Pond YD-3: PROPOSED DRAIN #3

Summary for Pond YD-4: PROPOSED DRAIN #4

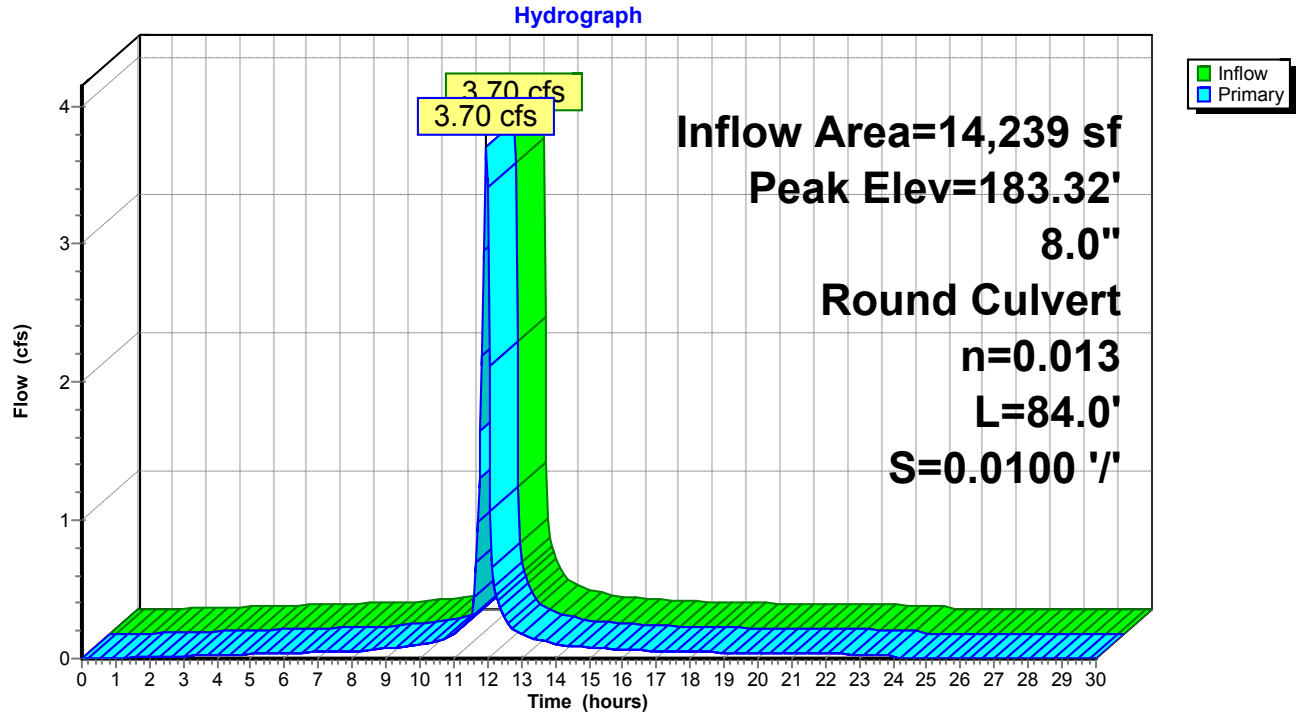
[58] Hint: Peaked 8.86' above defined flood level
[81] Warning: Exceeded Pond YD-3 by 9.07' @ 11.95 hrs



Inflow Area = 14,239 sf, 86.05% Impervious, Inflow Depth = 7.71" for 100-YEAR event
Inflow = 3.70 cfs @ 11.96 hrs, Volume= 9,151 cf
Outflow = 3.70 cfs @ 11.96 hrs, Volume= 9,151 cf, Atten= 0%, Lag= 0.0 min
Primary = 3.70 cfs @ 11.96 hrs, Volume= 9,151 cf

Routing by Stor-Ind method, Time Span= 0.00-30.00 hrs, dt= 0.05 hrs
Peak Elev= 183.32' @ 11.96 hrs
Flood Elev= 174.46'

Device	Routing	Invert	Outlet Devices
#1	Primary	172.29'	**8.0" Round Culvert** L= 84.0' CPP, projecting, no headwall, Ke= 0.900 Inlet / Outlet Invert= 172.29' / 171.45' S= 0.0100 '/' Cc= 0.900 n= 0.013, Flow Area= 0.35 sf

Primary OutFlow Max=3.62 cfs @ 11.96 hrs HW=182.83' (Free Discharge)
↑—**1=Culvert** (Barrel Controls 3.62 cfs @ 10.36 fps)

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Dutchess County, New York
Survey Area Data: Version 17, Jun 11, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Oct 7, 2013—Feb 26, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

1.0 INTRODUCTION

The Wallace Campus is 2.52 acres consisting of 5 parcels located at 319, 325, 327-329, 331 Main Street, in the City of Poughkeepsie. The properties are identified as Tax ID#'s 6162-77-114098, 109079, 109077 and 6162-78-127091. Parcels 6162-77-121116, 116114, 116113,128113 and 112116 are adjoining lots only part of site work for parking; no utilities are proposed. The site is located on the north side of Main Street, the west side of Catharine Street, and the south side of Mill Street (Westbound Arterial). The project has UTM coordinates of 589367 Easting and 4617455 Northing.

The Wallace campus drawing sets forth the boundaries of the Wallace campus consolidated lot and shows the site plan for that lot. Four adjoining parcels outside the Wallace campus are also shown on the drawing set, for the limited purpose of depicting the off-site improvements to be made on those properties pursuant to shared parking and easement agreements, and to show the manner in which those physical improvements and access provisions will improve pedestrian and vehicular circulation in the neighborhood, as well as landscaping, lighting, and community character.

The project sponsor will enter into shared parking and permanent access easement agreements with the owners of these adjoining parcels, which will be approved by the planning board as part of the project approvals. The drawing set depicts the off-site work to be performed by the project sponsor on these parcels to implement the shared parking and access agreements. The work on 302, 304 and 306 Mill Street ("the 3 Mill Street lots") would eliminate two existing curb cuts on Mill Street (between 302 and 304 Mill and between 304 and 306 Mill), and provide additional green space on those lots, including along the Mill Street frontage to replace those driveways. No water or sewer modifications to the existing services are proposed for these properties.

The Wallace campus owner will provide a permanent access easement to the owner of the 3 Mill Street lots for the benefit of owners and tenants, to access the parking areas located on these lots via the Wallace campus access drives. The shared parking agreement would maintain the allocation of dedicated parking (9 spaces) to the 3 Mill Street lots in compliance with the PID zoning. Lighting improvements, pedestrian walkways, and stormwater improvements will be provided to serve the offsite shared parking areas in the same manner as the parking areas on the Wallace campus parcel.

Pursuant to a separate shared parking agreement with the Hudson River Housing ("HRH") property, the project sponsor will be granted a permanent easement to construct pedestrian sidewalk paths within the Hudson River Housing property connecting to Mill Street and providing access from that parking area to the rear entrance to the HRH office building, and parking improvements along the HRH lot southerly boundary that integrate with the Wallace campus parking area, and to place a portion of the project dumpster. Lighting improvements and landscaping will be installed as shown on the drawing set. The project sponsor will provide HRH with a permanent access easement to use the two Wallace campus Mill Street entrances and exits for access to, and use of, 6 parking spaces which are located on Wallace campus property directly abutting the westerly boundary of HRH's property (as shown on the drawing set), which spaces will be reserved for use by HRH employees during working hours 8 am to 6 pm Monday to Friday.

The 6 spaces to be available for Wallace campus parking outside of those hours. No water or sewer modifications to the existing services are proposed for these properties.

Tax Lots 6162-78-127091, 6162-77-114098, 109077, & 109079 will be combined into one tax parcel. The proposed project will demolish the existing buildings at 319, 325, and 327-329 Main Street and will replace them with a building which will include retail and residential units. The project will also include a new building to be located along Catharine Street, which will include residential and day care units. The proposed project will remove a large amount of impervious surface from behind 325 and 327-329 Main Street to construct a new green area.

2.0 WATER SERVICES

2.1 Domestic Water Demand

The site is currently developed. Due to the change in owners and recent vacancies, historic water usage records are not available for all of the parcels. Assuming all parcels are fully occupied as they exist, the estimated consumption values for the existing buildings were derived from Table B-3 "Typical per Unit Hydraulic Loading Rates" of the New York State Department of Environmental Conservation (NYSDEC) Division of Water "Design Standards for Intermediate Sized Wastewater Treatment Systems", March 5, 2014. For the office space however, because the number of existing employees are not known, calculation for this was used from a previous Design Manual based on square footage instead of number employees. The existing property cards from the Dutchess County Parcel Access with the breakdown of existing square footage for each of the buildings have been provided in **Appendix A.** A summary of the projected sanitary sewer flow/water consumption is as follows:

Sanitary Sewer Flow / Water Consumption Projections						
EXISTING SITE						
Location	**Use**	**Size**		**Rate***		**Flow (GPD)**
Parcel D	Restaurant	150	Seats	28	Per Seat	4,200
	Club	800	Persons	16	Per Person	12,800
Parcel E	Office	10,920	sq ft	0.08	Per sq ft	874
Parcel F	Office	13,047	sq ft	0.08	Per sq ft	1,044
Parcel G	Office	114,856	sq ft	0.08	Per sq ft	9,188
					Total Existing Daily Flow:	**28,106**

The Wallace Campus will include Residential, Retail, and a Day Care. The estimated consumption values for the new additions and renovations were derived from Table B-3 "Typical per Unit Hydraulic Loading Rates" of the New York State Department of Environmental Conservation (NYSDEC) Division of Water "Design Standards for Intermediate Sized Wastewater Treatment Systems", March 5, 2014. A summary of the projected sanitary sewer flow/water consumption is as follows:

PROPOSED RE-DEVELOPMENT WATER/SEWER						
Location	**Use**	**Size**		**Rate***		**Flow (GPD)**
Parcel D - Wallace Bldg	Residential	69	Beds	110	Per Bedroom	7,590
Parcel D - Wallace Bldg	Retail	7,649	sq ft	0.08	Per sq ft	612
Parcel D - Wallace Bldg	Employees	13	Employees	15	Per employee	195
Parcel D - Main Str Bldg	Residential	69	Beds	110	Per Bedroom	7,590
Parcel D - Main Str Bldg	Retail	3,309	sq ft	0.08	Per sq ft	265
Parcel D - Main Str Bldg	Employees	6	per	15	Per sq ft	90
Parcel D - Catherine Str Bldg	Residential	49	Beds	110	Per Bedroom	5,390
Parcel D - Catherine Str Bldg	Retail	3,255	sq ft	0.08	Per sq ft	260
Parcel D - Catherine Str Bldg	Employees	5	per	15	Per sq ft	75
					Total Proposed Daily Flow:	**22,067**

* Rates based on New York State Design Standards for Intermediate Sized Wastewater Treatment Works (March 5, 2014), with a 20% reduction for the use of modern water saving fixtures.

2.2 Proposed Water Supply

Water supply for the project will be provided from the City of Poughkeepsie Municipal Water System. The water is supplied by the joint Town and City water treatment facility located at 3431 North Road, Poughkeepsie, NY 12601.

The water is supplied from the municipal lines in Main Street and Catharine Streets. The existing 6" sanitary line (one to Main and one to Catharine) and 6" and 2" water supply services for 331 Main Street/14 Catharine Street will remain unchanged. The new Main Street Building will utilize the existing water supply for former 319 Main Street, formerly Bull and Buddha, and includes a 6" sanitary sewer line, 6" fire line and 2" domestic line. Water supply for the proposed Catharine Street building will be provide by a new 6" connection for water and sewer to the municipal system located in Catharine Street. See ***Figure 1*** below for the building distinction.

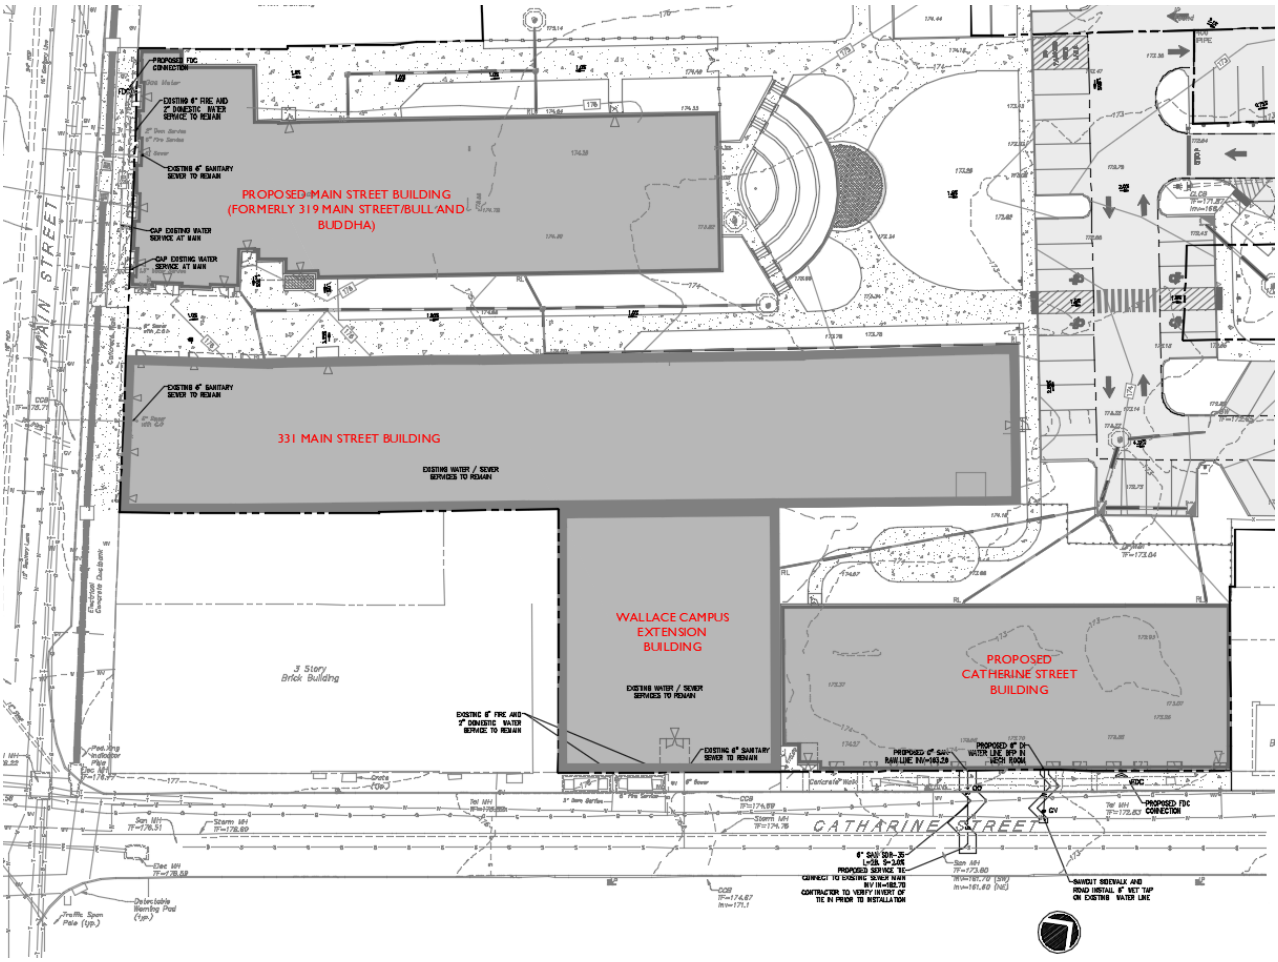

Figure 1: Building Distinction

2.3 Water Infrastructure Improvements

A new water meter and backflow prevention devices will be installed in the mechanical rooms in 331 Main Street and Main Street Buildings. A new 6" water service line will be installed for the new Catharine Street Building and will include a water meter and backflow prevention device to be located in the mechanical room. All building will include a new FDC connection and knox box on the building frontage.

2.4 Fire Suppression

The proposed buildings will be equipped with sprinkler systems in accordance with NFPA guidelines. There are no new fire hydrants proposed as part of the site plan. Existing municipal fire hydrants are located on Main Street, Mill Street, and Catharine Street. During final design of the fire suppression system the City Fire Department will be consulted to determine if any additional requirements will be required to meet the city's fire department needs.

3.0 WASTEWATER SERVICES

3.1 Design Wastewater Flows

As discussed in section 2.1 the estimated consumption values are derived from Table B-3 "Typical per Unit Hydraulic Loading Rates" of the New York State Department of Environmental Conservation (NYSDEC) Division of Water "Design Standards for Intermediate Sized Wastewater Treatment Systems", March 5, 2014. The total average day demand for sewer and water is 22,067 GPD for the project. Using a peaking factor of 4.0 as recommended by the NYSDEC the design max hourly flow rate is 61.30 GPM.

3.2 Existing Wastewater Treatment

The project will connect to the existing municipal sewer collection system. Wastewater generated at the site will be treated by the City/Town of Poughkeepsie Municipal Wastewater Treatment Plant. The plant is located off Hudson Street in the Town of Poughkeepsie.

3.3 Wastewater Infrastructure Improvements

The wastewater is discharged to the municipal lines in Main Street and Catharine Streets. The existing 6" sanitary line (one to Main and one to Catharine) for 331 Main Street/14 Catharine Street will remain unchanged. The new Main Street Building will utilize the existing wastewater lines for the former 319 Main Street, formerly Bull and Buddha, and includes a 6" sanitary sewer line. Wastewater for the Catharine Street building will be provided by a new 6" connection for sewer to the municipal system located in Catharine Street.

4.0 WATER AND WASTEWATER SERVICES – CONCLUSION

Based on the planned re-development water/wastewater consumption estimates, the site will have an decrease sewer and water usage of 6,039 GPD. The water and sewer system will be connected to the City of Poughkeepsie water and sewer systems, using the existing infrastructure at the site. The proposed water and wastewater services, from the City of Poughkeepsie Department of Public Works, have adequate infrastructure and capacity.

The City of Poughkeepsie Engineering Department will, as part of the site plan approval process, review and approve the water and sewer connections. The required testing parameters are also reviewed by the City Engineering Department and included on the approved plans.

Engineering
& Design

September 28, 2021
Revised December 7, 2021

Natalie Quinn, Planning Director
City of Poughkeepsie
62 Civic Center Plaza, 2nd Floor
Poughkeepsie, NY 12601

Wallace Campus Development City of Poughkeepsie, Dutchess County, New York
Colliers Engineering & Design Project No. 20003474A

Dear Natalie,

Colliers Engineer & Design (formerly Maser Consulting) has conducted a review of the reduced size proposed development plan for the Wallace Campus Development ("the Reduced Size Project") as it relates to the potential traffic and parking impacts of the Project. The prior development plan ("7-Story/Daycare Project"), which was previously analyzed in our February 27, 2021 letter report, was formerly proposed to consist of 214 mixed income affordable housing units, a 10,197 sq. ft. daycare facility, an approximately 29,000 sq. ft. community fitness center/climbing gym, 6,416 sq. ft of retail/commercial space and an approximately 1-acre privately owned, but publicly accessible green space ("Wallace Green").

The Reduced Size Project is now proposed to consist of 187 mixed income affordable housing units, 14,213 sq. ft. of retail/commercial space along with the Wallace Green. The fitness center/climbing gym and daycare facility are no longer part of the development.

The Reduced Size Project also includes changes to the onsite parking and circulation patterns resulting from the elimination of the previously proposed daycare facility and the associated drop-off/pick-up areas. A total of 60 parking spaces are proposed under this modified development plan as compared to the 62 parking spaces under the previously proposed plan.

The following provides a detailed discussion of the potential traffic and parking impacts of the Project based on this modified development plan as well as a comparison to the previously proposed development plan where appropriate.

Colliers Engineering & Design

Reduced Size Project Parking Demand

As previously identified in our February 27, 2021 letter report, the Project falls within the Poughkeepsie Innovation District Historic Core (PID-HC) and Urban Village (PID-UV) zones. The City of Poughkeepsie Zoning Code (Section 19-3.37.(13)) identifies the minimum parking requirements for the proposed uses within the development. These parking requirements and the total number of required parking spaces for the Reduced Size Project are identified in the Table No. 1 below.

Table No. 1 – Code Required Parking Summary – Reduced Size Project

Building	Proposed Use	Size	Zone	Code Required Parking Ratio	Required Spaces
Main Street Building	Residential (69 Units Total)	17 Units	PID-HC	0 Spaces/Unit	0
		52 Units	PID-UV	0.5 Spaces/Unit	26
				1 Visitor Space/10 Units	6
	Retail	3,309 Sq. Ft.	PID-UV	0 Spaces/ Sq. Ft.	0
Catharine Street Building	Residential	49 Units	PID-HC	0 Spaces/Unit	0
	Retail	3,255 Sq. Ft.		0 Spaces/ Sq. Ft.	0
Wallace Building	Residential	69 Units	PID-HC	0 Spaces/Unit	0
	Retail	7,649 Sq. Ft.		0 Spaces/ Sq. Ft.	0
				Total	32

As indicated in the table above, per the City Code parking requirements, the Reduced Size Project is required to provide a total of 32 off-street parking spaces. The total of 32 required parking spaces is less than half of the required number of parking spaces under the 7-Story/Daycare Project, which was required to provide approximately 90 total parking spaces prior to accounting for shared parking amongst the uses.

The shared parking accommodations for the 302, 304 & 306 Mill Street parcels, which will be provided 12 dedicated parking spaces, will still remain within the overall Wallace Campus parking lot. Similarly, The Wallace consolidated lot will continue to provide the adjacent Hudson River Housing (HRH) with six (6) reserved parking spaces on the Wallace Property during weekday office hours only (8 AM to 6 PM) for employee and client parking. These spaces would be available to Wallace Campus residents and visitors for parking outside these hours. Together with the 32 spaces required for the Reduced Size Project, the total required parking spaces is 50 spaces during HRH office hours and 44 spaces all other times on Weekdays and all day on Weekends.

Colliers Engineering & Design

As previously indicated, the Site Plan for the Reduced Size Project will provide 60 off-street parking spaces, which will accommodate the total parking requirements of the Wallace Campus, 302, 304 & 306 Mill Street Parcels and the HRH facility. Furthermore, as identified in our February 27, 2021 study, there is also sufficient available on-street parking in the vicinity of the Site to accommodate any potential excess parking demand that may be generated by the Project. It is the intent of the PID zone to leverage this availability of underutilized surplus parking in the PID downtown area for future development.

It should also be noted that the typical use of the Wallace Green is proposed to remain as a passive green space for both residents and visitors. As indicated in our prior study, it is the opinion of Colliers Engineer and Design that this space will not generate any additional parking demand, but rather will draw patrons who are already within the proposed development and immediate surrounding neighborhood to utilize the space.

The Reduced Size Project will also hold occasional Public Performances/Community Gatherings within the Wallace Green & Tiered Seating area. The parking accommodations for these performances/gatherings can be accommodated by available on-street parking in the area of the Site as previously identified in our February 27, 2021 study.

Reduced Size Project Traffic Generation & Traffic Related Impacts

In order to assess the potential traffic related impacts of the Project, estimates of the amount of traffic to be generated by the modified Wallace Campus development during each of the peak hours (Weekday AM, Weekday PM and Saturday) were developed based on information published by the Institute of Transportation Engineers (ITE) as contained in the report entitled ***Trip Generation***, 10th Edition, 2017, based on Land Use Categories; 223 - Affordable Housing; 411 - Public Park and; 820 - Retail. It should be noted that where applicable ITE data For Dense Multi-Use Urban Locations was referenced to reflect traffic generation rates commensurate with the downtown location of the proposed development.

Table No. 2, below, provides a summary of the traffic generation estimates for the Reduced Size Proejct based on the ITE data. This table also takes similar internal and multi-modal credits as identified in our February 27, 2021 report, which are based on the credits identified in the ***Poughkeepsie Downtown Parking Improvement Plan – Analysis of Further Parking Demand*** prepared by Nelson Nygaard dated April 2018.

Colliers Engineering & Design

Table No. 2 – Anticipated Site Generated Traffic Volumes for Reduced Size Project

Time Period	Entry			Exit		
	HTGR[1]	Volume	External Vehicle Trips[2]	HTGR[1]	Volume	External Vehicle Trips[2]
Residential – Affordable Housing (187 Units)						
Peak AM Hour	0.34	63	29	0.14	27	13
Peak PM Hour	0.24	44	21	0.14	26	12
Saturday Peak Hour	0.24	45	21	.24	45	21
Commercial Space (14,213 Sq. Ft.)						
Peak AM Hour	1.26	18	9	1.12	16	8
Peak PM Hour	2.39	34	16	2.53	36	17
Saturday Peak Hour	3.16	45	21	3.16	45	21
Public Park (1 Acre)						
Peak AM Hour	1.00	1	1	1.00	1	1
Peak PM Hour	6.00	6	3	5.00	5	3
Saturday Peak Hour	8.00	8	4	6.00	6	3
Total						
Peak AM Hour	---	---	**39**	---	---	**22**
Peak PM Hour	---	---	**40**	---	---	**32**
Saturday Peak Hour	---	---	**46**	---	---	**45**

Notes:

1. The Hourly Trip Generation Rates (HTGR) are based on data published by the Institute of Transportation Engineers (ITE) as contained in the Trip Generation Handbook, 10th Edition, 2017. ITE Land Use Code - 223 - Affordable Housing, ITE Land Use Code - 411 - Public Park and ITE Land Use Code - 820 - Retail. Note where applicable ITE data for dense multi-use urban locations was referenced.
2. "External Vehicle Trips" include a 30% internal capture trip credit for all land uses as well as a 35% multi-modal trip credit to account for internal trips within the development and between the development and other nearby uses as well as non-personal vehicle trips to the Site. These credits are based on data provided in the Poughkeepsie Downtown Parking Improvement Plan - Analysis of Future Parking Demand prepared by Nelson Nygaard dated April 2018.

Table No. 3 below provides a comparison of the above traffic generation estimates for the Reduced Size Project to the previously proposed 7-Story/Daycare Project. The trip generation estimates for the 7-Story/Daycare Project were identified in Table No. 7 of our February 27, 2021 report.

Colliers Engineering & Design

Table No. 3 – Traffic Generation Comparison – 7-Story/Daycare Project vs. Reduced Size Project

Time Period	7-Story/Daycare Project			Reduced Size Project		
	Entry Volume	Exit Volume	Total Volume	Entry Volume	Exit Volume	Total Volume
Peak AM Hour	72	58	130	39	22	61
Peak PM Hour	71	63	134	40	32	72
Saturday Peak Hour	54	56	110	46	45	91

As indicated in the above table, the Reduced Size Project is generally anticipated to generate less traffic than the previously proposed 7-Story/Daycare Project. This is attributable to the reduction in the number of residential units as well as the elimination of the daycare and fitness center/climbing gym uses.

Based on the above traffic generation estimates, the Reduced Size Project is expected to generate less than 100 entering vehicle trips during each of the peak hours analyzed and a portion of these trips are anticipated to be attracted from the existing traffic stream along Mill Street as pass-by and/or diverted link trips. As indicated in our February 27, 2021 report, ITE and NYSDOT guidelines indicate that developments generating less than 100 entering vehicle trips will not result in a significant impact to the surrounding area traffic operations. It should also be noted that no credit has been taken for the existing traffic generation of the existing buildings and/or possible re-occupancies of these spaces.

Reduced Size Project Site Access and Internal Circulation

The elimination of the proposed Daycare facility from the development plan has allowed for the elimination of the previously proposed drop-off area on the eastern one-way entry driveway. This has also allowed for a reconfiguration of the on-site parking areas to maximize the number of parking spaces provided. As a result of these changes, the driveways have been modified to be a one-way pair, with the western driveway to be one-way entering and the eastern driveway to be one-way exiting. This configuration provides the greatest Site distance for exiting vehicles onto Mill Street. Appropriate “One-Way” and “Do Not Enter” signage should be provided at each of the driveway locations as well as internally at the driveway connections to the internal east-west parking aisle.

Conclusions

Based on the data discussed herein, it is the opinion of Colliers Engineering & Design that the Reduced Size Project will not have a significant impact on traffic and parking conditions in the vicinity of the Site. It should also be noted that based on the parking calculations identified above the previous request for a waiver to be granted by the Planning Board for excess parking spaces under the waiver with fee-in-lieu provision of the PID Zoning District, section 19-3.37 (13) (e) is no longer required.

It is also noted, as indicated in our February 27, 2021 report, the proposed modifications to the two (2) Site access driveway connections to Mill Street, as well as the closure of the existing driveways to 302, 304 and 306 Mill Street, will require a NYSDOT Highway Work Permit to be obtained prior to implementation of these modifications.

Sincerely,

Colliers Engineering & Design CT, P.C.

ELIMINATION AND MINIMIZATION OF PROJECT VARIANCES

The original Site Plan (May 2021) required a number of area variances, including a 2-story height variance for the Main Street building and a 1-story variance for the Catharine Street building. During the summer of 2021, the Applicants met with their design team to minimize variances to the maximum extent possible. The October 2021 site plan improvements eliminated all height variances, bringing both new buildings into conformance with height regulations and assuring that they are lower in height than the existing Wallace building.

In addition to totally eliminating these two height variances, which were the most substantial variances sought, the Applicant has now been able to materially reduce the extent of the landscaping/parking lot variances relating to the two existing driveways into the site from Mill Street. The driveways have existed at their current width since the mid 1950's, and so are a pre-existing condition. There is presently no landscaping at the Mill Street frontage of either driveway (see photos of existing conditions). Nonetheless, because the development of the Wallace Campus is a comprehensive redevelopment of a large site, the Zoning Administrator has ruled that the new PID standards are applicable, and variances are required. The Applicant has developed a modified Site Plan relating to the parking entrances from Mill Street that substantially increase the areas of landscape screening in the entrance drives, and pulls parking further into the site, away from Mill Street. While the same types of variances are required, the *extent* of the variances has been significantly minimized.

The December 2021 site plan ("reduced variance plan") accomplishes the following on each of the Mill Street Driveways:

- It narrows the width of the drive aisles.
- Expands the width of the landscaped area along each driveway frontage, and thus the percentage of the opening that is occupied with landscape screening. While this screening doesn't technically meet the requirement of "frontage occupancy," which requires a building, it does serve to screen views into the site and provide a finished streetscape.
- It expands the depth of landscape screening in the drive aisles
- It significantly increases the area of landscaping along Mill Street.

These measures materially improve existing conditions. They are shown on the following chart:

CHART SHOWING CHANGES IN DRIVEWAY WIDTHS & LANDSCAPING AT MILL STREET ENTRANCES

Westerly Drive	**May 2021 ("Variance Plan")**	**December 2021 ("Reduced Variance Plan")**
Frontage (in feet)	45.5 FT	45.5 FT
Drive Lanes	2	1
Drive aisle width	24 feet	16 FT
Landscape width	4.8 FT (west side) 5.9 FT (east side)	7.5 FT (west side) 22 FT (east side)
Landscape depth (min)	0 FT	10.8 FT
Landscape depth (max)	24 FT	24 FT
Landscape area	144 SF	473 SF

Easterly Drive	**May 2021 ("Variance Plan")**	**December 2021 ("Reduced Variance Plan")**
Frontage width (in feet)	70.7 FT	70.7 FT
# Drive Lanes	2	1
Drive aisle width	24 FT	16 FT
Landscape width	19 FT (west side) 21 FT (east side)	20 FT (west side) 24 FT (east side)
Landscape depth (min)	1 FT	12 FT
Landscape depth (max)	12 FT	24 FT
Landscape area	254 SF	729 SF

COMPARISON OF MAY 2021 VARIANCES AND DECEMBER 2021 REDUCED VARIANCES

I. HEIGHT VARIANCES:

SECTION	REQ/PROHIBITED	MAY 2021 VARIANCES	DECEMBER 2021 VARIANCES
19-3.37(8) Table 3.37-2(b)	5 Story maximum height	Allow 7 story height – Main Street Building	VARIANCE ELIMINATED
19-3.37(8) Table 3.37-2(b)	5 Story maximum height	Allow 6 story height for Catharine Street building	VARIANCE ELIMINATED

II. VARIANCES REGARDING EXISTING MILL STREET DRIVEWAYS AND SCREENING OF VIEWS INTO PARKING LOTS:

WESTERLY DRIVE:

Landscape Screening

SECTION	REQ/PROHIBITED	MAY 2021 VARIANCES	DECEMBER 2021 VARIANCES
19-3.37(13)(b)2 19-3.37(13)(g)(2)(i)	Parking spaces must be setback at least 40 feet from front property line	Parking spaces within 2.5 feet of front property line; minimal landscaping (144 SF) and two drive aisles	Landscaping now covers 29.5 feet of the 45.5 foot frontage, at depths ranging from 10.8 to 24 feet (473 SF); one drive aisle
19-3.37(7)(b)(2)	Parking spaces must be on the interior of a lot and not visible from the street		

Frontage Occupancy

SECTION	REQ/PROHIBITED	MAY 2021 VARIANCES	DECEMBER 2021 VARIANCES

Date: **December 7, 2021**

Re: **Long-Term Management and Ownership of Wallace Campus**

Maintenance and Site Administration:

The Wallace Campus Development Team will identify and enter into an agreement with a qualified property manager via a competitive request for proposal process. The proposal review process will be rigorous, with applicants fully vetted and assessed. The RFP process will commence after completion of the site plan approval process, as we work through New York State Division of Homes and Community Renewal ("HCR") finance closing process. A management company will be identified in advance of construction commencement and chosen via a competitive and open RFP process. A draft RFP is included as an attachment to this memo.

Please note that in addition to our own high standards, the Development Team must also adhere to NYS HCR's management guidelines:
https://hcr.ny.gov/system/files/documents/2018/11/managementagreementguidelines.pdf

While selecting the management company, we will ensure that all NYS HCR guidelines are met in addition to our own standards for a high quality building manager. As we stated in a previous submission to the Planning Board, through the RFP process, we will review:

- management company's current portfolio
- track record and local reputation
- experience utilizing best practices to successfully manage affordable and mixed-use housing developments

While we will adhere to the HCR guidelines, equally as important to our selection process will be to engage and get feedback from local Poughkeepsie stakeholders and organizations. As noted previously, all candidates will be vetted by both the Wallace Campus development team and the project funders, including the HCR, LIHTC investors, and the senior lender. We anticipate this process to include in- person interviews as well as site visits. To raise awareness about the opportunity, the Development Team will work with the Dutchess Chamber of Commerce and other local business organizations.

To maintain the property to industry and developer standards, the Development Team is required by the LIHTC investor and HCR to set aside reserve funds to fund unexpected and preventative maintenance capital projects to ensure the quality of the buildings is maintained for the long term. The development team will capitalize approximately $500,000 for a building reserve at the time the building is placed in service. In addition, approximately $45,000 per year will be added to the reserve account to ensure the reserve is adequately funded throughout the life of the building.

Long-Term Ownership:

Per previous responses to the Planning Board, the Development Team will own and operate Wallace for the long term. An impeccable reputation is central to Mega's and ALCD's core business values and long-term plan. For example, Mega has developed and built Cliffside Apartments – the affordable housing

project was completed in 2009, and Mega continues to maintain an ownership interest. This is emphasized to an even greater extent with our work in affordable housing and relationships with the governing agencies and can be witnessed first-hand at the properties Mega has owned for years. We are extremely motivated to operate and maintain a first-class property at Wallace Campus. Anything less would be unacceptable. In addition to our unwavering commitment to the long-term ownership of this property, there are several regulatory agreements that restrict the sale of the Development Team's interests in the project, which are outlined below.

New York State Housing and Finance Agency

Per the HFA regulatory agreement that is a standard part of all funding agreements with HFA, the Development Team faces a substantial financial penalty for transferring or selling the property within 8 years from the date that the first unit is occupied. For example, if the Development Team transfers or sells its interests, a charge of 5% of the outstanding loan amount would be charged to the partnership. In addition, ownership cannot be transferred to any entity that is considered a "Prohibited Person". A prohibited person includes, but is not limited to, entities that own apartment buildings that have three violations in which tenants have withheld rent due to an owner's violation. Please contact the NYS HCR project contact for Wallace, Darren Scott, if you have any questions about HCR/HFA's regulatory requirements at Darren.scott@nyshcr.org.

State Historic Preservation Office ("SHPO")

The project will also be financed via the State Historic Preservation tax credits. Per SHPO's requirements, the Development Team is restricted from selling its interests for at least five-years upon the completion of the project. The National Park Service and IRS require the project to maintain the same ownership for at least five years. The development team is dedicated to rehabilitating the historic Wallace Department Store building back to its original charm as a beacon of history and vitality on Main Street. As mentioned, the development team has no intention of selling the renovated building even after the 5-year compliance period. We are in the business of long-term ownership of our buildings, and it is important to us that our buildings are managed properly in perpetuity.

PROPERTY MANAGEMENT FOR WALLACE CAMPUS
POUGHKEEPSIE, NY

Table of Contents

I. Introduction

II. Qualification Requirements

III. Evaluation Criteria

I. INTRODUCTION

Through this Request for Proposals ("RFP"), Wallace Campus Managers ("Owner") seeks to enter a contract with a qualified firm ("Property Manager") to provide property management services at Wallace Campus ("Wallace"). Property Manager may be not-for-profit or for-profit organizations and must have the legal authority and a demonstrated capacity to maintain the long-term physical and financial viability, regulatory compliance and responsible supervision of affordable housing.

II. QUALIFICATION REQUIREMENTS

Applicants must submit a full response to this RFP and meet the minimum criteria set forth herein to be further considered. Applicants must also demonstrate they have the legal authority, experience, and capacity to become a Property Manager.

A. Completeness of Qualifications

Interested Applicants must submit their qualifications and supporting documents. Upon review the Owner at its discretion may notify an Applicant that additional information or clarification is necessary.

B. Experience and Capacity

Owner will determine if Applicants meet minimum qualification requirements based on the criteria specified in Section III. Owner will only consider Applicants that demonstrate the requisite experience and capacity required to manage multifamily buildings.

C. Adverse Findings

An Applicant may be rejected at any time during the evaluation process or removed from the Qualified List if adverse findings are made about the Applicant or any of its Principals or related entities, including, but not limited to, adverse findings with respect to any of the following:

- Past or pending suspension, debarment, or finding of non-responsibility by any government agency.
- Findings of tenant harassment or a pending case of harassment.
- Arson, fraud, bribery, or grand larceny conviction or a pending case.
- A past or pending voluntary or involuntary bankruptcy proceeding.
- False information or failure to disclose information
- Violation of any anti-discrimination or fair housing laws, rules or regulations.

III. EVALUATION CRITERIA

Owner will evaluate an Applicant's cover letter, completed Statement of Qualifications and any additional documentation or responses required by this RFP.

Applicants will be evaluated based on the following criteria:

A. **Affordable Housing Management Experience** the Property Manager must have experience in successfully managing at least 200 units of income-restricted, residential rental and/or co-operative properties, including scattered site projects. Owner will evaluate the Property Manager by conducting a review of properties under its management and may consider, among other areas, the physical and financial condition of the properties; the ability to assess and prioritize capital needs and the timely completion of capital projects, the number and severity of any building and/or housing maintenance code violations against such properties; payment record for municipal taxes, water and sewer charges and any other municipal charges; Property Manager's track record and capacity to provide effective management services in a timely and responsive manner including the handling of tenant complaints; and Property Manager's ability to supervise building employees and maintain appropriate records.

B. **Local Presence** the Property Manager's primary Wallace manager must be based within a 30-minute drive of the Wallace Campus. The Property Manager must have a strong local presence and local experience.

C. **Management Plan and Operations** Applicants must provide a management plan for the operation of government subsidized and regulated projects as outlined in the attached **New York State Housing and Renewal Agency's Management Agreement Checklist**. The proposed property manager should be identified as a member of the development team in the application and the Property Manager should be certified by an accredited organization issuing certification in property management.

IV. SUBMISSION REQUIREMENTS AND QUALIFICATION PROCESS

All Applicants must follow all submission procedures as outlined below. Submission of an incomplete application or failure to follow any of the below procedures or conform to any of the requirements of this RFQ may be grounds for disqualification of the Applicant.

A. Inquiries

Applicants should direct all communications and inquiries this RFP to the Owner at:

TBD

B. Time and Place of Submission

TBD.

C. Application Materials

Applicants must submit a full response with addenda to this RFP and meet the minimum criteria set forth in Section III. Owner may request additional information or eliminate from further consideration all submissions that are not complete or do not conform to the requirements of the RFP. Owner may request additional information, interviews, site visits, or presentations from any or all applicants.

A complete package shall include a cover letter, a completed Statement of Qualifications, Broker's license, Bonding requirements along with all required attachments and/or exhibits and additional documentation as outlined below.

a) Cover Letter

One-page letter on company letterhead, signed by a Principal of the Applicant, that summarizes the Applicant's interest in, and ability to be, the Property Manager.

b) Financial Statements

Applicants are required to provide the year to date operating statement and the most recent 3 years of CPA prepared Financial Statements for the Applicant.

c) Statement of Qualifications

The Statement of Qualifications Form must be completed, signed by a Principal and notarized, and must include all required supporting documentation and/or exhibits as attachment

d) Property Management Plan

Applicant must provide responses to the guidelines outlined by the New York State Housing and Community Renewal agency. The agreement is attached as Appendix A.

e) Site Administration and Preventive Maintenance Plan

The Applicant shall agree to adhere to a property preventative maintenance plan, which will be incorporated into the Property Management Contract. Appendix B outlines the standard preventative maintenance plan—the Property Manager's preventative maintenance plan is expected to be largely similar.

APPENDIX A: NEW YORK STATE HOUSING AND COMMUNITY RENEWAL AGENCY'S MANAGEMENT AGREEMENT CHECKLIST

Link to NYS HCR's MANAGEMENT AGREEMENT CHECKLIST:
https://hcr.ny.gov/system/files/documents/2018/11/managementagreementguidelines.pdf

**subject to change post completion of the project

SAMPLE APPENDIX B: SITE ADMINISTRATION AND PREVENTATIVE MAINTENANCE

SITE ADMINISTRATION

Management Staff

The Property Manager will provide central office employees to perform services, which can best be handled on a centralized basis. The centralized services will include, but are not limited to, assistance in rental and recertification, procurement of supplies and equipment, technical assistance, risk management, receivables and payables processing, and bookkeeping and accounting.

Maintenance Staff

It expected that five staff members, including administrative staff, will be funded by the Owner. The maintenance needs will be evaluated in he first few months of the Property Manager's assignment. If required, additional training of staff will be conducted. If inefficiencies in the structure of the maintenance department are noted, necessary changes will be made.

PREVENTIVE MAINTENANCE

Program for Preventive Maintenance

The Property Manager will make sure that the maintenance staff and especially the resident superintendent have a complete understanding of the servicing of the mechanical equipment and appliances in the development.

The following schedule is anticipated for the maintenance staff to ensure that all areas of maintenance will be covered as needed:

- Daily cleaning of entryways, picking up of debris around the property, ensuring that laundry rooms are clean, processing of resident work requests and replacement, as needed, of any lightbulbs that either have been burnt out or broken.
- On a weekly basis, the resident superintendent will make sure that all of the service equipment has been checked out and that the outside shrubberies are being maintained properly. During the maintenance staff's daily or weekly workload, they will check out heating systems, appliances, roofs and grounds to make sure everything is in order. During the spring and summer, the lawn areas, trees and shrubs will be checked to see whether any seeding and/or fertilizing or trimming is necessary.
- The Property Manager and Superintendent are on call 24-hours a day, seven days a week. Any emergencies that occur will be addressed immediately.

Scheduled Maintenance (Installed Equipment)

Scheduled maintenance and repair for installed equipment will be implemented by the Managing Agent in accordance with manufacturers' recommendations and the requirements of equipment operating manuals.

Scheduled maintenance largely will entail cleaning or replacement of equipment parts. Maintenance records will be kept on each piece of equipment to ensure proper service.

Regular Inspection and Inspection Reports

Building Inspections: The Superintendent will inspect all public areas from cellar to roof on a daily basis. Work orders will be created for any conditions identified during these inspections that require attention. The Superintendent will submit a written inspection report to the Property Manager on a weekly basis. The Property Manager will submit a written inspection report to the Property Manger's senior management on a monthly basis. In addition, the Owner will be notified immediately of any serious problems identified during any inspections.

Apartment Inspections: All apartments will be inspected once a year. The Property Manager will send a written notice of inspection to residents well in advance in order to schedule a time that is convenient for them. Inspections will be conducted whenever a resident either moves into or vacates a unit. When a resident gives notice to vacate, a date of the inspection of his/her unit will be scheduled before his/her departure. At this time, both the Superintendent and the resident will inspect the unit, compare any damages or wear, with that on the move-in checklist and determine whether the resident must pay for repairs. Prior to releasing the unit, the Superintendent, using the same inspection sheet, will make all necessary repairs, have the unit painted (if necessary), and thoroughly cleaned, and check all equipment and appliances for proper operation.

Energy Conservation
Energy conservation measures will include preventive maintenance of heating systems and maintenance of fuel consumption logs and monitoring of usage. Where appropriate, capital improvements may be considered to achieve greater energy efficiencies. In addition, programs will be developed to educate the residents in methods of energy conservation.

Common Area Painting
All entrance ways, including frames, doors and overhangs (when necessary) will be painted every five years. Graffiti will be removed on a continual basis.

Trash Removal/Recycling
Trash removal will be handled in accordance with local mandates. The Property Manager will work with residents to adhere to these local requirements.

