
16. The following note must be added on all site plans where existing trees are to be retained: "Prior to the start of construction or excavation, trees to be retained shall be protected by silt fence, snow fence, construction fence, or equal, which will be placed at the drip line or several feet beyond. However, the fencing shall not cross public sidewalks. No storage or stockpiling of construction materials, debris or equipment shall occur within the fenced area." In addition to the note, the location of the fencing must be shown on the site or landscape plan. Where proximity to a building, driveway, parking area, or construction roadway prevents installation of fencing at the drip line, modification of the fence position shall be shown on the plan and shall be subject to the approval of the Planning Board. Field modification of the fence position may be granted by the Building Inspector/Zoning Administrator or Deputy Building Inspector.

The applicant may make a written request for a waiver of any of the site plan elements listed above. Such a request must be addressed to the Planning Board and to the Building Inspector, must describe specifically the item(s) and fully explain the reason(s) why the applicant feels a waiver is justified. Further, unless waived by Building Inspector, plans for all required improvements must be signed by a professional engineer or registered architect or, if appropriate, a registered landscape architect.

Please note that all applications for new construction must be accompanied by a properly prepared Full Environmental Assessment Form (EAF). Other plans will require either a Full EAF or a Short EAF, depending on project's specifics. Please note that one, two and three family dwellings do not require a Full EAF.

**SPECIAL PERMIT REQUEST**

In all applications containing a request for special permit, the applicant must submit written and/or visual documentation addressing the following considerations:

a) That all proposed structures, equipment or material shall be readily accessible for fire and police protection.
b) That the proposed use is of such location, size and character that, in general, it will be in harmony with the appropriate and orderly development of the district in which it is proposed to be situated and will not be detrimental to the orderly development of adjacent properties in accordance with the zoning classification of such properties.
c) That, in addition to the above, in the case of any use located in or directly adjacent to, a residential district:
    - The location and size of such use, the nature and intensity of operations involved in or conducted in connection therewith, its site layout and its relation to access streets shall be such that both pedestrian and vehicular traffic to and from the use and the assembly of persons in connection therewith will not be hazardous or inconvenient or incongruous with said residential district or conflict with the normal traffic of the neighborhood; and
    - The location and height of buildings, the location, nature and height of walls and fences and the nature and extent of screening and landscaping on the site shall be such that the use will not hinder or discourage the appropriate development and use of adjacent land and buildings or diminish the value thereof.

**APPLICATION FEES**

Upon submission of a site plan application, the applicant must pay a base fee $500, plus $35 per required off-street parking space and $150 per 1000 square feet of development. If the applicant is also requesting special permit review, an additional $500 must be paid at the time of application submission. In instances where an applicant is only requesting façade review for an existing building, a fee of $350 must be paid at the time of application submission. Note, if façade review is pertaining to a proposed site plan, the façade review fee is <u>not</u> required in addition to the site plan review fee.

| | FEES |
|---|---|
| Site Plan Review | $500.00 and $35.00 per required off-street parking space and $150.00 per 1000 square feet |
| Special Permit Review | $500.00 |
| Façade Review (Only) | $350.00 |

**TIMING OF APPLICATION**

Please remember that the Building Planning & Zoning Department must review all applications for site plan review to insure conformity with the requirements of the Zoning Ordinance, as well as to certify completeness of the submission. Since applications must be received by the Planning Department at least three Tuesday's prior to the Planning Board's Meeting, it is advisable that submissions be made to the Building Planning & Zoning Department no later than the second Tuesday of the month prior to Planning Board agenda on which the applicant plans to be considered. Once an application is conforming and complete, it will be forwarded to the Planning Board. Applicants filing incomplete applications will be informed of all deficiencies noted to exist in the submission in writing.

**Only complete applications will be forwarded.**

All applications for site plan, special permit and façade approval are required to be reviewed for comment by the Fire Chief, Police Chief, City Engineer, Superintendent of Public Works and Building Inspector. Copies of the application and accompanying information are forwarded to these officials by the Building Department simultaneously with transmission to the Planning Board. The complete application will be circulated, where required, to the Dutchess County Planning Department and to other appropriate agencies.

The Planning Board meets the third Tuesday of each month. Attendance by the applicant or the applicant's agent is required at these meetings. Should the applicant or representative fail to attend, the application will be removed from the agenda.

The Planning Board may hold a public hearing on site plan applications if the Board determines that such hearing would serve the public interest. The Board is required to hold a public hearing on all applications for Special Permit.

Upon completion of the review, the Planning Board will: approve, approve with conditions, or disapprove the site plan, special permit or façade application.

**REPSONSIBILITY OF THE APPLICANT FOLLOWING APPROVAL**

Approval by the Planning Board does not end the approval process, nor does it convey the right to build a project. Prior to commencement of the actual work, a Building Permit must be obtained. Prior to the actual occupancy of any building or land, a Certificate of Occupancy must be issued and all conditions of approval satisfied. Following approval by the Board, the applicant may either:

1) Circulate the original mylar or other acceptable original format of the approved site plan to the Fire Chief, Police Chief, Superintendent of Public Works/City Engineer and Building Inspector for their signatures;
2) Bring the mylar or other original to the Building, Planning & Zoning Department so that arrangements for these signatures can be made. The original, so signed, will then be sealed with the Planning Board's stamp of approval, provided that all conditions of the Board's approval have been met.

Seven (7) copies of the signed and stamped plan must be submitted to the Building Planning & Zoning Department prior to the issuance of any building permit for the proposed work.

0.00 (additional proposed square feet for expansion)

24,490 (total building footprint, square feet)

Lot Coverage: 6.45 (percentage, building coverage only)

Gross Floor Area: 96,760 (proposed square feet for new construction)

0.00 (existing square feet for change of use/expansion)

0.00 (additional proposed square feet for expansion)

96,760 (total gross floor area, square feet)

Building Height: 3.5 (stories) 35 (feet)

Floor Area Ratio: 0.25 (ratio of gross floor area divided by lot area)

## VIII. PROJECT PARKING INFORMATION

A) Number of Off-Street Parking Spaces required: 123

B) Number of Off-Street Parking Spaces provided: 123

C) Waiver Requested: _____ (Yes) X (No)

Is municipal parking available within 600 feet? _____ (Yes) X (No)

If yes, name all such municipal facilities: N/A

(If a waiver is requested based on proximity to municipal facilities, a written request for such waiver, addressed to the City Planning Staff and the Chairman of the Planning Board, must be submitted with the application.)

If a private parking facility is to be utilized, is such facility within 600 feet? N/A

_____ (Yes) _____ (No)

If yes, provide the address of the facility, name of the property owner, number of spaces in the lot, number of spaces available for lease, and length of lease. Attach copy of lease. Additional information may be required by the Planning Board): N/A

## IX. RESIDENTIAL PROPOSALS

A) Type of Development: Multiple residence rental apartments
(Townhouse, condominium, multiple residence rental, etc.)

B) Unit Breakdown:

Number of efficiency or "studio" units: None

Number of one (1) bedroom units: 31

Number of two (2) bedroom unit's 32

Number with three or more bedrooms: None

Total number of units: 63

C) Is funding public? ____ Yes X No
If yes, describe funding source: _____

## X. OFFICE PROPOSALS (____ Medical/Dental ____ Professional ____ Business)

A) Number of Employees: _____
N/A B) Number of doctors/dentists/medical practitioners: _____
C) Days/Hours of Operation: _____

**XI. SERVICE BUSINESS PROPOSALS**

A) Specify Business: _____
(e.g., laundromat, drycleaner, beauty parlor, travel agency, banks)

N/A B) Number of Employees: _____

C) Number of Washing Machines (for laundromat): _____

D) Days/Hours of Operation: _____

**XII. MERCANTILE PROPOSALS** (Retail _____ Wholesale _____)

A) Type of Mercantile (specify): _____

N/A B) Number of Employees: _____

C) Days/Hours of Operation: _____

**XIII. STANDARD RESTAURANT/FAST FOOD RESTAURANT/COFFEE SHOP/DONUT SHOP/NIGHTCLUB/DISCOTHEQUE/BAR PROPOSALS**

A) Specify Use: _____

N/A B) Number of seats (excluding bar stools and outdoor seating):_____

C) Meals served (i.e., breakfast, lunch, dinner): _____

D) Type of Menu: _____

E) Days/Hours of Operation: _____

F) Entertainment (live and/or recorded):_____

G) Will the restaurant contain a bar/lounge?: _____ Yes _____ No

H) If yes, how many seats at the bar? _____

I) Is a drive-through window proposed? _____

J) Is a walk-up window proposed? _____

K) Is an outdoor seating area proposed? _____

L) If yes, how many seats are proposed? _____

M) If yes, is outdoor cooking proposed? _____

**XIV. INDUSTRIAL/COMMERCIAL PROPOSALS** (Automobile repair, taxi, motor vehicle sales, warehouse, manufacturing, animal hospital, research facilities, etc.)

A) Specify Use: _____

N/A B) Number of shifts (if any): _____

C) Number of employees: _____
(If shifts are proposed, list number of employees per shift)

E) Number of work bays (if automobile repair): _____

F) Days/Hours of operation: _____

**XV. EDUCATIONAL/INSTITUTIONAL/RECREATIONAL PROPOSALS** (e.g., Museums, Theatres, Conference Centers, Hotels, Motels, Hospitals, Nursing Homes, Assisted Living Facilities, Nursery Schools, Private Schools, Day Care Centers, Places of Worship, Marinas, Membership Clubs, etc.)

A) Specify: _____

N/A B) Number of shifts (if any): _____

C) Number of employees: _____
(If shifts are proposed, list number of employees per shift)

D) Number of beds (hospitals, nursing homes, etc): _____

E) Number of seats in largest assembly space: _____

F) Number of classrooms (schools): _____

G) Number of rental units (hotels, motels, etc.) _____

H) Number of boat slips/courts (e.g., tennis, handball, etc.), alleys: _____

I) Days/Hours of Operation: _____

**XVI. PROPOSALS NOT MENTIONED ABOVE** (Please be specific):

None

**XVII. APPLICANT CERTIFICATION**

I, Nate Abikhzer, certify that the this application has addressed the objectives outlined in the Zoning Ordinance with consideration given to the public health, safety and welfare; the comfort and convenience of the public in general or the residents or users of the proposed development and of the immediate neighborhood.

The applicant certifies that all information contained herein is accurate and complete as of the date of this application.

*Re: Highview at the Fallkill Creek Proposed 64-Unit Residential Development (Maselo Realty LLC)*
*Milton Street (Tax Parcel 131300-6162-73-623227)*
*City of Poughkeepsie, Dutchess County, NY*
*Chazen #81947*

Dear Chair Levine:

The Applicant and Owner, Maselo Realty LLC, received comments from the City's consulting architect, Chris Kroner of MASS Design Group, in a letter dated September 7, 2021 regarding the architectural design. In addition, a September 13, 2021 letter was received from Dutchess County Department of Planning and Development regarding the Planned Residential Development (PRD) construction of a 63-apartment unit clustered multifamily development.

Below is a point-by-point response to each of the comments received from MASS Design Group:

**SITING:**

A. *The buildings are aligned to each other, roughly following the contours that make an embankment to the Fall Kill. In the workshop it was discussed how the buildings could rotate away from parallel in an effort to better follow existing contours. These rotations may allow for additional tree plantings in front of the buildings, which may be a worthwhile gesture for an existing wooded site. Design team offered to review this idea further.*

**Response: The northern building (Building 200) has been rotated slightly in order to better follow the site contours. Site conditions and setback constraints limit the amount that the building can be rotated. The buildings have been placed as far upland as possible to give the greatest possible buffer to the Fall Creek natural area. This has caused the parking and other site elements to cross the minimum setbacks. The project has been granted two variances related to setbacks by the ZBA.**

B. *As the City of Poughkeepsie continues to explore a future Fall Kill Trail system, the site appears to have the dimensions to participate in this effort. On Drawing C180, there is what appears to be a mulched area to the west of the buildings, but the purpose of this area is not explicitly*

*presented. Could the design team clarify its intent, and if there is the opportunity for this creekside zone to accept a future nearby trail?*

**Response: A 'Woodland Path' has been added to the site plans. The applicant plans to utilize this path as an amenity to residents. The applicant is open to having the Creekside section of this path open for public access as part of the future Fall Kill Trail system. The hatched area was erroneously identified as 'mulched area'. The hatched area to the west of the buildings will be seeded with a mix of native grasses. These areas will be maintained as naturalized meadow areas. The plans have been updated to properly identify these areas.**

***C.*** *The primary facades of these buildings are designed perpendicular from Milton Street (East Elevations), but the current package of drawings doesn't present the South Elevation, which would be the primary view from Milton Street - the public right of way. We acknowledge that there may be some existing tree groupings at the street, but from a street view perspective, the buildings would likely still be prominent beyond (see street view below). Please provide further elevations for the planning board's review.*

**Response:** ***The apartment buildings are two of the same. The front, rear and side elevations have been provided. The Left Side Elevation is the elevation that will be facing Milton Street.***

**MASSING**

A. *The two proposed structures are built into a hillside, and therefore will appear to be three stories from the proposed parking lot,but increase to four stories as you move towards the Fall Kill. The buildings are made with hipped roofs, which is understood to extend the single family pitched roof vernacular into the project. It was discussed if the roof pitch could be decreased to help the overall bulk of the project to be lessened.*

**Response: The front and rear roof slopes were lowered to a 6/12 roof pitch. The roof slopes along the sides and the gables are proposed to remain as 8/12 roof pitch.**

B. *The space between the two building volumes was discussed as an important public viewing court and possible stairway that focuses a viewshed of the project to the Fall Kill. Because of this opportunity, it was also asked if the ground floor plan layout may look to upgrade the side doors to make this space a more celebrated entry sequence into the building's amenity spaces. As shown in the side elevations, this area shows how the hillside plays a major role in this area and could potentially sponsor a public stairway down to the Fall Kill. This zone between the buildings could also help clarify the nearby parking peninsula that, if aligned with the interstitial space, would help further clarify the space and viewshed.*

**Response: The site plan has been revised to relocate the parking lot island in order to bring attention to that space between the buildings. While the elevation differences and proposed utilities make the public stairway infeasible, the site plan has been amended to make that location**

**an overlook for the Fall Kill. The landscape plan has been revised to call out areas for selective tree limb removal in order to open up views to the Fall Kill Creek.**

C. *Central Pediment: The building's central dormer gable includes a center drop arch decoration as the signature detail that the design team has included in the proposed drawings. The planning board may want to ask the design team to elaborate on the singular use of this detail, or if this treatment may be a motif to explore at other pedimented dormers.*

**Response: The front gable decorations were removed to provide a uniform and clean gable look.**

D. *Central Balcony: The porticos at the main entryways also show built up columns with square bases and capitals. Creating some continuity between the column detailing and the drop arch braces (ie. fastener detailing, joinery articulation, etc) above may be worth additional exploration to help connect the human experience with the overall building appearance. Above the portico it was discussed if there could be resident portico roof terrace access via doors in lieu of windows.*

**Response: The design was modified to remove the gathering space over the main entrance.**

E. *Please provide elevation regarding the pool house as another visible piece of the project at ground level.*

**Response: Elevations of the pool house have been submitted.**

**ARCHITECTURAL DETAILS, MATERIALS AND METHODS**

A. *While the documents we were sent had no notes as to the specific materials, it was presented in the workshop that the proposed buildings would have a neutral grayscale palette, with Stone at the Ground Floor, Brick at the subsequent floor, and then proceeds upward with board and batten cementitious wood. The roof in its current elevation is a predominant feature, made with Architectural Asphalt Shingles. Any efforts to incorporate solar on the roof or site should be noted. Color elevations and a materials board would help the board review the materials.*

**Response: A Material Key showing the materials and colors has been attached to the color elevation drawings.**

**B.** *In the workshop, it was mentioned that the window frames are currently being specified in a dark bronze, but it was recommended that if the building pursues a dark palette, that dark gray or black window frames have been recently installed around the city with success, and that they seem to weather and age slightly better than their lighter colored counterparts.*

**Response: The window frames will be black.**

**C.** *One architectural consideration we discussed for part of the workshop was trying to introduce methods to reduce the horizontal stacking/banding of materials by floor, with the goal of weaving them together vertically more holistically. One specific idea explored was to consider if the board and batten palette shall locally extend down by a floor at either the zones between dormers or alternatively to try the same approach at the dormer volumes. This design effort should also review the solution in conversation with the side elevations. At this interstitial zone, the stacked materials currently read very simply, but perhaps could incorporate some of the upgraded ground floor detailing to create a welcoming tactile space at the human scale.*

**Response: The rear elevation was altered by weaving the rear finishes from the second floor down to the first floor to disrupt the appearance of layering from the horizontal banding. The corner material at the ground level wraps around the sides and blends into the retaining wall.**

**D.** *Building trims were discussed as being specified as Polyvinyl Chloride (PVC). As this is a material on sustainability "Red Lists", we would generally recommend substituting a more environmentally responsible material for trims (ie. Claymark Solid Gold® Wood) wherever possible.*

**Response: The trim finishes will be Boral -Tru Exterior Cement Trim.**

**E.** *The balcony railings appear to be drawn with stock, readily available metal post panels, and the color needs to be clarified in a subsequent submission or discussion. In the workshop, it was discussed whether there might be options that allow the railings, the drop arches and the column details to work more closely together.*

**Response: The aluminum railing color will be black.**

Below is a point-by-point response to each of the comments received from Dutchess County

*A.* ***Circulation:*** *Vehicular circulation throughout the site is designed to be two-way except for site ingress and egress, which is shown as two 20'-wide, one-way driveways. To eliminate confusion and reduce the amount of impervious pavement on this parcel adjacent to the Fallkill Creek, the Board and applicant could evaluate the removal of one of the driveways and making the remaining driveway two-way. Given the topography, the eastern/ingress driveway could be eliminated and the western/egress driveway could be widened slightly to accommodate two-way traffic.*

**Response: The previously proposed ingress and egress with two one-way driveways has been redesigned to be one two-way driveway centered along Milton Street. This modification will help to calm traffic and assist in dividing traffic more evenly to Arnold and Fitchett Street. The newly proposed driveway will be widened to 24'.**

B. ***Open Space / Landscaping:*** *The site plan (C130) shows three hatched areas labeled "usable open space", but as per the landscape plan (C180) the southernmost hatched section appears to be existing forested land and the areas closer to the pool coincide with bioretention and pond areas, which are not typically considered appropriate for active/passive recreation (as per the definition of "usable open space" in §19-2.2). Also, the landscape plan doesn't include labels to indicate where the specific plants materials will be located.*

**Response: A 'Woodland Path' which will provide recreational space has been added to the site plan. The "usable open space" label has been revised to identify this area. The applicant plans to utilize this path as an amenity to residents. The applicant is open to having the Creekside section of this path open for public access as part of the future Fall Kill Trail system.**

Enclosed please find revised elevations and an updated plan set showing the modification of the two-way access to a single access and rotation of Building 200 per comments received.

Please call 845-486-1458 or email me at clobrutto@chazencompanies.com if you have any questions or need anything further.

Thank you.

Sincerely,

Senior Planner, Planning Services

## LEGEND:

**LAYOUT:**

- LOT LINE
- SETBACK LINE
- EASEMENT LINE
- BUILDING
- PAVED ROAD / DRIVEWAY / PARKING AREA
- ROAD CENTER LINE
- SIDEWALK
- CURB/WING GUTTER
- GRAVEL DRIVEWAY
- WORKLIMITS
- GUIDERAIL
- CHAIN LINK FENCE
- STOCKADE FENCE
- CONCRETE
- STABILIZED CONSTRUCTION ENTRANCE
- ROAD LINING & STRIPING
- GRAVEL PARKING AREA

**UTILITIES:**

- OHW — OVERHEAD WIRES
- ROAD CENTER LINE
- S — SANITARY SEWER LINE
- FM — FORCE MAIN
- W — WATER LINE
- ST — STORM DRAIN LINE
- DRAINAGE SWALE
- E — ELECTRIC LINE
- G — GAS LINE
- SIZE & TYPE — CULVERT W/ END SECTION

**GRADING & EROSION CONTROL:**

- 500 — 10 FT CONTOUR
- 448 — 2 FT CONTOUR
- 501.25 X — SPOT ELEVATIONS
- TREE LINE
- SHRUB LINE
- DRAINAGE SWALE
- ORANGE CONSTRUCTION FENCE
- SILT FENCE / FIBER LOG
- CHECK DAM WITH DITCH FLOW DIRECTION
- TD — TD — TEMPORARY DIVERSION SWALE
- STRAW BALE DIKE / FIBER ROLL
- FILTER FABRIC DROP INLET PROTECTION
- STONE & BLOCK DROP INLET PROTECTION
- CATCH BASIN GRATE DROP INLET PROTECTION
- CATCH BASIN SILT SAC DROP INLET PROTECTION
- PIPE OUTLET SEDIMENT TRAP
- SPOILS STORAGE AREA
- STABILIZED CONSTRUCTION ENTRANCE
- RIPRAP
- CONCRETE WASH OUT AREA
- TREE PROTECTION

**DEMO:**

- EXISTING FEATURE TO BE REMOVED
- EXISTING TREE TO BE REMOVED
- EXISTING SITE FEATURE TO BE REMOVED
- EXISTING PAVEMENT & SIDEWALK TO BE REMOVED
- EXISTING BUILDING TO BE REMOVED
- N.I.C. — NOT IN CONTRACT
- EXISTING STRUCTURE TO BE REMOVED, N.I.C

**SYMBOLS:**

- SIGN
- SIGN
- BOLLARD
- LIGHTED BOLLARD
- CATCH BASIN
- YARD DRAIN
- CLEAN OUT / DOWN SPOUT
- FLARED END SECTION
- DRAINAGE MANHOLE
- SANITARY MANHOLE
- CLEANOUT
- WELL
- WATER SHUT OFF VALVE
- WATER VALVE
- HYDRANT
- REDUCER
- CONTROL BOX
- ELECTRIC MANHOLE
- CABLE TV PEDESTAL
- GAS VALVE
- LIGHT POLE
- LIGHT WALL PACK
- POST AND LUMINAIRE
- TWIN POST AND LUMINAIRE AT 180°
- MAILBOX
- MONUMENT
- 25 — PARKING COUNT
- SOIL BORING
- TEST PIT
- TELEPHONE MANHOLE
- TELEPHONE PEDESTAL
- ELECTRIC TRANSFORMER
- TRAFFIC SIGNAL CONTROL BOX
- TSP — TRAFFIC SIGNAL POLE
- UTILITY POLE
- UTILITY POLE W/ LIGHT
- UTILITY POLE W/ GUY WIRE

# DEMOLITION PLAN NOTES:

## DEMOLITION NOTES:

1. REFER TO REQUIREMENTS OUTLINED IN THE EROSION & SEDIMENTS CONTROL PLANS & NOTES PRIOR TO COMMENCEMENT OF WORK.
2. BUILDING/STRUCTURE TO BE DEMOLISHED ARE SHOWN FOR REFERENCE PURPOSES ONLY AND ARE NOT TO BE DEMOLISHED AS PART OF THIS WORK. PRIOR TO DEMOLISHING ANY BUILDINGS/STRUCTURES, THE CONTRACTOR SHALL PERFORM A PRE-DEMOLITION SURVEY IN ACCORDANCE WITH STATE AND FEDERAL REGULATIONS GOVERNING THE DISPOSAL OF SOLID WASTE. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS AND APPROVALS BY THE AUTHORITY HAVING JURISDICTION.
3. CONFORM TO APPLICABLE CODE FOR DEMOLITION OF STRUCTURES, SAFETY OF ADJACENT STRUCTURES, DUST CONTROL, RUNOFF CONTROL, AND HAULING, DISPOSAL AND STORAGE OF DEBRIS.
4. PROVIDE, ERECT, AND MAINTAIN TEMPORARY BARRIERS AND SECURITY DEVICES.
5. MAINTAIN EXISTING UTILITIES TO REMAIN IN SERVICE AND PROTECT THEM AGAINST DAMAGE DURING SELECTIVE DEMOLITION OPERATIONS. DO NOT INTERRUPT EXISTING UTILITIES SERVING OPERATING FACILITIES, EXCEPT WHEN AUTHORIZED IN WRITING BY OWNER AND AUTHORITIES HAVING JURISDICTION.
6. NOTIFY ADJACENT OWNERS OF WORK THAT MAY AFFECT THEIR PROPERTY, POTENTIAL NOISE, UTILITY OUTAGE, OR DISRUPTION. COORDINATE WITH OWNER.
7. PREVENT MOVEMENT OR SETTLEMENT OF ADJACENT STRUCTURES. PROVIDE BRACING AND SHORING.
8. LOCATE AND IDENTIFY ALL EXISTING UTILITIES WITHIN THE CONSTRUCTION AREA. DISCONNECT AND SEAL OR CAP OFF UTILITY SERVICES THAT WILL BE AFFECTED BY THIS PROJECT. NOTIFY AFFECTED UTILITY COMPANIES BEFORE STARTING WORK AND COMPLY WITH THEIR REQUIREMENTS. VERIFY THAT UTILITIES HAVE BEEN DISCONNECTED AND CAPPED.
9. DEMOLISH AND REMOVE COMPONENTS IN AN ORDERLY AND CAREFUL MANNER.
10. PROTECT EXISTING FEATURES THAT ARE NOT TO BE DEMOLISHED.
11. CONDUCT OPERATIONS WITH MINIMUM INTERFERENCE TO PUBLIC OR PRIVATE ACCESSES.
12. MAINTAIN EGRESS AND ACCESS AT ALL TIMES. DO NOT CLOSE OR OBSTRUCT ROADWAYS, OR SIDEWALKS WITHOUT PERMITS. COORDINATE W/ AUTHORITY HAVING JURISDICTION.
13. CEASE OPERATIONS IMMEDIATELY IF ADJACENT STRUCTURES APPEAR TO BE IN DANGER. NOTIFY AUTHORITY HAVING JURISDICTION.
14. ROUGH GRADE AND COMPACT AREAS AFFECTED BY DEMOLITION TO MAINTAIN SITE GRADES AND CONTOURS.
15. FIELD VERIFY EXISTING CONDITIONS AND CORRELATE WITH REQUIREMENTS INDICATED ON DEMOLITION PLAN TO DETERMINE EXTENT OF SELECTIVE DEMOLITION REQUIRED.
16. CONDUCT DEMOLITION OPERATIONS AND REMOVE DEBRIS TO ENSURE MINIMUM INTERFERENCE WITH SELECTIVE DEMOLITION OPERATIONS.
17. CONDUCT DEMOLITION OPERATIONS TO PREVENT INJURY TO PEOPLE AND DAMAGE TO ADJACENT BUILDINGS AND FACILITIES TO REMAIN. ENSURE SAFE PASSAGE OF PEOPLE AROUND SELECTIVE DEMOLITION AREA.
18. USE WATER MIST, TEMPORARY ENCLOSURES AND OTHER SUITABLE METHODS TO LIMIT THE SPREAD OF DUST AND DIRT. COMPLY WITH GOVERNING ENVIRONMENTAL PROTECTION REGULATIONS. DO NOT USE WATER WHEN IT MAY DAMAGE EXISTING CONSTRUCTION, SUCH AS CAUSING ICING, FLOODING, AND TRANSPORTING POLLUTANTS.
19. REMOVE AND TRANSPORT DEBRIS IN A MANNER THAT WILL PREVENT SPILLAGE ON ADJACENT SURFACES AND AREAS.
20. CLEAN ADJACENT STRUCTURES AND IMPROVEMENTS OF DUST, DIRT AND DEBRIS CAUSED BY SELECTIVE DEMOLITION OPERATIONS. RETURN ADJACENT AREAS TO CONDITION EXISTING BEFORE START OF SELECTIVE DEMOLITION.
21. PROMPTLY DISPOSE OF DEMOLISHED MATERIALS. ALL DEBRIS RESULTING FROM DEMOLITION ACTIVITIES SHALL BE DISPOSED OF OFF-SITE AT A FACILITY APPROVED TO RECEIVE THE DEBRIS. DO NOT ALLOW DEMOLISHED MATERIALS TO ACCUMULATE ON-SITE. DO NOT BURN DEMOLISHED MATERIALS ON-SITE.
22. NO SITE DISTURBANCE IS TO OCCUR PRIOR TO CLEARING OF SUCH BY THE RETAINED QUALIFIED INSPECTOR.
23. ANY NECESSARY TREE CLEARING WILL OCCUR BETWEEN NOVEMBER 1ST AND MARCH 31ST TO AVOID DIRECT OR INDIRECT TAKE OF THE BAT SPECIES AS DURING THIS TIME THE BATS WOULD BE HIBERNATING AND NOT PRESENT ON SITE.

## LANDSCAPING NOTES:

1. SEE SHEET C580 FOR ALL LANDSCAPING NOTES.

# GRADING PLAN NOTES:

## GRADING NOTES:

1. PRIOR TO SITE DISTURBANCE, CONTRACTOR TO INSTALL EROSION & SEDIMENT CONTROL MEASURES.
2. IF ROCK IS ENCOUNTERED DURING CONSTRUCTION & REMOVAL BY BLASTING IS REQUIRED, THE CONTRACTOR SHALL OBTAIN ALL NECESSARY APPROVALS AND PERMITS REQUIRED BY THE AUTHORITY HAVING JURISDICTION.
3. ALL BLASTING OPERATIONS WILL ADHERE TO NEW YORK STATE AND LOCAL AUTHORITY ORDINANCES GOVERNING THE USE OF EXPLOSIVES. THE STATE REGULATIONS ARE CONTAINED IN 12 NYCRR 39 AND INDUSTRIAL CODE RULE 753.
4. STRIP ALL TOPSOIL PRIOR TO COMMENCING EARTHWORK OPERATIONS. TOPSOIL MAY BE STORED AND REUSED IN LAWN AND PLANTING AREAS ONLY. TOPSOIL AND SEED ALL AREAS DISTURBED BY CONSTRUCTION THAT ARE TO REMAIN GREEN.
5. BOX ALL TREES AND HOUSE ALL SHRUBS AND HEDGES BEFORE PLACING EARTH AGAINST OR NEAR THEM. ORNAMENTAL TREES, SHRUBS AND HEDGES WHICH MUST BE REMOVED DURING CONSTRUCTION SHALL BE HEALED IN AND RE-PLANTED IN AS GOOD A CONDITION AS THEY WERE BEFORE THEIR REMOVAL. ANY DAMAGED TREES, SHRUBS, AND/OR HEDGES SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE.
6. ALL EARTHWORK SHALL BE SMOOTHLY AND EVENLY BLENDED INTO EXISTING CONDITIONS. NO WORK, STORAGE OR TRESPASS SHALL BE PERMITTED BEYOND THE BOUNDARIES OF ANY EASEMENT OR PROPERTY LINE.
7. REMOVE ALL VEGETATION, TREES, STUMPS, GRASSES, ORGANIC SOILS, DEBRIS AND DELETERIOUS MATERIALS WITHIN THE AREAS SLATED FOR CONSTRUCTION.
8. IF PREVIOUSLY UNKNOWN CULTURAL, ARCHEOLOGICAL, OR HISTORIC REMAINS OR ARTIFACTS ARE DISCOVERED IN THE COURSE OF CONSTRUCTION OF THIS PROJECT, THE PROJECT SPONSORS SHALL SUSPEND CONSTRUCTION OPERATIONS IN THE PERTINENT AREA AND SHALL NOTIFY THE PROJECT ENGINEER. CONSTRUCTION IN THAT AREA SHALL RESUME ONLY AFTER COMPLETION OF FEDERAL, TRIBAL, AND STATE COORDINATION TO DETERMINE WHETHER PROTECTION OR RECOVERY OF THE REMAINS IS WARRANTED, OR WHETHER THE SITE IS ELIGIBLE FOR LISTING IN THE NATIONAL REGISTER OF HISTORIC PLACES.

# UTILITY PLAN NOTES:

## GENERAL CONSTRUCTION NOTES:

1. ALL UNDERGROUND UTILITIES ARE SHOWN IN THEIR RELATIVE POSITION AND ARE FOR INFORMATIONAL PURPOSES ONLY. CONTRACTOR TO VERIFY THEIR ACTUAL LOCATION IN THE FIELD PRIOR TO THE COMMENCEMENT OF CONSTRUCTION.
2. ANY CONDITION ENCOUNTERED IN THE FIELD DIFFERING FROM THOSE SHOWN HEREON, SHALL BE REPORTED TO THE DESIGN ENGINEER BEFORE CONSTRUCTION IS TO PROCEED.
3. SEWER MAINS IN RELATION TO WATER MAINS: WHERE POSSIBLE, SEWERS SHALL BE LAID AT LEAST 10 (TEN) FEET HORIZONTALLY FROM ANY EXISTING OR PROPOSED WATER MAIN. VERTICAL SEPARATION SHALL BE MAINTAINED TO PROVIDE 18 (EIGHTEEN) INCHES BETWEEN TOP OF SEWER AND BOTTOM OF THE WATER MAIN AT UTILITY CROSSINGS. WHEN NOT POSSIBLE TO OBTAIN THE PROPER VERTICAL SEPARATION, SEWER PIPE SHALL BE PRESSURE RATED AND TESTED @ 150psi, 10 (TEN) FEET ON EACH SIDE OF THE WATER MAIN BEING CROSSED.
4. ALL PROPOSED UTILITIES SHALL TERMINATE 5 FEET FROM ANY PROPOSED BUILDING FACE.
5. CONTRACTOR TO COORDINATE WITH BUILDING PLANS FOR ANY CONNECTIONS.
6. ALL STORM SEWER SHALL BE SMOOTH INTERIOR HDPE UNLESS OTHERWISE SPECIFIED.
7. ALL GRAVITY SANITARY SEWER SHALL BE SDR 35 PVC UNLESS OTHERWISE SPECIFIED.
8. ALL WATER PIPE SHALL BE CL52 DUCTILE IRON PIPE UNLESS OTHERWISE SPECIFIED.
9. CONTRACTOR TO VERIFY STATUS OF ALL UTILITY SERVICES PRIOR TO INTERRUPTION.
10. EXPLORATORY EXCAVATIONS SHALL BE PERFORMED BY THE CONTRACTOR AT ALL UTILITY CONNECTION LOCATIONS AND AS NEEDED TO VERIFY EXISTING CONDITIONS PRIOR TO PERFORMING WORK.
11. BEFORE CONSTRUCTING LINES TO CONNECT TO EXISTING UTILITIES, VERIFY EXISTING UTILITY INVERTS AND NOTIFY THE ENGINEER IF ANY VARIATION FROM THE PLAN IS REQUIRED.
12. THE CONTRACTOR SHALL MAINTAIN ALL EXISTING UTILITIES IN SERVICE FOR THE DURATION OF THE WORK.
13. THE CONTRACTOR SHALL COMPLY WITH ALL REQUIRED PERMITS AND ASSOCIATED CONDITIONS.
14. CONTRACTOR SHALL BE RESPONSIBLE FOR DEWATERING UTILITY TRENCHES AND EXCAVATIONS AND FOR THE MAINTENANCE OF SURFACE DRAINAGE DURING THE COURSE OF THE WORK.
15. IF ROCK REMOVAL BY BLASTING IS REQUIRED, THE CONTRACTOR SHALL OBTAIN ALL NECESSARY APPROVALS AND PERMITS REQUIRED BY THE AUTHORITY HAVING JURISDICTION.

# SITE PLAN NOTES:

## GENERAL CONSTRUCTION NOTES:

1. THE CONTRACTOR SHALL PROTECT EXISTING PROPERTY LINE MONUMENTATION. ANY MONUMENTATION DISTURBED OR DESTROYED, AS JUDGED BY THE ENGINEER OR OWNER, SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE AND UNDER THE SUPERVISION OF A NEW YORK STATE LICENSED LAND SURVEYOR.
2. ALL PAVEMENT RESTORATION SHALL MEET AND MATCH EXISTING GRADES.
3. ALL SAWCUT LINES SHALL BE PARALLEL AND CURVILINEAR TO EXISTING OR PROPOSED CURBING AND SHALL BE A CONSTANT DISTANCE OF 18" MIN AWAY.
4. ALL ARCHITECTURE IS SUBJECT TO PLANNING BOARD REVIEW.
5. NOTIFY ENGINEER 48 HOURS PRIOR TO INITIALIZATION OF ANY WORK ON SITE.
6. THE ENGINEER SHALL BE NOTIFIED IN WRITING OF ANY CONDITIONS THAT VARY FROM THOSE SHOWN ON THE PLANS. THE CONTRACTOR'S WORK SHALL NOT VARY FROM THE PLANS WITHOUT PRIOR REVIEW FROM THE ENGINEER.
7. CONTRACTOR IS RESPONSIBLE FOR EMPLOYING AND MAINTAINING ALL TRAFFIC CONTROL AND SAFETY MEASURES DURING CONSTRUCTION.
8. CONTRACTOR IS RESPONSIBLE FOR PROPERLY & SAFELY MAINTAINING AREA BETWEEN ALL ADJOINING PROPERTIES.
9. NO WORK, STORAGE OR TRESPASS SHALL BE PERMITTED BEYOND THE SITE PROPERTY LINES OR PUBLIC RIGHT-OF-WAY.
10. ALL EXISTING LAWN AREA, CURBING, PAVING, SIDEWALKS, CULVERTS OR OTHER PUBLIC OR PRIVATE PROPERTY DAMAGED BY TRENCHING OR EXCAVATION OPERATIONS SHALL BE REPLACED OR REPAIRED TO A CONDITION EQUAL TO EXISTING, AS DESCRIBED IN CONTRACT DOCUMENTS OR AS ORDERED BY ENGINEER (AOBE). MAILBOXES, SIGN POSTS, ETC SHALL BE PROPERLY REMOVED AND REPLACED EXACTLY AS THEY WERE BEFORE BEING DISTURBED. REMOVE AND REPLACE AFFECTED CURBING AND SIDEWALK TO NEAREST JOINT. REMOVE PAVEMENT AND REPLACE TO SAW CUT LINE. SAW CUT IN STRAIGHT LINE TO POINT NEEDED TO BLEND GRADE. REMOVE LAWN AND REPLACE TO MINIMUM LIMIT OF EXCAVATION.
11. IF PREVIOUSLY UNKNOWN CULTURAL, ARCHEOLOGICAL, OR HISTORIC REMAINS OR ARTIFACTS ARE DISCOVERED IN THE COURSE OF CONSTRUCTION OF THIS PROJECT, THE PROJECT SPONSORS SHALL SUSPEND CONSTRUCTION OPERATIONS IN THE PERTINENT AREA AND SHALL NOTIFY THE PROJECT ENGINEER. CONSTRUCTION IN THAT AREA SHALL RESUME ONLY AFTER COMPLETION OF FEDERAL, TRIBAL, AND STATE COORDINATION TO DETERMINE WHETHER PROTECTION OR RECOVERY OF THE REMAINS IS WARRANTED, OR WHETHER THE SITE IS ELIGIBLE FOR LISTING IN THE NATIONAL REGISTER OF HISTORIC PLACES.

## LAYOUT NOTES:

1. BUILDING DIMENSIONS TO BE TAKEN FROM ARCHITECTURAL BUILDING PLANS. NOTIFY THE ENGINEER OF ANY DEVIATION FROM CONDITIONS SHOWN ON THIS PLAN.
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATING ALL FIELD LAYOUT. THE CONTRACTOR SHALL TAKE TIES TO ALL UTILITY CONNECTIONS AND PROVIDE AS-BUILT SURVEY UP AS BUILT PLANS FOR ALL UTILITIES SHOWING TIES TO CONNECTIONS, BENDS, VALVES, LENGTHS OF LINES AND INVERTS. AS-BUILT PLANS SHALL BE REVIEWED BY THE OWNER AND THE ENGINEER AND THE CONTRACTOR SHALL PROVIDE ANY CORRECTION OR ADDITIONS TO THE SATISFACTION OF THE OWNER AND THE ENGINEER BEFORE UTILITIES WILL BE ACCEPTED.