Major Repairs
Major repairs that cannot be handled by the on-site maintenance staff will be contracted. Quality of workmanship and performance, as well as cost, will be the criteria for approval of bids. Contracts will be competitively bid. Proposed contracts that exceed a specific dollar amount will be handled in accordance with regulatory procedures and requirements, unless the work must be done on an emergency basis. Efforts will be made to solicit bids from minority and women-owned business enterprises.

Building and Common Areas
A schedule for cleaning entryways and all common areas will be maintained by the Superintendent. All common areas will be cleaned daily. A schedule for cleaning of sidewalks and general ground maintenance will be developed as well.

Requests for Maintenance Service
Tenants will request for maintenance service through the Property Manager's main office. A work order will be generated and give to the Superintendent and will be reviewed by the Property Manager. The work order will indicate the date and time the request was made and the nature of the request. When the request has been satisfied, the employee completing the work signs the request along with the resident and enters the date and time of the completion. The work order will be sent to the Property Manager's main office to be deemed completed.

Emergencies will be handled immediately. Non-emergency work orders will usually be completed within 48 hours. In some cases, the work may take a little longer, for example, when parts are required or a vendor is needed. In these instances, every effort will be made to complete the
work orders as quickly as possible. In the event of fire, flood, personal injury, or other serious problems involving insurance, the Owner and the Insurance Company will be advised immediately by the Property Manager.

Management Agreement Guidelines Checklist

1. Basic Information
   - A) Identify development, owner, agent, # affordable units and provide a brief description of the project including commercial space, if any.
   - B) Indicate programs the project is financed under (HTF, LIHTC, etc.)

2. Ownership / Management Relations
   - A) Describe the role and responsibility of the Owner and the delegation of authority to the Managing Agent.
   - B) Indicate the chain of command from all site staff to senior management.
   - C) State conditions which would require the Managing Agent to consult the Owner prior to taking action (i.e., maximum amount Agent can spend) and when management may act without consulting the Owner.
   - D) Specify site office hours and frequency of visits by senior management staff and Ownership representatives.

3. Marketing and Tenant Selection Plans
   - A) Indicate that management will market affordable units in accordance with the Agency's fair housing guidelines and/or AFHMP.
   - B) Indicate that management will select tenants in accordance with the Tenant Selection Plan stipulated in the proposed marketing plan.

4. Personnel Policy and Staffing Arrangements
   - A) Statement regarding recruiting procedures and conformance with EEO requirements.
   - B) Description of staffing requirements and job titles.
   - C) Indicate that staff is familiar with LIHTC program or has had recent training in the program
   - D) Statement that management is committed to ongoing staff training in areas of LIHTC compliance and professional property management techniques.
   - E) Statement that ownership/management concurs with the Agency minimum staffing requirements based on size of the project.

5. Plans For Carrying Out Preventive Maintenance and Repair Programs
   - A) Description of PM and repair program. Repairs will be made by site staff, independent contractors or identity-of-interest contractors.
   - B) Schedule for interior and exterior painting.
   - C) Schedule for PM on major systems (heating, etc.)
   - D) Description of procedures for inspecting and carrying out maintenance activities in units including upon move-in and move-out.
   - E) Description of procedures to address resident service/repair requests. Is there a work order system? How will service requests be handled during normal business hours and after hours?
   - F) Is there a statement confirming that HFA must be notified within 24 hours in the event of damage to the property and/or liability insurance claims.

6. Rent Collection Policies and Procedures
   - A) Description of rent collection procedures
   - B) Description of actions to be taken against tenants in arrears.
   - C) Description of the process for writing off bad debts.

7. Books of Account and Administrative Records
   A) Explanation of how books are to be kept-paid bills, unpaid bills, insurance policies, tenant security deposit accounts and other documents pertaining to the project.
   B) Include statement that management shall make this info. available to HFA upon request.
   C) Submission of reports in HFA-required format, including C-1, MORs, annual budgets, and annual audits.

8. Low Income Housing Tax Credit Compliance and Record Keeping
   A) Description of procedure for maintaining tenant files; 3rd party verification, etc. as required by the LIHTC program
   B) Description of procedure for tracking next available unit rule.
   C) Description of lease renewal and annual recertification procedures

9. Fidelity Bond
   A) Statement that managing agent is required to maintain fidelity bond insurance equal to 2 months Gross Potential Rental Income.

10. Management Compensation
   A) Description of management fee, and any additional fees.

11. Term of Agreement
   A) Description of term of agreement
   B) Description of causes for termination by Owner, Agent of HFA with a minimum of 30 days notice.

Natalie Quinn, Senior Planner - City of Poughkeepsie

From: Wallace Campus Partners

Re: Public & Planning Board Comments Regarding Historic Importance of:
319 Main Street
325 Main Street
327-329 Main Street

The Planning Board has inquired about the historic status of 319, 325, and 327-329 Main Street which will be demolished to make way for a new 5-story building at Wallace Campus.

Age and alterations of the buildings:
The three buildings in question, listed above, comprise approximately 111 linear feet of Main Street, on the North side of the street, facing south. Approximately ten feet of this existing façade is an existing alleyway so the building frontage facing onto Main St is about 100 linear feet. Of the three buildings in question 319 Main Street makes up more than 50% of the frontage.

Finally, both 325 Main Street and 327-329 Main Street have each had their Main Street facades substantially altered – 325 in the past 15 years – where the historic integrity of the two buildings has been irrevocably harmed. While the two buildings are akin to the historic Main Mall Row in scale at four stories, the buildings are otherwise entirely unlike anything currently deemed historic on Main Street. The new construction building proposed to replace these three buildings is actually more aesthetically contextual to the existing historic character on Main Street.

SHPO has determined that the buildings are not eligible for listing:
New York State Historic Preservation Office (NYSHPO) has, through several avenues and over five decades, analyzed the three buildings and has <u>not</u> found them to hold any substantive historic value. On May 18th, 2021, the Division for Historic Preservation of the Office of Parks, Recreation and Historic Preservation (OPRHP) issued a "No Adverse Effect" letter, based on a review of the Wallace project in its entirety, inclusive of the planned demolition and replacement of the 319, 325 and 327-329 Main Street buildings. Separately, NYSHPO – maintains a catalogue of "Resource Evaluations" and, in each instance NYSHPO staff has declared that the buildings in question are "Not Eligible" for addition to the historic register. In their finding none of the four "Criteria for Inclusion in the National Register" have been met. The No Adverse Effect Letter and evidence of all three buildings' ineligibility are attached here. The criteria that have not been met include:

(A) Association with events that have made a significant contribution to the broad patterns in our history;

(B) Association with the lives of persons significant in our past;

(C) Embodies the distinctive characteristics of a type, period or method of construction; or represents the work of a master; or possesses high artistic values; or represents a significant and distinguishable entity whose components may lack individual distinction;

(D) Have yielded, or may be likely to yield information important in prehistory

This completely contrasts with the situation of 331 Main Street, the former Wallace Department store, SHPO with the full support of the Wallace Campus partnership, has recognized the building's historic significance through its addition to the National Registry, and developed an architectural plan to carefully restore the building and preserve its historic details.

The SHPO findings on the three buildings are consistent with the local historic preservation community's response to these buildings since they were first considered as potentially historic properties as part of the Poughkeepsie inventory of historic structures, which survey ran from October 1976 through December 1977. That survey identified 59 properties that should be nominated to the national register but did not include the three buildings in question. Poughkeepsie's own Historic District and Landmark's Preservation Commission (HDLPC) has its own historic register; none of the three buildings are on, or have been nominated for inclusion on, the HDLPC's list. **The City declined to list the buildings at 319, 325, and 327-329 Main Street locally when a comprehensive study of Main Street was done.**

In addition to lack of historical value, the 3 buildings cannot practically be rehabilitated for adaptive reuse:
The three buildings slated for demolition would be difficult to rehabilitate efficiently. Like the width of 325 Main – approximately 19' – renders that building and adjoining buildings not conducive to an economic adaptive re-use. Combining the existing three buildings into a single structure is further delimited by their poor condition, differing floor-to-floor heights, and differing floor count, i.e. two floors vs four floors.

The Applicants will explore all reasonable possibilities of salvaging any interior architectural elements within the buildings.
In addition, at the request of the planning board and community, the Wallace Campus partners have worked with architectural salvagers to repurpose interiors (existing plumbing and remaining furniture and fixtures) of 331 Main Street and 325 Main Street. The architectural salvage company, Zarborkski Emporium, has declined to utilize any items in 319 Main Street. 329 Main Street is fully occupied – once the site is vacant, we will work with interested parties, and allow access for potential architectural salvage before demolitions. We have also reached out to Historic Albany Foundation to see if any exteriors of 319, 325, and 329 Main Street can be preserved and donated. In addition, we have reached out to the Poughkeepsie's Historic District and Landmark Commission to photo document the buildings per their request.

Mr. Charles Vandrei
Agency Historic Preservation Officer
NYS Environmental Conservation - Division of Lands and Forests
625 Broadway
Albany, NY 12233-4255

Re: DEC
Wallace Campus
City of Poughkeepsie, Dutchess County, NY
20PR06244

Dear Mr. Vandrei:

Thank you for continuing to consult with the Division for Historic Preservation of the Office of Parks, Recreation and Historic Preservation (OPRHP). We have reviewed the submitted materials in accordance with the New York State Historic Preservation Act of 1980 (section 14.09 of the New York Parks, Recreation and Historic Preservation Law). These comments are those of the Division for Historic Preservation and relate only to Historic/Cultural resources.

Our office has reviewed the revisions made to the updated scope of work. We understand that none of the proposed new construction will have an interior connection to the Wallace Department Store building. Based upon our review, it is the OPRHP's opinion that the project will have No Adverse Effect on historic resources provided the following conditions are met:

1. The Part-2 Federal Commercial Tax Credit application for the Wallace Department Store at 331 Main Street must be reviewed and approved by the National Parks Service.
2. A demolition and construction protection plan for the neighboring historic buildings must be developed and implemented. This plan should include physical protection options - if necessary, as well as include monitoring of the historic resources during the proposed work.
3. If these conditions cannot be met, or if there are substantive changes to the project, consultation with our office will resume.

Our office reminds you that the Federal Tax Credit program is administered by the National Park Service (NPS) in coordination with our office. While our office makes recommendations for the program, it is only the NPS that can approve the Tax Credit application. The opinions expressed in this letter are with regards to the Section 14.09 review in place for this project and do not guarantee approval by the NPS for the Tax Credit program. If you have any questions, I am best reached by email.

Sincerely,

Derek Rohde
Historic Site Restoration Coordinator

Re: City of Poughkeepsie Planning Board Review of Wallace Campus Project

Dear Ms. Quinn:

The City Police Department has reviewed the plans related to the Wallace Campus project and has been providing comments to you throughout the site plan review process as part of the typical procedure of circulating proposed plans to all City Departments.

You have inquired on behalf of the City of Poughkeepsie Planning Board whether the City Police Department has sufficient existing capacity to serve the Wallace Campus project which is proposed to be located in the Poughkeepsie Innovation District and which will result in the reuse of the Wallace Building for both ground floor retail and upper floor multiple family housing, with a new building replacing three existing buildings on Main Street and with a new building located in an infill area on Catharine Street. The total number of proposed multi-family residential units is 187 spread out in the three buildings.

The City Police Department has the capacity to serve this Project.

Thank you for meeting with us to discuss the project and the arrangement of outdoor space provided in both the pedestrian walkway and behind the Main Street building. We agree that it would be a good idea to allow for the project sponsor to install a security fence and gates around the outdoor space in the future, if necessary. At this time, nighttime gates would not appear to be necessary given the proposed provision of security cameras, sufficient lighting, and increased activity in the area as a result of the elimination of vacant buildings and proposed multi-family housing.

Re: City of Poughkeepsie Planning Board Review of Wallace Campus Project

Dear Ms. Quinn:

The City Fire Department has reviewed the plans related to the Wallace Campus project and has been providing comments to you throughout the site plan review process as part of the typical procedure of circulating proposed plans to all City Departments.

You have inquired on behalf of the City of Poughkeepsie Planning Board whether the City Police Department has sufficient existing capacity to serve the Wallace Campus project which is proposed to be located in the Poughkeepsie Innovation District and which will result in the reuse of the Wallace Building for both ground floor retail and upper floor multiple family housing, with a new building replacing three existing buildings on Main Street and with a new building located in an infill area on Catharine Street. The total number of proposed multi-family residential units is 187 spread out in the three buildings.

The Fire Department has the capacity to serve this Project.

The buildings will all be newly renovated or newly constructed and will meet the existing building codes for fire purposes making firefighting in the future less of a concern than in the existing non-compliant buildings, i.e. the three buildings on Main Street and the Wallace building.

If you have any further questions please do not hesitate to contact me.

COUNTY OF DUTCHESS

DEPARTMENT OF PLANNING AND DEVELOPMENT

December 9, 2021

To: Planning Board, City of Poughkeepsie
Re: ZR21-349, Wallace Campus Site Plan
Lots: 114098/109079/109077/112116/116114/121116/127091, Main Street and US44/NY55 (Mill St.)

The Dutchess County Department of Planning and Development has reviewed the subject referral within the framework of General Municipal Law (Article 12B, §239-l/m).

ACTION

The applicant is seeking site plan approval for the following:

- Restoration of the former Wallace Department Store building on Main Street, to contain a mix of non-residential and multi-family residential uses;
- Construction of a 5-story building on Main Street immediately west of the Wallace building (involving the demolition of three existing buildings) to contain residential and ground-floor retail uses;
- Construction of a 5-story addition to the Wallace building along the Catharine Street frontage, to contain residential and ground-floor retail uses;
- 187 units of mixed-income and supportive residential;
- Over 14,000 square feet of retail space, located primarily on the ground floors of all three buildings (note: daycare facility and climbing gym have been eliminated in exchange for additional retail space);
- A privately-owned public greenspace, and reconfiguration of parking and circulation patterns, in the interior of the block.

COMMENTS

We are pleased to see the applicant has incorporated local feedback and adjusted the proposal accordingly. In particular, the reduction of building heights to meet code, continued refinement of the architecture, and adjustments to the mix of unit sizes and target income levels are positive changes. Our only comment relates to lighting; it appears that changes have been made to the lighting plan which result in several areas showing unnecessarily high levels (e.g. between the Catharine and Wallace buildings (8+ fc), east of 310 Mill (3-5+ fc), and along the sidewalk east of Catharine Street building (3-4+ fc)). There are other small pockets of hot spots as well. The applicant could make modifications to the number, location and/or specs of the fixtures to create a lower (average of approximately one (1) footcandle), more even level of lighting site wide.

RECOMMENDATION

The Department recommends that the Board rely upon its own study of the facts in the case with due consideration of the above comments.

239 Planning/Zoning Referral - Exemption Communities

Please Fill in this section

Municipality: **City of Poughkeepsie**

Referring Agency: **Planning Board**

Tax Parcel Numbers(s): **1140980000, 1090790000, 1090770000, 1121160000, 1161140000, 1211160000, 1270910000**

Project Name: **Wallace Campus**

Applicant: **Wallace Campus Manager LLC**

Address of Property: **319 Main St, Poughkeepsie, NY 126010000**

Exempt Actions:*
239 Review is NOT Required

- Administrative Amendments (fees, procedures, penalties, etc.)
- Special Permits for residential uses (accessory apts, home occupations, etc.)
- Use Variances for residential uses
- Area Variances for residential uses
- Renewals/Extension of Site Plans or Special Permits that have no changes from previous approvals

No Authority to review these Actions

- Subdivisions / Lot Line Adjustments
- Interpretations

☐ Exempt Action submitted for informal review

Actions Requiring 239 Review

- ☐ Comprehensive/Master Plans
- ☐ Zoning Amendments (standards, uses, definitions, district regulations, etc.)
- ☐ Other Local Laws associated with zoning (wetlands, historic preservation, affordable housing, architectural review, etc.)
- ☐ Rezonings involving all map changes
- ☐ Architectural Review
- ☑ Site Plans (all)
- ☐ Special Permits for all non-residential uses
- ☐ Use Variances for all non-residential uses
- ☐ Area Variances for all non-residential uses
- ☐ Other (Describe):

Parcels within 500 feet of:

- ☑ State Road:
- ☐ County Road:
- ☐ State Property (with recreation area or public building)
- ☑ County Property (with recreation area or public building)
- ☐ Municipal Boundary
- ☐ Farm operation in an Agricultural District

Date Response Requested: **12/13/2021**

Entered By: **Knauss, Judith**

These actions are only exempt in municipalities that signed an intermunicipal agreemment with Dutchess County to that effect.

Re: Wallace Campus Project Review
Chazen Project #82029

Dear Ms. Quinn:

The Chazen Companies has reviewed the Wallace Campus project materials submitted by ALC Planning and Development dated November 5, 2021. We have the following comments.

Environmental Assessment Form (EAF) Part 1

1. Revisions were made to the EAF to address our minor comments previously submitted (e.g. Coastal Zone status; nearby historic sites).
2. Section B.c. identifies the possible need for variances. The project was revised to eliminate the need for height variances. We did not find identification of the need for other variances. This section could be revised if no variances are sought.
3. The energy use on Section D.k.i. increased over that projected in the prior EAF. It is not clear why that should be the case since the revised project has been downsized and would presumably use less energy.
4. Section D.r. should identify construction and operations solid waste (i.e. non-hazardous waste) generation.

Parking and Circulation

1. Chazen concurs with the results of the sight distance evaluation for the site driveways. A one-way sign at the exit driveway should be shown on the site plans to prevent wrong way travel when turning onto Mill Street.

Engineering

While revised plans were submitted, most of the engineering comments in our April 12, 2021 review letter have not been responded to. We also have several new comments in response to the latest submission. Note also we did not have time to conduct a detailed review of pipe sizing calculations. We will do so when the next submission addressing our comments is made.

Our consolidated comments are as follows.

Water

1. Engineering Report, Section 1.0: Site improvements are shown to 310 Mill Street (Tax Parcel 6162-78- 128113) but it's not included in the project description. Clarify this parcel's involvement in the project.
   Comment not addressed. The description still doesn't accurately describe the Wallace Campus. The description states there are 5 tax parcels involved and provides 4 addresses & tax parcel identification numbers where 8 individual tax parcels are part of the project. Similarly, the revised Lot Line Consolidation Plan includes Lots A-G and 310 Mill Street still isn't included. The description still describes a proposed day care.

2. Engineering Report, Section 2.2: References to "331 Catharine Street" were removed as requested. However, Section 2.2 includes a reference to "the Catharine Street building." As the project contains multiple buildings along Catharine Street, the building references should be checked to make sure they are clearly referencing a single building. The building references throughout the report should be reviewed for clarity and revised as needed.
   Comment not addressed. Response indicates that there is only one *proposed* building and that there are no revisions proposed to the existing services. This is a correct statement but doesn't address the comment.

3. Engineering Report, Section 2.2: provide correspondence from City Engineering that the existing water treatment facility and distribution mains located in the vicinity of the project site have sufficient capacity to supply the additional demand resulting from the proposed project. The engineer's response indicates the project results in a slight increase in water demand. However, this is not based on actual current demand/meter readings so it's not a reflection of the actual increase in demand over the current existing condition.
   Comment not addressed. No correspondence has been provided from City Engineering related to sufficient capacity.

4. Engineering Report, Section 2.1: existing sewer generation: office use generation shall be based on number of employees, per Table B-3 "Typical per Unit Hydraulic Loading Rates" of the NYSDEC "Design Standards for Intermediate Sized Wastewater Treatment Systems", March 5, 2014. As previously requested, revise calculations or provide methodology for converting to square footage.
   Comment not addressed. The engineering report continues to reference the NYSDEC "Design Standards for Intermediate Sized Wastewater Treatment Systems" (2014) which is based on number of employees, not square footage. The response indicates the methodology relies on the previous NYSDEC design manual. Either clarify the engineering report methodology reference or provide a conversion for square footage to number of employees based on the previous NYSDEC design manual.

5. Engineering report, Section 2.1: Existing square footage for Parcel E was increased by approximately 45,000 square feet. Additional information regarding where the square footages, restaurant seats and number of club patrons shall be provided.
   Comment not addressed. The response indicates the information was obtained from "Dutchess County Parcel Access as well as the project Architect for total SF of the building. The number of seats and club patrons was provided by the project architect when reviewing historical documentation for the building." No such supporting documentation has been added to or provided in the engineering report to support the estimated existing flows (ie. the methodology utilized by the project architect). Additionally, references to the fitness center and daycare uses should be removed from Section 2.1.

6. Engineering report, Section 2.1: Provide methodology for determining number of employees for the retail spaces included in the Sanitary Sewer Flow / Water Consumption Projections.
   Comment not addressed. The response indicates the estimated flows were provided by the project Architect and previous experience but no such supporting information has been added to or provided in the engineering report to support the estimated flows (ie. the methodology utilized by the project architect).

7. Engineering report, Section 2.1: A sentence that "sizing for the fitness and daycare are based on occupancy and parking calculations determine estimated number of patrons" has been added to the engineering report. Provide the correlation and calculations used to convert occupancy and parking calculations into number of patrons and number of people used for average daily sewage generation.
   Comment no longer applicable, as the fitness center and daycare are no longer proposed.

8. Engineering report, Section 2.4: Obtain hydrant flow testing data (if available) from the City Fire Department to verify what the available fire flows are in the vicinity of the project. Alternatively, perform hydrant testing in the vicinity of the project in coordination with the City Fire Department.
   Comment not addressed.

9. Engineering report, Section 2.4: Additional fire suppression methods may be required for the proposed buildings (standpipe, as an example). Revise fire suppression description accordingly.
   Comment addressed.

10. Engineering report, Section 4.0: Provide correspondence from Dutchess County Department of Behavioral and Community Health that their review and approval is not required for the proposed project and associated lot consolidation.
    Comment not addressed. No correspondence from DCDBCH has been provided.

Sewer

1. Sheets EX-1 & UT-1: The size of the existing sewer main in Catharine Street is shown on plan EX-1. The inverts for one sewer manhole have been provided on UT-1. The invert at the manhole on the opposite side of the connection point shall be shown in order to determine the invert of the existing sewer at the location of the proposed service lateral connection.
   Comment not addressed. The applicant now proposed connecting the sewer lateral directly

into the existing sanitary manhole within Catherine Street, which results in less than the minimum 10' horizontal separation to the water line to an existing hydrant. Indicate mitigation proposed at this location.

2. Engineering Report, Section 3.2: verify with City Engineering that the existing wastewater plant and the collection lines in the vicinity of the project site have sufficient capacity to serve the additional wastewater generation resulting from the proposed project. The engineer's response indicates the project results in a slight increase in sewer generation. However, this is not based on actual current demand/meter readings so it's not a reflection of the actual increase in demand over the current existing condition.
   Comment not addressed. No correspondence from City Engineering has been provided.

3. Engineering Report, Section 3.3: References to "331 Catharine Street" were removed as requested. However, Section 3.3 now references "the Catharine Street building." As the project contains multiple buildings along Catharine Street, the building references should be checked to make sure they are clearly referencing a single building. The building references throughout the report should be reviewed for clarity and revised as needed.
   Comment not addressed. Response indicates that there is only one *proposed* building and that there are no revisions proposed to the existing services. This is a correct statement but doesn't address the comment.

4. Provide correspondence from Dutchess County Department of Behavioral and Community Health that their review and approval is not required for the proposed project and associated lot consolidation.
   Comment not addressed. No correspondence from DCDBCH has been provided.

<u>Stormwater</u>

1. SWPPP: it's noted that the current General Permit (GP-0-20-001) is provided in Appendix A. However, the narrative and table of contents include references to the previous general permit. Update all references to the current GP number.
   Comment partially addressed. The Owner/Operator Certification Form provided in the SWPPP references GP-0-15-002 and should be replaced with the current version. The Appendix B divider page also contains a reference to GP-0-15-002.

2. SWPPP Narrative, page 8: describes one existing dry well to remain. Based on the Demolition Plan and HydroCAD modeling provided, it appears there may be 2 existing dry wells to remain. Clarify/revise as needed.
   Comment addressed.

3. SWPPP Narrative, page 8: states "all proposed piping is sized to accommodate peak flow from 25-year 24-hour storm, as prescribed by the local authority." Provide pipe sizing calculations for review.
   Pipe sizing calculations have been provided but have not yet been reviewed due to the delayed submission and resulting review timeframe. Related comment(s), if any, will be provided at a

later date.

4. SWPPP Narrative, page 9: Section 5.2 states there are seven different design points. However, only two are shown on the pre-development and post-development watershed maps. Clarify/revise as needed.
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

5. SWPPP Narrative, page 10: clarify what the "TOWN CB" peak flow discharge rate table refers to.
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

6. SWPPP: provide calculations for the provided WQv pretreatment.
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

7. SWPPP NOI: answer question 9
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

8. SWPPP NOI: answer question 10
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

9. SWPPP NOI: in question 29, provide the green roof contributing impervious area.
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

10. SWPPP NOI: answer question 42.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

11. SWPPP Test Pit Log: 2 test holes are provided in a test pit log, though it's not clear if they were performed at the project site. The log is for "Springside Neighborhood" and states that the location of the test pits are shown on DA-1. However, no test pits can be located on DA-1.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

12. SWPPP Infiltration Test Log: 2 infiltration test holes are provided in an infiltration test log, though it's not clear if they were performed at the project site. The log is for "Springside Neighborhood" and states that the location of the test pits are shown on DA-1. However, no test pits can be located on DA-1.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

13. SWPPP: provide preliminary infiltration testing for the proposed infiltration practices in accordance with Section 6.3.1 and Appendix D of the NYSDEC Stormwater Design Manual.

Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

14. Dry wells should include rooftop runoff only per Section 6.3.1 of the Design Manual. Alternatively, question 23 in the NOI shall be answered "No" and the SWPPP will be submitted for 60-day review from NYSDEC.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

15. SWPPP Narrative: Identify which existing and proposed buildings have cellars and provide a discussion of the proximity of proposed dry wells to those buildings.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

16. SWPPP Narrative: Provide the design calculations in Appendix D that are referenced in the narrative.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

17. SWPPP DA-2: show existing dry well(s) to remain.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

Plans

1. OP-1: Existing Zoning Maps show the scale as 1"=1,000' where it appears the scale is 1"=100'
   Comment not responded to. The Applicant shall provide a response for all previous comments.

2. SP-1: Title block states scale is 1"=20', plan states scale as 1"=40' where it appears the scale is 1"=30'
   Comment not responded to. The Applicant shall provide a response for all previous comments.

3. SG-1: dimension the separation from the proposed dry wells to the existing and proposed structures to ensure at least 10 feet of separation.
   Comment not responded to. The Applicant shall provide a response for all previous comments.

4. SG-1: less than 6" of cover is provided at Catch Basin #1. Revise accordingly.
   Comment not responded to. The Applicant shall provide a response for all previous comments.

5. SG-1: Rim elevation of DW-4 doesn't match the proposed grading.
   Comment not responded to. The Applicant shall provide a response for all previous comments.

6. SG-1: show what appears to be an existing drywell to remain on the east side of the CB to be replaced with proposed catch basin with sump (vicinity of CB#1). Alternatively, if this existing dry well isn't proposed to remain, remove the proposed piping shown tributary to it.
   Comment not responded to. The Applicant shall provide a response for all previous comments.

7. A number of improvements are shown on the 310 Mill St parcel, but it has not otherwise

been identified as a project parcel.
Comment not responded to. The Applicant shall provide a response for all previous comments.

8. Additional technical review comments of the site plan set will be provided once the general engineering comments provided herein have been addressed.
Comment not responded to. The Applicant shall provide a response for all previous comments.

Please do not hesitate to contact me with any comments or questions.

Sincerely,

Stuart F. Mesinger, AICP

Poughkeepsie, NY 12601

cc: Natalie Quinn, Senior Planner

RE: 2020-010: 319, 325, 327-329 and 331 Main Street "Wallace Campus" Resubmission

Dear City of Poughkeepsie Planning Board,

On October 8th, the applicant and design team convened with Chris Kroner and Natalie Quinn to discuss the latest iteration of their Wallace Campus project. The latest presented version of the design has reduced their new construction to five stories in an effort to follow zoning codes.

Main Street Building
The Main Street Building has been revised to the original proposal's fenestration which was encouraged by the planning board at their previous public meeting. The cornice work for the Main Street building has also been simplified and appears to be in more successful dialogue with both the detail and massing with other main street neighbors.

The north volume of the Main Street building has simplified the cornice detail work further to create a slightly more modern appearance on the east and north elevations. Interestingly, the west elevation retains the cornice work. As this building has a few public "fronts" - the elevation from Main Street, along the new proposed pedestrian street and as perceived from the arterial (Mill Street) - see below. ***The planning board and design team may want to discuss the resolution of the top coping of that massing, as lower level precast details appear to have more visual weight, and the west resolution has additional cornice detail in the currently proposed version.***

Catherine Street Building
As a trade off for the reduction in height, the Catherine Street building now has a continuous street front, with no public exterior connection through to the midblock. Instead, tenants of the building have a protected yard to the rear of the building which we

understand to be gated. **Planning board may wish to clarify the intent of this space.**

Wallace Building

One clarification about the proposed changes to the Wallace Building is regarding the previously discussed possible restoration of the East Side Mural (See White Area of Photo below). While we understood that the design team was originally considering that idea, which appears to be feasible (the current elevations on 1/A-200C do not currently show fenestration changes on that side of the building), the renderings on 1 & 2/A201, and 2/A203 show added windows which conflict with this mural's restoration. ***The design team should clarify which drawing best shows the proposal's intent.***

One related opportunity is for the west facade of the Main Street Building to host a new mural, which might be worth a conversation with the planning board.

We thank the design team for all the time, energy and consideration that they have put into these discussions, and we continue to see this project for downtown Poughkeepsie as an important discussion for public participation.

Sincerely,
Chris Kroner

Re: Wallace Campus Project Review
Chazen Project #82029

Dear Ms. Quinn:

The Chazen Companies has reviewed the Wallace Campus project materials submitted by ALC Planning and Development dated September 28, 2021. We have the following comments.

Parking and Circulation

1. Removal of the Daycare facility and fitness center/climbing gym reduces the parking demand. Chazen concurs with the parking demand calculations for the revised project.

2. Chazen concurs with the trip generation calculations and findings that the revised project will not have a significant impact on traffic.

3. The site circulation has been revised from earlier plans so that a one-way pair is provided with the eastern driveway as one-way exiting and the western driveway as one-way entering. The traffic assessment states that this configuration provides the greatest sight distance for the exiting vehicles.

   A sight distance evaluation that includes actual measurements at the access points should be provided. The proximity of adjacent building faces, stairs, and hedges appears to limit the sight distance at the eastern driveway such that the reversal of the one-way pair may be appropriate. Although the speed limit on Mill Street is 30 mph, the evaluation should be based on NYSDOT's data showing an 85th percentile speed of 37 mph.

Engineering Details

Revised engineering details have not been submitted. The applicant should address the engineering comments in our April 12, 2021 review letter.

SEQRA Review

The revised project is reduced in size and scale. Specifically, it incorporates ~22,000 less SF, the main building is two stories smaller, includes 27 fewer units and no longer includes a day care facility and gym/climbing

facility. Collectively these revisions result in less parking demand such that the parking demand can be accommodated on site; result in fewer vehicle trips; and result in less visual impact.

It is therefor our opinion that the project will have fewer impacts than the prior project and that the revised project will not result in significant adverse impact.

Please do not hesitate to contact me with any comments or questions.

Sincerely,

Stuart F. Mesinger, AICP

MEMORANDUM OF TRANSMITTAL

To: Planning Board

From Natalie Quinn, Planning Director

Date: June 15, 2021

Re: **Existing and Proposed Project Densities in the Downtown**

The Planning Department looked at a number of apartment and mixed-use buildings throughout the city in order to understand their residential densities and have points of comparison for the proposed Wallace Campus project. Existing structures, recent rehabilitations, proposed projects yet to be built, and new construction projects currently underway were looked at to determine the number of dwelling units per acre.

Below is a table that includes the developments that were examined. Of the 13 developments, there exists a range of density levels, from a low of 28 du/ac to a high of 200 du/ac. The average is 71 du/ac and the median is 51 du/ac. The Wallace project, at 214 units across three buildings within approximately 2.5 acres, has a density of 85 du/ac, 19.7% higher than the average. This is a dense project, but not as dense as projects such as Luckey Platt (135 du/ac), the proposed building at 316 Main St (200 du/ac), or even older apartment buildings such as 60 Carroll St (119 du/ac).

Development	Address	# of Units	Lot Size (ac)	DU/ac
Luckey Platt	332 Main St	138	1.02	135
Behrends Court	386 Main St	40	0.81	49
Crannell Square	35 Catharine St	75	1.22	61
40 Cannon	40 Cannon St	49	0.63	78
Executive Towers	160 Academy St	72	1.9	38
Queen City Lofts	178-188 Main St	70	1.07	65
316 Main St	316 Main St	80	0.4	200
Up To Date	278 Main St	24	0.47	51
Heart of the Block	472 Maple	40	1.43	28
60 Carroll	60 Carroll	25	0.21	119
The Hamilton	417-449 Main	54	1.59	34
One Dutchess	One Dutchess Ave	300	8.7	34
Eastman Tower	22 Montgomery	152	5.2	29
Wallace Campus total	Campus	214	2.52	85

THE CITY OF POUGHKEEPSIE
NEW YORK
PLANNING & ZONING
62 CIVIC CENTER PLAZA, 2ND FLOOR
POUGHKEEPSIE, NY 12601
Phone: (845) 451-4055 Fax: (845) 451-4006

If the Wallace project were "broken up" among the three separate buildings, the Main St. buildings become much more in line with the average dwelling units per acre, while the Catharine St. building on its own becomes a much denser development. We offer this admittedly arbitrary view of the project simply as a discussion point, as Wallace is a campus-style development spread across multiple parcels and fronting on two different streets.

Wallace Campus breakout 1	Main Street Building	87	1.2	73
Wallace Campus breakout 2	Wallace Building	67	0.9	74
Wallace Campus breakout 3	Catharine St Building	60	0.306	196

Ultimately, the Planning Department feels that this project is not out of scale with other developments within the city's core and addresses the goal of increased residential density that is supported within the Poughkeepsie Innovation District.

Re: Wallace Campus, Parking Review

Job #: 82029.00

Chazen has reviewed the revised parking analysis completed by Colliers Engineering & Design, dated May 3, 2021. Chazen generally agrees with the Colliers methodology and conclusions including the use of parking data from similar climbing gyms. However, we note the following items:

1. The project's weekday peak parking demand was calculated to be 89 spaces and occurred at 6:00 -7:00 p.m. An error in the parking calculations for the Daycare Center reduces the peak parking demand to 86 spaces during this period. This reduces the excess parking demand from 27 spaces to 24 spaces to be accommodated off-site.

2. It is noted that the Daycare Center parking demand noted above was calculated using an "average" rate. Chazen recommends the use of the 85th percentile parking rate for the Daycare Center which increases the parking demand of the Daycare Center from 7 spaces to 11 spaces at the 6:00 – 7:00 period. This increases the overall peak parking demand to 90 spaces.

In summary, a weekday peak parking demand of 90 spaces and an on-site parking supply of 62 spaces leaves an excess parking demand of 28 spaces to be accommodated off-site.

Re: Wallace Campus Project Review
Chazen Project #82029

Dear Ms. Quinn:

The Chazen Companies has reviewed the Wallace Campus project materials submitted by ALC Planning and Development dated March 2, 2021, including the Revised Site and Landscape Plan Set, Preliminary Engineering Report and Stormwater Pollution Prevention Plan by LRC Engineering and Surveying, LLC dated March 2, and the Updated Parking and Traffic Report by Maser Engineering dated February 27, 2021. We have the following comments.

Water

1. Engineering Report, Section 1.0: Site improvements are shown to 310 Mill Street (Tax Parcel 6162-78-128113) but it's not included in the project description. Clarify this parcel's involvement in the project.
2. Engineering Report, Section 2.2: References to "331 Catharine Street" were removed as requested. However, Section 2.2 includes a reference to "the Catharine Street building." As the project contains multiple buildings along Catharine Street, the building references should be checked to make sure they are clearly referencing a single building. The building references throughout the report should be reviewed for clarity and revised as needed.
3. Engineering Report, Section 2.2: provide correspondence from City Engineering that the existing water treatment facility and distribution mains located in the vicinity of the project site have sufficient capacity to supply the additional demand resulting from the proposed project. The engineer's response indicates the project results in a slight increase in water demand. However, this is not based on actual current demand/meter readings so it's not a reflection of the actual increase in demand over the current existing condition.
4. Engineering Report, Section 2.1: existing sewer generation: office use generation shall be based on number of employees, per Table B-3 "Typical per Unit Hydraulic Loading Rates" of the NYSDEC "Design Standards for Intermediate Sized Wastewater Treatment Systems", March 5, 2014. As previously requested, revise calculations or provide methodology for converting to square footage.
5. Engineering report, Section 2.1: Existing square footage for Parcel E was increased by approximately 45,000 square feet. Additional information regarding where the square footages, restaurant seats and number of club patrons shall be provided.

6. Engineering report, Section 2.1: Provide methodology for determining number of employees for the retail spaces included in the Sanitary Sewer Flow / Water Consumption Projections.
7. Engineering report, Section 2.1: A sentence that "sizing for the fitness and daycare are based on occupancy and parking calculations determine estimated number of patrons" has been added to the engineering report. Provide the correlation and calculations used to convert occupancy and parking calculations into number of patrons and number of people used for average daily sewage generation.
8. Engineering report, Section 2.4: Obtain hydrant flow testing data (if available) from the City Fire Department to verify what the available fire flows are in the vicinity of the project. Alternatively, perform hydrant testing in the vicinity of the project in coordination with the City Fire Department.
9. Engineering report, Section 2.4: Additional fire suppression methods may be required for the proposed buildings (standpipe, as an example). Revise fire suppression description accordingly.
10. Engineering report, Section 4.0: Provide correspondence from Dutchess County Department of Behavioral and Community Health that their review and approval is not required for the proposed project and associated lot consolidation.

Sewer

1. Sheets EX-1 & UT-1: The size of the existing sewer main in Catharine Street is shown on plan EX-1. The inverts for one sewer manhole have been provided on UT-1. The invert at the manhole on the opposite side of the connection point shall be shown in order to determine the invert of the existing sewer at the location of the proposed service lateral connection.
2. Engineering Report, Section 3.2: verify with City Engineering that the existing wastewater plant and the collection lines in the vicinity of the project site have sufficient capacity to serve the additional wastewater generation resulting from the proposed project. The engineer's response indicates the project results in a slight increase in sewer generation. However, this is not based on actual current demand/meter readings so it's not a reflection of the actual increase in demand over the current existing condition.
3. Engineering Report, Section 3.3: References to "331 Catharine Street" were removed as requested. However, Section 3.3 now references "the Catharine Street building." As the project contains multiple buildings along Catharine Street, the building references should be checked to make sure they are clearly referencing a single building. The building references throughout the report should be reviewed for clarity and revised as needed.
4. Provide correspondence from Dutchess County Department of Behavioral and Community Health that their review and approval is not required for the proposed project and associated lot consolidation.

Stormwater

1. SWPPP: it's noted that the current General Permit (GP-0-20-001) is provided in Appendix A. However, the narrative and table of contents include references to the previous general permit. Update all references to the current GP number.
2. SWPPP Narrative, page 8: describes one existing dry well to remain. Based on the Demolition Plan and HydroCAD modeling provided, it appears there may be 2 existing dry wells to remain. Clarify/revise as needed.
3. SWPPP Narrative, page 8: states "all proposed piping is sized to accommodate peak flow from 25-year 24-hour storm, as prescribed by the local authority." Provide pipe sizing calculations for review.

4. SWPPP Narrative, page 9: Section 5.2 states there are seven different design points. However, only two are shown on the pre-development and post-development watershed maps. Clarify/revise as needed.
5. SWPPP Narrative, page 10: clarify what the "TOWN CB" peak flow discharge rate table refers to.
6. SWPPP: provide calculations for the provided WQv pretreatment.
7. SWPPP NOI: answer question 9
8. SWPPP NOI: answer question 10
9. SWPPP NOI: in question 29, provide the green roof contributing impervious area.
10. SWPPP NOI: answer question 42.
11. SWPPP Test Pit Log: 2 test holes are provided in a test pit log, though it's not clear if they were performed at the project site. The log is for "Springside Neighborhood" and states that the location of the test pits are shown on DA-1. However, no test pits can be located on DA-1.
12. SWPPP Infiltration Test Log: 2 infiltration test holes are provided in an infiltration test log, though it's not clear if they were performed at the project site. The log is for "Springside Neighborhood" and states that the location of the test pits are shown on DA-1. However, no test pits can be located on DA-1.
13. SWPPP: provide preliminary infiltration testing for the proposed infiltration practices in accordance with Section 6.3.1 and Appendix D of the NYSDEC Stormwater Design Manual.
14. Dry wells should include rooftop runoff only per Section 6.3.1 of the Design Manual. Alternatively, question 23 in the NOI shall be answered "No" and the SWPPP will be submitted for 60-day review from NYSDEC.
15. SWPPP Narrative: Identify which existing and proposed buildings have cellars and provide a discussion of the proximity of proposed dry wells to those buildings.
16. SWPPP Narrative: Provide the design calculations in Appendix D that are referenced in the narrative.
17. SWPPP DA-2: show existing dry well(s) to remain.

Plans

1. OP-1: Existing Zoning Maps show the scale as 1"=1,000' where it appears the scale is 1"=100'
2. SP-1: Title block states scale is 1"=20', plan states scale as 1"=40' where it appears the scale is 1"=30'
3. SG-1: dimension the separation from the proposed dry wells to the existing and proposed structures to ensure at least 10 feet of separation.
4. SG-1: less than 6" of cover is provided at Catch Basin #1. Revise accordingly.
5. SG-1: Rim elevation of DW-4 doesn't match the proposed grading.
6. SG-1: show what appears to be an existing drywell to remain on the east side of the CB to be replaced with proposed catch basin with sump (vicinity of CB#1). Alternatively, if this existing dry well isn't proposed to remain, remove the proposed piping shown tributary to it.
7. A number of improvements are shown on the 310 Mill St parcel, but it has not otherwise been identified as a project parcel.
8. Additional technical review comments of the site plan set will be provided once the general engineering comments provided herein have been addressed.

Parking

1. From a parking generation standpoint, Maser defines the project area as a Dense Urban Area rather than a General Urban/Suburban Area and Chazen agrees with this. However, parking data for the Daycare Center and Fitness Center in the Dense Urban Area classification is limited to one study and should not be used for the parking estimates; therefore, parking rates for the General Urban/Suburban Area classification should be used.
2. Parking estimates were only provided using "average" rates. It is common to also present parking estimates using an "85th percentile" rate as this is often used for parking design applications. It is important to note that neither the average rate nor the 85th percentile rate represent a parking standard.
3. Using the General Urban/Suburban rates, Chazen has estimated the parking demand using average and 85th percentile rates:

Daycare Center & Fitness Center
Parking Demand (Spaces)

Parking Demand	Daycare Center		Fitness Center	
	Average	85th %-tile	Average	85th %-tile
Unadjusted Demand	25	38	60	110
Internal and Multi-use credits	-13	-21	-32	-60
Adjusted Demand	12	17	28	50

4. The combined parking demand for the Daycare Center and the Fitness Center is 40 spaces using average parking rates. Estimates provided by Maser using average rates is 35 spaces. The combined parking demand for the Daycare Center and the Fitness Center is 67 spaces using 85th percentile parking rates, a difference of 32 spaces as estimated by Maser using average rates.
5. The shared parking analysis provided by Maser shows that there are 231 available public parking spaces within 600 feet of Wallace Campus on a weekday; therefore, there is enough parking available to accommodate the additional demand of 32 spaces as estimated using the 85th percentile rates.

We would be pleased to discuss these comments at the Board's next meeting. In the meantime, please do not hesitate to contact me with any comments or questions.

Sincerely,

Stuart F. Mesinger, AICP

RE: 2020-010: 319, 325, 327-329 and 331 Main Street "Wallace Campus" Resubmission

Dear City of Poughkeepsie Planning Board,

On March 16, the applicant and design team updated the planning board with their latest iteration of their Wallace Campus project.

Catharine Street Building
Notably, there have been architectural changes that reproportion the building footprint along Catherine Street to extend to the full lot line, which reduced the massing to six stories. This design appears to fit more successfully alongside the building's immediate neighbors along Catharine Street.

Main Street Building
1) The Main Street building also has shown aesthetic evolution, especially along the cornice line. While some cornice work is advisable on a building of this scale, we advised the applicant during the meeting that the detailed historic cornice ornament feels a bit busy for a midblock building, and that this may be attributed to the proposed choice to show a highly ornamented cornice both atop of the street wall and atop of the setback massing. Since the meeting, we observe that historic cornice ornamentation along both streetwall massing and setback massing appears to establish a new architectural precedent for the Main Street Corridor. ***During the meeting it was advised that the design team consider options of either highlighting the streetwall massing with the historic cornice line or highlighting the setback massing with the cornice line, for review by the planning board.***

2) It was noted that in the current version the decorative cornice turns the southwest corner and appears to project over the west lot line wall, where ***we suggested the applicant to provide additional dimension and clarity of intent regarding the lotline projections to the board.***

As this project has significant scale both in footprint and in proposed massing heights, we continue to see this project for downtown of Poughkeepsie as an important discussion for public participation.

Sincerely,
Chris Kroner

Principal

COMMISSIONER

COUNTY OF DUTCHESS

DEPARTMENT OF PLANNING AND DEVELOPMENT

April 2, 2021

To: Planning Board, City of Poughkeepsie
Re: Referral 21-060, Wallace Campus Site Plan
Parcels: 6162-77-114098 / 109079 / 109077 / 112116 / 116114 / 121116 and 6162-78-127091 / 128813, Main Street and US44/NY55 (Mill Street)

The Dutchess County Department of Planning and Development has reviewed the subject referral within the framework of General Municipal Law (Article 12B, §239-l/m).

ACTION

The applicant is requesting site plan approval for the following:

- Restoration of the former Wallace Department Store building on Main Street, to contain a mix of non-residential and multi-family residential uses;
- Construction of a stepped-height 5- and 7-story building on Main Street adjacent to the Wallace building (involving the demolition of three existing buildings) to contain non-residential and multi-family residential uses;
- Construction of a 6-story addition to the Wallace building along the Catharine Street frontage, to contain a daycare and multi-family residential;
- 214 units of mixed-income affordable rental housing (in the Wallace building and new construction);
- Approximately 6,400 square feet of ground-floor commercial on Main Street (in the Wallace building and new construction), as well as a 29,000 square foot climbing gym and fitness center (in the Wallace annex on Catharine Street);
- A privately-owned public greenspace, and reconfiguration of parking and circulation patterns, in the interior of the block.

COMMENTS

As noted previously, we appreciate the applicant's consideration of feedback received and the associated modifications to the site plan, building architecture, and site details. Upon review of this latest referral, we have the following comments:

Building Heights

The new buildings proposed still exceed the number of stories permitted in the PID zoning (5-story maximum in PID-HC, 6-story maximum in PID-UV). The PID governs height based on the number of stories, within which it also provides a maximum height per story (20' ground floor / 14' upper floors). We find the overall bulk of a building in relation to the historic fabric of the City's downtown to be the most important governing factor for functionally determining when a building is of an appropriate height versus when it is too tall and overwhelms its historic neighbors.

According to the documentation provided by the applicant, the Wallace building is 69' to the very top of its Main Street façade. This measurement provides a baseline from which to evaluate the other buildings in this block, as the Wallace building is one of the more prominent structures. The Main Street building appears to be approximately 60' to the top of the 5-story southern facade, and then steps up to approximately 80' at the top of the 7-story portion of the building (plus additional height for the roof mechanicals). Although the technique of stepping back the top two stories does aid in mitigating the impact of the bulk of the building along Main Street, the overall 80' height of the setback still contributes to the building visually overwhelming the block. View 1 shown on sheet A-202 illustrates how the 80' tall, 7-story portion looks top heavy, and competes with the 60' tall, 5-story facade.

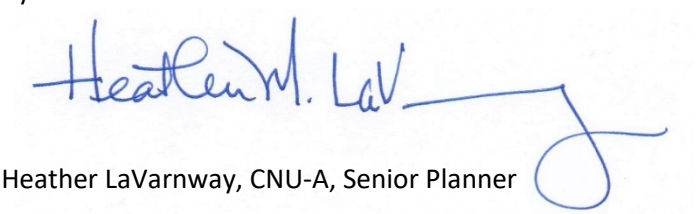
The Catharine Street building has been redesigned to have a slightly larger footprint and six stories where seven were previously proposed. The current design of the Catharine Street building is approximately 68' to the top of the cornice, and no longer appears to dwarf it's 3-story neighbor to the south. The elimination of the seventh story (and associated reduction in height from approximately 79' to 68') has mitigated our concern about the size of the Catharine Street building in relation to its neighbors in the PID-HC district.

Main Street Upper Cornice

We note the design modifications to the Main Street building's cornice, which are more in keeping with the context of the building. We suggest evaluating whether a less detailed/ornate cornice on the stepped-back section could help reduce the visual prominence of it, allowing it to visually recede while giving the 5-story façade center stage along Main Street.

Lighting

We are pleased to see that overall lighting levels are much lower than previously proposed. In reviewing the fixture specs, we note that the wall and pole mounted fixtures have a color rendering index (CRI) of only 70, though a CRI of 80 or 90 are options for both types of fixtures. We recommend a minimum of CRI 80 to ensure that the color of objects is rendered as close to "natural" as possible.



RECOMMENDATION

For the reasons stated above, we recommend the Board not grant the requested site plan approval until the following condition has been met:

1. The height of the Main Street building be reduced to complement rather than compete with the Wallace Building and other nearby historic structures.

   Voting and Reporting Requirements: If the Board acts contrary to our recommendation, the law requires that it do so by a majority plus one of the full membership of the Board and that it notify us of the reasons for its decision.

LIST OF TABLES

Table 1: EGCC Requirements and Credits Vs. LEED V4.1 2

1.0 INTRODUCTION

The Wallace Campus project is a mixed-use affordable housing development bounded by Main Street, Catharine Street and Mill Street in the City of Poughkeepsie. The applicant has requested a one-story height bonus based on "Green Building Practices." In accordance with the City's code, the applicant must demonstrate that the "proposed site and building techniques are of similar or greater value in terms of water use, energy efficiency, stormwater management, and carbon emissions, as LEED Gold or Platinum certification."

Figure 1:
City of Poughkeepsie Code Citation

> *Green building practices.* One additional story may be added to the maximum building height for developments that acquire Gold or Platinum certification through LEED Building and/or Neighborhood Development Rating System. If not LEED certified, the applicant is required to demonstrate, through submission of plans, details and certifications by accredited green building/architectural professionals, that the proposed site and building techniques are of similar or greater value in terms of water use, energy efficiency, stormwater management, and carbon emissions, as LEED Gold or Platinum certification. The applicant and the applicant's LEED-certified professional shall work in concert with City staff to identify the LEED rating system to be used to guide the development and advise the Planning Board accordingly.

Based on communication with the applicant we understand that at this phase of the project there is insufficient design detail to evaluate the proposed project for equivalency with LEED. To support the Planning Board and allow the project to move forward, this report provides an analysis of the Enterprise Green Community program, and how it compares to the LEED Certification process. This analysis is intended to demonstrate the basis for equivalency, and therefore qualification for the one-story height increase.

2.0 EQUIVALENCY ANALYSIS

Enterprise Green Communities is a non-profit organization that was developed to create a straightforward and unified path to incorporate sustainable, green building practices for low-income housing projects. The path for these projects is outlined by the Enterprise Green Communities Criteria (EGCC), which establishes mandatory and optional green building practices that must be incorporated into low-income housing projects to certify these projects as sustainable developments. The following is an equivalency analysis between the two programs.

2.1 Credit Category Comparison

The EGCC is similar to LEED V4.1 Residential: Multi-family criteria (LEED V4.1). Both standards require specific baseline credits or criteria and a specified number of additional optional credits. Required and optional credits for the EGCC and LEED V4.1 with respect to their credit categories are outlined below in Table 1. The EGCC has a greater number of required building practices than the LEED V4.1. Accordingly, the EGCC establishes a more stringent baseline with unified project goals for all certified projects than the LEED V4.1. For optional credits however, the EGCC has more leniency with a possible 290 credits and a requirement of only 40 credits for certification. LEED V4.1 requires various levels of optional credits for their four certification levels, bronze, silver, gold, and platinum, with a total of 110 possible credits. In a

side-by-side credit comparison, EGCC certified projects are at least equivalent to LEED V4.1 silver level projects, with the possibility of having a gold level certification based on the specific optional credits utilized. It should be noted that this comparison does not consider several requirements of the EGCC which do not exist within the requirements or optional credits of LEED V4.1.

Table 1:
EGCC Requirements and Credits Vs. LEED V4.1

Enterprise Green Communites Criteria Vs. LEED V4.1 Residential: Multifamily					
EGCC			LEED V4.1		
Category	Number of Requirements	Number of Optional Credits	Equivalent Category	Number of Requirements	Number of Optional Credits
Water	2	39	Water Efficiency	2	12
Operating Energy	4	55	Energy and Atmosphere	4	34
Site Improvements	5	16	Sustainable Sites	1	10
Intergrative Design	4	33	Intergrative Process	0	1
Location + Neighborhood Fabric	6	53	Location and Transportation	0	15
Materials	5	58	Materials, Resources, and Regional Priority	2	17
Healthy Living Enviornment	5	36	Indoor Enviornmental Quality	6	16
O+M and Resident Engagment	5	0			
			Innovation	0	6
Totals	36	290	Totals	15	111

2.2 Detail Level Comparison

While the EGCC and LEED V4.1 have very similar requirements within each comparable category, specific differences between the two standards exist that are important to this analysis. The two most important areas are the location and transportation criteria and the water use, stormwater control, and energy consumption/carbon emissions categories.

2.2.1 Location and Transportation

EGCC has mandatory requirements for the location of project sites and proximity to community amenities and transit routes. Projects are not allowed to be located in an area that would negatively impact a floodplain, waterway, ecosystem, or prime farmland. Projects are required to be located within 0.25 miles of a dedicated public open space, 0.5 miles of a public transit service, and 0.5 miles of four approved community amenities. These two caveats are designed to lessen the impact of projects on the environment and increase the engagement of residents with their surrounding communities. LEED V4.1

has no requirements for the location of project sites but does have optional low value credits for all of these criteria.

2.2.2 Water Use, Stormwater Control, and Energy Consumption/Carbon Emissions

Water use, stormwater control, and energy consumption/carbon emissions requirements of both EGCC and LEED V4.1 are the on the surface equal. However, EGCC has more stringent stormwater requirements and optional credits for both programs generally do not overlap.

Both standards require at least a 20% reduction in water use from the same referenced baseline standard and whole building water use monitoring. EGCC however, requires WaterSense fixtures be installed in all kitchens and bathrooms and for all projects to develop a Legionella water management program. LEED V4.1 only offers optional credits for additional water conservation techniques and more advanced water metering programs. EGCC offers credits for these two criteria and for efficient plumbing designs, non-potable reuse, and access to potable water in emergencies.

Stormwater management within LEED V4.1 is completely optional. This standard only requires that construction pollution prevention practices be observed. EGCC requires construction pollution prevention practices and stormwater management of all rainwater entering the site for up to the 60th percentile rain event. Efficient irrigation practices, such as rainwater harvesting and reuse, are also required on all projects that utilize irrigation or need water for landscaping.

EGCC and LEED V4.1 require the same baseline criteria for energy performance of structures, however, the EGCC requires more efficient appliances and interior lighting. LEED V4.1 requires a minimum energy performance via the ASHRAE 90.1 standard where EGCC requires all appliances and units be ENERGY STAR rated. The ENERGY STAR rating meets or exceeds the requirements of ASHRAE 90.1. Heating and cooling systems are required to meet the same efficiency standard as well, although interior lighting of EGCC projects must be through high efficiency fixtures. EGCC optional credits focus on projects reducing their energy consumption through renewable or green rated building practices and minimizing the use of combusting or gas-powered utilities. LEED V4.1 also addresses optional renewable energy credits but does not give credit to the use of all electric utilities and appliances.

2.3 Additional Requirements of the EGCC

While the side-by-side credit comparison highlights the overall similarities of EGCC and LEED V4.1, it is important to highlight the portions of the EGCC that are not included in the LEED V4.1. The most notable difference is the inclusion of a mandatory operation, maintenance, and resident engagement section within the EGCC. This category is not included in LEED V4.1. This category requires energy and water data collection, which must be submitted to the Enterprise Green Community organization for a minimum of 5 years after construction completion to ensure the energy and water goals for the project are being met. Additionally, the EGCC requires each project to have an integrative design process, which is only an optional credit for the LEED V4.1 criterion. These two criteria are further detailed below.

2.3.1 Operations, Maintenance, and Resident Engagement

A unique requirement of the EGCC is the mandatory incorporation of a thorough operations and maintenance plan and resident engagement criteria. There are five required criteria within this category,

to establish a benchmark for continued maintenance of the facilities and engagement of the residents. Additional criteria in this category requires monitoring and collection of water and energy use data.

Under the EGCC, a Building Operations and Maintenance Manual and Plan (O&M) and an Emergency Management Manual (EMM) are required to be created and issued to building staff and workers. The O&M must be developed in collaboration with the design team to ensure all implemented sustainability systems are maintained throughout the project's useful life. This plan must include a detailed list and layout of all items on the project site that will need to be maintained, their maintenance specifications, and repair information. Cleaning schedules, hardscape and landscape upkeep plans, and an occupant turnover plan highlighting common items that should be replaced with each new tenant are required for the O&M. The EMM must include a process for addressing natural disasters, system malfunctions, and power outages. This plan must prioritize resident safety in case of an emergency and outline how staff members will work to mitigate any emergency.

For resident engagement, a resident manual and walk-though/orientation process must be established. The resident manual should highlight all environmental, societal, and technological advantages of the building and how residents can positively impact the structure and its community. Recycling and refuse management, basic O&M procedures, and a briefing of community amenities for residents to utilize should be covered by this plan. In conjunction with this manual, each project must provide walk-throughs and an orientation on the building operations for all prospective residents.

The last piece of the O&M and resident engagement category is the requirement for collecting and storing energy and water use of the project. This data can be collected on a whole building or individual unit basis and must be made available for all residents to view. Additionally, the Enterprise Green Communities organization must be able to monitor the data for 5 years from the project's date of completion to ensure that the water and energy use goals are being met.

LEED V4.1 does not have any mandatory or optional credits for O&M or resident engagement practices. There is a required credit for monitoring energy and water use however, this collected data is not required to be viewed by a third party and not required to be assessed against project goals.

2.3.2 Integrative Design Process

The EGCC prioritizes an integrated design and construction process to ensure that the criteria specified in each project is met during and after construction is completed. In this process, a "project priorities survey" must be submitted and approved by the Enterprise Green Communities organization before design can begin. This survey includes information on who may be future residents, how various resident needs will be met, how all required EGCC will be met, which optional criteria will be included, and all geographic and climatic information of the community surrounding the project.

Once the survey is approved, coordination meetings must be scheduled and outlined between the various design teams and construction managers which highlight who is responsible for each criteria and how each team will be held accountable for their given tasks. Then, the EGCC requires that the construction documents reflect all applicable criteria and that this information is communicated to the construction management team. Project teams are required to create and implement a contractor education plan which will inform all parties working to construct the project of the sustainability goals, project timeline, and accountability structure for each task. Each phase of the integrated design process must be proven to have been completed to the EGCC standards with through direct submission to the Enterprise Green

Community organization and/or through thorough documentation of the process within the construction documents.

The required EGCC integrative design process is much more stringent and structured than the optional process which may be utilized for LEED V4.1. Within LEED V4.1, projects can either provide contractor education or implement an integrative process. No incentive is given for projects to include both of these facets. Additionally, the optional integrative process does not require pre-approval of project goals and criteria.

3.0 CONCLUSION

As made evident by a high-level comparison of categories, the Enterprise Green Communities Certification is comparable to a LEED V4.1 Residential: Multi-family Certification. Through analysis of categories and criteria alone, the EGCC falls between LEED Silver and Gold. This comparison however does not account for the many additional requirements of the EGCC certification which are not included in the LEED V4.1 criteria list. More importantly, the areas where EGCC goes above and beyond LEED V4.1 provide critical enhancements that improve the sustainability of the project. The most important of these enhancements is through resident engagement and reporting of operational data. Residents have a tremendous impact on the functional sustainability of a development. EGCC, through the integrative design process, resident engagement and reporting will ensure a higher level of sustainability and is critical to this analysis.

Given this detailed analysis, it is our opinion that the Enterprise Green Communities Certifications is of similar or greater value in terms of water use, energy efficiency, stormwater management, and carbon emissions as LEED Gold certification.

Moving forward the integrative design process will allow for the City to be engaged in the advancement of design documents and ensure that the project meets the requirements of EGCC which are necessary to justify the one-story height bonus.

THE CITY OF POUGHKEEPSIE
NEW YORK
PLANNING DEPARTMENT

March 31, 2021

Wallace Campus Manager LLC
c/o Emanuel Kokinakis
48-02 25th Ave, Suite 400
Astoria, NY 11103

Dear Mr. Kokinakis:

The Wallace Campus site plan bearing the revision date of March 2, 2021 has been reviewed for compliance with the provisions of the Zoning Ordinance, and the following deficiencies were noted to exist:

Note: As noted on the site plan set and related materials, the "Main Street Building" refers to the proposed new construction building located on the properties currently listed as 319-329 Main Street, the "Wallace Building" refers to the existing building located at 331 Main Street with an annex fronting on Catharine Street, and the "Catharine Street Building" refers to the proposed new construction building on the existing accessory parking area located on the 331 Main Street property, which is proposed to front entirely on Catharine Street.

1. Section 19-3.37 Table 3.37-2(h) requires that in the PID-HC, 100% frontage occupancy must be provided, while the PID-UV allows a minimum of 80% up to 100% frontage occupancy; while Table 3.37-2(1) permits side yards in PID-UV to be between zero (0) to ten (10) feet. The portion of the proposed consolidated lot located in the PID-HC provides less than 100% frontage occupancy. The side yard along the lot's western boundary in the PID-UV district is 0 feet at the street and widens to 25 feet 9.6 inches.

2. Section 19-3.37 (8) (c) and Table 3.37-2(b) allow for a maximum height of five stories in the PID-HC, with no allowance for bonus stories. The same table allows buildings in the PID-UV to be a maximum of six stories, with bonus stories permitted. The Main Street Building is proposed to be seven stories. The Main Street Building straddles the two subdistricts, and is subject to the zoning provisions governing the land upon which each section is located.

3. Section 19-3.37 (8) (c) and Table 3.37-2(b) allow for a maximum height of five stories in the PID-HC, with no allowance for bonus stories. The Catharine Street building is proposed to be six stories.

4. Section 19-3.37 Table 3.37-2(h) requires a minimum of 80% frontage occupancy in the PID-UV and 100% frontage occupancy in the PID-HC. There is zero (0) frontage occupancy at the two sections of the site that abut Mill Street.

THE CITY OF POUGHKEEPSIE
NEW YORK
PLANNING DEPARTMENT
62 CIVIC CENTER PLAZA, 2ND FLOOR
POUGHKEEPSIE, NY 12601
Phone: (845) 451-4010 Fax: (845) 451-4006

5. Section 19-3.37 (7) (b) (2) requires that off-street parking be beyond the front building line, on the interior of the lot and not visible from street: the parking is not entirely on the interior of the lot and is visible from the street.

6. Section 19-3.37 (13) (b)(2) requires that all parking spaces shall be set back at least 40 feet from the front property line and screened from view of the street by landscaping. Parking is within 40 feet of the front property line and is not notably screened from view.

7. Section 19-3.37 (13) (g) (2) (i) requires that all parking spaces shall be set back at least 40 feet from the front property line and screened from view of the street by landscaping at least three feet in height, opaque fencing with the finished side facing the street, or other means as approved by the Planning Board. Both entrances/exits to the site contain off-street parking spaces which are within the required set-back and are not notably landscaped.

8. Section 19-3.37(13)(g)(2)(iii) requires that a landscape island shall be provided every ninth parking space for rows of parking that are more than eight spaces in length. There shall be no more than eight continuous parking spaces in a row without a landscape island. There are two diagonal rows with more than eight (8) spaces. While these rows are existing, and previously approved by the Planning Board, the change of use of the site and the overall site alterations require compliance, or a variance.

Please see the attached zoning analysis for details and further discussion items.

You may, within thirty (30) days of the date of this letter, either:

1. Appeal to the Zoning Board of Appeals, including any request for variances; or
2. Modify the plan to reflect compliance for any or all of the items noted above.

Please feel free to contact me if you have any further questions in this regard.

Very truly yours,

Judith Knauss
Deputy Zoning Administrator

THE CITY OF POUGHKEEPSIE
NEW YORK
PLANNING DEPARTMENT

Phone: (845) 451-4010 Fax: (845) 451-4006

WALLACE CAMPUS ZONING ANALYSIS
MARCH 23, 2021

NEW MAIN STREET BUILDING (NEW CONSTRUCTION) DEFICIENCIES ZONING DISTRICT: PID-UV/PID-HC

The uses proposed for this building are residential and commercial. All proposed uses are permitted in both the PID-UV and PID-HC, pursuant to the provisions of Section 19-3.37, Table 3.37-1 of the Zoning Ordinance. Please note that the range of commercial uses permitted is wide.

Section 19-3.37 Table 3.37-2(h) provides that in the PID-HC, buildings must occupy 100% of the property frontage, while the PID-UV allows a minimum of 80% up to 100% frontage occupancy, and Table 3.37-2(f) permits side yards in the PID-UV District to be between zero (0) to ten (10) feet. The frontage of the consolidated lot on Main Street is partially located in PID-UV and partially located in PID-HC, and is occupied by the proposed Main Street Building and the existing Wallace Building. The proposed Main Street Building straddles the district boundary between the PID-HC and the PID-UV. The Wallace Building is entirely in the PID-HC District. The proposed frontage occupancy in the PID-UV district is 100%. The proposed frontage occupancy in the PID-HC district is less than 100% (78.13%). An area variance is required. The Main Street Building has a side yard along the lot's western boundary in the PID-UV District that is zero feet at the street that widens to 25.8 feet. A variance is required for the portion of the side yard that exceeds 10 feet.

Section 19-3.37 (8) (c) and Table 3.37-2(b) allow for a maximum height of 5 stories in the PID-HC, with no allowance for bonus stories. The same table allows buildings in the PID-UV to be a maximum of 6 stories, with bonus stories permitted. As previously noted, the proposed building straddles a district boundary. The building is proposed to be 7 stories. The applicant has applied to the Planning Board for a one-story height bonus for this portion of the building, to allow 7 stories where 6 stories is permitted in the district, based on green building practices pursuant to section 19-3.37 (9) (a) (2), and the Planning Board is considering this request. A two-story height variance is required for the PID-HC portion of the building.

331 MAIN STREET BUILDING (EXISTING BUILDING CONVERSION) ZONING DISTRICT: PID-HC

The uses proposed for this building are: residential, fitness center (including rock climbing component) and commercial space. All proposed uses are permitted in the PID-HC pursuant to the provisions of Section 19-3.37, Table 3.37-1 of the Zoning Ordinance.

As this building is existing, no area variances are required except those that apply to the general development of the site (specifically off-street parking).

THE CITY OF POUGHKEEPSIE
NEW YORK
PLANNING DEPARTMENT
62 CIVIC CENTER PLAZA, 2ND FLOOR
POUGHKEEPSIE, NY 12601
Phone: (845) 451-4010 Fax: (845) 451-4006

CATHARINE STREET BUILDING (NEW CONSTRUCTION) DEFICIENCIES
ZONING DISTRICT: PID-HC

The uses proposed for this building are: residential and daycare. All proposed uses are permitted in the PID-HC pursuant to the provisions of Section 19-3.37, Table 3-.37-1 of the Zoning Ordinance.

Section 19-3.37 (8) (c) and Table 3.37-2(b) allow for a maximum height of five stories in the PID-HC, with no allowance for bonus stories. The building is proposed to be six stories. A one-story height variance is required.

GENERAL SITE DEFICIENCIES
ZONING DISTRICT: PID-UV/PID-HC

The development of the site includes various site improvements, including pedestrian walkways, open space, and parking, which are subject to review and approval of the Planning Board as part of the site plan approval process. The lot is considered a through lot with three frontages. Please note that Section 19-3.37(9)(b) provides that on a through lot in any subdistrict, front yard setbacks and frontage occupancy requirements as mandated in Table 3.37-2 are required to be met on both, or, in this case, all street frontages. The proposed consolidated lot is larger than one acre and is governed by the large lot provisions in Section 19-3.37 (12) (c). The proposed mid-block pedestrian pathway/throughway between Main Street and Mill Street is encouraged in conjunction with the development of the large lot (Section 19-3.37 (12) (c) (1) (ii)), and subject to Planning Board Site Plan review.

The development of the site includes substantial redesigning of the existing off-street parking, including the elimination of a significant amount of pavement and construction, adjacent to the Main Street/Mill Street pedestrian connector, of Wallace Green, privately-owned open space accessible to the public, while utilizing two extant curb cuts, one towards the eastern edge of the property and one nearer to the western edge of the property, separated by the property at 310 Mill Street. This parking lot will also incorporate portions of the rear yards of four adjoining parcels: 302, 304, 306 and 310 Mill Street, as part of shared-parking agreements. The Planning Board has the authority to approve such arrangements as part of the site plan review process.

While the proposed site uses are allowed, review of this plan reveals the following deficiencies relating to the Mill Street frontages and access-drives and on-site parking accessed by these frontages requiring area variances:

Section 19-3.37 Table 3.37-2(h) requires a minimum of 80% frontage occupancy in the PID-UV and 100% frontage occupancy in the PID-HC. There is zero frontage occupancy at the two existing sections of the site that abut Mill Street. Area variances are required.

THE CITY OF POUGHKEEPSIE
NEW YORK
PLANNING DEPARTMENT
62 CIVIC CENTER PLAZA, 2ND FLOOR
POUGHKEEPSIE, NY 12601
Phone: (845) 451-4010 Fax: (845) 451-4006

Section 19-3.37 (7) (b) (2) requires that off-street parking be beyond the front building line, on the interior of the lot and not visible from street. The "Front Building Line" is defined in the zoning law as "the plane of a building that borders the public right-of-way, parallel to or coterminous with the front property line." Portions of the parking which are closest to, and within 40-feet of, the two existing access points to Mill Street are not entirely on the interior of the lot and appear to be visible from the street due to the vehicle entrance points. Area variances are required relative to the location and visibility of proposed parking.

Section 19-3.37 (13) (b)(2) requires that all parking spaces shall be set back at least 40 feet from the front property line and screened from view of the street by landscaping in accordance with subsection (13) (g)[1]. Portions of the parking at each of the two existing access points to Mill Street are located within 40 feet of the front property line along Mill Street. Additionally, such parking is not wholly screened from view at either entrance due to the vehicle entrance points. Area variances are required. Planning Board has jurisdiction to determine sufficiency of landscaping during site plan review, but a variance is required regarding the 40 foot setback.

Section 19-3.37 (13) (g) (2) (i) requires that all parking spaces shall be set back at least 40 feet from the front property line and screened from view of the street by landscaping at least three feet in height, opaque fencing with the finished side facing the street, or other means as approved by the Planning Board. Both entrances/exits to the site contain off-street parking spaces which are within the required set-back. Additionally, such parking is not wholly screened from view at either entrance by landscaping or other means, due to the vehicle entrance points. Area variances are required. The Planning Board has jurisdiction to determine sufficiency of landscaping and/or the type of screening required during site plan review, but a variance is required regarding the 40 foot setback.

Section 19-3.37(13)(g)(2)(iii) requires that a landscape island shall be provided every ninth parking space for rows of parking that are more than eight spaces in length. There shall be no more than eight continuous parking spaces in a row without a landscape island. There are two rows with more than eight (8) spaces. While these rows are existing, and previously approved by the Planning Board, the change of use of the site and the overall site alterations require compliance, or a variance.

Additionally, snow storage is shown. Planning Board shall determine if the storage provided is sufficient.

[1] The reference to section 13(f) in the Code of Ordinances is intended to refer to the landscaping provisions in Section 13 (g). Section 13 (f) does not address landscaping, and section 13 (g) does.

THE CITY OF POUGHKEEPSIE
NEW YORK
PLANNING DEPARTMENT
62 CIVIC CENTER PLAZA, 2ND FLOOR
POUGHKEEPSIE, NY 12601
Phone: (845) 451-4010 Fax: (845) 451-4006

PARKING REQUIREMENTS

Section 19-3.37 Table 3-37.4 requires off-street parking as follows:

- No parking requirements for residential uses in the PID-HC
- .5 spaces per unit in the PID-UV, plus 1 visitor space per 10 units
- Planning Board determines the parking requirement for the day care center and recreational facility
- Planning Board determines whether loading berths are required
- Planning Board reviews requests for shared parking and ascertains whether overall demand for parking is satisfied by the proposed arrangement
- Once the parking requirement is determined, the need for waivers and any fee-in-lieu of parking shall be determined by the Planning Board.

BICYCLE PARKING

Long Term: .5 space per bedroom, 1 spaces for each 12,000 square feet for retail/2 minimum, 1 spaces for each 10,000 square feet for office/non-retail commercial/2 minimum. Other uses determined by the Planning Board during site plan review. The Main Street Building requires 46 long-term bicycle parking spaces, the Wallace Building requires 37 long-term bicycles parking spaces, and the Catharine Street Building requires 32 long-term bicycle parking spaces, for a total of 115 bicycle parking spaces.

Long term bicycle parking is being provided inside the Wallace Building and Catharine Street Building, with a total area of 831 square feet. The applicant shall provide justification that the square footage provided is sufficient to support 115 bicycles, and clarify how residents of the Main Street Building will have access to the bicycle parking located in the Wallace Building and Catharine Street Building.

Short Term: .05 spaces per bedroom, 1 space for each 5000 square feet for retail/2 minimum, 1 space per 20,000 square feet for office/nonretail commercial/2 space minimum. Other uses determined by the Planning Board. The Main Street Building requires 6 short-term bicycle parking spaces, the Wallace Building requires 7 short-term bicycles parking spaces, and the Catharine Street Building requires 3 short-term bicycle parking spaces, for a total of 16 short-term bicycle parking spaces.

45 short term bicycle parking spaces are claimed. The Planning Board shall determine if the bicycle parking provided is sufficient.

MARCUS J. MOLINARO
COUNTY EXECUTIVE

EOIN WRAFTER, AICP
COMMISSIONER

COUNTY OF DUTCHESS

DEPARTMENT OF PLANNING AND DEVELOPMENT

December 8, 2020

To: Planning Board, City of Poughkeepsie
Re: Referral 20-298, Wallace Campus Site Plan
Parcels: 6162-77-114098 / 109079 / 109077 / 112116 / 116114 / 121116 and 6162-78-127091 / 128813, Main Street and US44/NY55 (Mill Street)

The Dutchess County Department of Planning and Development has reviewed the submitted referral for countywide and intermunicipal impacts as outlined in General Municipal Law (Article 12B, §239-l/m).

ACTION

The applicant is requesting site plan approval for the following:

- Restoration of the former Wallace Department Store building on Main Street, to contain a mix of non-residential and multi-family residential uses;
- Construction of a stepped-height 5- and 7-story building on Main Street adjacent to the Wallace building (involving the demolition of three existing buildings) to contain non-residential and multi-family residential uses;
- Construction of a 7-story addition to the Wallace building along the Catharine Street frontage, to contain a daycare and multi-family residential;
- 220 units of mixed-income affordable rental housing (in the Wallace building and new construction);
- Approximately 6,400 square feet of ground-floor commercial on Main Street (in the Wallace building and new construction), as well as a climbing gym and fitness center;
- A privately-owned public greenspace, and reconfiguration of parking and circulation patterns, in the interior of the block.

COMMENTS

We appreciate the comprehensive responses provided to our comments from July 2020, and are pleased to see that the proposed Main Street and Catharine Street buildings have been redesigned to better reflect the existing historic architectural patterns and forms as required by the PID zoning, and that other modifications to the site design are proposed. Many of the issues expressed in our earlier letter have been ameliorated by the redesign. However, we do continue to have a few concerns:

Building Heights

The proposed building heights are still in conflict with the bulk table shown in the PID zoning. The applicant has suggested that the maximum numerical height measurement of 76', as outlined in the formula found in §19-3.37(8)(c), should outweigh the stated 5-story maximum. This question will require the City to make a determination as to what the ultimate intent of the PID zoning was --- does the maximum number of stories noted in the bulk table take precedence over the mathematical formula found in §19-3.37(8)(c)? While this is not a question we can answer, we would suggest that in reviewing the PID zoning during its drafting and subsequent adoption, an assumption could have been made that the intent of the 5-story maximum outlined in the bulk table was meant to reflect the building heights found in existing 5-story historic structures located in the PID-HC subdistrict. As per the applicant's

documentation, the Wallace Building is 64 feet tall and Luckey Platt is 71 feet tall. The City could survey the heights of other historic buildings in the district to inform the question of intent.

Portions of the Main Street building are within the PID-HC district. While the stepped approach to the Main Street building height, with the street wall being 5 stories (56 feet tall) and the taller portion being set back 22', does lessen some of the visual bulk of the extra stories, it does not fully alleviate the concern. We also note that the proposed Main Street building is 86 feet tall at the peak of the setback gabled parapet, so portions of the building are still in conflict with both the bulk table and §19-3.37(8)(c). The Catharine Street building, which is wholly within the PID-HC subdistrict, is proposed at 7 stories tall and appears to visually dwarf it's 3-story neighbor to the south.

The 5-story maximum height limit in the PID-HC district should serve to ensure that new development blends into its historic surroundings.

Architecture

While we find the new design of the Main Street building more in keeping with the letter and intent of the PID zoning, the dual gabled parapets capping the 5-story streetfront portion, as well as the single gabled parapet on the 7-story setback, are somewhat incongruous with the majority of the historic buildings along Main Street. The Catharine Street building has an institutional look, and as per the perspective views included for review, the upper two floors make the building look top-heavy.

Lighting

Our concerns about the site lighting remain. Although the applicant has redesigned the lighting, overall levels are now even higher than previously proposed. As per the photometrics, levels throughout the site range upwards of 2-7+ footcandles. This is much brighter than necessary, and will result in unwanted glare and light pollution. A lower, more evenly distributed level of lighting ranging from just 0.1-1 footcandle would provide for both the safety and comfort of pedestrians and vehicles traversing the site. We note that the fixtures are dark-sky compliant and of a preferred color temperature.

RECOMMENDATION

For the reasons stated above, we recommend the Board not grant the requested site plan approval until the following condition has been met:

1. The building heights are reduced to no higher than 5 stories, in compliance with the bulk table in the zoning.

   Voting and Reporting Requirements: If the Board acts contrary to our recommendation, the law requires that it do so by a majority plus one of the full membership of the Board and that it notify us of the reasons for its decision.

RE: 2020-010: 319, 325, 327-329 and 331 Main Street "Wallace Campus" Resubmission

Dear City of Poughkeepsie Planning Board,

Our office is in receipt of the latest drawings (plans and elevations) for Wallace Campus on November 06, 2020, and were able to participate in the preliminary presentation of the project to the City of Poughkeepsie Planning Board on November 17. A project introduction meeting was convened via teleconference on November 24, 2020. This video conference included Natalie Quinn, Saky Yakas, Lasha Brown, Rachel Goodfriend, Jennifer Van Tuyl, Adam Augenblick, Anne Saylor and Rosaura Andújar-McNeil and myself. The applicant's architects and design team introduced the drawings and the conversation took a constructive workshop approach to understanding opportunities that the design team could continue to investigate. Generally, MASS would like to make the following comments to assist the Planning Board's review, and would encourage the design to develop.

URBAN APPROACH

1. General

   This particular application has many facades, on Main Street and on Catherine Street, but given the new scale of the residential structures, these also will be seen from the Arterial—first from the Crannell Street parking lot and second from directly north of the project on Mill Street. ***Please submit a rendering of project massing from Mill Street and North Facades for planning board review.***

   There are also no images of the project looking east. This might help the planning board understand the project's visual impact and congruence with the historic buildings of Main Mall Row, including 317 Main, which we understand to be on the local register but not the national register. ***Please submit a rendering of project massing looking east on Main Street, with at least four buildings west of the site shown for planning board review.***

2. Public Corridor

   We typically discourage any demolition, especially along Main Street, from the perspective of embodied carbon and environmental impact. That said, the development team has found a compelling approach to flip the pedestrian link between Main Street and the rear garden court to the eastern side of their property line (along the Wallace Building). This 29' pedestrian way appears to function similarly to others found in Poughkeepsie—such as Garden Street and Liberty Street—with the exception that a security gate closes off the majority of the access to the public.

   Our first question to the team was ***is the gate absolutely necessary, or can the corridor link be designed to remain public?*** In the meeting it was described that its purpose was to control the privately owned public space. Without any public function in the corridor, we are concerned that the corridor would become a significant void space after hours, which contradicts the lively renderings presented to the planning board. ***Some clear understanding of the operation and security features of the gate should be clarified. We would encourage the applicant to reconsider the gate, or at minimum, to push the gate north as much as possible and***

massdesigngroup.org

program the corridor with enough lighting, seating, or perhaps an outdoor feature such that the public would feel welcome at all hours in that space.

3. Alignment and Relationship through to the Arterial

We are enthusiastic about the notion of a public amphitheater space to be added to the downtown core of the City of Poughkeepsie. However, we do feel that the site plan, paths, and northern gated access could offer more of a connection to the urban fabric for both the public and the residents of 220 new housing units. By moving the public corridor to the east, it nearly realigns one axis of porosity to Mill Street (Arterial) at the east side of 310 Mill Street, but there could also be a second axis extended into the project from Conklin Street. This second axis would help the project support a more walkable downtown historic core and create more demand for an additional crosswalk across the arterial (see diagram below). ***Please comment on gate placement and site circulation strategies.***

ARCHITECTURAL DETAILS, MATERIALS, AND METHODS

1. **Wallace Building**

The original Wallace Building renovation package included elevations and views from the "public green." **Please provide those with any related updates in the next submission.**

We understand that the design team came to Poughkeepsie and studied historical features to incorporate into each building. Had the team visited in the decades prior, they may have seen how Wallace's cursive logo was once painted on the exposed East Facade, a renowned feature of the Poughkeepsie Skyline (see photo below). ***This logo has since been whitewashed, but we would highly encourage the development team to consider reinstalling this logo as a nod to Poughkeepsie's urban history.***

Similarly, any efforts to restore fenestration or perhaps the Wallace Co. front signage would be appreciated.

2. **Main Street Building**

The architecture team explained to us that they were inspired to pick up on cues of surrounding historical fabric to tie the building into downtown. Lasha specifically referenced the frontal symmetry and meter of the Windsor Hotel as the spacing of the structural bays, which are supportable. The strong horizontal banding, thickened facade with inset windows, and brickwork are all very clearly reasoned. ***Please submit physical material samples for planning board review of color and texture.***

Ground Floor
The ground floor material is called out as precast concrete panels with shallow reliefs, similar to the stamped tin plate ceilings derived from Wallace Co and seen throughout downtown Poughkeepsie. We find this material approach to be very inspired and supportable. We similarly are in favor of the contemporary storefront canopies that deeply extend into the structure.

Upper Floors
We remain very curious about the reiteration of arches and deep extruded cornice at the top of the fifth floor that appear to resemble some of the features of 329 Main Street (we understand that 329 Main was remodeled in the 1970s to the pink stucco exterior we see today). ***Have other cornice ideas been considered?***

Similarly, we remain hesitant with regards to the double gabled cornice being

shown as a parapet wall for a residential terrace for the sixth floor residents and the similar central pediment at the roof level. While the design team shared that this approach was to help reinforce the scale of the building as compared to the central medallion cornice articulation found on historic buildings throughout Main Street (referred to in the meeting as a "camel bump"), we find this double gabled parapet with gable beyond offering an awkward resolution, as a gable would typically indicate a roof structure of similar shape behind. ***We would encourage the design team to consider alternative cornice articulations.***

Residential Layout - Massing/Floorplate Considerations
As the height between Wallace and Main Street Buildings creates a deep canyon space between them, we would encourage the applicant to consider modulating the floor plate of their new residential apartments to help windows to face more southward and not be directly opposite to new residential windows cut into the western wall of the Wallace Building.

Please clarify any rooftop programming intent.
Please clarify areas and any visible mechanical systems or meters that will be incorporated into the project.

3. **Catherine Street Building**
The references to the massing of Luckey Platt are explicit, but from a material standpoint, we would encourage the lower floor to relate to the proposed Main Street Building of this application. This is a very tall structure that appears to successfully use fenestration and glass to help alleviate some of the bulk. It is unclear how the upper floors turn the corner from the renderings (specifically A-204). Much like the Main Street Building, for a building of this height and scale, we would hope that the facade detailing and materiality would wrap the corners. ***Please clarify intent in this rendering and submit a full elevation package for the planning board to review.***

In the workshop, we discussed the opportunity to reconsider the floor plate of the building to fully extend to the lot line as a strategy to alleviate the height of the building and to create a more clear entry to the proposed Day Care Center from Catherine Street. It is notable that the sidewalk width in front of this building's facade is quite small in comparison to Main Street and therefore we encourage the design team to look again at storefront canopy/awning configurations to help create some a more welcoming streetscape for pedestrians.

Please clarify any rooftop programming intent.
Please clarify areas and any visible mechanical systems or meters that will be incorporated into the project.

We see this reimagination of downtown of Poughkeepsie as an exciting discussion for the public to understand, a highly critical piece of the future of Main Street in Poughkeepsie, and therefore we look forward to the evolution of this important project and subsequent submissions that may incorporate elements that further design excellence.

Sincerely,
Chris Kroner

Re: Wallace Campus Project Review
Chazen Project #82029

Dear Ms. Quinn:

The Chazen Companies has reviewed the Wallace Campus project materials submitted November 3, 2020. We have the following comments.

Water

1. Engineering Report, Section 2.2: multiple references to a 331 Catherine Street expansion, which is believed to be a reference to the seven-story addition to 331 Main Street located along Catharine Street adjacent to #14. Revise references to this proposed addition in the report for clarity.
2. Engineering Report, Section 2.1: existing sewer generation: office use generation shall be based on number of employees, per Table B-3 "Typical per Unit Hydraulic Loading Rates" of the NYSDEC "Design Standards for Intermediate Sized Wastewater Treatment Systems", March 5, 2014. Revise calculations or provide methodology for converting to square footage.
3. Engineering Report, Section 2.1: Proposed sewer generation: for retail uses, add 15 gpd per employee/shift per Table B-3.
4. Engineering Report, Section 2.1: Proposed sewer generation: provide methodology for determining number of patrons for the proposed fitness center and number of people for the proposed daycare center.
5. Engineering Report, Section 2.2: verify with City Engineering that the existing water treatment facility and distribution mains located in the vicinity of the project site have sufficient capacity to supply the additional demand resulting from the proposed project.
6. Engineering report, Section 2.2: add a reference to the existing 6" water line supplying fire flow to 14 Catharine Street/331 Main Street to remain (in addition to the reference to the 2" potable water supply line).
7. Engineering report: add section discussing regulatory approvals required for the proposed water/sewer improvements.
8. Engineering report: add section discussing requirements for testing of the proposed water/sewer improvements.
9. Engineering report, Section 2.4: Verify that available fire flows are sufficient for sprinkler design.

Sewer

1. Sheet SN-2: Provide service lateral connection detail.

2. Sheet UT-1: Show size of existing sewer mains and ensure adequate invert at point of service lateral connection.
3. Engineering Report, Section 3.2: verify with City Engineering that the existing wastewater plant and the collection lines in the vicinity of the project site have sufficient capacity to serve the additional wastewater generation resulting from the proposed project.
4. Engineering Report, Section 3.3: reference made to 311 Main Street, which is not part of the proposed project- revise accordingly.
5. Reference made to 311 Catharine Street addition, which is believed to be a reference to the seven-story addition to 331 Main Street located along Catharine Street adjacent to #14. Revise references to this proposed addition in the report for clarity.

Stormwater

1. Show existing and proposed roof leader discharge locations
2. Show proposed area of disturbance. Project appears to result in disturbance in excess of 1 acre and will require a full Stormwater Pollution Prevention Plan (SWPPP).
3. Infiltration testing shall be performed to support the proposed stormwater infiltration practices.
4. Project proposes abandoning 3 of the 4 existing dry wells and the construction of 4 new dry wells. The project also results in a reduction in impervious surfaces. The project SWPPP shall analyze the existing and proposed conditions to ensure compliance with State and local water quality and quantity requirements.
5. Sheet SG-1: provide sufficient cover at all proposed drainage structures.
6. Per the NYS Stormwater Management Design Manual, January 2015, dry wells should receive rooftop runoff only. It appears the proposed dry wells are intended to receive parking lot runoff as well.
7. Per the Design Manual, all flows that exceed the capacity of the dry well should be passed through a surcharge pipe. No surcharge pipes are shown on the proposed plan.

Parking and Circulation

1. Chazen has reviewed the PID zoning requirements for the project's parking demand. It is our understanding that the Planning Department is continuing their review of the requirements and demand as well; therefore, we will withhold our final review of the calculated parking demand until the Department's review is completed.
2. Chazen concurs with the use of the Nelson\Nygaard Downtown Parking Improvement Plan for the data related to the area's parking supply, parking demand, and internal/multi-use credits.
3. The site plan does not show a trash and recycle pick-up area for residents and commercial use. The access and maneuvering of trucks for refuse pick-up should be shown.
4. The eastern site driveway aisle consists of angled parking on west side and 90-degree parking on the east side. Since it is a one-way driveway both parking areas should be angled. This will also help prevent wrong-way travel on the one-way driveway.
5. The following comments relate to the designated Day Care drop-off zone within the one-way entrance driveway aisle:
    a. Based on Maser's experience and observations of drop-off/pick-up times of 2-3 minutes, the study states that the driveway of 120 feet is enough for the Day Care drop-off or pick-up and that the queue will not extend to Mill Street. However, a recent study conducted by Chazen at a day-care

facility revealed that the average time required for drop-offs was 6 minutes and for pick-ups was 11 minutes. This is a significant difference in times from Maser's experience and will impact the number of vehicles queued within the driveway aisle. Maser should provide data to support their queuing findings.

b. Given the longer drop-off and pick-up times, it can be expected that the queue of vehicles for the Day Care will block use of the parking spaces on the east side of the driveway.
c. The striped drop-off zone is essentially in the parking aisle, and in Chazen's opinion, creates and unsafe condition with children entering and exiting vehicles and it should be removed.
d. Excluding the striped drop-off zone, two spaces are assigned for the Day Care use with a 15-minute restriction. Based on the shared parking demand analysis, the parking demand for the entire site is 130 spaces during peak periods with only 66 spaces provided on-site. Therefore, it is likely that no other spaces will be available on-site for Day Care pick-up and drops-offs as stated in the study and users of the Day Care will have to find other places to park off-site. Although there are "No Parking" restrictions on Catharine Street and Mill Street, parent's may be tempted to park on these roads. It does not appear that the site can adequately accommodate the parking demands of the Day Care center without impacting the adjoining street network.