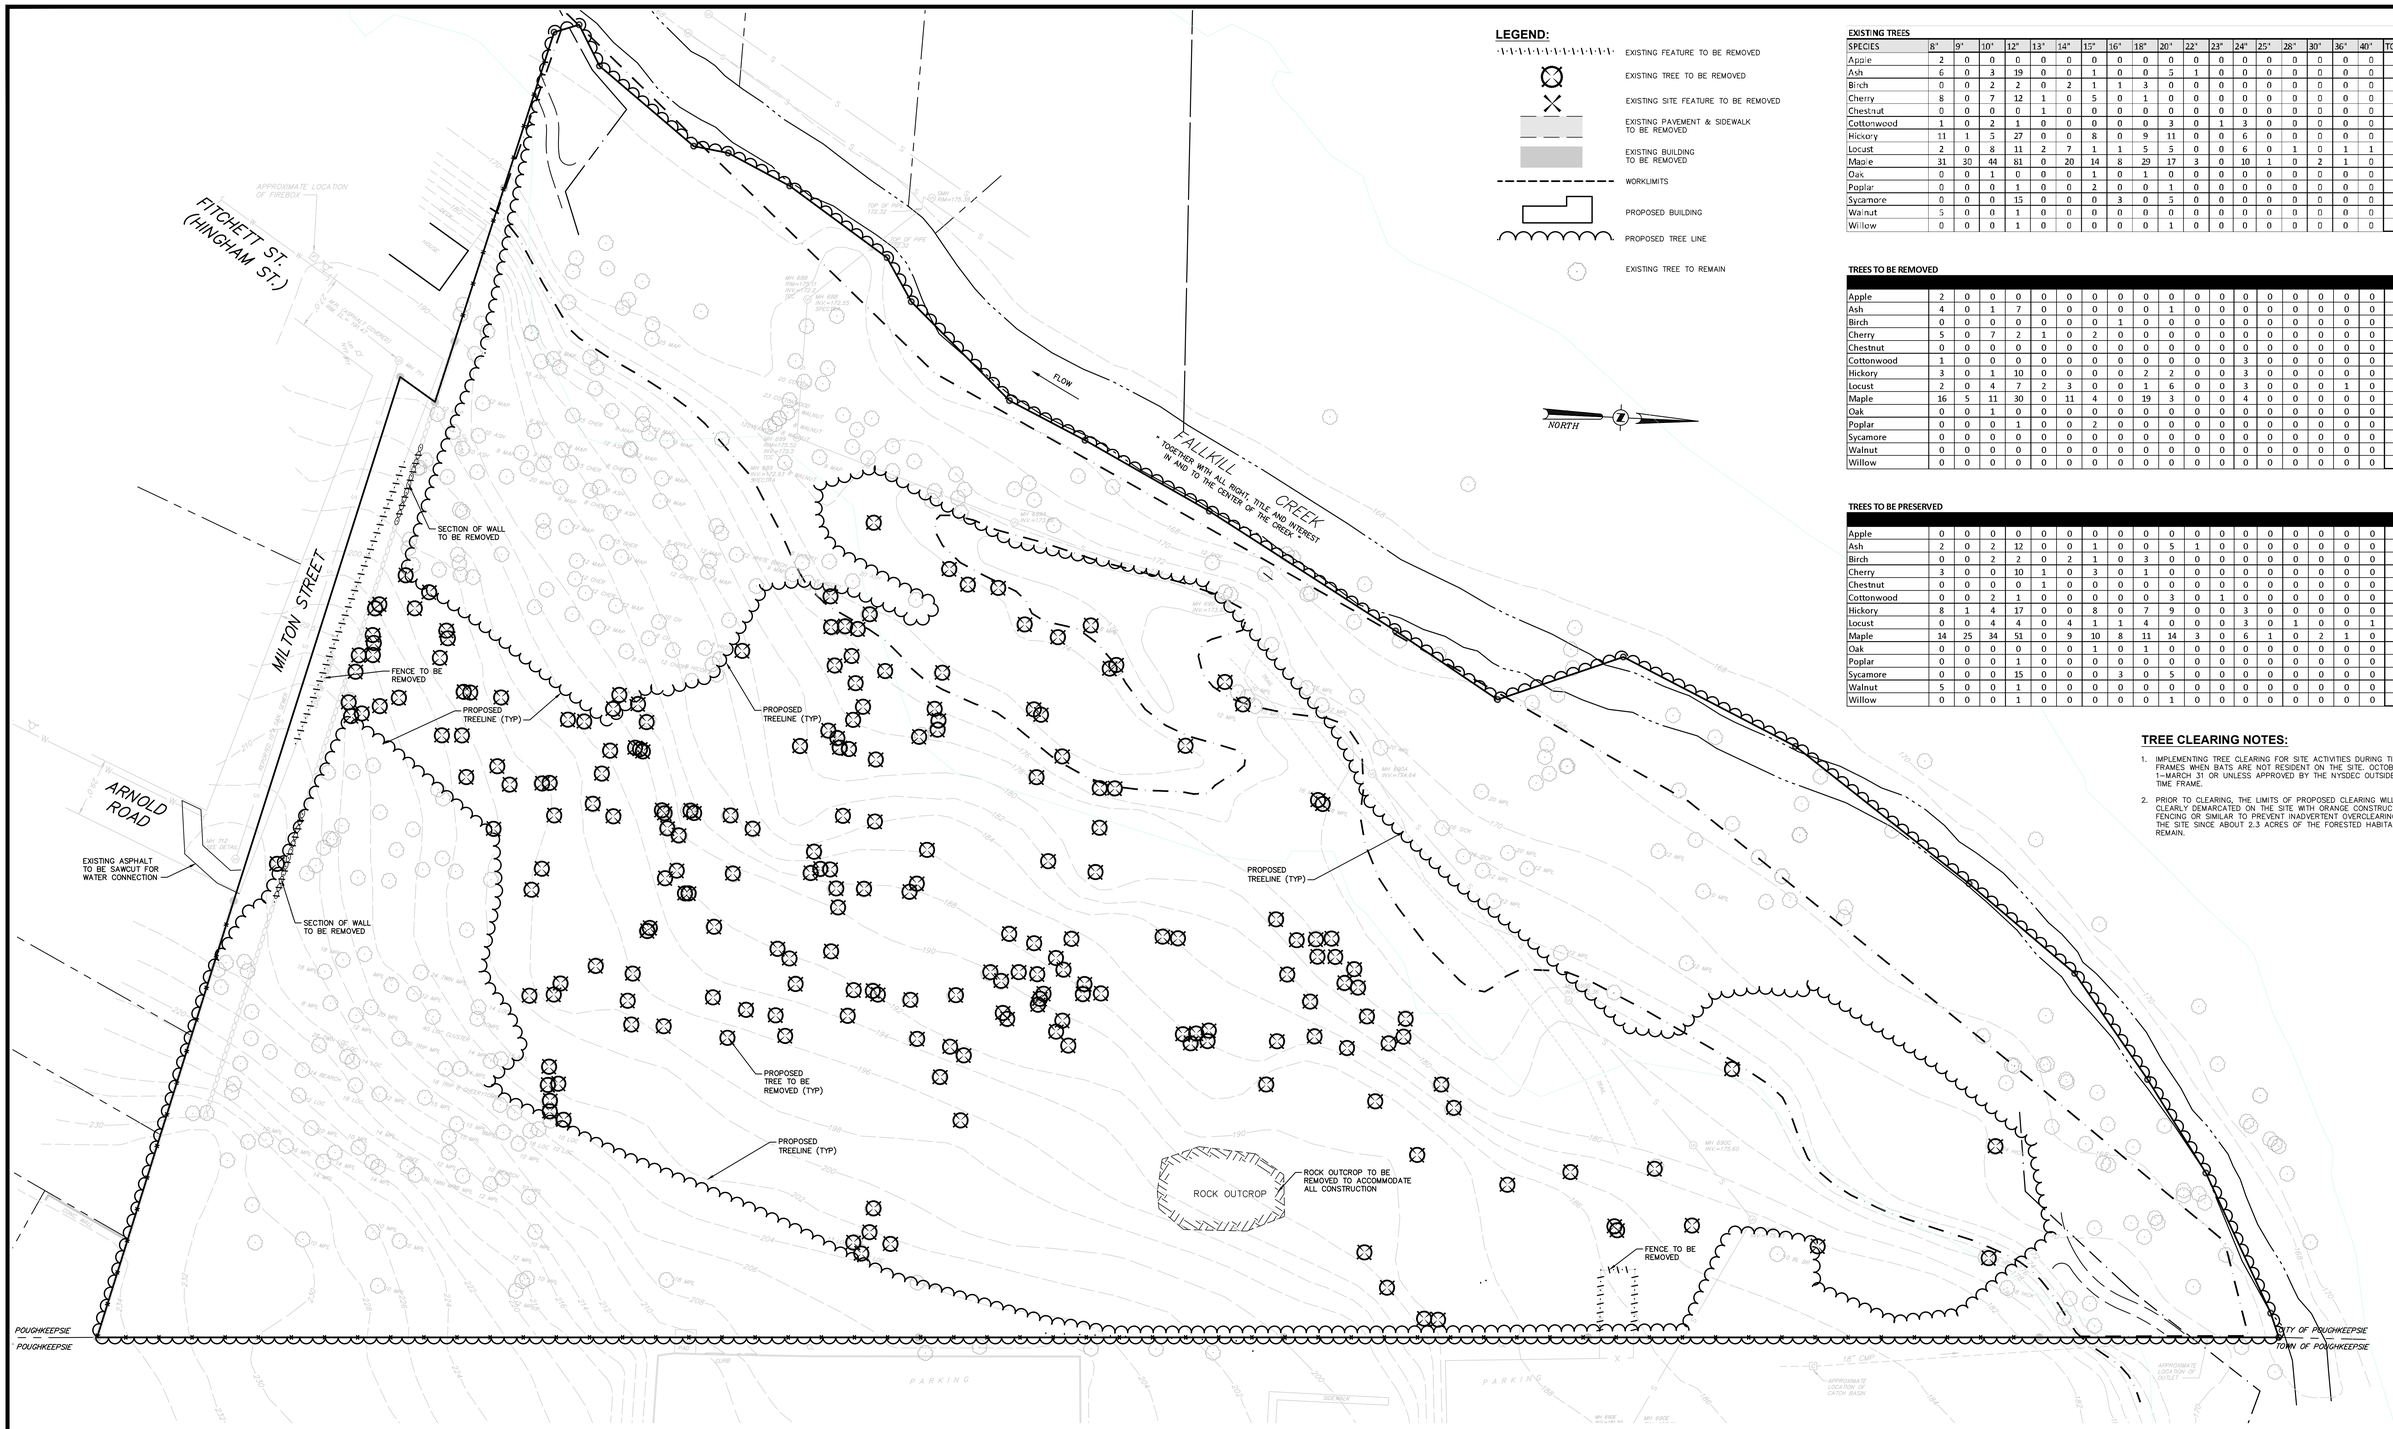
## PAVING NOTES:

1. NO VEHICULAR TRAFFIC OF ANY SORT SHALL BE PERMITTED ON THE SURFACE OF SUBBASE COURSE MATERIAL ONCE IT HAS BEEN FINE GRADED, COMPACTED, AND IS READY FOR PAVING. SUBBASE MATERIAL SO PREPARED FOR PAVING SHALL BE PAVED WITHIN THREE DAYS OF PREPARATION.
2. SUBBASE MATERIAL AND THE VARIOUS ASPHALT CONCRETE MATERIALS CALLED FOR IN THESE DRAWINGS SHALL CONFORM WITH THE REFERENCED SECTION OF THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED **"LATEST EDITIONS"**. CONSTRUCTION SHALL BE AS FURTHER SET FORTH IN THOSE SPECIFICATIONS AND AS OTHERWISE PROVIDED FOR IN THESE DRAWINGS.
3. PLACE ASPHALT CONCRETE MIXTURE ON PREPARED SURFACE, SPREAD AND STRIKE-OFF USING A SELF-PROPELLED PAVING MACHINE, WITH VIBRATING SCREED. PLACEMENT IN INACCESSIBLE AND SMALL AREAS MAY BE BY HAND.
4. PROVIDE JOINTS BETWEEN OLD AND NEW PAVEMENTS OR BETWEEN SUCCESSIVE DAY'S WORK.
5. TACK COAT WHEN SPECIFIED OR CALLED OUT ON THE DRAWINGS OR REQUIRED BY THE REFERENCED SPECIFICATION SHALL CONFORM WITH THE FOLLOWING:
   A. TACK COAT SHALL MEET THE MATERIAL REQUIREMENTS OF 702-90 ASPHALT EMULSION FOR TACK COAT OF THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED **"LATEST EDITION"**, SHALL BE APPLIED IN ACCORDANCE WITH SECTION 407 – TACK COAT SHALL BE IN ACCORDANCE WITH THOSE SPECIFICATIONS AND AS OTHERWISE PROVIDED FOR IN THESE DRAWINGS.
   B. REMOVE LOOSE AND FOREIGN MATERIAL FROM ASPHALT SURFACE BEFORE PAVING NEXT COURSE. USE POWER BROOMS, BLOWERS OR HAND BROOM.
   C. APPLY TACK COAT TO ASPHALT PAVEMENT SURFACES & AND SURFACES OF CURBS, GUTTERS, MANHOLES, AND OTHER STRUCTURES PROJECTING INTO OR ABUTTING PAVEMENT. DRY TO A "TACKY" CONSISTENCY BEFORE PAVING.
   D. TACK COAT ENTIRE VERTICAL SURFACE OF ABUTTING EXISTING PAVEMENT.
6. AFTER COMPLETION OF PAVING AND SURFACING OPERATIONS, CLEAN SURFACES OF EXCESS OR SPILLED ASPHALT, GRAVEL OR STONE MATERIALS TO THE SATISFACTION OF THE ENGINEER.

## TESTING WATER MAINS:

1. AFTER TRENCH HAS BEEN BACKFILLED, HYDROSTATIC ACCEPTANCE TESTS, CONSISTING OF A PRESSURE TEST AND A LEAKAGE TEST, SHALL BE PERFORMED ON ALL SECTIONS OF WATER MAIN INSTALLED. LEAKAGE TEST SHALL BE CONDUCTED CONCURRENTLY WITH PRESSURE TEST. TEST SECTION SHALL BE LIMITED TO ABOUT 2000 FT (MAX.) UNLESS OTHERWISE APPROVED BY THE ENGINEER.
2. AFTER ALL TESTS AND INSPECTIONS HAVE BEEN PERFORMED EVIDENCE OF COMPLIANCE SHALL BE FORWARDED TO OWNER/ENGINEER AND THE MUNICIPALITY PRIOR TO ACCEPTANCE.
3. ALL WATER FOR TESTS SHALL BE FURNISHED AND DISPOSED OF BY THE CONTRACTOR AT THE CONTRACTOR'S EXPENSE. SOURCE AND/OR QUALITY OF WATER WHICH THE CONTRACTOR PROPOSES TO USE IN TESTING LINES SHALL BE ACCEPTABLE TO THE ENGINEER.
4. HYDROSTATIC PRESUMPTIVE TESTS MAY BE PERFORMED WHEN SYSTEM IS PARTIALLY BACKFILLED TO SIMPLY CHECK WORK, BUT ACCEPTANCE OF SYSTEM SHALL BE BASED ON HYDROSTATIC TESTS RUN ON FINISHED SYSTEM AFTER IT HAS BEEN COMPLETELY BACKFILLED. ALL HYDROSTATIC TESTS SHALL BE PERFORMED IN ACCORDANCE WITH SECTION 4 OF AWWA STANDARD C 600 OR LATEST ADDITION, AS MODIFIED HEREIN.
5. FOR THE PRESSURE TEST, SYSTEM SHALL BE PRESSURIZED AND MAINTAINED AT A MINIMUM OF 150 POUNDS PER SQUARE INCH, OR 1.5 TIMES THE WORKING PRESSURE, WHICHEVER IS GREATER, BASED ON THE ELEVATION OF THE LOWEST POINT IN THE SECTION BEING TESTED AND CORRECTED TO THE ELEVATION OF THE GAUGE. PROVISIONS SHALL BE MADE TO RELIEVE AIR TRAPPED AT HIGH POINTS IN THE SYSTEM THROUGH ADJACENT HYDRANTS OR THROUGH TAPS AND CORPORATION STOPS INSTALLED FOR THIS PURPOSE BY THE CONTRACTOR. AFTER SAID PRESSURE HAS BEEN MAINTAINED SUCCESSFULLY, WITH FURTHER PUMPING AS REQUIRED, FOR A PERIOD OF AT LEAST TWO HOURS, THE SECTION UNDER TEST SHALL BE CONSIDERED TO HAVE PASSED THE PRESSURE TEST.
6. LEAKAGE TEST SHALL BE PERFORMED CONCURRENTLY USING A MINIMUM TEST PRESSURE OF 150 LBS/SQUARE INCH, OR 1.5 TIMES THE WORKING PRESSURE, WHICHEVER IS GREATER, BASED ON THE ELEVATION OF THE LOWEST POINT IN THE SECTION UNDER TEST AND CORRECTED TO ELEVATION OF THE GAUGE. LEAKAGE TEST DURATION SHALL BE A MINIMUM OF 2 HOURS AFTER LEAKAGE RATE HAS STABILIZED.
7. MAXIMUM ALLOWABLE LEAKAGE SHALL BE AS SHOWN IN THE FOLLOWING TABLE:
   ALLOWABLE LEAKAGE PER 1000 FT (305M) OF PIPELINE (GPH)

| AVG. TEST PRESSURE | NOMINAL PIPE DIAMETER—IN. | | | | | | |
|---|---|---|---|---|---|---|---|
| PSI | 4 | 6 | 8 | 10 | 12 | 14 | 16 |
| 450 | 0.57 | 0.86 | 1.15 | 1.43 | 1.72 | 2.01 | 2.29 |
| 400 | 0.54 | 0.81 | 1.08 | 1.35 | 1.62 | 1.89 | 2.16 |
| 350 | 0.51 | 0.76 | 1.01 | 1.26 | 1.52 | 1.77 | 2.02 |
| 300 | 0.47 | 0.70 | 0.94 | 1.17 | 1.40 | 1.64 | 1.87 |
| 275 | 0.45 | 0.67 | 0.90 | 1.12 | 1.34 | 1.57 | 1.79 |
| 250 | 0.43 | 0.64 | 0.85 | 1.07 | 1.28 | 1.50 | 1.71 |
| 225 | 0.41 | 0.61 | 0.81 | 1.01 | 1.22 | 1.42 | 1.62 |
| 200 | 0.38 | 0.57 | 0.76 | 0.96 | 1.15 | 1.34 | 1.53 |
| 175 | 0.36 | 0.54 | 0.72 | 0.89 | 1.07 | 1.25 | 1.43 |
| 150 | 0.33 | 0.50 | 0.66 | 0.83 | 0.99 | 1.16 | 1.32 |
| 125 | 0.30 | 0.45 | 0.60 | 0.76 | 0.91 | 1.06 | 1.21 |
| 100 | 0.27 | 0.41 | 0.54 | 0.68 | 0.81 | 0.95 | 1.08 |



1. IF LEAKAGE IN SYSTEM EXCEEDS THE SPECIFIED AMOUNT, THE CONTRACTOR SHALL, AT NO ADDED COST TO THE OWNER, LOCATE, REPAIR, AND/OR REPLACE DEFECT(S) AND RE-TEST PIPING SYSTEM.

## GENERAL CONSTRUCTION NOTES:

1. ALL UTILITY WORK INVOLVING CONNECTION TO EXISTING MUNICIPAL WATER MAIN SHALL BE COORDINATED WITH OWNER AND OWNER'S REPRESENTATIVE. NOTIFY OWNER AND THE OWNER'S REPRESENTATIVE 3 WORKING DAYS BEFORE CONNECTION IS MADE.
2. THE CONTRACTOR SHALL VERIFY THE PRESENCE OF AND EXACT LOCATION OF ALL UTILITIES PRIOR TO COMMENCING ANY EXCAVATION WORK AS THE EXACT LOCATION OF UTILITIES MAY DIFFER FROM THE LOCATION SHOWN, AND ADDITIONAL UTILITIES MAY EXIST.
3. THE CONTRACTOR SHALL REVIEW ALL FIELD UTILITY MARKOUT INFORMATION AND BRING ANY CONFLICTS TO THE ATTENTION OF THE PROJECT ENGINEER PRIOR TO COMMENCING ANY WORK OPERATIONS. TEST PITS MAY BE REQUIRED BY THE CONTRACTOR TO VERIFY ACTUAL UTILITY LOCATIONS AND/OR DEPTHS. TEST PIT OPERATIONS WILL MEET ALL NECESSARY REQUIREMENTS AS SET FORTH IN THESE PLANS, DETAILS, FEDERAL/STATE/LOCAL REGULATIONS AND ANY SPECIFIC PERMIT REQUIREMENTS.
4. THE CONTRACTOR SHALL PERFORM EXPLORATORY EXCAVATIONS AT ALL UTILITY CONNECTION LOCATIONS AND AS NEEDED TO VERIFY EXISTING CONDITIONS PRIOR TO PERFORMING WORK. THE CONTRACTOR SHALL NOTIFY THE OWNER AND OWNER'S REPRESENTATIVE 3 WORKING DAYS PRIOR TO SUCH EXCAVATIONS TO ENSURE THEIR PRESENCE.
5. THE CONTRACTOR SHALL EXERCISE CAUTION WHEN EXCAVATING FOR THE PROPOSED STRUCTURES AND WATER LINES AS THE EXACT LOCATION OF UNDERGROUND STRUCTURES AND UTILITIES ARE NOT KNOWN. ANY DAMAGE TO EXISTING STRUCTURES/UTILITIES ABOVE OR BELOW GRADE, CAUSED BY THE CONTRACTOR SHALL BE REPAIRED IMMEDIATELY BY THE CONTRACTOR AT HIS OWN EXPENSE.

## WATER MAIN NOTES:

1. ALL WATER MAINS SHALL BE CEMENT LINED DUCTILE IRON PIPE, CLASS 52 PUSH-ON JOINT, UNLESS OTHERWISE SPECIFIED BY OR APPROVED BY THE WATER DEPARTMENT. JOINING SHALL EMPLOY "MEGALUG" CONNECTIONS, FIELD LOCK GASKET, OR AS ALTERNATIVELY SPECIFIED BY THE WATER DEPARTMENT. ALL WATER PIPING CONSTRUCTION SHALL BE TO THE SPECIFICATIONS OF THE WATER DEPARTMENT. WET TAP OF PUBLIC WATER SYSTEM SHALL BE APPROVED AND SUPERVISED BY THE WATER DEPARTMENT. TAPPING SLEEVE SHALL BE STAINLESS STEEL OR APPROVED EQUAL. ALL MAINLINE VALVES SHALL BE RESILIENT WEDGE OR APPROVED EQUAL.
2. THE WATER LINE MAY BE FLEXED WITHIN PIPE SPECIFICATIONS OR LAID DEEPER IN AREAS WHERE A CROSSING WITH A SANITARY LINE OCCURS, TO ACHIEVE THE REQUIRED 1.5' VERTICAL SEPARATION DISTANCE. IF THIS DISTANCE CANNOT BE REASONABLY ACHIEVED, THE CONTRACTOR SHALL USE PRESSURE RATED SANITARY SEWER PIPE OF EQUAL OR GREATER RATEING THAT THE PRESSURE CLASS FOR THE WATER LINE.
3. MINIMUM VERTICAL SEPARATION BETWEEN WATER MAINS AND SEWER PIPE SHALL BE 18 INCHES MEASURED FROM THE OUTSIDE OF THE PIPES AT THE POINT OF CROSSING. ONE FULL STANDARD LAYING LENGTH OF WATER MAIN SHALL BE CENTERED UNDER OR OVER THE SEWER SO THAT BOTH JOINTS WILL BE AS FAR FROM THE SEWER LINE AS POSSIBLE. IN ADDITION, WHEN THE WATER MAIN PASSES UNDER A SEWER, ADEQUATE STRUCTURAL SUPPORT (COMPACTED SELECT FILL) SHALL BE PROVIDED FOR THE SEWER TO PREVENT EXCESSIVE DEFLECTION OF JOINTS AND SETTLING OF THE SEWER PIPE ON THE WATER MAIN. MINIMUM HORIZONTAL SEPARATION BETWEEN PARALLEL WATER MAINS AND SEWER PIPES (INCLUDING MANHOLES AND VAULTS) SHALL BE 10 FEET MEASURED FROM THE OUTSIDE OF THE PIPES, MANHOLES OR VAULTS.
4. ALL WATER MAINS SHALL HAVE A MINIMUM OF (5) FIVE FEET OF COVER FROM THE TOP OF THE MAIN TO FINISHED GRADE. THE CONTRACTOR SHALL CHECK ALL FINISHED GRADE STAKES BEFORE TRENCHING TO ENSURE THAT ALL INSTALLED WATERMAINS WILL HAVE THE REQUIRED COVER.
5. THE SUPPLIER OF WATER MUST RECEIVE AT LEAST 48-HOUR ADVANCE NOTIFICATION REQUESTING SAMPLING SERVICES. SAMPLING WILL NOT BE PERFORMED PRIOR TO RECEIPT FROM A NEW YORK STATE LICENSED OR REGISTERED DESIGN PROFESSIONAL (ENGINEER, ARCHITECT, OR LAND SURVEYOR WITH A SPECIAL EXEMPTION UNDER SECTION 7208(N) OF THE EDUCATION LAW) CERTIFYING THAT THE WATER SUPPLY IMPROVEMENTS, TESTING AND DISINFECTION PROCEDURES WERE COMPLETED IN ACCORDANCE WITH THE APPROVAL PLANS, REPORTS, SPECIFICATIONS AND ANY APPROVED AMENDMENTS. A NYSDOH CERTIFIED LABORATORY WILL COLLECT SAMPLES FOR FREE CHLORINE RESIDUAL, TOTAL AND FECAL COLIFORM AND 24-HOUR BACTERIAL PLATE COUNT. THE CERTIFICATE OF COMPLIANCE SHALL BE PROVIDED TO THE WATER MAINTENANCE SUPERVISOR AS A CONDITION OF APPROVAL FOR OPERATION.
6. THE CONTRACTOR SHALL COORDINATE THE TESTING WITH THE WATER DEPARTMENT SO AS TO MAINTAIN THE AMOUNT OF SERVICE INTERRUPTION TO EXISTING USERS TO THE LEAST EXTENT PRACTICABLE. WATER MAIN INSTALLATION AND TESTING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE PROJECT ENGINEER OR HIS DESIGNEE AS NECESSARY TO MEET CONDITIONS IN NOTE 5 ABOVE.
7. THE WATER MAIN SHALL BE PRESSURE LEAKAGE TESTED IN ACCORDANCE WITH THE MINIMUM REQUIREMENTS OF THE AWWA STANDARD C600 (LATEST REVISION) OR IN ACCORDANCE WITH MORE STRINGENT REQUIREMENTS IMPOSED BY THE SUPPLIER OF WATER. TEST TO FIRST VALVE WITHIN BUILDING.
8. THE WATER MAIN SHALL BE DISINFECTED EQUAL TO AWWA STANDARD FOR DISINFECTING WATER MAINS DESIGNATION C651 (LATEST REVISION). THE FOLLOWING DISINFECTION, THE WATER MAIN SHALL BE FLUSHED UNTIL THE CHLORINE CONCENTRATION IN THE WATER LEAVING THE MAIN IS NO HIGHER THAN THAT GENERALLY PREVAILING IN THE SYSTEM. THE PROJECT ENGINEER OR HIS DESIGNEE SHALL ALSO WITNESS DISINFECTION AND FLUSHING.
9. ALL WATER MAIN FITTINGS NOT RECEIVING 24-HOUR CHLORINE DISINFECTION TIME MUST BE SWAB-DISINFECTED 30 MINUTES PRIOR TO INSTALLATION.
10. THE SAMPLING POINT(S) MUST

## TREE CLEARING NOTES:

1. IMPLEMENTING TREE CLEARING FOR SITE ACTIVITIES DURING TIME FRAMES WHEN BATS ARE NOT RESIDENT ON THE SITE. OCTOBER 1–MARCH 31 OR UNLESS APPROVED BY THE NYSDEC OUTSIDE THIS TIME FRAME.
2. PRIOR TO CLEARING, THE LIMITS OF PROPOSED CLEARING WILL BE CLEARLY DEMARCATED ON THE SITE WITH ORANGE CONSTRUCTION FENCING OR SIMILAR TO PREVENT INADVERTENT OVERCLEARING OF THE SITE SINCE ABOUT 2.3 ACRES OF THE FORESTED HABITAT WILL REMAIN.

## SOIL RESTORATION NOTES:

IN AREAS WHERE SOIL DISTURBANCE HAS OCCURRED OUTSIDE OF BUILDINGS AND PAVEMENT AREAS, THE DISTURBED SUB–SOILS SHALL BE RETURNED TO ROUGH GRADE AND THE FOLLOWING SOILS RESTORATION STEPS APPLIED:

1) APPLY THREE INCHES OF COMPOST OVER SOIL. COMPOST SHALL BE AGED, FROM PLANT DERIVED MATERIALS, FREE OF VIABLE WEED SEEDS, HAVE NO VISIBLE FREE WATER OR DUST PRODUCED WHEN HANDLING, PASS THROUGH A HALF INCH SCREEN AND HAVE A PH SUITABLE TO GROW DESIRED PLANTS.
2) TILL COMPOST INTO THE SUBSOIL TO A DEPTH OF AT LEAST 12–INCHES USING A CAT–MOUNTED RIPPER, TRACTOR MOUNTED DISC, OR TILLER, MIXING AND CIRCULATING AIR AND COMPOST INTO SUB–SOILS.
3) ROCK–PICK UNTIL UPLIFTED STONE/ROCK MATERIALS OF FOUR INCHES AND LARGER SIZE ARE CLEANED OFF THE SITE.
4) APPLY TOPSOIL TO A DEPTH OF SIX INCHES.

ALL RIGHTS RESERVED. COPY OR REPRODUCTION OF THIS DRAWING OR DOCUMENT, OR ANY PORTION THEREOF, WITHOUT THE EXPRESS WRITTEN PERMISSION OF CHAZEN ENGINEERING, LAND SURVEYING, LANDSCAPE ARCHITECTURE & GEOLOGY CO., D.P.C. ## LIGHTING NOTES:

1. GRID NUMBERS SHOWN REPRESENT FOOTCANDLE VALUES AT GROUND PLANE.
2. THE LIGHTING FIXTURES, SURFACE LOCATIONS AND ASSOCIATED PHOTOMETRIC VALUES ARE IDENTIFIED BY TCC. DETAILED DESIGN OF THE LIGHTING SPECIFICATIONS, FOUNDATION DESIGN, LIGHTING CONDUIT, WIRING, AND CONTROL CIRCUITRY SHALL BE BY OTHERS.
3. IF DISCREPENCIES EXIST BETWEEN THE LIGHTING SCHEDULE AND LIGHTING PLAN, THE PLAN SHALL DICTATE.

**LIGHTING SCHEDULE**

| Label | Mounting Height | QTY | Manufacturer | Catalog Number | Description | Lamp | Number Lamps | Filename | Lumens per Lamp | LLF | Wattage | Efficiency | Notes |

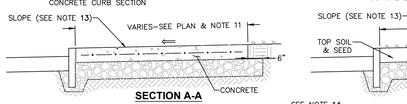
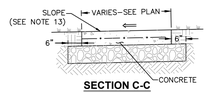
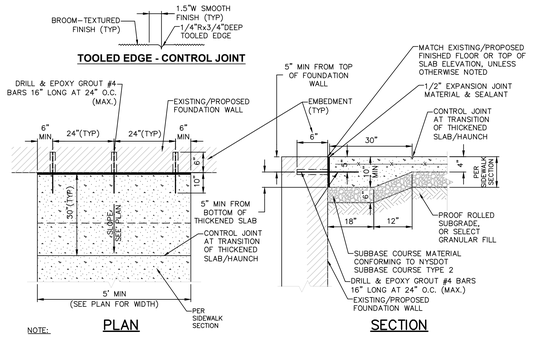
Drawing Name: Z:\projects\81900–81999\81947.00 – Highview II\DWG\01_C190_81747–00_PHOTOMTRIC.dwg
Xref's Attached: XUTIL_81947; XGRADING_81947; XLANDSCAPE_81947; XLAYOUT_81947; XTB_30X42_81947; XPHOTOMETRIC_81947; XBASE–ENG–WETLAND_81947–00; XBASE–ENG_81947
Date Printed: Oct 05, 2021, 4:15pm



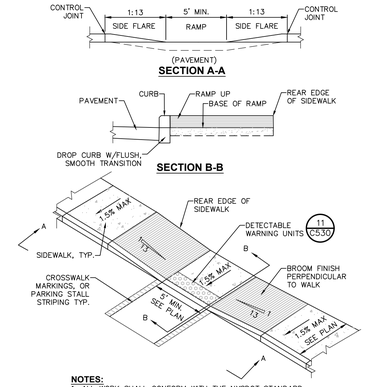


**NOTES:**



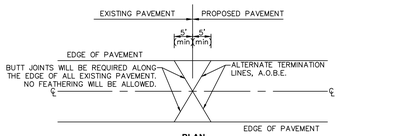
1. MATERIALS AND METHODS OF CONSTRUCTION SHALL BE IN CONFORMANCE WITH THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION (NYSDOT) STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED **"CURRENT VERSION"**, AND ALL ADDENDA THERE TO.
2. SUBBASE MATERIAL SHALL CONFORM WITH **SECTION 304** – SUBBASE COURSE OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS AND THE TYPE CALLED OUT IN THESE DRAWINGS.
3. HOT MIX ASPHALT (HMA) PAVEMENT SHALL CONFORM WITH **SECTION 400**–HOT MIX ASPHALT OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS AND THE TYPE CALLED OUT IN THESE DRAWINGS. ALTHOUGH **SECTION 400** IN ITS ENTIRETY IS REFERENCED, THE HOT MIX ASPHALT (HMA) PAVEMENT(S) SPECIFIED FOR THIS CONTRACT SHALL BE AS SPECIFIED UNDER **SECTION 402**–HOT MIX ASPHALT (HMA) PAVEMENTS.
4. TACK COAT WHEN SPECIFIED OR CALLED OUT IN THESE DRAWINGS OR REQUIRED BY THE REFERENCED SPECIFICATIONS SHALL CONFORM WITH **SECTION 407**–TACK COAT OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
5. WHERE IT IS NECESSARY TO PLACE FILL FOR PURPOSES OF BRINGING THE SUBGRADE ELEVATION UP TO A SPECIFIED GRADE, THE FILL MATERIAL PLACED SHALL BE IN CONFORMANCE WITH **SECTION 203**– EXCAVATION AND EMBANKMENT OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
6. PAVEMENT SECTION SHOWN IS PRELIMINARY. PRIOR TO BIDDING AND COMMENCEMENT OF CONSTRUCTION, THE FINAL DESIGN OF THE PAVEMENT SECTION MUST BE PREPARED BY A NYS LICENSED PROFESSIONAL ENGINEER AND MUST BE BASED ON A CURRENT GEOTECHNICAL REPORT PREPARED FOR THIS PROJECT.

## 1 PAVEMENT SECTION DETAIL
SCALE: NOT TO SCALE

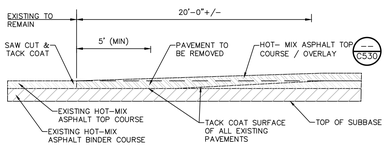


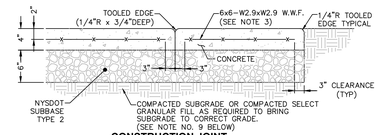
NOTE:

1. THICKENED (HAUNCH) & ADDITIONALLY REINFORCED CONCRETE SIDEWALK ENDS ARE REQUIRED AT ALL EXISTING/PROPOSED BUILDING ENTRANCES.
2. SEE CONCRETE SIDEWALK DETAIL FOR ADDITIONAL DETAILS & NOTES.

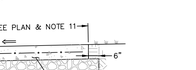


## 3 CONCRETE SIDEWALK AT BUILDING ENTRANCES
SCALE: NOT TO SCALE



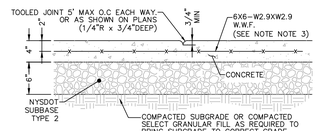


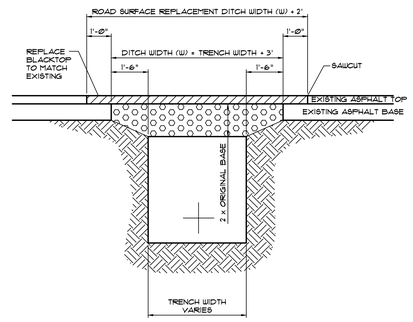
**NOTES:**

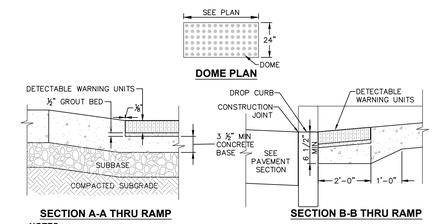


1. ALL WORK SHALL CONFORM WITH THE NYSDOT STANDARD SPECIFICATION FOR CONSTRUCTION AND MATERIALS DATED, **"CURRENT VERSION"**, AND ALL ADDENDA THERE TO; SPECIFICALLY **SECTION 608**– SIDEWALKS, DRIVEWAYS, AND BICYCLE PATHS.
2. SLOPE RAMP AND SIDE FLARES AS INDICATED IN THE PLANS OR AS ORDERED BY THE ENGINEER.
3. DETECTABLE WARNING UNITS SHALL BE PROVIDED ON ALL RAMPS IN ACCORDANCE W/ ADA REQUIREMENTS.

## 4 PEDESTRIAN RAMP SECTION - DROP CURB
SCALE: NOT TO SCALE







**NOTES:**

1. MATERIAL AND METHODS OF CONSTRUCTION SHALL BE IN CONFORMANCE WITH THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION (NYSDOT) STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED "CURRENT VERSION", AND ALL ADDENDA THERE TO.
2. ALL CONCRETE SHALL BE **4,500** CONCRETE. CONCRETE MATERIALS, PLACEMENT, AND CONSTRUCTION SHALL CONFORM WITH **SECTION 500** OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
3. REINFORCING STEEL FOR CONCRETE SHALL CONFORM WITH SECTION 556 – REINFORCING STEEL FOR CONCRETE STRUCTURES OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS AND AS SPECIFICALLY CALLED OUT IN THE DRAWINGS.
4. ALL EXPOSED SURFACES SHALL HAVE A BROOM TEXTURED FINISH & TOOLED EDGES. TOOL SHALL PROVIDE MAX 1–1/2" WIDE SMOOTH TROWEL FINISH AT JOINT.
5. EXPANSION JOINTS SHALL BE LOCATED A MAXIMUM OF 20' ON CENTER, OR AS INDICATED ON PLANS.
6. JOINTS SHALL NOT BE SAW CUT.
7. EXPOSED CONCRETE SURFACES SHALL BE TREATED WITH **"SUREBOND" 1100 RESIN–BASED, WATER EMULSION CONCRETE CURING COMPOUND,** OR EQUAL. RATE AND METHOD OF APPLICATION SHALL BE IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS.
8. SUBBASE MATERIAL SHALL CONFORM WITH **SECTION 304** OF THE ABOVE REFERENCED NYSDOT STANDARD.
9. WHERE IT IS NECESSARY TO PLACE FILL FOR PURPOSE OF BRINGING THE SUBGRADE ELEVATION UP TO A SPECIFIED GRADE, THE FILL MATERIAL PLACED SHALL BE IN ACCORDANCE WITH SECTION 203–EXCAVATION AND EMBANKMENT OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
10. ALL WORK SHALL CONFORM WITH **SECTION 608**–SIDEWALK, DRIVEWAYS, AND BICYCLE PATHS OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
11. ALL WORK SHALL CONFORM WITH AASHTO GEOMETRIC DESIGN OF HIGHWAYS AND STREET 2011, ICC A117.1 2009. OR LATEST EDITION.
12. SIDEWALK WIDTH SHOWN ON THE PLANS IS TO BE MEASURED FROM THE BACK OF THE CURB.
13. SIDEWALKS SHALL HAVE A CROSS SLOPE OF **1.5%** MAX. UNLESS OTHERWISE NOTED ON PLAN.
14. INSTALL EXPANSION JOINT WITH PREMOLDED RESILIENT JOINT FILLER & SEALANT AT ALL EXISTING SIDEWALKS, CURBS, FIXED OBJECTS, ETC., INCLUDING THOSE PLACED ON PREVOUS DAYS.

**CONCRETE SLAB:**
1. MATERIAL AND METHODS OF CONSTRUCTION SHALL BE IN CONFORMANCE WITH THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION (NYSDOT) STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED MAY 1, 2008, AND ALL ADDENDA THERETO.
2. CONCRETE SHALL HAVE A MINIMUM COMPRESSION STRENGTH OF 4500 PSI @ 28 DAY AND SHALL BE PLACED IN ACCORDANCE WITH ACI SPECIFICATIONS AND ITS LATEST REVISION.
3. REINFORCING STEEL FOR CONCRETE SHALL CONFORM WITH SECTION 556 – REINFORCING STEEL FOR CONCRETE STRUCTURES OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS AND AS SPECIFICALLY CALLED OUT IN THE DRAWINGS.
4. ALL EXPOSED SURFACES SHALL HAVE A BROOM TEXTURED FINISH & TOOLED EDGES. TOOL SHALL BE PROVIDE MAX 1-1/2" WIDE SMOOTH TROWEL FINISH AT JOINT.
5. EXPANSION JOINTS SHALL BE LOCATED A MAXIMUM OF 20' ON CENTER, OR AS INDICATED ON PLANS.
6. CONTROL JOINTS SHALL BE LOCATED A MAXIMUM OF 5' ON CENTER, OR AS INDICATED ON PLANS.
7. JOINTS SHALL NOT BE SAW CUT.
8. EXPOSED CONCRETE SURFACES SHALL BE TREATED WITH "SUREBOND"/"SAFEBOND" SB-7000 INTENSIFIER BRIGHT PROTECTOR AND SIDEWALK SEALER, OR EQUAL. RATE AND METHOD OF APPLICATION SHALL BE IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS.
9. SUBBASE MATERIAL SHALL CONFORM WITH SECTION 304 OF THE ABOVE REFERENCED NYSDOT STANDARD.
10. WHERE IT IS NECESSARY TO PLACE FILL FOR PURPOSE OF BRINGING THE SUBGRADE ELEVATION UP TO A SPECIFIED GRADE, THE FILL MATERIAL PLACED SHALL BE IN ACCORDANCE WITH SECTION 203-EXCAVATION AND EMBANKMENT OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.

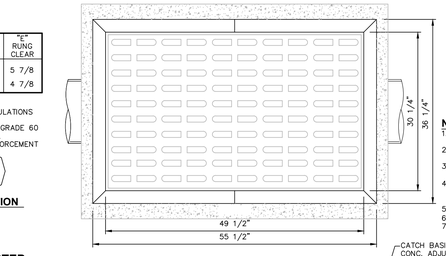
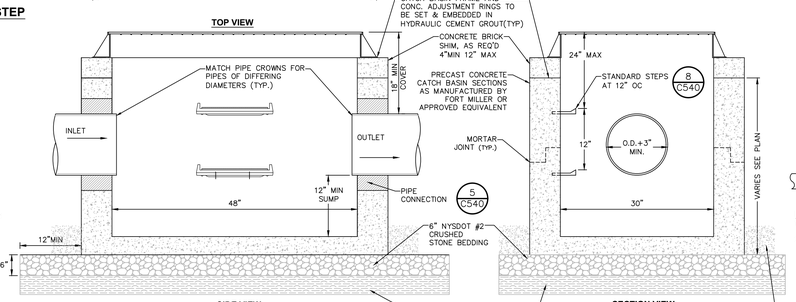
NOTES:
1. OUTLET CONTROL STRUCTURE SHALL BE PRECAST REINFORCED CONCRETE AS MANUFACTURED BY FORT MILLER CO. OR APPROVED EQUIVALENT. REINFORCEMENT FOR OUTLET CONTROL STRUCTURE SHALL BE DESIGNED BY A LICENSED NEW YORK STATE PROFESSIONAL ENGINEER PRIOR TO CONSTRUCTION. SHOP DRAWINGS SHALL BE SUBMITTED FOR REVIEW. STRUCTURE SHALL BE DESIGNED FOR HS20-44 VEHICULAR LOADING PLUS 25% IMPACT.
2. OUTLET CONTROL STRUCTURES HAVING A DEPTH GRATER THAN 48" FROM FINISHED SURFACE TO THE TOP OF THE CONCRETE BASE SHALL BE PROVIDED WITH STEPS.
3. BACKFILL USING EMBANKMENT FILL, COMPACTED IN 8" LIFTS.
4. CONTRACTOR TO PROVIDE PADLOCKS & KEYS(KEYED ALIKE) FOR ALL STORM WATER MANAGEMENT BASIN OUTLET CONTROL STRUCTURES INSTALLED ON THIS PROJECT. CONTRACTOR MAY SUBMIT ALTERNATE CONFIGURATION FOR LOCKING GRATE.

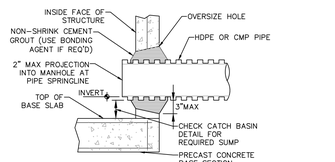
SECTION B - ORIFICE PLATE

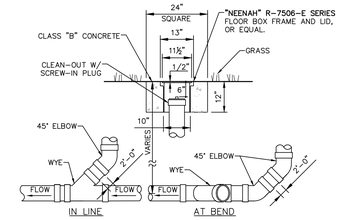


SECTION C



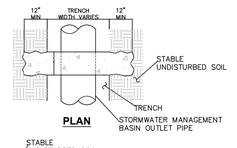
OUTLET STRUCTURE GRATE



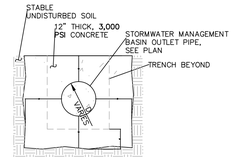


NOTES:
1. CATCH BASIN SHALL BE PRECAST CONCRETE. DESIGNED FOR HS20-44 VEHICULAR LOADING AND 25% IMPACT.
2. FRAME AND COVER SHALL BE DESIGNED FOR HS20-44 VEHICULAR LOADING & 25% IMPACT.
3. CONCRETE CATCH BASIN CASTING CLEAR OPENING DIMENSION MUST MATCH FRAME AND GRATE CLEAR OPENING DIMENSION.
4. CATCH BASINS HAVING A DEPTH GREATER THAN 48" FROM FINISHED SURFACE TO THE TOP OF THE CONCRETE BASE SHALL BE PROVIDED WITH STEPS.
5. BACKFILL USING TRENCH BACKFILL, COMPACTED IN 6" LIFTS.
6. SUMPS FOR CATCH BASINS SHALL BE 12".
7. EJ GROUP GRATE & FRAME PN#00758535A01 OR EQUIVALENT.

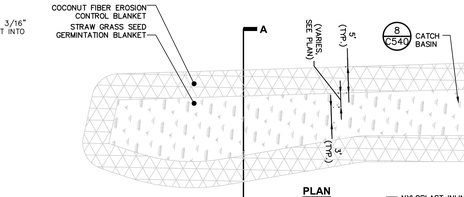
3 PRECAST CONCRETE RECTANGULAR CATCH BASIN DETAIL
SCALE: NOT TO SCALE



4 PIPE CONNECTION TO DRAINAGE STRUCTURE-CMP OR HDPE CEMENT GROUT SEAL JOINT
SCALE: NOT TO SCALE



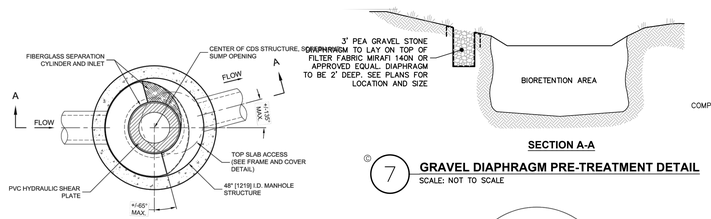
NOTES:
1. SEWER PIPE FITTINGS TO BE ASTM D-3033 OR D-3034 SDR-35.
2. TO BE USED FOR GRAVITY PORTION OF SANITARY SYSTEM AS WELL AS THE STORM ROOF DRAINAGE SYSTEM.



5 CLEAN OUT - NON TRAFFIC AREAS
SCALE: NOT TO SCALE

PLAN

10 ANTI-SEEP COLLAR
SCALE: 3/4" = 1'-0"



NOTES:
1. SOIL COMPOSITION (TO BE DEMONSTRATED BY CONTRACTOR):
   35-60% SAND*
   30-55% SILT
   10-25% CLAY
   SOIL WILL BE FREE OF STONES, STUMPS, ROOTS, OR OTHER WOODY MATERIAL OVER 1" IN DIAMETER. PLACE PLANTING SOIL IN 12" LIFTS, LOOSELY COMPACTED (USE LIGHT EQUIPMENT SUCH AS COMPACT LOADER OR DOZER/LOADER WITH MARSH TRACKS). DO NOT USE HEAVY EQUIPMENT WITHIN BIORETENTION AREAS. CONTRACTOR TO DEMONSTRATE: THE SOIL SHALL HAVE A PERMEABILITY OF AT LEAST 0.5 INCH PER HOUR.

   * SAND SUBSTITUTION SUCH AS DIABASE, GRAYSTONE #10, OR ROCK DUST ARE NOT ACCEPTABLE. NO CALCIUM CARBONATE OR DOLOMITIC SAND SUBSTITUTIONS ARE ACCEPTABLE.
2. RIVER STONE; SHALL CONFORM TO NYSDOT SECTION 620-29
3. CONTRACTOR SHALL DEMONSTRATE: SOIL FOR EACH BIORETENTION AREA SHALL MEET THE FOLLOWING CRITERIA:

| | |
|---|---|
| PH RANGE** | 5.2 – 7.0 |
| ORGANIC MATTER | 1.5–4% |
| MAGNESIUM | 35 LBS/ACRE |
| PHOSPHOROUS | 75 LBS/ACRE |
| POTASSIUM | 85 LBS/ACRE |
| SOLUBLE SALTS | NOT TO EXCEED 500 PPM |

   ** IF PH FALLS OUT OF ACCEPTABLE RANGE, PH OF SOIL MAY BE MODIFIED WITH LIME (HIGHER PH), OR WITH WITH IRON SULFATE PLUS SULFUR (LOWER PH).
4. BIORETENTION AREA TO BE SURROUNDED WITH SILT FENCE DURING CONSTRUCTION. ONCE UPSTREAM AREA IS STABILIZED, SILT FENCE TO BE REMOVED AS APPROVED BY PROJECT ENGINEER.

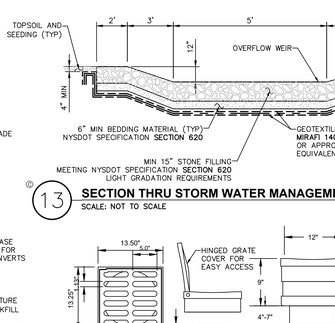
NOTES:
1. SANDY LOAM TOPSOIL SHALL HAVE AN INFILTRATION RATE OF 2 INCHES PER HOUR AND 5 INCHES AN HOUR FOR SAND AND GRAVEL COURSE.
2. SOIL COMPACTION MUST BE NO GREATER THAN 85% IN THE PLANTER.
3. THE GROWING MEDIA SHOULD BE UNIFORM MIXTURE OF 70% SAND (100% PASSING THE 1-INCH SIEVE AND 5% PASSING THE NO. 200 SIEVE) AND 30% TOPSOIL WITH AN AVERAGE OF 5% ORGANIC MATERIAL, SUCH AS COMPOST OR PEAT, FREE OF STONES, ROOTS AND WOODY DEBRIS AND ANIMAL WASTE.
4. DRAINAGE LAYER SHALL BE CLEAN SAND WITH 100% PASSING THE 1-INCH SIEVE AND 5% PASSING THE NO. 200 SIEVE.
5. SEE LANDSCAPE PLAN FOR PROPOSED PLANTING SCHEDULES.



| PLANTER ELEVATION | | | |
|---|---|---|---|
| BUILDING PLANTER | ELEVATIONS | | |
| | "A" ELEV | "B" ELEV | "C" ELEV |
| PLANTER -1 | 195.0' | 196.0' | 196.5' |

PIPE TYPE & SIZE VARIES. SEE PLAN

NOTES:
1. PIPE BEDDING & PIPE ZONE BACKFILL SHALL BE A NATURAL RUN-OF-BANK (R.O.B.) SAND OR A MIXTURE OF CRUSHED STONE AND GRAVEL, FREE OF SOFT, NONDURABLE PARTICLES, ORGANIC MATERIALS AND ELONGATED PARTICLES, AND SHALL BE WELL GRADED FROM FINE TO COARSE PARTICLES. BEDDING GRADATIONS SHALL BE APPROVED BY THE ENGINEER AND SHALL MEET THE FOLLOWING GRADATION REQUIREMENTS:

| SIEVE DESIGNATION | % PASSING |
|---|---|
| 3/4" | 100% |
| NO. 40 | 0-70% |
| NO. 200 | 0-10% |

2. TRENCH BACKFILL SHALL BE A NATURAL RUN-OF-BANK (R.O.B.) OR PROCESSED GRAVEL OR EXCAVATED MATERIAL FREE OF SOFT, NONDURABLE PARTICLES, ORGANIC MATERIALS AND ELONGATED PARTICLES, AND SHALL BE WELL GRADED FROM FINE TO COARSE PARTICLES. TRENCH BACKFILL GRADATIONS SHALL BE APPROVED BY THE ENGINEER AND SHALL MEET THE FOLLOWING GRADATION REQUIREMENTS:

| SIEVE DESIGNATION | % PASSING |
|---|---|
| 4" | 100% |
| NO. 40 | 0-70% |
| NO. 200 | 0-10% |

IN NON-TRAFFIC UNPAVED AREAS TRENCH BACKFILL CAN BE MATERIALS EXCAVATED FROM THE TRENCH AS APPROVED BY THE ENGINEER AND COMPACTED TO 90% MODIFIED PROCTOR.

3. INSTALL CONTINUOUS DETECTABLE MARKING TAPE DURING BACKFILLING OF TRENCH FOR UNDERGROUND PIPING. LOCATE TAPE 12" BELOW FINISHED GRADE, DIRECTLY OVER PIPING, EXCEPT 6" BELOW SUBGRADE UNDER PAVEMENTS & SLAB.
4. TRENCHING SHALL BE IMPLEMENTED IN ACCORDANCE WITH O.S.H.A. STANDARDS.
5. 5'-0" MIN COVER SHALL BE APPLIED TO WATER MAIN OR SANITARY SEWER FORCE MAINS ONLY.

15 PIPE TRENCH DETAIL (TYPICAL)
SCALE: NOT TO SCALE

GENERAL NOTES
1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. DIMENSIONS MARKED WITH ( ) ARE REFERENCE DIMENSIONS. ACTUAL DIMENSIONS MAY VARY.
3. FOR FABRICATION DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHTS, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. www.contechES.com
4. CDS WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING.
5. STRUCTURE SHALL MEET AASHTO HS20 AND CASTINGS SHALL MEET HS20 (AASHTO M 306) LOAD RATING, ASSUMING GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION.
6. PVC HYDRAULIC SHEAR PLATE IS PLACED ON SHELF AT BOTTOM OF SCREEN CYLINDER. REMOVE AND REPLACE AS NECESSARY DURING MAINTENANCE CLEANING.

INSTALLATION NOTES
A. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
B. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE CDS MANHOLE STRUCTURE (LIFTING CLUTCHES PROVIDED).
C. CONTRACTOR TO ADD JOINT SEALANT BETWEEN ALL STRUCTURE SECTIONS, AND ASSEMBLE STRUCTURE.
D. CONTRACTOR TO PROVIDE, INSTALL AND GROUT PIPES. MATCH PIPE INVERTS WITH ELEVATIONS SHOWN.
E. CONTRACTOR TO TAKE APPROPRIATE MEASURES TO ASSURE UNIT IS WATER TIGHT, HOLDING WATER TO FLOWLINE INVERT MINIMUM. IT IS SUGGESTED THAT ALL JOINTS BELOW PIPE INVERTS ARE GROUTED.

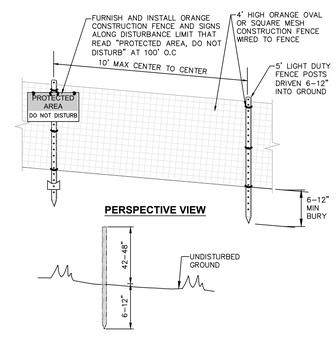
PLAN VIEW

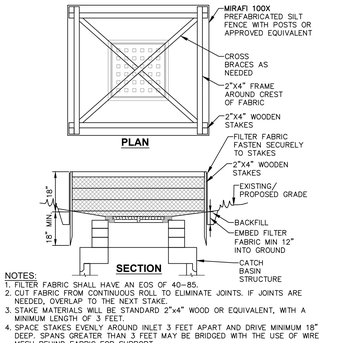
CONSTRUCTION ENTRANCE SPECIFICATIONS:

1. STONE SIZE – USE 2" STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT
2. THICKNESS – NOT LESS THAN SIX (6) INCHES.
3. WIDTH – TWELVE (12) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY FOUR (24) FEET IF SINGLE ENTRANCE TO SITE.
4. LENGTH – NOT LESS THAN 50' (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30' MINIMUM LENGTH WOULD APPLY).
5. GEOTEXTILE – WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER – ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE – THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS–OF–WAY. THIS MAY REQUIRE PERIODIC TOP DRESSING WITH ADDITIONAL STONE AS CONDITIONS DEMAND AND REPAIR AND/OR CLEANOUT OF ANY MEASURES USED TO TRAP SEDIMENT. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC RIGHTS–OF–WAY MUST BE REMOVED IMMEDIATELY.
8. WASHING – WHEELS SHALL BE CLEANED TO REMOVE SEDIMENT PRIOR TO ENTRANCE ONTO PUBLIC RIGHTS–OF–WAY. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

① **STABILIZED CONSTRUCTION ACCESS DETAIL**
SCALE: NOT TO SCALE



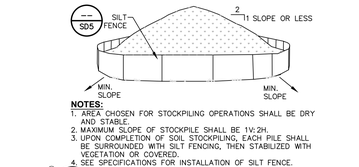
NOTES:



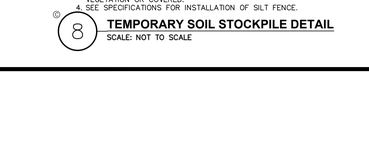
1. WOVEN WIRE FENCE TO BE FASTENED SECURELY TO FENCE POSTS WITH WIRE TIES OR STAPLES. POSTS SHALL BE STEEL "T" OR "U" TYPE OR HARDWOOD.
2. FILTER FABRIC TO BE FASTENED SECURELY TO WOVEN WIRE FENCE WITH TIES SPACED EVERY 24" AT TOP AND MID SECTION. FENCE SHALL BE WOVEN WIRE, 6" MAX MESH OPENING.
3. WHEN TWO SECTIONS OF FILTER FABRIC ADJOIN EACH OTHER THEY SHALL BE OVERLAPPED BY 6" AND FOLDED.
4. MAINTENANCE SHALL BE PERFORMED AS NEEDED AND MATERIALS REMOVED WHEN "BULGES" DEVELOP IN THE SILT FENCE.
5. MAXIMUM DRAINAGE AREA FOR OVERLAND FLOW TO A SILT FENCE SHALL NOT EXCEED 1/4 ACRE PER 100 FEET OF FENCE.
6. SILT FENCE SHALL BE USED WHERE EROSION COULD OCCUR IN THE FORM OF SHEET EROSION.
7. SILT FENCE SHALL NOT BE USED WHEN A CONCENTRATION OF WATER IS FLOWING TO THE BARRIER.
8. MAXIMUM ALLOWABLE SLOPE LENGTHS CONTRIBUTING RUN–OFF TO A SILT FENCE ARE:

| SLOPE STEEPNESS | MAXIMUM SLOPE LENGTH(FT) |
|---|---|
| 2:1 | 25 |
| 3:1 | 50 |
| 4:1 | 75 |
| 5:1 OR FLATTER | 100 |

② **SILT FENCE INSTALLATION DETAIL**
SCALE: NOT TO SCALE



③ **TEMPORARY ORANGE CONSTRUCTION FENCE DETAIL**
SCALE: NOT TO SCALE



NOTES:

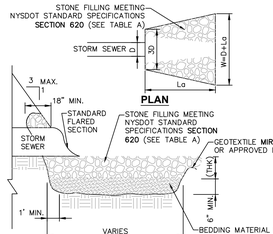
1. FILTER FABRIC SHALL HAVE AN EOS OF 40–85.
2. CUT FABRIC FROM CONTINUOUS ROLL TO ELIMINATE JOINTS. IF JOINTS ARE NEEDED, OVERLAP TO THE NEXT STAKE.
3. STAKE MATERIALS WILL BE STANDARD 2"x4" WOOD OR EQUIVALENT, WITH A MINIMUM LENGTH OF 3 FEET.
4. SPACE STAKES EVENLY AROUND INLET 3 FEET APART AND DRIVE MINIMUM 18" DEEP. SPANS GREATER THAN 3 FEET MAY BE BRIDGED WITH THE USE OF WIRE MESH BEHIND FABRIC FOR SUPPORT.
5. FABRIC SHALL BE EMBEDDED 1 FOOT MINIMUM BELOW GROUND AND BACKFILLED. IT SHALL BE SECURELY FASTENED TO THE STAKES AND FRAME.
6. A 2"x4" WOOD FRAME SHALL BE COMPLETED AROUND THE CREST OF THE FABRIC FOR OVERFLOW STABILITY.
7. MAXIMUM DRAINAGE AREA IS 1 ACRE.
8. INLET PROTECTION SHALL REMAIN IN–PLACE UNTIL SITE HAS BEEN STABILIZED.

④ **TEMPORARY OUT OF PAVEMENT FILTER FABRIC DROP INLET PROTECTION DETAIL**
SCALE: NOT TO SCALE

NOTES:

1. CONTAINMENT MUST BE STRUCTURALLY SOUND AND LEAK FREE AND CONTAIN ALL LIQUID WASTES.
2. CONTAINMENT DEVICES MUST BE OF SUFFICIENT QUANTITY OR VOLUME TO COMPLETELY CONTAIN THE LIQUID WASTES GENERATED.
3. WASHOUT MUST BE CLEANED OR NEW FACILITIES CONSTRUCTED AND READY TO USE ONCE WASHOUT IS 75% FULL. THIS INCLUDES REPLACEMENT OF THE 10 MIL POLYETHLENE SHEETING.
4. WASHOUT AREA(S) SHALL BE INSTALLED IN A LOCATION EASILY ACCESSIBLE BY CONCRETE TRUCKS.
5. ONE OR MORE AREAS MAY BE INSTALLED ON THE CONSTRUCTION SITE AND MAY BE RELOCATED AS CONSTRUCTION PROGRESSES.
6. AT LEAST WEEKLY, REMOVE ACCUMULATION OF SAND AND AGGREGATE AND DISPOSE OF PROPERLY.

⑤ **CONCRETE WASHOUT AREA DETAIL**
SCALE: NOT TO SCALE



NOTES:

1. TOPSOIL, SEED, MULCH, AND FERTILIZE DISTURBED SOIL AREAS THAT WILL BE LEFT EXPOSED FOR 14 DAYS OR MORE.

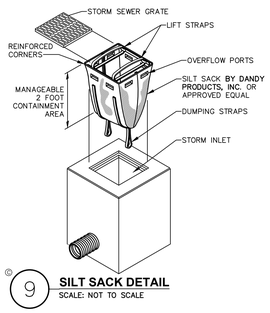
⑥ **END SECTION WITH STONE LINED APRON DETAIL**
SCALE: NOT TO SCALE

NOTES:

1. PREPARE THE TOPSOIL (SEEDBED) FIRST BY RAKING, SHAPING, FINE GRADING, COMPACTING, SEEDING & FERTILIZING THE SLOPES.
2. USE THE TRENCHING & ANCHORING PROCEDURES DETAILED HEREIN TO SECURE ANY EXPOSED MATERIAL ENDS. SECURE ALL PRODUCT OVERLAPS. OVERLAP IN THE DIRECTION OF WATER FLOW, PERPENDICULAR TO THE SLOPE.
3. KEEP EROSION CONTROL BLANKET IN SOLID CONTACT WITH THE TOPSOIL.
4. USE THE REQUIRED NUMBER OF STAPLES/STAKES TO SECURELY FASTEN THE EROSION CONTROL BLANKET TO THE SLOPE. IN LOOSE SOIL CONDITIONS, THE USE OF STAPLES/STAKES LENGTHS GREATER THAN 6" MAYBE NECESSARY FOR PROPER SECURING. STAPLE PATTERNS & OVERLAPS ARE DEPENDENT ON SITE CONDITIONS & MANUFACTURER'S REQUIREMENTS. CONTRACTOR SHALL CONSULT WITH MANUFACTURER FOR ACTUAL SITE SPECIFIC REQUIREMENTS.



TRENCHING & ANCHORING PROCEDURE NOTES:

SIDE SEAM OVERLAP:- THE EDGES OF PARALLEL BLANKETS SHALL BE STAPLED WITH A 5" OVERLAP.

TOP OF SLOPE TRENCH:- BEGIN AT THE TOP OF SLOPE BY ANCHORING THE EROSION CONTROL BLANKET IN A 6"D x 6"W TRENCH WITH A 12" OVERLAP EXTENDED BEYOND THE UP–SLOPE PORTION OF THE TRENCH. ANCHOR WITH A ROW OF STAPLES/STAKES 12" O.C. IN THE BOTTOM OF THE TRENCH. BACKFILL & COMPACT THE TRENCH AFTER STAPLING. APPLY SEED TO THE COMPACTED SOIL & FOLD THE REMAINING 12" PORTION OF THE EROSION CONTROL BLANKET BACK OVER THE SEED & COMPACTED SOIL. SECURE THE EROSION CONTROL BLANKET OVER THE COMPACTED SOIL WITH A ROW OF STAPLES/STAKES SPACED 12" O.C. ACROSS THE ENTIRE WIDTH.

END ROLL OVERLAP:- CONSECUTIVE BLANKETS SPLICED DOWN THE SLOPE SHALL BE PLACED END OVER END (SHINGLE–STYLE) WITH A 3" OVERLAP. STAPLE THRU OVERLAPPED AREAS, 12" APART ACROSS THE ENTIRE WIDTH.

⑩ **EROSION CONTROL BLANKET INSTALLATION DETAIL**
SCALE: NTS

⑨ **SILT SACK DETAIL**
SCALE: NOT TO SCALE

NOTES:

1. AREA CHOSEN FOR STOCKPILING OPERATIONS SHALL BE DRY AND STABLE.
2. MAXIMUM SLOPE OF STOCKPILE SHALL BE 1V:2H.
3. UPON COMPLETION OF SOIL STOCKPILING, EACH PILE SHALL BE SURROUNDED WITH SILT FENCING, THEN STABILIZED WITH VEGETATION OR COVERED.
4. SEE SPECIFICATIONS FOR INSTALLATION OF SILT FENCE.

⑧ **TEMPORARY SOIL STOCKPILE DETAIL**
SCALE: NOT TO SCALE

## SPDES GENERAL PERMIT GP-0-20-001 COMPLIANCE NOTES:

THIS PLAN SET AND THE ACCOMPANYING SWPPP ENTITLED **[NAME]** HAVE BEEN SUBMITTED AS A SET. THESE ENGINEERING DRAWINGS ARE CONSIDERED AN INTEGRAL PART OF THE SWPPP. THEREFORE THE PLAN SET IS NOT CONSIDERED COMPLETE WITHOUT THE SWPPP.

**1. THE TOTAL AREA OF DISTURBANCE PLANNED FOR THIS PROJECT IS LESS THAN 1 ACRE THEREFORE A SPDES GENERAL PERMIT (GP–0–20–001) IS NOT REQUIRED.**

1. THIS PROJECT HAS NOT RECEIVED WRITTEN APPROVAL FROM _____ **(INSERT NYSDEC OR MUNICIPALITY (IF MS4))** ALLOWING THE DISTURBANCE OF MORE THAN FIVE (5) ACRES OF LAND AT ANY ONE TIME. THEREFORE, IF THE CONTRACTOR'S CONSTRUCTION SEQUENCE REQUIRES THE DISTURBANCE OF MORE THAN FIVE ACRES AT ANY ONE TIME, WRITTEN APPROVAL MUST BE OBTAINED FROM NYSDEC PRIOR TO EXCEEDING THE 5 ACRE LIMIT.

1. THIS PROJECT HAS REQUESTED WRITTEN APPROVAL FROM _____ **(INSERT NYSDEC OR MUNICIPALITY (IF MS4))** ALLOWING THE DISTURBANCE OF MORE THAN FIVE (5) ACRES OF LAND AT ANY ONE TIME. CONTRACTOR SHALL NOT DISTURB MORE THAN FIVE (5) ACRES UNTIL SUCH TIME THAT THE WAIVER IS GRANTED AND WRITTEN AUTHORIZATION IS RECEIVED FROM NYSDEC.

## CONSTRUCTION SEQUENCING NOTES:

1. PRIOR TO COMMENCING ANY CLEARING, GRUBBING, EARTHWORK ACTIVITIES, ETC.AT THE SITE, THE CONTRACTOR SHALL FLAG THE WORK LIMITS AND SHALL INSTALL TEMPORARY EROSION AND SEDIMENT CONTROL MEASURES (I.E. SILT FENCES, TREE PROTECTION/BARRIER FENCES, STABILIZED CONSTRUCTION ENTRANCES, STORM DRAIN SEDIMENT FILTERS, DRAINAGE DITCH SEDIMENT FILTERS, ETC.) INDICATED ON THE PROJECT DRAWINGS. TEMPORARY EROSION AND SEDIMENT CONTROL MEASURES MUST BE CONSTRUCTED, STABILIZED, AND FUNCTIONAL BEFORE SITE DISTURBANCE BEGINS WITHIN THEIR TRIBUTARY AREAS.
2. THE CONTRACTOR SHALL CLEAR AND GRUB THE AREA OF THE STORMWATER MANAGEMENT FACILITIES. THIS AREA SHALL NOT EXCEED FIVE (5) ACRES IN EXTENT WITHOUT TEMPORARY STABILIZATION.
3. THE STORMWATER DETENTION BASIN SHALL BE UTILIZED AS A TEMPORARY SEDIMENT TRAP DURING CONSTRUCTION. THE CONTRACTOR SHALL INSTALL THE OUTLET CONTROL STRUCTURES AND THE EARTHEN BERM. THE BASIN SHALL BE GRADED TO THE TOP OF THE AQUATIC BENCH AS INDICATED IN THE TYPICAL STORMWATER MANAGEMENT BASIN SECTION PRESENTED IN THE PROJECT DRAWINGS.
4. PRIOR TO COMMENCING CLEARING, GRUBBING AND/OR EARTHWORK ACTIVITIES IN ANY OTHER AREA OF THE SITE, THE CONTRACTOR SHALL INSTALL INLET AND OUTLET PROTECTION MEASURES (RIPRAP OVERFLOW WEIR(S), CULVERT INLET/OUTLET PROTECTION, ETC.) AND SHALL STABILIZE THE AREAS DISTURBED DURING THE CONSTRUCTION OF THE SEDIMENT BASIN.
5. THE CONTRACTOR SHALL INSTALL TEMPORARY DIVERSION MEASURES WITH ASSOCIATED STABILIZATION MEASURES (I.E., VEGETATIVE COVER, DRAINAGE DITCH SEDIMENT FILTERS, STORM DRAIN SEDIMENT FILTERS, ETC.)TO ASSURE THAT STORMWATER RUNOFF IS CONVEYED TO THE TEMPORARY SEDIMENT BASIN.
6. TEMPORARY DIVERSION MEASURES SHALL BE LOCATED IN A MANNER THAT WILL ASSURE THAT THE AREA TRIBUTARY TO EACH DIVERSION DOES NOT EXCEED FIVE (5) ACRES. THESE TEMPORARY DIVERSION MEASURES SHALL BE INSPECTED DAILY AND REPAIRED/STABILIZED AS NECESSARY TO MINIMIZE EROSION.
7. THE CONTRACTOR SHALL COMMENCE SITE CONSTRUCTION ACTIVITIES INCLUDING CLEARING & GRADING OF THE PROPOSED AREA OF DISTURBANCE AS REQUIRED.
8. INSTALL PROTECTIVE MEASURES AT THE LOCATIONS OF ALL GRATE INLETS, CURB INLETS, AND AT THE ENDS OF ALL EXPOSED STORM SEWER PIPES.
9. CONSTRUCT ALL UTILITIES, CURB AND GUTTER, GUTTER INLETS, AREA INLETS, AND STORM SEWER MANHOLES, AS SHOWN ON THE PLANS. INLET PROTECTION MAY BE REMOVED TEMPORARILY FOR THIS CONSTRUCTION. PLACE REQUIRED RIP–RAP AT LOCATIONS SHOWN ON THE PLANS.
10. FINALIZE PAVEMENT SUB–GRADE PREPARATION.
11. REMOVE PROTECTIVE MEASURES AROUND INLETS AND MANHOLES NO MORE THAN 24 HOURS PRIOR TO PLACING STABILIZED BASE COURSE.
12. INSTALL SUB–BASE MATERIAL AS REQUIRED FOR PAVEMENT.
13. PRIOR TO FINALIZING CONSTRUCTION OF THE STORMWATER MANAGEMENT FACILITY, ALL CATCH BASINS AND DRAINAGE LINES SHALL BE CLEANED OF ALL SILT AND SEDIMENT.
14. UPON COMPLETION OF SITE CONSTRUCTION ACTIVITIES, THE CONTRACTOR SHALL FINALIZE CONSTRUCTION OF THE STORMWATER MANAGEMENT FACILITY. CONTRACTOR SHALL FINISH GRADE THE FORBAY(S), AQUATIC BENCHES, AND WET POOL(S) AND STABILIZE AS INDICATED IN THE PROJECT DRAWINGS.
15. THE CONTRACTOR SHALL REMOVE ALL TEMPORARY EROSION AND SEDIMENT CONTROL MEASURES AFTER IMMEDIATELY ESTABLISH PERMANENT VEGETATION ON THE AREAS DISTURBED DURING THEIR REMOVAL.

## EROSION AND SEDIMENT CONTROL MEASURES:

1. DAMAGE TO SURFACE WATERS RESULTING FROM EROSION AND SEDIMENTATION SHALL BE MINIMIZED BY STABILIZING DISTURBED AREAS AND BY REMOVING SEDIMENT FROM CONSTRUCTION SITE DISCHARGES.
2. AS MUCH AS IS PRACTICAL, EXISTING VEGETATION SHALL BE PRESERVED. FOLLOWING THE COMPLETION OF CONSTRUCTION ACTIVITIES IN ANY PORTION OF THE SITE, PERMANENT VEGETATION SHALL BE ESTABLISHED ON ALL EXPOSED SOILS.
3. SITE PREPARATION ACTIVITIES SHALL BE PLANNED TO MINIMIZE THE SCOPE AND DURATION OF SOIL DISRUPTION.
4. PERMANENT TRAFFIC CORRIDORS SHALL BE ESTABLISHED AND "ROUTES OF CONVENIENCE" SHALL BE AVOIDED. STABILIZED CONSTRUCTION ENTRANCES SHALL BE INSTALLED AT ALL POINTS OF ENTRY ONTO THE PROJECT SITE.

## MAINTENANCE OF EROSION AND SEDIMENT CONTROL MEASURES:

PERMANENT AND TEMPORARY VEGETATION:
INSPECT ALL AREAS THAT HAVE RECEIVED VEGETATION EVERY SEVEN DAYS & AFTER EVERY RAIN EVENT. ALL AREAS DAMAGED BY EROSION OR WHERE SEED HAS NOT ESTABLISHED SHALL BE REPAIRED AND RESTABILIZED IMMEDIATELY.

STABILIZED CONSTRUCTION ENTRANCE:
INSPECT THE ENTRANCE PAD EVERY SEVEN DAYS & AFTER EVERY RAIN EVENT. CHECK FOR MUD, SEDIMENT BUILD–UP AND PAD INTEGRITY. MAKE DAILY INSPECTIONS DURING WET WEATHER. RESHAPE PAD AS NEEDED FOR DRAINAGE AND RUNOFF CONTROL. WASH AND REPLACE STONE AS NEEDED. THE STONE IN THE ENTRANCE SHOULD BE WASHED OR REPLACED WHENEVER THE ENTRANCE FAILS TO REDUCE MUD BEING CARRIED OFF–SITE BY VEHICLES. IMMEDIATELY REMOVE MUD AND SEDIMENT TRACKED OR WASHED ONTO PUBLIC ROADS BY BRUSHING OR SWEEPING. REMOVE TEMPORARY CONSTRUCTION ENTRANCE AS SOON AS THEY ARE NO LONGER NEEDED TO PROVIDE ACCESS TO THE SITE.

SILT FENCE:
INSPECT FOR DAMAGE EVERY SEVEN DAYS & AFTER EVERY RAIN EVENT. MAKE ALL REPAIRS IMMEDIATELY. REMOVE SEDIMENT FROM THE UP–SLOPE FACE OF THE FENCE BEFORE IT ACCUMULATES TO A HEIGHT EQUAL TO 1/3 THE HEIGHT OF THE FENCE. IF FENCE FABRIC TEARS, BEGINS TO DECOMPOSE, OR IN ANY WAY BECOMES INEFFECTIVE, REPLACE THE AFFECTED SECTION OF FENCE IMMEDIATELY.

SOIL STOCKPILE:
INSPECT SEDIMENT CONTROL BARRIERS (SILT FENCE OR HAY BALE) AND VEGETATION FOR DAMAGE EVERY SEVEN DAYS & AFTER EVERY RAIN EVENT. MAKE ALL REPAIRS IMMEDIATELY. REMOVE SEDIMENT FROM THE UP–SLOPE FACE OF THE SEDIMENT CONTROL BARRIER BEFORE IT ACCUMULATES TO A HEIGHT EQUAL TO 1/3 THE HEIGHT OF THE SEDIMENT CONTROL BARRIER. IF SEDIMENT CONTROL BARRIER TEARS, BEGINS TO DECOMPOSE, OR IN ANYWAY BECOMES INEFFECTIVE, REPLACE THE AFFECTED SECTION OF SEDIMENT CONTROL BARRIER IMMEDIATELY. REVEGETATE DISTURBED AREA TO STABILIZE SOIL STOCK PILE. REMOVE THE SEDIMENT CONTROL BARRIER WHEN THE SOIL STOCKPILE HAS BEEN REMOVED.

DUST CONTROL:
SCHEDULE CONSTRUCTION OPERATIONS TO MINIMIZE THE AMOUNT OF DISTURBED AREAS AT ANY ONE TIME DURING THE COURSE OF WORK. APPLY TEMPORARY SOIL STABILIZATION PRACTICES SUCH AS MULCHING, SEEDING, AND SPRAYING (WATER). STRUCTURAL MEASURES (MULCH, SEEDING) SHALL BE INSTALLED IN DISTURBED AREAS BEFORE SIGNIFICANT BLOWING PROBLEMS DEVELOP. WATER SHALL BE SPRAYED AS NEEDED. REPEAT AS NEEDED, BUT AVOID EXCESSIVE SPRAYING, WHICH COULD CREATE RUNOFF AND EROSION PROBLEMS.

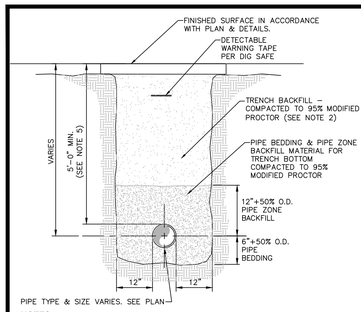
CHECK DAM:
INSPECT CHECK DAMS EVERY SEVEN DAYS & AFTER EVERY RAIN EVENT. IF SIGNIFICANT EROSION HAS OCCURRED BETWEEN STRUCTURES A LINER OF STONE OR OTHER SUITABLE MATERIAL SHOULD BE INSTALLED IN THAT PORTION OF THE CHANNEL. REMOVE SEDIMENT ACCUMULATED BEHIND THE DAM AS NEEDED TO ALLOW CHANNEL TO DRAIN THROUGH THE STONE CHECK DAM AND PREVENT LARGE FLOWS FROM CARRYING SEDIMENT OVER THE DAM. REPLACE STONES AS NEEDED TO MAINTAIN THE DESIGN CROSS SECTION OF THE STRUCTURES. REMOVE CHECK DAMS AS PER APPROVAL OF ENGINEER.

EROSION CONTROL BLANKET:
INSPECT THE BLANKET EVERY SEVEN DAYS & AFTER EVERY RAIN EVENT. REPLACE WIRE STAPLES AS REQUIRED. REPAIR AND RESEED WHERE CRACKS AND DAMAGED VEGETATION IS EVIDENT. WHEN DAMAGED BEYOND REPAIR OR NO LONGER FUNCTIONING, THE BLANKET SHALL BE REPLACED.

EARTH DIKE:
INSPECT ALL EARTH DIKES EVERY SEVEN DAYS & AFTER EVERY RAIN EVENT. ALL AREAS DAMAGED BY EROSION SHALL BE REPAIRED IMMEDIATELY.

TEMPORARY SWALE:
INSPECT ALL EARTH DIKES EVERY SEVEN DAYS & AFTER EVERY RAIN EVENT. ALL AREAS DAMAGED BY EROSION SHALL BE REPAIRED IMMEDIATELY.

SEDIMENT TRAP:
INSPECT ALL SEDIMENT TRAPS EVERY SEVEN DAYS & AFTER EVERY RAIN EVENT. REPAIRS SHALL BE MADE AS NEEDED. SEDIMENT SHALL BE REMOVED AND THE TRAP RESTORED TO THE ORIGINAL DIMENSIONS WHEN SEDIMENT HAS ACCUMULATED TO 1/2 OF THE DESIGN DEPTH OF THE TRAP.



STORM DRAIN INLET PROTECTION:
INSPECT ALL STORM DRAIN INLET PROTECTION DEVICES EVERY SEVEN DAYS & AFTER EVERY RAIN EVENT. MAKE REPAIRS AS NEEDED, REMOVE SEDIMENT FROM THE POOL AREA AS NECESSARY.

DEWATERING PITS:
(IF REQUIRED) – INSPECT DAILY DURING OPERATION FOR CLOGGING OR OVERFLOW. CLEAR INLET AND DISCHARGE PIPES OF OBSTRUCTIONS. IF A FILTER MATERIAL BECOMES CLOGGED WITH SEDIMENT, PIT SHALL BE DISMANTLED AND CONSTRUCT NEW PITS AS NEEDED.

SNOW AND ICE CONTROL:
PARKING LOTS, ROADWAYS, AND DRIVEWAYS ADJACENT TO WATER QUALITY FILTERS SHALL NOT BE SANDED DURING SNOW EVENTS DUE TO HIGH POTENTIAL FOR CLOGGING FROM SAND IN SURFACE WATER RUNOFF. USE SALT ONLY FOR SNOW AND ICE CONTROL.

## GENERAL EROSION AND SEDIMENT CONTROL NOTES:

1. ALL EROSION AND SEDIMENT CONTROL MEASURES ARE TO BE IN STRICT COMPLIANCE WITH "NEW YORK STATE STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL", NOVEMBER 2016.
2. EXCESS SOIL TO BE STOCKPILED WITHIN THE LIMITS OF SITE DISTURBANCE IF NOT USED IMMEDIATELY FOR GRADING PURPOSES. INSTALL SILT FENCE AROUND SOIL STOCKPILES.
3. APPLY SURFACE STABILIZATION AND RESTORATION MEASURES. AREAS UNDERGOING CLEARING OR GRADING AND ANY AREAS DISTURBED BY CONSTRUCTION ACTIVITIES WHERE WORK IS DELAYED, SUSPENDED, OR INCOMPLETE AND WILL NOT BE REDISTURBED FOR 21 DAYS OR MORE SHALL BE STABILIZED WITH TEMPORARY VEGETATIVE COVER WITHIN 14 DAYS AFTER CONSTRUCTION ACTIVITY IN THAT PORTION OF THE SITE HAS CEASED. (SEE SPECIFICATIONS FOR TEMPORARY VEGETATIVE COVER). AREAS UNDERGOING CLEARING OR GRADING AND ANY AREAS DISTURBED BY CONSTRUCTION ACTIVITIES WHERE WORK IS COMPLETE AND WILL NOT BE REDISTURBED SHALL BE STABILIZED AND RESTORED WITH PERMANENT VEGETATIVE COVER AS SOON AS SITE AREAS ARE AVAILABLE AND WITHIN 14 DAYS AFTER WORK IS COMPLETE. (SEE SPECIFICATIONS FOR PERMANENT VEGETATIVE COVER). SEEDING FOR PERMANENT VEGETATIVE COVER SHALL BE WITHIN THE SEASONAL LIMITATIONS. PROVIDE STABILIZATION WITH TEMPORARY VEGETATIVE COVER WITHIN 14 DAYS AFTER WORK IS COMPLETE, FOR SEEDING OUTSIDE PERMITTED SEEDING PERIODS.
4. SEEDED AREAS TO BE MULCHED WITH STRAW OR HAY MULCH IN ACCORDANCE WITH VEGETATIVE COVER SPECIFICATIONS.
5. THE CONTRACTOR IS RESPONSIBLE FOR THE INS

PIPE TYPE & SIZE VARIES. SEE PLAN

**NOTES:**

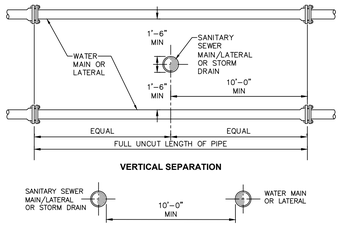
1. PIPE BEDDING & PIPE ZONE BACKFILL SHALL BE A NATURAL RUN–OF–BANK (R.O.B.) SAND OR A MIXTURE OF CRUSHED STONE AND GRAVEL, FREE OF SOFT, NONDURABLE PARTICLES, ORGANIC MATERIALS AND ELONGATED PARTICLES, AND SHALL BE WELL GRADED FROM FINE TO COARSE PARTICLES. BEDDING GRADATIONS SHALL BE APPROVED BY THE ENGINEER AND SHALL MEET THE FOLLOWING GRADATION REQUIREMENTS:

| SIEVE DESIGNATION | % PASSING |
|---|---|
| 3/4" | 100% |
| NO. 40 | 0–70% |
| NO. 200 | 0–10% |

2. TRENCH BACKFILL SHALL BE A NATURAL RUN–OF–BANK (R.O.B.) OR PROCESSED GRAVEL, OR EXCAVATED MATERIAL FREE OF SOFT, NONDURABLE PARTICLES, ORGANIC MATERIALS AND ELONGATED PARTICLES, AND SHALL BE WELL GRADED FROM FINE TO COARSE PARTICLES. TRENCH BACKFILL GRADATIONS SHALL BE APPROVED BY THE ENGINEER AND SHALL MEET THE FOLLOWING GRADATION REQUIREMENTS:

| SIEVE DESIGNATION | % PASSING |
|---|---|
| 4" | 100% |
| NO. 40 | 0–70% |
| NO. 200 | 0–10% |

IN NON–TRAFFIC UNPAVED AREAS TRENCH BACKFILL CAN BE MATERIALS EXCAVATED FROM THE TRENCH AS APPROVED BY THE ENGINEER AND COMPACTED TO 90% MODIFIED PROCTOR.



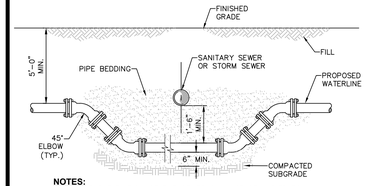
3. INSTALL CONTINUOUS DETECTABLE MARKING TAPE DURING BACKFILLING OF TRENCH FOR UNDERGROUND PIPING. LOCATE TAPE 12" BELOW FINISHED GRADE, DIRECTLY OVER PIPING, EXCEPT 6" BELOW SUBGRADE UNDER PAVEMENTS & SLAB.

4. TRENCHING SHALL BE IMPLEMENTED IN ACCORDANCE WITH O.S.H.A. STANDARDS.

5. 5'–0" MIN COVER SHALL BE APPLIED TO WATER MAIN OR SANITARY SEWER FORCE MAINS ONLY.

## 1 PIPE TRENCH DETAIL (TYPICAL)

SCALE: NOT TO SCALE

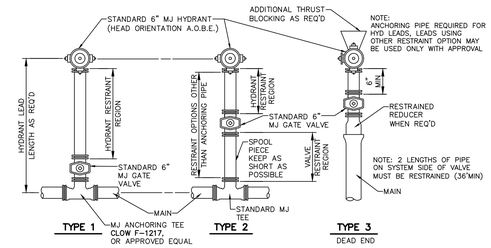


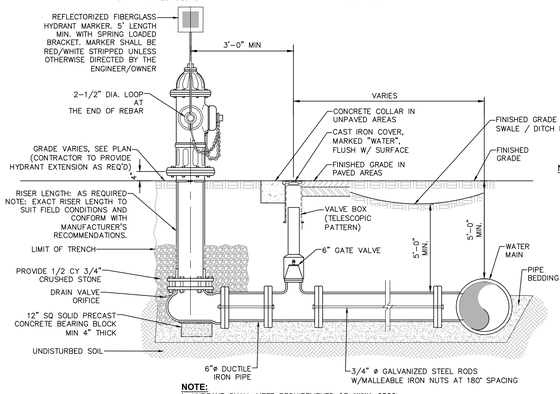
**NOTES:**

1. NO DEVIATION IN THE SEPARATION REQUIREMENTS WILL BE PERMITTED WITHOUT THE EXPRESS APPROVAL OF THE NYS HEALTH DEPARTMENT. OFFSETTING OF WATERLINE SHALL BE REQUIRED WHERE SEPARATION DISTANCES CANNOT BE MAINTAINED.
2. WHEN IT IS IMPOSSIBLE TO OBTAIN VERTICAL SEPARATION AS INDICATED ABOVE, BOTH THE WATER MAIN AND THE SEWER MAIN SHALL BE CONSTRUCTED OF MECHANICAL JOINT, DUCTILE IRON PIPE OR PVC WATER WORKS GRADE PRESSURE PIPE FOR 10' EACH SIDE OF CROSSING AND SHALL BE PRESSURE TESTED TO **150psi** TO ASSURE WATER TIGHTNESS.