We would be pleased to discuss these comments at the Board's next meeting. In the meantime, please do not hesitate to contact me with any comments or questions.

Sincerely,

Stuart F. Mesinger, AICP
Vice President, Land Development

THE CITY OF POUGHKEEPSIE

DEPARTMENT OF PUBLIC WORKS & ENGINEERING

SITE PLAN REVIEW
Form #2

1.	Date:	December 1, 2020
2.	Name of Site Plan:	Wallace Campus
3.	Address or Location:	Main, Catherine and Mill Street
4.	Owner:	Wallace Campus Managers, LLC
5.	Engineer/ Architect:	LRC Group

6. Yes ☐ No ☐ The site plan as forwarded by the Planning Department is acceptable and will be signed off on with no condition(s).

7. Yes ☐ No ☐ The site plan as forwarded by the Planning Department is acceptable and has been signed off on with no condition(s).

8. Yes ☒ No ☐ The applicant should be notified that the Dept. of Public Works/Engineering requires the following comment(s) be addressed:

1. Please confirm that existing 331 Main Street and 14 Catharine Street share a water service and indicate in engineering report. Verify water services are adequate for fire suppression where appropriate.
2. New services larger than 2" require a tapping sleeve, right open tapping valve and right open curb valve. Show and label these proposed features for Catharine Street water tap and service on UT-1. Show trenches for new water and sewer services as hatched and sawcut.
3. Submit SWPPP for review. (We acknowledge this will be included in a forthcoming submission).
4. As-built information is to be provided to Engineering Department. Upon approval of the site plan, the approved site plan with signatures shall be provided in PDF format. Upon completion of construction, as-built drawings shall be provided to the City Engineering in AutoCAD format.
5. Indicate on Site Plan all sidewalks and curbs that are cracked and / or deteriorated along Church Street that are potential for pedestrian trip hazards are to be repaired to NYSDOT standards. Show these locations as hatched on Site Plan for all sidewalks, curbs and driveway aprons to be replaced. Include note on site plan indicating any curbs or sidewalks within City or NYSDOT ROW damaged by construction shall be replaced per City or NYSDOT standards as appropriate. The applicant shall obtain proper work permits from the NYSDOT and/or City of Poughkeepsie DPW.

302 Mill St:

1. Show location of roof drains on plan. Verify roof leaders are not connected to sanitary sewer.
2. Indicate if existing water and sewer services are sufficient for alterations. If new services are required show complete from building to main. All utility connections through the street must be delineated, hatched and edges shown as sawcut if required.

306 Mill St:

1. Show location of roof drains on plan. Verify roof leaders are not connected to sanitary sewer.
2. Indicate if existing water and sewer services are sufficient for alterations. If new services are required show complete from building to main. All utility connections through the street must be delineated, hatched and edges shown as sawcut if required.

Joseph A. Chenier, CPESC, CPMSM
Assistant Civil Engineer

COUNTY OF DUTCHESS

DEPARTMENT OF PLANNING AND DEVELOPMENT

July 30, 2020

To: Planning Board, City of Poughkeepsie
Re: Referral 20-166, Wallace Campus Site Plan
Parcels: 6162-77-114098 / 109079 / 109077 / 112116 / 116114 / 121116 and 6162-78-127091 / 128813, Main Street and US44/NY55 (Mill Street)

The Dutchess County Department of Planning and Development has reviewed the submitted referral for countywide and intermunicipal impacts as outlined in General Municipal Law (Article 12B, §239-l/m).

ACTION

The applicant is requesting site plan approval for the following:

- Restoration of the former Wallace Department Store building on Main Street, to contain a mix of non-residential and multi-family residential uses;
- Construction of a 7-story building on Main Street adjacent to the Wallace building (involving the demolition of three existing buildings) to contain non-residential and multi-family residential uses;
- Construction of a 7-story addition to the Wallace building along the Catharine Street frontage, to contain a daycare and multi-family residential;
- 220 units of affordable rental housing (in the Wallace building and new construction);
- 6,800 square feet of ground-floor commercial on Main Street (in the Wallace building and new construction), as well as a climbing gym and fitness center;
- A privately-owned public greenspace, and reconfiguration of parking and circulation patterns, in the interior of the block.

COMMENTS

In 2019, the City of Poughkeepsie adopted the Poughkeepsie Innovation District (PID) zoning "to implement the principles and overall objectives established in the Poughkeepsie Innovation District – Policy Framework (PID-PF)." The Wallace Campus project represents the largest test of the PID to date and could be precedent-setting in how future projects come to fruition. To that end, it is critical the City carefully evaluate this project to ensure it not only upholds but celebrates the vision the City has for the future of its historic downtown.

Upon careful review of the proposed project in the context of the PID Policy Framework and associated zoning regulations, we have numerous concerns:

Buildings Heights in Conflict with PID-HC Zoning

Portions of the proposed project associated with 319 Main Street and the parcels fronting on Mill Street are in the Urban Village subdistrict (PID-UV), while the remainder of the project is located in the Historic Core subdistrict (PID-HC). The maximum building height permitted in the Historic Core is five stories. As per §19-3.37(9)(a), height bonuses are only available for projects located in the PID-UV and PID-CC subdistricts, not in the PID-HC subdistrict. As such, the entire 7-story building proposed along Catharine Street, and a majority of the 7-story building proposed adjacent to the Wallace building on Main Street, are taller than allowed by code and not eligible for height bonuses. The Policy Framework, which provides the ideological foundation for the

PID zoning, is very clear about the importance of maintaining the historic form and "preservation of Main Street's historic character." As such, the 7-story building heights do not appear to conform to either the letter or intent of the PID zoning.

Demolition of Existing Main Street Buildings

Tearing down existing buildings that contribute to the overall character of the HC subdistrict should be an alternative of last resort, yet the applicant is proposing to demolish three buildings along Main Street to make room for the 7-story structure proposed adjacent to the Wallace building. The Policy Framework clearly states that the PID zoning should "facilitate the *adaptive reuse of underutilized commercial buildings* while incentivizing high-density mixed-use development *on vacant land* [emphases added]." The applicant asserts these three buildings are "blighted," but vacant and blighted are not the same thing. They all appear to be in decent shape and are not detracting from the streetscape, and the structure at 319 Main underwent extensive renovations about a decade ago to make it more compatible with the historic context along Main Street. Given the history of urban renewal in Poughkeepsie, the loss of three existing Main Street buildings, of varying styles but all worthy of adaptive reuse, sets an unsettling precedent for the application of the PID zoning.

Proposed Architecture Conflicts with Zoning

The Historic Core subdistrict objective outlined in §19-3.37(4)(a) states, in part, that "preservation of historic architecture is encouraged when possible, and *new development should complement the existing character of the corridor* [emphasis added]." In addition, §19-3.37(10)(c)(3) requires that "new construction and rehabilitation in the PID-HC...shall reflect the traditional architecture of Main Street in building and roof forms, window proportions, materials, colors and details." The proposed project involves the demolition of three existing buildings along Main Street and the construction of two oversized new structures of a style that does not appear to reflect the traditional architecture of the historic downtown. In fact, immediately adjacent to the proposed project along Main Street is a group of eight Italianate buildings, listed on the National Register of Historic Places as *Main Mall Row*. To quote the documentation on file with the National Register, "The Main Mall Row, one block east of Market Street, is the most architecturally significant group of commercial structures extant on Main Street and in the City of Poughkeepsie." Given the proximity of these and other historic buildings, any project developed in the vicinity should conform to the directive in the zoning code that new buildings complement and reflect, rather than compete with, the traditional architecture and historic character of the subdistrict. In addition, we note the following specific concerns regarding the new buildings:

Proposed New Building on Main Street:

- The ground floor storefront entrances are not located along Main Street but instead have been placed on the sides of the building, about 25' back from the Main Street sidewalk on the west and east façades. None of the permitted frontages outlined in §19-3.37(10)(b) allow for store entrances to be located as such, and §19-3.37(10)(c)(2) requires "the principal pedestrian entrances to shopfront buildings within the PID-HC Subdistrict shall be directly connected to the sidewalk." In addition, §19-3.37(10)(c)(1) requires "the main entrance for buildings in all subdistricts be located on the front façade...and the maximum distance between ground floor entrances shall be 50 feet." As designed, the shopfront entrances are located on the sides of the building and at least 100 feet apart.
- Rather than build right up to the side yard lot line as is commonplace in this section of Main Street, this building has been designed to functionally look like a standalone structure, which breaks up the street wall and interrupts the predominant historic form in the area. As per §19-3.37(8)-Table 3.37-2, the maximum side yard setback is 0' in the HC subdistrict and 10' in the UV subdistrict, so the setback along the east side does not meet code, and portions along the west side exceed the maximum as well.
- §19-3.37(10)(c)(7) requires buildings to have "roofs with articulated parapets and cornices. Parapets shall be a minimum of 42 inches high..." The building design does not appear to meet this requirement.

- There appears to be an open tunnel running east/west through the ground floor of the building, about two-thirds of the way back toward the interior of the block. What is the purpose of this tunnel, , and how will public safety concerns be addressed?
- The black-to-white color gradient treatment covering the north façade, along with the proposed terracotta rain screens covering most of the lower 5 stories on the south façade, do not appear to reflect the historic architecture of the HC subdistrict, as required by §19-3.37(4)(a) and §19-3.37(10)(c)(3).

Proposed New Building on Catharine Street:

- The ground-floor façade does not appear to meet the frontage requirements as per §19-3.37(10)(b), nor the building entrance requirements of §19-3.37(10)(c)(1). There is one residents-only entrance, and no active interaction with the public realm. The daycare entrance is located around to the back. Also, it is not clear if the requirement in §19-3.37(7)(c) limiting street-facing ground floor space to non-residential uses in the PID-HC has been met.
- §19-3.37(10)(c)(7) requires buildings to have "roofs with articulated parapets and cornices. Parapets shall be a minimum of 42 inches high..." The building design does not appear to meet this requirement.
- Why is the sidewalk adjacent to the north side of the building gated at the east and west ends?
- The bright yellow-to-orange color gradient treatment covering the west façade, along with the proposed terracotta rain screens covering most of the lower 5 stories on the east façade, do not appear to reflect the historic architecture of the HC subdistrict, as required by §19-3.37(4)(a) and §19-3.37(10)(c)(3).

100% Affordable Housing

The Policy Framework discusses housing affordability at length, touching on the need to develop inclusionary housing policies to make it "easier for developers to *include a wider mix of price points* for both sales and rental properties" and to "advance an optional inclusionary housing program in which developers are granted approval for a significantly greater amount of development in exchange for providing on-site affordable housing *as part of their project*" [emphases added]. Building on the Policy Framework, the zoning includes a density incentive, via the height bonuses mentioned above, for the development of affordable housing in the PID-UV and PID-CC subdistricts only. Those incentives require a minimum of 10%–20% affordable units. The applicant is proposing to build a 100% affordable project, but the general agreement amongst affordable housing experts is that it's best to create mixed-income developments whenever possible, and especially in a project of this size. Concentrating a large number of affordable units together can result in a stigma being associated with the development, whereas sensitively incorporating affordable and market-rate units within the same development allows the affordable units to blend in and become part of the larger neighborhood. Has the applicant investigated the idea of providing both affordable and market-rate units in this project?

Privately-Owned Public Greenspace

The project includes a privately-owned, publicly accessible greenspace located in the interior of the block. While the inclusion of such an amenity has potential, we have numerous concerns. Although the proposed greenspace is slated to be accessible to the public (during daylight hours only), its isolation within the interior of the block and surrounded by residential units will work against its ability to attract the general public – people may not "feel" welcome even if they technically are. In order to lock the greenspace after dark, the entire area will be fenced and users funneled through a limited number of access points, including a single gate along the entire length of the fence on the north side. The fencing and gates eliminate the opportunity for natural paths of travel through the space, and will emphasize the private nature of the greenspace and make it less comfortable for the public's use.

Other concerns include the amphitheater, which is dug down below grade and faces the exposed basement and rear-facing residential units of the new Main Street building. The disparate nature of a public performance space juxtaposed against private residential space could lead to a lack of use, and an unused amphitheater is worse than no amphitheater. And while we applaud the idea of having a contest for local students to design the greenspace, we suggest the contest could inform the design but that the final program and layout be done by a professional who understands the realities of park design and the particulars of how people use and move through space.

Other Items of Concern

Wallace Building Storefront – The architectural rendering of the former Wallace Department Store shows two building entrances along Main Street. Are these to be the commercial storefronts? We understand the applicant is working with New York's State Historic Preservation Office (SHPO) regarding the return of this façade to its more recent Art Moderne period, but are concerned about the diminutive approach applied to these entrances. The visual prominence of the storefront entrances should be sensitively enhanced so they contribute to a more vibrant, lively streetfront.

Lighting –Lighting levels throughout the site are much higher than necessary and will result in unwanted glare and light pollution. A lower, more even level of lighting ranging from 0.1-1 footcandle will provide comfortable lighting for both pedestrian and vehicular safety. In addition, fixtures should have a color temperature between 2,700K-3,000K; anything higher can result in a harsh, unpleasant glare. The number, arrangement and/or type of fixtures may need to be adjusted to achieve a lower, more even level of lighting site-wide.

Parking Lot Landscaping – It does not appear that the proposed landscaping for the interior parking lot meets the requirements as outlined in §19-3.37(13)(g).

RECOMMENDATION

For the reasons stated above, we recommend the Board not grant the requested site plan approval until the following conditions have been met:

1. An alternative is provided that does not involve demolition of any existing Main Street buildings;
2. The building heights are reduced to no higher than 5 stories, in compliance with the zoning;
3. The architecture is modified, particularly the "building and roof forms, window proportions, materials, colors and details," to sensitively complement and reflect the historic architecture of the PID-HC subdistrict, in compliance with the zoning;
4. The building details, such as the entrances, frontages and setbacks, comply with the zoning.

Voting and Reporting Requirements: If the Board acts contrary to our recommendation, the law requires that it do so by a majority plus one of the full membership of the Board and that it notify us of the reasons for its decision.

Re: Support for Wallace Campus Project

Dear Board Members:

My husband (John Watson) and I (Deirdra "Jen" Brown) write in support of the Wallace Campus ("WC") Development. John and I are property tax paying homeowners who live in downtown Poughkeepsie just blocks from the planned demolition and construction. I have been a resident of Poughkeepsie for twelve years, John has been here for more than forty-five years.

We have reviewed the WC planning board submissions, attended Planning Board and WC informational meetings and consulted with other members of the community regarding this project and **we are of the firm belief that the benefits of the proposed development far outweigh the perceived costs.**

The project, in both the demolition and construction phases, will pull from the local workforce and use locally sourced building material, creating jobs and stimulating the economy. The proposed design is stunningly beautiful while simultaneously adhering to the context of the neighborhood's current architecture. The planned green space, market place and Promenade can only enhance our lovely city as it creates space for engagement with our neighbors and community building activities.

Finally, and most importantly, we endorse WC's commitment to provide deeply **affordable and supported housing units.** This commitment is consistent with our Mayor's expressed commitment to "celebrate the beauty and richness of the diverse peoples of our great City," and to ***"mindfully cultivate a communal spirit of amity toward one another across lines of race, ethnicity, and religion . . . every day."***[1] In the past, cities across the U.S. have used planning and zoning board decisions to separate the wealthy from the poor, the black from the white, the "us" from the "them," to the detriment of our entire community. The

[11] Mayoral Proclamation 14 June 2020

highspeed arterial separating North from South Poughkeepsie is a legacy of such policies that not only perpetuates residential segregation but impedes the economic and spiritual growth of our *entire city*. Several commentators at your meetings used the term **"Market Rate Units."** This phrase is a *dogwhistle for separation;* for what could possibly motivate a desire to impose 'market rates' on a private developmer other than a desire to create a residential climate that will draw in the money moving north from New York City, and exclude from the Poughkeepsie Innovation Zone people they wrongfully view as undesirable.

Do not let those voices prevail. We have an opportunity to get this right. To build a community animated by our diversity and our unity. Such communities benefit everyone.

With kind regards, we remain

Very truly yours,

John Watson and John D. Watson

Re: Wallace Campus

January 7, 2022

Page 1 of 8—Laurie Sandow comments to City of Poughkeepsie Planning Board
re: Wallace Campus

I will preface my comments by saying that nobody but nobody, whether rich or poor, seeks to find themselves in housing that is not affordable. By federal standards, that means a household paying no more than 30% (or in some documents, 35%) of gross income on housing costs, including rent/mortgage payment, insurance, utilities, taxes, and maintenance. Despite this, when the general public hears "affordable", they are more than likely to react with thought along the lines of, "Oh, affordable housing? That's housing for the unwashed masses."

Affordable housing was of so little importance or consequence to City Planner Natalie Quinn that when she wrote the code for the "Innovation District", affordable housing was only included as an incentive, and not as an obligation. The comments and objections I voiced to that Innovation District proposal at the time of its public hearing are included further below in this letter, beginning on page 5.

And so we find ourselves today with an ever-growing number of "market rate"—i.e. projects affordable to only a select population—being approved by the City of Poughkeepsie Planning Board throughout the Innovation District, coupled with the simultaneous destruction of existing affordable housing in the very same District. As an example, I give you Baxter's purchase and conversion of Luckey Platt, where affordable housing was destroyed, and existing tenants who had been living in affordable apartments were driven out through construction that violated their warranty of habitability, and through new leases at rates that equaled only UN-affordable housing.

I have asked, more than once, that City Administrator Marc Nelson introduce property registration, so that first responders and others will have correct addresses and contact information if/when the need arises. Such registration would also document the number of single-, two-family, and multi-family of properties; the number of properties that are not locally owned, not owner-occupied, and/or fraudulently claimed to be owner-occupied. I've also requested annual Rental Property Income and Expense (RPIE) reporting, such as exists, for example, in New York City, so that this documented information can act as reference, and its data can be applied in various departments.

Similarly, I have asked, more than once, that Ms. Quinn produce a "heat map" of City of Poughkeepsie purchases, conversions, and parties behind the various LLCs purchasing and registering these parcels. Such an analysis, study and/or map has certainly never been released to the public. It is not known whether it has ever been produced behind closed doors. The refusal to do so has always been explained away as "one cannot control the free market", as if data collection would control the market. But as a consequence, applications are ushered through the Planning Board and other City agencies—the Common Council included—with each agency effectively wearing blinders. Projects seek approval, and even rezoning, and are considered as if each application exists in a vacuum and silo, entirely unrelated to a project and/or application that might be just a minute's walk away; entirely unrelated to the net effect of multiple project approvals; or even the projects and populations on just the other side of a certain zoning or district boundary.

And, in stark contrast to all the current approvals for market rate developments, and because of the incentive-only, and still-absent obligation in Innovation District zoning for affordable housing, we have the Wallace Campus proposal for one large, clustered, segregated "affordable" development, that would reserve slightly more than one-sixth of its units for supportive housing.

I believe the current developers are absolutely sincere in their commitment and desire to provide affordable housing. It's unlikely, of course, that intention was shared by Eric Anderson when he began accumulating all these parcels. Anderson continues to lurk in the background of the Wallace Campus development, in ways that are entirely unknown and opaque to the general public.

At the December 21, 2021, Planning Board meeting, I read this short quote from the movie "It's a Wonderful Life", where George Bailey said:
"Just remember this, Mr. Potter, that this rabble you're talking about…they do most of the working and living and dying in this community. Well, is it too much to have them work and pay and live and die in a couple of decent rooms and a bath? Anyway, my father didn't think so. People were human beings to him, but to you, a warped, frustrated old man, they're cattle. Well in my book, my father died a much richer man than you'll ever be!"

That quote has deep meaning to me. I absolutely believe in the necessity of providing, creating and/or preserving affordable housing. I believe that working people at all financial rungs; that people who've worked their whole lives and who now live on fixed incomes; and that people who've experienced illnesses, hard times and tragedies that have set them back on their heels, all these people and more deserve quality, affordable housing. So it pains me to object to this development as currently proposed because there are so many unanswered questions, and/or consequences that can be seen, known and already manifested today on Main Street, and at locations and developments, like the MHA/HRH/Dutchess County homeless pods, and the HRH Fallkill Commons.

Regarding Wallace Campus unanswered questions—for example, there are 30 studio units set aside as supportive housing which, by law, can be occupied by just one person. The income range to qualify for those units? Up to $35,850/yr. The subsidy, grants and/or other funding streams going to the developer and/or MHA for those units?—unknown. The criteria for selection in those units?—unknown. The number of veterans repeatedly featured on developer slides that will be selected for these supportive housing units?—unknown. The community opinion of the quality of MHA services?—widely differing opinions among different city ethnicities and demographics. Additionally, if occupants were not categorized as qualifying for supportive housing, the same income of $35,850/yr. would qualify them to apply for occupancy in 1- and even 2-bedroom units.

The terms of the leases for any unit?—unknown. Adjustments to leases and rents if/when vacancies?—unknown. The Property Management company?—still unknown. The problems that Main St. business owners can document, and that they are already encountering on a daily basis?—dismissed by MHA. The claims that this development will bring customers to these Main Street businesses?—unsubstantiated, and not supported through any increase in customer base currently being brought to these businesses by tenants in such developments as the revised Luckey Platt. On the contrary, should someone undertake a study, it is far more likely that City of Poughkeepsie residents will be reflected in the increase of business traffic, not at City locations, but at such Town of Poughkeepsie locations as Hudson Heritage and Eastdale.

The Planning Board's attention to any of these questions? Sadly, just as the Board has set its comment deadline prior to public's opportunity to hear and consider the variances that Wallace Campus developers will be bringing to the Tuesday, January 12, 2022, meeting of the Zoning Board of Appeals, this Board is almost certain to be instructed by Senior Planner and Acting Development Director Natalie Quinn that the public's questions, answers, and concerns are not relevant to the Planning Board's decision-making regarding the Wallace Campus.

I close by including the comments I first made at the Innovation District special meeting of February 11, 2019:

I am here today, as I am at most of the City's public comment periods. And I am wondering why I'm here, since it has become increasingly clear that public hearings and public comments in this City are staged for little purpose other than window dressing, And, also, that we have a situation leading up to tonight's meeting where councilmembers claim to have consulted one person, or one committee or another, behind closed doors, but have never asked their questions or had them answered out in public, enlightening the public, and creating a permanent public record.

Regarding tonight's vote on the Innovation District, I am unalterably opposed to the Ordinance as written—that is, if I actually knew what was written, because the final language of the Ordinance was not posted to the City's website or the Special Meeting notice. Once again, as is the City's habit, the public is deprived of the opportunity to comment knowledgeably because necessary documents have been withheld from them. So I will rely on an earlier draft, that I had to hunt for, and which was filled with typographical errors and incorrect section references, but which otherwise is unlikely to have been changed.

While tonight's Ordinance pretends to represent "best practices," and unlike the 2017-2018 Pace Land Use draft framework, it creates a District that does not include any guarantees of affordable commercial space, of affordable housing, of continuing open space, community space, or parkland. In fact, it codifies the exact opposite.

So much for lip service. What affordable housing is actually being retained? Is there a person on this Council who can point out existing affordable housing anywhere on the Innovation District map?

Making matters worse, the only other appearance of the word "affordable" anywhere else in the Ordinance is in a section offering Bonus Heights in only two of the four District subdivisions, for developments that include 10% or 20% or more of their total units as affordable housing, and where "affordable" is based on County AMI (Area Median Income) which is already two times City AMI. But that differential is actually irrelevant, because the gap between the amount a building is expected to produce from rents and the amount developers will need to pay lenders and investors is almost certain to mean that property owners will never take advantage of these bonus heights in exchange for affordable units. Tonight's Ordinance contains not one word of protection for a single one of this City's challenged populations—from service workers to seniors. I assure you, if affordable housing is not guaranteed in the Ordinance, it's not going to trickle down in the District.

"(9) Special Dimensional Standards

(a) Bonus Heights. **In order to encourage better design, sustainable land use, and inclusive development, an incentive of additional stories as described below is offered to applicants of housing developments in PID-UV and PID-CC subdistricts if their buildings incorporate anyone of the following features. Maximum cumulative bonuses shall not exceed 3 stories.**

1. Affordable Housing.

i. Three (3) additional stories may be added to the maximum permitted building height for developments that include 20% or more of the total units as affordable housing. 50% of the affordable units shall be priced to be affordable at 60-80% of Dutchess County AMI and 50% of the affordable units shall be priced to be affordable at 80% - 100% of Dutchess County AMI. - 3 additional stories.

ii. Two (2) additional stories may be added to the maximum permitted building height for developments that include more than 10% of units as affordable housing with 50% of the affordable units priced to be affordable at 60-80% of Dutchess County AMI and 50% of the affordable units priced to be affordable at 80% - 100% of Dutchess County AMI. - 2 additional stories."

Unlike the 2017-2018 Pace Land Use draft framework, nowhere in the Ordinance is there mention of an inclusionary housing mandate where new developments would include a certain percentage of on-site affordable units. Unlike the Pace Land Use draft framework, nowhere in the Ordinance is there a provision for enduring affordable commercial spaces that will support and retain locally owned businesses. And while the Ordinance also pays lip service to the creative economy, the District map already shows that economy pushed to the outskirts, in the subdistrict named the "Creative Edge".

According to the Ordinance, permanent parks and outdoor recreational spaces are specifically excluded from the Historic Core:

(7) Permitted Uses.

(d) Parks & Programming. **Permanent parks and outdoor recreational spaces are permitted as-of-right in all subdistricts, subject to design standards outlined in §193.37(I2)(d), with the exception of the PID-HC Subdistrict. The exclusion of parkland from the Historic Core Subdistrict is intended to encourage a consistent street wall and maximize the efficiency of land use within the commercial corridor.**

How can Poughkeepsie City planners be so uninformed about the value of parks in the urban landscape? Have they never been to places like New York City, where parks like Bryant Park, Union Square and Madison Square are in high demand, and generate tremendous revenue?

With this Ordinance, you can say goodbye to Mural Square, which the City named "square"—not "park"—long ago so that they wouldn't have to alienate it before selling it to a developer. Goodbye to Christmas Tree lighting, to public celebrations on Main Street, to the potential of pop-up restaurants, markets, and outdoor lunches. With this Ordinance, pedestrian plazas and parks will be permitted only in the subdistricts called the Urban Village, and the Civic Corridor.

The property owners on Main Street, in this so-called Innovation District are largely absentee landlords. They are the very ones who've kept downtown blighted and their properties vacant for the past many years. A change in name won't change their stripes, nor will it cause them to straighten up and fly right. In fact, it will do the opposite, delivering benefits in exchange for the harm they've been doing. And the councilmembers who vote in favor of tonight's Ordinance will be willing partners in that.

To add to the drama of backroom deals, it's pure comedy that last Monday—the same night the Exempts got their liquor license back—Councilmember Petsas walked into the Council meeting an hour late and three sheets to the wind, complaining about dictatorships and demanding that the Innovation District vote be added to the agenda. His own Council reign was a study in dictatorship and flipping the bird to the public. And need I point out that he and the other sponsors of tonight's Ordinance, are the very same Councilmembers who regularly block public access and comment on their social media accounts, practicing NOT democracy, but their own ongoing policies of censorship, propaganda and fake news.

Quinn, Natalie

To: Quinn, Natalie
Subject: Wallace Campus Comment

Good morning,
My name is Diamond Mima. I am a lifelong resident of the City of Poughkeepsie. I am also a mom of two daughters.
For the last 5 Years I have served my community as an activist, advocate an organizer for affordable, quality, permanent housing.
In my time of serving the community, I have come to know a great need for housing across all incomes, demographics and backgrounds of City of Poughkeepsie residents, including myself.
The city is indeed in a housing crisis. Currently less than 2.6% of unoccupied housing is available. There is also a backlog of eviction court dates not only for the City of Poughkeepsie but for the entire Dutchess County.
I believe our community will benefit greatly from the proposed Wallace campus project. As you know the project will provide 186 affordable housing units in over 14,000 square feet of commercial space, as well as half an acre of open Green Space.
For far too long, downtown Poughkeepsie has been underutilized, forgotten and passed by. A generation or so ago, downtown Poughkeepsie was the Regions, Center of economic and social activity. It is our duty to recreate a downtown that helps everyone in the city. We must invest in the people of the City of Poughkeepsie. I believe wholeheartedly that this project encompasses that.
The Wallace project will Revitalize the area with new commercial space and Green Space and is a major investment for the downtown area of Main Street.
As a City of Poughkeepsie resident and as your neighbor, I compel you to see not only the affordable housing it will bring but the hope that this development can bring to the entire city.
I fully support the new proposed development and ask that you, our planning board, approve this project.

Highest Regards,
Diamond Marie Mima
22 Balding Avenue, Poughkeepsie

Quinn, Natalie

To: Quinn, Natalie
Subject: Wallace Campus Support- I. Benitez

Good Morning,
My name is Isis Benitez and I am a current resident in the City of Poughkeepsie as well as working in the City of Poughkeepsie. Housing has always been an issue here in this City. I have grown up here and have seen so many people struggle to keep a roof over their heads let alone their families heads. I have seen people be evicted due to unforeseen circumstances. It has been both appalling and disheartening.

After hearing about the Wallace Campus building project, I assure you that this is much needed. I have never seen affordable housing in the City of Poughkeepsie and see this as a win. The City of Poughkeepsie holds the minority majority, black and brown people. People of color have always had a history of not being able to afford much compared to our white counterparts. To see that this City is now becoming gentrified and be dismayed by it is an understatement. There should be no reason as to why black and brown folks and folks of color in general are being pushed out of this city.

Affordable housing is long overdue. There was not much knowledge shared throughout the City of Poughkeepsie about the Wallace Campus Project, for reasons I cannot understand. This affordable housing project has to happen, it is needed, and the City needs to prioritize it being built. As someone who is up and coming and trying to find my own places to live, I cannot even think about trying to afford an apartment here. A lot of the people I grew up with and moved away cannot think about coming back to live here considering the high increase in rent.

Don't let the racist ties to the City of Poughkeepsie blind you from allowing this affordable housing project to be built. Vote in support and approval of the project, in support of this community!

In Community,
-Isis Benitez

Subject: Wallace Project

Dear Natalie,

I'm a newly-returned Poughkeepsie Resident and I'm excited to see the new developments in City of Poughkeepsie. Particularly, I am very excited about the potential Wallace Campus restoration project. I want to express my support. I am happy to see quality affordable housing being built, especially since folks most in need of affordable housing are the folks who would benefit most from living in space where walking here and there is easy. This project is likely to become a generator of economic growth as it makes it easier for new residents to get to and from Main Street stores.

It is also exciting to see a public performance/community space being built on Main Street as this will create a broader sense of cohesive community.

The only aspect of the plan that I am disappointed (or confused?) about - is that there is a fence or barrier around the public space. I am not in favor of fencing in the community space - if it is community space it should be open. In inquiring of the developers, it seems this was done at the behest of the planning board. I hope the planning board reconsiders. As the developers noted, the Police Department does not anticipate trouble with the space if it is left open and accessible.

In every other way - I think this is a thoughtful project that will be great for City of Poughkeepsie. I urge the planning board to go forward with it!

Sincerely,
Tamara Bond-Williams
Poughkeepsie resident

Subject: Wallace Campus Public Comment

To the City of Poughkeepsie Planning Board:

I write to you to implore your approval of the Wallace Campus site plan. It is apparent that the plan is beyond architecturally sound, and it additionally provides a needed and proper influx of affordable housing that exceeds habitability, a condition many of our residents are left without, through genuinely dignified standards of living.

I am grateful the planning board has made this a stringent process, demonstrating their commitment to this city and its residents. The developers' willingness to commit the time and financial resources toward compliance with the board's demands have led to a plan that not only meets zoning, building, and land use statute, but one that is successful in dialogue with the detail and massing of the project's neighbors. Both parties have executed their duties in these regards to the fullest.

As to the component of affordability, it is fortuitous that this vote occurs the day after Martin Luther King, Jr. Day. Affordable housing on this scale will leave a significant number of our community members with greater means that will serve to bolster their savings and disposable income; it moves beyond ending the indignity and humiliation of living in substandard conditions to the realm of ending poverty, which was a critical component to King's moral and political philosophy. In his book *All Labor Has Dignity*, King states that "northern ghettos are the prisons of forgotten men." It is our moral and civic duty to be cognizant of our neighbors who continue to live in such conditions and to act on this awareness by abolishing Poughkeepsie's ghettos. The Wallace Campus represents to many a necessary step in this abolition.

While there are innumerable reasons this site plan must be approved, having read and listened to comments and deliberations, it seems a moment needs to be taken to address the reasons a person appointed to represent this city cannot in good conscience vote against this site plan.

Among these reasons is that the crux of the debate has very clearly been about affordable and supportive housing and the people who occupy it, not just anecdotally, but from an evidentiary standpoint- the words and actions surrounding this debate are recorded. What's within a planning board's legal purview in NYS when reviewing site plans is to ensure compliance with zoning, building, and land use statute, all of which this site plan complies with. It is not within a planning board's legal purview to reject a site plan on the grounds of potential residents' income or disabilities, and if rejected the evidence in a resulting civil suit as having done such would be beyond preponderance. Voting against site plan approval would signal a public representative's willingness to deliberately step outside the bounds of law for private interests, the definition of corruption, and place the burden of the resulting civil action, which is inevitable given the developers' abundant financial resources, on the shoulders of the city's taxpayers.

Legal liability aside, government appointees have a moral responsibility to those they represent. Heeding comments of outspoken members of the public that express discriminatory views of those among us with low income and/or disabilities, often with racist undertones, would be unconscionable, as would yielding to one's own personal biases and prejudices. That these factors are already represented in comments and deliberations assigns an element of immorality to this process that will be in and of itself difficult for this community to recover from.

The rationale to approve this site plan stacks immeasurably higher than any legitimate grounds for rejection, and as such I and many other residents fully expect all planning board members to attend this session and unanimously approve this site plan.

Sincerely,

Brian Robinson

Subject: Wallace Campus

As a person involved in many issues of equity in the City of Poughkeepsie and as mother of a son with a disability who currently lives in the city of Poughkeepsie, I wish to strongly advocate for the Wallace Campus project. THe lack of affordable housing even as market priced rentals proliferate is a real threat to the people who currently call Poughkeepsie home as well as to those of middle and lower income who cannot afford to rent in the city.

My son who has Down Syndrome has been residing in his own apartment in the city of Poughkeepsie since 2000, However, as he gets older, his needs are growing. I speak for him and many more individuals with disabilities who would benefit greatly from support services as they strive to live independent and productive lives in the City of Poughkeepsie. As resources from other agencies become more and more stressed, an opportunity such as the Wallace Campus becomes all the more important. Please support this project and approve its continuation.

Natalie Quinn
City of Poughkeepsie
Planning Board

Subject: Wallace Campus Project - Thank You

Natalie,

I had a chance to watch the Webcast of the 12/21/21 Planning Board meeting and public comments on the Wallace Project. I think it has come a long way forward since the initial submission, and I am now much less negative about the project than I was a few months ago. I remain a bit skeptical, based primarily on history. I like the changes that have evolved in the site plan. The building and property look much better than what was initially proposed, thanks to the work of the Planning Board reviews and the public comment.

The explanation of how "supportive housing" will be implemented sounds good. Just please keep in mind the number of questions that were answered by MHA with "we don't believe" or "I don't believe", or "we believe". What was explained was positive and appropriate, but I remain skeptical to a degree, mainly because when this was initially discussed many months ago the developer described it as "some units reserved for individuals in need of services" and the developer did not appear to have any idea what that actually meant at that time.

Given everything going on in Dutchess and Ulster Counties I remain fearful that the City of Poughkeepsie is growing as a dumping ground for individuals unwanted by other municipalities. My comments about urine and feces on Main Street were rapidly brushed off in the December 21 meeting, which I assume means that the speaker (from MHA) had his own special interests in mind or is unaware of current business conditions on Main Street. I hope the Planning Board keeps this in mind going forward, as we don't need more developments contributing to our current conditions. In the last few months we have seen closure of Zhane's Palette, the Great Studio, and the Queen City 15 gallery, with closure of the Barrett Art Center soon to follow, with none of these closures being driven by COVID.

While I am a strong supporter of affordable housing and well-implemented supportive housing, I stand firm in my belief that we need a balanced housing strategy supporting both market rate and affordable housing, with new developments having a mixture of both - which the Wallace Project does not. If I recall correctly "The RIP" was very unbalanced from the beginning, market rate

apartments could not be rented, and look at what it rapidly became. Recent trends of successful high density housing are greatly overweighted with market rate apartments, e.g. 50%+.

While I am less negative about the project at this time I still have concerns:

1. A founding argument of the Wallace Campus project is that we as a City need affordable housing. Implicit in this statement is a claim that this project will make a difference for our City. Given this, the preferential selection of residents for affordable housing in the project should be absolute, limited to City of Poughkeepsie residents. If we have such a need, as claimed, an inability of the developer to fill the project with City of Poughkeepsie residents should be a burden carried by the developer, as a result of business decisions by the developer to build affordable housing using public funds. Housing needs by Rhinebeck, Red Hook, Kingston, and other municipalities should be satisfied within those municipalities, and we should not participate in forced displacement of people from their communities due to a lack of affordable housing in those municipalities.
2. The residency requirements should also applied to the supportive housing component of the project, with City of Poughkeepsie residency being an absolute requirement. MHA supports multiple counties in our region and should not be allowed to "refer" or "transfer" people from outside the City of Poughkeepsie to this development, claiming some type of "business need" later, akin to what Kingston Health Alliance is currently doing. If they can't meet the numbers, then there isn't a need, and it should be the developers problem.
3. Numerous agreements and understandings have been discussed in the Planning Board meetings, some of which are described in the project documents while some are merely recorded in the meeting minutes and public comment responses. I think it is important that we all understand how long term oversight of these agreements will be monitored going forward, that the agreements are in writing, that the City of Poughkeepsie and the funding agencies are aware of them, and that proper oversight takes place. As what lawyers will always tell you, if it isn't in the contract you can't cry foul later. This project has the potential of good benefit to our City, with equal potential for long term economic damage.

I found the discussion about the Innovation District and role of the creative community in our future to be quite informative. The notion of not having a "north star" in the meeting webcast about 1:28 in, is precisely the problem I believe we have, and the lack of any type of vision of what our City should become in the future has far-reaching implications.

Subject: City of Poughkeepsie Planning Board Meeting statement

Dear Ms. Quinn,

I missed some of the presentation and I am a new homeowner in the city of PK.
Some of the public comments that I heard at this hearing claimed that the rates of housing undermine market rate housing.
I was a renter in Brooklyn, NY for 20 years, so I have a good idea about Brooklyn market rates, which are some of the highest in the country.

Now I live on a block that is currently 90% owned by a single management company that through local monopoly has set rates very comparable Brooklyn apartments.

When folks are priced out of their rent they turn to crime to supplement their income. This project potentially could remedy the way that working class have been squeezed by the market during this pandemic.

As a community we should not prioritize economic development at the expense of human development. There are qualitative markers that are more important return on this investment.

Natalie Quinn
City of Poughkeepsie
Planning Board

Subject: Planning Board 12/21/2021 Meeting re: Wallace Campus Project

Natalie,

The Wallace Campus project is apparently slated for an approval vote at the Planning Board meeting tonight. Every time I read the latest revisions to their application I see a new set of questions that are avoided or unanswered. Unfortunately I will be unable to participate so I am sending you my latest set of questions and concerns, updated from my previous email:

1. The Maintenance Plan appendix mentions Site Maintenance within the campus, but does not describe any maintenance and cleanup that will be performed on sidewalks and streets around the Wallace Campus. Given the nature of some of the residents it can be expected that around gathering points and locations where drug sales will occur there will be cleanup necessary on a daily basis. Who is required to perform the cleanup?
2. What will the process be to request that the Wallace Campus management company send someone to clean urine and feces off of storefronts when one of their residents makes a mess? Will there be financial compensation?
3. What will the process be to get compensation for business loss or failure due to existence of the Wallace Campus or its residents? We will lose at least 3 Main Street businesses this month, with another closing soon after the new year. With several of these the closures have cited problems with the homeless in the Main Street corridor. And now apparently 40 Cannon / REVEL32 are up for sale. Is this how we revitalize our City?
4. The revised plan shows a new relationship with MHA, with services in the building. Will MHA perform services ONLY for the residents, or will this Main Street site now be the location of the new Psychiatric Center for Dutchess and Ulster Counties? With the total closure of Health Alliance in Kingston of mental health and addiction treatment services and the proposed expansion of Ulster County homeless and treatment centers in the City of Poughkeepsie, we are growing into a low or no-income center for the Hudson Valley. Is this what we want? Is the Wallace Campus just another step in lowering the AMI of the City of Poughkeepsie?

5. The revised plan makes no reference to addiction treatment services, so will those also be provided by MHA? ONLY for the residents?
6. Given that addiction and psychiatric services have been discontinued by Health Alliance in Kingston are referring all patients to Poughkeepsie, will the Wallace Campus now be an attraction for Ulster County as well as Dutchess County? FYI I called Health Alliance and asked for addiction treatment and they gave me the phone number for Poughkeepsie. I know that a patient was referred to Poughkeepsie (WMC) and was treated and then shown the door when the program ended, dumping the person here with no way home.
7. In the responses to the November 16 questions there is a claim that the City of Poughkeepsie has demonstrated a need for more affordable housing. I would like to see that demonstration - I just keep hearing the claim with no supporting facts. Recent affordable housing developments in our City have been populated primarily by people from outside the City of Poughkeepsie, so what proof do we have that this project will have any impact at all on affordable housing needs within our City? How will this be measured, and will a performance bond be required to ensure that the benefits are actually to individuals within our own community?
8. Dutchess County has a need for affordable housing, 28 of the 32 municipalities in our County have not built any, and many of those municipalities refuse to provide affordable housing and refuse to provide shelters for the homeless. What can be done to stop the flow of additional individuals into the City of Poughkeepsie in need of housing, mental health treatment, and addiction treatment? How can Dutchess County continue to cut services around the County to save money, then reduce taxes, and then claim they can't afford to expand help to those in need within the communities in which the services are needed?

Contrary to what has been stated in previous Planning Board meetings the Planning Board is responsible for determination of the "appropriateness" of proposed projects, and Planning Board members should not be told to support a project out of fear of developer lawsuits - filing lawsuits is a normal course of action and built in to the cost of doing business for developers, and it is why we have Corporation Counsel. I have heard this rumor going around and feel that Planning Board members should be cautioned about such threats.

Poughkeepsie, NY 12601

Re: Wallace Campus site plan application (PB#2020-010)

Dear Chairman Levine:

I am submitting this letter on behalf of my client, Nobus Group LP, the owner of two properties directly across the street from the proposed project. Please include this letter in the Record for the Wallace Campus site plan application—PB#2020-010.

1. **This project presents one or more potential adverse environmental impacts necessitating an Environmental Impact Statement (EIS).**

   To find that an EIS is not required the Lead Agency ***must*** find that there are ***no*** adverse environmental impacts or that the environmental impacts will not be significant. *See* 6 NYCRR 617.7(a)(2). To the contrary, a Lead Agency ***must prepare an EIS*** when one or more potential adverse environmental ***impacts may exist***. *See* 6 NYCRR 617.7(a)(1). "Because the operative word triggering the requirement of an EIS is `may', there is a relatively ***low threshold for the preparation of an EIS.***" *Silvercup Studios v. Pwr. Auth. St. of N.Y*, 285 A.D.2d 598, 600 (N.Y. App. Div. 2001) *quoting In re Omni Partners*, 237 A.D.2d 440, 442 (N.Y. App. Div. 1997) (citations omitted) *emphasis added.*

   The Applicant has not presented any facts that rebut the presumption that an EIS is required. To the contrary, the public has presented many potential adverse environmental impacts that may result from this project necessitating the need for an EIS. Public comment has surely shown the litany of potential adverse environmental impacts that may exist

The Planning Board has not taken a hard look at multiple areas of environmental concern, including existing patterns of population concentration, distribution, or growth and existing community or neighborhood character. *See* 6 NYCRR. 617.2 (l).

a. *Population displacement* - the resulting displacement of neighborhood residents and businesses caused by a proposed action is an environmental impact within the purview of SEQRA. *Chinese Staff & Workers Ass'n v. City of New York*, 68 N.Y.2d 359 (N.Y. 1986). Many businesses and commercial property owners have spoken publicly about the resulting difficulty they will have attracting commercial tenants, and prospective patrons of commercial properties, if the Wallace Campus is approved.

   As such, an EIS is required to determine whether Wallace will indeed result in displacing businesses at or near the proposed site.

b. *Population Concentration* - the impact of increasing the concentration of subsidized housing in the City is particularly important as Poughkeepsie has approximately two-thirds[1] of Dutchess County's subsidized housing, and yet is home to only 10%[2] of the County's population.

   An EIS is needed to understand whether this project contributes to the clustering of subsidized housing and whether that contribution to clustering has negative environmental impact that should be mitigated.

c. *Financial Health* - The impact this project will have on the City's financial health has not been discussed. Financial health will affect existing patterns of population as it directly correlates with the City's ability to finance public works and infrastructure.