## 3 SANITARY/STORM SEWER AND WATERMAIN SEPARATION DETAIL

SCALE: NOT TO SCALE





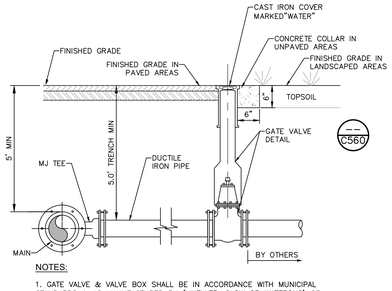
**NOTES:**

1. WHEN THE ELEVATION OF THE SEWER CAN NOT BE VARIED TO MEET THE ABOVE REQUIREMENTS, THE WATER MAIN SHALL BE RELOCATED TO PROVIDE THIS REQUIRED SEPARATION.
2. WHEN IT IS IMPOSSIBLE TO OBTAIN VERTICAL SEPARATION AS INDICATED ABOVE, BOTH THE WATER MAIN AND THE SEWER MAIN SHALL BE CONSTRUCTED OF MECHANICAL JOINT DUCTILE IRON PIPE OR PVC WATER WORKS GRADE PRESSURE PIPE FOR 10' EACH SIDE OF CROSSING AND SHALL BE PRESSURE TESTED TO **150psi** TO ASSURE WATER TIGHTNESS.

## 4 WATERLINE OFFSET DETAIL

SCALE: NOT TO SCALE

**NOTES:**



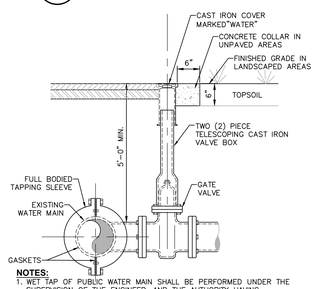
1. HYDRANTS SHALL BE **MUELLER SUPER CENTURION 250** OR APPROVED EQUIVALENT BY THE AUTHORITY HAVING JURISDICTION. HYDRANTS SHALL MEET REQUIREMENTS OF **AWWA STANDARD C–502.**
2. HYDRANTS SHALL BE CAST IRON BODY, DRY BARREL DESIGN, COMPRESSION–TYPE VALVE, OPENING AGAINST PRESSURE AND CLOSING WITH PRESSURE, 6–INCH MECHANICAL JOINT INLET FOOT PIECE, 5 ¼ INCH MAIN VALVE OPENING, O–RING TYPE PACKING, RATED FOR 250–PSI WORKING PRESSURE, TWO (2) 2 ½ INCH HOSE NOZZLES AND ONE (1) 4 ½ INCH PUMPER NOZZLE.
3. NOZZLE OUTLET THREADS SHALL MEET LOCAL FIRE DEPARTMENT REQUIREMENTS AND HAVE CAST IRON CAPS WITH NON–KINKING STEEL CHAINS. OPERATING AND CAP NUTS: PENTAGON 1 ½ INCH POINT TO FLAT. HYDRANT VALVES SHALL BE OPENED BY TURNING OPERATING NUT TO THE LEFT, OR **COUNTERCLOCKWISE.**
4. HYDRANTS SHALL BE TRAFFIC TYPE WITH BREAKABLE SAFETY FLANGE WITH RED EXTERIOR ALKYD GLOSS ENAMEL PAINT. HYDRANTS SHALL BE TOUCHED UP TO REMOVE ANY MARKS OR SCRAPED PAINT CAUSED BY INSTALLATON OR TRANSIT.

**NOTE:**

1. HYDRANT SHALL MEET REQUIREMENTS OF **AWWA C502.**

## 2 HYDRANT ASSEMBLY DETAIL

SCALE: NOT TO SCALE

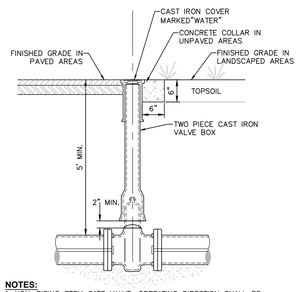


**NOTES:**

1. GATE VALVE & VALVE BOX SHALL BE IN ACCORDANCE WITH MUNICIPAL STANDARDS & AS MANUFACTURED BY **(MUELLER, CLOW OR WATEROUS)** OR APPROVED EQUIVALENT.

## 5 DUCTILE IRON SERVICE PIPE

SCALE: NOT TO SCALE

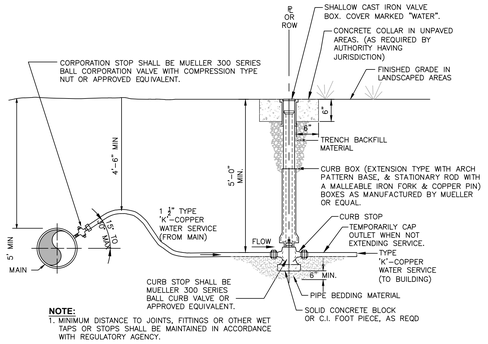


**NOTES:**

1. WET TAP OF PUBLIC WATER MAIN SHALL BE PERFORMED UNDER THE SUPERVISION OF THE ENGINEER, AND THE AUTHORITY HAVING JURISDICTION.
2. TAPPING SLEEVE AND VALVE SUPPORT SHALL BE COORDINATED WITH THE ENGINEER TO SUIT FIELD CONDITIONS.
3. MINIMUM DISTANCE TO JOINTS, FITTINGS, OR OTHER WET TAPS OR STOPS SHALL BE 3 FEET.
4. VALVE OPERATING DIRECTION SHALL BE **COUNTERCLOCKWISE** TO OPEN ( TURNING LEFT ).
5. TAPPING SLEEVE SHALL BE SELECTED TO FIT EXISTING PIPE MATERIAL ( C.I., D.I., A.C. ) AND OUTSIDE DIAMETERS.
6. THRUST BLOCK IS REQUIRED WHERE THE BRANCH OF THE TAPPING SLEEVE DOES NOT HAVE RESTRAINED JOINT.
7. TAPPING SLEEVE, VALVE & VALVE BOX SHALL BE IN ACCORDANCE WITH MUNICIPAL STANDARDS & AS MANUFACTURED BY **(MUELLER, CLOW OR WATEROUS)** OR APPROVED EQUIVALENT.

## 6 TAPPING SLEEVE AND VALVE DETAIL

SCALE: NOT TO SCALE

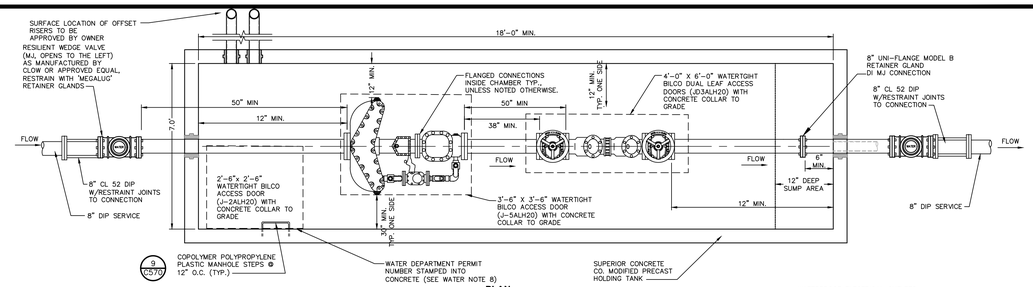


**NOTES:**

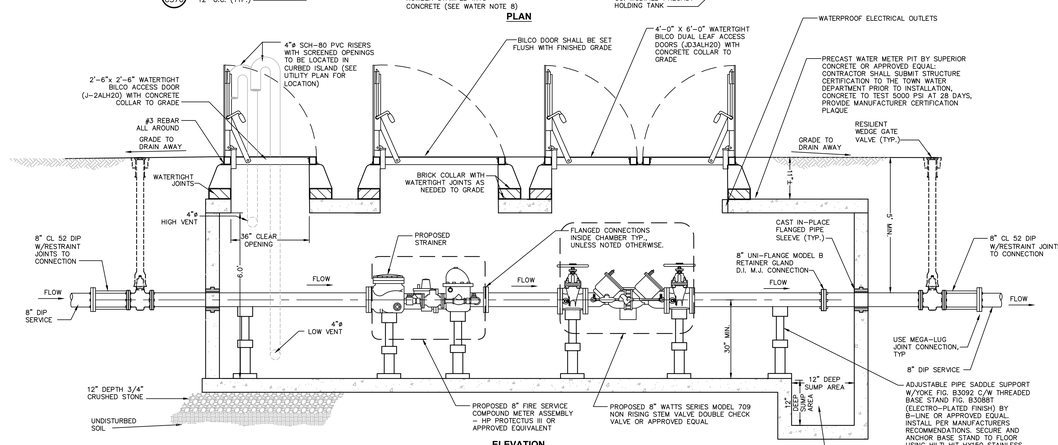
1. NON–RISING STEM GATE VALVE, OPERATING DIRECTION SHALL BE **COUNTERCLOCKWISE** TO OPEN.
2. MINIMUM DISTANCE TO JOINTS, FITTINGS, OR OTHER WET TAPS OR STOPS SHALL BE 3 FEET.
3. IF VALVE IS TO BE RODDED, PROVIDE VALVE WITH RODDING FLANGES OR EYEBOLTS. TWO (2) 3/4"ø GALVANIZED STEEL RODS WITH MALLEABLE IRON NUTS AT 180° SPACING SHALL BE USED FOR RODDING VALVES. FOR 12" DIA. PIPE OR LESS. FOR LARGER PIPE SIZES, SEE TABLE FOR NUMBER OF TIE RODS REQUIRED–"JOINT RESTRAINT OPTION DETAILS.)
4. GATE VALVE & VALVE BOX SHALL BE IN ACCORDANCE WITH MUNICIPAL STANDARDS & AS MANUFACTURED BY **(MUELLER, CLOW OR WATEROUS)** OR APPROVED EQUIVALENT.

## 7 TYPICAL GATE VALVE DETAIL

SCALE: NOT TO SCALE



**NOTE:**



1. MINIMUM DISTANCE TO JOINTS, FITTINGS OR OTHER WET TAPS OR STOPS SHALL BE MAINTAINED IN ACCORDANCE WITH REGULATORY AGENCY.

## 9 COPPER WATER SERVICE

SCALE: NOT TO SCALE

**PLAN**

**ELEVATION**

## 8 WATER METER AND BACKFLOW PREVENTION PIT DETAIL

SCALE: NOT TO SCALE

**NOTES**

1. WATER METER PIT AND ASSEMBLY SHALL BE SUBJECT TO REVIEW AND FINAL APPROVAL BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. WATER METER SHALL BE A SENSUS OMNI OR APPROVED EQUAL.
2. WATER METER SHALL BE PROVIDED WITH A REMOTE READING SYSTEM WITH BRONZE WATERTIGHT ENCLOSURE. WATER PROOF REGISTERS SHALL BE PROVIDED. LOCATION SHALL BE APPROVED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT PRIOR TO CONSTRUCTION.
3. AN ALUMINUM WARNING PLATE SHALL BE RIVETED OR OTHERWISE PERMANENTLY ATTACHED TO THE MANHOLE COVER. THE PLATE SHALL BE A MINIMUM OF 12"x12" AND SHALL BE ENGRAVED WITH THE FOLLOWING LANGUAGE: "WARNING: CONFINED SPACE – ENTRY PROHIBITED WITHOUT AUTHORIZATION – CALL OWNER FOR APPROVAL TO ACCESS". VENTILATION SHALL CONFORM TO EXISTING LOCAL AND/OR STATE CODES AND AS PER SECTION 6.2.5 OF "RECOMMENDED STANDARDS FOR WATER WORKS – 1997" (TEN STATES STANDARDS).
4. PREPARED SURFACE (I.E., BOTTOM) OF EXCAVATION FOR PLACEMENT OF WATER METER PIT SHALL CONSIST OF A MINIMUM 6" DEPTH OF 3/4" CRUSHED STONE, LEVELED AND LAID OVER STABLE NATIVE SOIL. IF EXCAVATION REVEALS UNSTABLE SOIL MATERIAL, THIS BEDDING REQUIREMENT SHALL BE MODIFIED BY THE PROJECT ENGINEER.
5. WHEN INSTALLING TURBO METERS WITH A STRAINER, A MINIMUM OF FIVE (5) PIPE DIAMETERS OF STRAIGHT RUN PIPE OR EQUIVALENT FULL OPEN COMPONENTS IS REQUIRED UPSTREAM OF THE METER INLET FLANGE. A MINIMUM OF THREE (3) PIPE DIAMETERS OF STRAIGHT PIPE OR EQUIVALENT IS REQUIRED DOWN STREAM OF THE METER.
6. DO NOT INSTALL ELBOWS, BENDS, NONCONCENTRIC REDUCERS, CHECK VALVES, BACK FLOW PREVENTORS AND/OR PRESSURE REDUCING DEVICES WITHIN TEN (10) PIPE DIAMETERS UPSTREAM OR FIVE (5) PIPE DIAMETERS DOWNSTREAM OF THE METER.
7. EXTERIOR OF METER PIT SHALL RECEIVE TWO COATS OF BITUMINOUS COATING.
8. WITHIN 30 DAYS OF INSTALLATION, THE BACKFLOW PREVENTION DEVICE SHALL BE TESTED BY A CERTIFIED TESTER. FOLLOWING TESTING, A NYS DOH–1013 REPORT MUST BE COMPLETED AND SUBMITTED TO THE CITY OF POUGHKEEPSIE, TOWN CLERK AND DUTCHESS COUNTY HEALTH DEPARTMENT TO CERTIFY THAT DEVICE WAS INSTALLED PER APPROVED PLANS.
9. ALL BACKFLOW PREVENTION DEVICES MUST BE TESTED AT LEAST ANNUALLY BY A NYS CERTIFIED TESTER WITH A COPY OF THE INSPECTION AND TEST REPORT (DOH–1013) FORWARDED TO CITY OF POUGHKEEPSIE, AND THE DUTCHESS COUNTY DEPARTMENT OF HEALTH.
10. REINFORCEMENT FOR MANHOLE COMPONENTS SHALL BE DESIGNED BY A LICENSED NEW YORK STATE PROFESSIONAL ENGINEER PRIOR TO CONSTRUCTION. SHOP DRAWINGS SHALL BE SUBMITTED FOR REVIEW. STRUCTURE SHALL BE DESIGNED FOR HS20–44 VEHICULAR LOADING PLUS 25% IMPACT.
11. PROVIDE WATERPROOF ELECTRIC OUTLET FOR SUMP PUMP IN THE EVENT WATER ACCUMULATES IN SUMP AREA.

| SCHEDULE OF JOINT RESTRAINT BARE DIP (NOT POLYWRAPPED) (LENGTH OF PIPE EACH SIDE OF FITTING TO BE RESTRAINED IN FEET "L") | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| PIPE SIZE (INCHES) | FITTING TYPE | | | | | | | REDUCER | | | | | |
| | 90° | 45° | 22½° | 11¼° | TEE | VALVE | DEAD END | 6" | 8" | 10" | 12" | 16" | 18" | 24" |
| 6" | 43 | 18 | 8 | 4 | 29 | 31 | 31 | | | | | | | |
| 8" | 56 | 23 | 11 | 5 | 38 | 41 | 41 | 17 | | | | | | |
| 10" | 68 | 28 | 14 | 7 | 48 | 50 | 50 | 31 | 17 | | | | | |
| 12" | 81 | 34 | 16 | 8 | 57 | 59 | 59 | 43 | 31 | 17 | | | | |
| 16" | 106 | 44 | 21 | 10 | 76 | 78 | 78 | 66 | 57 | 46 | 33 | | | |
| 18" | 119 | 49 | 24 | 12 | 85 | 88 | 88 | | 69 | 59 | 48 | 18 | | |
| 24" | 156 | 65 | 31 | 15 | 116 | 116 | 116 | | | | 86 | 63 | 50 | |
| 30" | 192 | 80 | 38 | 19 | 142 | 144 | 144 | | | | | | 91 | 50 |

**NOTES:**

1. THE LENGTH OF PIPE REQUIRING RESTRAINT IS BASED UPON THE FOLLOWING ASSUMPTIONS:

   A. BEDDING TYPE 2 – FLAT BOTTOM TRENCH, BACKFILL LIGHTLY CONSOLIDATED TO CENTER LINE OF PIPE.
   B. SOIL TYPE CLAY 1 – CLAY OF MEDIUM TO LOW PLASTICITY, LL<50, <25% COURSE PARTICLES [CL & CL–ML] :

      CL – INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY GRAVELY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS
      ML – INORGANIC SILTS, VERY FINE SAND, ROCK FLOUR, SILTY OR CLAYEY FINE SANDS.

   C. PIPE IS BARE DUCTILE IRON PIPE (NOT POLYWRAPPED)
   D. DEPTH TO TOP OF PIPE 5'–0" MINIMUM
   E. MAXIMUM OPERATING PRESSURE OF 150 PSI
   F. FACTOR OF SAFETY OF 1.5

2. FOR END PLUGS, RESTRAIN PIPE LENGTH GIVEN FOR DEAD END FITTING.
3. THE LENGTH OF NEW PIPE TO BE RESTRAINED IS THE LENGTH FOR EACH SIDE OF THE FITTING.
4. THE ABOVE INFORMATION WAS PROVIDED USING THE THRUST RESTRAINT PROGRAM ISSUED BY THE DUCTILE IRON PIPE RESEARCH ASSOCIATION (DIPRA) AND IS BASED ON THE ASSUMPTIONS LISTED IN NOTE 1. RESTRAINED LENGTH REQUIREMENTS FOR FIELD CONDITIONS AND PIPE SIZES DIFFERING FROM THOSE LISTED ABOVE SHOULD BE EVALUATED SEPARATELY.
5. RESTRAINED JOINT PIPE AND FITTINGS SHALL BE USED ONLY AS ALLOWED BY THE PROJECT PLANS AND/OR SPECIFICATION.

## 10 JOINT RESTRAINT SCHEDULE AND NOTES

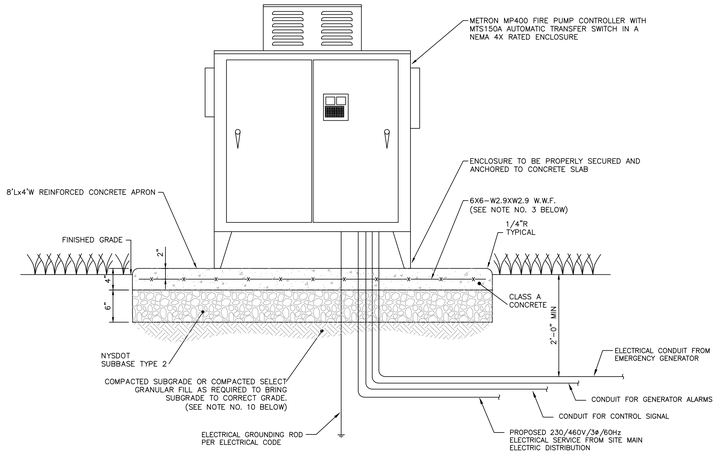
**PLAN**

**SECTION PLAN**

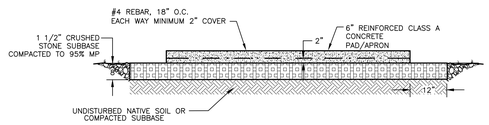


**SECTION A-A**

**NOTES**

1. PUMP CHAMBER AND ASSEMBLY AND SHOP DRAWINGS SHALL BE SUBJECT TO REVIEW AND FINAL APPROVAL BY THE CITY OF POUGHKEEPSIE ENGINEERING DEPARTMENT.
2. FIRE PUMP FURNISHED FOR FIRE PROTECTION SERVICE SHALL BE SUPPLIED WITH SPECIFIED DRIVERS, CONTROLS AND PUMP ACESSORIES AS DESCRIBED IN APPENDIX TO ENGINEERING REPORT
3. AN ALUMINUM WARNING PLATE SHALL BE RIVETED OR OTHERWISE PERMANENTLY ATTACHED TO THE MANHOLE COVER. THE PLATE SHALL BE A MINIMUM OF 12"x12" AND SHALL BE ENGRAVED WITH THE FOLLOWING LANGUAGE: "WARNING: CONFINED SPACE – ENTRY PROHIBITED WITHOUT AUTHORIZATION – CALL OWNER FOR APPROVAL TO ACCESS". VENTILATION SHALL CONFORM TO EXISTING LOCAL AND/OR STATE CODES AND AS PER SECTION 6.2.5 OF "RECOMMENDED STANDARDS FOR WATER WORKS – 1997" (TEN STATES STANDARDS).
4. PREPARED SURFACE (I.E., BOTTOM) OF EXCAVATION FOR PLACEMENT OF PUMP CHAMBER SHALL CONSIST OF A MINIMUM 9" DEPTH OF 3/4" CRUSHED STONE, LEVELED AND LAID OVER STABLE NATIVE SOIL. IF EXCAVATION REVEALS UNSTABLE SOIL MATERIAL, THIS BEDDING REQUIREMENT SHALL BE MODIFIED BY THE PROJECT ENGINEER.
5. FIRE PUMP PIT TO BE PROVIDED WITH STEPS.
6. ALL ELECTRICAL SHALL BE INSTALLED AS PER THE NATIONAL ELECTRIC CODE, LATEST EDITION.
7. INSTALLATION AND TESTING TO BE CERTIFIED COMPLETE BY A NYS LICENSED PROFESSIONAL ENGINEER.

© 1 **PUMP CHAMBER DETAIL**
SCALE: NOT TO SCALE



1. THE METRON COMBINATION FIRE PUMP CONTROLLER/TRANSFER SWITCH IS A METRON MODEL MP400 WITH INTEGRATED MTS150A AUTOMATIC TRANSFER SWITCH IN A NEMA 4X RATED ENCLOSURE. THE UNIT IS UNDERWRITER'S LABORATORIES (UL) AND FACTORY MUTUAL (FM) APPROVED AND MEETS ALL THE REQUIREMENTS OF NFPA FOR CENTRIFUGAL FIRE PUMPS.
2. THE CONTROLLER/TRANSFER SWITCH UNIT SHALL BE MANUFACTURED BY METRON, INC. AND BE EQUIPPED WITH ALL THE FEATURES DESCRIBED IN THE ENGINEER'S REPORT. THE UNIT PROVIDES OPERATION OF THE ELECTRIC FIRE PUMP MOTOR FROM AN ALTERNATE SOURCE WHEN THE NORMAL POWER SOURCE FAILS.
3. THE FIRE PUMP IS A PEERLESS HORIZONTAL SPLIT CASE SINGLE STAGE FIRE PUMP MODEL 4AEF10 EQUIPPED WITH A 3550 RPM, 3PH, 230/460V, 60 HZ ELECTRIC MOTOR. THE PUMP SHALL BE EQUIPPED WITH ALL ANCILLARY ACCESSORIES DESCRIBED IN THE ENGINEER'S REPORT.
4. THE EMERGENCY GENERATOR SET SHALL BE A KOHLER MODEL 230REOZJB, 230 KW, DIESEL UNIT WITH SOUND ATTENUATED ENCLOSURE AND DUAL–WALL SUB–BASE TANK, OR APPROVED EQUAL. THE GENERATOR IS TO BE EQUIPPED WITH ALL FEATURES DESCRIBED IN THE ENGINEER'S REPORT.
5. THIS DETAIL IS PROVIDED TO ILLUSTRATE THE INTENDED LAYOUT. THE CONTRACTOR SHALL PROVIDE SHOP DRAWINGS SHOWING THE ARRANGEMENT AND LOCATIONS OF ALL COMPONENTS, CONDUITS AND EQUIPMENT FOR THE FIRE PUMP CONTROLLER/AUTO TRANSFER SWITCH UNIT FOR A COMPLETE AND FUNCTIONAL INSTALLATION.
6. THE CONTRACTOR SHALL SUBMIT A COPY OF THE SHOP DRAWINGS TO THE CITY OF POUGHKEEPSIE ENGINEER FOR REVIEW.
7. THE INSTALLATION SHALL COMPLY WITH ALL LOCAL, STATE AND NEC ELECTRICAL CODE AND NFPA REQUIREMENTS.
8. INSTALL ALL WIRING IN RIGID GALV. STEEL CONDUITS.
9. ALL WIRING SHALL BE ADEQUATELY SIZED TO CARRY REQUIRED LOADS AS PER ELECTRICAL CODES.

© 2 **ELECTRIC FIRE PUMP CONTROLLER AND AUTO-TRANSFER SWITCH**
SCALE: NOT TO SCALE

CONCRETE NOTES:

1. MATERIAL AND METHODS OF CONSTRUCTION SHALL BE IN CONFORMANCE WITH THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION (NYSDOT) STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED JANUARY 2, 2002, AND ALL ADDENDA THERETO; THE ONLY EXCEPTION BEING THAT THE WORK OF THIS CONTRACT SHALL BE MEASURED IN ENGLISH UNITS.
2. ALL CONCRETE SHALL BE CLASS A CONCRETE. CONCRETE MATERIALS, PLACEMENT, AND CONSTRUCTION SHALL CONFORM WITH SECTION 500 OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
3. REINFORCING STEEL FOR CONCRETE SHALL CONFORM WITH SECTION 556 – REINFORCING STEEL FOR CONCRETE STRUCTURES OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS AND AS SPECIFICALLY CALLED OUT IN THE DRAWINGS.
4. ALL EXPOSED SURFACED SHALL HAVE A BROOM TEXTURED FINISH.
5. EXPANSION JOINTS SHALL BE LOCATED A MAXIMUM OF 20'–0" ON CENTER, OR AS INDICATED ON PLANS.
6. JOINTS SHALL NOT BE SAW CUT.
7. EXPOSED CONCRETE SURFACES SHALL BE TREATED WITH "SUREBOND","SAFEBOND" SB–7000 INTENSIFIER BRIGHT PROTECTOR AND SIDEWALK SEALER, OR EQUAL. RATE AND METHOD OF APPLICATION SHALL BE IN ACCORDANCE WITH MANUFACTURE'S RECOMMENDATIONS.
8. SUBBASE MATERIAL SHALL CONFORM WITH SECTION 304 OF THE ABOVE REFERENCED NYSDOT STANDARD.
9. WHERE IT IS NECESSARY TO PLACE FILL FOR PURPOSE OF BRINGING THE SUBGRADE ELEVATION UP TO A SPECIFIED GRADE, THE FILL MATERIAL PLACED SHALL BE IN CONFORMATION WITH SECTION 203–EXCAVATION AND EMBANKMENT OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
10. ALL WORK SHALL CONFORM WITH SECTION 608–SIDEWALK, DRIVEWAYS, AND BICYCLE PATHS OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.

**NOTES:**

1. THE CONCRETE PAD DIMENSIONS SHALL BE 16'L x 10'W.
2. THE CONTRACTOR SHALL MAKE PROVISIONS TO PROVIDE ALL SLEEVES REQUIRED FOR THE PASSAGE OF ALL CONDUITS IN THE CONCRETE SLAB.

© 3 **GENERATOR PAD DETAIL**

## LANDSCAPING NOTES:

1. THE LANDSCAPE CONTRACTOR SHALL CAREFULLY COORDINATE CONSTRUCTION ACTIVITIES WITH THAT OF THE EARTHWORK CONTRACTOR AND OTHER SITE DEVELOPMENT.
2. THE CONTRACTOR SHALL VERIFY DRAWING DIMENSIONS WITH ACTUAL FIELD CONDITIONS AND INSPECT RELATED WORK AND ADJACENT SURFACES. THE CONTRACTOR SHALL VERIFY THE ACCURACY OF ALL FINISH GRADES WITHIN THE WORK AREA. THE CONTRACTOR SHALL REPORT TO THE LANDSCAPE ARCHITECT/ENGINEER AND OWNER ALL CONDITIONS WHICH PREVENT PROPER EXECUTION OF THIS WORK.
3. THE EXACT LOCATION OF ALL EXISTING UTILITIES, STRUCTURES AND UNDERGROUND UTILITIES, WHICH MAY NOT BE INDICATED ON THE DRAWINGS, SHALL BE DETERMINED BY THE CONTRACTOR. THE CONTRACTOR SHALL PROTECT EXISTING STRUCTURES AND UTILITY SERVICES AND IS RESPONSIBLE FOR THEIR REPLACEMENT IF DAMAGED.
4. THE CONTRACTOR SHALL KEEP THE PREMISES FREE FROM RUBBISH AND ALL DEBRIS AT ALL TIMES AND SHALL ARRANGE MATERIAL STORAGE SO AS NOT TO INTERFERE WITH THE OPERATION OF THE PROJECT. ALL UNUSED MATERIALS, RUBBISH AND DEBRIS SHALL BE REMOVED FROM THE SITE.
5. NO TREES OR SHRUBS SHALL BE PLANTED ON EXISTING OR PROPOSED UTILITY LINES.
6. QUALITY ASSURANCE:
   A. NOMENCLATURE: PLANT NAMES SHALL CONFORM TO THE LATEST EDITION OF "STANDARDIZED PLANT NAMES" AS ADOPTED BY THE AMERICAN JOINT COMMITTEE ON HORTICULTURAL NOMENCLATURE.
   B. SIZE AND GRADING: PLANT SIZES AND GRADING SHALL CONFORM TO THE LATEST EDITION OF "AMERICAN STANDARD FOR NURSERY STOCK" AS SPONSORED BY THE AMERICAN ASSOCIATION OF NURSERYMEN, INC (AAN), UNLESS OTHERWISE SPECIFIED.
   C. NURSERY SOURCE: OBTAIN FRESHLY DUG, HEALTHY, VIGOROUS PLANTS NURSERY GROWN UNDER CLIMACTIC CONDITIONS SIMILAR TO THOSE IN THE LOCALITY OF THE PROJECT FOR A MINIMUM OF 2 YEARS. PLANTS SHALL HAVE BEEN LINED OUT IN ROWS, ANNUALLY CULTIVATED, SPRAYED, PRUNED AND FERTILIZED IN ACCORDANCE WITH GOOD HORTICULTURAL PRACTICE. ALL PLANTS SHALL HAVE BEEN TRANSPLANTED OR ROOT PRUNED AT LEAST ONCE IN THE PAST 3 YEARS. BALLED AND BURLAPPED PLANTS MUST COME FROM SOIL WHICH WILL HOLD A FIRM ROOT BALL. HEELED IN PLANTS AND PLANTS FROM COLD STORAGE ARE NOT ACCEPTABLE.
   D. SUBSTITUTIONS: DO NOT MAKE SUBSTITUTIONS OF TREES AND/OR SHRUB MATERIALS. IF REQUIRED LANDSCAPE MATERIAL IS NOT OBTAINABLE, SUBMIT PROOF OF NON-AVAILABILITY AND PROPOSAL FOR USE OF EQUIVALENT MATERIAL. WHEN AUTHORIZED, ADJUSTMENTS OF CONTRACT AMOUNT (IF ANY) WILL BE MADE BY CHANGE ORDER.
7. SEEDING & PLANTING SEASONS AND TIMING CONDITIONS:
   A. UNLESS OTHERWISE DIRECTED IN WRITING, SEED LAWNS FROM MARCH 15 TO JUNE 15, AND FROM AUGUST 15 TO OCTOBER 15.
   B. UNLESS OTHERWISE DIRECTED IN WRITING PLANT TREES AND SHRUBS FROM MARCH 15 TO JUNE 1, AND FROM AUGUST 15 TO OCTOBER 30.
   C. AREAS UNDERGOING CLEARING OR GRADING AND ANY AREAS DISTURBED BY CONSTRUCTION ACTIVITIES WHERE LAWNS OR PLANTINGS ARE TO BE ESTABLISHED AND WORK IS COMPLETE, SHALL BE RESTORED WITH PERMANENT VEGETATIVE COVER AS SOON AS SITE AREAS ARE AVAILABLE AND WITHIN 14 DAYS AFTER WORK IS COMPLETE: WORK SHALL BE WITHIN THE SEASONAL LIMITATIONS FOR EACH KIND OF LANDSCAPE WORK REQUIRED. PROVIDE STABILIZATION WITH TEMPORARY VEGETATIVE COVER (TOPSOIL AND TEMPORARY COVER SEED MIX) WITHIN 14 DAYS AFTER WORK IS COMPLETE, FOR SEEDING OUTSIDE PERMITTED SEEDING PERIODS.
8. PRODUCTS:
   A. IMPORTED TOPSOIL: PROVIDE TOPSOIL CONFORMING TO THE FOLLOWING:
      i. LOAM TOPSOIL, WELL DRAINED HOMOGENEOUS TEXTURE AND OF UNIFORM GRADE, WITHOUT THE ADMIXTURE OF SUBSOIL MATERIAL AND FREE OF DENSE MATERIAL, HARDPAN, CLAY, STONES, SOD OR OTHER OBJECTIONABLE MATERIAL.
      ii. CONTAINING NOT LESS THAN 5% NOR MORE THAN 20% ORGANIC MATTER IN THAT PORTION OF A SAMPLING PASSING A 1/4" SIEVE WHEN DETERMINED BY THE WET COMBUSTION METHOD ON A SAMPLE DRIED AT 105°C.
      iii. CONTAINING A PH VALUE WITHIN THE RANGE OF 6.5 TO 7.5 ON THAT PORTION OF THE SAMPLE WHICH PASSES A 1/4" SIEVE.
      iv. CONTAINING THE FOLLOWING WASHED GRADATIONS:

| SIEVE DESIGNATION | % PASSING |
|---|---|
| 1" | 100 |
| 1/4" | 97-100 |
| NO 200 | 20-60 |

   B. SEED MIXTURE:
      PROVIDE FRESH, CLEAN, NEW-CROP SEED MIXED IN THE PROPORTIONS SPECIFIED FOR SPECIES AND VARIETY, AND CONFORMING TO FEDERAL AND STATE STANDARDS. PROVIDE THE FOLLOWING MIXTURES:
      i. LAWN SEED MIX

SUN AND PARTIAL SHADE:

| AMOUNT BY: WEIGHT | SPECIES OR VARIETY | MINIMUM % PURITY | GERMINATION |
|---|---|---|---|
| 50% | KENTUCKY BLUE GRASS* | 95% | 80% |
| 20% | PERENNIAL RYE | 98% | 90% |
| 30% | CREEPING RED FESCUE | 97% | 85% |
| 100% | | | |

*MINIMUM 2 (EQUAL PROPORTIONS) VARIETIES AS LISTED IN CORNELL RECOMMENDATIONS FOR TURFGRASS.

SHADE:

| AMOUNT BY: WEIGHT | SPECIES OR VARIETY | MINIMUM % PURITY | GERMINATION |
|---|---|---|---|
| 25% | KENTUCKY BLUE GRASS** | 95% | 80% |
| 20% | PERENNIAL RYE | 98% | 90% |
| 35% | CREEPING RED FESCUE | 97% | 85% |
| 20% | CHEWINGS RED FESCUE | 97% | 85% |
| 100% | | | |

**SHADE TOLERANT VARIETY

      ii TEMPORARY COVER SEED MIX

| AMOUNT BY: WEIGHT | SPECIES OR VARIETY | MINIMUM % PURITY | GERMINATION |
|---|---|---|---|
| 100% | ANNUAL RYEGRASS | 98% | 90% |

   C. LIME: NATURAL LIMESTONE CONTAINING AT LEAST 85% OF TOTAL CARBONATES, GROUND TO SUCH FINENESS THAT AT LEAST 90% PASSES A 10-MESH SIEVE AND AT LEAST 50% PASSES A 100-MESH SIEVE.
   D. FERTILIZER:
      i. FOR STARTER FERTILIZING: COMMERCIAL STARTER FERTILIZER, GRANULAR, NONBURNING PRODUCT CONTAINING 5% NITROGEN, 10% AVAILABLE PHOSPHOROUS, AND 5% WATER SOLUABLE POTASH (5-10-5).
      ii. FOR FINAL FERTILIZING: IF APPLIED IN SPRING SEASON, SHALL BE A SLOW RELEASE COMMERCIAL FERTILIZER, GRANULAR, WITH 3-1-2 NPK. IF APPLIED IN FALL SEASON, SHALL BE AS SPECIFIED IN (8.D.) ABOVE.
   E. TREES, SHRUBS, GROUND COVERS, PERENNIALS, ANNUALS:
      i. PLANTING SOIL MIXTURE: SHALL BE PREMIXED IN BULK, AND CONTAIN THE FOLLOWING BY VOLUME:
         30 PARTS TOPSOIL
         10 PARTS PEAT
         1 PART BONE MEAL
      ii. PEAT: BROWN TO BLACK IN COLOR, WEED AND SEED FREE. DRIED SPHAGNUM PEAT, CONTAINING NOT MORE THAN 9% MINERAL ON A DRY BASIS AND CONFORMING TO NYSDOT 713-15.
      iii. BONE MEAL: FINELY GROUND, RAW, MINIMUM 4% NITROGEN AND 20% PHOSPHORIC ACID. IT SHALL BE DELIVERED IN SEALED BAGS SHOWING THE MANUFACTURER'S GUARANTEED ANALYSIS.
   F. STAKES: 8 FEET LONG, 3 INCH DIA. CEDAR OR P.T. WOOD STAKES.
   G. HOSE: NEW, 2-PLY GARDEN HOSE NOT LESS THAN 1/2 INCH IN DIAMETER.
   H. WEED CONTROL FABRIC: SOIL CHECK AS MANUFACTURED BY BRIGHTON BYPRODUCTS CO. INC, NEW BRIGHTON, PA; MIRASCAPE OR MIRAFI GEOSYNTHETIC PRODUCTS, NORCROSS, PA, OR APPROVED EQUIVALENT.
   I. MULCH:
      i. LAWN AREAS
      OAT OR WHEAT STRAW, FREE OF WEEDS. AN ALTERNATIVE IS WOOD FIBER CELLULOSE IF HYDROSEEDING IS USED.
      ii. PLANT BED AREAS
      GROUND OR SHREDDED HARDWOOD BARK, UNCOLORED. NO PIECES OVER 2 INCHES GREATEST DIMENSION. FREE FROM SAWDUST.
9. EXECUTION:
   A. LANDSCAPE WORK SHALL BE UNDERTAKEN AS SOON AS SITE AREAS ARE AVAILABLE.
   B. TOPSOIL SHALL BE SPREAD NO LESS THAN 4" OVER SUB-GRADE MATERIAL. SOIL AMENDMENTS SHALL BE THOROUGHLY MIXED INTO THE TOP 4" OF TOPSOIL, FOLLOWING THE SPECIFICATIONS STATED BELOW.
   C. PERFORM FINE GRADING TO FINISHED ELEVATION ONLY IMMEDIATELY PRIOR TO PLANTING. PLANTING AREAS SHALL BE GRADED TO A SMOOTH, EVEN SURFACE, FREE OF DEPRESSIONS OR RIDGES WITH A UNIFORM LOOSE, FINE TEXTURE.
   D. FERTILIZING:
      i. THE SOIL SHALL BE TESTED FOR PH AND LIME ADDED AS NECESSARY. ALL AMENDMENTS SHALL BE CHECKED AND APPROVED BY LANDSCAPE ARCHITECT BEFORE AMENDMENTS ARE MADE.
      ii. APPLY FERTILIZER AT RATE OF 4 LBS/1000 SF FOR LAWN AREAS.
   E. LAWN:
      i. LAWN SEED MIX: SEED AT THE RATE OF 5 TO 6 LBS PER 1,000 SF.
      ii. TEMPORARY COVER SEED MIX: SEED AT THE RATE OF 3 TO 4 LBS PER 1,000 SF.
      iii. TEMPORARY COVER SEED MIX TO BE APPLIED ONLY FOR LATE FALL OR SUMMER SOIL STABILIZATION OUTSIDE ALLOWED SEEDING PERIODS.
   F. ALL SEEDED AREAS SHALL BE PROTECTED FROM EROSION BY ONE OF THE FOLLOWING METHODS:
      i. A UNIFORM BLANKET OF STRAW APPLIED AT A RATE OF 2 TONS/ACRE MIN, TO BE APPLIED ONCE SEEDING IS COMPLETE.
      ii. WOOD FIBER CELLULOSE APPLIED WITH SEED MIX BY A HYDROSEEDER AT A RATE OF 2,000 LBS/ACRE.
   G. ALL SEEDED SLOPES 3:1 OR GREATER SHALL BE PROTECTED FROM EROSION WITH JUTE MESH OR APPROVED EQUAL.
   H. ALL NEWLY PLANTED AREAS SHALL BE KEPT MOIST BY WATERING UNTIL GRASSES AND GROUND COVERS ARE WELL ESTABLISHED. THE LANDSCAPE CONTRACTOR MUST WATER PLANT MATERIAL WHEN NECESSARY FOR 60 DAYS AFTER INSTALLATION.
   I. LAWNS ARE TO BE WARRANTED UNTIL THEY BECOME ESTABLISHED, UNTIL FINAL ACCEPTANCE, AND NOT LESS THAN 60 DAYS AFTER COMPLETION OF ALL WORK. TREES, SHRUBS, GROUND COVERS, AND PERENNIALS SHALL BE WARRANTED AGAINST DEFECTS INCLUDING POOR GROWTH AND DEATH, EXCEPT WHEN RESULTING FROM OWNER NEGLECT, INCIDENTS THAT ARE BEYOND THE CONTROL OF THE LANDSCAPE INSTALLER AND DAMAGE OR ABUSE BY OTHERS, FOR AT LEAST ONE FULL YEAR AFTER PROJECT COMPLETION.

# PROJECT NARRATIVE

# 1.0 INTRODUCTION

## 1.1 Project Summary

The Applicant and Owner, Maselo Realty, LLC, is proposing the rezoning of an 8.713-acre tax parcel on Milton Street in the City of Poughkeepsie from Medium Low-Density Residential (R-2) to Planned Residential Development (PRD) for the construction of a 63-apartment unit clustered multifamily development within two buildings with two accesses off Milton Street. The parcel is identified as parcel number 131300-6162-73-623227 on the City of Poughkeepsie Tax Map. The Town of Poughkeepsie abuts the eastern edge of the property (see Figures 1 and 2).

The parcel is currently undeveloped and zoned for Medium Low-Density Residential (R-2) within which multifamily development is not permitted. Therefore, to facilitate the proposed project, the Applicant is petitioning the City for a rezoning of the property from R-2 to PRD by the Common Council. Upon completion of the rezoning, the Applicant will seek site plan approval from the Planning Board.

## 1.2 Background

On April 25, 2006, the City of Poughkeepsie Planning Board granted site plan approval for the construction of a 120-unit condominium complex to be known as Highview at the Fallkill Creek, located on the north side of Milton Street. The Applicant was Phoenix Capital Partners, LLC. The parcel was zoned as Medium High-Density Residential (R-4) at that time, which would have permitted a maximum of 140 dwelling units based on the R-4 requirements and lot size. The original project was never undertaken, and site plan approvals lapsed. The site was subsequently rezoned to Medium Low-Density Residence District (R-2) in October 2010.