   Moody's explicitly stated the City of Poughkeepsie's bond rating would decrease if there were a decline in average wealth of City residents.[3]

[1] See 2020 Dutchess County Rental Housing Survey to calculate this number. http://dutchessny.gov/Departments/Planning/docs/2020-Rental-Housing-Survey-Report.pdf

[2] Dutchess County Population ~294,000 (https://www.census.gov/quickfacts/fact/table/dutchesscountynewyork/PST045219); Poughkeepsie Population ~30K (https://www.census.gov/quickfacts/fact/table/poughkeepsiecitynewyork/PST045219)

[3] See Exhibit 1.

This project has the potential to realize that negative impact and make it increasingly difficult for the City to finance important public works.

An EIS is needed to understand the impact this project will have on City financial health.

d. *Overbuilding Low-Income Housing in Poughkeepsie Is Not Working* - Poughkeepsie's economy has been struggling for a long time, and there is no empirical evidence showing that low income or affordable housing has helped economic development. Approximately 19%[4] of City residents live in poverty, this is almost double the national average (10.5%). Additionally, as defined by Dutchess County, poverty is concentrated in the City of Poughkeepsie.[5] Although there are some studies that suggest (or show) low income or affordable housing can drive economic development, this is, empirically, not the case for Poughkeepsie.

   An EIS is needed to determine whether this project contributes to the overbuilding of low-income housing and whether that contribution to overbuilding has a negative environmental impact that should be mitigated.

e. *Impact on Parking* -The parking study relied on by the Planning Board and the applicant was never adopted by the Common Council. There has been insufficient discussion or analysis on this issue. The Wallace proposal calls for a project where 187+ people will live; but is short 87+ parking spots.

   As there may be an adverse parking impact, An EIS is required to determine if such impacts can be mitigated.

f. *Project Scale* - This project is huge. Its scale in the context of the small City of Poughkeepsie necessitates the preparation of an EIS.

[4] https://www.towncharts.com/New-York/Economy/Poughkeepsie-city-NY-Economy-data.html

[5] Per Dutchess County, poverty is concentrated in a region when the poverty rate in that region is 10% higher than the County average. 2020-2024 Dutchess County and City of Poughkeepsie Consolidated Plan at page 94 https://cityofpoughkeepsie.com/wp-content/files/commdev/ConPlan_FinalDraft_7_2_21.pdf. Poverty in the County is 8.6% (https://www.census.gov/quickfacts/fact/table/dutchesscountynewyork/PST045219/). Poverty in the City is greater than 19%. Therefore poverty is concentrated in the City.

2. Ms. Anne Saylor has a conflict of interest by being on the Planning Board

Ms. Saylor's is the Deputy Commissioner of Housing with Dutchess County. Ms. Saylor's role with Dutchess County is to execute the County's strategy on homelessness, transitional housing, and affordable housing. See **Exhibit 2** for an official description of Ms. Saylor's role as Deputy Commissioner for Housing with Dutchess County. The County's strategy is to "centralize" (or concentrate) poverty and welfare-oriented services, including housing in the City of Poughkeepsie. *See* **Exhibit 4** which outlines the Dutchess County's strategy to "centralize" or concentrate[6] welfare-oriented services in Poughkeepsie[7]). This strategy, which is supported and implemented by Ms.Saylor, likely conflicts with the City's best interest because concentrating poverty and welfare-oriented services erodes the tax base, lowers the quality of public services and/or increases the cost of providing the same.

Given that the proposed Wallace Campus project is a low-income housing development, providing supportive and transitional housing and associated services, this project appears well aligned with the County's strategy of concentrating poverty and welfare-oriented facilities/services in the City. However, as the County's strategy may conflict with the best interest of the City, a conflict of interest is present having Ms. Saylor make a decision on this project. Certainly, at a minimum, there is the perception in the public's mind that a conflict of interest is present. Therefore, we believe the participation of Ms. Saylor – an employee of Dutchess County who will be supporting this project to advance the County's interest – in a decision making role on this project raises a conflict of interest.

3. The applicant's funding partner Leviticus Fund's other Poughkeepsie investments have been public safety failures.

Leviticus Fund is an investor in the Poughkeepsie Underwear Factory (PUF) and transitional housing on Rose St—Falkill Commons. PUF's pocket park is littered with drug dealing, drug use and prostitution. Rose Street has a relatively high amount of crime. Both areas have become public safety concerns.[8] More diligence needs to be done to ensure the long-term impacts of the Wallace

[6] The County has concentrated these services including low-income housing in the City of Poughkeepsie.
[7] As approximately two-thirds of Dutchess County's subsidized housing is located in the City of Poughkeepsie, the strategy of Dutchess County is clear - concentrate subsidized housing in the City of Poughkeepsie.
[8] See compilation of Police blotter attached as **Exhibit 5**

project are not a detriment to the City. The point here is that projects like the Wallace project do not have a history of turning around a neighborhood for the better.

4. **There are involved agencies other than those listed in the application.**

   These agencies include:

   a. NYS Attorney General (AG) -

      The AG's opinion as to Civil Rights violations related to concentrating poverty and welfare-oriented facilities in a City comprised largely of individuals from protected classes. This concentration drains resources on a community with a high concentration of individuals from protected classes and contributes to illegal segregation.[9]

   b. City of Poughkeepsie School District -

      To advise on whether the School District can afford to support new students, and whether a PILOT agreement is in the School District's best interest.

5. **This project conflicts with the City's current comprehensive planning efforts.**

   This project is massive and if approved the City will have to plan around it, rather than plan according to the will of the people[10]. The City residents through their elected officials (the Common Council) should have their voices heard in approving a comprehensive plan.

   As comprehensive planning is underway, it would be arbitrary and capricious to approve this project without considering the forthcoming comprehensive plan.

[9] https://www.nytimes.com/2017/07/02/us/federal-housing-assistance-urban-racial-divides.html
[10] The Common Council's approval of the comprehensive plan represents the will of the people who elected them.

Further this project, and housing policy generally, has significant impacts on the City's economy which is closely linked to the comprehensive plan. As explained in the Newburgh Housing Study conducted by Dwarka Consulting, and sponsored by Leviticus Fund, housing policy must be connected to economic development policy. Newburgh has similar size, demographics, and economy as Poughkeepsie and is within the same HUD Area Median Family Income Region as Poughkeepsie. As such, the Newburgh study is particularly relevant to Poughkeepsie. For Newburgh, Dwarka/Leviticus found:

> *The housing needs assessment revealed the importance of linking housing policy reform with broader economic development and neighborhood revitalization initiatives. While housing cost burdens are driven in part by rising rental costs and property tax burdens, relatively low-income levels and multi-generational poverty have made it difficult for many residents to pay market rents or build wealth through homeownership. The absence of a coordinated strategy aimed at increase tax revenue from commercial development places an increased burden on residential property owners and makes homeownership more elusive for long-time renters. Advancing strategies for redeveloping Newburgh's underutilized commercial properties and devising new pathways toward affordable homeownership could help improve the vitality of the City's neighborhoods while also strengthening residents' shared sense of community, inclusion, and opportunity.*[11]

Therefore, the Wallace project conflicts with the comprehensive planning efforts, especially because there is no link to economic development.

Additionally, the Wallace proposal contains nothing but conclusory statements when referencing how this project relates to economic development—a significant deficiency considering Dwarka/Leviticus' findings.

6. The PID is an illegal Municipal Theme District.

A Municipal Theme District is an area of not less than ten square acres that is designated by a county, city, town or village and formed for the purpose of

[11] https://leviticusfund.org/wp-content/uploads/2021/06/Working-Paper-I_Newburgh-Housing-Needs-Assessment.pdf at page 46

promoting, advancing or coordinating an approved theme—art, entertainment, education, culture or business. *See* N.Y. Gen. Mun. Law § 990-b & 990-c. A lawful municipal theme district is administered by a board that is appointed by the body which designated the district. *See* N.Y. Gen. Mun. Law § 990-f.

The Poughkeepsie Innovation District (the "PID") was formed for an approved municipal theme enumerated in N.Y. Gen. Mun. Law § 990-c, i.e. to promote business as shown by City Code Section 19-3.37(1). The purpose of the PID is to revitalize the City's historic Central Business District. *Id.* However, the PID, among other deficiencies, is not administered by a board which was designated by the body that created the district. *See* N.Y. Gen. Mun. Law § 990-f. Therefore, among other deficiencies, the PID is an illegal Municipal Theme District.

7. The Wallace Site Plan Application improperly combines two or more applications.

The Planning Board's Site Plan Application form asks for the proposed project's "zoning district."[12] "District" as written in the site plan application is singular. Therefore, pursuant to the Planning Department's procedure, a procedurally compliant site plan application can only comprise a single zoning district.

The Wallace proposal spans two zoning districts, the PID Urban Village (PID-UV) and the PID Historic Core (PID-HC). Both the PID-UV and PID-HC have different land use restrictions that are violated by the Wallace proposal. Therefore, this site plan application if approved as a single application violates lawful procedure.

8. Zoning restrictions for the Historic Core and Urban Village both apply to the entire project.

As this is a single proposal, comprising multiple parcels from separate zoning districts, the most restrictive zoning covenants of each zoning district should apply to the entire proposal. Pocket parks are prohibited in the PID. Since the Wallace proposal calls for a pocket park, this proposal is not permitted.

9. Other Impropriety Associated with this application.

The Applicant's funding partner Leviticus Fund is representing Wallace as if the project has already been approved and built. *See* **Exhibit 3**, a screen shot taken

[12] See Site Plan Application, Page 1 Paragraph VI.

from Leviticus Fund's website on 7/5/21. This raises questions as to whether the Planning Board and the Applicant have predetermined the project's approval without following lawful procedure.

10. The Wallace proposal conflicts with the Poughkeepsie Innovation District policy.

The PID code incentivizes mixed income development where 50% of the affordable units are priced to be affordable at 60%-80% AMI, and the remaining 50% of affordable units are priced to be affordable at 80%-100% AMI. *See* Poughkeepsie Cit Code §19-3.37(9)(a)(1).

Wallace's proposed affordability pricing is so far from that which is incentivized by the PID zoning code, that Wallace's proposal conflicts with the PID policy.

Respectfully,

Jeff Feigelson

Rating Action: Moody's assigns Ba1 to Poughkeepsie, NY's GO bonds; outlook stable

09 Mar 2021

New York, March 09, 2021 -- Moody's Investors Service has assigned a Ba1 rating to the City of Poughkeepsie, NY's $5.2 million Public Improvement Refunding Bonds, 2021. Moody's maintains the Ba1 on the city's issuer and GOLT ratings. The outlook remains stable.

The issuer rating is equivalent to the city's hypothetical general obligation unlimited tax (GOULT) rating; there is no debt associated with the GOULT security.

RATINGS RATIONALE

The Ba1 issuer rating reflects the city's weak financial position. Although the city has made material strides in improving its operations and governance, its financial position remains weak as the negative fund balance position accumulated in previous years is still being dealt with. Favorably, the city is continuing to take action to run operating surpluses which are being used to reduce that deficit. Management's endeavors are aided by a recent uptick in development which is causing tax base, and revenue expansion.

The ongoing pandemic has had only a modest impact on the city. While sales taxes took a large hit before rebounding, the city's conservative budgeting and stable property taxes have largely blunted the financial impact of the pandemic.

We consider the outstanding debt to be GOLT because of limitations under New York State (Aa2 stable) law on property tax levy increases. The absence of distinction between the GOLT rating and the Issuer rating reflects the town council's ability to override the property tax cap and the faith and credit pledge in support of debt service.

RATING OUTLOOK

The stable outlook reflects our expectations that, despite ongoing improvements, it will take continued effort to restore financial health.

FACTORS THAT COULD LEAD TO AN UPGRADE OF THE RATING

-Significant and sustained improvement in reserves and liquidity

-Material tax base growth

-Improved resident wealth and income

FACTORS THAT COULD LEAD TO A DOWNGRADE OF THE RATING

-Reversion to structural imbalance

-Declines in the tax base or resident wealth and income

LEGAL SECURITY

Debt service on the bonds and notes is secured by the City's faith and credit supported by its pledge to levy ad valorem property taxes to pay debt service as limited by New York State's Property Tax Cap-Legislation (Chapter 97 (Part A) of the Laws of the State of New York, 2011).

USE OF PROCEEDS

Proceeds from the bonds will be used to refund all or a portion of the Public Improvement (Serial) Bonds, Series 2009A and Public Improvement (Serial) Bonds, Series 2020 for interest savings.

Description of Ms. Saylor's role with Dutchess County.

projects.

- **Creation of a Deputy Commissioner for Housing**, who will focus on addressing our community's challenges regarding affordable housing and homelessness issues. Anne Saylor, the Department of Planning and Development's current Community Development Administrator, will assume this role and lead the County's efforts to find solutions to address the transitional housing needs and appropriate support services, which will allow individuals to move to and maintain permanent housing and independent living.

Exhibit 3

Screenshot of Leviticus Fund's project map, showing Wallace Campus.

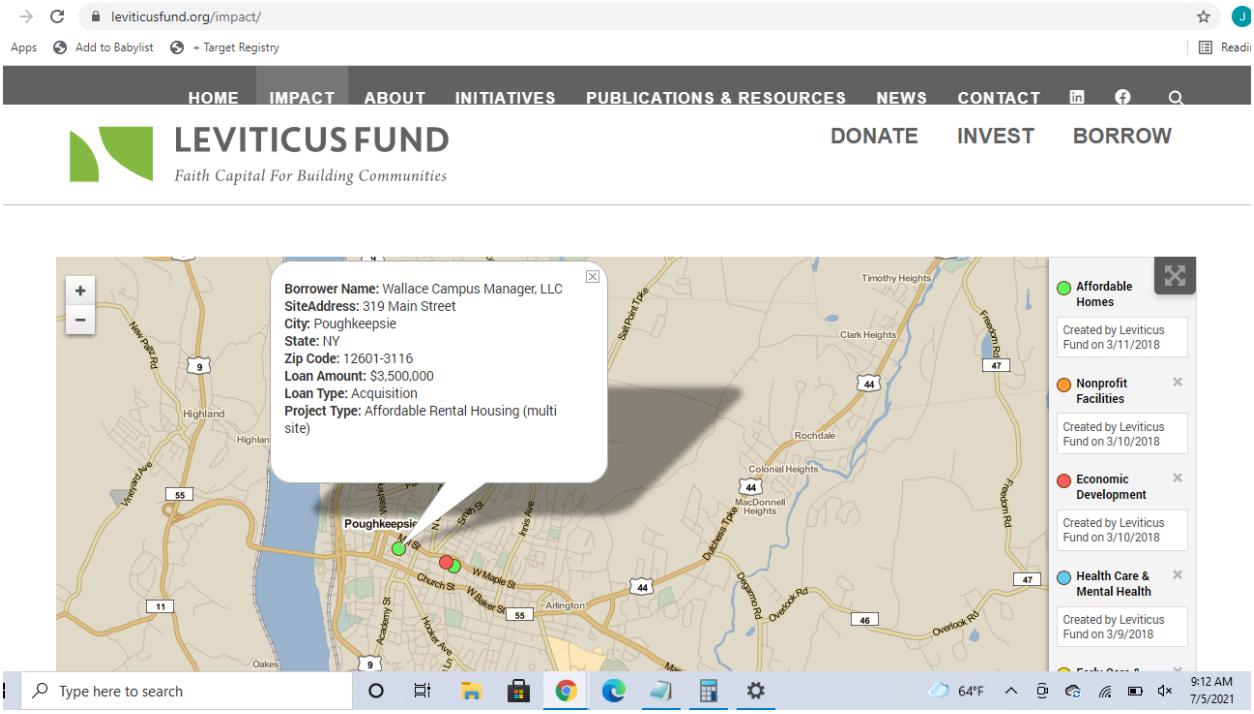

Exhibit 4

Excerpt from page 33 of Dutchess County Adopted 2021 Budget available at: https://www.dutchessny.gov/Departments/Budget/Docs/2021-Adopted-Budget-Document.pdf

Throughout 2019, an interdisciplinary team of housing service providers and officials from Dutchess County and local governments met to reimagine and reinvigorate how we address homelessness. This team identified areas of concern, including the increasing length of stay for those in shelters; cost and inefficiency of placing individuals and families in local motels; lack of diverse housing options; and difficulty in providing services to a dispersed homeless population.

To address these concerns, we will take four bold steps to reduce the homeless population, provide more effective transitional housing, and increase the availability of affordable housing:

1. Establishing a one-stop contact center for households facing eviction. This would be the first step towards a more comprehensive system to centralize our established housing services to provide information and support to those searching for affordable housing, help access available financial assistance, and connect with financial planning and legal services to prevent evictions.
2. Engaging local hospitals and state-run correctional facilities, to ensure appropriate re-entry planning before the release of patients or incarcerated individuals.
3. Reducing reliance on costly motels for providing temporary housing by developing new centralized emergency and transitional housing solutions.
4. Increasing access to affordable housing by working with local municipalities to add zoning language and land use policy to expand rental and housing options; engaging builders to earmark market- and submarket-rate housing as part of larger projects; and training local municipal, planning, and zoning board members on what affordable housing is and why it's important.

Subject: Planning Board Meeting: Wallace Campus Plants Idea

Hi Natalie,

Last week, my husband Kyle and I attended an outreach meeting where I asked if it was possible to consider utilizing local nurseries specializing in New York native plants to promote sustainability and pollinators to fill the green space at Wallace Campus.

Since Monarchs migrate through the Hudson Valley, this could potentially become a Certified Monarch Waystation. A butterfly garden could provide beautiful summer and fall blooms along with educational sessions utilizing the space to teach the public about plants and butterflies!

My two suggestions are Catskill Native Nursery in Kerhonkson, NY or Rosedale Nurseries in Hawthorne, NY. Both supply Northeast native plants. Where typical turf grass can require added water, fertilizer and frequent mowing, native plants require less maintenance and are self-sustaining once rooted. Both nurseries are able to advise on best plant options for the sunlight, soil conditions and space available.

Let me know if there's anything to know for tomorrow or if I can bring this up as a topic.
Looking forward to the meeting!
Sincerely,
Carmella

Poughkeepsie, NY 12601

Re: Wallace Campus

December 20, 2021

Dear Ms. Quinn and Members of the Planning Board:

As the Chair of the City of Poughkeepsie Common Council, I am writing to express support for the demolition, conversion and new construction at 319, 325, 327-329 and 331 Main Street in Poughkeepsie, New York. The proposed project will provide 186 affordable housing units and over 14,000 square feet of commercial space, as well as open green space accessible from Main Street ("Wallace Campus").

I believe that the Wallace Campus's affordable and supportive housing will benefit the City's residents. The City of Poughkeepsie's comprehensive plan community engagement process has indicated that lack of affordable housing is at the forefront of people's worries. By approving 186 units of affordable housing, the Planning Board will help secure the City's future. Additionally, the project's new commercial space will activate Main Street and enliven a commercial corridor located in the Poughkeepsie Innovation District.

I support the new proposed development and hope that the Planning Board approves the project.

Sincerely,

Sarah Salem
Councilmember At-Large
City of Poughkeepsie Common Council

November 11, 2021

Re: Wallace Campus Public Hearing, October 19, 2021, relevant to the upcoming meeting November 16, 2021

To: The City or Poughkeepsie Planning Board & Developers of the Wallace Campus Project

While I appreciate your efforts at these public hearings to create the best project possible for the City, nevertheless this project in its current state has failed to adequately address the following key issues:

Supportive Housing – Not appropriate for a downtown business district trying to rejuvenate

While the developer appears to continually include supportive housing units, it rarely is, if ever mentioned in this development. Why is this the case? Why does it appear that any discussion of this issue is hidden or avoided?

The logic of establishing a home base for people in need of mental health and treatment services right in the heart of our Downtown, our struggling Central Business District, does not make any sense when the City is attempting to attract new businesses, people who will spend money at retail establishments and wish to frequent fun and interesting restaurants and other business types.

This is not a case of NIMBY, this is a case of common sense

This project establishes a home base for a population that has a variety of issues including substance abuse who will be surrounded by attractive-nuisances catering to their urges.

Right next door to Wallace is a bodega which specializes in cheap beer, tobacco and unhealthy foods, while 50 yards across the street is a liquor store, our number one attractive nuisance for reasons obvious to us property/business owners. Will we just see this existing problem expand further?

Wallace Green Concept – The Realities of Poughkeepsie – How will it be managed?

Given the failure to police the other Downtown Poughkeepsie parks & recreational areas, it needs to be fully thought through and investigated how the Green is going to be utilized, managed, and maintained. What will prevent it from becoming another Poughkeepsie "Needle Park?" Without a carefully thought out plan, different from what has been tried before, it will be similar to all the other public spaces along the Main Street corridor. A review of the call records from the police, fire, and emergency medical services proves this out. One thing I did not see in the renderings were any trees to help create a welcoming natural streetscape & shade. Wallace ison the sunny side of the street where trees would thrive.

For many years I worked with your 1st ward representative to have trees planted in order to help soften the landscape, as many businesses owners complained about the detrimental effect of strong sunlight reflecting off their windows. This effort never came to fruition, leaving businesses frustrated and disappointed that the north side of the street, which is in constant shade, happens to be fully tree lined, yet theirs remains barren. This is your opportunity to change that.

Poughkeepsie A Failed History of Public Amenities -Murphy Park – Liberty Street Planter

All our Main St. parks/accessible open spaces have been shuttered, or have had seating areas removed. The population of homeless, loiterers, and substance abusers which really needs tender loving care, need be administered to yet they should not receive assistance on the sidewalks of our city, in the heart of our business district. Take a look at Murphy Park, right in front of the Poughkeepsie underwear factory. This once promising park has now been fully enclosed by chain-link fence to prevent access by anyone. Many businesses once located in PUF have left for greener pastures.

The city used to have a beautiful mature tree and raised-bed planter at Liberty Street, which the administration saw fit to remove -not because of the plan to remake the parking area: it was determined to be the best solution for dealing with substance-abusing drug addled loitering population who insist on soothing themselves with a variety of substances. Numerous calls to Police have resulted in Narcan being administered, while the majority drunkenly act-out, leaving copious amounts of empty liquor bottles throughout the corridor and on every inch of Main Street. Did I fail to mention public defecation, urination, & illicit sexual activities?

Prolonged Demolition and Construction Process

The prolonged demolition and construction process is going to have a damaging effect on the existing businesses, many which are already struggling to survive. It will also severely exacerbate the already difficult traffic/parking/loading situation.

Failure to embrace Historic Preservation

I find it very disappointing that you still choose to tear down three perfectly functional buildings which, though modified and refaced, are now part of the historic fabric of our existing streetscape. They are our familiar streetscape and have been for some time.

If you look at cities such as Boston Savannah GA,and Dublin Ireland, you're not allowed to just destroy a building's facade, you must preserve it. They support preserving historic facades while constructing modern buildings behind them. Feel free to consult with your colleagues at the Boston Planning & Development Agency, formerly known as the http://www.bostonplans.org/ Boston Redevelopment Authority. Yes, the facades at 319-325-329 have been muddled, but there is photographic evidence of what used to exist and can be remade.

There are plenty of examples of Main Street buildings which have been restored to present their facades and storefronts with relative historical accuracy, along with building envelopes rehabbed and brought up to current standards of energy efficiency and safety. Look no further than the two properties you face: 328 and 330 Main Street. They've been restored as such and hold a place on the local historic register, also making a rather prominent appearance in one of your streetscape renderings.

November 16, 2021

Dear Natalie,

After our conversations and interviews, I'm well aware how supportive you are of the Wallace Campus Project. I am conflicted about the scope of the work the long-term upheaval of the blocks and surrounding areas. I am skeptical about the project actually being completed at all, although certain it will commence, no matter the cost.

What perplexes me is how one justifies our initial conversations regarding the Poughkeepsie Innovation District. I thought it was important to you, Mayor Rolison and the city to improve the Main Street Business Corridor for actual businesses. The Wallace Campus Project leans heavily on a high percentage of subsidized units in order to secure the highest financial incentives for the developer. Folks of all levels of financial means deserve to have access to affordable housing, but why does it have to be in this stretch of Main Street? How will this possibly attract new businesses that aren't barber shops, hair and nail salons, cell phone stores, bodegas, or smoke shops?

With a seemingly imminent approval for the WCP on the horizon, is there any example of another downtown business that has managed to grow and thrive while creating more subsidized and supportive housing? Will anything improve? When will the ongoing problems that happen daily be addressed? Drunks, addicts, sex workers and dealers work out in the open. Parking is a disaster, street sanitation is non-existent, and a lack of police presence keep people away. As much as I adore my new business and the customers who have been so supportive, I hesitate to make any long-term commitment to staying at its current location.

I used to feel the City of Poughkeepsie had potential. I have to say I am not feeling at all optimistic. I have lived here for over four decades. At the time, the Main Mall was a wonderful place. It was vibrant and bustling with activity, not an empty storefront in sight. Nothing would bring me more joy than being proven wrong. I just don't see it happening.

Subject: Planning board comments

Owning a shop on Main Street has given me a particular vantage point for the wallace campus that I don't think many people have. If we are going to use our "innovation business district " as a place where we are now housing hundreds and hundreds of people, some whom have serious mental health issues, then I think we need to come to terms with the fact that having a downtown business district with a thriving downtown I not in the cards. I am all for supportive housing but in the only one or two intact blocks that we have left of our Main Street? , I can't believe this is the only place that this could happen. And if that is the case I think we should all be OK with businesses leaving this district and going someplace else and just write off our business district for the decades to come. The only businesses that will be able to thrive will be beauty supply, smoke shops and convenient stores. And all of that is fine as long as everyone understands that that is the choice that is being made. I believe in Poughkeepsie! I believe that housing is a human right, but I don't believe putting people most at risk for drug and alcohol addiction in the very place that it is most easily found is a good choice.

Thank you very much for all you do.

Sincerely, Kari Rieser

Ms. Judith Knauss
City of Poughkeepsie Zoning Administrator
62 Civic Center Plaza
Poughkeepsie, NY 12601

Re: 317 Main Street Zoning

Dear Ms. Quinn & Knauss:

Our office has been retained to design interior alterations at 317 Main Street from office/business use on the second and third floors to residential use: four one bedroom units. There are several existing windows on the Easterly lot line on the second and third floors. Per my email inquiry to Judith for lot line window clarifications, I received a response regarding such in the zoning district as follows:

There are some zoning requirements in the PID relative to set-backs for new construction abutting lots with existing structures. These are outlined below.

- *Section 19-3.37(8)(f) provides that upper-story setbacks are utilized to reduce perceived building scale and height, ensuring a human-scaled urban form and sufficient access to light and air, while 19-3.37(8)(1) provides that upper-story setbacks on principal buildings adjacent to preexisting structures with wall openings shall be regulated by Section 19-3.23(4)(e).*

- *Section 19-3.24(4)(e) states:*
  Upper-story setbacks on principal buildings. In order to ensure that building height extensions or the construction of new principal buildings on infill lots do not create new nonconformities to preexisting adjacent structures with regard to wall openings and other requirements of the Uniform Fire Prevention and Building Code, or create functionally obsolete wall openings for the purposes of light and ventilation, or obstruct access of emergency service vehicles to upper floors of existing adjacent structures, the following setback requirements shall apply:
  [Added by Ord. No. O-15-06, 8-24-2015, § 1]
  1. *Where a height extension is proposed on an existing principal building, said extension shall be set back a minimum of five feet from any preexisting, legal exterior wall openings, such as windows, of an adjacent principal building located on an abutting lot.*
  2. *The construction of a new principal building on a lot that abuts a lot with a preexisting principal building with a side yard setback of zero is permitted to be constructed with a side yard setback of*

zero on the first floor. However, for all additional floors above the first floor, a setback of at least five feet shall be required from any existing exterior wall openings, such as windows, of the adjacent preexisting principal building. The setback shall be measured from the lot line.

We are aware that the Wallace Campus project is proposed adjacent to the easterly lot line of 317 Main Street and appears to be a multistory building on the lot line. If this is the case, the project would obstruct these easterly windows on 317 Main Street and be in non-conformance with the zoning law 19-3.24(e).

As the Wallace Campus project is open for public comment at the moment, we request a review of this condition by the planning board to confirm if it is in accordance with the law as currently designed.

Thank you,

Kimberly Ryan, RA
Senior Associate

City of Poughkeepsie Planning Board
62 Civic Center Plaza
Poughkeepsie, NY 12601

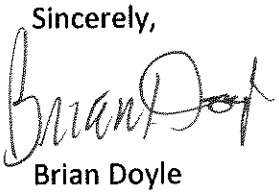
Re: Wallace Campus

Dear Mr. Levine,

As a follow up to our discussion regarding the proposed Wallace Campus, I am writing to provide my observations.

Certainly, the city of Poughkeepsie and the people here are in need of more in the way of affordable and decent housing. We have seen that rental rates have accelerated at a faster pace than people's income.

In particular, people in those lower wage jobs are struggling in this regard. I know this from my observations around many of the people to whom we provide services, as well as those lower-paid staff of Family Services. The aspiration to bring more affordable rental housing into the city of Poughkeepsie is laudable.



I am concerned, however, that affordable housing is best dispersed throughout the community so as to not create enclaves of people differentiated by their economic standing. An ideal model is one where development provides certain percentages of housing at market rate and within the same development provide housing that is affordable for working people with lower salaries as well as people who are experiencing poverty for whatever variety of reasons.

While Family Services is not in the "housing business", I do think that I've had the benefit of gaining certain perspectives around how best to have the City as one and not divided into districts differentiated by economic status.

I hope these observations are useful and I hope the developers of the Wallace Campus provide this type of integrated approach and then follow up with ensuring the supports that wrap around the housing that are so important for purposes of safety, upkeep and overall well-being of the tenants.

Thank you.

Sincerely,

Brian Doyle

Hi Natalie,

I tuned in for the planning board call on June 15th which included public comments on the Wallace Campus project. I did not have the opportunity to speak but wanted to share my support for the project. The proposed climbing gym is of particular interest to me as I am a huge climber and would love to see that amenity added to downtown Poughkeepsie. Moreover, the proposed operator of the gym (Chris Scott) is someone I think very highly of and have worked with in the past. He's a great fit for the gym and the community and is committed to making the project a success for all parties involved.

Thank you,
Cliff

Members of the City of Poughkeepsie Planning Board:

Hudson River Housing shares the below statement with regard to current projects before the Planning Board, in particular the Wallace Campus.

We believe in and stand by affordable housing as the critical foundation of thriving communities that provide opportunity for all. Our home is the foundation from which we all can achieve our full potential.

Yet most residents in Poughkeepsie are struggling to maintain this foundation, and were even before the onset of the COVID-19 pandemic.

- According to a 2019 profile of Poughkeepsie written by Hudson Valley Pattern for Progress
  - ⅔ of all housing units in Poughkeepsie are renter-occupied
  - Poughkeepsie median rents rose over 25% between 2000-2018
  - 58% of Poughkeepsie renters are cost burdened, meaning they spend more than 30% of their income towards housing costs
  - 38% of renters are severely cost-burdened, paying more than 50% of their income towards housing
- In 2020, the Poughkeepsie-Newburgh-Middletown HUD Metro Fair Market Rent Area was ranked the fourth most expensive area in New York, with an average 2-bedroom apartment rented at $1,397.

As a community, we must be willing to step up to the challenge of providing opportunity for all. That means housing people can afford, combined with all the tools people need to thrive.

As it reviews the projects before them, we urge the City to consider:

- That affordable housing is desperately needed in the community
- That projects of any kind require active and present management and an array of services and supports that help individuals and families access opportunity
- That residents are right to express their concerns about the scale and pace of development in the city - the agenda for this evening's meeting is testament to that. All the more reason for the city to prioritize affordable housing as a bedrock for any additional changes that may come.
- That when possible and appropriate, mixed-income projects are ideal in that they replicate on a smaller scale how healthy communities exist as a whole, including exposure to an array of different people and opportunities. They also reduce stigma by lessening the separation between "housing" and "affordable housing"
- That the number of people on the precipice of homelessness must be faced as a

a reality the city will eventually bear regardless, and investing in affordable housing is certainly the proactive choice.

We are aware that projects currently proposed are sometimes being compared unfavorably to some of Hudson River Housing's work. We acknowledge the challenges that make the task of providing a continuum of housing options in our community difficult. Community challenges such as substance abuse, mental health crises, and homelessness have been exacerbated by the combined blows of the pandemic and skyrocketing housing costs. The trauma caused by poverty, homelessness, underemployment, discrimiation - societal shortfalls - means that our community has a responsibility to wrap its arms around those who are suffering, even when - especially when - it is most difficult.

As we face the reality of these challenges, low-income and unhoused families, and those that are in service to them, should not become the victims of a narrative of fear and discrimination. This allows stigma to grow unchecked, and limits the ability of our community to meet our present and future with innovative, compassionate solutions.

We must be willing to create communities that meet the needs of all people. We urge the City of Poughkeepsie to stand in support of affordable housing as the critical foundation of thriving communities that provide opportunity for all.

Respectfully,

Christa Hines

Christa Hines
Executive Director

Memorandum

TO : Members of the City of Poughkeepsie Planning Board; Ms. N. Quinn, Director of Planning Department
FROM : Sheila Newman
49 Loockerman Ave, Poughkeepsie NY 12601
RE : File #2020-010
WALLACE CAMPUS: DEMOLITION, CONVERSION & NEW CONSTRUCTION

The proposal before the Planning Board for the former Wallace Department Store site is a totally inappropriate project for the Central Business District(CBD) of the City of Poughkeepsie. And, at the outset, I wish to concur whole heartedly with the 14 people who spoke at the public hearing of May 18, 2021. Each and every critique should be enough to recommend rejection of this unfortunate redevelopment. Just to mention a few speaks volumes. the subsidies that the City would take on as a multi-million dollar burden; the inappropriate architectural and economic and social vision of the developers; the clearly exploitive aspect of using federal funding for the upfront money in the project.

Our voices are speaking out against a proposal destroying opportunities for future development. We are asking this body to look to the future. The Planning Board will doom our City if it goes forward with a proposal based on such obsolete thinking. The distinguished urban planning scholar Richard Florida says it well. It will be "… **higher-amenity neighborhoods that (are) key to attracting new residents to live in central cities….** . **A 2013 study documented shifts to more mixed-use, vibrant, live-work downtowns in cities of all shapes and sizes that were happening a decade ago. "**

Poughkeepsie is beginning to move in the direction of a live-work downtown--think Lucky-Platt re-use-- that will be throttled by the housing that is proposed. Moreover, there is already a generous share of low-income housing already on or adjacent to our Main Street corridor. Professor Florida tells us different CBD housing will be the future of successful cities and instead of a narrow focus on retail, imagining a work life of the future and the interests and needs of younger residents are necessary.

Professor Florida gets the last word: We have a once-in-a-century opportunity to turn our business districts and our cities into something better, less divided, and more inclusive. Shame on us if we fail to grasp it.

May 20, 2021

Poughkeepsie Planning Board Members:

Due to time conflicts I was unable to attend your recent public comment session about the proposed Wallace project, or to submit written comments until now. I hope what I'm providing here can still be considered as part of the public comment record on this matter. My position is opposed to the Wallace proposal.

I am a longtime City of Poughkeepsie resident, and will briefly mention my significant interest in quality housing that is affordable for people across the income spectrum. I have volunteered in various capacities for Hudson River Housing, beginning more than a decade ago with some of the earliest activities of its Middle Main project for downtown Poughkeepsie, and as a board member of the agency since 2011. In 2020 I completed a Master's in Community Development Policy and Practice, and focused on housing issues in the 5th Ward of Poughkeepsie for my culminating capstone research project.

What stands out to me most about the Wallace project, is the combination of three factors: 1) *The significant proportion of tenants it intends to serve well under the area's Average Medium Income*, including a large number of people who require on-site mental health services, 2) *The large scale of apartments and related facilities it would create* (also public green space, child care center, recreation facility), 3) The proposal comes *from entities based outside our local area*.

I consider the first two factors to be crucial topics of discussion for both the City of Poughkeepsie and Dutchess County more broadly. The County's recently released housing survey certainly demonstrates the rising prices of housing in our area that are exceeding wage trends. It indicates that we actually need to be addressing this housing gap *on a scale far greater than the number of apartments that the Wallace project would provide*. And to accomplish this, we surely need private developers who are interested to advance such housing, because the combined resources of nonprofits such as Hudson River Housing alongside of local governments aren't enough to solve the scale of this housing shortage – we absolutely need partnership among private for-profits, private non-profits, and the government sector, in plans that bring the three together.

If only the entities proposing the Wallace project would have initially approached City and County planning officials. Or similarly, they had approached a trusted and fiscally prudent local development partner, whether a for-profit or non-profit. In this case, Hudson River Housing would be a good candidate, because it incorporates human services for residents into its various developments. From the get-go, a constructive dialogue could have been undertaken to thoroughly consider options that meet both the Wallace developers' need for profit, and the public's need for quality housing at the below market rates. All the more importantly, observations, suggestions, and feedback from City and County residents could have been built

into the development process from the very outset, insuring the relevance and impact of such an urgently needed housing effort.

Instead, the Wallace proposal is being forced upon our locale by entities from elsewhere, who have neither local interest nor knowledge guiding their efforts. The only motives they have shown are to devise a profitable project, including through significant reliance on public grant funds meant to enhance housing affordability and environmental cleanup. Their math skills and their enterprise are surely impressive; they have determined that a project under the guise of expanding rental opportunities below market rate, and using earmarked public funds to do so, will yield them a healthy profit.

Could the City of Poughkeepsie use a new and well-financed child care facility downtown, of the kind proposed by the Wallace developers? No doubt. The additional downtown green space that's part of the proposal also sounds promising, but its location and management will make a significant difference in whether this component is a net positive for residents and the City overall. Similarly, while a recreation facility that features a climbing wall sounds good on paper, it would be fundamentally better for local residents to have a voice in how such a badly needed rec investment would best serve the public good.

Even more importantly, the Wallace proposal undermines the need for a countywide solution to housing affordability. It plops its profit-seeking intentions into the City with no consideration of the larger area context. Instead, it will only worsen the disproportion of apartments in Dutchess County specified for below market rents that are located in the City of Poughkeepsie. Municipalities throughout the county have a responsibility to share in a balanced effort to provide for the health and happiness of all residents.

The Wallace project is the cautionary moment when the City of Poughkeepsie Planning Board must draw a proverbial "line in the sand" to reject what would be a bad outcome for the public, and for the future of the City. This is a pivotal occasion when we must insist on a thoughtful, thorough, and equitable process to meeting the public's housing need, which finds solutions by bringing together parties from throughout our county – including members of the public, elected officials, municipal managers, housing developers, investors, financial institutions, philanthropists, and human service organizations.

Thank you for carefully deliberating your decision on the Wallace proposal, and I look forward to your decision on this urgent matter.

Best regards,

Jeffrey Kosmacher

Hi Natalie,

Thank you for the quick reply. I have addressed my concerns with the police department, as we have had interaction with them over the past few weeks. We have shared stills and videos of ongoing activity. My thought process with Planning was that constraints on police, coupled with increased illicit activity, might have a bearing on future large scale concentration of housing in the city, and the ability to attract retail to support this housing. Lawlessness does not provide a nurturing living environment for any income level, nor entice retailers to risk their fortune and safety. Housing appears to be sprouting fast and furious, with a curious mix of market and nonmarket based units, amidst a decreasing police presence.

If my above concerns are redundant and are already under consideration by the board, I understand. Thank you for your consideration. I think we all have a difficult path in front of us. Please share my concerns with the Board.

Regards,

Kevin

Subject: RE: Public Comment 05-18-2021

Hi Kevin –

I believe comments regarding police assets and criminal activity would be better posed at a Common Council meeting rather than a Planning Board meeting. The Planning Board's sole ability is to approve development site plans, whereas the Common Council has a say on things like police contracts and budget.

Unfortunately, the Common Council meeting was last night (the 1st and 3rd Monday of every month), so the next Common Council meeting will not be until June 7th. The contact for public comments at a common council meeting is the City Chamberlain:

> If you are interesting in commenting during Public Participation, please email jdavis@cityofpoughkeepsie.com before 4pm on Monday, May 17, 2021.

Let me know if you have any questions, or if you felt your comments are directly relevant to one of the three applications that will have public hearings at tonight's Planning Board meeting - https://cityofpoughkeepsie.com/planning-board/archives/6166

Best,
Natalie

Natalie,

Is it too late to register for public comment for tonight's meeting? I would like to address recent criminal activity and the dilemma caused by increasingly limited police assets. I believe this deteriorating situation will have a significant impact on any hopes for a vibrant retail sector for the City. Thanks.

Kevin

Chairman Levine and Planning Board members:

Thank you for the opportunity to comment on the proposed Wallace Campus.

I am a City native (my parents lived on Hooker Avenue when I was born), and lived virtually my entire life in Poughkeepsie, just selling our home on Kimball Road nine months ago. I do hope we will return to the City one day as part time or full-time residents.

My purpose in commenting is to urge the Planning Board to delay a decision on the Wallace Campus.

I am old enough to recall when our Main Street and downtown were vibrant and thriving, even after the first South Road shopping centers came along in the 1960s. The Wallace Campus, as proposed, is not the way to assure a return vibrancy. Its size, scope and density are simply too overwhelming for that corner and the block and create an array of concerns.

- The buildings to be constructed are too large, with the seven story Catherine Street building being of particular concern. Catherine is a narrow street with narrow sidewalks. Combined with the exceptionally large apartment building under construction on the opposite side of Catherine Street, it would create a canyon effect on that block.
- Parking is another concern, and I would not agree with the claims made by the developer and its consultants regarding available parking nearby, the number of cars that will be owned by residents, and the parking requirements of the day care, fitness center and other commercial uses. With all the development and apartments currently existing and planned in the city, parking is going to be an issue, especially for downtown business owners and their customers. While planners and others call for Poughkeepsie to be a walkable city, living in Poughkeepsie continues to be very car dependent.
- Traffic related to the day care center during drop off and pick up times can potentially lead to backups on Mill Street. It is assumed by the project proposers that most day care users will be Wallace Campus residents. Based on the overwhelming number of studio and one-bedroom units planned and the very small number of two-bedroom units, this doesn't really add up.
- The figures put forth about drop off and pick up times and potential back up are questionable.
- The traffic issue is further compounded considering the various discussions about redesigning Mill Street bringing it down to fewer than three lanes and slowing traffic down.
- The walkway through the proposed campus from Mill Street to Main Street brings up safety concerns. There was already one walkway in that vicinity that had to be blocked off due to safety problems. If it is necessary to have this walkway, can it

at least be accessible only to residents from dusk to dawn, and closed to the public during those hours?

- The project does not represent the balance of the most successful strategies regarding mixed income models. Further, supported housing located on the grounds of a day care center is another potential issue. There is a lack of detail in the proposal regarding the supported housing and the reference to it seems to have been eliminated from materials on the city website.

These are just some of the issues brought to light by the size and scope of this project. Several other apartment developments in the Main Street/Downtown area either already in operation, proposed or planned that are not nearly the size of this project. They do not generally carry the same concerns.

Additionally, I keep hearing/reading about different studies being done regarding housing, parking, and traffic in the city. With a project like this that will forever change the nature of the core downtown area, would it not be prudent to wait for any ongoing studies to be completed and to determine just what the city, its residents and other interested parties want this area to be?

Thank you for the opportunity to comment and for your service to the city, and again, please delay a decision on this matter.

Wallace Campus

The City of Poughkeepsie at a Crossroads in History

Norman Steinberg
Real Estate Asset Management Partners
nsteinberg@reassetmgmt.com
May 14, 2021

I. Introduction

A. The City of Poughkeepsie is at a crossroads in its history. The true potential of Downtown Poughkeepsie can be achieved only if the community works together to revitalize it

B. Organic growth is starting to occur in the business community, and it is reaching a critical mass. New establishments have opened up in Downtown including:

1. Breweries
2. Restaurants
3. Entertainment
4. And the further beautification of the Walkway Over the Hudson

C. The Wallace Campus as currently designed is very flawed:

1. With its concentration in the lowest economic/income cohorts it will not support this economic growth.
2. Lack of emphasis on retail/restaurants/entertainment will create empty streets in the 100% retail location at Academy/Catherine and Main. This will not increase needed foot traffic. This will reduce the vibrancy of the Downtown Core by reducing the potential number of commercial establishments that can open up on Main and Catherine Streets.
3. The project must be redesigned, or it will set back the entire revitalization effort of the City and is a significant economic underutilization of the site.

D. Competing Live/work Downtowns are being built as we speak within 5 miles of Downtown Poughkeepsie and will dramatically siphon off growth and the ability to change if we do not react quickly.

1. Downtowns
   a) *Hudson Heritage*
   b) *Eastdale Village*
2. Ramifications are significant
   a) *Regional residents no longer need to spend their dollars to go to Downtown Poughkeepsie for food or entertainment.*
   b) *The creation of 1,100 market rate units will offer an attractive alternative to middle income and above residents that can pull a meaningful tax base out of the City*

E. . A new housing/zoning plan to revitalize Downtown must be formulated. The City of Poughkeepsie needs to encourage responsible growth including market rate housing and an Entertainment District in the Downtown Core

1. Downtown must be re-zoned as a live/work area to compete with the surrounding developments.
2. There needs to be an appropriate balance of market rate vs subsidized/affordable housing.

F. Concluding:

1. The City of Poughkeepsie has an opportunity now that may never occur again to revitalize its Downtown Core and needs to act fast
2. The Wallace Campus Project will set the City's revitalization efforts back to a point where it may never recover. It must put the project on hold
3. Through effective planning and rezoning, the Downtown Core must encourage Market Rate housing, mixed-income housing with an even dispersion of incomes, restaurants, bars, entertainment so that a viable economic and safe Downtown Core can grow and thrive.

II. The Downtown Core needs to attract market rate housing because it supports a vibrant commercial area and creates a symbiotic relationship

A. The Benefits include:

1. Attracts consumers, customers, from outside the City to spend money in the City
2. Increases safety with more people walking the streets day and evening which
3. Increases Property Values which increases Property Taxes
4. Increases the sales taxes collected
5. Increases municipal parking revenue
6. Increases JOBS for the local community, especially service jobs that low income/less educated are qualified for and start their climb up the economic ladder and out of dependence

B. This creates a stable financial government for the City

1. that can support Affordable Housing
2. Which can upgrade the infrastructure
3. Pay for more municipal services

III. Poughkeepsie needs a new housing/zoning plan that benefits the City of Poughkeepsie and its residents first

A. It must provide an appropriate balance of market rate vs subsidized/affordable housing. Numerous studies show that the most benefits accruing to a community occurs when it is a meaningful blend of both market rate and affordable housing.

B. Need to address market rate and affordable housing in a thoughtful manner.

1. Create a 10 Year Plan.
2. what is the correct number of units?
3. What is the appropriate mix of income levels?
4. Where should it be located?
5. Where and how supportive housing should be located?

C. Needs to Resist being the Repository of Subsidized, Tax Credit and Inclusionary Units for Dutchess County and the surrounding area. According to the 2020 Dutchess County Rental Survey which analyzes apartment complexes over 20 units:

1. The City of Poughkeepsie has 65% of the subsidized housing units in Dutchess County while only 10% of the population. By Comparison, the Town of Poughkeepsie only has 5.4% of the subsidized units in Dutchess and has 15% of the population, significantly below its Fair Share. (Exhibit 1).
2. The City of Poughkeepsie has 71% of the non-senior subsidized housing which has a wider age dispersion with more social issues to address. In fact, only Beacon and the City of Poughkeepsie address this core constituency. Wallace Housing will only continue to add to this imbalance.
3. The City of Poughkeepsie has 25% of tax credit and inclusionary units in Dutchess County while only 10% of the population. By comparison, the Town of Poughkeepsie only has 23% of tax credit and inclusionary units in Dutchess County with 15% of the population (Exhibit 1)
4. The City of Poughkeepsie has become the destination for affordable housing for the Town of Poughkeepsie and Dutchess County.
    a) *According to a representative of the Planning Board the Town of Poughkeepsie has no mandate for affordable housing.*
    b) *Section 8 was turned over to the City of Poughkeepsie years ago*
    c) *Hudson Heritage will add over 750 units of market rate housing based on their master plan and no affordable housing. Hudson Heritage does show on a leasing plan that 160 units of affordable housing is under contract. It remains to be seen as to whether it comes to fruition.*

d) Eastdale Village has 400 units of market rate housing and no affordable units.

e) The Town has 2,320 market rate units vs 977 units for the City; twice as many units with only 44% more population

f) Moreover, the Town of Poughkeepsie has not built an entire subsidized housing complex since 2011. (see Exhibit2)

g) In the interim the City of Poughkeepsie has built 407 units of subsidized units since 2000 and only 544 units of market rate of which almost half are outside the core (One Dutchess and Water Club) and unique with river views.

IV. Two New Live-Work Downtowns are being built within a 5-mile distance with distinct advantages over Downtown Poughkeepsie (see overview in Exhibit 4) - Eastdale Village and Hudson Heritage

A. Combined they are almost ½ million SF of commercial space including restaurants, supermarket, medical facilities, office – How much does Downtown offer?

B. Set up as Main Streets –They will be NEW, clean, neat, safe, well maintained – live work with town center green and activities. These places attract not only residents but patrons from outside their communities during the evening. Why go to Downtown Poughkeepsie?

C. Pulling Business out of the City

1. The Crafted Kup, a Poughkeepsie-based coffeehouse with two other locations
2. Freddy B boutique, an extension of Poughkeepsie's Elizabeth Boutique.
3. Rosticccceria Ross & Sons

D. Both in Town of Poughkeepsie – they have no affordable housing in their master plans.

E. Hudson Heritage with 750 units and Eastdale Village with 400 units can pull a significant tax base out of the City.

F. The size of these developments is significant when compared to the 400 that were built in the City of Poughkeepsie in the last 10 years according to the Dutchess County Rental Survey.

G. Eastdale Village comes with a 20 Year Pilot Program for commercial space.

V. The Wallace Housing Campus is flawed:

A. Urban planners will agree that affordable housing is most effective when it is a combination of market rate and subsidized units. There are no market rate units included in this project.

B. The income levels are too low to support a viable commercial base that would allow for a revitalization of the Core area of Downtown.

25% of all units are below 30% AMI; 20% of all units are below 40% AMI; and 30% of all units are below 50% AMI (meaning that 75% of all units are below 50% AMI) - $28,600 – $50,000 according to the developer quoted in a recent Poughkeepsie Journal article.

C. Lack of emphasis on retail/restaurants/entertainment will create empty streets in the 100% location and reduce foot traffic and vibrancy of the Downtown Core.

D. On Catherine St, at 6-7 stories will dominate a narrow side street including shadows that will create an ominous effect on the streetscape.

E. The Unit Mix is skewed toward Studios and 1-Bedrooms which attract single people. When layered over a low-income/supportive housing requirement, if not carefully managed it can attract transients.

VI. Conclusion

A. Need to place the Wallace Campus Project on hold until the needs of the City in terms of market rate and affordable housing have been assessed

B. The City of Poughkeepsie needs an immediate action plan that will address the imminent competition for discretionary spending/tourism/market rate tenants that will be coming from Hudson Heritage and Eastdale Village

C. The City of Poughkeepsie needs a new housing/zoning plan that revitalizes the Downtown Core and benefits the City of Poughkeepsie and its residents first.

D. The City of Poughkeepsie needs to encourage responsible growth including market rate housing and an Entertainment District in the Downtown Core

Source 2020 Dutchess County Rental Housing Survey

Conclusion

The City of Poughkeepsie has 16 subsidized projects, the next highest is Beacon at 4

65% of the subsidized housing in Dutchess County is in The City of Poughkeepsie while only having 10% of the population

The City of Poughkeepsie is carrying more than 5x times its fair share of subsidizing housing compared to the other municipalities in the County

[1] 294,218 Represents the entire County population. The Sum of the cities popualion do not equal the actual Total County Population.

Cc: Mayor Email; Nelson, Marc
Subject: Wallace Building Campus - Residential Building in the City of Poughkeepsie

To Members of the Planning Board:
Cc: Mr. Mayor and Mr. Nelson:

I am writing my comments regarding the Wallace Campus Project. Although there are many parts of the project that sound appealing, I don't believe this project is suitable for the downtown Poughkeepsie Main Street, Mill Street, Catherine Street corridor.

The site plan cites mixed use and technically this is correct as it includes retail space, open space, residential apartments and a daycare. However, when you look deeper at the actual mixed use, the residential portion is 88% (189 units) studio and one bedroom apartments. Two bedroom apartments (25 units) compromise the other 12%. Considering that the population this development is supposed to serve is wide - between 30% AMI to 80% AMI - it appears this development will be serving the lower end of the AMI scale.

Planning Board member Ann Saylor wisely commented on Page 17 of the "Comments at Planning Board Meeting December 15, 2020" that the public has concern about the concentration of lower income apartments in the area, and suggested that more units with different price points be included. The developers response was inadequate. The developers success in other communities is irrelevant to us, what we are concerned about in the City of Poughkeepsie is our Community and the type of growth we want in residential housing in the City of Poughkeepsie, especially the downtown Main Street area.

The 189 studio and one bedroom apartments coupled with the Kearney Project numbers have a large concentration of low income housing in the area. Couple this with the other sites being considered for development in this MIXED USE category the inner City of Poughkeepsie is being consumed by low income housing disguised as nixed use development.

I strongly urge the Planning Board to support the over-saturation of low income housing concern expressed by Ms. Saylor. It is my concern and of many of the people I have spoken to regarding this project.

Additionally there are concerns about the parking for the pick up and drop off at the Catherine Street building day care center. Comments from the planning board related to pick up and drop off times, and cars quad in the driveway are prudent. I draw your attention to the developers response that the expectation the residents of the Wallace Building will be using the daycare in addition to the surrounding area and they will be walking. Please explain how 88% (189) of studio and one bedroom apartments will be customers of a daycare center? The potential for Wallace Campus families to use the daycare amount to 25 families. In addition, that would mean that 100% of the 12% (25) two bedroom apartments would be rented to families vs. roommates.

On another note, the developers partnership with Hudson River Housing is concerning. We long time Poughkeepsie residents and tax payers know that the Hudson River Housing has been an abysmal failure. There are numerous problems associated with their developments. I will give one example; the Poughkeepsie Underwear Factory, a gorgeous building and wonderful renovation. I ask anyone to dare to use the open space on the corer of Main and Cherry Street to relax, enjoy a meal with your family. The area is littered with trash, and not suitable for a peaceful respite. The area ia a home to solicitation, drug use, and homeless panhandling. Hardly a successful open space suitable for quiet enjoyment free from danger.

I urge the Planning Board to reject this proposal. In addition, I ask that the Mayor and the City Administrator slow down this pace of residential development in the City of Poughkeepsie until a comprehensive plan for RESIDENTIAL DEVELOPMENT can be made and accepted by the Community.

Our City planners have made numerous mistakes that have not been good for our City and our Community. i.e. arterial highways, both north/south, especially east/west, urban renewal of downtown, the Main Mall and closing Main Street. As we have learned from some of these past mistakes - they cannot be reversed.

The Walkway over the Hudson, the growth of the area Hospitals into Medical Centers, Marist College, and surrounding educational institutions have made are area very desirable. Let those in charge of our City develop a comprehensive residential development plan that is good for all.

Respectfully,
Rose Graziano-Moffett

Good evening, my name is Lydia Hatfield and I live on Union Street in the City of Poughkeepsie. I am here tonight to speak in favor of development models like the Wallace Campus that seek to provide mixed income housing options for mid to low income residents.

As a person who has spent some time working for a housing agency, I'm someone who people come to for housing support and resources when unexpected things happen in their lives. In the last few weeks alone, I've connected with 3 individuals and 1 pair in need of places to live. These folks are of various races, income statuses, professions, ability statuses… and all are on the brink of "settling" for a $1500 one bedroom or studio apartment.

I deeply love my neighborhood on the outskirts of downtown and the people in it, and it makes me feel such grief to think that soon, this might be me. My neighborhood is rapidly gentrifying and and last year my landlord tried to raise my rent by $400 a month. We were ultimately able to negotiate a lower rate, but there were no laws to protect us and, for someone like me who makes less than $30,000, almost no options for where to go next. And this was before the impact of the pandemic.

Considering how essential secure and safe housing is to a person's ability to thrive, and how consuming it can be to not know where you'll live next month - this lack of options is unacceptable. In January alone at the start of 2021, there were about 117 eviction hearings in the Poughkeepsie City Courts. (Also, only 8 of those tenants had legal council on record at the time which almost guarantees their eviction.) Housing options FOR ALL have never been more important.

I am sure there will be many folks here tonight that have reservations about locating locating folks who need affordable housing downtown. I think it's important to point out that between the other developments discussed here tonight, and other new projects like the renovation of Luckey Platt, there are considerably more market rate units coming online than those reserved for individuals that fall in specific income categories.

If the Wallace Campus gets the necessary funding to offer this affordable housing model, they will be doing more than most to create these options.

My questions for the developer include:

1. Given the funding you are applying for, will you be able to offer these apartments at affordable rates indefinitely or will this program "sunset," meaning the Wallace Campus will ultimately become a part of the unregulated housing stock in Poughkeepsie?

2. Gentrification of a community does not just impact the cost of housing, but also the cost of living and availability of affordable services. What guarantee will you offer to your 30% AMI residents and residents of the broader neighborhood to ensure their continued ability to access these services?

And to the City of Poughkeepsie, I ask: My question for the City of Poughkeepsie is - At this point, it is well documented that increased development activity in urban centers like Poughkeepsie causes an increase in housing prices and overall cost of living surrounding that development. How will you balance the market-rate developments being advanced here with policies that preserve an affordable cost of living in the City for everyday people to feel secure and have stability here?

Subject: 316 Main Street Comment, 4/20/21 Poughkeepsie Planning Board Hearing

Dear Director Natalie Queen and Poughkeepsie Planning Board,

My name is Nicolas Shearman, thank you to the Planning Board for this opportunity to comment. I am commenting on the 316 Main Street application per the 4/20/21 Planning Board hearing. From 2012-2016 I lived in the Poughkeepsie area while studying at Marist College currently live down river in Astoria NY at 3608 28th Ave.

While in Poughkeepsie I helped plan the 2016 Poughkeepsie Community Wealth Building Summit as a volunteer. Although I currently live in Astoria, NY, I continue to follow news about equitable community development efforts in the City of Poughkeepsie and construction of affordable housing. It is heartening to see the significant progress made by residents and government, nonprofit, and private sectors towards these ends. The Poughkeepsie Downtown Innovation district is a great example of this advancement.

The architecture urban design and amenities of 316 Main Street looks beautiful and complementary to the scale of the subject area of Main Street. The green and solar infrastructure is wonderful. My comment tonight is to express concern about the lack of affordable housing in this project proposal. There is mention of workforce housing in the graphic portion of the application before the Planning Board, but I could not locate any further detail in the application about the affordability breakdown for apartments.

The City of Poughkeepsie, like most cities in New York, are desperately in need of affordable housing development to prevent rampant gentrification in this time of shifting populations in the wake of COVID-19, so I'm concerned of projects built on Main Street that do not include affordable units. The City of Poughkeepsie is right in wanting to grow its population, but for social justice purposes it must retain and care for its current population. I urge the board to require the applicant to revise their application and/or provide supplementary information about the affordable housing plan for the project and, if there is no affordable component, assess how the project might work against the affordable development goals of the innovation district. The Wallace Campus proposal, I feel, should be the standard for what Cities like Poughkeepsie should look for in revitalizing their downtowns, and I hope 316 Main St takes a page from their book regarding providing affordable units. It's the right thing to do. Cities are not for extracting profit, but instead creating communities and shared prosperity.

Also, I urge the City of Poughkeepsie to pass the proposed ETHICs Act with at least a requirement of 20% affordable and mixed income units and to advance legislation to declare a housing emergency and rent stabilization.

Thank your consideration of this comment

Sincerely,
Nicolas Shearman

CVH Questions re: Wallace Campus

-What is the breakdown of units by %AMI for the Wallace Campus--how many of each type (1, 2 bedroom etc) at what level AMI?

-Why are there not more/any units for families larger than 2? How and why did developers choose to prioritize studios and 1-2 bedrooms?

-Will courtyard walkthroughs be accessible 24/7?

-Who will run the childcare center? Who will be able to access it and how? What are the costs to access?

-How will the public access the gym? What are the costs?

Re: Proposed Wallace Campus
Impacts on 317 Main Street

Dear Planning Board Members,

I have owned the 130-year old building at 317 Main Street since 1989. I'll let others address the appropriateness of the Wallace project; I'm more concerned as to how the new "Main Street" building will directly impact my building. For clarification of this matter, please have the applicant address the following questions:

1) How will the 317 Main Street building be protected during demolition of the Bull and Buddha building and construction of the new Main Street Building?
2) The foundation of my building is laid-up field stone. How will the foundation be protected during excavation for the new building?
3) The air intake and exhaust for my high efficiency boiler, the first floor bathroom vent, and the discharge from a roof drain are located about 8 feet above grade at various places along the alleyway wall of my building. How will these be affected by the new development?
4) Apparently, they plan to block the 8 windows on the second and third floors of my building, which were installed when the building was constructed in 1890. How will the windows be closed off?
5) The second and third floors of my building overhang the common building line by about a foot. How will the new construction address this situation?
6) Telephone and internet services for 317 Main and 315 Main come from cables via the Bull and Buddha building. How will these services be affected by the new development during and after construction?
7) How will my roof and related flashing on my building be protected?

None of these matters appear to be discussed in the Wallace application materials. Other questions may come to mind in response to answers received to these questions. Please accept these written questions in lieu of oral comments during the public hearing. Thank you for your consideration.

Sincerely,

Roy T. Budnik for 317 Main Mall Corp.

RE: Wallace Campus

Dear Planning Board,

First, I would like to thank you for your service and all the work you do on the planning board for our city.

I had a question regarding the Wallace Campus.

Will the developer grant easements or access to the rear of the existing buildings along Main Street and Mill Street which are adjacent to the project? These buildings have existing businesses or residents which may have or require rear access for entrance/exits of the buildings and possibly even for garbage/recycling. The renderings appear to have fencing and even plantings along the property lines of these other buildings. Is this being considered?

Thank you again.

Best,

Andrew Crocco

Resolution ___ of the City of Poughkeepsie Planning Board

Site Plan Review for the Wallace Campus: Demolition, conversion & New Construction 319,325, 327-329 &331 Main Street & 302,304,306 & 310 Mill Street

Date: January 19, 2022

Moved by: _____; Seconded by: _____

Whereas, Wallace Campus Manager, LLC, the Applicant, has applied to the City of Poughkeepsie Planning Board for site plan approval for the Wallace Campus Project (the "Project") that involves the demolition, conversion and new construction, resulting in a mixed use development with 187 dwelling units, 14,235 SF of retail commercial space, and publicly-accessible open space on the parcels at 319, 325, 327-329 and 331 Main Street;

Whereas, the Project also involves the redevelopment of the existing off-street parking area that fronts on Mill Street and concerns properties at 302, 304, 306 and 310 Mill Street (Grid #6162-77-114098, 109079, 109077, 121116, 116114, 128113 and 6162-78-127091);

Whereas, the Project is located in the Poughkeepsie Innovation District Urban Village (PID-UV) and the Poughkeepsie Innovation District Historic Core (PID-HC);

Whereas, the Applicant seeks site plan approval for the Project which includes the demolition of the existing buildings at 319, 325, 327-329 Main Street, followed by new construction and conversion of existing structures, resulting in a mixed use development of three buildings with 187 dwelling units and various commercial spaces for unidentified tenants. The proposal involves combining the lots at 319, 325, 327-329 and 331 into a single lot of record. Also the redevelopment of the off-street parking area will involve the properties at 302, 304, 306 and 310 Mill Street;

Whereas, the Application was first presented to the City of Poughkeepsie Planning Board at the June 16, 2020 meeting and the project at that time included development of 214 dwelling units and commercial uses, including 6416 Sf of retail, a day care facility, a community recreation facility with a climbing wall, and publicly-accessible open space—the Planning Board passed a motion to hire outside consultants for architectural review, special counsel and engineering review due to the complexity of the proposed project; and

Whereas, the Application did not reappear before the Planning Board until the November 17, 2020 meeting after some outstanding and open building code violations on property included with the application had been addressed, at that meeting the Planning Board was presented with a revised project, project team and Applicant;

Whereas, the Application was considered at the December 15, 2020 Planning Board meeting and at that meeting the Planning Board declared its intent to be lead agency for the Project, determined that the Project is a type 1 action pursuant to SEQRA and directed Planning Staff to undertake a coordinated review with the other involved agencies to determine if the other involved agencies had any objection to the Planning Board serving as lead agency and if the other involved agencies had any comments on the Project application including Part 1 of the full Environmental Assessment Form;

Whereas, the lead agency coordination letters were circulated to all involved agencies on March 19, 2021, and no involved agency objected to the City of Poughkeepsie Planning Board serving as lead agency for the SEQRA review of the Project;

Whereas, at the City Planning Board meeting on March 16, 2021, the Applicant presented to the City Planning Board any further changes to the Project and the City Planning Board scheduled a public hearing on the Project for April 20, 2021;

Whereas, On April 20, 2021, the City Planning Board confirmed its status as SEQRA lead agency and opened the public hearing, receiving both oral and written comments from the public on the Project;

Whereas, the City Planning Board held two (2) special Planning Board meetings to thoroughly discuss the Full EAF Part 1 and the supporting environmental review documentation submitted by the Applicant and to carefully consider and complete Parts 2 and 3 of the Full EAF and on December 21, 2021 the City Planning Board issued a negative declaration of environmental significance finding that an Environmental Impact Statement would not be required to be prepared for this Action;

Whereas, the City Planning Staff duly filed and published the negative declaration as required by SEQRA;

Whereas, the public hearing on the Project was held open for public comment and the public was given the opportunity to comment at eight (8) Planning Board meetings and to submit written comments until January 7, 2022 (going beyond the last public hearing, which was closed at the Planning Board meeting on December 21, 2021), all of the public comments on the project and any responses to those public comments provided by the Applicant are on file with the City Planning Office—all comments either written or oral were carefully considered by the City Planning Board in site plan review;

Whereas, a full statement of the Application was first referred to the Dutchess County Planning Department as required by the NYS General Municipal Law in July of 2020, however, as the Project was revised to address Planning Board member comments and concerns and the technical review comments by the Planning Board's architectural and engineering consultants, and the City Departments, the Project was referred several more times to the Dutchess County Planning Department, this resulted in a final letter, dated December 9, 2021 from the Dutchess County Planning Department indicating that the Application was a matter of local concern with comments and stating as follows: *We are pleased to see the applicant has incorporated local feedback and*

adjusted the proposal accordingly, in particular , the reduction of building heights to meet code, continued refinement of the architecture, and adjustments to the mix of unit sizes and target income levels are positive changes. Our only comment relates to lighting…." The County comments concerning lighting are being addressed as a condition of this approval;

Whereas, based upon the zoning determination, the Applicant applied to the City Zoning Board of Appeals for a number of area variances and the City Zoning Board of Appeals approved the area variances for the Project at its meeting on January 11, 2022;

Whereas, the City Planning Board has carefully considered the record in this matter (a list of the documents entered in the record and the documents themselves are on file with the City Planning Office) and notes the following: 1) the Project has been redesigned several times to address concerns regarding the façade and massing of the new buildings to make them more compatible with surrounding historic buildings and to improve the aesthetics of the Project ; 2) the height of the new buildings has been reduced to comply with the PID zone; 3) the Project has been designed to meet the requirements of the Enterprise Green Communities Program; 4) the Project will renovate and adaptively reuse an existing historic building—the Wallace Building, ensuring its preservation into the future; 5) the Project is participating in the NYSDEC Brownfields program to ensure the remediation of any legacy contamination at the site and to clean it to residential standards; 6) the Project has consulted with the NYS Office of Parks, Recreation and Historic Preservation in the design of the project and that office has signed off on the Project as well as the National Park Service on the use of historic tax credits for the renovation and reuse of the Wallace Building; 7) the City Departments have commented on the Project and any comments that remain are minor and technical in nature and the City Police Department and the City Fire Department, as well as the City DPW, have provided letters confirming that they are able to serve the project and provide water and sewer services for the project; the Applicant has made efforts to address public concerns regarding the Project by changing the mix of units to be constructed by increasing the number of units offering two bedrooms and by offering information on the future management of the housing; and the Applicant has made efforts to engage with the community by having meetings with the public and local organizations concerning among others, reuse of historic elements from the buildings to be demolished or renovated and use of the proposed open space for artistic purposes.

Now Therefore Be It Resolved, that the City Planning Board after review of the standards set forth in the City Zoning Code at section 19-6.1 for the issuance of site plan approval and after review of the requirements of the PID-UV and PID-HC zone at section 19-3.37 have determined that the Project complies with both the site plan standards and the requirements of the PID zone finding as follows that:

a) The Project complies with several key components of the PID-Policy Framework including the preservation of Main Street's historic character, improving workforce development opportunities, improving multi-modal connections with the pedestrian walkway open space connecting to the existing parking area, increasing and enhancing affordable housing in the City, and remediating and redeveloping vacant properties, including surface parking lots;

b) The Project provides street level retail space that is consistent with the business goals of the City as expressed in the PID-HC subdistrict as "a medium -density corridor with vertically mixed buildings characterized by engaging ground floor uses… and galleries that are flush with the front property line and maintain high levels of ground floor transparency to create an engaging pedestrian environment. The project also preserves historic architecture when possible and has designed the new development to complement the existing character of the corridor;" the retail space that is proposed is consistent with the retail uses and professional uses, including creative spaces, allowed in the PID;

c) The Project is also consistent with the PID-UV which provides for similar ground floor uses and higher-density multi-family residential uses, the pedestrian plazas and public open spaces are encouraged in this area as well;

d) The Project provides sufficient parking for the proposed uses;

e) The Project site plans submitted as of December 7, 2021 (see attached list of the final plans) are hereby approved, subject to the following conditions:

i) that the lighting plans comply with the comments of the Dutchess County Planning Board and that the lighting be maintained throughout the life of the Project as dark sky compliant;

ii) all remaining technical comments on the site plan and the Stormwater Pollution Prevention Plan by the City Planning Board's consulting engineer, dated December 22, 2021 and the City Departments be addressed and the plans revised as necessary to satisfy the comments;

iii) that the Project comply with the conditions set forth in the memorandum dated June 29, 2020 from City of Poughkeepsie Fire Department, including (1) a standpipe/sprinkler system will be installed as per code, (2) an approved fire alarm system will be installed throughout, (3) an approved fire suppression system will be installed in all cooking areas as per Code and connected to alarm system (commercial Kitchens), (4) a knox box entry system will be installed, and keys supplied for building, (5) for public assembly areas, occupancy permits will be required, and (6) where elevators are installed, a FEO K1 Fire Dept override key shall be installed.

iv) that the requirements of the Brownfields Program be fulfilled to the satisfaction of the NYSDEC such that a certificate of completion is issued;

v) that historical salvage firms be given the opportunity to remove historic items from the structures to be demolished, excepting if the Applicant intends to use the items in this Project, e.g. the Wallace sign;

vi) that all State, local and City approvals needed for the Project be obtained and submitted to the City;

vii)
that the Applicant work with NYSDOT to address NYSDOT's comments regarding signal timing;

viii) that the Project meet the requirements of the Enterprise Green Communities Program;

ix) that the Project provide security for its residents and for the open space that will be made available to the public throughout the life of the Project;

x) that all landscaping for the Project be maintained and kept in good condition throughout the life of the Project, including the landscaping in the open space and in the parking lot;

xi) that the Project owner is required, if at any time requested by the City, to place a gate that blocks public access to the open space if the City determines that such a gate is necessary for the public health, safety or welfare;

xii) that the Applicant provide a plan for the demolition of the structures to the City Building Inspector prior to the issuance of the demolition permit addressing the timing and means of the demolition and showing how the demolition will be undertaken consistent with public safety and the requirements of the Brownfields Program;

xiii) **that the Applicant shall submit a fully executed easement agreement with the owners of 302,304, 306 and 310 Mill Street for access to and use of parking facilities at the parking lot located off of Mill Street as reconfigured by the site plan;**

xiv) that the Applicant shall provide a performance bond in an amount acceptable to the City Engineering Department and in the form acceptable to the City of Poughkeepsie Corporation Counsel prior to the issuance of demolition or building permits to secure the site improvements, including landscaping, relating to the pedestrian walkway, Wallace Commons, the parking lot improvements and any improvements related to sewer, water or stormwater; and,

xv) that the Applicant shall provide the Planning Board and Planning Department staff with the name and contact information of the management firm to manage the Project upon selection and that the Applicant shall maintain the highest level of care regarding the building, residents, tenants and occupants throughout the lifetime of the Project.

Building Footprint: Addenda 'A' & 'B' (proposed square feet for new construction)

Addenda 'A' & 'B' (existing square feet for change of use/expansion)

Addenda 'A' & 'B' (additional proposed square feet for expansion)

Addenda 'A' & 'B' (total building footprint, square feet)

Lot Coverage: Addenda 'A' & 'B' (percentage, building coverage only)

Gross Floor Area: 61,768 SF (proposed square feet for new construction) Admiral Halsey Two - Lot One

86,745 SF (existing square feet for change of use/expansion) Admiral Halsey One - Lot Two

N/A (additional proposed square feet for expansion)

N/A (total gross floor area, square feet)

Building Height: Addenda 'A' & 'B' (stories) _____ (feet)

Floor Area Ratio: Addenda 'A' & 'B' (ratio of gross floor area divided by lot area)

VIII. PROJECT PARKING INFORMATION

A) Number of Off-Street Parking Spaces required: See Addenda 'A' & 'B'

B) Number of Off-Street Parking Spaces provided: See Addenda 'A' & 'B'

C) Waiver Requested: XX (Yes) _____ (No)

Is municipal parking available within 600 feet? _____ (Yes) XX (No)

If yes, name all such municipal facilities: N/A

(If a waiver is requested based on proximity to municipal facilities, a written request for such waiver, addressed to the City Planning Staff and the Chairman of the Planning Board, must be submitted with the application.)

If a private parking facility is to be utilized, is such facility within 600 feet?

_____ (Yes) XX (No)

If yes, provide the address of the facility, name of the property owner, number of spaces in the lot, number of spaces available for lease, and length of lease. Attach copy of lease. Additional information may be required by the Planning Board): N/A

IX. RESIDENTIAL PROPOSALS

A) Type of Development: Multiple Family Senior Development
(Townhouse, condominium, multiple residence rental, etc.)

B) Unit Breakdown:

Number of efficiency or "studio" units: See Addenda 'A' & 'B'

Number of one (1) bedroom units: See Addenda 'A' & 'B'

Number of two (2) bedroom unit's See Addenda 'A' & 'B'

Number with three or more bedrooms: See Addenda 'A' & 'B'

Total number of units: See Addenda 'A' & 'B'

C) Is funding public? XX Yes ____ No
If yes, describe funding source: NYC Homes & Community Renewal Program

Section X is 'Not Applicable'

X. OFFICE PROPOSALS (____ Medical/Dental ____ Professional ____ Business)

A) Number of Employees: _____

B) Number of doctors/dentists/medical practitioners: _____

C) Days/Hours of Operation: _____

Section XI is 'Not Applicable'

XI. SERVICE BUSINESS PROPOSALS

A) Specify Business: _____
(e.g., laundromat, drycleaner, beauty parlor, travel agency, banks)

B) Number of Employees: _____

C) Number of Washing Machines (for laundromat): _____

D) Days/Hours of Operation: _____

Section XII is 'Not Applicable'

XII. MERCANTILE PROPOSALS (Retail _____ Wholesale _____)

A) Type of Mercantile (specify): _____

B) Number of Employees: _____

C) Days/Hours of Operation: _____

Section XIII is 'Not Applicable'

XIII. STANDARD RESTAURANT/FAST FOOD RESTAURANT/COFFEE SHOP/DONUT SHOP/NIGHTCLUB/DISCOTHEQUE/BAR PROPOSALS

A) Specify Use: _____

B) Number of seats (excluding bar stools and outdoor seating):_____

C) Meals served (i.e., breakfast, lunch, dinner): _____

D) Type of Menu: _____

E) Days/Hours of Operation: _____

F) Entertainment (live and/or recorded):_____

G) Will the restaurant contain a bar/lounge?: _____ Yes _____ No

H) If yes, how many seats at the bar? _____

I) Is a drive-through window proposed? _____

J) Is a walk-up window proposed? _____

K) Is an outdoor seating area proposed? _____

L) If yes, how many seats are proposed? _____

M) If yes, is outdoor cooking proposed? _____

Section XIV is 'Not Applicable'

XIV. INDUSTRIAL/COMMERCIAL PROPOSALS (Automobile repair, taxi, motor vehicle sales, warehouse, manufacturing, animal hospital, research facilities, etc.)

A) Specify Use: _____

B) Number of shifts (if any): _____

C) Number of employees: _____
(If shifts are proposed, list number of employees per shift)

E) Number of work bays (if automobile repair): _____

F) Days/Hours of operation: _____

Section XV is 'Not Applicable'

XV. EDUCATIONAL/INSTITUTIONAL/RECREATIONAL PROPOSALS (e.g., Museums, Theatres, Conference Centers, Hotels, Motels, Hospitals, Nursing Homes, Assisted Living Facilities, Nursery Schools, Private Schools, Day Care Centers, Places of Worship, Marinas, Membership Clubs, etc.)

A) Specify: _____

B) Number of shifts (if any): _____

C) Number of employees: _____
(If shifts are proposed, list number of employees per shift)

D) Number of beds (hospitals, nursing homes, etc): _____

E) Number of seats in largest assembly space: _____

F) Number of classrooms (schools): _____

G) Number of rental units (hotels, motels, etc.) _____

H) Number of boat slips/courts (e.g., tennis, handball, etc.), alleys: _____

I) Days/Hours of Operation: _____

XVI. PROPOSALS NOT MENTIONED ABOVE (Please be specific):

_____

_____

_____

_____

_____

XVII. APPLICANT CERTIFICATION

I, STEVEN TINKELMAN, certify that the this application has addressed the objectives outlined in the Zoning Ordinance with consideration given to the public health, safety and welfare; the comfort and convenience of the public in general or the residents or users of the proposed development and of the immediate neighborhood.

The applicant certifies that all information contained herein is accurate and complete as of the date of this application.

Re: Admiral Halsey Apartments Inc. – Site Plan Review
Property: 135 Main Street, Poughkeepsie, New York

Dear Chairman Levine and Members of the Planning Board

On behalf of Admiral Halsey Apartments Inc. ("Applicant"), we respectfully submit this letter and enclosures in furtherance of the proposed multifamily senior development on property located at 135 Main Street, Poughkeepsie, New York (the "Project Site"). The Project Site is currently improved with an existing 13 story multifamily building, which includes 119 senior dwelling units. This existing structure is located on the southern portion of the Project Site. The Applicant is now proposing an additional 5 story building with 72 senior dwelling units in the rear of the Project Site (the "Project").

The Applicant has proposed to subdivide the Project Site into two lots. Proposed Lot 2 will include the existing multifamily building, consisting of 118 income restricted senior units, 1 superintendent's unit and 46 off-street parking spaces. Proposed Lot 1 will include the proposed new multifamily building, consisting of 71 income restricted senior units, 1 superintendent's unit and 58 off-street parking spaces. The proposed subdivision is required for Project financing and will result in the need for additional area variances. The proposed Project and related area variances are set forth in the enclosed site plans, prepared by Tinkelman Architecture and dated June 22, 2021 (the "Site Plans"). Importantly, the Project has been designed to ensure that the existing structure and new structure are coordinated, and new open spaces has been provided between the buildings for use by the residents of both facilities.

Project Submission and Review

In addition to the Site Plans, we have also enclosed with this letter: (1) site plan application form, (2) subdivision application form, (3) Full Environmental Assessment Form ("Full EAF"), and (4) application fees. Pursuant to the New York State Environmental Quality Review Act ("SEQRA"), the Project is an Unlisted Action. We submit that the Planning Board should designate itself as lead agency and conduct a coordinated SEQRA review.

In support of the application, we submit the below information that the Planning Board may consider in its initial review the Project pursuant to Zoning Code 19-6.1 (site plan review) and SEQRA. Once the Planning Board has had a chance to review this application and comment on the same, we will provide additional information as needed.

TINKELMAN ARCHITECTURE

1) **Land Use and Community Character:** The Project will create additional affordable senior housing in the City of Poughkeepsie, which is in high demand. The Project Site is within the City's Urban Density Residence "R-6" zoning district and the proposed use is permitted with site plan review. While we understand that the City is currently updating its Comprehensive Plan, we submit that the Project Site is in the City's downtown area and the Project is consistent with the urban development principles in the current Comprehensive Plan. To this end, because this population is less dependent on vehicle transportation, it is important for senior housing to be located in a downtown urban area close to public transportation opportunities. As demonstrated by the renderings provided herein, the Project is consistent with the character of the neighborhood and has been designed to blend with the existing buildings in the area.

2) **Transportation and Parking:** The Project is creating an additional multifamily building on the Project Site, which will include 71 senior affordable units and 1 superintendent's unit. Additional off-street parking has been provided for the proposed new senior housing building that is compliant with the City's zoning requirement (58 parking spaces, where 40 is required). Off-street parking for the existing building is currently pre-existing legally non-conforming (54 parking spaces, where 66 is required) and provide more than enough parking spaces for the existing tenants. That said, tenants and guests of both buildings will be able to utilize the off-street parking on the entire Project Site (104 parking spaces, where 106 is required).

   As experienced with the existing building and the use thereof, the senior population occupying the Project is not dependent on personal vehicular transportation and does not fully utilize existing parking (see a summary of existing parking counts below). Additionally, 36 of the new 72 units will be set aside for frail elderly who will likely not have driver's licenses because of the mobility and/or audiovisual impairments which define their conditions. Instead, tenants will be dependent on local public transportation, group transportation, shuttle services provided for mobility impaired residents, and pedestrian travel. The current access points of the Project Site function without issue and the Project is not expected to result in any adverse traffic impacts.

   To demonstrate that the proposed parking will not be an issue, the Applicant performed parking counts, which resulted in the following findings:

   1) Tuesday May 24, 2021
      - 10:00 am – 34 spaces occupied.
      - 3:00 pm – 30 spaces occupied.
      - 7:00 pm – 32 spaces occupied.

2) Saturday May 29, 2021:
   - 10:00 am – 28 spaces occupied.
   - 3:00 pm – 32 spaces occupied.
   - 7:00 pm – 31 spaces occupied.

On Tuesday May 24th, the parking lot only utilized 62% of its actual capacity. On Saturday May 29th, the parking lot only utilized to 58% of its actual capacity. Accordingly, the existing building has much more parking than is utilized. Therefore, with the addition of the new off-street parking spaces on the Project Site, the Project will provide sufficient parking to serve its senior tenants and related guest.

3) **Water, Wastewater and Stormwater:** The Project will connect to existing public sewer and water supplies, which has ample capacity to serve the proposed Project. Further, related to stormwater management, due to the disturbance of >1 acre, a full Stormwater Pollution Prevention Plan ("SWPPP") will be prepared, which will demonstrate that stormwater will be appropriately controlled. The SWPPP is being prepared in compliance with the NYSDEC SPDES General Permit for Stormwater Discharges from Construction Activity, Permit No. GP-0-20-001. The Project is not within the current LWRP boundaries.

4) **Plants and Animals:** The Project Site is entirely within an urban setting and is previously disturbed. The Project will not have any adverse impact on plants or animals. There is no rare vegetation or critical wildlife habitat on the Project Site. Again, the Project is not within the current LWRP boundaries.

   A review of the EAF Mapper identified Atlantic Sturgeon and Shortnose Sturgeon located in the project vicinity. The habitat for these species is the Hudson River, approximately 0.5 miles from the project site. The area between the project and the Hudson River is developed suburban/urban and the proposed project will not impact these species or their habitats.

5) **Aesthetic Resources:** The Project Site is within an urban setting. The proposed new multifamily building has been specifically designed to complement and fit within its urban context. To this end, we have provided elevations and renderings of the Project for the Planning Board's review. The proposed building will feature massing and material changes which create the appearance of multiple buildings and not large monolithic shapes. To reinforce the residential scale of the building the plan of the building will be an "L" shape structure. The arm of the "L" along North Perry Street will be 4 stories high and the arm of the structure that is perpendicular to North Perry Street and further back from the street line shall be 5 stories. At the base of the building along North Perry Street, a loggia will encourage pedestrian circulation and engagement at the base of the building. Off this loggia is where much of the communal activities will take place. The facades will be a combination of fiber cement panels and brick veneer. The window systems that will be employed in the design shall be casement windows of a residential style and character. The brick will be compatible in color and texture with the surrounding brick buildings in the neighborhood to be consistent with the new building's existing context.

6) **Lighting:** New energy-efficient lighting will be utilized throughout the Project Site. Exterior site lighting will be designed to comply with the Zoning Code and to be the minimum necessary while ensuring safe and secure residential use. All proposed lighting will be downward facing and will minimize sky glow and light pollution from the Project Site. Where appropriate, lighting fixtures will be of a full cutoff type or provided with shields to reduce glare and light pollution. The lighting is consistent with the Project Site urban setting.

7) **Historic and Archeological Resources:** The proposed Project has undergone a New York State Historic Preservation Office ("SHPO") review, which was completed on November 17, 2020, and found no adverse impacts. At the time of this review the proposed project consisted of a seven (7) story building with 72 dwelling units. The submitted project is a lower building with the same number of dwelling units. The effects on the surrounding historic districts would be the same in either case. This SHPO determinations has been enclosed herein.

Conclusion

Based on the above, we respectfully submit that the proposed Project is consistent with the neighborhood and is compliant with the City's site plan review considerations. We submit that the Planning Board should declare its intent to be the lead agency pursuant to SEQRA and commence coordinated review of the Project.

Once we obtain initial feedback from the Planning Board, the City's consultants, and involved/interested agencies, we will supplement our application. We look forward to working with the City in furtherance of the Project.

Respectfully,

Steven Tinkelman, AIA
Managing Member

RE: Admiral Halsey II
135 Main Street
Parcel # 131300-6062-76-911183-0000
Poughkeepsie, NY 12601

Dear Chairman Levine and Members of the Planning Board,

I hope this letter finds you well.

This letter, together with the attached revised Site Plan drawing and Zoning Analysis, constitutes our current submittal to the City of Poughkeepsie Planning Board. We are submitting this amended application for Site Plan, Architectural, and Special Use Permit approval for the above referenced parcel at 135 Main Street.

At the previous Planning Board presentation held on September 21, 2021, the Applicant proposed to subdivide the Project Site into two lots. Proposed Lot 2 will include the existing multifamily building (Admiral Halsey I), consisting of 118 income restricted senior units, 1 superintendent's unit and 46 off-street parking spaces. Proposed Lot 1 will include the new multifamily building (Admiral Halsey II), consisting of 71 income restricted senior units, 1 superintendent's unit and 58 off-street parking spaces. As stated in the previous Planning Board presentation, the Applicant has indicated that the proposed property subdivision is necessary for successful Project financing and will result in the need for additional site variances. Importantly, the Project has been designed to ensure that the existing structure and new structure are coordinated, and new open spaces have been provided between the buildings for use by the residents of both facilities.

At the Planning Board meeting the Planning Board members requested that the Applicant consider increasing the amount of open/green space around the Project and perhaps revisit the site design to reduce the number of variances that might be ultimately required for the Project. Also discussed at the meeting was the fact that the amount of parking required by the City of Poughkeepsie Zoning Code could be reduced given the fact that the building occupants are senior and elderly/frail residents and many of them would not and do not have cars.

Given that information, the Planning Board members where amenable to the idea of exchanging the quantity of required parking spaces for more open space on the site.

Therefore, we present to you and the Board for consideration the revised site plan enclosed. The originally proposed new property line presented to the Planning Board on September 21, 2021, that would subdivide the original lot, has been redefined and moved. The distance between the existing Admiral Halsey I building and the proposed Admiral Halsey II building has also been increased. This was accomplished by the adjustment of the proposed property line and slightly moving the Admiral Halsey II building northward. These design decisions create several opportunities for the project. When considering the original site design that was presented, we were able to eliminate the need for 2 of the requested variances in the original submission. The variances that were eliminated from the original variance request list are as follows: an overall lot area variance for Admiral Halsey II and a side yard variance for Admiral Halsey II.

However, because of the considerations that we gave to the request of the Planning Board members for more open green space around the proposed Admiral Halsey II, it became necessary for us to add back into the list of requested variances, a new variance for the Admiral Halsey II portion of the project. The variance that we added to the requested variance list is for the required number of parking spaces at the Admiral Halsey II building. We redesigned the parking layout on the north side of Admiral Halsey II to address the board's desire for more open greenspace around the perimeter of the building and site. In addition to this, as discussed in the Planning Board meeting, we have eliminated the parking spaces on the east side of the newly created open green space that was presented in the site plan. The resultant parking count for Admiral Halsey II will be 37 parking spaces, and not the required 40 parking spaces. We have also reduced the number of parking spaces and re-arranged the layout of the remaining parking spaces. The changes to the new lot line likewise reduce the parking space count at Admiral Halsey I to 35 spaces. The combined parking count for the two buildings is now proposed to be 72 parking spaces. The Applicant feels that a combined parking space count of 72 spaces is adequate for both buildings, given the resident population. All of these design decisions created more green/open space throughout the site and even though we still need a variance for the open space requirement at Admiral Halsey II, these moves have increased the open/green space around the project. Ultimately, with the new revised site plan, we have reduced the number of required variances from 8 to 7.

The revisions and design changes indicated above are depicted in drawing sheets G-100 (Zoning Information) and PZ-100 (Site Plan) and are dated October 19, 2021, and indicated as Revision 1. For expediency's sake the Civil Engineering drawings have not been updated yet. The Civil Engineering drawings that will need updating include SUB-1, SG-1, SD-1, UT-1, EC-1, and TT-1. The engineering drawings shall be revised after the scheduled October 19. 2021 Planning Board meeting.

Based on the above, we respectfully submit that the proposed Project is consistent with the neighborhood and is compliant with the City's site plan review considerations. We submit that the Planning Board should declare its intent to be the lead agency pursuant to SEQRA and commence coordinated review of the Project.

TINKELMAN ARCHITECTURE

Once we obtain additional feedback from the Planning Board, the City's consultants, and involved/interested agencies, we will supplement our application. We look forward to working with the city in furtherance of the Project.

Respectfully,

City of Poughkeepsie
62 Civic Center Plaza, 3rd Floor
Poughkeepsie, NY 12601

RE: Admiral Halsey II
135 Main Street
Parcel # 131300-6062-76-911183-0000
Poughkeepsie, NY 12601

Dear Chairman Levine and Members of the Planning Board,

I hope this letter finds you well.

At the previous Planning Board presentation held on October 19, 2021, the Applicant presented to the Planning Board the revised Architectural Site Plan for the Project that was originally discussed at the September 21, 2021, meeting. The Site Plan and Zoning Analysis were the only items updated for the October meeting. This was done in order to illustrate to the Planning Board what the Applicant was proposing, the various Zoning Variance requests that will be required from the revisions and allow the Planning Board members to respond to the revised Site Plan proposal. At the October meeting the Planning Board members requested that the Applicant update all of the drawings and advance the site and landscape design of the Project to allow for more in depth discussions for future Planning Board meetings. The Planning Board also requested that the Project be formally issued for distribution for the various Departmental reviews.