## 1.3 Site Description and Project Details

The project parcel is located in the northeast quadrant of the city, along the city/town border, with access to the site on Milton Street by way of Fitchett Street and West Arnold Road. The project site consists of vacant wooded land. The Fallkill Creek runs along the western property line and within the property for approximately 200 linear feet. The current development proposal, referenced as Highview at the Fallkill Creek – Milton Street, includes 63 multifamily dwelling units clustered within two buildings in the southeast portion of the project parcel. The unit breakdown is anticipated to include approximately 31 one-bedroom and 32 two-bedroom units.

The development will be located away from Milton Street (approximately 240 feet) with a substantial natural buffer. The finished floor of the southern building's (Building 100 on Sheet C130) ground floor will be approximately 18 ft lower than Milton Street. The development will not directly impact wetlands or the Fallkill Creek and is approximately 146 – 160 feet away from the Creek. The development will occupy less than half of the 8.713-acre property allowing for approximately 57% of the site to remain undisturbed including 380 trees or approximately 68% of trees currently found on the site.

## 1.4 Anticipated Permits/Approvals

Table 1 provides a list of the approvals/permits that are anticipated for the project.

**Table 1: Anticipated Approvals/Permits**

| AGENCY | APPROVAL/PERMIT |
|---|---|
| City of Poughkeepsie Common Council | Rezoning from R-2 to PRD |
| City of Poughkeepsie Planning Board | Site plan approval |
| City of Poughkeepsie Zoning Board of Appeals | Area Variances |
| City of Poughkeepsie – Engineering Department | Curb cut approval |
| City of Poughkeepsie – Zoning Administrator | Floodplain development permit |
| Dutchess County Department of Planning and Development | GML 239m referral |
| Dutchess County Department of Health | Water and Sewer Connections |
| New York State Department of Environmental Conservation (NYSDEC) | GP-0-20-001<br>SPDES General Permit for Discharges during Construction Activities |

# 2.0 LAND USE, ZONING, AND PUBLIC POLICY

## 2.1 Land Use and Zoning

The parcel is currently undeveloped and zoned for Medium Low-Density Residential (R-2). To the north and west, the property is abutted by Light Industrial (I-1) and Research & Development (R&D) districts, which house a range of uses including multi-family housing (Highridge Garden Apartments), a junkyard, the City's Department of Public Works complex, and manufacturing uses. To the east, in the Town of Poughkeepsie, the property is abutted by a parcel zoned for Multifamily Residence (Town of Poughkeepsie) which contains a large apartment complex, Mountain Brook Apartments. The southern portion of the lot abuts a Medium-Low Density Residential (R-2) district, comprised primarily of single-family residences (Figures 3 and 4).

The purpose of the R-2 District is to provide for areas of relatively open character for single family dwellings on individual lots, as well as for creative cluster development on appropriate sites to provide for facilities and uses which serve residents of those areas and which are benefited by an open residential environment; and to provide opportunity for more intensive use of large older residential structures as a means of assuring neighborhood stability. Table 2 shows the uses that are permitted in this district. Apartments/multifamily dwellings are not permitted in R-2 Districts. Therefore, the Applicant is petitioning the City for a rezoning of the property from R-2 to PRD by the Common Council to facilitate the development of a 63-unit multifamily residential development.

The rezoning of the property to a PRD District, which will permit multifamily residential development, is anticipated to result in a more environmentally sensitive development of the property than that of a traditional single-family home development. The minimum lot area requirement in the R-2 District is 6,000 SF for each single family home; therefore, a maximum of 63 dwellings could theoretically be developed on the site according to the R-2 zoning requirements. Under the existing R-2 zoning, a cluster development allows for flexibility with site design, but the residential uses permitted in a cluster development are

limited to the residential uses permitted in the underlying zoning district. In the R-2 District, the residential use is single family detached dwellings, which would preclude apartment development.

**Table 2: Medium Low-Density Residence District (R-2) – Permitted Uses**

The Applicant proposes to rezone the property to PRD to allow multifamily development within a development that conforms to the parcel's unique environmental character. The property is identified in the Poughkeepsie's Natural Resource Inventory by Hudsonia Ltd. as one of the last remaining areas within the City of Poughkeepsie where the Fall Kill is not channeled and is permitted to flood naturally. Approximately one-third of the property falls within the City's flood area boundary and contains both upland hardwood forest and upland shrubland habitat. These characteristics make the site ideally suited to the clustering of development away from the creek, which will retain existing habitat. Therefore, rezoning the property to PRD is an appropriate alternative given the PRD's stated purpose and its innate flexibility that is intended to encourage context-specific housing that responds to the characteristics of a site and the character of the surrounding neighborhood.

The purpose of the PRD District Zoning is as follows:

> *It is the purpose of this Planned Residential Development (PRD) section to provide performance criteria as the basis for flexible use and design regulations so that self-contained residential neighborhoods, containing both individual building sites and common property, may be planned and developed in a unified manner on those large tracts of vacant or predominantly vacant land that are appropriate for such use.*

*It is further the intent (1) to encourage innovations in residential development so that the growing demands for housing of different types at all economic levels may be met by greater variety in type, design and siting of dwellings; and (2) to encourage the maximum reasonable conservation and the most efficient possible use of large tracts of land. These objectives cannot be achieved through the use of rigid and uniform traditional bulk and use zoning and subdivision regulations.*

The rezoning of land to a PRD District by the Common Council replaces the use and dimensional specifications contained elsewhere in the Zoning Ordinance with an approved plan, which becomes the basis for land use controls. The specific objectives of the PRD zoning designation are:

(a) An increase in choices of housing types (one-family detached, semidetached, attached and multifamily dwellings) available to city residents at various economic levels.

The proposed project includes 63 apartment dwelling units, which are anticipated to be leased at market rate.

(b) More usable open space and recreation areas.

Approximately 22,100 SF of usable open space will be provided for tenant use as part of the proposed project.

(c) Preservation of trees and outstanding natural topographic and geological features and prevention of soil erosion.

The rezoning of the property to a PRD District will permit multifamily residential development and is anticipated to result in a more environmentally sensitive development of the property than that of a traditional single-family home development. The development will not directly impact wetlands or the Fallkill Creek and is approximately 146 – 160 feet away from the Creek. The development will occupy less than half of the property allowing for approximately 57% to remain undisturbed including 380 trees or approximately 68% of trees currently found on the site.

The proposed project will require greater than one acre of disturbance and will require coverage under the State Pollutant Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Construction Activity. A Stormwater Pollution Prevention Plan will be prepared in conformance with the most current New York State Stormwater Management Design Manual and New York State Standards and Specifications for Erosion and Sediment Control.

(d) More convenience in location of accessory commercial and service areas.

The proposed project does not include accessory commercial or services areas.

(e) A smaller network of utilities and streets which would lower housing and public maintenance costs.

The proposed project would utilize internal driveways, drive aisles and parking. No new streets are proposed. The site is currently served by municipal utilities and it is anticipated that connections to these utilities will be sought.

(f) A more desirable environment than would be possible through the strict application of other provisions of this Chapter.

A strict application of the Medium Low-Density Residential (R-2) Zoning District to the project site could theoretically yield 63 single-family homes. The R-2 Zoning District does allow cluster development, but the residential uses permitted in a cluster development are limited to the residential uses permitted in the underlying zoning district. In the R-2 District, the residential use is single family detached dwellings, which would preclude apartment development. The Applicant proposes to rezone the property to PRD to allow multifamily development within a development that conforms to the parcel's unique environmental character.

Under a PRD zoning designation, the development may not exceed the density standards of the current R-2 zoning designation, which has a minimum lot area of 6,000 SF per dwelling unit, for maximum of 63 dwelling units on 8.713 acres. However, due to the PRD District's flexibility the development may be clustered into two multi-family buildings rather than spread out as detached single-family homes. This allows for development that will better conform to the natural conditions and constraints of the site.

A PRD is required to meet the following standards and general requirements per §19-3.18:

(a) The minimum area to qualify for a PRD District shall be 25 contiguous acres of land. Where the applicant can demonstrate that the characteristics of his holdings will meet the objectives of this section, plans covering lesser acreage may be considered.

The Applicant is proposing construction of a 63-unit clustered multifamily apartment development within two buildings with access off Milton Street on an approximately 8.713-acre property. The site design includes open space and a pool and pool house. Due to the clustered nature of the site design, the development will occupy less than half of the property allowing for approximately 57% to remain undisturbed including 380 trees or approximately 68% of trees currently found on the site. The proposed project does not include accessory commercial or services areas or internal roadways. The strict application of the R-2 zoning for the provision of single-family homes, whether a clustered or conventional subdivision, would result in greater ground disturbance and loss of natural habitat.

(b) A PRD shall have access to an arterial street, as defined in the City of Poughkeepsie ordinances and regulations.

The project will have two accesses (each one-way) off Milton Street, which is not codified as an arterial street by the City of Poughkeepsie. Therefore, the Applicant will seek an area variance from the Zoning Board of Appeals (ZBA). The appeal to allow access to the proposed PRD from Milton Street versus an arterial road is not anticipated to result in an undesirable change to the character of the neighborhood or detriment to nearby properties because there are not

significant adverse impacts to the traffic system from the project and because the development is well screened from Milton Street.

(c) The following shall be permitted uses:

1. Dwelling units of all types, subject to the requirements of Subsection (3)(d) below.

The proposed multifamily development is a permitted use in the PRD Zone. No accessory commercial development is proposed.

2. Retail, personal service and professional office uses, where such uses are scaled primarily to serve the residents of the PRD.

(d) Residential density and standards:

1. The gross density, measured over the entire tract shall not exceed the equivalent of the number of units that are permitted in the zoning district in effect for the subject property immediately prior to the designation of the property for PRD.

The minimum lot area requirement in the R-2 District is 6,000 SF for each single family home; therefore, a maximum of 63 dwellings could theoretically be developed on the site according to the R-2 zoning requirements. The site plan presents 63 dwelling units.

2. There shall be off-street parking facilities, subject to the requirements of Section 19-4.3 of this Chapter.

The site plan proposes 124 spaces be provided as part of the development, which meets the requirements of Section 19-4.3.

3. Required usable open spaces shall be provided at the same ratio as R-4 District [Section 19-3.15(4)(i)], plus there shall be 1,000 square feet of usable open space for every single-family detached dwelling unit.

The City's Zoning Ordinance stipulates that for residential uses located in R-4 there shall be provided in each multiple dwelling not less than 300 square feet of usable open space for each one-bedroom unit; 400 square feet of usable open space for each two-or-more-bedroom unit. For any development containing more than 15 units, such usable open space shall be devoted to improved and landscaped play and sitting areas for use of residents thereof, and the design and layout of the usable open space shall be subject to approval by the Planning Board.

The 32 one-bedroom units would require 9,300 SF of open space. The 32 two-bedroom units would require 12,800 SF of open space. The total required open space is 22,100 SF.

The site plan includes usable open space and a swimming pool with pool house. Therefore, the project complies with the required 22,100 SF of open space.

(e) Commercial density and standards:

1. Commercial uses may be permitted where such uses are scaled to serve the residents of the PRD. Where a PRD contains less than 250 dwelling units, a maximum of 2,500 square feet of floor area may be provided

for retail commercial and personal service use. Where a PRD contains more than 250 dwelling units, an additional 1,000 square feet of retail commercial or personal service use may be provided for each 100 additional dwelling units.

No accessory commercial uses are proposed as part of the development.

2. Not more than one office or studio, other than accessory to a use otherwise permitted, shall be permitted for each 25 dwelling units or major fraction thereof, on the parcel. If such office(s) is in a residential structure, such office or studio may be located only on the first floor. Access to such office or studio shall be separate from access to residential portions of the structure.

No accessory commercial uses are proposed as part of the development.

3. There shall be off-street parking facilities, subject to the requirements of Section 19-4.3 of this Chapter.

No accessory commercial uses are proposed as part of the development.

(f) Common areas and facilities.

1. "Common areas and facilities" in a PRD is defined as a parcel or parcels of land, together with all improvements thereon, the use and enjoyment of which are shared by the owners and occupants of the individual building sites or dwelling units. Where common areas or facilities exist, the ownership of such property may be either public or private. Where such areas or facilities are not dedicated to the City of Poughkeepsie or other public agency, the owner shall provide for and establish an organization for the continued ownership and maintenance thereof. Such organization shall not be dissolved nor shall it dispose of any common areas or facilities by sale or otherwise.

There are residential amenity areas and other common spaces, which will be managed by the owner.

(4) Site and structure requirements.

(a) It shall be the city's policy to preserve and incorporate into the landscaping of the development natural features, such as streams, rock outcrops, trees and shrubs. All trees with a diameter of eight inches or more, measured three feet from the base of the tree, shall be preserved to the fullest extent possible consistent with good design, engineering and reasonable development of the site. Permission to remove any such trees shall be subject to approval by the Planning Board.

The trees with a diameter of eight inches or more, measured three feet from the base of the tree, are intended to be preserved to the fullest extent possible consistent with good design, engineering and reasonable development of the site. The site plan retains 380 trees on the site or approximately 68% of trees currently found on the site. Additionally, a rock outcrop located in the south central part of the site is retained. No development of the Fallkill Creek, wetlands, or floodplain area are proposed as part of the project.

(b) Where adequate surface drainage is not possible by grading alone, a supplementary drainage system approved by the City Engineer shall be required.

The proposed project will require greater than one acre of disturbance and will require coverage under the State Pollutant Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Construction Activity. A Stormwater Pollution Prevention Plan will be prepared in conformance with the most current New York State Stormwater Management Design Manual and New York State Standards and Specifications for Erosion and Sediment Control and through coordination with the City Engineer. The Grading and Utility Plan (C140) shows the stormwater being conveyed via swales and subsurface piping to an on-site stormwater bioretention basin. The treated water will outflow to the Fallkill Creek.

(c) All electric, telephone, cable television and similar equipment shall be installed underground in accordance with the New York State Public Service Commission regulations.

The Applicant will work with the local utilities to advance underground connections to the site.

(d) Lot sizes and dimensions and structure heights and locations thereon may be freely disposed and arranged in conformance with the overall density standards set forth herein. In reviewing any application for a PRD, the Planning Board shall be guided by standards set elsewhere in this Chapter for comparable uses and by common good planning practice, to the end that the resulting development shall be compatible with the surroundings, and to assure the stability of the uses proposed to be developed on the site.

The site design avoids sensitive natural resources (e.g. Fallkill Creek, wetlands) leaving approximately 57% of the site undisturbed. The design complies with the bulk and dimensional requirements of the PRD, with the exception of the 50-foot buffer along the east side of the site which abuts the Town of Poughkeepsie. Area variances will be sought to allow the refuse enclosure and parking within the buffer strip and for the pool house location within 120 feet of an apartment building located within the Town of Poughkeepsie, if applicable. The design provides a 131-foot buffer to the Fallkill Creek where Zoning Section 19-4-18(2)(a) requires a minimum 30-foot setback. The proposed parking meets the requirements of the Zoning Ordinance. The buildings are proposed to be 3.5 stories, with three stories visible on the east or front façade and four stories visible on the west façade. Note that the finished floor elevation of the ground floor of the southern most building will be approximately 18 feet lower than Milton Street and the same building will be approximately 240 feet north of Milton Street with a substantial buffer in between.

(e) The right-of-way and pavement widths for internal roads serving multifamily dwellings shall be adequate and sufficient in size, location and design to accommodate the maximum traffic, parking and loading needs and the access of fire-fighting equipment and police or emergency vehicles. The pavement of said roads shall be not less than 22 feet wide and shall be subject to all other applicable city ordinances and standards.

The site design includes access-ways of 20 feet wide. A truck turning template will be provided as the design is advanced to demonstrate suitable access for emergency vehicles.

(f) The developer shall provide all necessary on-site water and sewer facilities, including, if necessary, water storage tanks, storm drainage, highway access, paved service streets, sidewalks, parking and loading facilities, lighting, fire alarm system and other necessary facilities, making reasonable provision

for utility service connections with adjoining properties in other ownerships. Such proposed improvements shall be subject to review and approval by the appropriate city authority. Water supply and distribution sewers, storm drains, streets, sidewalks and paved areas shall be approved by the Department of Public Works and the City Engineer; parking area access, layout and lighting shall be approved by the Police Department; all site plans shall be approved by the Fire Department for access, water pressure and supply and hydrant and call box locations.

The site is currently served by municipal utilities and it is anticipated that connections to these utilities will be sought. Detailed site engineering will continue to advance during the site plan review with regard to utilities, lighting, and other necessary facilities.

(g) Any nonresidential uses within the PRD must be located so as to be compatible with nearby residential uses.

No accessory commercial uses are proposed as part of the development.

(h) A buffer strip shall be provided along the property line and along any street line. Said strip shall be at least 50 feet in depth, measured inward from the street line or property line; provided, however, that in no event shall any structure or building be permitted closer than 120 feet from any residence on any property abutting the PRD property and shall be suitably landscaped with grass and shrubs, trees or other ground cover or such screening as the Planning Board may prescribe. No parking shall be permitted in this area.

The site plan includes parking area and the refuse enclosure within the 50-foot required buffer strip and the pool house is located less than 120 feet from the Mountain Brook apartment building located east of the site in the Town of Poughkeepsie. Area variances will be sought to allow the refuse enclosure and parking with the buffer strip and for the pool house location within 120 feet of an apartment building located within the Town of Poughkeepsie, if applicable. The requested area variances will not result in a detriment to the health, safety and welfare of the neighborhood or community because the development will be located away from Milton Street (approximately 240 feet) with a substantial natural buffer. The requested area variances are critical as these allow the site design to be setback away from the natural resources on site so that no direct impacts to the FallKill Creek or wetlands occurs.

(i) Maximum building coverage of the site shall be 20%.

The site design represents a development comprising approximately 5% building coverage.

In addition to Planning Board meetings, the project underwent two community meetings in 2019 and has received support from Councilwoman Flowers, see Attachment A for a letter of support.

## 2.2 Public Policy

*City of Poughkeepsie Comprehensive Plan, 1998*

The City updated its Comprehensive Plan in 1998 with a focus on three areas: Main Street, the Cottage Street Business District, and the Waterfront. These areas were identified as being critically important to

the City's future growth. Other areas of interest updated in the Plan included neighborhood planning issues, the City's Zoning Code, and recreational resources. The Plan outlines the following goals:

- Goal #1: A Traditional Downtown and Main Street;
- Goal #2: Neighborhoods with a Strong Sense of Community;
- Goal #3: A Vibrant Waterfront for Commerce and Recreation;
- Goal #4: Increased Employment Opportunities;
- Goal #5: User-Friendly Transportation Systems;
- Goal #6: A Regional Center for Commerce, Medicine, and Government; and
- Goal #7: Creating New Economic Opportunities.

The Plan states with regard to Goal #2 that, "City government can play a strong role in making the City a safe, healthy place to live. Policies and decisions on zoning issues that define and protect neighborhood character, and capital investment in parks, sidewalks, and streets, should be in keeping with this goal. New housing should maintain a high architectural standard compatible with surrounding buildings; high rises should be avoided. Infill housing should be encouraged, with design standards to ensure that existing housing stock is not devalued. The City should also support renovation and reuse of vacant buildings, and removal and replacement of dilapidated structures."

The proposed rezoning would allow for a PRD that better conforms to the project site's unique characteristics and fits with the community's character. Pending the rezoning, the proposed project would bring infill development to a developed part of the City that is comprised of a diverse mix of land uses. The rezoning is anticipated to be consistent with the City's Comprehensive Plan as it would utilize existing zoning regulations to develop a unique site with a development that is consistent with local land uses and zoning.

*Dutchess County Hudson River Valley Greenway Compact Plan, 2000*

Dutchess County is one of 13 counties that make up the Hudson River Valley Greenway, which was established by the State by the Hudson River Valley Greenway Act of 1991. In March 2000, the Hudson River Valley Greenway Council approved the Dutchess County Greenway Compact Plan, "Greenway Connections: Greenway Compact Program and Guides for Dutchess County Communities." The Greenway was created to facilitate the development of a voluntary regional strategy for preserving scenic, natural, historic, cultural and recreational resources while encouraging compatible economic development and maintaining the tradition of home rule for land use decision-making. By Local Law Number 1 of 2002, the City became a participating community in the Greenway Compact, and adopted a statement of land use policies, principles and guides entitled, "Greenway Connections: Greenway Compact Program and Guides for Dutchess County Communities." The City requires that consideration of the Greenway Compact Plan policies, principles and guides be used to supplement other established land use policies in the City where discretionary decisions are made.

The proposed action to rezone the property from R-2 to PRD to facilitate the construction of a 63-apartment unit clustered multifamily development will bring infill development to an irregularly shaped parcel that is bound by a mix of land uses, including the Fallkill Creek. The proposed development is anticipated to adhere to the purpose of the PRD District as it will provide multifamily housing within a site design that encourages conservation of natural resources. Therefore, the proposed action is consistent

with the Greenway Compact Plan as it is anticipated to comply with zoning and is consistent with the Greenway Guide and Comprehensive Plan.

*Fallkill Watershed Management Plan, October 2006*

The Fallkill Watershed covers 19.5 square miles, including portions of the City of Poughkeepsie. The Fallkill is approximately 38 miles long, and where it travels through the City it has been channelized and is contained by stone walls before it charges into the Hudson River. The Fallkill has been evaluated and has been found to contain various chemicals and bacteria, with deterioration being most prevalent within the City. The Plan makes several recommendations to improve the Fallkill, including removal of stone walls channelizing the creek and greater oversight on trash dumping. The vision for this section of the creek is articulated as, "The creek and its immediate environs should be transformed into an attractive community resource that is valued for its aesthetic, recreational, and biological attributes as well as its cultural role in the development and history of the City of Poughkeepsie."[1]

The project site abuts and includes some portions of the Fallkill Creek. No impacts to the Creek, associated wetlands are proposed to occur as part of the proposed project. Pending the approval of the rezoning, a floodplain development permit would be sought for work within the floodplain area, if applicable. The project would be constructed according to a Stormwater Pollution Prevention Plan and proposes connection to the City's storm sewer and sewer systems; therefore, the proposed action will not negatively impact the objectives of the Management Plan.

# 3.0 COMMUNITY SERVICES

## 3.1 Emergency Services

Fire emergency/ambulance service is provided by the City of Poughkeepsie. According to the City website, the Fire Department is a 64-man career-staffed department that protects 31,000 people living in an area of 4.78 square miles. It operates three fire stations that respond to almost 5,000 calls per year. The City's apparatus includes four engines, two ladder trucks, one rescue vehicle and a fire/rescue boat. Water for fire protection is obtained from the City of Poughkeepsie water supply. A truck turning radius plan will be submitted during the site plan review. It is anticipated that there is sufficient firefighting capability to meet the minimal increase in demand related to the proposed 63 new residential units.

Police protection is provided by the City of Poughkeepsie Police Department, with support from Dutchess County Sheriff's Department and NYS Police.

# 4.0 SOILS AND WATER RESOURCES

## 4.1 Soils

Figure 5 shows the soil types that are expected to be present on the project site, and Table 3 provides characteristics of these soil types, according to the Dutchess County Soil Survey information available in GIS and the Natural Resource Conservation Service website.

[1] Fall Kill Watershed Management Plan, October 2006, Page 5.

**Table 3: Characteristics of Soil Types within Project Area**

| % of SITE | SOIL SYMBOL | SOIL TYPE | SLOPES | DRAINAGE | DEPTH TO WATER TABLE (FEET) | DEPTH TO BEDROCK (INCHES) |
|---|---|---|---|---|---|---|
| | DwC | Dutchess-Cardigan complex, rolling, rocky | 5 to 16% | well | >6 | |
| | | Dutchess (40%) | | well | >6 | >60 |
| | | Cardigan (30%) | | well | >6 | 20 to 40 |
| | DxC | Dutchess-Cardigan-Urban Land complex, rolling, rocky | 5 to 16% | | | |
| | | Dutchess (25%) | | well | >6 | >60 |
| | | Cardigan (25%) | | well | >6 | 20 to 40 |
| | | Urban Land (25%) | | well | >2 | >10 |
| | Ud | Udorthents, smoothed | mostly 0 to 8% but 8 to 25% on sides of excavations & along highways | somewhat excessively to moderately well | >3.0 Nov-Jun | >60 |

Most of the site contains the Dutchess-Cardigan complex, rolling, rocky soil series (DwC). An area of the Dutchess-Cardigan-Urban Land complex soil series (DxC) exists along Milton Street, and an area of Udorthents soil series (Ud) exists in the southwest corner of the project parcel. The Dutchess soils and the Cardigan soils are well drained soils. The Udorthents soil series is a somewhat excessively to moderately well drained soil. Urban Land is described as areas covered by buildings, streets, parking lots and other impervious surfaces, which obscure soil identification, so that the actual identification of the soil is not determined for some portions of the site. The Dutchess soil series, the Cardigan soil series, and the Udorthents soil series all have a depth to water table of greater than 6 feet. Urban Land is described as areas covered by buildings, streets, parking lots and other impervious surfaces which obscure soil identification, so that the actual identification of the soil is not determined for some portions of the site. Therefore, the depth to water table for these areas is unknown and is assumed to be greater than 2 feet according to the Soil Survey.

According to the City of Poughkeepsie's Natural Resources Inventory (NRI) Report, the project site's bedrock geology is Graywacke and shale, which is considered less permeable than other types of bedrock found in the City of Poughkeepsie. The surficial geology of the site features bedrock outcrops. These rock outcrop areas are shown on the concept plan.

According to a geotechnical engineering report by Chazen for the previously approved site plan, groundwater was encountered in only one of eight borings.[2] These borings ranged in depth from 5.5 feet to 15.8 feet due to refusal at bedrock, with the exception of the northernmost boring in which refusal occurred at 2.5 feet. Thus, groundwater was generally deeper than 5.5 feet throughout most of the site. The report states that, "groundwater seepage into open excavations is not anticipated at this time, but that the contractor should be prepared to lower the groundwater table two feet below the base of excavations to provide a stable subgrade for construction activities and to maintain the integrity of the natural bearing soils."

If water is encountered above three feet below the surface, footings and footing drains will be designed in accordance with accepted construction practices to alleviate any problems associated with a high water table. With this practice, no significant impacts due to the presence of water above three feet below the surface are anticipated.

Rock encountered during the construction of the proposed residential development will be removed by mechanical methods (ripping), when possible. If blasting is determined to be necessary, all blasting operations will adhere to New York State and local ordinances governing the use of explosives. Proper program guidelines will be established between New York State, the City of Poughkeepsie and the blasting contractor prior to undertaking this activity. If blasting is required, it will be performed in accordance with New York State Department of Transportation (NYSDOT) Geotechnical Engineering Manual #22 "Procedures for Blasting" latest edition.

Based on this information, the proposed project will not result in any significant adverse impacts related to soils.

## 4.2 Water Resources

According to NYSDEC wetland and stream information available through GIS (Figure 6), the EAF Mapper, and Environmental Resource Map (Figure 7), there is a NYSDEC Class C stream, Fallkill Creek (Regulation 862-393) that travels along the western edge of the property, with approximately 200 linear feet located within the property boundary. Class C streams are not regulated by the NYSDEC. There are no regulated NYSDEC wetlands located on the property. There is a National Wetland Inventory (NWI) freshwater forested/shrub wetland (PFO1E) located on the western part of the site adjoining the area where the Fallkill Creek flows. The NWI identifies the Fallkill Creek as riverine (R3UBH).

Ecological Solutions conducted a site visit on October 15, 2020 to conduct a wetland delineation and habitat assessment. There are 0.776 acres of wetland (associated with the Fallkill Creek) located along the western site boundary. These wetlands are characterized as forested floodplain.

The Fall Kill is identified in the Natural Resources Inventory for the City of Poughkeepsie (referred to herein as the NRI Report) as a natural resource that supports or contributes to beautification, habitat, flood control, history, recreation and climate resilience. The project site is discussed throughout the document as a parcel, "that is undeveloped and contains streamside forests and wetlands within the floodplain. Due to the lack of channelization, this area floods readily without harming buildings or roads. It is an important

[2] *Geotechnical Engineering Report*, The Chazen Companies, September 14, 2005.

flood mitigation area as it is the only segment of the creek in the City of Poughkeepsie where flooding can naturally occur."[3] The Fall Kill is identified as a conservation priority in the NRI Report because it, "provides streamside habitats, helps to reduce and filter surface runoff, provides shading vegetation, and provides organic material that supports the food web and habitat structure of the stream."[4] Based on this rationale a priority conservation zone of 160 feet from the stream edge is recommended to increase habitat area and improve in-stream conditions.

Per Zoning Section 19-4.18, any structure or use of land for other than parking, recreation or open space shall be located not nearer than 30 feet to the top of the banks of the Fall Kill Creek. In addition, the City's PRD Zoning District (Zoning Section 19-3.18-4(h)), requires a buffer strip of at least 50 feet from the property line. The project complies with these requirements as an approximately 131 FT buffer is provided from the stream edge, which preserves the existing habitat without fragmentation. The proposed project will not impact wetlands and the development area is located approximately 146 – 160 feet away from the Creek. Furthermore, with the implementation of the Stormwater Pollution Prevention Plan (SWPPP) no significant adverse impacts to wetlands or to the NYSDEC Fallkill Creek will occur as part of the proposed action.

### 4.3 Floodplain

The property is identified in the NRI Report as one of the last remaining areas within the City of Poughkeepsie where the Fall Kill is not channelized and is permitted to flood naturally. This section of the Fall Kill is identified as a significant habitat area that provides important flood retention due to the undeveloped forested riparian buffer. The NRI Report explains that during flood events the Fall Kill may overflow into these wetlands, which are located within the flood hazard area or 100-year floodplain. According to the NRI Report, "flooding helps to slow down water, recharge groundwater and increase water quality by letting particulates settle out instead of being carried downstream."[5] According to FEMA Community Panel Number 36027C0358E information (effective 5/12/2012) available through GIS (Figure 6), an area abutting the Fallkill Creek is located within Zone AE (100-year floodplain) or special flood hazard area. The floodplain area is identified on the site plan. Some grading (no construction) may occur within the 100-year floodplain; therefore, a floodplain development permit will be sought. There will be a substantial buffer and distance between the proposed development and the Fall Kill and the implementation of the SWPPP will ensure that no significant adverse impacts to the floodplain will occur.

## 5.0 UTILITIES

### 5.1 Water and Wastewater

Municipal water and sewer service currently serve the project site. According to the New York State Department of Environmental Conservation (NYSDEC) *Design Standards for Intermediate Sized Wastewater Treatment Systems,* March 2014, the proposed project is expected to require water usage of

[3] The Environmental Cooperative at Vassar Barns. *Natural Resources Inventory for the City of Poughkeepsie*. 2019. Page 10.
[4] The Environmental Cooperative at Vassar Barns. *Natural Resources Inventory for the City of Poughkeepsie*. 2019. Page 73.
[5] The Environmental Cooperative at Vassar Barns. *Natural Resources Inventory for the City of Poughkeepsie*. 2019. Page 46.

11,410± gallons per day. It is anticipated that the City's municipal water system has capacity to serve the proposed use. The Grading and Utility plan (C140) shows a proposed water tap at the 8" water main available at Milton Street. The previous analysis, submitted for the previously proposed 120-unit project approved in 2006, indicated that sufficient pressure and capacity exists to serve the proposed 63-unit project. The Engineer's Report for the water system will be updated to identify current system conditions with regards to static and residual pressure. Sprinkler pressures and flow rates will be identified to assess flow capabilities at the proposed hydrants. Consultation with the Fire Chief will be undertaken at that time as well.

The Grading and Utility plan (C140) shows a sanitary sewer connection to the existing sanitary sewer main that passes through the site. The previous analysis, submitted for the previously proposed 120-unit project approved in 2006, indicated that sufficient capacity exists to serve the proposed 63-unit project. The Engineer's Report for the sanitary sewer will be updated to identify the conditions of the existing sewer main and its capacity during peak flow from the proposed connection point downstream along the Fallkill Creek through to Mansion Street.

**Table 4: Anticipated Water Usage/Wastewater Generation**

| Type of Use | Units | Gallons per Day | Anticipated Use/Generation |
|---|---|---|---|
| Apartment | Per bedroom | 110 | 31 one-bedroom = 3,410 gpd<br>32 two-bedroom units = 7,040 gpd |
| Pool | Per swimmer[1] | 10 | Approximately 720 SF pool = 48 swimmers<br>48 swimmers x 10 = 480 gpd |
| Pool House | Per swimmer | 10 | 48 swimmers x 10 = 480 gpd |
| | | | **Total = 11,410 gpd** |

[1] Based on NYS Sanitary Code Subpart 6-1, which requires a minimum of 15 SF of pool surface area per swimmer for a shallow pool.

### 5.2 Stormwater

The proposed project will require greater than one acre of disturbance and will require coverage under the State Pollutant Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Construction Activity. A SWPPP will be prepared in conformance with the most current New York State Stormwater Management Design Manual and New York State Standards and Specifications for Erosion and Sediment Control. The Grading and Utility Plan (C140) shows the stormwater being conveyed via swales and subsurface piping to an on-site stormwater bioretention basin. The treated water will outflow to the Fallkill Creek. Therefore, the proposed project is not expected to result in any adverse impacts in regard to stormwater.

## 6.0 TRAFFIC AND PARKING

### 6.1 Traffic

The project would feature two one-way access drives across from Fitchett Street and West Arnold Road. This would distribute traffic between the two access points, rather than concentrating traffic at any one location. Site traffic will then use Mansion Street to disperse travel to the north, south, east, and west. Other local roads likely to be used by site traffic include Corlies Avenue, Pershing Avenue, Innis Avenue, and Smith Street.

Dutchess County's PRL Bus Line is conveniently routed through the neighboring Mountain Brook Apartments. Several routes including the B, E and F travel along the East West Arterial, approximately ½ mile south of the site.

The *Trip Generation Manual, 10th Edition* published by the Institute of Transportation Engineers (ITE) is the industry-standard resource for estimating the traffic generated by various types of land uses and it was used to estimate the site generated trips for this project. Based on data for Multifamily Housing-Mid Rise (Land Use Code 221), the proposed project will generate 22 total trips in the weekday morning and 28 total trips in the evening peak periods, See Table 5. This is a minimum amount of traffic that will be added to the surrounding roadway network, representing about 1 trip every 3 to 10 minutes for the entering and exiting movements.

**Table 5: Estimated Traffic Generation**

| Land Use | AM Peak Hour Trips Entering the Site | AM Peak Hour Trips Exiting the Site | Total AM Peak Trips added to Adjacent Street Traffic | PM Peak Hour Trips Entering the Site | PM Peak Hour Trips Exiting the Site | Total PM Peak Trips added to Adjacent Street Traffic |
|---|---|---|---|---|---|---|
| Multifamily Housing (Mid-Rise) Land Use Code 221 | 6 | 16 | 22 | 17 | 11 | 28 |

Note: Analysis uses 63 dwelling units and the fitted curve equation in the ITE Manual to determine the AM and PM peak hour trip generation.

A traffic impact study was completed in 2005 for this project. At that time, the project consisted of 163 units and was estimated to generate 76 and 90 total trips for the weekday morning and afternoon peak periods. The traffic study concluded that the project at 163 units would have minimal impact as the studied intersections would continue to operate at acceptable levels of service. Therefore, at the currently proposed 63-units with reduced volumes this project will also have minimal traffic impacts. No improvements are needed.

Additionally, historic traffic volumes collected on roadways in the vicinity of the site were reviewed using NYSDOT's *Traffic Data Viewer*. The data shows that volumes for Mansion Street, Corlies Avenue, Innis Avenue, and Smith Street have decreased between 2012 and 2019 on the order of 1% to 15%. This is further indication that the surrounding roadways expected to serve the proposed project have the capacity available to accommodate the site traffic.

## 6.2 Parking

The proposed project is required to provide 123 parking spaces per Section 19-4.3 of the City's Zoning Ordinance. As shown in Table 6, the proposed project will provide 124 parking spaces.

**Table 6: Multifamily Buildings – Required and Proposed Parking**

| Required | | Proposed |
|---|---|---|
| **1.5 spaces for each 1-bedroom apartment**; | 31 one-bedroom units = 47 parking spaces | 124 parking spaces |
| **2.0 spaces for each 2-bedroom or larger apartment**; | 32 two-bedroom units = 64 parking spaces | |
| **Additional 10% of the total required spaces for visitor parking** | 10% of 111 parking spaces = 11.1 spaces | |
| **Total** | Total Required Parking = 123 parking spaces | |

# 7.0 VEGETATION AND WILDLIFE

## 7.1 Endangered, Threatened, and Rare Species and Significant Habitat

According to the NRI Report, the project site is home to several habitats, including upland shrubland, upland hardwood forest, upland mixed forest and hardwood swamp in addition to wetland and stream areas. Table 7 presents a brief description of these habitats based on information found in the report.

**Table 7: Habitat Types on the Project Site**

| Specific Habitat Type | Brief Description |
|---|---|
| Upland Shrubland | Open (nonforested) area with shrubs making up >20% of ground cover |
| Upland Hardwood Forest | Non-wetland forest dominated by hardwood trees (conifers make up 25% of canopy) |
| Upland Mixed Forest | Non-wetland forest with a mix of hardwoods and conifers (conifers make up 25-75% of canopy) |
| Hardwood Swamp | Wetland (identified by predominance of hydrophytic vegetation) dominated by trees and/or shrubs |

According to the NRI Report, "the Fall Kill is highly impacted by channelization and pollution, nonetheless it continues to serve as an important habitat for migratory fish species such as the American eel and river herring." The Upland Hardwood Forest, which currently dominates the site, is described as a habitat that is also important for cooling derived from shade, carbon sequestration, reducing stormwater runoff, and improvement of air quality. According to the NYSDEC Environmental Resource Map (Figure 7), there are known occurrences of the Blanding's Turtle (State listed threatened species) on or in the vicinity of the project site. In a January 21, 2020 letter the NYSDEC stated that they have no records of rare or state-listed animals or plants, or significant natural communities at the project site. The letter also explained that within 0.8 mile of the project site is a documented location of Blanding's Turtle (Emydoidea blandingii, state listed as Threatened). The turtles may travel 0.8 mile or more from documented locations. There is no NYSDEC Significant Natural Community identified on the project site.

According to the US Fish & Wildlife Service (USFWS) Information for Planning and Consultation[6] (Attachment B), there is potential for the Indiana Bat (endangered) on or in the vicinity of the project site.

The project site is identified in Map 4.4, "Habitat Envelopes and Potential Corridors" within the NRI Report as a Significant Habitat Area. The Report states that, "if new development in these areas cannot be avoided, it should be concentrated near the edges and near existing roads and other development so that as much habitat area as possible is preserved without fragmentation."[7]

Ecological Solutions, LLC completed a threatened and endangered species habitat suitability assessment on October 15, 2020 to assess the existing habitat on site, potential impacts, and possible mitigation for impacts and conservation of the listed species (see Attachment B). Table 8 identifies the habitat that was observed on the site:

**Table 8: Habitat Cover Types Identified on the Site**

| Description | Coverage (acres) | Disturbance (acres) |
|---|---|---|
| Fall Kill Creek | 1.0 | 0 |
| Rich Mesophytic Forest | 4.7 | 2.5 |
| Upland Meadow | 2.8 | 0 |

Rich Mesophytic Forest: The site slopes generally contain rich mesophytic forest upslope of the Fallkill Creek. The dominant trees include a mixture of the following: red maple (Acer rubrum), white ash Fraxinus americana), red oak (Quercus rubra), and black oak (Q. velutina). There is a subcanopy stratum of small trees and tall shrubs dominated by flowering dogwood (Cornus florida), red maple, and black cherry (Prunus serotina). The overstory trees are generally large in the 12 to 24+ inch range with several larger oaks and other tree species on the site. Debris/trash is located in areas throughout the forest.

Fallkill Creek: The Fallkill Creek and associated wetland fringe is located along and is part of the western site boundary. The wetland fringe associated with the Creek is forested floodplain.

Upland Meadow: Within the forested area are openings or pockets upland meadow.

**Blanding's Turtle**

Blanding's turtles are a mobile species that utilize a variety of wetland and upland habitats for nesting, foraging, overwintering, and drought refuges. Characteristics that indicate core habitat are: shrubby pools/ponds with permanent or intermittent hydroperiod with little flow through; high water depths of 0.5–4.0 feet; tree canopy open or absent; tree fringe present; and a dense cover of shrubs, forbs, lemnids or nymphaeids, with coarse and fine organic debris. In addition to core wetlands it is known that Blanding's turtles use a complex of habitat types during different periods in their life cycle. According to the NYSDEC it is a semi-aquatic species that uses a variety of wetland and upland habitats. Wetland habitat usage by Blanding's turtles includes different types of freshwater systems such as emergent marshes, woodland pools, red maple swamps, buttonbush kettle-holes, ponds including excavated ponds, lakes, rivers, and streams. Juvenile Blanding's are normally associated with shallower water and more densely

[6] Note there is no federal action involved so a formal consultation under Section 7 is not required.
[7] The Environmental Cooperative at Vassar Barns. *Natural Resources Inventory for the City of Poughkeepsie.* 2019. Page 221 or page 85 of Appendix A.

vegetated habitats as compared to that of adults. Open meadows especially with Hoosic gravelly soils are preferred nesting habitats. Upland forest area provides shade during turtle travel and migration.

Based on information gathered during the Habitat Assessment, there is no core habitat on/or immediately adjacent to the site. There are no mapped Hoosic soils on the site. Hoosic soils are associated with turtle nesting when covered by low growing sparsely vegetated upland meadow/agriculture area. The Fallkill Creek may have been utilized in the distant past by this species in some capacity for travel and dispersal but today is unlikely due to the extensive development in this area of the City of Poughkeepsie and lack of potential habitat as a destination. There are no impacts to this species since there is no potential habitat on the site or in the vicinity of the site.

**Indiana Bats**

The bats typically hibernate in caves/mines in the winter and roosts under bark or in tree crevices in the spring, summer, and fall. The hibernacula - Williams Lake Complex is about 10 miles from the site. Suitable potential summer roosting habitat is characterized by trees (dead, dying, or alive) or snags with exfoliating or defoliating bark, or containing cracks or crevices that could potentially be used by Indiana bats as a roost. The minimum diameter of roost trees observed to date is 2.5 inches for males and 4.3 inches for females. However, maternity colonies generally use trees greater than or equal to 9 inches dbh. Overall, roost tree structure appears to be more important to Indiana bats than a particular tree species or habitat type. Females appear to be more habitat specific than males presumably because of the warmer temperature requirements associated with gestation and rearing of young. As a result, they are generally found at lower elevations than males may be found. Roosts are warmed by direct exposure to solar radiation, thus trees exposed to extended periods of direct sunlight are preferred over those in shaded areas. However, shaded roosts may be preferred in very hot conditions. As larger trees afford a greater thermal mass for heat retention, they appear to be preferred over smaller trees. Streams associated with floodplain forests, and impounded water bodies (ponds, wetlands, reservoirs, etc.) where abundant supplies of flying insects are likely found provide preferred foraging habitat for Indiana bats, some of which may fly up to 2-5 miles from upland roosts on a regular basis. Indiana bats also forage within the canopy of upland forests, over clearings with early successional vegetation (e.g., old fields), along the borders of croplands, along wooded fencerows, and over farm ponds in pastures. While Indiana Bats appear to forage in a wide variety of habitats, they seem to tend to stay fairly close to tree cover. The rich mesophytic forest described in Table 8 occupies about 4.7 acres of the 8.7 acres site. This forested area contains many large trees in the 24+ inch dbh range with some containing holes and crevices that could provide foraging habitat for this species.