Therefore, please accept this letter, together with the attached completed and revised submission package, as our current submittal to the City of Poughkeepsie Planning Board. The architectural design of the project has been revised, slightly, from the design that was presented at the October Planning Board meeting. While we believe that the building as previously presented was a positive contribution to the city, we felt that we could do more to create a warmer and more pleasing building that reflects the feeling of "home" for the neighborhood. With that in mind, the facades have been revised to include more of the warmer blue/gray color panel system and less of the lighter gray color. The base of the building on the North side has been revised to include more brick veneer and less cementitious panel. Along the courtyard side, at the base of the building, additional quantities of glass are employed to increase the feeling of openness and further encourage the sense of community interaction. Perhaps most dramatically, we have increased the amount

TINKELMAN ARCHITECTURE

of glass in the loggia along North Perry Street and the physical width of the loggia space has been increased to encourage community use and the interaction of the building's residents.

The landscape design of the Project's outdoor open space that is offered in this submission package is carefully considered to encourage the interaction of both the residents of the existing Admiral Halsey I and the proposed Admiral Halsey II. The existing gazebo and the existing maintenance building on the site are to be relocated in the new landscape design to provide for the open green space in the new plan. The new design features meandering walking paths, a newly designed and relocated gazebo, small planting beds, and a generous number of shade trees of several species to create a lush green space with visual interest. We feel that all of these revisions to the building noted above and the proposed landscape create a welcoming presence in the neighborhood and advance the feeling of community.

As well as the drawings presented here, we have also included with this package an updated long form EAF and an updated SEQR. The submission also includes the Preliminary Engineering Report. Therefore, we are submitting this amended application for Site Plan, Architectural, and Special Use Permit approval for the above referenced parcel at 135 Main Street. In addition to this, as requested by the Planning Board, we have also submitted the required six (6) sets of drawings to the Planning Board for departmental review.

In addition to the submission of the drawing package for the Project, an Architectural Review Work Session has been scheduled for December 6, 2021 with MASS Design Group, the city's design consultant.

Based on the above, we respectfully submit that the proposed Project is consistent with the neighborhood and is compliant with the City's site plan review considerations. We submit that the Planning Board should declare its intent to be the lead agency pursuant to SEQRA and commence coordinated review of the Project.

We look forward to working with the city in furtherance of the Project.

Respectfully,

TINKELMAN ARCHITECTURE

Anthony Juliano

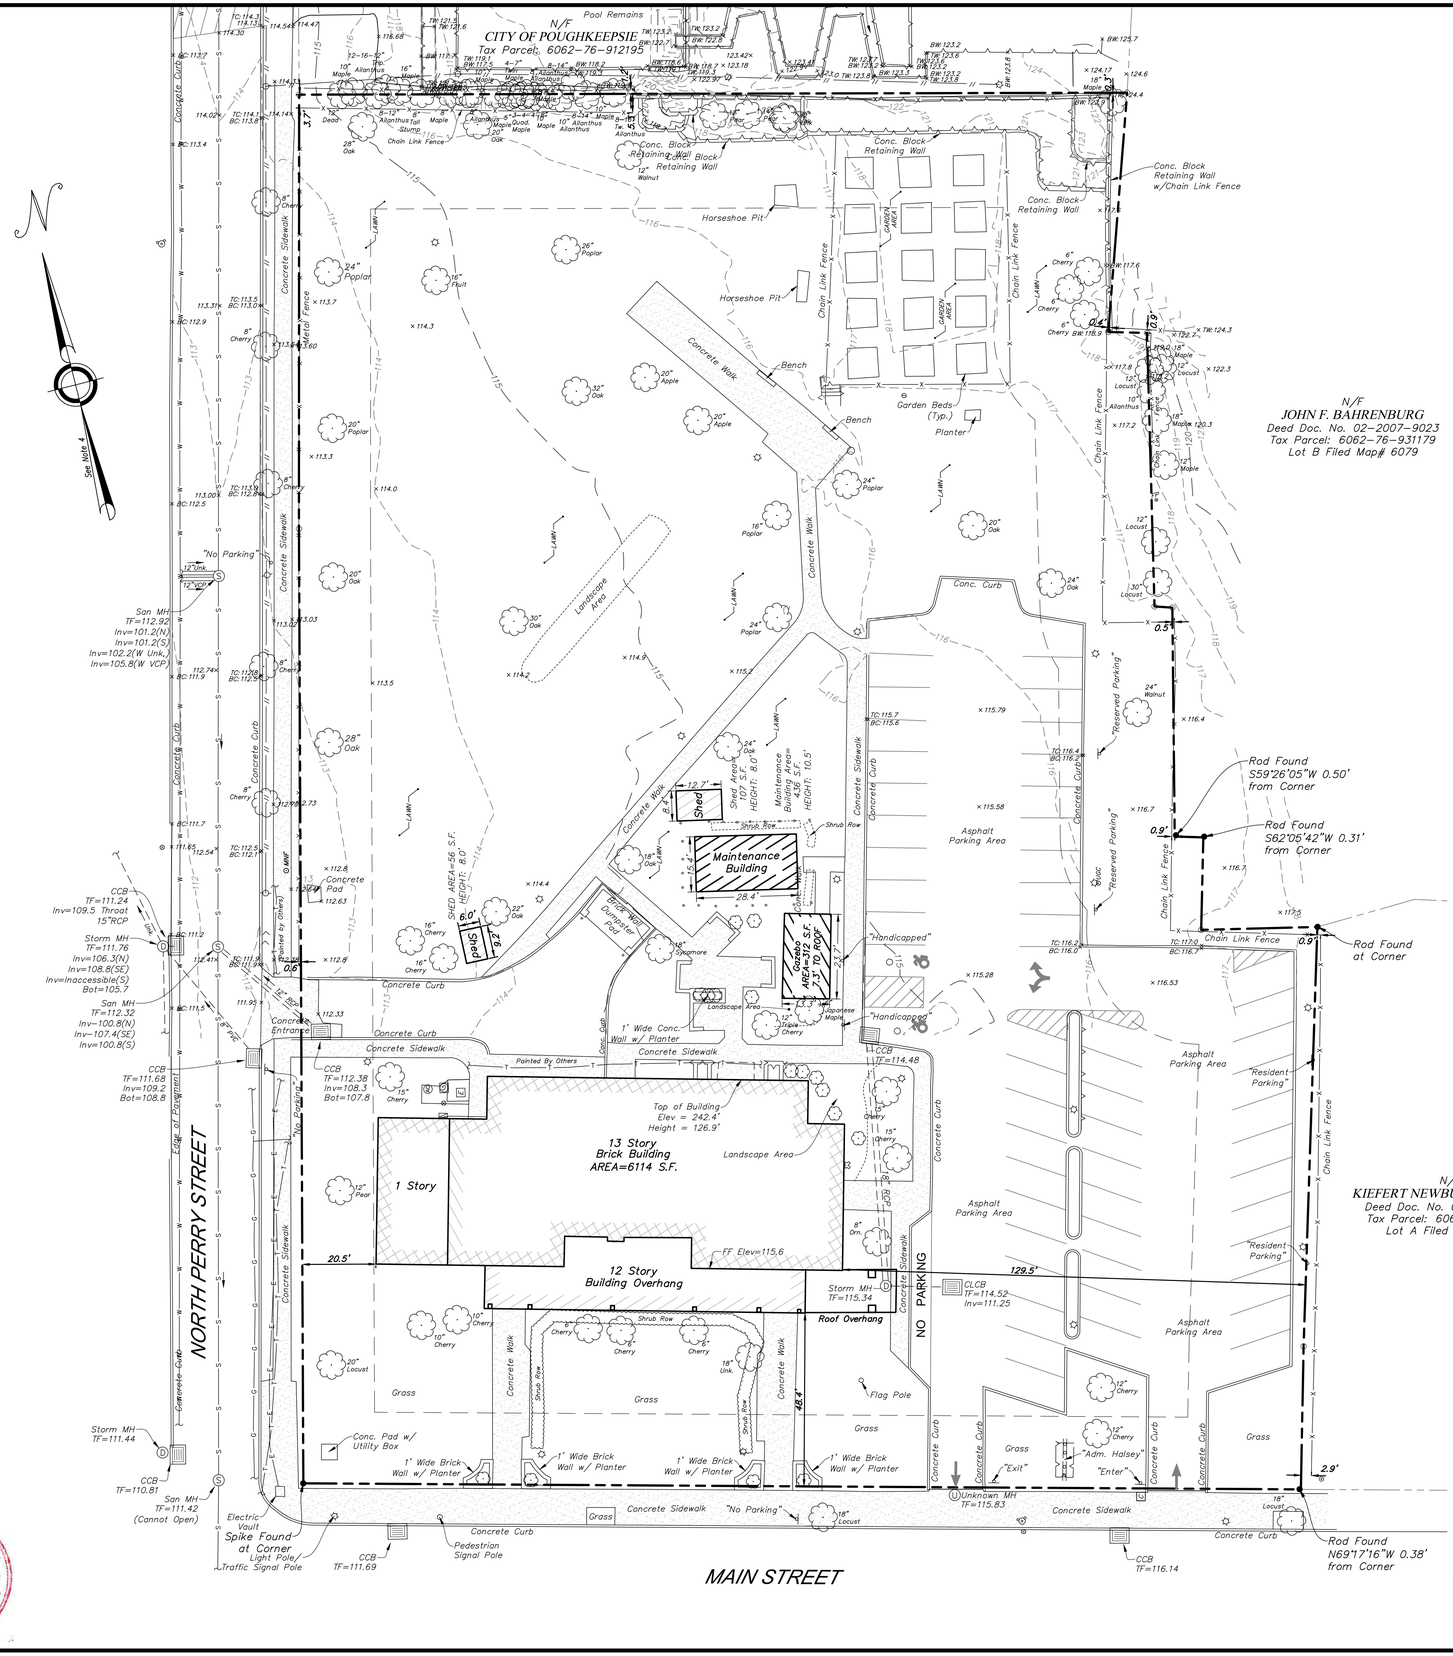
Map Notes

1. *Unauthorized alteration or addition to a survey map bearing a licensed land surveyor's seal is a violation of section 7209, sub–division 2, of the New York State Education Law.*
2. *Only copies from the original of this survey marked with an original of the land surveyor's seal shall be considered to be a true copy.*
3. *The above certification shall run only to the person for whom the survey is prepared , and on his behalf to the title company, governmental agency and lending institution. Certifications are not transferable to additional institutions or subsequent owners.*
4. *North Arrow & Bearings are referenced to the North American Datum of 1983 (NAD83) projected onto the New York State Plane East Zone based on field tie–in to map referenced in Note 7A.*
5. *Elevations & Contours are referenced to the North American Vertical Datum of 1988 (NAVD88) based on field tie–in to map referenced in Note 7A.*
6. *Field survey was completed on November 8, 2021.*
7. *Reference is made to the following maps:*
   A. *"ALTA/NSPS Land Title Survey Prepared for OMNI New York LLC, City of Poughkeepsie, County of Dutchess, New York", scale 1"=20', dated July 2, 2020, prepared by Chozen Engineering, Land Surveying & Landscape Architecture, Co., D.P.C.*
8. *Parcel is identified as Tax Section 6062, Block 76, Lot 911183 on the City of Poughkeepsie Assessor's Map.*
9. *Property is located in Zone "Other Areas – Zone X" (areas determined to be outside the 0.2% annual chance floodplain) as depicted on Flood Insurance Rate Map (FIRM) Panel 0358E, Dutchess County, New York, City of Poughkeepsie, Community Number 360222, Map Number 36027C0358E, effective date: May 2, 2012.*
10. *The subsurface utilities depicted hereon conform to the following Utility Quality Levels, as defined by the American Society of Civil Engineers (ASCE) in Document CI/ASCE 38–02 titled "Standard Guidelines for the Collection and Depiction of Existing Subsurface Utility Data":*
    - *Sanitary Sewer: QLC*
    - *Storm Sewer: QLC*
    - *Water: QLC and QLD*
    - *Natural Gas: QLC and QLD*
    - *Electric: QLC and QLD*
    - *Communications: QLC and QLD*

The subsurface utilities were compiled from parol evidence, record drawings, and surficial evidence located during the field survey. The Surveyor has not physically exposed the subsurface utilities, and makes no guarantee that the subsurface utilities depicted hereon comprise all such utilities within the surveyed area, either in service or abandoned. The Surveyor further does not warrant or guarantee that the subsurface utilities are in the exact location depicted, though they have been plotted, in accordance with the standard of care, from information available.



The contractor is required to utilize the local utility one call system prior to excavation for the purpose of verifying the subsurface utilities in the area.

Certification

I hereby declare this map to be prepared in accordance with the Code of Practice of the New York State Association of Land Surveyors, adopted October, 1996 and revised through July 18, 1997.

METHODS OF CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION (NYSDOT) STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED MAY 1, 2008, AND ALL ADDENDA THERETO

GRADING AND DRAINAGE NOTES

1. ALL EXISTING STRUCTURES NOTED TO BE REMOVED, FENCING, TREES, ETC., WITHIN CONSTRUCTION AREA SHALL BE REMOVED & DISPOSED OF OFF SITE. ANY BURNING ON SITE SHALL BE SUBJECT TO LOCAL ORDINANCES.
2. CONTRACTOR SHALL NOTIFY ALL UTILITY COMPANIES HAVING UNDERGROUND UTILITIES ON SITE OR IN RIGHT-OF-WAY PRIOR TO EXCAVATION. CONTRACTOR SHALL CONTACT UTILITY LOCATING COMPANY AND LOCATE ALL UTILITIES PRIOR TO GRADING START.
3. SITE GRADING SHALL NOT PROCEED UNTIL EROSION CONTROL MEASURES HAVE BEEN INSTALLED.

PLANTING NOTES:

1. THE LANDSCAPE PLAN AND RELATED DETAILS ARE FOR LANDSCAPING INFORMATION ONLY. PLEASE REFER TO THE SITE, GRADING & EROSION CONTROL PLANS FOR ALL OTHER INFORMATION.
2. THE CONTRACTOR SHALL GUARANTEE THAT ALL PLANTS, TREES, AND SHRUBS SHALL BE HEALTHY AND FREE OF DISEASE FOR A PERIOD OF ONE YEAR AFTER SUBSTANTIAL COMPLETION AND ACCEPTANCE BY OWNER OR LANDSCAPE ARCHITECT. CONTRACTOR SHALL REPLACE ANY DEAD OR UNHEALTHY PLANTS AT CONTRACTOR'S EXPENSE. PLANT MATERIAL REPLACEMENTS SHALL BE GUARANTEED FOR ONE FULL YEAR FROM DATE OF REPLACEMENT. FINAL ACCEPTANCE SHALL BE MADE IF ALL PLANTS MEET THE GUARANTEE REQUIREMENTS INCLUDING MAINTENANCE. MAINTENANCE RESPONSIBILITIES INCLUDE CULTIVATING, SPRAYING, WEEDING, WATERING, TIGHTENING GUYS, PRUNING, FERTILIZING, MULCHING, AND ANY OTHER OPERATIONS NECESSARY TO MAINTAIN PLANT VIABILITY. MAINTENANCE SHALL BEGIN IMMEDIATELY AFTER PLANTING AND CONTINUE UNTIL THE END OF THE ONE YEAR GUARANTEE PERIOD.
3. THE CONTRACTOR SHALL SUPPLY ALL LABOR, PLANTS, AND MATERIALS IN QUANTITIES SUFFICIENT TO COMPLETE THE WORK SHOWN ON THE DRAWINGS AND LISTED IN THE PLANT SCHEDULE. IN THE EVENT OF A DISCREPANCY BETWEEN QUANTITIES SHOWN IN THE PLANT SCHEDULE AND THOSE REQUIRED BY THE DRAWINGS, THE LARGER SHALL APPLY.
4. ALL SHRUB MASSINGS SHALL BE MULCHED TO A DEPTH OF 4" WITH SHREDDED HARDWOOD BARK MULCH.
5. NO PLANT SHALL BE PLACED IN THE GROUND BEFORE ROUGH GRADING HAS BEEN COMPLETED AND APPROVED BY ENGINEER. STAKING THE LOCATION OF ALL TREES AND SHRUBS SHALL BE COMPLETED PRIOR TO PLANTING FOR APPROVAL BY THE OWNER OR LANDSCAPE ARCHITECT. STAKING OF THE INSTALLED TREE MUST BE COMPLETED THE SAME DAY AS IT IS INSTALLED. ALL TREES SHALL BE STAKED OR GUYED PER DETAIL SEE THIS SHEET FOR PLANTING DETAILS.
6. COORDINATE PLANT MATERIAL LOCATIONS WITH SITE UTILITIES. SEE SITE LAYOUT, GRADING AND UTILITY DRAWINGS FOR STORM, SANITARY AND WATER LINES. SEE LIGHTING PLAN FOR ELECTRICAL AND LIGHTING LAYOUT AND DETAILS. UTILITY LOCATIONS ARE APPROXIMATE. EXERCISE CARE WHEN DIGGING IN AREAS OF POTENTIAL CONFLICT WITH UNDERGROUND OR OVERHEAD UTILITIES. THE CONTRACTOR IS RESPONSIBLE FOR ANY DAMAGE DUE TO CONTRACTOR'S NEGLIGENCE AND SHALL REPLACE OR REPAIR ANY DAMAGE AT CONTRACTOR'S EXPENSE.
7. LANDSCAPE PLANTING PITS MUST BE FREE DRAINING. PAVEMENT, COMPACTED SUBGRADE, AND BLASTED ROCK SHALL BE REMOVED FROM WITHIN TRAFFIC ISLANDS TO BE LANDSCAPED TO A DEPTH OF 2' OR TO A GREATER DEPTH IF REQUIRED BY PLANTING DETAILS OR SPECIFICATIONS. REPLACE SOIL WITHIN ISLANDS WITH MODERATELY COMPACTED LOAM OR SANDY LOAM FREE FROM STONES AND RUBBISH 1" OR GREATER IN DIAMETER AND ANY OTHER MATERIAL HARMFUL TO PLANT GROWTH AND DEVELOPMENT. PLANTING INSTALLATION WITHIN ISLANDS SHALL BE AS DETAILED AND CONTAIN PLANTING MIX AS SPECIFIED.
8. TIME OF PLANTING: NEW PLANT MATERIALS SHALL BE INSTALLED BETWEEN APRIL 1 AND JUNE 1, OR AFTER SEPTEMBER 15TH AND NO LATER THAN OCTOBER 31ST.
9. PLANTING SOIL MIXTURE FOR TREES AND SHRUBS:
   - 1 PART PEAT MOSS
   - 3 PARTS TOPSOIL
   - FERTILIZER/LIME (APPLY AS RECOMMENDED BY SOIL ANALYSIS)
   - MYCORHIZA INOCULANT – "TRANSPLANT 1-STEP" AS MANUFACTURED BY ROOTS, INC. OR APPROVED EQUAL.
     USE PER MANUFACTURER'S RECOMMENDATIONS FOR TREES AND SHRUBS.
10. TOPSOIL SHALL BE INSTALLED AT A MINIMUM DEPTH OF 6" IN LAWN AREAS. CONTRACTOR SHALL SUBMIT TOPSOIL TO A CERTIFIED TESTING LABORATORY TO DETERMINE pH, FERTILITY, ORGANIC CONTENT AND MECHANICAL COMPOSITION. THE CONTRACTOR SHALL SUBMIT THE TEST RESULTS FROM REGIONAL EXTENSION OFFICE OF USDA TO THE OWNER OR LANDSCAPE ARCHITECT FOR REVIEW AND APPROVAL. CONTRACTOR SHALL INCORPORATE AMENDMENTS FOR GOOD PLANT GROWTH AND PROPER SOIL ACIDITY RECOMMENDED FROM THE TOPSOIL TEST.
11. LAWN SEEDING MIXTURE (LOW-MOW):

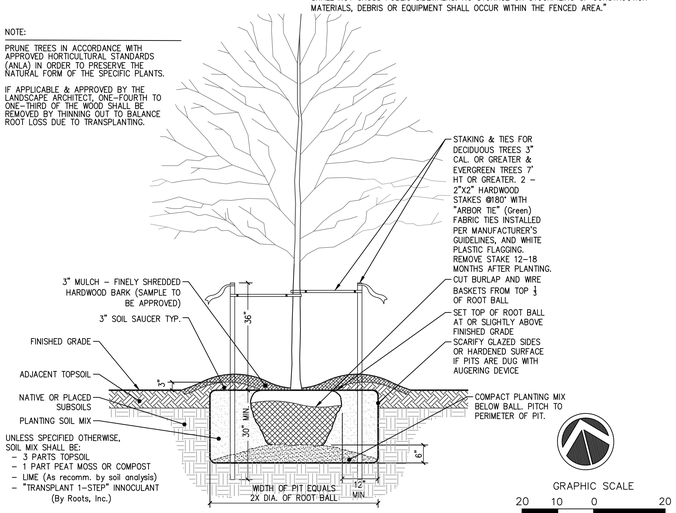
    15% KENTUCKY BLUEGRASS (POA PRATENSIS – SINGLE VARIETY)
    15% PERENNIAL RYEGRASS (LOLIUM PERENNE)
    30% CREEPING RED FESCUE (FESTUCA RUBRA)
    25% CHEWINGS FESCUE (FESCTUCA RUBRA "JAMESTOWN II")
    15% HARD FESCUE (FESTUCA OVINA "RELIANT II")

    SEEDING RATE: 4.5 LBS PER 1,000 S.F. (ADD 10% TO QUANTITY IF HYDROSEEDED).

    SEEDING DATES: AUGUST 15 – OCTOBER 1 AND APRIL 15 – JUNE 15 UNLESS OTHERWISE APPROVED BY THE OWNER OR LANDSCAPE ARCHITECT.
12. ALL SLOPES GREATER THAN 3:1 RECEIVING A GRASS SEEDING MIXTURE SHALL BE COVERED WITH AN EROSION CONTROL BLANKET.
13. ALL DISTURBED AREAS NOT OTHERWISE DEVELOPED SHALL BE SEEDED WITH THE LAWN SEEDING MIXTURE.
14. TREE PROTECTION: PRIOR TO THE START OF CONSTRUCTION OR EXCAVATION, TREES TO BE RETAINED SHALL BE PROTECTED BY SILT FENCE, SNOW FENCE, CONSTRUCTION FENCE, OR EQUAL, WHICH WILL BE PLACED AT THE DRIP LINE OR SEVERAL FEET BEYOND. HOWEVER, THE FENCING SHALL NOT CROSS PUBLIC SIDEWALKS. NO STORAGE OR STOCKPILING OF CONSTRUCTION MATERIALS, DEBRIS OR EQUIPMENT SHALL OCCUR WITHIN THE FENCED AREA."

2 SHRUB PLANTING DETAIL
SCALE: 1/2" = 1'-0"

SECTION THROUGH PERENNIAL BED



PERENNIAL NOTES:
1. BULB/CORM PERENNIALS TO BE PLANTED IN FALL. POTTED PERENNIALS MAY BE PLANTED APRIL 15 TO OCTOBER 1.
2. ROTOTILL FERTILIZER AND LIME INTO SOIL PRIOR TO PLANTING AND IN ACCORDANCE TO SOIL ANALYSIS RECOMMENDATIONS.
3. DO NOT OVER COMPACT PLANTING BED. WATER THOROUGHLY AFTER PLANTING BULBS.
4. ADJUST PLANTING DEPTH AS RECOMMENDED BY BULB SUPPLIER.
5. PROVIDE DRAINAGE AS REQUIRED (PERF PIPE 4" ADS) WHEN SUBGRADE IS CLASSIFIED AS A HEAVY SOIL OR EXCESSIVELY COMPACTED.

UNLESS SPECIFIED OTHERWISE, PERENNIAL BED SOIL MIX SHALL BE:
- 3 PARTS TOPSOIL
- 1 PART MANURE (WEED FREE)
- 1 PART PEAT MOSS OR COMPOST
- LIME (As recommended by soil analysis)
- "MILORGANITE" AT 5 LBS. PER 100 SF.

3 ANNUAL/PERENNIAL AND GROUND COVER BEDS DETAIL
SCALE: 1/2" = 1'-0"

NOTE:
PRUNE TREES IN ACCORDANCE WITH APPROVED HORTICULTURAL STANDARDS (ANLA) IN ORDER TO PRESERVE THE NATURAL FORM OF THE SPECIFIC PLANTS.

IF APPLICABLE & APPROVED BY THE LANDSCAPE ARCHITECT, ONE-FOURTH TO ONE-THIRD OF THE WOOD SHALL BE REMOVED BY THINNING OUT TO BALANCE ROOT LOSS DUE TO TRANSPLANTING.

NOTES:
1. Serviceable Components/ Qualified: Refer to www.designlights.org. Qualified Products List under Family Models for details.
2. Not for use with HSP.
3. Choose Drive Current "A" for Driver Option, which is provided at 350mA only.
4. Choose Drive Current "P1" for Driver Option, which is provided at 700mA only.
5. WFC=Not to be used on projects with Enlighted or Wireless controls systems.
6. Cannot be used in conjunction with other control options.
7. Enlighted wireless sensors are factory installed and require network commissioner in appropriate quantities.
8. Enlighted wireless sensors are factory installed and require network components in appropriate quantities.
9. Not available with SPD or CA.
10. Not available with DIM.
11. Not available with CAP or CAPT.
12. Requires 20 mA with CA or Dimming or 0-10V or DALI Driver.
13. Requires 20 mA with CA or Dimming or 0-10V or DALI Driver. Not available with Enlighted Sensors.
14. Requires Lighting Agreements or Enlight Lighting Options to be Act Compliant.
15. Not available with HSD.
16. Enlighted wireless sensors are factory installed and require network components in appropriate quantities.
17. Not available with Enlighted Sensors. Cannot be overlaid for field changes.
18. Not supply 120V with DTH.

Construction
- Heavy-wall, die-cast aluminum housing and removable hinged door frame
- Stainless steel and corrosion resistant fasteners offer vandal resistant access

Optics
- High-efficiency injection-molded AccuLED optics technology
- 10 optical distributions
- IDA Certified (3000K CCT and warmer only)

Electrical
- Standard with 0-10V dimming
- Utilizes "Hook-N-Lock" mounting solutions proprietary circuit module designed to withstand 10kV of transient line surge
- Suitable for operation in -40°C to 40°C ambient environments. Optional 50°C high ambient (HA) configuration.
- Suitable for operation in -40°C to 40°C ambient environments. Optional 50°C high ambient (HA) configuration.

Mounting
- Utilizes "Hook-N-Lock" mounting mechanism, securing to a gasketed and zinc plated mounting bracket
- Two black oxide coated Allen set screws concealed but accessible from below

Finish
- Super durable TGIC polyester powder coat paint, 2.5 mil nominal thickness
- RAL and custom color matches available
- Coastal Construction (CC) option available

Warranty
- Five year limited warranty, consult website for details. www.cooperlighting.com/legal

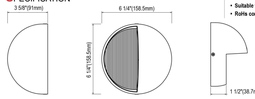
POULYNOE LED WALL LIGHT



Product Description

The Poulynoe wall light is designed in an architecture round shape and full cut-off design. It combines aluminium structure and glass lens in one integral beautiful streamlined shape. Suitable for both indoor and outdoor wall light application.

Electrical System
- Input voltage: 120V
- 50/60Hz
- Power Factor: >0.87
- Working Temperature: -13.95°F (-25.35°C)

This Photometric Plan has been submitted to and Approved by the City of Poughkeepsie, NY. For the protection of the City of Poughkeepsie, NY, the Owner and the Engineer of Record, this photometric performance is the basis of design. The design make fixture is the style/look and quality the owner has approved. If an alternate lighting package is submitted, a similar fixture in appearance and construction quality must be furnished. Additionally, the contractor shall provide a point-by-point lighting plan for approval with the submittal. The AGI32 (Third party Lighting Calculation Software by Lighting Analysts, Inc) file used to create the City of Poughkeepsie, NY approved point-by-point will be furnished for the contractors use. This will ensure a fair and equal comparison between the design make performance and any submitted alternate product. Failure to comply with this requirement will result in the return of the submittal as rejected.

NOTES:
1 Customer is responsible for engineering analysis to confirm pole and fixture compatibility for all applications. Refer to our white paper WPW1004EN, A Beacon of A Standard 400W CCT and minimum 70 CRI. A Not for use with reduced voltage or current during nighttime hours. Not for use with 2-circuiting. Not for use with step dimming. Not for use with 3rd party dimming controls. Not for use with Ecosystem. For use of an external step transformer when combined with sensor options. Not available with sensor or 7000K. Not available in combination with the HS high ambient sensor options or CE. B Only for use with 480V Wye systems. Per NEC, not for use with ungrounded systems, impedance grounded systems or corner grounded systems commonly known as Three Phase Three Wire Delta. Three Phase High Leg Delta and Single Phase Center Tap Grounded Neutral systems are examples of compatible systems. C Not available with 7000K. D Not available with 5000K or 7000K. E Not available with 3000K or 7000K. F Not available in High Current. G Not available with 7000K. H Not available with 5000K or 7000K. I Not available with 3000K or 5000K. J Not available with 7000K. K Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. L Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. M Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. N Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. O Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. P Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. Q Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. R Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. S Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. T Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. U Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. V Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. W Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. X Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. Y Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source. Z Not available with 3000K, 5000K and 6000K when performing dynamic Three Phase applications. Three Phase applications are those where the fixture is connected to all three phases of the incoming power source.

*Consult LumenRadio system pages for additional details and compatibility. Not available with 9-16 light square housing. Not available with 347V, 480V or high ambient options.

DESCRIPTION

The Galleonaire LED luminaire features advanced thermally conductive polymer heatsinks and open frame endcaps for a sleek aesthetic with superior weight reduction. Patented, high-efficiency AccuLED Optics™ systems provides uniform and energy conscious illumination to walkways, parking lots and roadways. Ideal for commercial security lighting applications. IP66 rated and UL/cUL Listed for wet locations.

SPECIFICATION FEATURES

Construction
Extruded aluminum driver enclosure thermally isolated from Light Squares for optimal heat dissipation. Integral tool-less frame die-cast aluminum end caps provide structural support for tile housing and heatsinks. Thermally conductive polymer heatsinks offer significant weight reduction while fully maintaining thermal management of the Light Squares. Die vibration tested and rated. Optional tool-less hardware available for ease of entry to electrical chamber. Housing is IP66 rated.

Optics
Efficient, high-efficiency injection-molded AccuLED Optics technology. Optics are precisely shaped to shape the distribution, maximizing efficiency and application spacing. AccuLED Optics create consistent application patterns, allowing for to meet customized application requirements. Offered standard in 4000K +/- 275K (CCT 70 CRI. Optional 2700K, 3000K, 5000K and 6000K CCT.

Electrical
LED drivers are mounted to removable tray assembly for ease of maintenance. 120-277V 50/60Hz, 347V, 480V 60Hz. Class 2 power factor >90% is compatible for use with 480V Wye systems only. Standard with 0-10V dimming. Shipped standard with Cooper Lighting Solutions integral surge protection module designed to withstand 10kV of transient line surge. The Galleonaire LED luminaire is suitable for operation in -40°C to 40°C ambient environments. Light Squares are IP66 rated. Greater than 90% lumen maintenance expected at 60,000 hours. Available in standard 1A drive current and optional 600mA and 800mA drive currents (nominal).

Mounting
STANDARD ARM MOUNT: Extruded aluminum arm includes internal bolt guides allowing for easy positioning of fixture during mounting. When mounting two or more luminaires at 90° and 120° apart, the EA extended arm may be required. Refer to the arm mounting requirement table. Round pole adapter included. For wall mounting, specify wall mount bracket option. QUICK MOUNT ARM: Adapter is bolted directly to the pole. Quick mount arm slide into place on the adapter and is secured with two screws, facilitating quick and easy installation. The versatile, patent pending, quick mount arm accommodates multiple drill patterns ranging from 3" to 4-7/8". Removal of the door on the quick mount arm enables wiring of the fixture without having to access the driver compartment. A knock-out enables round pole mounting.

Finish
Housing finished in super durable TGIC polyester powder coat paint, 2.5 mil nominal thickness for superior protection against fade and wear. Heat sink is dark gray, non-paintable. Standard housing colors include black, bronze, grey, white, dark platinum and graphite metallic. RAL and custom color matches available.

Warranty
Five-year warranty.

CITY OF POUGHKEEPSIE WATER NOTES

1. ALL WATER MAINS SHALL BE CEMENT LINED DUCTILE IRON PIPE, CLASS 52 PUSH-ON JOINT, UNLESS OTHERWISE SPECIFIED BY OR APPROVED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. JOINTING SHALL EMPLOY "MEGALUG" CONNECTIONS, FIELD LOCK GASKET, OR AS ALTERNATIVELY SPECIFIED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. ALL WATER PIPING CONSTRUCTION SHALL BE TO THE SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. WET TAP OF PUBLIC WATER SYSTEM SHALL BE APPROVED AND SUPERVISED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. TAPPING SLEEVE SHALL BE STAINLESS STEEL OR APPROVED EQUAL. ALL MAINLINE VALVES SHALL BE RESILIENT WEDGE OR APPROVED EQUAL.

2. THE WATER LINE MAY BE FLEXED WITHIN PIPE SPECIFICATIONS OR LAID DEEPER IN AREAS WHERE A CROSSING WITH A SANITARY LINE OCCURS, TO ACHIEVE THE REQUIRED 1.5' VERTICAL SEPARATION DISTANCE. IF THIS DISTANCE CANNOT BE REASONABLY ACHIEVED, THE CONTRACTOR SHALL USE PRESSURE RATED SANITARY PIPE OF EQUAL OR GREATER RATING THAN THE PRESSURE CLASS FOR THE WATER LINE.

3. MINIMUM VERTICAL SEPARATION BETWEEN WATER MAINS AND SEWER PIPE SHALL BE 18 INCHES MEASURED FROM THE OUTSIDE OF THE PIPES AT THE POINT OF CROSSING. ONE FULL STANDARD LAYING LENGTH OF WATER MAIN SHALL BE CENTERED UNDER OR OVER THE SEWER SO THAT BOTH JOINTS WILL BE AS FAR FROM THE SEWER LINE AS POSSIBLE. IN ADDITION, WHEN THE WATER MAIN PASSES UNDER A SEWER, ADEQUATE STRUCTURAL SUPPORT (COMPACTED SELECT FILL) SHALL BE PROVIDED FOR THE SEWER TO PREVENT EXCESSIVE DEFLECTION OF JOINTS AND SETTLING OF THE SEWER PIPE ON THE WATER MAIN. MINIMUM HORIZONTAL SEPARATION BETWEEN PARALLEL WATER MAINS AND SEWER PIPES (INCLUDING MANHOLES AND VAULTS) SHALL BE 10 FEET MEASURED FROM THE OUTSIDE OF THE PIPES, MANHOLES, OR VAULTS.

4. ALL WATER MAINS SHALL HAVE A MINIMUM OF (5) FIVE FEET OF COVER FROM THE TOP OF THE MAIN TO FINISHED GRADE. THE CONTRACTOR SHALL CHECK ALL FINISHED GRADE STAKES BEFORE TRENCHING TO ENSURE THAT ALL INSTALLED WATER MAINS WILL HAVE THE REQUIRED COVER.

5. THE SUPPLIER OF WATER MUST RECEIVE AT LEAST 48-HOUR ADVANCE NOTIFICATION REQUESTING SAMPLING SERVICES. SAMPLING WILL NOT BE PERFORMED PRIOR TO RECEIPT FROM A NEW YORK STATE LICENSED OR REGISTERED DESIGN PROFESSIONAL (ENGINEER, ARCHITECT, OR LAND SURVEYOR WITH A SPECIAL EXEMPTION UNDER SECTION 7208(N) OF THE EDUCATION LAW) CERTIFYING THAT THE WATER SUPPLY IMPROVEMENTS, TESTING AND DISINFECTION PROCEDURES WERE COMPLETED IN ACCORDANCE WITH THE APPROVED PLANS, REPORTS, SPECIFICATIONS, AND ANY APPROVED AMENDMENTS. A NYSDOH CERTIFIED LABORATORY WILL COLLECT SAMPLES FOR FREE CHLORINE RESIDUAL, TOTAL, AND FECAL COLIFORM AND 24-HOUR BACTERIAL PLATE COUNT. THE CERTIFICATE OF COMPLIANCE, TESTING, AND SAMPLING RESULTS SHALL BE PROVIDED TO THE CITY WATER MAINTENANCE SUPERVISOR AND DUTCHESS COUNTY DEPARTMENT OF HEALTH AS A CONDITION OF APPROVAL FOR OPERATION.

6. THE CONTRACTOR SHALL COORDINATE THE TESTING WITH THE WATER DEPARTMENT SO AS TO MAINTAIN THE AMOUNT OF SERVICE INTERRUPTION TO EXISTING USERS TO THE LEAST EXTENT PRACTICABLE. WATER MAIN INSTALLATION AND TESTING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE PROJECT ENGINEER OR HIS DESIGNEE AS NECESSARY TO MEET CONDITIONS IN NOTE 5 ABOVE.

7. THE WATER MAIN SHALL BE PRESSURE LEAKAGE TESTED IN ACCORDANCE WITH THE MINIMUM REQUIREMENTS OF THE AWWA STANDARD C600 (LATEST REVISION) OR IN ACCORDANCE WITH MORE STRINGENT REQUIREMENTS IMPOSED BY THE SUPPLIER OF WATER. TEST TO FIRST VALVE WITHIN BUILDING.

8. THE WATER MAIN SHALL BE DISINFECTED EQUAL TO AWWA STANDARD FOR DISINFECTING WATER MAINS DESIGNATION C651 (LATEST REVISION). FOLLOWING DISINFECTION, THE WATER MAIN SHALL BE FLUSHED UNTIL THE CHLORINE CONCENTRATION IN THE WATER LEAVING THE MAIN IS NO HIGHER THAN THAT GENERALLY PREVAILING IN THE SYSTEM. THE PROJECT ENGINEER OR HIS DESIGNEE SHALL ALSO WITNESS DISINFECTION AND FLUSHING.

9. ALL WATER MAIN FITTINGS NOT RECEIVING 24-HOUR CHLORINE DISINFECTION CONTACT TIME MUST BE SWAB-DISINFECTED 30 MINUTES PRIOR TO INSTALLATION.

10. THE SAMPLING POINT(S) MUST BE DECONTAMINATED BY FLAMING.

11. FIRE HYDRANTS ARE NOT ACCEPTABLE SAMPLING POINTS, UNLESS OTHERWISE APPROVED BY SITE ENGINEER AND CITY OF POUGHKEEPSIE WATER DEPARTMENT.

12. FIRE HYDRANT WEEP HOLES (DRAINS) SHALL BE PLUGGED WHEN GROUND WATER IS ENCOUNTERED WITHIN SEVEN FEET OF THE FINISHED GRADE. WHEN DRAINS ARE PLUGGED, THE BARRELS MUST BE PUMPED DRY AFTER USE DURING FREEZING WEATHER. SUCH HYDRANTS SHALL BE IDENTIFIED BY MARKINGS AS APPROVED BY THE CITY OF POUGHKEEPSIE.

13. PROPOSED WATER METERS LOCATED WITHIN THE METER PIT OR BUILDING SHALL BE A COMPATIBLE REMOTE STYLE TYPE (SENSUS), AND SHALL BE APPROVED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT PRIOR TO INSTALLATION. WATER METER SHALL BE EQUIPPED WITH (RADIO TYPE REMOTE READER) TRANSCEIVER PROVIDED BY METER MANUFACTURER AND INSTALLED AND PROGRAMMED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT.

14. THE WATER LINE SHALL BE INSTALLED AT A CONTINUOUS GRADE WITH NO ABRUPT HIGH POINTS OR LOW POINTS.

15. FINAL WATER DISTRIBUTION SYSTEM AND CERTIFICATION IS SUBJECT TO REVIEW, REVISION AND APPROVAL BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT AND THE DCDOH PRIOR TO APPROVAL TO OPERATE.

16. ALL WATER MAINS AND RELATED APPURTENANCES SHALL BE CONSTRUCTED TO THE LATEST STANDARDS AND SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE.

17. THE WATER MAIN SHALL NOT BE PLACED INTO SERVICE UNTIL SO AUTHORIZED BY THE CITY OF POUGHKEEPSIE.

18. ALL WATER SERVICE CONSTRUCTION SHALL BE SUBJECT TO INSPECTION BY THE CITY WATER DEPARTMENT PRIOR TO BACKFILLING. BEDDING AND PIPE ZONE MATERIAL SHALL BE COMPOSED OF CRUSHED STONE OR LIGHT GRAVEL HAVING A GRADATION LIMIT OF 3/4" MINUS. AN ACCEPTABLE MATERIAL SHALL MEET THE FOLLOWING REQUIREMENT:

SIEVE DESIGNATION	% PASSING
3/4"	100
NO.40	0-70
NO. 200	0-10

19. TRENCH BACKFILL SHALL BE WELL-GRADED SOIL AND GRAVEL MATERIAL. ALL PARTICLES SHALL HAVE A GRADATION OF 2" OR LESS. AN ACCEPTABLE MATERIAL SHALL MEET THE FOLLOWING REQUIREMENT:

SIEVE DESIGNATION	% PASSING
2 INCH	100
1/4 INCH	30-65
NO. 40	5-40
NO. 200	0-15

20. BEDDING AND BACKFILL MATERIAL SHALL BE STOCKPILED IN AMOUNTS NECESSARY FOR REASONABLE BACKFILLING REQUIREMENTS. A SIEVE ANALYSIS OF BEDDING OR BACKFILL MAY BE REQUIRED AT THE REQUEST OF THE CITY OF POUGHKEEPSIE.

21. THE SITE UTILITY CONTRACTOR SHALL BE RESPONSIBLE FOR ALL BURIED PIPING TO THE LOCATION OF THE PROPOSED BUILDING CONNECTION POINT (I.E. INSIDE THE BUILDING). THIS INCLUDES THE TESTING AND CERTIFICATION OF ALL WATER SERVICE WORK FROM THE CITY WATER CONNECTION POINT TO THE PROPOSED BUILDINGS INTERIOR CONNECTION POINT.

22. INDICATOR TAPE SHALL BE PLACED 12" BELOW FINISHED GRADE DIRECTLY ABOVE ALL WATERLINES.

23. ALL COPPER WATER SERVICE PIPING INSTALLATION, BACKFILL AND TESTING SHALL BE REVIEWED AND APPROVED BY THE CITY OF POUGHKEEPSIE WATER MAINTENANCE SUPERVISOR OR HIS DESIGNEE. BEDDING, PIPE ZONE, AND BACKFILL MATERIAL MUST BE SAND ONLY.

24. THE PIPE SUPPORTS FOR THE METER PIT SHALL BE MADE OF GALVANIZED STEEL AND SHALL BE ADJUSTABLE. THE SUPPORTS ARE TO BE PLACED ONLY BENEATH SPOOL PIECES AND NOT UNDER CRITICAL EQUIPMENT, METERS, ETC.

25. THREE AS-BIULT DRAWINGS WHICH INCLUDE VERIFICATION OF THE WATER INFRASTRUCTURE WILL BE PROVIDED TO THE PLANNING DEPARTMENT FOR DISSEMINATION TO THE ENGINEERING AND WATER DEPARTMENTS PRIOR TO ANY EASEMENT DEDICATION TO THE CITY.

CITY OF POUGHKEEPSIE SANITARY SEWER NOTES

1. FLOOR DRAINS, IF CONSTRUCTED, SHALL BE CONNECTED TO THE SANITARY SEWER. FLOOR DRAINS DO NOT INCLUDE FOUNDATION/FOOTER DRAIN: ALL DISCHARGES TO THE SANITARY SEWER SHALL COMPLY WITH THE EFFLUENT LIMITS OF THE LOCAL AND/OR DUTCHESS COUNTY SANITARY CODE.

2. DEFLECTION TESTS SHALL BE PERFORMED ON ALL FLEXIBLE PIPES. THE TESTS SHALL BE CONDUCTED AFTER FINAL BACKFILL HAS BEEN IN PLACE AT LEAST 5 DAYS. NO PIPE SHALL EXCEED A DEFLECTION OF 5%. IF THE DEFLECTION TEST IS TO BE RUN USING A RIGID BALL OR MANDREL, IT SHALL HAVE A DIAMETER EQUAL TO 95% OF THE INSIDE DIAMETER OF THE PIPE. THE TEST SHALL BE PERFORMED WITHOUT MECHANICAL PULLING DEVICES.

3. SANITARY SEWERS AND APPURTENANCES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE LATEST STANDARDS AND SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE. ALL SANITARY SEWER SYSTEM COMPONENTS SHALL BE INSTALLED BY OR UNDER THE SUPERVISION OF A CITY OF POUGHKEEPSIE LICENSED PLUMBER IN ACCORDANCE WITH THE CITY PLUMBING CODE.

4. MAJOR EARTHWORK SHALL BE COMPLETED PRIOR TO INSTALLATION OF ANY SANITARY SEWER MAINS AND APPURTENANCES. AIR CONNECTING SEWER LINES SHALL BE FLUSHED BEFORE TESTED.