Construction of the project will occur over a 6 month - 1 year period. Activities during construction will include grading and earth-moving, building construction, addition of electric lights, increasing impervious surface area and altering site drainage will occur. The project may result in direct and indirect effects on Indiana bats by altering the quality and quantity of their summer habitat including removing trees, generating noise during construction, and creating visual disturbances. There will be an increase in vehicular traffic, parking, and maintenance activities which are anticipated effects from construction and operation of the project to bats.

Since the USFWS list of species for the site indicated that the site is within the range of the threatened/endangered bat, the Applicant will incorporate the following conservation measures to ensure no impact occurs to this species.

Effects from Tree Clearing: Clearing activities could have an adverse impact on foraging and roosting activities. Such impacts will be avoided by conducting all clearing during winter months when bats will be in hibernation off site. Proposed clearing for the project will remove ±2.5 acres of forested habitat. The project will avoid impacts by:

- Implementing tree clearing for site activities during timeframes when bats are not resident on the site October 1 – to March 31 or unless approved by the NYSDEC outside this timeframe, and

- Prior to clearing, the limits of proposed clearing will be clearly demarcated on the site with orange construction fencing (or similar) to prevent inadvertent overclearing of the site since about 2.3 acres of forested habitat will remain.

Effects from Lighting: Site lighting is anticipated after development of the site. To avoid impacts to foraging or roosting bats street lighting on the site will use City of Poughkeepsie Planning Board approved light fixtures that have tops that direct light down to minimize light pollution and not interfere with potential bat foraging activities. These measures will result in minimizing potential adverse effects to Indiana bats so that adverse effects to this species are deemed unlikely.

As explained in earlier sections, a large buffer (131 feet) and distance (146 – 160 feet away) will separate the Fall Kill Creek from the proposed development. Based on the information provided above, no significant adverse impacts will occur to vegetation and wildlife. This information will be provided to NYSDEC.

## 8.0 HISTORIC AND ARCHEOLOGICAL RESOURCES

According to the NYS Office of Parks, Recreation, and Historic Preservation (NYSOPRHP) Cultural Resource Information System (CRIS) mapping (Figure 8), the project site does not contain and is not adjacent to any National or State Historic Register sites or any sites that were determined to be eligible for listing on the National or State Historic Register. The CRIS mapping indicates that the project site is partially located within a known archeologically sensitive area. Consultation will be undertaken with NYSOPRHP and project information and plans will be uploaded to the CRIS system for their review.

# FULL ENVIRONMENTAL ASSESSMENT FORM (FEAF) PART 1 FORM

## Instructions for Completing Part 1

**Part 1 is to be completed by the applicant or project sponsor.** Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1is accurate and complete.

**A. Project and Applicant/Sponsor Information.**

| | | |
|---|---|---|
| Name of Action or Project:<br>Highview at the Fallkill Creek | | |
| Project Location (describe, and attach a general location map):<br>Milton Street, City of Poughkeepsie, Dutchess County, New York | | |
| Brief Description of Proposed Action (include purpose or need):<br>The Applicant and owner, Maselo Realty, LLC, is proposing the rezoning of an 8.713-acre tax parcel on Milton Street in the City of Poughkeepsie from Medium Low-Density Residential (R-2) to Planned Residential Development (PRD) for the construction of a 63-apartment unit clustered multifamily development within two buildings with two accesses off Milton Street. The parcel is identified as parcel number 131300-6162-73-623227 on the City of Poughkeepsie Tax Map. The Town of Poughkeepsie abuts the eastern edge of the property. The parcel is currently undeveloped and zoned for Medium Low-Density Residential (R-2) within which multifamily development is not permitted. Therefore, to facilitate the proposed project, the Applicant is petitioning the City for a rezoning of the property from R-2 to PRD by the Common Council. Upon completion of the rezoning, the Applicant will seek site plan approval from the Planning Board. | | |
| Name of Applicant/Sponsor:<br>Maselo Realty, LLC (Nate Abikhzer) | Telephone: 845-341-7395<br>E-Mail: nateabikhzer@gmail.com | |

**B. Government Approvals**

**B. Government Approvals, Funding, or Sponsorship.** ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

| Government Entity | If Yes: Identify Agency and Approval(s) Required | Application Date (Actual or projected) |
|---|---|---|
| a. City Counsel, Town Board, or Village Board of Trustees ☑Yes ☐No | City of Poughkeepsie Common Council - Rezoning to PRD | Oct 2019 |
| b. City, Town or Village Planning Board or Commission ☑Yes ☐No | City of Poughkeepsie Planning Board - Site Plan Approval | Oct 2019 |
| c. City, Town or Village Zoning Board of Appeals ☑Yes ☐No | City of Poughkeepsie Zoning Board of Appeals - Area Variances | To be determined |
| d. Other local agencies ☑Yes ☐No | City Engineering Dept. - Curb Cut approval; City Zoning Administrator - Floodplain development | To be determined |
| e. County agencies ☑Yes ☐No | Dutchess County Planning Department - GML 239m Referral; Health Department - Utility Conn. | To be determined |
| f. Regional agencies ☐Yes ☑No | | |
| g. State agencies ☑Yes ☐No | NYS Department of Environmental Conservation GP-0-15-002 | To be determined |
| h. Federal agencies ☐Yes ☑No | | |

i. Coastal Resources.

*i.* Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes ☑No

*ii.* Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes ☑No

*iii.* Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No

**C. Planning and Zoning**

**C.1. Planning and zoning actions.**

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes ☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

**C.2. Adopted land use plans.**

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes ☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☐Yes ☑No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway; Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☐Yes ☐No

If Yes, identify the plan(s):

Hudson River National Heritage Area; Fall Kill Watershed Management Plan, October 2006; Dutchess County Hudson River Valley Greenway Compact Plan, 2000

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No

If Yes, identify the plan(s):

**C.3. Zoning**

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
The site is zoned for medium low-density residential (R-2).

b. Is the use permitted or allowed by a special or conditional use permit? ☐ Yes ☐ No
Not applicable. Applicant is seeking a rezoning to Planned Residential Development District.

c. Is a zoning change requested as part of the proposed action? ☑ Yes ☐ No
If Yes,
*i.* What is the proposed new zoning for the site? Rezoning to Planned Residential Development District

**C.4. Existing community services.**

a. In what school district is the project site located? Poughkeepsie City School District

b. What police or other public protection forces serve the project site?
City of Poughkeepsie Police Department with support from Dutchess County Sheriff's Department and NYS Police

c. Which fire protection and emergency medical services serve the project site?
City of Poughkeepsie Fire Department

d. What parks serve the project site?
Mansion Square Park

**D. Project Details**

**D.1. Proposed and Potential Development**

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Residential apartments

b. a. Total acreage of the site of the proposed action? 8.713 acres
b. Total acreage to be physically disturbed? 3.7 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 8.713 acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
*i.* If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☐ Yes ☑ No
If Yes,
*i.* Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
*ii.* Is a cluster/conservation layout proposed? ☐ Yes ☐ No
*iii.* Number of lots proposed? _____
*iv.* Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will the proposed action be constructed in multiple phases? ☐ Yes ☑ No
*i.* If No, anticipated period of construction: 12 months
*ii.* If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

f. Does the project include new residential uses? ☑ Yes ☐ No

If Yes, show numbers of units proposed.

| | One Family | Two Family | Three Family | Multiple Family (four or more) |
|---|---|---|---|---|
| Initial Phase | _____ | _____ | _____ | 63 Apartments |
| At completion of all phases | _____ | _____ | _____ | _____ |

g. Does the proposed action include new non-residential construction (including expansions)? ☐ Yes ☑ No

If Yes,

*i.* Total number of structures _____

*ii.* Dimensions (in feet) of largest proposed structure: _____height; _____width; and _____ length

*iii.* Approximate extent of building space to be heated or cooled: _____ square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☐ Yes ☑ No

If Yes,

*i.* Purpose of the impoundment: _____

*ii.* If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☐ Other specify:

_____

*iii.* If other than water, identify the type of impounded/contained liquids and their source.

_____

*iv.* Approximate size of the proposed impoundment. Volume: _____ million gallons; surface area: _____ acres

*v.* Dimensions of the proposed dam or impounding structure: _____ height; _____ length

*vi.* Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete):

_____

**D.2. Project Operations**

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite) ☐ Yes ☑ No

If Yes:

*i* .What is the purpose of the excavation or dredging? _____

*ii.* How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards): _____
- Over what duration of time? _____

*iii.* Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

_____

_____

i*v.* Will there be onsite dewatering or processing of excavated materials? ☐ Yes ☐ No

If yes, describe. _____

_____

*v.* What is the total area to be dredged or excavated? _____acres

*vi.* What is the maximum area to be worked at any one time? _____ acres

*vii.* What would be the maximum depth of excavation or dredging? _____ feet

*viii.* Will the excavation require blasting? ☐ Yes ☐ No

*ix.* Summarize site reclamation goals and plan: _____

_____

_____

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐ Yes ☑ No

If Yes:

*i.* Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): _____

_____

*ii.* Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

_____

_____

_____

_____

*iii.* Will the proposed action cause or result in disturbance to bottom sediments? ☐ Yes ☐ No

If Yes, describe: _____

*iv.* Will the proposed action cause or result in the destruction or removal of aquatic vegetation? ☐ Yes ☐ No

If Yes:

- acres of aquatic vegetation proposed to be removed: _____
- expected acreage of aquatic vegetation remaining after project completion: _____
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access): _____

_____

- proposed method of plant removal: _____
- if chemical/herbicide treatment will be used, specify product(s): _____

*v.* Describe any proposed reclamation/mitigation following disturbance: _____

_____

c. Will the proposed action use, or create a new demand for water? ☑ Yes ☐ No

If Yes:

*i.* Total anticipated water usage/demand per day: 11,410 gallons/day

*ii.* Will the proposed action obtain water from an existing public water supply? ☑ Yes ☐ No

If Yes:

- Name of district or service area: City of Poughkeepsie
- Does the existing public water supply have capacity to serve the proposal? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No
- Do existing lines serve the project site? ☑ Yes ☐ No

*iii.* Will line extension within an existing district be necessary to supply the project? ☐ Yes ☑ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

_____

- Source(s) of supply for the district: _____

*iv.* Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☑ No

If, Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- Proposed source(s) of supply for new district: _____

*v.* If a public water supply will not be used, describe plans to provide water supply for the project: _____

_____

*vi.* If water supply will be from wells (public or private), what is the maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑ Yes ☐ No

If Yes:

*i.* Total anticipated liquid waste generation per day: 11,410 gallons/day

*ii.* Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each): _____

Sanitary wastewater

_____

*iii.* Will the proposed action use any existing public wastewater treatment facilities? ☑ Yes ☐ No

If Yes:

- Name of wastewater treatment plant to be used: City of Poughkeepsie Sewage Treatment Plant
- Name of district: City of Poughkeepsie
- Does the existing wastewater treatment plant have capacity to serve the project? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No

- Do existing sewer lines serve the project site? ☑ Yes ☐ No
- Will a line extension within an existing district be necessary to serve the project? ☐ Yes ☑ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

*iv.* Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐ Yes ☑ No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

*v.* If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge or describe subsurface disposal plans):

_____

*vi.* Describe any plans or designs to capture, recycle or reuse liquid waste: _____

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☑ Yes ☐ No

If Yes:

*i.* How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or 1.82 acres (impervious surface)

_____ Square feet or 8.713 acres (parcel size)

*ii.* Describe types of new point sources. Subsurface piping and outflow.

*iii.* Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

Stormwater will be conveyed via swales and subsurface piping to an on-site stormwater bioretention basin. The treated water will outflow to the Fallkill Creek.

- If to surface waters, identify receiving water bodies or wetlands: Fallkill Creek
- Will stormwater runoff flow to adjacent properties? ☐ Yes ☑ No

*iv.* Does the proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☑ Yes ☐ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☑ Yes ☐ No

If Yes, identify:

*i.* Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

*ii.* Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

Temporary impacts during construction.

*iii.* Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

Natural gas, boilers

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐ Yes ☑ No

If Yes:

*i.* Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐ Yes ☐ No

*ii.* In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide ($CO_2$)
- _____Tons/year (short tons) of Nitrous Oxide ($N_2O$)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride ($SF_6$)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

*i.* Estimate methane generation in tons/year (metric): _____

*ii.* Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

_____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

_____

_____

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☐Yes ☑No

If Yes:

*i.* When is the peak traffic expected (Check all that apply): ☐ Morning ☐ Evening ☐Weekend ☐ Randomly between hours of _____ to _____.

*ii.* For commercial activities only, projected number of truck trips/day and type (e.g., semi trailers and dump trucks): _____

_____

*iii.* Parking spaces: Existing _____ Proposed _____ Net increase/decrease _____

*iv.* Does the proposed action include any shared use parking? ☐Yes ☐No

*v.* If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:

_____

*vi.* Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☐Yes ☐No

*vii* Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☐Yes ☐No

*viii*. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☐Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☐Yes ☑No

If Yes:

*i.* Estimate annual electricity demand during operation of the proposed action: _____

_____

*ii.* Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):

_____

*iii.* Will the proposed action require a new, or an upgrade, to an existing substation? ☐Yes ☐No

l. Hours of operation. Answer all items which apply.

*i.* During Construction:

- Monday - Friday: Approximately 6:30 AM to 9:00 PM
- Saturday: Approximately 6:30 AM to 9:00 PM
- Sunday: None
- Holidays: None

*ii.* During Operations:

- Monday - Friday: 24 hours
- Saturday: 24 hours
- Sunday: 24 hours
- Holidays: 24 hours

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☑ Yes ☐ No

If yes:

*i.* Provide details including sources, time of day and duration:

Temporary noise generated during construction activities will be limited to weekdays 6:30 AM to 9 PM.

*ii.* Will the proposed action remove existing natural barriers that could act as a noise barrier or screen? ☑ Yes ☐ No

Describe: The majority of the site is undeveloped wooded area. Approximately 2.246 acres will be cleared; Landscaping pursuant to Zoning Ordinance requirements will be implemented.

n. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

*i.* Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

To be determined

*ii.* Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☑ Yes ☐ No

Describe: The majority of the site is undeveloped wooded area. Approximately 2.246 acres will be cleared; Lighting pursuant to Zoning Ordinance requirements will be implemented.

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

*i.* Product(s) to be stored _____

*ii.* Volume(s) _____ per unit time _____ (e.g., month, year)

*iii.* Generally, describe the proposed storage facilities:_____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☑ No

If Yes:

*i.* Describe proposed treatment(s):

*ii.* Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☐ Yes ☑ No

If Yes:

*i.* Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: _____ tons per _____ (unit of time)
- Operation : _____ tons per _____ (unit of time)

*ii.* Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: _____
- Operation: _____

*iii.* Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: _____
- Operation: _____

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

*i.* Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

*ii.* Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

*iii.* If landfill, anticipated site life: _____ years

t. Will the proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

*i.* Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

_____

_____

*ii.* Generally describe processes or activities involving hazardous wastes or constituents: _____

_____

_____

*iii.* Specify amount to be handled or generated _____ tons/month

*iv.* Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

_____

_____

*v.* Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

_____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

_____

_____

**E. Site and Setting of Proposed Action**

**E.1. Land uses on and surrounding the project site**

a. Existing land uses.

*i.* Check all uses that occur on, adjoining and near the project site.

☑ Urban ☑ Industrial ☑ Commercial ☑ Residential (suburban) ☐ Rural (non-farm)

☐ Forest ☐ Agriculture ☑ Aquatic ☑ Other (specify): public services

*ii.* If mix of uses, generally describe:

_____

_____

b. Land uses and covertypes on the project site.

| Land use or Covertype | Current Acreage | Acreage After Project Completion | Change (Acres +/-) |
|---|---|---|---|
| • Roads, buildings, and other paved or impervious surfaces | 0.0 | 1.792 | +1.792 |
| • Forested | 4.727 | 2.481 | -2.246 |
| • Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural) | 2.789 | 3.292 | +0.503 |
| • Agricultural (includes active orchards, field, greenhouse etc.) | 0.0 | 0.0 | 0.0 |
| • Surface water features (lakes, ponds, streams, rivers, etc.) | 0.071 | 0.071 | 0.0 |
| • Wetlands (freshwater or tidal) | 0.776 | 0.776 | 0.0 |
| • Non-vegetated (bare rock, earth or fill) | 0.098 | 0.049 | -0.049 |
| • Other Describe: _____ _____ | | | |

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☑ No

*i.* If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☐ Yes ☑ No

If Yes,

*i.* Identify Facilities:

_____

_____

e. Does the project site contain an existing dam? ☐ Yes ☑ No

If Yes:

*i.* Dimensions of the dam and impoundment:

- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

*ii.* Dam's existing hazard classification: _____

*iii.* Provide date and summarize results of last inspection:

_____

_____

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☑ No

If Yes:

*i.* Has the facility been formally closed? ☐ Yes ☐ No

- If yes, cite sources/documentation: _____

*ii.* Describe the location of the project site relative to the boundaries of the solid waste management facility:

_____

_____

*iii.* Describe any development constraints due to the prior solid waste activities: _____

_____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐ Yes ☑ No

If Yes:

*i.* Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

_____

_____

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☐ Yes ☑ No

If Yes:

*i.* Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☐ Yes ☑ No

☐ Yes – Spills Incidents database Provide DEC ID number(s): _____

☐ Yes – Environmental Site Remediation database Provide DEC ID number(s): _____

☐ Neither database

*ii.* If site has been subject of RCRA corrective activities, describe control measures:_____

_____

_____

*iii.* Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☐ Yes ☑ No

If yes, provide DEC ID number(s): _____

*iv.* If yes to (i), (ii) or (iii) above, describe current status of site(s):

_____

_____

*v.* Is the project site subject to an institutional control limiting property uses? ☐ Yes ☑ No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

**E.2. Natural Resources On or Near Project Site**

a. What is the average depth to bedrock on the project site? <1 ft to > 5 feet

b. Are there bedrock outcroppings on the project site? ☑ Yes ☐ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? 1 %

c. Predominant soil type(s) present on project site:

| | |
|---|---|
| Dutchess Cardigan Complex (DwC) | 93.6 % |
| Dutchess Cardigan Urban (DxC) | 5.5 % |
| Udorthents | 0.9 % |

d. What is the average depth to the water table on the project site? Average: > 2 ft to > 6 feet

e. Drainage status of project site soils:
☑ Well Drained: 99 % of site
☑ Moderately Well Drained: 1 % of site
☐ Poorly Drained _____% of site

f. Approximate proportion of proposed action site with slopes:
☑ 0-10%: note % of site
☑ 10-15%: note % of site
☑ 15% or greater: note % of site
Note: See Section 4.

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.

*i.* Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☑ Yes ☐ No

*ii.* Do any wetlands or other waterbodies adjoin the project site? ☑ Yes ☐ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

*iii.* Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☑ Yes ☐ No

*iv.* For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name 862-393 Classification C
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name Federal Waters, Federal Waters, Federal Waters,... Approximate Size 0.776 acres
- Wetland No. (if regulated by DEC) _____

*v.* Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☑ Yes ☐ No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____
Name - Pollutants - Uses:Fall Kill and tribs – Nutrients – Recreation;Aquatic Life

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100-year Floodplain? ☑ Yes ☐ No

k. Is the project site in the 500-year Floodplain? ☐ Yes ☑ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:
*i.* Name of aquifer: _____

m. Identify the predominant wildlife species that occupy or use the project site:
Common Dutchess County species

n. Does the project site contain a designated significant natural community? ☐ Yes ☑ No
If Yes:
*i.* Describe the habitat/community (composition, function, and basis for designation):
*ii.* Source(s) of description or evaluation:
*iii.* Extent of community/habitat:
- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☑ Yes ☐ No

If Yes:
*i.* Species and listing (endangered or threatened):
Blanding's Turtle (NYSDEC) Indiana Bat (USFWS)

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐ Yes ☑ No

If Yes:
*i.* Species and listing:

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐ Yes ☑ No
If yes, give a brief description of how the proposed action may affect that use:

**E.3. Designated Public Resources On or Near Project Site**

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐ Yes ☑ No
If Yes, provide county plus district name/number:

b. Are agricultural lands consisting of highly productive soils present? ☐ Yes ☑ No
*i.* If Yes: acreage(s) on project site?
*ii.* Source(s) of soil rating(s):

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐ Yes ☑ No
If Yes:
*i.* Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature
*ii.* Provide brief description of landmark, including values behind designation and approximate size/extent:

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐ Yes ☑ No
If Yes:
*i.* CEA name:
*ii.* Basis for designation:
*iii.* Designating agency and date:

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? ☐ Yes ☑ No

If Yes:

*i.* Nature of historic/archaeological resource: ☐ Archaeological Site ☐ Historic Building or District

*ii.* Name: _____

*iii.* Brief description of attributes on which listing is based:

_____

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☑ Yes ☐ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

*i.* Describe possible resource(s): _____

*ii.* Basis for identification: _____

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☑ Yes ☐ No

If Yes:

*i.* Identify resource: See Figure 9.

*ii.* Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): See Figure 9.

*iii.* Distance between project and resource: See Figure 9 miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

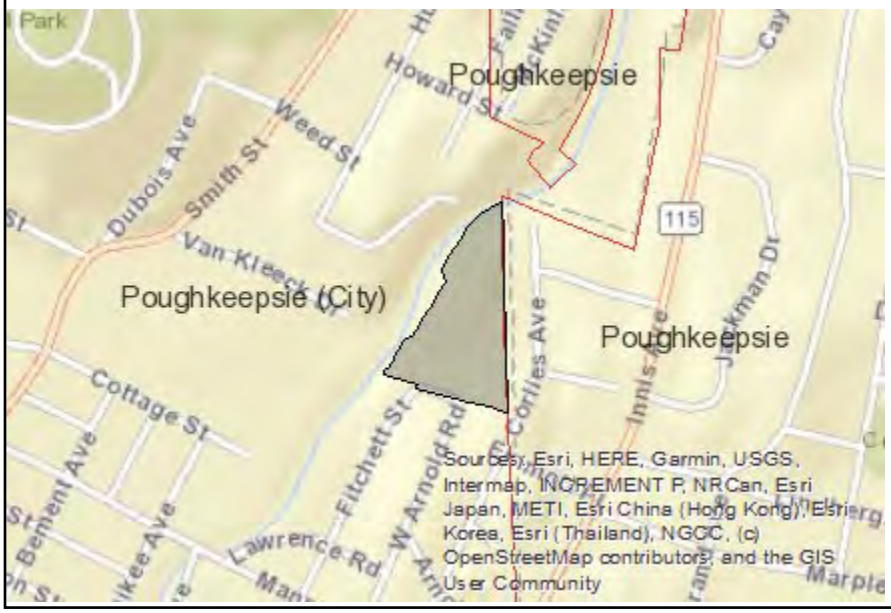
*i.* Identify the name of the river and its designation: _____

*ii.* Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

**F. Additional Information**

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.



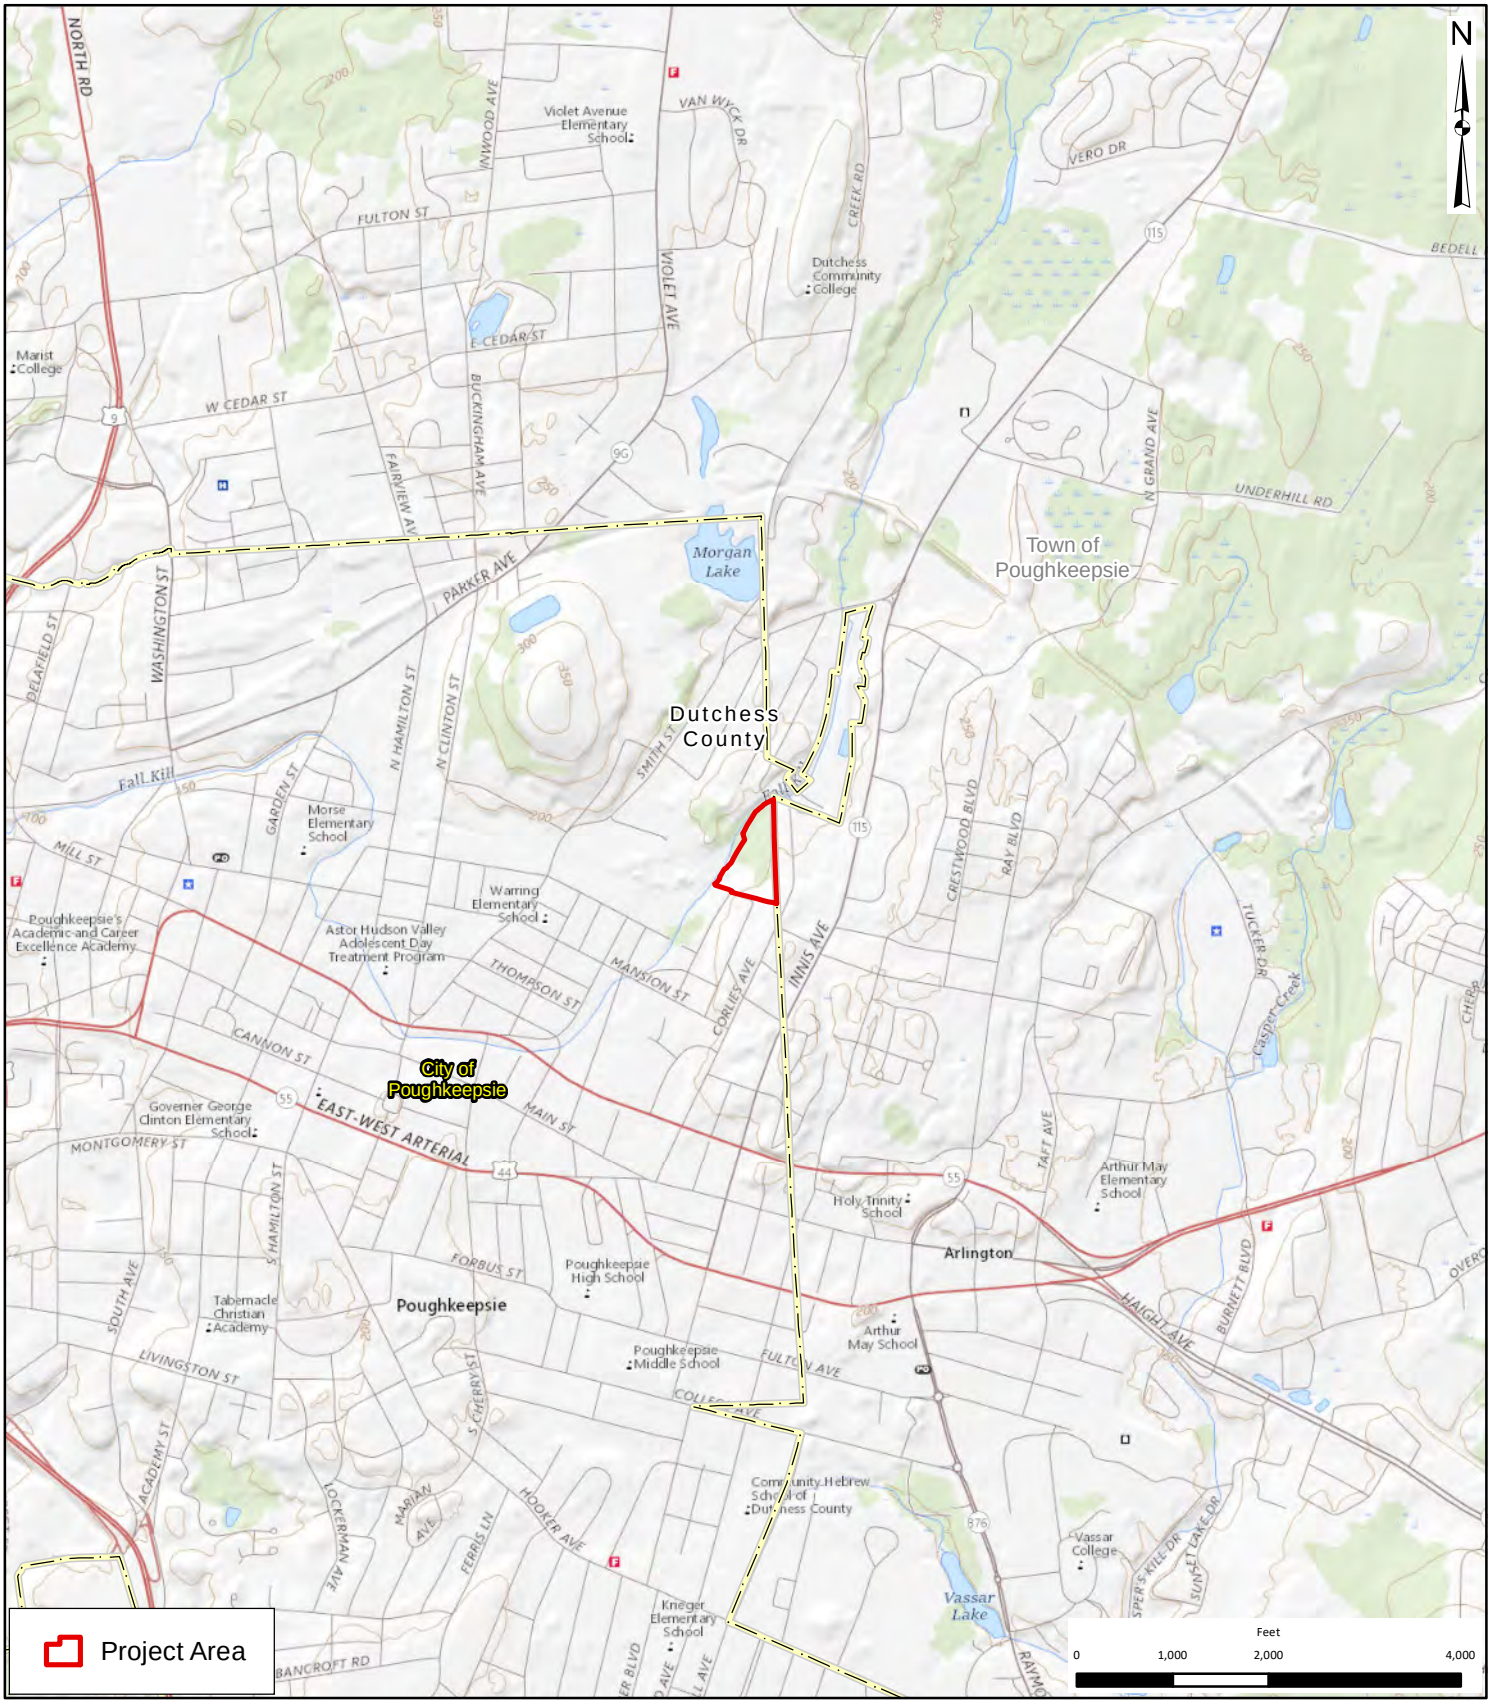
**G. Verification**

I certify that the information provided is true to the best of my knowledge.

Applicant/Sponsor Name Maselo Realty, LLC Date December 2, 2020

Signature Caren LoBrutto, Agent for Applicant, Chazen Companies Title Senior Planner

**PRINT FORM**



**Disclaimer:** The EAF Mapper is a screening tool intended to assist project sponsors and reviewing agencies in preparing an environmental assessment form (EAF). Not all questions asked in the EAF are answered by the EAF Mapper. Additional information on any EAF question can be obtained by consulting the EAF Workbooks. Although the EAF Mapper provides the most up-to-date digital data available to DEC, you may also need to contact local or other data sources in order to obtain data not provided by the Mapper. Digital data is not a substitute for agency determinations.

## Councilwoman Flowers Letter of Support

# THE CITY OF POUGHKEEPSIE
## NEW YORK

August 10, 2020

Ms. Natalie Quinn, Planning Director
City of Poughkeepsie
62 Civic Center Plaza
Poughkeepsie, New York 12601

*Re: Highview II: Proposed 64-Unit Residential Development (Maselo Realty LLC)*
*Milton Street (Tax Parcel 131300-6162-73-623227), City of Poughkeepsie*

Dear Ms. Quinn:

I am writing to provide my support for Maselo Realty, LLC's application for a proposed rezoning of the Milton Street property to a Planned Residential Development (PRD) Zoning District to facilitate the construction of a 64-apartment unit clustered multifamily development within two buildings off Milton Street.

The Applicant, represented by Simon and Nate Abikzer, have undertaken community outreach for this project which involved two community meetings that I hosted. One meeting was held at City Hall, Common Council Chambers in which you attended and the other meeting was held at 505 Main Street, Public Safety Bldg. Renderings of the proposed project were shared with the residents who live near the proposed project and many of them asked questions about the project and voiced their concerns.

The meetings were well advertised. I hand delivered flyers to all the residents on Corlies Ave, W. Arnold Road, Fitchett Street and Lawrence Road, explaining the proposed project and inviting them to the meetings. I also sent text messages and call residents who I had contact info, reminding them of the meeting so due diligence was made to inform all residents of the project. Residents of the area who were able to attend were very vocal of what they wanted and not want to see. The exchange of ideas resulted in the current site plan design. The applicant assured the residents that they will be "good neighbors" and ensure that the two buildings will have minimum visibility so it will not infringe on the existing neighborhood.

Based on the fact that the project will be no more than 64 units, the feedback from the residents who attended the meetings and the applicant's genuine efforts in addressing the concerns of the residents in the immediate area, I am in support of the proposed rezoning of the Milton Street property and construction of the 64 apartment unit.

Please feel free to contact me to discuss further if needed.

Thank you

Sincerely,

Councilperson Yvonne Flowers

Caren LoBrutto
Chazen Companies
21 Fox Street
Poughkeepsie, NY 12601

Re: Highview II
County: Dutchess Town/City: City of Poughkeepsie

Dear Ms. LoBrutto:

In response to your recent request, we have reviewed the New York Natural Heritage Program database with respect to the above project.

We have no records of rare or state-listed animals or plants, or significant natural communities at the project site.

Within 0.8 mile of the project site is a documented location of **Blanding's turtle** (*Emydoidea blandingii*, state listed as Threatened). The turtles may travel 0.8 mile or more from documented locations. For information about any permit considerations for your project, please contact the Permits staff at the NYSDEC Region 3 Office, Division of Environmental Permits, at dep.r3@dec.ny.gov.

For most sites, comprehensive field surveys have not been conducted. We cannot provide a definitive statement on the presence or absence of all rare or state-listed species or significant natural communities. Depending on the nature of the project and the conditions at the project site, further information from on-site surveys or other resources may be required to fully assess impacts on biological resources.

For information regarding other permits that may be required under state law for regulated areas or activities (e.g., regulated wetlands), please contact the Permits staff at the NYSDEC Region 3 Office as described above.

Sincerely,

Andrea Chaloux

# IPaC resource list

**We are experiencing intermittent network issues causing large delays in species lists and letters. This is a known issue and we are working to fix it. Thank you for your patience.**

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

NOT FOR CONSULTATION

## Location

Dutchess County, New York

## Local office

New York Ecological Services Field Office

(607) 753-9334
(607) 753-9699

# Endangered species

**This resource list is for informational purposes only and does not constitute an analysis of project level impacts.**

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population, even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species

[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

NOT FOR CONSULTATION

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information.
2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

## Mammals

| NAME | STATUS |
|---|---|
| Indiana Bat Myotis sodalis<br>There is **final** critical habitat for this species. Your location is outside the critical habitat.<br>https://ecos.fws.gov/ecp/species/5949 | Endangered |

# Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

THERE ARE NO CRITICAL HABITATS AT THIS LOCATION.

# Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act

[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

| NAME | BREEDING SEASON (IF A BREEDING SEASON IS INDICATED FOR A BIRD ON YOUR LIST, THE BIRD MAY BREED IN YOUR PROJECT AREA |

# Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ “Proper Interpretation and Use of Your Migratory Bird Report” before using or attempting to interpret this report.

**Probability of Presence (■)**

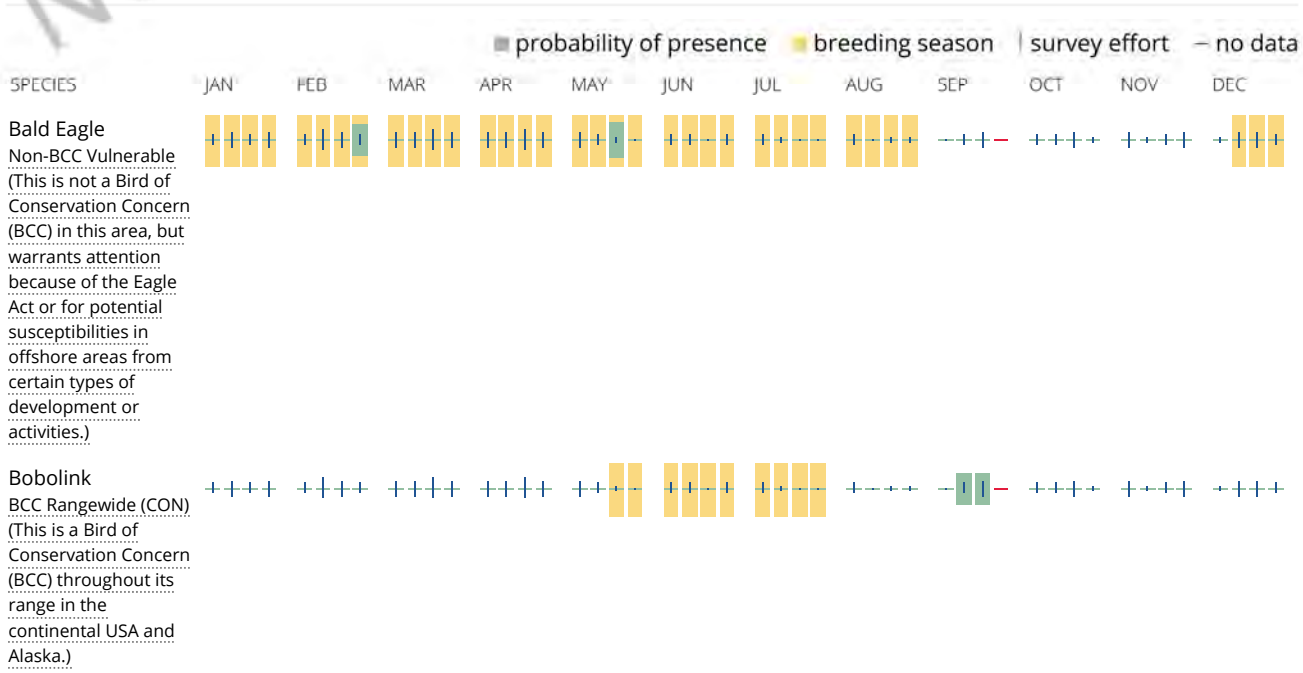
Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

**Breeding Season** (▪)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.



**Survey Effort** (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

**No Data** (–)
A week is marked as having no data if there were no survey events for that week.

**Survey Timeframe**
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

NOT FOR CONSULTATION

Canada Warbler
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Prairie Warbler
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Red-headed Woodpecker
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Wood Thrush
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

NOT FOR CONSULTATION

**Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.**

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures and/or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

**What does IPaC use to generate the migratory birds potentially occurring in my specified location?**

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

**What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?**

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

**How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?**

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

**What are the levels of concern for migratory birds?**

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

**Details about birds that are potentially affected by offshore projects**

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

**What if I have eagles on my list?**

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

**Proper Interpretation and Use of Your Migratory Bird Report**

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ “What does IPaC use to generate the migratory birds potentially occurring in my specified location”. Please be aware this report provides the “probability of presence” of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the “no data” indicator (a red horizontal bar). A high

NOT FOR CONSULTATION

survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

# Facilities

## National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS AT THIS LOCATION.

## Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

## Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

This location overlaps the following wetlands:

FRESHWATER FORESTED/SHRUB WETLAND

PFO1E

RIVERINE

R3UBH

A full description for each wetland code can be found at the National Wetlands Inventory website

**Data limitations**

NOT FOR CONSULTATION

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

**Data exclusions**

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

**Data precautions**

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

NOT FOR CONSULTATION

# THE CITY OF POUGHKEEPSIE
## NEW YORK

August 10, 2020

Ms. Natalie Quinn, Planning Director
City of Poughkeepsie
62 Civic Center Plaza
Poughkeepsie, New York 12601

*Re: Highview II: Proposed 64-Unit Residential Development (Maselo Realty LLC)*
*Milton Street (Tax Parcel 131300-6162-73-623227), City of Poughkeepsie*

Dear Ms. Quinn:

I am writing to provide my support for Maselo Realty, LLC's application for a proposed rezoning of the Milton Street property to a Planned Residential Development (PRD) Zoning District to facilitate the construction of a 64-apartment unit clustered multifamily development within two buildings off Milton Street.

The Applicant, represented by Simon and Nate Abikzer, have undertaken community outreach for this project which involved two community meetings that I hosted. One meeting was held at City Hall, Common Council Chambers in which you attended and the other meeting was held at 505 Main Street, Public Safety Bldg. Renderings of the proposed project were shared with the residents who live near the proposed project and many of them asked questions about the project and voiced their concerns.

The meetings were well advertised. I hand delivered flyers to all the residents on Corlies Ave, W. Arnold Road, Fitchett Street and Lawrence Road, explaining the proposed project and inviting them to the meetings. I also sent text messages and call residents who I had contact info, reminding them of the meeting so due diligence was made to inform all residents of the project. Residents of the area who were able to attend were very vocal of what they wanted and not want to see. The exchange of ideas resulted in the current site plan design. The applicant assured the residents that they will be "good neighbors" and ensure that the two buildings will have minimum visibility so it will not infringe on the existing neighborhood.

Based on the fact that the project will be no more than 64 units, the feedback from the residents who attended the meetings and the applicant's genuine efforts in addressing the concerns of the residents in the immediate area, I am in support of the proposed rezoning of the Milton Street property and construction of the 64 apartment unit.

Please feel free to contact me to discuss further if needed.

Thank you

Sincerely,

Councilperson Yvonne Flowers

**State Environmental Quality Review**
**NEGATIVE DECLARATION**
**Notice of Determination of Non-Significance**

This notice is issued pursuant to Part 617 of the implementing regulations pertaining to Article 8 (State Environmental Quality Review Act) of the Environmental Conservation Law.

The **CITY OF POUGHKEEPSIE PLANNING BOARD**, as lead agency, has determined that the proposed action described below will not have a significant environmental impact and a Draft Environmental Impact Statement will not be prepared.

**Name of Action:** **Highview at the Fallkill Creek**

**SEQR Status:** Type 1 □
Unlisted ■

**Conditioned Negative Declaration:** □ Yes
■ No

**Description of Action:**

The project area is the subject of a Rezoning to Planned Residential Development (PRD) by the CITY OF POUGHKEEPSIE COMMON COUNCIL and Site Plan review (Unlisted Action) by the CITY OF POUGHKEEPSIE PLANNING BOARD.

The current project is an application for rezoning of a tax parcel on Milton Street in the City of Poughkeepsie from Medium Low-Density Residential (R-2) to Planned Residential Development (PRD) and Site Plan Approval for the construction of a 63-apartment unit clustered multifamily development within two buildings. The site is currently undeveloped and presently consists of upland hardwood forest, hardwood swamp, and upland shrubland along the Fall Kill Creek. The site is proposed to be served with central water and sewer from the City of Poughkeepsie. Development of the site will also involve the construction of the typical appurtenances associated with residences development such as lighting, asphalt drives, landscaping, sidewalk, pool, and pool house.

The project area is comprised of one parcel being 8.713 acres, Tax ID Number 6162-73-623227.

**Access**

Access to the proposed project will be from two new driveways off Milton Street.

**Parking**

The proposed project is required to provide 123 parking spaces per Section 19-4.3 of the City's Zoning Ordinance. As shown in Table 6, the proposed project will provide 124 parking spaces.

The CITY OF POUGHKEEPSIE PLANNING BOARD has been designated Lead Agency for the current project under consideration.

**Location:**

Milton Street, Tax Parcel Number 6162-73-623227.

**Required Permits and Approvals:**

1. Rezoning from R-2 to PRD – City of Poughkeepsie Common Council
2. Site Plan – City of Poughkeepsie Planning Board
3. Area Variances – City of Poughkeepsie Zoning Board of Appeals (TBD)
4. Driveway Permit - City of Poughkeepsie Department of Public Works
5. Floodplain Development Permit – City of Poughkeepsie Zoning Administrator
6. Water/Sewer Department approvals - Dutchess County Health Department
7. SPDES General Permit for Discharges during Construction Activities – New York State Department of Environmental Conservation

**Documents and Comments Reviewed and Considered by the Lead Agency:**

The applicant submitted application materials to the CITY OF POUGHKEEPSIE PLANNING BOARD including the following:

1. Correspondence from The Chazen Companies, dated February 11, 2020
2. Correspondence from The Chazen Companies, dated July 28, 2020
3. Correspondence from The Chazen Companies, dated December 2, 2020
4. Application for Rezoning dated December 5, 2019
5. Part I Full EAF by The Chazen Companies dated December 3, 2019, updated December 2, 2020
6. Natural Resource Inventory Analysis by Chazen Companies dated January 9, 2020

7. Concept Plan from The Chazen Companies dated February 11, 2020
8. Site Plan by The Chazen Companies last revised December 1, 2020
9. Grading and Utility Plan by The Chazen Companies last revised December 1, 2020
10. Landscape Plan by The Chazen Companies last revised December 1, 2020
11. Tree Removal Plan by The Chazen Companies last revised December 1, 2020
12. Wetlands Map by The Chazen Companies dated November 17, 2020
13. Threatened and Endangered Species Habitat Suitability Assessment Report by Ecological Solutions dated October 18, 2020
14. Correspondence from Office of Parks, Recreation and Historic Preservation (OPRHP), dated December 17, 2020
15. Correspondence from NYS DEC Environmental Engineering Technician, Division of Environmental Permits, dated January 19, 2021

The Planning Board initiated the environmental review of the project on October 20, 2020 by declaring its intent to be Lead Agency in a coordinated SEQR process. Notice of intent to be Lead Agency was then circulated to the City of Poughkeepsie Common Council, City of Poughkeepsie Zoning Board of Appeals, Dutchess County Planning Department and New York State Department of Environmental Conservation in line with Part 617 of Title 6 NYCRR. There was no objection to the designation.

The Planning Board considered the application, materials, comments and discussion at regular meetings on February 26, 2020, September 15, 2020, October 20, 2020, and December 15, 2020.

A duly notice public hearing on the matter was opened by the Common Council on November 16, 2020. At which two members of the public registered to speak. Written and oral comments were received by City Engineering Department; Dutchess County Department of Planning; and members of the public. Public comments received were in regards to visual and noise barriers between the proposed structures and Milton Street, dual access and egress driveways onto Milton Street to avoid one-way traffic, stormwater management, and protection of the Fall Kill Creek.

The Lead Agency has reviewed the proposed action to assess the severity of potential environmental impacts of the Rezoning and Site Plan and has determined that for the reasons set forth herein a Draft Environmental Impact Statement will not be required.

**Reasons Supporting This Determination:**

1. **Impact on Land (Part II EAF # 1)**

   **The proposed action may result in increased erosion, whether from physical disturbance or vegetation removal (including from treatment by herbicides).**

   Although the proposed action will disturb more than one acre and create stormwater runoff, paving or construction of other impervious surfaces will be occur only on approximately 20% of the project site and stormwater will be conveyed via swales and subsurface piping to an on-site stormwater bioretention basin. Additionally, the applicant will be required to provide a Grading Plan, Erosion and Sediment Control Plan, and a Stormwater Pollution Prevention Plan to be reviewed and approved by the City of Poughkeepsie Engineer.

   Accordingly, any potential adverse impacts to the land associated with the project would be avoided.

2. **Impact on Geological Features (Part II EAF # 2)**

   The project as designed will not result in a negative impact to the Geological Features of the project site as the project does not meet the threshold criteria as listed on the Part II EAF and does not contain any unique or unusual land forms on site. Furthermore, the proposed PRD zoning designation will permit minimal disturbance and protection of natural resources.

3. **Impact on Surface Waters (Part II EAF # 3)**

   **The proposed action may involve construction within or adjoining a freshwater or tidal wetland, or in the bed or banks of any other water body.**

   Although the proposed action will involve construction adjoining a freshwater wetland, the natural habitat along the banks of the Fall Kill and immediately adjacent to the wetland will remain. The nearest construction or clearing will occur approximately 120 feet from the nearest boundary of the wetland. Additionally, the applicant will be required to provide a Grading Plan, Erosion and Sediment Control Plan, and a Stormwater Pollution Prevention Plan to ensure that the adjoining Fall Kill Creek and wetland will not be negatively impact by sediment or stormwater runoff.

   Accordingly, any potential adverse impacts to the surface waters adjoining the project would be avoided.

4. **Impact on Groundwater (Part II EAF # 4)**

The project as designed will not result in a negative impact to the Groundwater on or near the project site as the project does not meet the threshold criteria as listed on the Part II EAF and will not result in new or additional use of ground water and is not expected to have potential to introduce contaminants to ground water or an aquifer.

**5. Impact on Flooding (Part II EAF # 5)**

**The proposed action may result in development within a 100 year floodplain.**

Although an area of the project site does fall within a 100 year floodplain, no construction will occur within the flood hazard area and minimal clearing and grading may occur. There will be a substantial buffer and distance between the proposed development and Fall Kill and the implementation of a SWPPP will ensure that no significant adverse impacts to the floodplain occur. Furthermore, a floodplain development permit application will be reviewed and approved by the City of Poughkeepsie Building Inspector prior to and grading or construction.

Accordingly, any potential adverse impacts to the floodplain associated with the project would be avoided.

**6. Impact on Air (Part II EAF # 6)**

The project as designed will not result in a negative impact to the Air Resources on or near the project site as the project does not meet the threshold criteria as listed on the Part II EAF as it does not include a state regulated air emission source.

**7. Impact on Plants and Animals (Part II EAF # 7)**

**The proposed action may result in a reduction or degradation of any habitat used by any rare, threatened or endangered species, as listed by New York State or the federal government.**

**The proposed action may substantially interfere with nesting/breeding, foraging, or over-wintering habitat for the predominant species that occupy or use the project site.**

Although there are known occurrences of the Blanding's Turtle (a threatened species as listed by NYS) on or in the vicinity of the project site, a Habitat Assessment dated October 18, 2020 noted no core habitat on/or immediately adjacent from the site. A January 21, 2020 letter from NYSDEC noted that the project site is within screening distance of a known record. In response, the applicant has created Blanding's Turtle Education and Encounter Plan for measures to take during construction and

operation of this project to minimize impacts to the species and to potential suitable habitat.

Since the USFWS has listed the Indiana Bat as a threatened/endangered species within the area, the applicant has incorporated conservation measures to ensure no impact to the species. The measures include minimal tree clearing (less than 20% of Project Area), scheduling of tree clearing during timeframes when bats are not resident on site, clear demarcation of proposed clearing areas to prevent inadvertent over clearing, and full-shielding of outdoor lights to minimize light pollution and potential adverse effect on bat foraging activities. The Planning Board will require that a note be added to the final site plan prohibiting the cutting of trees between the dates of October 1 and March 31.

Accordingly, any potential adverse impacts to Blanding's Turtles or Indian Bats associated with the project would be avoided.

**8. Impact on Agricultural Resources (Part II EAF # 8)**

The project is not located within an Agricultural District and therefore will not result in a negative impact to the Agricultural Resources.

**9. Impact on Aesthetic Resources (Part II EAF # 9)**

The project as designed will not result in a negative impact to the Aesthetic Resources on or near the project site as the project does not meet the threshold criteria as listed on the Part II EAF as it will not create an obvious change or sharp contrast in land use and is not readily visible from or within a scenic resource.

**10. Impact on Historic and Archeological Resources (Part II EAF # 10)**

According to the NYS Office of Parks, Recreation, and Historic Preservation (NYSOPRHP) Cultural Resource Information System (CRIS) mapping (Figure 8), the project site does not contain and is not adjacent to any National or State Historic Register sites or any sites that were determined to be eligible for listing on the National or State Historic Register. The CRIS mapping indicates that the project site is partially located within a known archeologically sensitive area. Consultation was undertaken with NYSOPRHP, which confirmed that "no properties, including archaeological and/or historic resources, listed in or eligible for the New York State and National Registers of Historic Places will be impacted by this project."

***See NYSOPRHP Letter dated December 17, 2020 prepared by Roger Daniel Mackay, Deputy Commissioner for Historic Preservation Division for Historic Preservation.***

**11. Impact to Open Space and Recreation (Part II EAF # 11)**

The project as designed will not result in any impact to Open Space or Recreational areas near the Project Area as the project does not meet the threshold criteria as listed on the Part II EAF as it does not include or is immediately adjacent to Open Spaces or Recreational Areas.

**12. Impact to Critical Environmental Areas (Part II EAF # 12)**

The project is not located within a Critical Environmental Area and therefore will not result in a negative impact to Critical Environmental Areas.

**13. Impact to Transportation (Part II EAF # 13)**

The project as designed will not result in any significant impact to existing transportation systems near the Project Area as the project does not meet the threshold criteria as listed on the Part II EAF as it will generate fewer than 100 peak hour vehicle trips per hour.

**14. Impact to Energy (Part II EAF # 14)**

The project will not result in a negative impact to the Energy resources in the area as the project does not meet the threshold criteria as listed on the Part II EAF.

**15. Impact to Noise, Odor and Lights (Part II EAF # 15)**

**The proposed action may result in light shining onto adjoining properties.**

**The proposed action may result in lighting creating sky-glow brighter than existing area conditions.**

Although the proposed action will include outdoor lighting, the city code of ordinances requires that light does not shine onto adjoining properties and that all lighting be fully-shielded and dark-sky compliant to reduce glare and sky glow impacts.

Accordingly, any potential adverse impacts with regards to outdoor lighting associated with the project would be avoided.

**16. Impact to Human Health (Part II EAF # 16)**

The project will not result in a negative impact to Human Health as the project does not meet the threshold criteria as listed on the Part II EAF and no impacts to Human Health have therefore been identified.

**17. <u>Consistency with Community Plans (Part II EAF # 17)</u>**

**The proposed action is inconsistent with local land use plans or zoning regulations.**

The proposed action includes a rezoning of the Project Area from Medium Low-Density Residential (R-2) to Planned Residential Development (PRD). If the action is successful the proposed action will be consistent with adopted land use plans and zoning regulations. Additionally, the proposed PRD zoning designation requires that the development be kept to the same density standards as the current R-2 zoning designation, which has a minimum lot area of 6,000 SF per dwelling unit, for maximum of 63 dwelling units. Flexibility of building placement and form permitted within the PRD allows units to be clustered into two multi-family buildings rather than spread out as detached single-family homes. This allows for development that will better conform to the natural conditions and constraints of the site, as noted in the City's adopted Natural Resource Inventory.

**18. <u>Impact to Community Character (Part II EAF # 18)</u>**

The project will not result in a negative impact to Community Character as the project does not meet the threshold criteria as listed on the Part II EAF and no impacts to Community Character have therefore been identified.

Re: Highview at the Fallkill Creek, City of Poughkeepsie, NY

Job #: 81947.00

*Highview at the Fallkill Creek* is proposed as a 63unit apartment project. Direct access to the site will be from Fitchett Street and West Arnold Road. Site traffic will then use Mansion Street to disperse for travel to the north, south, east, and west. Other local roads likely to be used by site traffic include Corlies Avenue, Pershing Avenue, Innis Avenue, and Smith Street.

The *Trip Generation Manual, 10th Edition* published by the Institute of Transportation Engineers (ITE) is the industry-standard resource for estimating the traffic generated by various types of land uses and it was used to estimate the site generated trips for this project. Based on data for Multifamily Housing-Mid Rise (Land Use Code 221), the proposed project will generate 22 total trips in the weekday morning and 29 total trips in the evening peak periods. This is a minimum amount of traffic that will be added to the surrounding roadway network, representing about 1 trip every 3 to 10 minutes for the entering and exiting movements.

**Table 1**
**Peak Hour Generated Trips**

| Land Use | AM Peak Hour | | | PM Peak Hour | | |
|---|---|---|---|---|---|---|
| | Enter | Exit | Total | Enter | Exit | Total |
| LUC 221: Multifamily Housing-Mid Rise | 6 | 16 | 22 | 17 | 11 | 28 |

A traffic impact study was completed in 2005 for this project. At that time, the project consisted of 163 units and was estimated to generate 76 and 90 total trips for the weekday morning and afternoon peak periods. The traffic study concluded that the project at 163 units would have minimal impact as the studied intersections would continue to operate at acceptable levels of service. Therefore, at the currently proposed 63-units with reduced volumes this project will also have minimal traffic impacts. No improvements are needed.

Additionally, historic traffic volumes collected on roadways in the vicinity of the site were reviewed using NYSDOT's *Traffic Data Viewer*. The data shows that volumes for Mansion Street, Corlies Avenue, Innis Avenue, and Smith Street have decreased between 2012 and 2019 on the order of 1% to 15%. This is further indication that the surrounding roadways expected to serve the proposed project have the capacity available to accommodate the site traffic.

As part of previous coordination with Councilwoman Yvonne Flowers and community members, the original single entry was reconfigured to two access points, with one-way exit off Fitchett Street and one-way entrance off West Arnold Street. By breaking up the single entry/exit into two accesses there will be a reduction in the number of conflict points as compared to a single access. In other words, entering and exiting left-turn movements, normally the critical movements at an intersection, will be separated and will not be overlapping. This will also minimize queuing on-site and on Milton Avenue. As it relates to potential conflicts with other traffic on Milton Street this is not considered an issue because there is only one other driveway with access off Milton Street. All other neighborhood traffic is anticipated to travel south on Fitchett Street or West Arnold as Milton Street is not a through street and provides no other connections.

# CITY OF POUGHKEEPSIE
# ZONING BOARD OF APPEALS
# DECISION

In the matter of the appeal of Maselo Realty, LLC, regarding the property at Milton Street (Grid #6162-73-623227), Poughkeepsie, New York:

At a Regular Meeting of the Zoning Board of Appeals held on the 14th day of September, 2021, at 6:30pm:

**Present**
Nathan Shook Chair
John Gildard
Thomas Klug
Rob Page (arrived late)
Scott Parker
Steven Reifler

**Excused**
Jessica Vinall

WHEREAS, the Zoning Board of Appeals has received an application from Maselo Realty, LLC, relative to the proposed multi-residential development on Milton Street, consisting of two buildings containing a total of 63 units, with a swimming pool and accessory surface parking, requiring the following variances:

- Section 19-3.18(4)(h) requires that a PRD shall have access to an arterial street, as defined in the City of Poughkeepsie ordinances and regulations. An arterial street is defined by the Zoning Ordinance as "a street providing for through traffic movement between areas and across the city with direct access to abutting property. The street is subject to required traffic control of entrances, exits and curb use." As Milton Street is not an arterial street, the applicant is seeking full relief from this section of the code.
- Section 19-3.183(b) requires that A buffer strip shall be provided along the property line and along any street line. Said strip shall be at least 50 feet in depth, measured inward from the street line or property line. This strip shall be suitably landscaped with grass and shrubs, trees or other ground cover or such screening as the Planning Board may prescribe. No parking shall be permitted in this area. The parking area, drive aisle and refuse enclosure of the development encroaches into the required buffer with a set-back of 9 feet; the applicant is seeking a variance of 41 feet.
- Section 19-3.18(3)(b) provides that in no event shall any structure or building be permitted closer than 120 feet from any residence on any property abutting the PRD property and shall be suitably landscaped with grass and shrubs, trees or other ground cover or such screening as the Planning Board may prescribe. The refuse enclosure of the development encroaches into the required buffer with a 94.8 foot set-back; the applicant is seeking a variance of 25.2 feet.

WHEREAS, the application was accompanied by supporting documentation including a Title Sheet (G001), Site Plan (C130) and a Landscape Plan (C180), all dated 5/25/21, prepared by Chazen Companies; and,

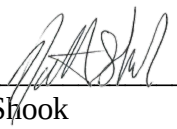
WHEREAS, a public hearing was held on July 13, 2021 and September 14, 2021; and,

WHEREAS, the applicant has demonstrated that the granting of the area variance will not produce an undesirable change in the character of the neighborhood, and will not be a detriment to nearby properties; and,

WHEREAS, the applicant has demonstrated that there is no other feasible method to achieve compliance at this time; and,

WHEREAS, the applicant has demonstrated that the variance requested is not substantial; and,

WHEREAS, the applicant has demonstrated the granting of the variance will not have an adverse effect or impact on the physical or environmental conditions in the neighborhood; and,



WHEREAS, the applicant has demonstrated that the need for the variances is not necessarily self-created:

NOW THEREFORE BE IT FURTHER RESOLVED that the City of Poughkeepsie Zoning Board of Appeals hereby grants the area variances as noted above, with the following conditions:

- Through the site plan review process with the Planning Board, the applicant shall investigate potentially beneficial traffic control measures for Milton Street, Arnold Road and Fitchett Street, and propose any measures as a means of mitigate adverse traffic impacts on the surrounding neighborhood as deemed appropriate

Motion: Steven Reifler
Second: Thomas Klug
Carried: 6:0:0

The motion to grant the variances carried unanimously.

Nathan Shook
Chairman
Zoning Board of Appeals

## PROJECT INFORMATION

New construction: X (yes)_____ (no)

Change of use:_____ (yes) X (no)

Expansion/addition:_____ (yes) X (no)

Alteration:_____ (yes) X (no)

Cost of Construction: $$3.5m

**LOT AND BULK INFORMATION**:

Lot area: 0.28 (acres) 12,378.7 (square feet)

Building Footprint: 4,127 SF (proposed square feet for new construction)

_____ (existing square feet for change of use/expansion)

_____ (additional proposed square feet for expansion)

4,127 SF (total building footprint, square feet)

Lot Coverage: 33.2% (percentage, building coverage only)

Gross Floor Area: 12,157 SF (proposed square feet for new construction)

_____ (existing square feet for change of use/expansion)

_____ (additional proposed square feet for expansion)

12,157 SF (total gross floor area, square feet)

Building Height: 3 (stories) 34 (feet)

Floor Area Ratio: 0.98 (ratio of gross floor area divided by lot area)

## VIII. PROJECT PARKING INFORMATION

A) Number of Off-Street Parking Spaces required: 32

B) Number of Off-Street Parking Spaces provided: 22

C) Waiver Requested: X (Yes) _____ (No)

Is municipal parking available within 600 feet? _____ (Yes) X (No)

If yes, name all such municipal facilities: _____

_____

_____

(If a waiver is requested based on proximity to municipal facilities, a written request for such waiver, addressed to the City Planning Staff and the Chairman of the Planning Board, must be submitted with the application.)

If a private parking facility is to be utilized, is such facility within 600 feet?

_____ (Yes) X_____ (No)

If yes, provide the address of the facility, name of the property owner, number of spaces in the lot, number of spaces available for lease, and length of lease. Attach copy of lease. Additional information may be required by the Planning Board): _____

_____

_____

_____

## IX. RESIDENTIAL PROPOSALS

A) Type of Development: Mixed Use
(Townhouse, condominium, multiple residence rental, etc.)

B) Unit Breakdown:

Number of efficiency or "studio" units: 0

Number of one (1) bedroom units: 11

Number of two (2) bedroom unit's 4

Number with three or more bedrooms: 0

Total number of units: 15

C) Is funding public? ____ Yes X___ No

If yes, describe funding source: _____

## X. OFFICE PROPOSALS (____ Medical/Dental ____ Professional ____ Business)

A) Number of Employees: _____

B) Number of doctors/dentists/medical practitioners: _____

C) Days/Hours of Operation: _____

**XI. SERVICE BUSINESS PROPOSALS**

A) Specify Business: _____
(e.g., laundromat, drycleaner, beauty parlor, travel agency, banks)

B) Number of Employees: _____

C) Number of Washing Machines (for laundromat): _____

D) Days/Hours of Operation: _____

**XII. MERCANTILE PROPOSALS** (Retail X Wholesale _____)

A) Type of Mercantile (specify): TBD

B) Number of Employees: TBD

C) Days/Hours of Operation: 9AM-6PM

**XIII. STANDARD RESTAURANT/FAST FOOD RESTAURANT/COFFEE SHOP/DONUT SHOP/NIGHTCLUB/DISCOTHEQUE/BAR PROPOSALS**

A) Specify Use: _____

B) Number of seats (excluding bar stools and outdoor seating):_____

C) Meals served (i.e., breakfast, lunch, dinner): _____

D) Type of Menu: _____

E) Days/Hours of Operation: _____

F) Entertainment (live and/or recorded):_____

G) Will the restaurant contain a bar/lounge?: _____ Yes _____ No

H) If yes, how many seats at the bar? _____

I) Is a drive-through window proposed? _____

J) Is a walk-up window proposed? _____

K) Is an outdoor seating area proposed? _____

L) If yes, how many seats are proposed? _____

M) If yes, is outdoor cooking proposed? _____

**XIV. INDUSTRIAL/COMMERCIAL PROPOSALS** (Automobile repair, taxi, motor vehicle sales, warehouse, manufacturing, animal hospital, research facilities, etc.)

A) Specify Use: _____

B) Number of shifts (if any): _____

C) Number of employees: _____
(If shifts are proposed, list number of employees per shift)

E) Number of work bays (if automobile repair): _____

F) Days/Hours of operation: _____

**XV. EDUCATIONAL/INSTITUTIONAL/RECREATIONAL PROPOSALS** (e.g., Museums, Theatres, Conference Centers, Hotels, Motels, Hospitals, Nursing Homes, Assisted Living Facilities, Nursery Schools, Private Schools, Day Care Centers, Places of Worship, Marinas, Membership Clubs, etc.)

A) Specify: _____

B) Number of shifts (if any): _____

C) Number of employees: _____
(If shifts are proposed, list number of employees per shift)

D) Number of beds (hospitals, nursing homes, etc): _____

E) Number of seats in largest assembly space: _____

F) Number of classrooms (schools): _____

G) Number of rental units (hotels, motels, etc.) _____

H) Number of boat slips/courts (e.g., tennis, handball, etc.), alleys: _____

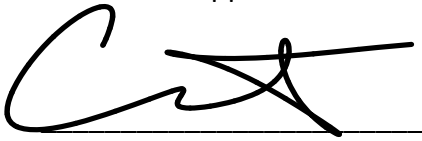
I) Days/Hours of Operation: _____

**XVI. PROPOSALS NOT MENTIONED ABOVE** (Please be specific):

_____

_____

_____



_____

_____

**XVII. APPLICANT CERTIFICATION**

I, Eric Baxter _____, certify that the this application has addressed the objectives outlined in the Zoning Ordinance with consideration given to the public health, safety and welfare; the comfort and convenience of the public in general or the residents or users of the proposed development and of the immediate neighborhood.

The applicant certifies that all information contained herein is accurate and complete as of the date of this application.

_____ 8/31/2021 _____

Signature of Applicant Date

134 – 136 South Ave
City of Poughkeepsie Planning Board
October 1, 2021

To whom it may concern,

Thank you for having us present the 134 – 136 South Ave project during the last planning board meeting. We are excited to get started on this project and glad that the board shares our excitement to create this connection between the Vassar Brothers Medical Center and the residential area it borders.

In this resubmission, we have addressed the comments we received after our presentation. Regarding the parking concerns that were expressed, we have included a detailed map that shows where there is on-street parking available as well as permit parking. As well, we have included the availability throughout the day of on-street parking in the immediate vicinity of the project. We made an effort to speak with the parking department of Poughkeepsie to inquire about the availability of permit parking along Reade Place. Lastly, we revised our renderings and exterior elevations to implement the comments from members of the planning board.

Once again, we want to thank the entire planning board in supporting us with this project. We hope that these revisions will allow you to move forward with the 134 – 136 South Ave project and assist us in creating additional housing and commercial space that envisions a new cornerstone in the community.

Best Regards,

Eric Baxter
Baxter Development

## GENERAL NOTES:

1. THE OWNER/APPLICANT WISHES TO RAZE THE EXISTING BUILDING LOCATED AT 134-136 SOUTH AVENUE, POUGHKEEPSIE NY, AND CONSTRUCT A NEW 3-STORY MULTI-USE BUILDING GENERALLY IN ITS PLACE. THE FIRST FLOOR WILL PROVIDE ±2,017 SQUARE FEET OF COMMERCIAL SPACE PLUS THREE 1-BEDROOM RESIDENTIAL APARTMENT UNITS, AND THE SECOND AND THIRD FLOORS WILL PROVIDE A TOTAL OF EIGHT 1-BEDROOM AND FOUR 2-BEDROOM RESIDENTIAL APARTMENT UNITS.
2. MULTI-USE BUILDINGS ARE SPECIALLY PERMITTED IN THE C-1 NEIGHBORHOOD COMMERCIAL ZONING DISTRICT.
3. EXISTING FEATURES AS SHOWN ON THIS SITE PLAN PROVIDED BY A SURVEY ENTITLED "BOUNDARY AND TOPOGRAPHIC SURVEY FOR B&A REALTY MANAGEMENT" PREPARED BY MASER ASSOCIATES AND DATED NOVEMBER 13, 2017.
4. THE SITE DOES NOT CONTAIN ANY WETLANDS, WATERCOURSES OR FLOODPLAINS PER AVAILABLE GIS MAPPING.
5. THE PROJECT IS SERVICED BY PUBLIC WATER AND SEWER FROM THE CITY OF POUGHKEEPSIE.

## GENERAL CONSTRUCTION NOTES:

1. THE CONTRACTOR SHALL PERFORM A UTILITIES CALL-OUT PRIOR TO CONSTRUCTION TO VERIFY ALL UNDERGROUND UTILITY LOCATIONS BY CONTACTING UFPO @ 1-800-962-7962.
2. WATER, SEWER AND STORM SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE PLANS. ALL OTHER UTILITIES (TELEPHONE, ELECTRIC, GAS, CABLE, ETC.) SHALL BE INCORPORATED FOLLOWING SITE PLAN APPROVAL. ALL SUCH UTILITY DESIGNS SHALL BE DEVELOPED IN COOPERATION WITH THE RESPECTIVE UTILITY COMPANIES.
3. THE CONTRACTOR SHALL FIELD VERIFY THE SIZE, LOCATION, DEPTH AND CONDITION OF ALL UTILITIES AND REPORT ANY DISCREPANCIES TO THE ENGINEER. THE CONTRACTOR SHALL NOT ASSUME THAT ALL LOCATIONS AS SHOWN ON THE PLAN ARE CORRECT.
4. THE CONTRACTOR SHALL CONSTRUCT ALL IMPROVEMENTS AS SHOWN ON PLANS. ANY FIELD CONDITIONS THAT MAY RESULT IN A VARIATION FROM THE PLAN SET SHALL BE BROUGHT TO THE ENGINEERS ATTENTION IN WRITING. VARIATIONS FROM THE PLAN WITHOUT APPROVAL FROM THE ENGINEER WILL BE CONSIDERED DEFICIENT.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ON-SITE OR OFF-SITE DAMAGES TO VEGETATION OR PROPERTY CAUSED BY HIS OPERATIONS. SUCH DAMAGES SHALL BE REPAIRED OR REPLACED AT THE CONTRACTORS COST TO THE SATISFACTION OF THE ENGINEER, PROPERTY OWNER OR AGENCY HAVING JURISDICTION.
6. THE CONTRACTOR SHALL SECURE ALL NECESSARY PERMITS PRIOR TO CONSTRUCTION.
7. THE CONTRACTOR SHALL SECURE THE WORK LIMITS OF THE SITE BY INSTALLATION OF CONSTRUCTION FENCING AND OTHER MEASURES, AS NECESSARY TO PREVENT NON-AUTHORIZED ENTRY.
8. THE CONTRACTOR SHALL KEEP THE SITE IN A CLEAN AND ORDERLY MANNER.
9. THE CONTRACTOR SHALL NOT INTERRUPT EXISTING ACCESS OR OPERATIONS FOR THE REMAINDER OF THE SITE.

## LANDSCAPING NOTES:

1. THE LANDSCAPE CONTRACTOR SHALL CAREFULLY COORDINATE CONSTRUCTION ACTIVITIES WITH THAT OF THE EARTHWORK CONTRACTOR AND OTHER SITE DEVELOPMENT.
2. THE CONTRACTOR SHALL VERIFY DRAWING DIMENSIONS WITH ACTUAL FIELD CONDITIONS AND INSPECT RELATED WORK AND ADJACENT SURFACES. THE CONTRACTOR SHALL VERIFY THE ACCURACY OF ALL FINISH GRADES WITHIN THE WORK AREA. THE CONTRACTOR SHALL REPORT TO THE ENGINEER AND OWNER ALL CONDITIONS WHICH PREVENT PROPER EXECUTION OF THIS WORK.
3. THE EXACT LOCATION OF ALL EXISTING UTILITIES, STRUCTURES AND UNDERGROUND UTILITIES, WHICH MAY NOT BE INDICATED ON THE DRAWINGS, SHALL BE DETERMINED BY THE CONTRACTOR. THE CONTRACTOR SHALL PROTECT EXISTING STRUCTURES AND UTILITY SERVICES AND IS RESPONSIBLE FOR THEIR REPLACEMENT IF DAMAGED.
4. THE CONTRACTOR SHALL KEEP THE PREMISES FREE FROM RUBBISH AND ALL DEBRIS AT ALL TIMES AND SHALL ARRANGE MATERIAL STORAGE SO AS NOT TO INTERFERE WITH THE OPERATION OF THE PROJECT. ALL UNUSED MATERIALS, RUBBISH AND DEBRIS SHALL BE REMOVED FROM THE SITE.
5. TREES SHALL BE PLANTED CLEAR OF EXISTING OR PROPOSED UTILITY LINES.
6. QUALITY ASSURANCE:
   A. PLANT NAMES SHALL CONFORM TO THE LATEST EDITION OF "STANDARDIZED PLANT NAMES" AS ADOPTED BY THE AMERICAN JOINT COMMITTEE ON HORTICULTURAL NOMENCLATURE.
   B. SIZE AND GRADING: PLANT SIZES AND GRADING SHALL CONFORM TO THE LATEST EDITION OF "AMERICAN STANDARD FOR NURSERY STOCK" AS SPONSORED BY THE AMERICAN ASSOCIATION OF NURSERYMEN, INC (AAN), UNLESS OTHERWISE SPECIFIED.
   C. NURSERY SOURCE: OBTAIN FRESHLY DUG, HEALTHY, VIGOROUS PLANTS NURSERY GROWN UNDER CLIMACTIC CONDITIONS SIMILAR TO THOSE IN THE LOCALITY OF THE PROJECT FOR A MINIMUN OF 2 YEARS. PLANTS SHALL HAVE BEEN LINED OUT IN ROWS, ANNUALLY CULTIVATED, SPRAYED, PRUNED AND FERTILIZED IN ACCORDANCE WITH GOOD HORTICULTURAL PRACTICE. ALL PLANTS SHALL HAVE BEEN TRANSPLANTED OR ROOT PRUNED AT LEAST ONCE IN THE PAST 3 YEARS. BALLED AND BURLAPPED PLANTS MUST COME FROM SOIL WHICH WILL HOLD A FIRM ROOT BALL. HEELED IN PLANTS AND PLANTS FROM COLD STORAGE ARE NOT ACCEPTABLE.
   D. SUBSTITUTIONS: DO NOT MAKE SUBSTITUTIONS OF TREES AND/OR SHRUB MATERIALS. IF REQUIRED LANDSCAPE MATERIAL IS NOT OBTAINABLE, SUBMIT PROOF OF NON-AVAILABILITY AND PROPOSAL FOR USE OF EQUIVALENT MATERIAL.
   E. SEEDING & PLANTING SEASONS AND TIMING CONDITIONS: UNLESS OTHERWISE DIRECTED IN WRITING PLANT TREES AND SHRUBS FROM MARCH 15 TO JUNE 1, AND FROM AUGUST 15 TO OCTOBER 30.
7. SEEDING & PLANTING SEASONS AND TIMING CONDITIONS:
   A. UNLESS OTHERWISE DIRECTED IN WRITING PLANT TREES AND SHRUBS FROM MARCH 15 TO JUNE 1, AND FROM AUGUST 15 TO OCTOBER 30.

## UTILITY NOTES:

1. ALL WATER & SEWER CONNECTIONS SHALL COMPLY WITH CITY WATER AND SEWER DISTRICT REQUIREMENTS.
2. THE RAW SEWER LINE SHALL BE SET TO ENSURE GRAVITY FLOW FROM THE BUILDING TO THE POINT OF CONNECTION WITH THE EXISTING SEWER MAIN, WHILE MAINTAINING PROPER EARTH COVER ABOVE ALL PIPING.
3. NO CELLAR, ROOF, OR FOOTING DRAINS SHALL BE DISCHARGED INTO THE SANITARY SEWER SYSTEM.
4. THE SEWER LATERAL, IF REQUIRED, SHALL BE THE SAME SIZE AS THE EXISTING SERVICE LINE CONNECTION WITH GASKETED WATERTIGHT JOINTS AND SHALL BE LAID WITH A MINIMUM SLOPE. ACCEPTABLE TO THE SEWER DEPARTMENT AND PROJECT ENGINEER.
5. INVERT AND LOCATION OF EXISTING STORMWATER LINES, SANITARY SEWER MAINS, AND WATER MAINS ARE APPROXIMATE. CONTRACTOR TO FIELD VERIFY LOCATION AND CONDITION OF EXISTING INFRASTRUCTURE PRIOR TO CONSTRUCTION.
6. ROOF LEADERS WILL BE CONNECTED TO THE NEAREST STORMWATER MANHOLE TO THE EAST OF THE BUILDING.

## GRADING & DRAINAGE NOTES:

1. PROPOSED EROSION CONTROL MEASURES SHALL BE INSTALLED PRIOR TO THE COMMENCEMENT OF CONSTRUCTION ACTIVITIES AND SHALL BE CONTINUALLY IN PLACE UNTIL THE END OF CONSTRUCTION AND STABILIZATION OF DISTURBED EARTH. REFER TO THE E&SC PLAN.
2. NYSDEC SPDES GENERAL PERMIT 0-20-001 COVERAGE IS NOT REQUIRED BASED ON THE SOIL DISTURBANCE ASSOCIATED WITH THE PROJECT BEING LESS THAN ONE (1) ACRE IN AREA.
3. THE CONTRACTOR SHALL ENSURE THAT THERE ARE NO AREAS OF TRAPPED DRAINAGE FOLLOWING CONSTRUCTION. POSITIVE PITCH TO PROMOTE OVERLAND FLOW TO ADEQUATE DISCHARGE LOCATIONS IS REQUIRED.
4. SPOT ELEVATIONS ALONG CURB LINE REPRESENT BOTTOM OF CURB ELEVATION UNLESS OTHERWISE NOTED.

| 3: ABDELRAZAQ AGHA; 40 PHILLIPS AVE HIGHLAND; NY 12528 |
| 4: 84 NEW HACKENSACK LLC; 84 NEW HACKENSACK ROAD WAPPINGERS FALLS, NY 12590 |
| 5: NEVILLE MCDONALD; 8 MARTIN DRIVE POUGHKEEPSIE, NY 12603 |
| 6: FRANCIS J MILLER JR.; 2 READE PLACE, POUGHKEEPSIE, NY 12601 |
| 7: 130 SOUTH AVENUE, LLC.; 35 BEECHWOOD AVENUE POUGHKEEPSIE, NY 12601 |

## ADA CONSTRUCTION NOTES:

1. ADA ACCESSIBLE COMPONENTS AND ACCESS ROUTES FOR THE SITE MUST COMPLY WITH ALL APPLICABLE STATE AND LOCAL ACCESSIBILITY LAWS AND REGULATIONS AND THE CURRENT ADA STANDARDS. FINISHED SURFACES ALONG THE ACCESSIBLE ROUTE FROM PARKING SPACE OR PEDESTRIAN ACCESS TO POINTS OF ACCESSIBLE BUILDING INGRESS/OR EGRESS, MUST COMPLY WITH ADA REQUIREMENTS. THESE INCLUDE, BUT ARE NOT LIMITED TO THE FOLLOWING:
   1.1. PARKING SPACES AND PARKING AISLES - SLOPE SHALL NOT EXCEED 1:48 IN ANY DIRECTION.
   1.2. CURB RAMPS - SLOPE MUST NOT EXCEED 1:12 (8.3%) FOR A MAXIMUM OF SIX (6) FEET.
   1.3. LANDINGS - MUST BE PROVIDED AT EACH END OF RAMPS, MUST PROVIDE POSITIVE DRAINAGE, AND MUST NOT EXCEED 1:48 IN ANY DIRECTION.
   1.4. PATH OF TRAVEL ALONG ACCESSIBLE ROUTE - MUST PROVIDE A 36-INCH OR GREATER UNOBSTRUCTED WIDTH OF TRAVEL. THE SLOPE MUST BE NO GREATER THAN 1:20 IN THE DIRECTION OF TRAVEL, AND MUST NOT EXCEED 1:48 IN CROSS SLOPE. WHERE PATH OF TRAVEL WILL BE GREATER THAN 1:20, ADA RAMP STANDARDS MUST BE MET WITH A MAXIMUM SLOPE OF 1:12, FOR A MAXIMUM RISE OF 30 INCHES. RAMPS MUST HAVE ADA HAND RAILS AND LANDINGS AT BOTH THE TOP AND BOTTOM OF EACH RAMP, WITH CROSS SLOPES NO MORE THAN 1:48 IN ANY DIRECTION.
   1.5. DOORWAYS - MUST HAVE A LANDING AREA ON THE EXTERIOR SIDE OF THE DOOR THAT IS SLOPED AWAY FROM THE DOOR NO MORE THAN 1:48 AND MUST BE NO LESS THAN 60 INCHES LONG.
2. WHEN THE PROPOSED CONSTRUCTION INCLUDES CONNECTION TO EXISTING ADA COMPONENTS, CONTRACTOR MUST VERIFY EXISTING ELEVATIONS SHOWN. NOTIFY THE DESIGN ENGINEER IMMEDIATELY IF THERE ARE ANY DISCREPANCIES OR FIELD CONDITIONS THAT DIFFER FROM WHAT IS SHOWN BEFORE COMMENCING WORK. CONSTRUCTED IMPROVEMENTS MUST COMPLY WITH THE MAXIMUM AND MINIMUM ADA REQUIREMENTS.
3. THE CONTRACTOR MUST VERIFY THE SLOPES OF THE FORMWORK PRIOR TO POURING CONCRETE. CONTRACTOR IS RESPONSIBLE FOR ALL COSTS TO REMOVE, REPAIR AND REPLACE NON-CONFORMING CONCRETE.

## EROSION AND SEDIMENT CONTROL NOTES:

1. NYSDEC SPDES GENERAL PERMIT 0-20-001 COVERAGE IS NOT REQUIRED BASED ON THE SOIL DISTURBANCE ASSOCIATED WITH THE PROJECT BEING ±0.34 ACRES (LESS THAN ONE 1 ACRE IN AREA, THEREFORE SPDES IS NOT REQUIRED).
2. ALL EROSION CONTROL MEASURES EMPLOYED DURING THE CONSTRUCTION PROCESS SHALL BE INSPECTED BY THE CONTRACTOR IN ACCORDANCE WITH THE MAINTENANCE SCHEDULE. ALL EROSION CONTROL STRUCTURES SHALL BE REPAIRED AND MAINTAINED AS NECESSARY BY THE CONTRACTOR.
3. ALL STORMWATER SYSTEMS (E.G. BASINS) SHALL BE REGULARLY INSPECTED FOR SEDIMENT ACCUMULATIONS.
4. ALL EROSION CONTROL INSTALLATION AND MAINTENANCE MEASURES SHALL MEET THE REQUIREMENTS OF THE NEW YORK STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL.
5. STOCKPILES, IF NEEDED, SHALL BE LOCATED IN AREAS AWAY FROM STORM DRAINAGE AND SHALL BE PROPERLY PROTECTED FROM EROSION BY A SURROUNDING SILT FENCE.
6. PERMANENT SEEDED AREAS FOR EROSION CONTROL SHALL BE IN ACCORDANCE WITH DETAIL AND SPECIFICATIONS ON THE DETAILS SHEET.
7. AREAS UNDERGOING CLEARING OR GRADING AND WHERE WORK IS DELAYED OR COMPLETED AND WILL NOT BE REDISTURBED FOR A PERIOD OF 21 DAYS OR MORE SHALL BE STABILIZED WITH TEMPORARY OR PERMANENT VEGETATIVE COVER WITHIN 14 DAYS.
8. ON-SITE DUST CONTROL SHALL BE ACCOMPLISHED BY STANDARD METHODS OF LIGHTLY WATERING ALL EXPOSED SOIL AND RAPIDLY STABILIZING THE REGRADED AREAS WITH TOPSOIL, LOAM AND/OR SEEDING.
9. THE CITY ENGINEER AND PROJECT ENGINEER SHALL BE NOTIFIED NO LESS THAN 48 HOURS PRIOR TO THE START OF ANY SITE WORK, AND BY SUCH NOTIFICATION, SHALL BE PROVIDED WITH THE NAME AND TELEPHONE NUMBER OF THE GENERAL CONTRACTOR RESPONSIBLE FOR SUCH WORK.
10. THE CITY AND/OR ITS REPRESENTATIVES MAY INSPECT EROSION AND SEDIMENT CONTROL PRACTICES ON THE SITE DURING CONSTRUCTION AND RECOMMEND THAT THE CONTRACTOR INSTALL ADDITIONAL EROSION CONTROL MEASURES IF DEEMED NECESSARY TO PROTECT ANY UNDISTURBED AREAS OF THE SITE. ANY SUCH REQUESTS SHALL BE MADE DIRECTLY TO THE CONTRACTOR AND FOLLOWED UP WITH A WRITTEN NOTIFICATION TO THE DEVELOPER. IN ADDITION, THE PROJECT ENGINEER SHALL BE CONSULTED ON ANY SPECIAL ADDITIONS OR DELETIONS OF EROSION CONTROL MEASURES WARRANTED BY CHANGING FIELD CONDITIONS.
11. IF GROUNDWATER IS ENCOUNTERED DURING CONSTRUCTION ACTIVITIES, THE CONTRACTOR SHALL CONSTRUCT A DEWATERING PIT IN ACCORDANCE WITH NEW YORK STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL (AKA SUMP PIT) TO FILTER WATER FOR PUMPING TO A SUITABLE LOCATION.
12. WHEN ALL DISTURBED AREAS ARE STABLE, ALL TEMPORARY EROSION AND SEDIMENT CONTROL MEASURES SHALL BE REMOVED.

## INSPECTION SCHEDULE & MAINTENANCE OF EROSION AND SEDIMENT CONTROL MEASURES

PERMANENT AND TEMPORARY VEGETATION:
INSPECT ALL AREAS THAT HAVE RECEIVED VEGETATION EVERY SEVEN DAYS AND AFTER EVERY STORM EVENT WITH RAINFALL THAT EQUALS OR EXCEEDS 0.5 INCH. ALL AREAS DAMAGED BY EROSION OR WHERE SEED HAS NOT ESTABLISHED SHALL BE REPAIRED AND RESTABILIZED IMMEDIATELY.

STABILIZED CONSTRUCTION ENTRANCE:
INSPECT THE ENTRANCE PAD EVERY SEVEN DAYS AND AFTER EVERY STORM EVENT WITH RAINFALL THAT EQUALS OR EXCEEDS 0.5 INCH. CHECK FOR MUD, SEDIMENT BUILD-UP AND PAD INTEGRITY. MAKE DAILY INSPECTIONS DURING WET WEATHER. REGRADE PAD AS NEEDED FOR RUNOFF CONTROL. WASH AND REPLACE STONE AS NEEDED. THE STONE IN THE ENTRANCE SHOULD BE WASHED OR REPLACED WHENEVER THE ENTRANCE FAILS TO REDUCE MUD BEING CARRIED OFF SITE BY VEHICLES. IMMEDIATELY REMOVE MUD AND SEDIMENT TRACKED OR WASHED ONTO PUBLIC ROADS BY BRUSHING OR SWEEPING. REMOVE TEMPORARY CONSTRUCTION ENTRANCE AS SOON AS THEY ARE NO LONGER NEEDED TO PROVIDE ACCESS TO THE SITE AS DIRECTED BY PROJECT ENGINEER.

SILT FENCE:
INSPECT FOR DAMAGE EVERY SEVEN DAYS AND AFTER EVERY STORM EVENT WITH RAINFALL THAT EQUALS OR EXCEEDS 0.5 INCH. MAKE ALL REPAIRS IMMEDIATELY. REMOVE SEDIMENT FROM THE UP-SLOPE FACE OF THE FENCE BEFORE IT ACCUMULATES TO A HEIGHT EQUAL TO ONE-QUARTER THE HEIGHT OF THE FENCE. IF FENCE FABRIC TEARS, BEGINS TO DECOMPOSE, OR IN ANY WAY BECOMES INEFFECTIVE, REPLACE THE AFFECTED SECTION OF FENCE IMMEDIATELY.

SOIL STOCKPILE:
INSPECT SEDIMENT CONTROL BARRIERS (SILT FENCE) AND VEGETATION FOR DAMAGE EVERY SEVEN DAYS AND AFTER EVERY STORM EVENT WITH RAINFALL THAT EQUALS OR EXCEEDS 0.5 INCH. MAKE ALL REPAIRS IMMEDIATELY. REMOVE SEDIMENT FROM THE UP-SLOPE FACE OF THE SEDIMENT CONTROL BARRIER BEFORE IT ACCUMULATES TO A HEIGHT EQUAL TO ONE-QUARTER THE HEIGHT OF THE SEDIMENT CONTROL BARRIER. IF SEDIMENT CONTROL BARRIER TEARS, BEGINS TO DECOMPOSE, OR IN ANY WAY BECOMES INEFFECTIVE, REPLACE THE AFFECTED SECTION OF SEDIMENT CONTROL BARRIER IMMEDIATELY. REVEGETATE DISTURBED AREA TO STABILIZE SOIL STOCKPILE. REMOVE THE SEDIMENT CONTROL BARRIER WHEN THE SOIL STOCKPILE HAS BEEN REMOVED.

DUST CONTROL:
SCHEDULE CONSTRUCTION OPERATIONS TO MINIMIZE THE AMOUNT OF DISTURBED AREAS AT ANY ONE TIME DURING THE COURSE OF WORKS. APPLY TEMPORARY SOIL STABILIZATION PRACTICES SUCH AS MULCHING, SEEDING, AND SPRAYING (WATER). STRUCTURAL MEASURES (MULCH, SEEDING) SHALL BE INSTALLED IN DISTURBED AREAS BEFORE SIGNIFICANT BLOWING PROBLEMS DEVELOP. WATER SHALL BE SPRAYED AS NEEDED. REPEAT AS NEEDED, BUT AVOID EXCESSIVE SPRAYING, WHICH COULD CREATE RUNOFF AND EROSION PROBLEMS.

DEWATERING PITS:
(IF REQUIRED) - INSPECT DAILY DURING OPERATION FOR CLOGGING OR OVERFLOW. CLEAR INLET AND DISCHARGE PIPES OF OBSTRUCTIONS. IF A FILTER MATERIAL BECOMES CLOGGED WITH SEDIMENT, PIT SHALL BE DISMANTLED AND NEW PITS SHALL BE CONSTRUCTED AS NEEDED.

CATCH BASINS:
ALL CATCH BASINS SHALL BE INSPECTED AFTER EACH STORM EVENT FOR SEDIMENT ACCUMULATION, AND DEBRIS, AND REMOVE AS NECESARRY. THE INLET PROTECTION SHALL BE INSPECTED FOR SEDIMENT ACCUMULATION AND REPLACED AS NECESARRY. WHEN SEDIMENT ACCUMULATION WITHIN THE CATCH BASIN SUMP REACHES 1/2 OF THE SUMP DEPTH, IT SHALL BE REMOVED.

UNAUTHORIZED ALTERATIONS OR ADDITIONS TO THIS DRAWING IS A VIOLATION OF SECTION 7209.2 OF THE NEW YORK EDUCATION LAW

## MAP REFERENCES:

1. EXISTING FEATURES AS SHOWN ON THIS SITE PLAN PROVIDED BY A SURVEY ENTITLED "BOUNDARY AND TOPOGRAPHIC SURVEY FOR B&A REALTY MANAGEMENT" PREPARED BY MASER ASSOCIATES AND DATED NOVEMBER 13, 2017.

## DEMOLITION NOTES:

1. PRIOR TO DEMOLISHING ANY BUILDINGS/STRUCTURES, THE CONTRACTOR SHALL PERFORM A PRE-DEMOLITION SURVEY IN ACCORDANCE WITH STATE AND FEDERAL REGULATIONS GOVERNING THE DISPOSAL OF SOLID WASTE. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS AND APPROVALS BY THE AUTHORITY HAVING JURISDICTION. ALL DEBRIS RESULTING FROM DEMOLITION ACTIVITIES SHALL BE DISPOSED OF OFF-SITE AT A FACILITY APPROVED TO RECEIVE THE DEBRIS.
2. CONFORM TO APPLICABLE CODE FOR DEMOLITION OF STRUCTURES, SAFETY OF ADJACENT STRUCTURES, DUST CONTROL, RUNOFF CONTROL, AND HAULING, DISPOSAL AND STORAGE OF DEBRIS.
3. PROVIDE, ERECT, AND MAINTAIN TEMPORARY BARRIERS AND SECURITY DEVICES.
4. MAINTAIN EXISTING UTILITIES TO REMAIN IN SERVICE AND PROTECT THEM AGAINST DAMAGE DURING SELECTIVE DEMOLITION OPERATIONS. DO NOT INTERRUPT EXISTING UTILITIES SERVING OPERATING FACILITIES, EXCEPT WHEN AUTHORIZED IN WRITING BY OWNER AND AUTHORITIES HAVING JURISDICTION.
5. NOTIFY ADJACENT OWNERS OF WORK THAT MAY AFFECT THEIR PROPERTY, POTENTIAL NOISE, UTILITY OUTAGE, OR DISRUPTION. COORDINATE WITH OWNER.
6. PREVENT MOVEMENT OR SETTLEMENT OF ADJACENT STRUCTURES. PROVIDE BRACING AND SHORING.
7. LOCATE AND IDENTIFY ALL EXISTING UTILITIES WITHIN THE CONSTRUCTION AREA. DISCONNECT AND SEAL OR CAP OFF UTILITY SERVICES THAT WILL BE AFFECTED BY THIS PROJECT. NOTIFY AFFECTED UTILITY COMPANIES BEFORE STARTING WORK AND COMPLY WITH THEIR REQUIREMENTS. VERIFY THAT UTILITIES HAVE BEEN DISCONNECTED AND CAPPED.
8. DEMOLISH AND REMOVE COMPONENTS IN AN ORDERLY AND CAREFUL MANNER.
9. PROTECT EXISTING FEATURES THAT ARE NOT TO BE DEMOLISHED.
10. CONDUCT OPERATIONS WITH MINIMUM INTERFERENCE TO PUBLIC OR PRIVATE ACCESSES.
11. MAINTAIN EGRESS AND ACCESS AT ALL TIMES. DO NOT CLOSE OR OBSTRUCT ROADWAYS, OR SIDEWALKS WITHOUT PERMITS.
12. CEASE OPERATIONS IMMEDIATELY IF ADJACENT STRUCTURES APPEAR TO BE IN DANGER. NOTIFY AUTHORITY HAVING JURISDICTION.
13. ROUGH GRADE AND COMPACT AREAS AFFECTED BY DEMOLITION TO MAINTAIN SITE GRADES AND CONTOURS.
14. FIELD VERIFY EXISTING CONDITIONS AND CORRELATE WITH REQUIREMENTS INDICATED ON DEMOLITION PLAN TO DETERMINE EXTENT OF SELECTIVE DEMOLITION REQUIRED.
15. MAINTAIN EXISTING UTILITIES TO REMAIN IN SERVICE AND PROTECT THEM AGAINST DAMAGE DURING SELECTIVE DEMOLITION OPERATION.
16. CONDUCT DEMOLITION OPERATIONS AND REMOVE DEBRIS TO ENSURE MINIMUM INTERFERENCE WITH SELECTIVE DEMOLITION OPERATIONS.
17. CONDUCT DEMOLITION OPERATIONS TO PREVENT INJURY TO PEOPLE AND DAMAGE TO ADJACENT BUILDINGS AND FACILITIES TO REMAIN. ENSURE SAFE PASSAGE OF PEOPLE AROUND SELECTIVE DEMOLITION AREA.
18. USE WATER MIST, TEMPORARY ENCLOSURES AND OTHER SUITABLE METHODS TO LIMIT THE SPREAD OF DUST AND DIRT. COMPLY WITH GOVERNING ENVIRONMENTAL PROTECTION REGULATIONS. DO NOT USE WATER WHEN IT MAY DAMAGE EXISTING CONSTRUCTION, SUCH AS ICE, FLOODING, AND POLLUTION.
19. REMOVE AND TRANSPORT DEBRIS IN A MANNER THAT WILL PREVENT SPILLAGE ON ADJACENT SURFACES AND AREAS.
20. CLEAN ADJACENT STRUCTURES AND IMPROVEMENTS OF DUST, DIRT AND DEBRIS CAUSED BY SELECTIVE DEMOLITION OPERATIONS. RETURN ADJACENT AREAS TO CONDITION EXISTING BEFORE START OF SELECTIVE DEMOLITIONS.
21. PROMPTLY DISPOSE OF DEMOLISHED MATERIALS. DO NOT ALLOW DEMOLISHED MATERIALS TO ACCUMULATE ON-SITE. DO NOT BURN DEMOLISHED MATERIALS ON-SITE.
22. EXISTING WATER, SEWER, GAS AND OTHER SERVICES TO BE ABANDONED PER THE REQUIREMENTS OF THE REGULATING AGENCY.

## SCHEDULE OF REGULATIONS (C-1)
## BULK REGULATIONS & CONFORMANCE TABLE:

| PARAMETER | REQUIREMENT | EXISTING | PROPOSED |
|---|---|---|---|
| LOT AREA: | 35,400 S.F.[1] | ±12,379 S.F. | ±12,379 S.F. |
| LOT FRONTAGE: | 40 FEET MINIMUM | ±110 FEET | ±110 FEET |
| YARD SETBACKS: | | | |
| FRONT YARD (SOUTH AVE): | 15 FEET MINIMUM[2] | ±1.8 FEET[3] | 6.00 FEET[4] |
| FRONT YARD (READE PL): | 15 FEET MINIMUM[2] | ±0.6 FEET[3] | 6.00 FEET[4] |
| SIDE YARD: | 15 FEET MINIMUM[5] | ±69.10 FEET | 6.20 FEET[6] |
| REAR YARD:[7] | 25 FEET MINIMUM | ±70.95 FEET | 53.68 FEET |
| LOT COVERAGE: | MAX 80% | ±9.9% | ±33.2% |
| USEABLE OPEN SPACE: | 4,900 SQ FT MINIMUM[8] | 2,868 S.F. | 2,155 S.F.[9] |
| MAXIMUM BUILDING HEIGHT: | 3 STORIES OR 35 FEET | 2 STORIES, < 35' | 3 STORIES, 34' |

1. THE MINIMUM REQUIRED LOT AREA IS BASED ON THE RESIDENTIAL DEVELOPMENT PORTION OF THE PROJECT, WHERE 19-3.22(4)(b) REQUIRES 2,200 SF PER 1-BR UNIT AND 2,800 SF PER 2-BR UNIT, RESULTING IN A REQUIRED 35,400 S.F. LOT AREA.
2. TEN (10) FEET, IF CORNER LOT FIFTEEN (15) FEET.
3. EXISTING NON-CONFORMING
4. THE APPLICANT IS SEEKING A VARIANCE WHERE 15 FEET IS REQUIRED, AND 6 FEET IS PROVIDED, THEREBY REQUIRING RELIEF OF 9 FEET.
5. NO SIDE YARD IS REQUIRED, EXCEPT, IF PROVIDED, IT MUST BE AT LEAST SIX (6) FEET; IF A CORNER LOT, THE SIDE YARD MUST FIFTEEN (15) FEET.
6. THE APPLICANT IS SEEKING A VARIANCE WHERE 15 FEET IS REQUIRED, AND 6.2 FEET IS PROVIDED, THEREBY REQUIRING RELIEF OF 8.8 FEET.
7. PER 19-4.12(4), ON A CORNER LOT, ONE YARD OTHER THAN THE FRONT YARDS SHALL BE DEEMED TO BE A REAR YARD AND THE OTHER OR OTHERS SHALL BE DEEMED TO BE SIDE YARDS. THE APPLICANT IS CHOOSING THE NORTHERN PROPERTY LINE TO BE THE REAR YARD.
8. THE MINIMUM USABLE OPEN SPACE REQUIRED IN C-1 ZONE, PER 19-3.22(4)(h), IS THE SAME AS THAT PER 19-3.15(4)(i), WHICH REQUIRES 300 SQUARE FEET OF USABLE OPEN SPACE FOR EACH ONE-BEDROOM UNIT AND 400 SQUARE FEET OF USABLE OPEN SPACE FOR EACH TWO-OR-MORE-BEDROOM UNIT, FOR A MINIMUM REQUIRED USABLE OPEN SPACE OF 4,900 SQUARE FEET (FOR ELEVEN 1-BR UNITS PLUS FOUR 2-BR UNITS).
9. THE APPLICANT IS SEEKING A VARIANCE WHERE THE MINIMUM USABLE OPEN SPACE IS 4,900 SQUARE FEET, AND NONE IS PROVIDED (OPEN SPACE ON THE SITE IS SHOWN, BUT DOES NOT MEET THE DEFINITION OF USABLE OPEN SPACE), THEREBY REQUIRING RELIEF OF 4,900 SQUARE FEET.

## REQUIRED PARKING:

USE = COMMERCIAL (ASSUME RETAIL)
REQUIRED SPACES = 1/300 SF FLOOR AREA
PROPOSED FLOOR AREA = 2,017 SQUARE FEET
REQUIRED COMM'L PARKING = 6.7 SPACES

USE = MULTI-FAMILY RESIDENTIAL
REQUIRED SPACES = 1.5/1-BR UNIT
REQUIRED SPACES = 2/2BR UNIT
REQUIRED RES'L PARKING = 24.5 SPACES
TOTAL REQUIRED PARKING = 31.6 SPACES (SAY 32 SPACES)

## PROVIDED PARKING:

ON-SITE PARKING = 19 SPACES
ON-SITE ACCESSIBLE PARKING = 2 SPACES
ON-SITE TOTAL PARKING = 21 SPACES
ON-STREET PARKING = 8 SPACES
TOTAL PARKING PROVIDED = 29 SPACES
NOTES:
1. ON-STREET PARKING IS TIME LIMITED (REFER TO THE CALLOUTS ON EXISTING SIGNAGE).
2. 19-4.3(4) ALLOWS FOR JOINT USE OF PARKING BASED ON TIME DIFFERENCES. IT IS ASSUMED THAT THE MAJORITY OF RESIDENTIAL SPACES WILL BE AVAILABLE DURING NORMAL BUSINESS HOURS DURING WEEKDAYS. HOWEVER, THE APPLICANT IS SEEKING A VARIANCE WHERE THE MINIMUM REQUIRED NUMBER OF PARKING SPACES IS 32, WHERE 21 ON-SITE PARKING SPACES ARE PROVIDED, THEREBY REQUIRING RELIEF OF 11 PARKING SPACES.

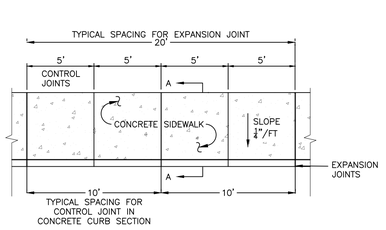
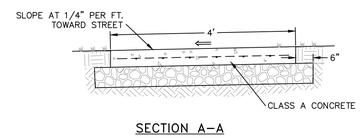
LEGEND
- (A) 1-1/2" ASPHALT CONCRETE TOP COURSE- NYSDOT TYPE 6F
- (B) 2-1/2" ASPHALT CONCRETE BINDER COURSE- NYSDOT TYPE 3
- (C) 10" GRANULAR SUBBASE COURSE- NYSDOT ITEM 304.12

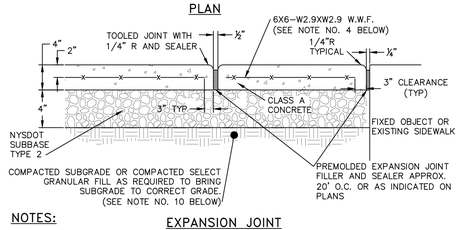
NOTES:
1. SAW CUT MIN. 18" BEYOND EXCAVATION WITH SMOOTH EDGES. 18" JOINT BETWEEN EXISTING AND NEW TOP COURSE TO BE MILLED. JOINT TO BE SEALED WITH POLYMER MODIFIED SEALER.
2. FURNISH, PLACE, AND COMPACT SUBBASE.
3. TACK COAT IN ACCORDANCE WITH NYSDOT STANDARD SPEC.
4. FURNISH AND PLACE ASPHALT CONCRETE PAVEMENT AS SPECIFIED.

PAVEMENT RESTORATION DETAIL
NOT TO SCALE



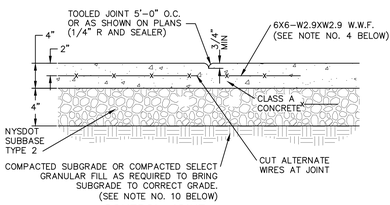


SIGN DETAILS
NOT TO SCALE

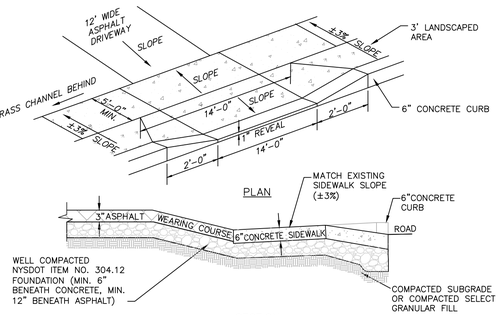


NOTES:
1. ALL DIMENSIONS SUBJECT TO CURRENT MUNICIPALITY ZONING AND SITE REGULATIONS.
2. PAINTED ACCESSIBLE SYMBOL TO BE IN ACCORDANCE WITH NYSDOT AND ADA STANDARDS.
3. IF PARKING ABUTS A SIDEWALK, THEN THE REGULATORY SIGNS SHALL BE PLACED BEHIND THE SIDEWALK.

PARKING AND STRIPING DETAIL
NOT TO SCALE

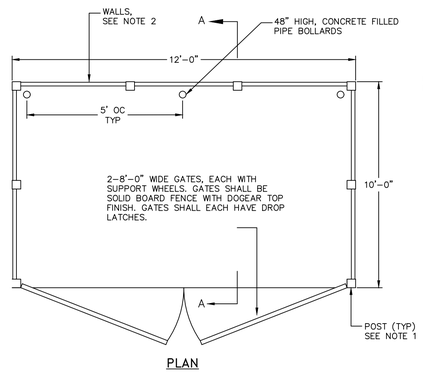


SECTION A-A

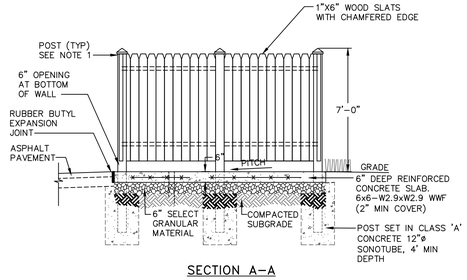


EXPANSION JOINT

CONTROL JOINT



NOTES:
1. 10' SPACING OF CONTROL JOINTS SHALL BE USED FOR CAST IN PLACE CONCRETE CURBS.
2. MATERIAL AND METHODS OF CONSTRUCTION SHALL BE IN CONFORMANCE WITH THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION (NYSDOT) STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED JANUARY 2, 2002, AND ALL ADDENDA THERETO; THE ONLY EXCEPTION BEING THAT THE WORK OF THIS CONTRACT SHALL BE MEASURED IN ENGLISH UNITS.
3. ALL CONCRETE SHALL BE 4,000 PSI CLASS A CONCRETE. CONCRETE MATERIALS, PLACEMENT, AND CONSTRUCTION SHALL CONFORM WITH SECTION 500 OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
4. REINFORCING STEEL FOR CONCRETE SHALL CONFORM WITH SECTION 556 – REINFORCING STEEL FOR CONCRETE STRUCTURES OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS AND AS SPECIFICALLY CALLED OUT IN THE DRAWINGS.
5. ALL EXPOSED SURFACED SHALL HAVE A BROOM TEXTURED FINISH.
6. EXPANSION JOINTS SHALL BE LOCATED A MAXIMUM OF 20' ON CENTER, OR AS INDICATED ON PLANS.
7. JOINTS SHALL NOT BE SAW CUT.
8. EXPOSED CONCRETE SURFACES SHALL BE TREATED WITH "SUREBOND"/"SAFEBOND" SB-7000 INTENSIFIER BRIGHT PROTECTOR AND SIDEWALK SEALER, OR EQUAL. RATE AND METHOD OF APPLICATION SHALL BE IN ACCORDANCE WITH MANUFACTURE'S RECOMMENDATIONS.
9. SUBBASE MATERIAL SHALL CONFORM WITH SECTION 304 OF THE ABOVE REFERENCED NYSDOT STANDARD.
10. WHERE IT IS NECESSARY TO PLACE FILL FOR PURPOSE OF BRINGING THE SUBGRADE ELEVATION UP TO A SPECIFIED GRADE, THE FILL MATERIAL PLACED SHALL BE IN CONFORMATION WITH SECTION 203-EXCAVATION AND EMBANKMENT OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
11. ALL WORK SHALL CONFORM WITH SECTION 608-SIDEWALK, DRIVEWAYS, AND BICYCLE PATHS OF THE ABOVE REFERENCED NYSDOT STANDARD SPECIFICATIONS.
12. CONCRETE SHALL BE SEALED WITH A SALT RESISTANT SEALER.



CONCRETE SIDEWALK DETAIL
NOT TO SCALE

NOTE:
1. PRE-MOLDED EXPANSION JOINTS TO BE USED AT ALL JOINTS.
2. DRIVEWAY SHALL BE PAVED AFTER THE SIDEWALK.
3. EXISTING SIDEWALK TO REMAIN UNTOUCHED.
4. CONCRETE SHALL BE SEALED WITH A SALT RESISTANT SEALER.

DRIVEWAY ENTRANCE THROUGH SIDEWALK DETAIL
NOT TO SCALE

NOTES
1. POSTS SHALL HAVE A DECORATIVE CAP, CONSISTENT WITH THE ARTS & CRAFTS STYLE, AS APPROVED BY OWNER. POST SPACING SHALL BE AS REQUIRED BY WALL CONSTRUCTION.
2. WALLS OF DUMPSTER ENCLOSURE SHALL BE A SOLID WOOD PRIVACY FENCING NATURAL STAIL OR PAINT TO COMPLEMENT BUILDING.

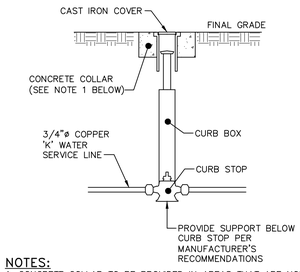
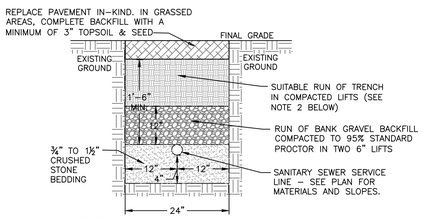
UNAUTHORIZED ALTERATIONS OR ADDITIONS TO THIS DRAWING IS A VIOLATION OF SECTION 7209.2 OF THE NEW YORK EDUCATION LAW



Dig Safely. New York. Call 811 before you dig

**NOTES:**

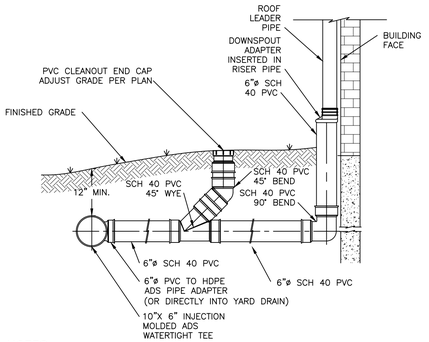
1. EXCAVATION AND TRENCHING SHALL MEET ALL OSHA REQUIREMENTS.
2. SUITABLE RUN OF TRENCH SHALL NOT INCLUDE FROZEN MATERIALS, DEBRIS, ORGANIC MATERIALS, ENLOGATED PARTICLES, LARGE STONES OR OTHER UNSUITABLE MATERIALS. IF THE RUN OF TRENCH MATERIAL IS FOUND TO BE UNSUITABLE, A SUITABLE BACKFILL MATERIAL SHALL BE IMPORTED AND USED.
3. IN AREAS WHERE 5' COVER REQUIREMENT CANNOT BE MET, THE CONTRACTOR SHALL PROVIDE PIPE INSULATION TO PREVENT FREEZING.



## WATER SERVICE LINE TRENCH DETAIL
NOT TO SCALE

**NOTES:**

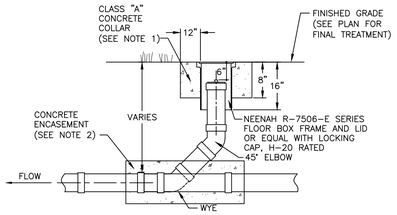
1. CONCRETE COLLAR TO BE PROVIDED IN AREAS THAT ARE NOT PAVED. THE COLLAR SHALL BE 6" FROM THE COVER AND SHALL EXTEND 6" BELOW FINAL GRADE.
2. CURB STOP TO BE COMPRESSION TYPE BY MUELLER.
3. AREA AROUND CURB BOX TO BE BACKFILLED WITH GRAVELLY MATERIAL.



## WATER SHUT-OFF VALVE DETAIL
NOT TO SCALE

**NOTES:**

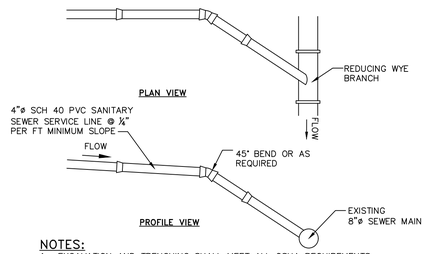
1. EXCAVATION AND TRENCHING SHALL MEET ALL OSHA REQUIREMENTS.
2. SUITABLE RUN OF TRENCH SHALL NOT INCLUDE FROZEN MATERIALS, DEBRIS, ORGANIC MATERIALS, LARGE STONES OR OTHER UNSUITABLE MATERIALS. IF THE RUN OF TRENCH MATERIAL IS FOUND TO BE UNSUITABLE, A SUITABLE BACKFILL MATERIAL SHALL BE IMPORTED AND USED.



## SANITARY SEWER LINE TRENCH DETAIL
NOT TO SCALE

**NOTES:**

1. ALL ROOF LEADER PIPES SHALL BE 6"ø SCH 40 PVC @ 2.0% SLOPE MIN. UNLESS SPECIFIED OTHERWISE.
2. PVC JOINT CONNECTIONS SHALL BE MADE WITH PVC CEMENT.
3. ROOF LEADER HEADER PIPES SHALL BE 10"ø HDPE PIPE.
4. SUBSTITUTIONS OF PIPE MATERIAL SHALL BE BROUGHT TO THE DESIGN ENGINEER'S ATTENTION FOR REVIEW.



## ROOF LEADER CONNECTION DETAIL
NOT TO SCALE

NOTES:

1. CONCRETE COLLAR TO BE PROVIDED IN AREAS THAT ARE NOT PAVED. THE COLLAR SHALL BE 12" FROM THE COVER AND SHALL BE A MINIMUM OF 8" THICK.
2. CONCRETE ENCASEMENT SHALL BE A MINIMUM OF 6" AROUND PIPE JOINTS OF WYE.

## CLEANOUT DETAIL
NOT TO SCALE

**NOTES:**

1. EXCAVATION AND TRENCHING SHALL MEET ALL OSHA REQUIREMENTS.
2. SUITABLE RUN OF TRENCH SHALL NOT INCLUDE FROZEN MATERIALS, DEBRIS, ORGANIC MATERIALS, LARGE STONES OR OTHER UNSUITABLE MATERIALS. IF THE RUN OF TRENCH MATERIAL IS FOUND TO BE UNSUITABLE, A SUITABLE BACKFILL MATERIAL SHALL BE IMPORTED AND USED.
3. TAPPING SADDLE FOR CONNECTION OF THE PROPOSED SERVICE LINE TO THE EXISTING SEWER MAIN TO BE A 4" PREDCO HUB TAP SADDLE – MODEL #HTS4/E.

## SANITARY SEWER SERVICE CONNECTION DETAIL

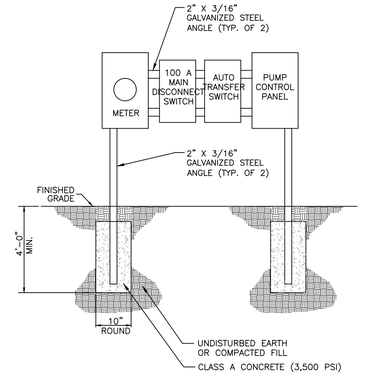
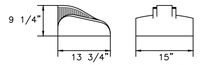
LUMINAIRE & POLE SPECIFICATIONS

SINGLE ARM-MOUNTED BY LITHONIA LIGHTING



LUMINAIRE: 175 WATT METAL HALIDE TYPE IV CUTOFF DISTRIBUTION WITH 4" SQUARE MOUNTING ARM KAD-175M-R4-HS

POLE: SQUARE STRAIGHT ALUMINUM POLE, DARK BRONZE SSA-15-4C

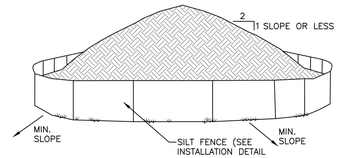


NOTES

1. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO CHECK AND VERIFY ALL ANCHOR BOLT DIMENSIONS (SIZE, BOLT CIRCLE, ETC.) WITH THE POLE MANUFACTURER PRIOR TO INSTALLATION OF THE FOUNDATIONS.
2. CHAMFER EXPOSED EDGES OF ALL FOUNDATIONS.
3. PROVIDE INSULATED GROUNDING BUSHING ON EXPOSED ENDS (IN BASE OF POLE) OF ALL GALVANIZED STEEL SWEEPS.
4. COLOR OF LUMINAIRE SHALL MATCH COLOR OF POLE.
5. THE LIGHT SOURCE SHALL BE COMPLETELY SHIELDED TO PREVENT HORIZONTAL GLARE.

## POLE AND LUMINARE DETAIL
NOT TO SCALE

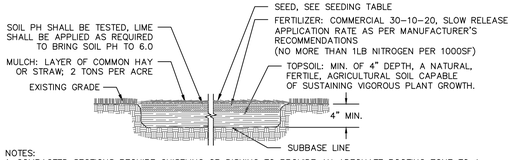
## ELECTRICAL EQUIPMENT MOUNTING DETAIL
NOT TO SCALE



LUMINAIRE & POLE SPECIFICATIONS

ASW1 WALL MOUNTED SERIES BY LITHONIA LIGHTING

LUMINAIRE: 100 WATT METAL HALIDE TYPE III ASYMETRIC DISTRIBUTION MOUNTED AT 8 FT ASW1-100M- SR3

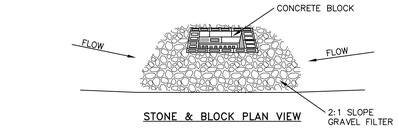


COLOR: TEXTURED DARK BRONZE POLYETER POWDER FINISH.

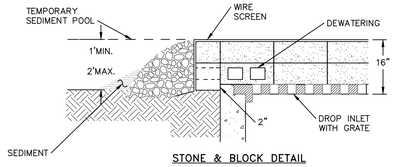
## WALL MOUNTED LUMINARE DETAIL
NOT TO SCALE

NOTES:
1. AREA CHOSEN FOR STOCKPILING OPERATIONS SHALL BE DRY AND STABLE.
2. EACH PILE SHALL BE SURROUNDED WITH SILT FENCING, THEN STABILIZED WITH VEGETATION OR COVERED.

## TEMPORARY SOIL STOCKPILE DETAIL
NOT TO SCALE



NOTES:
1. COMPACTED SECTIONS REQUIRE CHISELING OR DISKING TO PROVIDE AN ADEQUATE ROOTING ZONE TO A MINIMUM DEPTH OF 12"
2. SOIL AMENDMENTS SHOULD BE INCORPORATED INTO THE UPPER 2" OF SOILS BASED ON SOIL TESTING. IF SOIL MUST BE FERTILIZED BEFORE RESULTS OF A SOIL TEST CAN BE OBTAINED TO DETERMINE FERTILIZER NEEDS, APPLY COMMERCIAL FERTILIZER AT 600 POUNDS PER ACRE 5-5-10 OR EQUIVALENT.
3. PERMANENT SEEDINGS MAY BE MADE ANY TIME OF YEAR IF PROPERLY MULCHED AND ADEQUATE MOISTURE IS PROVIDED. LATE JUNE THROUGH EARLY AUGUST IS NOT OPTIMAL SEEDING PERIOD AS PORTIONS OF THE SEEDING MAY FAIL DUE TO DROUGHT AND HEAT. THESE AREAS MAY NEED RESEEDING IN LATE SUMMER/FALL OR THE FOLLOWING SPRING.
4. WATERING MAY BE ESSENTIAL TO ESTABLISH A NEW SEEDING WHEN A DROUGHT CONDITION OCCURS SHORTLY AFTER A NEW SEEDING EMERGES. DO NOT EXCEED THE APPLICATION RATE FOR THE SEED OR SUBSOIL.



SEEDING TABLE

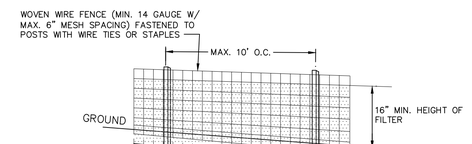
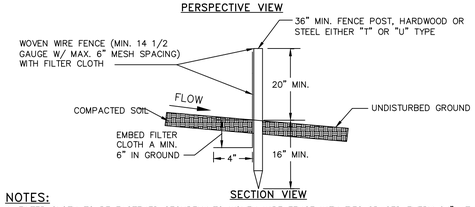
STONE & BLOCK PLAN VIEW



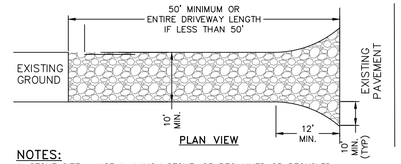
STONE & BLOCK DETAIL



"DOUGHNUT" DETAIL

NOTES:
1. LAY ONE BLOCK ON EACH SIDE OF THE STRUCTURE ON ITS SIDE FOR DEWATERING. FOUNDATION SHALL BE 2 INCHES MINIMUM BELOW REST OF INLET AND BLOCKS SHALL BE PLACED AGAINST INLET FOR SUPPORT.
2. HARDWARE CLOTH OR 1/2" WIRE MESH SHALL BE PLACED OVER BLOCK OPENINGS TO SUPPORT STONE.
3. USE CLEAN STONE OR GRAVEL 1/2-3/4 INCH IN DIAMETER PLACED 2 INCHES BELOW TOP OF THE BLOCK ON A 2:1 SLOPE OR FLATTER.
4. FOR STONE STRUCTURES ONLY, A 1 FOOT THICK LAYER OF THE FILTER STONE WILL BE PLACED AGAINST THE 3 INCH STONE AS SHOWN ON THE DRAWINGS. MAXIMUM DRAINAGE AREA 1 ACRE

## CATCH BASIN INLET PROTECTION DETAIL
NOT TO SCALE



PERSPECTIVE VIEW

SECTION VIEW

NOTES:
1. FILTER CLOTH TO BE FASTENED SECURELY TO WOVEN WIRE FENCE WITH TIES SPACED EVERY 24" AT TOP AND MID SECTION.
2. WHEN TWO SECTIONS OF FILTER CLOTH ADJOIN EACH OTHER THEY SHALL BE OVER-LAPPED BY SIX INCHES AND FOLDED. FILTER CLOTH SHALL BE EITHER FILTER X, MIRAFI 100X, STABILINKA T140N OR APPROVED EQUAL.
3. PREFABRICATED UNITS SHALL BE GEOFAB, ENVIROFENCE OR APPROVED EQUAL.
4. MAINTENANCE SHALL BE PERFORMED AS NEEDED AND MATERIAL REMOVED WHEN "BULGES" DEVELOP IN THE SILT FENCE.

## SILT FENCE DETAIL
NOT TO SCALE

PLAN VIEW

NOTES:
1. STONE SIZE - USE 1-4 INCH STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT.
2. THICKNESS - NOT LESS THAN SIX (6) INCHES.
3. WIDTH - 12 FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. 24 FOOT MINIMUM IF SINGLE ENTRANCE TO SITE.
4. GEOTEXTILE - WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
5. SURFACE WATER - ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED BENEATH THE ENTRANCE, IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
6. MAINTENANCE - THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY. THIS MAY REQUIRE PERIODIC TOP DRESSING WITH ADDITIONAL STONE AS CONDITIONS DEMAND AND REPAIR AND/OR CLEANOUT OF ANY MEASURE USED TO TRAP SEDIMENT. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACTED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.
7. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
8. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

## STABILIZED CONSTRUCTION ENTRANCE DETAIL

LOCATION MAP

GENERAL NOTES:

1. UNDERGROUND UTILITIES SHOWN HEREON BASED ON UTILITY EVIDENCE VISIBLE AT GROUND SURFACE AND RECORD DRAWINGS AND ARE SUBJECT TO FIELD VERIFICATION BY EXCAVATION. UTILITIES SHOWN DO NOT PURPORT TO CONSTITUTE OR REPRESENT ALL UTILITIES LOCATED UPON OR ADJACENT TO THE SURVEYED PREMISES.
2. THE OFFSETS OR DIMENSIONS SHOWN HEREON, FROM THE PROPERTY LINES TO THE STRUCTURES, ARE FOR A SPECIFIC PURPOSE AND USE; THEREFORE, THEY ARE NOT INTENDED TO MONUMENT THE PROPERTY LINES OR TO GUIDE THE ERECTION OF FENCES, ADDITIONAL STRUCTURES OR ANY OTHER IMPROVEMENTS.
3. EASEMENTS AND/OR SUBSURFACE STRUCTURES RECORDED OR UNRECORDED ARE NOT GUARANTEED UNLESS PHYSICALLY EVIDENT ON THE PREMISES AT THE TIME OF THE SURVEY.
4. SUBJECT TO ALL RIGHTS, EASEMENTS, COVENANTS AND RESTRICTIONS OF RECORD.
5. SUBJECT TO ANY STATE OF FACTS AN UP-TO-DATE ABSTRACT OF TITLE WOULD DISCLOSE.
6. BASIS OF BEARING IS NEW YORK STATE PLANE COORDINATE SYSTEM EAST ZONE. CONTROL WAS ESTABLISHED USING KEYNET VRS SYSTEM. THE HORIZONTAL DATUM IS RELATIVE TO NAD83
7. THE VERTICAL POSITION OF THE HEREIN SURVEY IS BASED ON THE KEYNET RTK GPS NETWORK AND IS SUBJECT TO FURTHER ADJUSTMENT TO ANY LOCAL NGS BENCHMARKS. THE VERTICAL DATUM IS RELATIVE TO NAVD 1988.

# *Short Environmental Assessment Form*
## *Part 1 - Project Information*

**Instructions for Completing**

**Part 1 – Project Information. The applicant or project sponsor is responsible for the completion of Part 1.** Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification. Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information.

Complete all items in Part 1. You may also provide any additional information which you believe will be needed by or useful to the lead agency; attach additional pages as necessary to supplement any item.

**Part 1 – Project and Sponsor Information**

Name of Action or Project:

134-136 South Avenue Mixed-Use Commercial Building

Project Location (describe, and attach a location map):

134-136 South Avenue, Poughkeepsie NY 12601

Brief Description of Proposed Action:

The applicant wishes to develop the lot located at 134-136 South Avenue in the City of Poughkeepsie (Tax ID # 6061-44-956742). The development will include razing of the existing residential building on site and construction of a new 3-floor Commercial-Residential mixed used building in its place. In total the building will accommodate space for 3 retail stores, 11 one-bedroom apartments, and 4 two-bedroom apartments. The remainder of the site will be developed to accommodate off-street parking and pedestrian ways. The site is located in the City of Poughkeepsie's C-1 Neighborhood Commercial Zoning District where mixed used residential buildings are allowed under special permit.

| Name of Applicant or Sponsor: | Telephone: 845-471-1047 |
|---|---|
| AE Baxter, LLC c/o Eric Baxter | E-Mail: eric@baxterbuilt.com |

Address:

278 Mill Street, Suite 100

| City/PO: | State: | Zip Code: |
|---|---|---|
| Poughkeepsie | New York | 12601 |

| | NO | YES |
|---|---|---|
| 1. Does the proposed action only involve the legislative adoption of a plan, local law, ordinance, administrative rule, or regulation? If Yes, attach a narrative description of the intent of the proposed action and the environmental resources that may be affected in the municipality and proceed to Part 2. If no, continue to question 2. | ☑ | ☐ |
| 2. Does the proposed action require a permit, approval or funding from any other government Agency? If Yes, list agency(s) name and permit or approval: City of Poughkeepsie Planning Board- Site Plan & SUP; City of Poughkeepsie ZBA - Area Variances | ☐ | ☑ |

3. a. Total acreage of the site of the proposed action? 0.28 acres
   b. Total acreage to be physically disturbed? +/- 0.26 acres