5. MAXIMUM ALLOWABLE INFILTRATION OR EXFILTRATION SHALL NOT EXCEED 100 GALLONS PER INCH DIAMETER PER MILE OF PIPE PER DAY FOR THE SANITARY SEWER. IF AN AIR TEST IS USED, THE TEST, AS A MINIMUM, SHALL CONFORM TO THE PROCEDURE DESCRIBED IN THE ASTM -F-1417 (1992) ENTITLED "STANDARD PRACTICE FOR INSTALLATION ACCEPTANCE OF GRAVITY SEWER LINES USING LOW PRESSURE AIR" (RE-APPROVED 1998). SANITARY MANHOLES SHALL BE VISUALLY INSPECTED AND TESTED FOR LEAKAGE BY EXFILTRATION OR VACUUM. VACUUM TESTING OF MANHOLES SHALL COMPLY WITH THE METHOD OUTLINED IN THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION TECHNICAL INFORMATION PAMPHLET (TIP) NO.15 (REVISED).

6. SANITARY SEWER MAINS ARE TO BE POLYVINYL CHLORIDE (PVC) AND SANITARY LATERALS SHALL BE PVC, SDR-35, UNLESS OTHERWISE NOTED.

7. FINAL SEWER COLLECTION SYSTEM LAYOUT IS SUBJECT TO REVIEW, REVISION AND APPROVAL BY THE CITY OF POUGHKEEPSIE SEWER DEPARTMENT.

8. ALL SANITARY PIPE AND/OR MANHOLES SHALL BE A MINIMUM OF TEN (10) HORIZONTAL FEET FROM THE WATER MAIN; SANITARY PIPE SHALL HAVE A MINIMUM 18" SEPARATION FROM ANY WATER MAIN OR WATER SERVICE LINE. IF FOR SOME REASON THIS SEPARATION CANNOT BE ACHIEVED, SANITARY SEWER PIPE IN THE AREA SHALL BE SDR-26 PRESSURE RATED PIPE, (OR BE ENCASED PER THE DETAIL ON DN-3) AND ONE FULL LENGTH OF WATER MAIN SHALL BE CENTERED UNDER OR OVER THE SEWER. ALL SANITARY SEWER CONSTRUCTION SHALL BE TO SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE SEWER DEPARTMENT.

9. ALL SANITARY TESTING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE PROJECT ENGINEER, AND CERTIFICATES OF COMPLIANCE WITH THE INSTALLATION SPECIFICATIONS, TEST STANDARDS, APPROVED PLANS OR APPROVED AMENDMENTS SHALL BE PROVIDED TO THE APPROPRIATE SEWER AUTHORITY AND THE DCDOH AS A CONDITION OF APPROVAL FOR OPERATION.

10. ALL SANITARY SEWER CONSTRUCTION SHALL BE SUBJECT TO INSPECTION BY THE CITY SEWER SUPERINTENDENT PRIOR TO BACKFILLING. PIPE BEDDING AND PIPE ZONE MATERIAL SHALL BE COMPOSED OF CRUSHED STONE OR GRAVEL, FREE OF SOFT NONDURABLE PARTICLES WITH THE FOLLOWING GRADATION REQUIREMENTS:

SIEVE DESIGNATION	% PASSING
3/4"	100
NO.40	0-70
NO. 200	0-10

ALL TRENCH BACKFILL MATERIAL SHALL BE APPROVED BY THE SUPERINTENDENT OF SEWERS AND MUST MEET THE FOLLOWING GRADATION REQUIREMENT:

SIEVE DESIGNATION	% PASSING
2 INCH	100
1/4 INCH	30-65
NO.40	5-40
NO. 200	0-15

BEDDING AND BACKFILL MATERIAL SHALL BE STOCKPILED IN AMOUNTS NECESSARY FOR REASONABLE BACKFILLING REQUIREMENTS. A SIEVE ANALYSIS OF BEDDING OR BACKFILL MAY BE REQUIRED AT THE REQUEST OF THE CITY OF POUGHKEEPSIE.

11. ALL NEW SANITARY SEWER MANHOLE COVERS SHALL BE NOMINAL 26" DIAMETER CAST IRON AND SHALL READ "SANITARY SEWER". FRAMES SHALL BE 8" IN HEIGHT AND THE FRAME AND COVER SHALL BE SYRACUSE CASTINGS NO.1 009 OR AN APPROVED EQUAL.

12. INDICATOR TAPE SHALL BE PLACED 12" BELOW FINISHED GRADE DIRECTLY ABOVE ALL SANITARY LINES.

13. LOCATION OF SEWER LATERAL CLEAN OUTS ARE TO BE PLACED AS SHOWN ON THE APPROVED SITE PLAN AND NOT TO EXCEED EVERY 75' MEASURED FROM THE SEWER MAIN CONNECTION OR AS DETERMINED BY THE CITY OF POUGHKEEPSIE SUPERINTENDENT OF SEWERS WHERE LOCATIONS ARE NOT SPECIFICALLY SHOWN.

14. EXTERNAL DROP MANHOLES SHALL BE USED FOR SEWERS ENTERING AT AN ELEVATION OF 24 INCHES OR HIGHER AT THE INLET OF A SEWER MANHOLE.

15. THREE AS-BUILT DRAWINGS WHICH INCLUDE VERIFICATION OF THE SEWER INFRASTRUCTURE INCLUDING RIMS AND INVERTS WILL BE PROVIDED TO THE PLANNING DEPARTMENT FOR DISSEMINATION TO THE ENGINEERING AND SEWER DEPARTMENTS PRIOR TO ANY EASEMENT DEDICATION TO THE CITY.

DECOMPACTION OF SOILS IN RECLAIMED AREAS:

THESE PROCEDURES SHALL BE FOLLOWED PRIOR TO INSTALLATION OF TOP SOIL OR INFILTRATION PRACTICES IN ANY AREA PREVIOUSLY IMPERVIOUS OR COMPACTED BY COSTRUCTION EQUIPMENT. FOR ALL AREAS TO BE RECLAIMED FOR STORMWATER INFILTRATION, THE AREA SHALL BE MARKED OFF WITH ORANGE SAFETY FENCE AFTER DEMOLITION AND PRIOR TO DECOMPACTION TO PREVENT FURTHER COMPACTION OF THE UNDERLYING SOILS.

AREAS RECLAIMED AS TOP SOIL:

A. APPLY 3" OF COMPOST OVER SUBSOIL AFTER SUBGRADE LEVELS HAVE BEEN REACHED AND IMMEDIATELY PRIOR TO PLACING PLANTING SOILS.

B. THE ENTIRE SUBGRADE AREA SHALL BE LOOSENED TO A MINIMUM DEPTH OF 12 INCHES UTILIZING THE BUCKET OF A BACK HOE, CAT MOUNTED RIPPER, TILLER, OR EQUIVALENT EQUIPMENT. ROCK PICK UNTIL UPLIFTED STONE/ROCK MATERIAL OF FOUR INCHES AND LARGER SIZE HAVE BEEN CLEARED FROM THE SITE.

C. ANY SUBGRADE AREAS WHICH HAVE BECOME HEAVILY COMPACTED (DEFINED AS EXCEEDING 86%-88% COMPACTION ASTM 698 STANDARD PROCTOR) INCLUDING, BUT NOT LIMITED TO, TEMPORARY PARKING AREAS, MATERIAL STOCKPILE AREAS, TEMPORARY ROADWAYS, CONSTRUCTION AREAS AND AREAS AROUND THE BUILDING, OTHER CONSTRUCTION AREAS, AREAS SHOWN ON THE PLANS, OR AREAS IDENTIFIED BY THE DESIGN PROFESSIONAL SHALL BE DEEP-SCARIFIED. IMMEDIATELY PRIOR TO PLACING SOILS, HEAVILY COMPACTED AREAS SHALL BE LOOSENED TO A MINIMUM DEPTH OF 18 INCHES USING THE TEETH OF A BACK HOE OR OTHER SUITABLE EQUIPMENT. FREQUENCY OF COMPACTION TESTS SHALL BE ONE PER 500 SQUARE FEET.

D. CONFIRM THAT THE SUBGRADE IS AT THE PROPER ELEVATION AND THAT NO FURTHER EARTHWORK IS REQUIRED TO BRING THE SUBGRADE TO PROPER ELEVATIONS. PROVIDE A REPORT TO THE DESIGN PROFESSIONAL THAT THE SUBGRADE HAS BEEN PLACED TO THE REQUIRED ELEVATIONS, HAS BEEN DECOMPACTED ACCORDING TO THE CONTRACT DOCUMENTS AND IS READY FOR INSPECTION AT LEAST 3 DAYS PRIOR TO PLACING PLANTING SOIL. PERFORM NO WORK OF PLACING AND SPREADING PLANTING MIXED UNTIL ELEVATIONS HAVE BEEN CONFIRMED AND THE AREA HAS BEEN ACCEPTED BY THE OWNER'S REPRESENTATIVE.

E. AFTER THE SOILS HAVE BEEN LOOSENED AND INSPECTED, TOPSOIL MAY BE SPREAD BY USING A WIDE-TRACK BULLDOZER SIZE D-5 OR SMALLER OR MAY BE DUMPED AND SPREAD WITH THE BUCKET OF A BACKHOE FROM THE EDGE OF THE LOOSENED AREA. NO RUBBER-TIRED EQUIPMENT OR HEAVY EQUIPMENT EXCEPT FOR A SMALL BULLDOZER SHALL PASS OVER THE SUBSOILS (SUBGRADE) AFTER THEY HAVE BEEN LOOSENED. IF THE CONTRACTOR PLANS TO UTILIZE SUCH AREAS FOR ANY USE OF HEAVY EQUIPMENT, THIS SHOULD BE CARRIED OUT PRIOR TO BEGINNING THE PROCESS OF LOOSENING SOILS OR FILLING IN THAT AREA, OR IT WILL HAVE TO BE RESCARIFIED AND MEET THIS SPECIFICATION REQUIREMENT.

AREAS RECLAIMED FOR STORMWATER INFILTRATION PRACTICES:

A. EXCAVATE AREA TO THE DEPTH OF THE PROPOSED BOTTOM OF THE INFILTRATION PRACTICE.

B. THE ENTIRE SUBGRADE AREA SHALL BE LOOSENED TO A MINIMUM DEPTH OF 12 INCHES BELOW PROPOSED SUBGRADE UTILIZING THE BUCKET OF A BACK HOE, CAT MOUNTED RIPPER, TILLER, OR EQUIVALENT EQUIPMENT. ROCK PICK UNTIL UPLIFTED STONE/ROCK MATERIAL OF FOUR INCHES AND LARGER SIZE HAVE BEEN CLEARED FROM THE SITE.

C. ANY SUBGRADE AREAS WHICH REMAIN HEAVILY COMPACTED (DEFINED AS EXCEEDING 86%-88% COMPACTION ASTM 698 STANDARD PROCTOR), AS SHOWN ON THE PLANS, OR AREAS IDENTIFIED BY THE DESIGN PROFESSIONAL SHALL BE DEEP-SCARIFIED. IMMEDIATELY PRIOR TO PLACING SOILS, HEAVILY COMPACTED AREAS SHALL BE LOOSENED TO A MINIMUM DEPTH OF 18 INCHES USING THE TEETH OF A BACK HOE OR OTHER SUITABLE EQUIPMENT. FREQUENCY OF COMPACTION TESTS SHALL BE ONE PER 500 SQUARE FEET.

D. CONFIRM THAT THE SUBGRADE IS AT THE PROPER ELEVATION AND THAT NO FURTHER EARTHWORK IS REQUIRED TO BRING THE SUBGRADE TO PROPER ELEVATIONS. PROVIDE A REPORT TO THE DESIGN PROFESSIONAL THAT THE SUBGRADE HAS BEEN PLACED TO THE REQUIRED ELEVATIONS, HAS BEEN DECOMPACTED ACCORDING TO THE CONTRACT DOCUMENTS AND IS READY FOR INSPECTION AT LEAST 3 DAYS PRIOR TO PLACING INFILTRATION PRACTICES. PERFORM NO WORK UNTIL ELEVATIONS HAVE BEEN CONFIRMED AND THE AREA HAS BEEN ACCEPTED BY THE OWNER'S REPRESENTATIVE.

E. AFTER THE SOILS HAVE BEEN LOOSENED AND INSPECTED, INFILTRATION PRACTICES MAY BE INSTALLED USING A WIDE-TRACK BULLDOZER SIZE D-5 OR SMALLER OR MAY BE PLACED, DUMPED, OR SPREAD WITH THE BUCKET OF A BACKHOE FROM THE EDGE OF THE LOOSENED AREA. NO RUBBER-TIRED EQUIPMENT OR HEAVY EQUIPMENT EXCEPT FOR A SMALL BULLDOZER SHALL PASS OVER THE SUBSOILS (SUBGRADE) AFTER THEY HAVE BEEN LOOSENED. IF THE CONTRACTOR PLANS TO UTILIZE SUCH AREAS FOR ANY USE OF HEAVY EQUIPMENT, THIS SHOULD BE CARRIED OUT PRIOR TO BEGINNING THE PROCESS OF LOOSENING SOILS OR FILLING IN THAT AREA, OR IT WILL HAVE TO BE RESCARIFIED AND MEET THIS SPECIFICATION REQUIREMENT.

F. WHEN INFILTRATION PRACTICES ARE LOCATED BELOW PAVEMENT THE AREA SHALL REMAIN FREE OF LARGE VEHICLES UNTIL THE PAVEMENT SUBBASE HAS BEEN INSTALLED.

G. FOR REFERENCE OF DECOMPACTION NOTES, SEE NYS DESIGN MANUAL SECTION 5.1.6 FOR DEEP RIPPING AND DECOMPACTION OF EXISTING AREAS THAT ARE PROPOSED FOR RESTORATION.

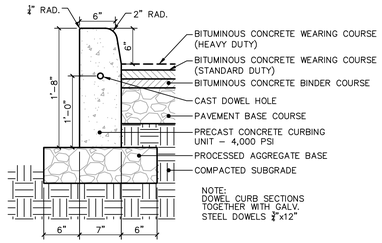
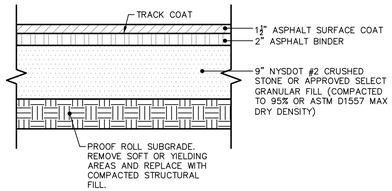
NOTES:



1. THE DETAILS PROVIDED ARE NOT DRAWN TO SCALE, THE QUANTITY OF DOMES DEPICTED ON THE DETECTABLE WARNING UNIT (THE DOMES AND THE ENTIRE 24" LEVEL SURFACE) IS FOR ILLUSTRATION ONLY.
2. THE SIZE OF THE DETECTABLE WARNING FIELD SHALL BE 24" IN THE DIRECTION OF TRAVEL AND SHALL EXTEND THE FULL WIDTH OF THE CURB RAMP OR FLUSH SURFACE.
3. THE ROWS OF DOMES SHALL BE ALIGNED TO BE PERPENDICULAR OR RADIAL TO THE GRADE BREAK BETWEEN THE RAMP LANDING OR CURB RAMP AND THE STREET.
4. WHERE DOMES ARE ARRAYED RADIALLY THEY MAY DIFFER IN DOME DIAMETER AND CENTER–TO– CENTER SPACING WITHIN THE RANGES SPECIFIED ON THIS SHEET.
5. THE DETECTABLE WARNING FIELD SHALL BE THE COLOR SPECIFIED IN THE CONTRACT DOCUMENTS OR MEET THE REQUIREMENTS OF THE STANDARD SPECIFICATIONS.
6. DETECTABLE WARNING SHALL BE LOCATED SO THAT THE EDGE OR CORNER OF THE WARNING FIELD NEAREST TO THE ROADWAY IS 5" TO 9" FROM THE FRONT OF THE CURB OR THE ROADWAY EDGE (12" WHERE TRAVERSABLE CURB IS USED). INSTALL THE DETECTABLE WARNING FIELD BEHIND THE FLUSH CURB.
7. THE EDGE OF THE DETECTABLE WARNING FIELD NEAREST TO A RAILROAD CROSSING SHALL BE 6'–0" MINIMUM AND 15'–0" MAXIMUM FROM THE CENTERLINE OF THE NEAREST RAIL.

DETECTABLE WARNING TILE SPECS



"DURALAST" CAST IRON WARNING TILES AS FABRICATED BY EAST JORDAN IRON WORKS, 800–626–4653; NATURAL FINISH (NO POWDER COATING)

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Applicant/Sponsor Information.

Name of Action or Project: Admiral Halsey II - Affordable Housing Building		
Project Location (describe, and attach a general location map): 135 Main Street, Poughkeepsie, NY		
Brief Description of Proposed Action (include purpose or need): Omni New York LLC ("Omni") is proposing to construct an affordable housing building with 72 income restricted units (efficiency and one-bedroom) for seniors (the "Project") on property located at 135 Main Street, Poughkeepsie, New York 12601 (the "Property"). The Property is currently improved with an existing high-rise affordable housing building (Admiral Halsey I). Omni proposes to subdivide the Property into two (2) lots to permit the development. Subdivided Lot 1 will be 40,656.67 square feet (0.933 acres) and contain the existing 86,745 square foot building. Subdivided Lot 2 will be 58,899.04 square feet (1.35 acres) and contain the proposed new 4-5 story 61,286 square foot building. The subject property is located in an R6 zoning district.		
Name of Applicant/Sponsor: Ken Spillberg - SVP of Development, Omni New York LLC	Telephone: (646) 502-7197 E-Mail: kspillberg@onyllc.com	
Address: 909 3rd Ave, 21st floor		
City/PO: New York	State: NY	Zip Code: 10022
Project Contact (if not same as sponsor; give name and title/role): Etan Hindin - Senior Project and Account Manager, Hillmann Consulting, LLC	Telephone: (908) 688-7800 x237 E-Mail: ehindin@hillmannconsulting.com	
Address: 1600 Route 22 East		
City/PO: Union	State: NJ	Zip Code: 07083
Property Owner (if not same as sponsor): Admiral Halsey Apartments Inc. (affiliate of Omni New York LLC)	Telephone: (646) 502-7197 E-Mail: kspillberg@onyllc.com	
Address: 909 Third Ave, 21st Floor		
City/PO: New York	State: NY	Zip Code: 10022

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

Government Entity	If Yes: Identify Agency and Approval(s) Required	Application Date (Actual or projected)
a. City Counsel, Town Board, or Village Board of Trustees ☐Yes ☐No		
b. City, Town or Village Planning Board or Commission ☑Yes ☐No	City of Poughkeepsie	9/21/2021, 10/19/2021, 12/21/2021
c. City, Town or Village Zoning Board of Appeals ☑Yes ☐No	City of Poughkeepsie	1/11/2022
d. Other local agencies ☐Yes ☐No		
e. County agencies ☐Yes ☐No		
f. Regional agencies ☐Yes ☐No		
g. State agencies ☑Yes ☐No	NYSDEC	TBD
h. Federal agencies ☐Yes ☐No		

i. Coastal Resources.

i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☑Yes ☐No

ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes ☑No

iii. Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes ☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes ☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☐Yes ☑No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway; Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☐Yes ☑No

If Yes, identify the plan(s):

_____

_____

_____

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No

If Yes, identify the plan(s):

_____

_____

_____

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
R6

b. Is the use permitted or allowed by a special or conditional use permit? ☑ Yes ☐ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
i. What is the proposed new zoning for the site?

C.4. Existing community services.

a. In what school district is the project site located? Poughkeepsie City School District

b. What police or other public protection forces serve the project site?
City of Poughkeepsie Police Department

c. Which fire protection and emergency medical services serve the project site?
City of Poughkeepsie Fire Department

d. What parks serve the project site?
Wheaton Park, Victor C. Waryas Park, Dongan Square Park

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Residential

b. a. Total acreage of the site of the proposed action? 2.2 acres
b. Total acreage to be physically disturbed? 2.2 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 2.2 acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☑ Yes ☐ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
Residential
ii. Is a cluster/conservation layout proposed? ☐ Yes ☑ No
iii. Number of lots proposed? 2
iv. Minimum and maximum proposed lot sizes? Minimum 40,656 sf Maximum 58,899 sf

e. Will the proposed action be constructed in multiple phases? ☐ Yes ☑ No
i. If No, anticipated period of construction: 24 months
ii. If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

f. Does the project include new residential uses? ☑ Yes ☐ No

If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase	72			
At completion of all phases	72			

g. Does the proposed action include new non-residential construction (including expansions)? ☐ Yes ☑ No

If Yes,

i. Total number of structures _____

ii. Dimensions (in feet) of largest proposed structure: _____height; _____width; and _____ length

iii. Approximate extent of building space to be heated or cooled: _____ square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☐ Yes ☑ No

If Yes,

i. Purpose of the impoundment: _____

ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☐ Other specify:

_____

iii. If other than water, identify the type of impounded/contained liquids and their source.

_____

iv. Approximate size of the proposed impoundment. Volume: _____ million gallons; surface area: _____ acres

v. Dimensions of the proposed dam or impounding structure: _____ height; _____ length

vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete):

_____

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite) ☑ Yes ☐ No

If Yes:

i .What is the purpose of the excavation or dredging? Excav. of soil/removal of unsuitable fill for construction of new building including basement.

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards): TBD
- Over what duration of time? TBD

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

Existing fill shall be removed from the project site. Potentially usable fill should be stockpiled and covered with tarps or plastic sheeting for protection from excess moisture. If any soft or otherwise unsuitable soils are noted, the unsuitable material shall be removed and replaced with new structural fill.

iv. Will there be onsite dewatering or processing of excavated materials? ☑ Yes ☐ No

If yes, describe. Any fill material that is or becomes wet must be dried prior to its re-use.

_____

v. What is the total area to be dredged or excavated? 2.2 acres

vi. What is the maximum area to be worked at any one time? 2.2 acres

vii. What would be the maximum depth of excavation or dredging? 7.5 feet

viii. Will the excavation require blasting? ☐ Yes ☑ No

ix. Summarize site reclamation goals and plan: _____

The goal is to re-use as much existing fill as possible for the construction of the new building. As mentioned, Potentially usable fill should be stockpiled and covered with tarps or plastic sheeting for protection from excess moisture. If any soft or otherwise unsuitable soils are noted, the unsuitable material shall be removed and replaced with new structural fill.

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐ Yes ☑ No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): _____

_____

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

_____

_____

_____

_____

iii. Will the proposed action cause or result in disturbance to bottom sediments? ☐ Yes ☑ No

If Yes, describe: _____

iv. Will the proposed action cause or result in the destruction or removal of aquatic vegetation? ☐ Yes ☑ No

If Yes:

- acres of aquatic vegetation proposed to be removed: _____
- expected acreage of aquatic vegetation remaining after project completion: _____
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access): _____

_____

- proposed method of plant removal: _____
- if chemical/herbicide treatment will be used, specify product(s): _____

v. Describe any proposed reclamation/mitigation following disturbance: _____

_____

c. Will the proposed action use, or create a new demand for water? ☑ Yes ☐ No

If Yes:

i. Total anticipated water usage/demand per day: 14,400 gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☑ Yes ☐ No

If Yes:

- Name of district or service area: Poughkeepsie Water District
- Does the existing public water supply have capacity to serve the proposal? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No
- Do existing lines serve the project site? ☑ Yes ☐ No

iii. Will line extension within an existing district be necessary to supply the project? ☐ Yes ☑ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

_____

- Source(s) of supply for the district: _____

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☑ No

If, Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- Proposed source(s) of supply for new district: _____

v. If a public water supply will not be used, describe plans to provide water supply for the project: _____

_____

vi. If water supply will be from wells (public or private), what is the maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑ Yes ☐ No

If Yes:

i. Total anticipated liquid waste generation per day: approx. 23,400 gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each): sanitwary wastewater

_____

_____

iii. Will the proposed action use any existing public wastewater treatment facilities? ☑ Yes ☐ No

If Yes:

- Name of wastewater treatment plant to be used: Poughkeepsie Water Treatment Facility
- Name of district: City of Poughkeepsie Water Treatment District
- Does the existing wastewater treatment plant have capacity to serve the project? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No

- Do existing sewer lines serve the project site? ☑ Yes ☐ No
- Will a line extension within an existing district be necessary to serve the project? ☐ Yes ☑ No

  If Yes:
  - Describe extensions or capacity expansions proposed to serve this project: _____

_____

_____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐ Yes ☑ No

If Yes:
- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge or describe subsurface disposal plans):

_____

_____

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: _____

_____

_____

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☐ Yes ☑ No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or _____ acres (impervious surface)

_____ Square feet or _____ acres (parcel size)

ii. Describe types of new point sources. _____

_____

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

_____

_____

- If to surface waters, identify receiving water bodies or wetlands: _____

_____

_____

- Will stormwater runoff flow to adjacent properties? ☐ Yes ☐ No

iv. Does the proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☐ Yes ☐ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☐ Yes ☑ No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

_____

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

_____

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

_____

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐ Yes ☑ No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐ Yes ☐ No

ii. In addition to emissions as calculated in the application, the project will generate:
- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

_____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

_____

_____

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☐Yes ☑No

If Yes:

i. When is the peak traffic expected (Check all that apply): ☐ Morning ☐ Evening ☐Weekend ☐ Randomly between hours of _____ to _____.

ii. For commercial activities only, projected number of truck trips/day and type (e.g., semi trailers and dump trucks): _____

_____

iii. Parking spaces: Existing _____ Proposed _____ Net increase/decrease _____

iv. Does the proposed action include any shared use parking? ☐Yes ☑No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:

_____

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☑Yes ☐No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☐Yes ☑No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☐Yes ☑No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☐Yes ☑No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action: _____

_____

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):

_____

iii. Will the proposed action require a new, or an upgrade, to an existing substation? ☐Yes ☑No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: 7:00 AM - 4:00 PM
- Saturday: N/A
- Sunday: N/A
- Holidays: N/A

ii. During Operations:

- Monday - Friday: 24/7
- Saturday: 24/7
- Sunday: 24/7
- Holidays: 24/7

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☑ Yes ☐ No

If yes:

i. Provide details including sources, time of day and duration:

Noise generated by construction equipment for the duration of the construction Phase: weekdays monday through Friday 7 am to 4 pm

ii. Will the proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☑ No

Describe: _____

n. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

Pole mounted site lights within parking areas, wall sconces and recessed fixtures on the building, new pole lights and bollards within pedestrian locations

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☑ No

Describe: _____

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

i. Product(s) to be stored _____

ii. Volume(s) _____ per unit time _____ (e.g., month, year)

iii. Generally, describe the proposed storage facilities:_____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☑ No

If Yes:

i. Describe proposed treatment(s):

ii. Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☑ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☐ Yes ☑ No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: _____ tons per _____ (unit of time)
- Operation : _____ tons per _____ (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: _____
- Operation: _____

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: _____
- Operation: _____

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

ii. Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will the proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☐ Urban ☐ Industrial ☑ Commercial ☑ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☑ Other (specify): Parkland

ii. If mix of uses, generally describe:

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	0.80 acres	1.47 acres	0
• Forested			
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)			
• Agricultural (includes active orchards, field, greenhouse etc.)			
• Surface water features (lakes, ponds, streams, rivers, etc.)			
• Wetlands (freshwater or tidal)			
• Non-vegetated (bare rock, earth or fill)			
• Other Describe: lawn/grass and landscape beds	1.48 acres	0.80 acres	0

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☑ No

i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☑ Yes ☐ No

If Yes,

i. Identify Facilities:

The Grand Rehabilitation and Nursing at River Valley, Christopher Columbus Elementary School, Trinity Temple Church-Seventh, , St. Joseph's Church,

_____

e. Does the project site contain an existing dam? ☐ Yes ☑ No

If Yes:

i. Dimensions of the dam and impoundment:

- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____

iii. Provide date and summarize results of last inspection:

_____

_____

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Has the facility been formally closed? ☐ Yes ☐ No

- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:

_____

_____

iii. Describe any development constraints due to the prior solid waste activities: _____

_____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

_____

_____

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☑ Yes ☐ No

If Yes:

i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☐ Yes ☐ No

☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____

☐ Yes – Environmental Site Remediation database — Provide DEC ID number(s): _____

☑ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures:_____

_____

_____

iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☑ Yes ☐ No

If yes, provide DEC ID number(s): V00292, 314068, 314071, C314125, 546031

iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):

Remediation at sites V00292, 314068 and C314125 are complete. At site 314071 there was little to no evidence of contamination and no contact with site-related contaminants is expected. For site 546031, a remedial investigation to address floodplain soils in the Upper Hudson River Floodplain under USEPA and State oversight is now underway.

v. Is the project site subject to an institutional control limiting property uses? ☐ Yes ☑ No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? 13 feet

b. Are there bedrock outcroppings on the project site? ☐ Yes ☑ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? _____%

c. Predominant soil type(s) present on project site:

Fill Material	50 %
Coarse Sand	50 %
	%

d. What is the average depth to the water table on the project site? Average: 8.5 feet

e. Drainage status of project site soils:
- ☑ Well Drained: 100 % of site
- ☐ Moderately Well Drained: _____% of site
- ☐ Poorly Drained _____% of site

f. Approximate proportion of proposed action site with slopes:
- ☑ 0-10%: 100 % of site
- ☐ 10-15%: _____% of site
- ☐ 15% or greater: _____% of site

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☐ Yes ☑ No

ii. Do any wetlands or other waterbodies adjoin the project site? ☐ Yes ☑ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☐ Yes ☑ No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name _____ Classification _____
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name _____ Approximate Size _____
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☑ No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100-year Floodplain? ☐ Yes ☑ No

k. Is the project site in the 500-year Floodplain? ☐ Yes ☑ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:

i. Name of aquifer: _____

m. Identify the predominant wildlife species that occupy or use the project site: _____
N/A _____ _____ _____
_____ _____ _____

n. Does the project site contain a designated significant natural community? ☐ Yes ☑ No
If Yes:
i. Describe the habitat/community (composition, function, and basis for designation): _____
_____
ii. Source(s) of description or evaluation: _____
iii. Extent of community/habitat:
- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☑ Yes ☐ No

If Yes:
i. Species and listing (endangered or threatened): _____
Atlantic Sturgeon, Shortnose Sturgeon
_____

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐ Yes ☑ No

If Yes:
i. Species and listing: _____
_____

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐ Yes ☑ No
If yes, give a brief description of how the proposed action may affect that use: _____
_____

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐ Yes ☑ No
If Yes, provide county plus district name/number: _____

b. Are agricultural lands consisting of highly productive soils present? ☐ Yes ☑ No
i. If Yes: acreage(s) on project site? _____
ii. Source(s) of soil rating(s): _____

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐ Yes ☑ No
If Yes:
i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature
ii. Provide brief description of landmark, including values behind designation and approximate size/extent: _____
_____
_____

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐ Yes ☑ No
If Yes:
i. CEA name: _____
ii. Basis for designation: _____
iii. Designating agency and date: _____

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? ☑ Yes ☐ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☐ Historic Building or District

ii. Name: Mill Street - North Clover Street Historic District, Union Street Historic District, Vassar Institute, Mill - North Clover (Boundary Increase)

iii. Brief description of attributes on which listing is based:

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☑ Yes ☐ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

i. Describe possible resource(s):

ii. Basis for identification:

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☑ Yes ☐ No

If Yes:

i. Identify resource: Wheaton Park

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): Local Park

iii. Distance between project and resource: 0.11 miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

i. Identify the name of the river and its designation:

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

New York, NY 10022

Re: NYSHCR
Admiral Halsey Senior Village Phase II: New Construction
135 Main St, Poughkeepsie, NY 12601
20PR07157

Dear Mr. Spillberg:

Thank you for requesting the comments of the New York State Historic Preservation Office (SHPO). We have reviewed the provided documentation in accordance with Section 106 of the National Historic Preservation Act of 1966. These comments are those of the SHPO and relate only to Historic/Cultural resources. They do not include other environmental impacts to New York State Parkland that may be involved in or near your project. Such impacts must be considered as part of the environmental review of the project pursuant to the National Environmental Policy Act and/or the State Environmental Quality Review Act (New York Environmental Conservation Law Article 8).

The project area is located between the Mill Street-North Clover Street Historic District and the Union Street Historic District, both of which are listed in the State and National Registers of Historic Places. Our office has reviewed the proposed construction of a new 7-story residential building. Based upon our review, it is the SHPO's opinion that the project will have No Adverse Effect on historic or archaeological resources. If there are substantive changes to the project consultation with our office should resume.

If you have any questions, I can be reached by email.

Sincerely,

Derek Rohde
Historic Site Restoration Coordinator

New York, New York 10022

RE: Phase I Environmental Site Assessment
135 Main Street
Poughkeepsie, New York 12601
Hillmann Project No: Z34631

Dear Mr. Shevchuk:

Hillmann Consulting LLC is pleased to provide the results of our Phase I Environmental Site Assessment of the above referenced property. This assessment was performed in general accordance with the scope and limitations of ASTM Practice E 1527-13, which is the latest version of the E1527 standard published by the ASTM.

We appreciate the opportunity to provide environmental due diligence services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact our office at 908-688-7800.

Sincerely,

Hillmann Consulting, LLC

Stephanie Lamb
Senior Project Manager

List of Abbreviations/Acronyms

Hillmann may use the following abbreviations and acronyms for common terminology described in our report. Not all abbreviations or acronyms may be applicable to this report:

ACM	– Asbestos Containing Material
AOC	– Area of Concern
AST	– Aboveground Storage Tank
ASTM	– American Society for Testing Materials
BER	– Business Environmental Risk
CEA	– Classification Exception Area
CERCLA	– Comprehensive Environmental Response Compensation and Liability Act
CERCLIS	– Comprehensive Environmental Response Compensation and Liability Information System
CESQG	– Conditionally Exempt Small Quantity Generator
COC	– Chemicals of Concern
CORRACTS	– Corrective Action Sites
CREC	– Controlled Recognized Environmental Condition
DNPL	– Delisted National Priority List
DTSC	– Department of Toxic Substances Control
ENG	– Engineering
ERNS	– Emergency Response Notification System
FDEP	– Florida Department of Environmental Protection
FDNY	– Fire Department, City of New York
FDOT	– Florida Department of Transportation
FOI/FOIA/FOIL	– Freedom of Information / Freedom of Information Act / Freedom of Information Letter
HVAC	– Heating Ventilation & Air Conditioning
HREC	– Historic Recognized Environmental Condition
IAQ	– Indoor Air Quality
ISRA	– Industrial Site Recovery Act
LBP	– Lead-Based Paint
LQG	– Large Quantity Generator
LTANK	– Leaking Storage Tank
LUST	– Leaking Underground Storage Tank
MassDEP	– Massachusetts Department of Environmental Protection
SDS/MSDS	– Safety Data Sheet / Material Safety Data Sheet
NA	– Not Applicable
NCDOH	– Nassau County Department of Health
NFA	– No Further Action
NFRAP	– No Further Remedial Actions Planned
NJDEP	– New Jersey Department of Environmental Protection
NPDES	– National Pollutant Discharge Elimination System
NPL	– National Priority List
NYCDEP	– New York City Department of Environmental Protection
NYCDOB	– New York City Department of Buildings
NYCOER	– New York City Office of Environmental Remediation
NYSDEC	– New York State Department of Environmental Conservation
OPRA	– Open Public Records Act
PADEP	– Pennsylvania Department of Environmental Protection
PAH	– Polycyclic Aromatic Hydrocarbon
PCE	– Perchloroethylene
RAO	– Response Action Outcome
RCRA	– Resource Conservation and Recovery Act
RCRIS	– Resource Conservation and Recovery Information System
REC	– Recognized Environmental Condition
RWQCB	– Regional Water Quality Control Board
SCAQMD	– South Coast Air Quality Management District
SCDHS	– Suffolk County Department of Health Services
SDG	– Significant Data Gap
SEMS	– Superfund Enterprise Management System
SRP	– Site Remediation Program
SQG	– Small Quantity Generator
SVOC	– Semi-Volatile Organic Compound
TCE	– Trichloroethylene
TSDF	– Treatment Storage and/or Disposal Facility
USEPA	– United States Environmental Protection Agency
UST	– Underground Storage Tank
VEC	– Vapor Encroachment Condition
VOC	– Volatile Organic Compound

1.0 FINDINGS, OPINIONS, AND CONCLUSIONS

Hillmann Consulting, LLC (Hillmann) performed a Phase I Environmental Site Assessment (ESA) of 135 Main Street, Poughkeepsie, New York (the Property). The assessment has been conducted in accordance with our contracted scope of work and the ASTM Standard Practice E 1527-13 for Phase I Environmental Site Assessments and All Appropriate Inquiries (AAI) Final Rule 40 CFR Part 312. This section contains a summary of findings, opinions and conclusions made by this assessment. However, this section, alone, does not constitute the complete assessment. The report must be read in its entirety.

1.1 Summary of Project Details

Primary Street Address:		135 Main Street			
City:	Poughkeepsie	**County:**	Dutchess	**State:**	New York
Tax ID/Parcel Number:		Block 76, Lot 911			
Property Owner:		Admiral Halsey Apartments			
Zoning Designation:		R6 (Residential)			
Approx. Property Area:		2.20 acres			
Buildings/# of Floors		One building/13-story			
Approx. Building Area:		85,800 ft²			
Approx. Year Built:		1976			
Commercial Occupants:		None			
Current Use:		Residential (Senior)			
Prior Uses:		Commercial stores, Coal Manufactured Gas Plant			
Inspected By:		Ms. Stephanie Lamb			
Site Contact/Company:		Ms. Lori Ferguson/ Reliant Realty			
Site Escort/Company:		Mr. Chris Green/ Reliant Realty			
Inspection Date:		October 20, 2020			
Weather Conditions:		Overcast, 60 degrees F

Prior Env. Reports/User Provided Info:		X			3.0
Data Gaps:	X				2.3

1.3 Findings, Opinions and Conclusions

1.3.1 Recognized Environmental Conditions

Hillmann has performed a Phase I Environmental Site Assessment in accordance with the scope and limitations of ASTM Practice E 1527-13 of the Property as described in Section 2 of this report. Any additions to, exceptions to, or deletions from this practice are also described in Section 2 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Property, except for the following:

RECOGNIZED ENVIRONMENTAL CONDITIONS	
REC #1	Subsurface testing conducted at the Property in 2007 and 2019 identified metals and SVOCs in soils and groundwater at concentrations exceeding regulatory cleanup standards. The identified contaminants were attributed to historical urban fill. Groundwater results in one location indicated VOC and PAH compounds exceeding the NYSDEC regulatory cleanup standards. These compounds are indicative of possible petroleum contamination due to recorded PID readings and staining observed in the corresponding soil boring. Due to the findings of the subsurface testing, the Property voluntarily procured a Soil and Groundwater Contamination Health and Safety Plan (EHI, 2007) that prescribed operational procedures for site personnel to follow during activities that disturb soil or groundwater. Since the identified urban fill and VOC contaminants in soil and groundwater are being managed in place under the Soil and Groundwater Contamination Health and Safety Plan the metals and SVOCs in soil and VOCs in groundwater are considered to be a REC in connection with the Property.
HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS	
	No HRECs were identified
CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS	
	No CRECs were identified

SIGNIFICANT DATA GAPS	
	No SDGs were identified.

1.3.2 REC Response Action Recommendations

The following table presents recommended response actions to the identified RECs for further investigation and/or corrective action:

REC RESPONSE ACTION SUMMARY TABLE	
REC	**Response Action**
REC #1	Given the presence of metals, PAHs, and VOCs in soil and groundwater, and the current plans for new construction at the site, the site specific management plan for handling site soils and groundwater should be updated and followed during planned construction activities.

1.3.3 Notable Environmental Conditions / De Minimis Conditions

The following environmental conditions were identified, but are not considered to be a REC in connection with the Property:

NOTABLE ENVIRONMENTAL CONDITIONS / DE MINIMIS CONDITIONS	
1.	The central and northern portions of the property were occupied by portions of a manufactured gas plant, currently known as the CH – Bayeaux Street Poughkeepsie MGP, from approximately the mid-19th to early-20th century. As further described in Section 4.3.1, the former MGP site is listed on the database of New York State Superfund sites and has undergone previous subsurface investigations with NYSDEC oversight due to the potential for subsurface impacts from the historical gas manufacturing operations. According to the NYSDEC published information, following the completions of site investigation work in 1990 and 2006, no significant MGP waste material was found and a NFA status was granted by NYSDEC on March 12, 2007.
2.	A gasoline UST associated with a former dairy operation was depicted at the northeast portion of the Property by a 1952 fire insurance map. The entire property was redeveloped into the current senior housing complex in the mid-1970s. While disposition of the historical gasoline UST has not been determined, subsurface testing at the Property did not identify evidence of a petroleum release from the former gasoline UST.
3.	A 10,000-gallon above ground storage tank (AST) was observed in the rear of the building, central portion of the Property. The tank is enclosed with a brick structure and accessed via permanent step ladder fixed to the concrete enclosure. No evidence of leakage was observed at the time of the inspection.
4.	A 10,000-gallon #2 heating oil UST was closed in place in 1997. The UST closure was documented by a 1997 tank closure report by Conrad Geoscience, which concluded that all soil testing results were below NYSDEC standards.
5.	One 55-gallon drum of floor cleaner was observed in the maintenance storage room. No signs of leaking or staining were observed in the area of the drum.
6.	One hydraulic trash compactor was observed in the compactor room. No signs of leaking or staining were observed in the area of the compactor motor.

1.3.4 Environmental Professional Statement

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a *property* of the nature, history and setting of the subject *property*. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Stephanie Lamb
Environmental Professional

1.4 Business Environmental Risks / Non-ASTM Scope

Hillmann has performed a limited review of the following potential Business Environmental Risks (BER), also known as "Non-ASTM Scope concerns", in accordance with the contracted scope of work scope for this assessment. The following is a summary of findings for applicable BERs. For a more detailed discussion of the findings and contracted scope of work, please see the referenced report section.

BUSINESS ENVIRONMENTAL RISKS / NON-ASTM SCOPE			
Subject	**Findings**	**Not Appl.**	**Rpt. Ref.**
Asbestos	Based on the building age, asbestos may be present. Suspect ACM noted within the building included sheet rock wall materials in good condition, vinyl floor tiles and mastic in locally damaged condition, and glued on ceiling tiles in damaged condition. Although not observed, roofing materials are also assumed ACM.		7.1
Lead Paint	Painted surfaces observed within the accessed areas of the residential building were noted to be in good condition. Hillmann was provided with a copy of a prior lead paint screening report titled Lead Paint Screening; by Environmental Health Investigations, dated October 9, 2007. Based on the results of the screening, no tested paint surfaces were found to contain lead paint.		7.2
Radon	Property is located in the USEPA radon designation Zone 1 or 'high risk' area for radon. Hillmann was provided with a copy of a prior radon testing report titled Radon Testing; by Environmental Health Investigations, dated September 8, 2008. All sample results were below the EPA Action Level of 4.0 pCi/L.		7.3
Mold / Microbial Damage	Hillmann did not observe any evidence of significant problems with moisture intrusion or mold/microbial growth at the Property.		7.4
NWI Wetlands	No mapped wetland areas were depicted at the Property.		4.1
Lead in Drinking Water	Potable water service at the Property is provided by a utility connection with the New York City Water Supply System. A recently published water quality report from the utility indicated compliance with USEPA water quality standards for lead in drinking water.		7.6

2.0 INTRODUCTION

2.1 Purpose and Scope

This assessment was conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-13. The ASTM describes these methodologies as representing good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the "landowner liability protections," or "LLPs"): that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35) (B). The primary goal of the processes established by ASTM E1527-13 is to identify *recognized environmental conditions* in connection with the Property.

The term *recognized environmental condition (REC)* is defined by the ASTM as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

The ASTM has also defined the terms *historical recognized environmental conditions* and *controlled recognized environmental conditions* as two additional types of RECs. The term *historical recognized environmental condition (HREC)* is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls or engineering controls).

The term *controlled recognized environmental condition (CREC)* is defined as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

Conditions determined to be *"de minimis conditions"* are not considered to be RECs, HRECs or CRECs. *De minimis condition* is defined by the ASTM, "…as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

The chief components of this assessment are generally described as follows:

- A non-invasive visual reconnaissance of the Property and adjoining properties in accordance with ASTM guidelines for evidence of RECs.

- Interviews of past and present owners and occupants and state and local government officials, seeking information related to the potential presence of RECs at the Property.

- A review of standard physical record sources for available topographic, geologic and groundwater data.

- A review of standard historic record sources, such as fire insurance maps, city directories, aerial photographs, prior reports and interviews, etc., to determine prior uses of the Property from the present, back to the Property's first developed use, or back to 1940, whichever is earlier.

- A review of standard environmental record sources including federal and state environmental databases, and additional environmental record sources, to identify potential regulatory concerns with the Property, adjoining properties and properties located within the surrounding area.

An evaluation of environmental or other regulatory compliance matters is excluded from the scope of this assessment.

These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

2.1.1 Business Environmental Risks/Non-ASTM Scope Considerations

In accordance with our contract agreement, Hillmann may have addressed the following potential environmental subject matters that are outside of the requirements of the ASTM E1527-13 standard:

Asbestos-Containing Materials (ACM): A cursory non-intrusive visual screening for the presence of suspect ACM within the accessed areas of buildings built prior to 1990 on the Property. It is emphasized that this cursory non-intrusive visual screening does not constitute an asbestos survey/inspection of the premises. An asbestos survey/inspection should be sought by the report User(s) if more certainty is desired regarding ACM and potential asbestos hazards at the Property. Furthermore, a review of regulatory compliance matters pertaining to asbestos is excluded from the scope of work.

Lead-Based Paint (LBP): A cursory non-intrusive visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1980 on the Property. It is emphasized that this cursory non-intrusive visual screening does not constitute a comprehensive survey for LBP or potential lead hazards. A comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding LBP at the Property. Furthermore, a review of regulatory compliance matters pertaining to lead-based paint is excluded from the scope of work.

USEPA Designated Radon Potential: Review of general non-site specific data published by the USEPA regarding the Radon Zone classification for the area of the Property.

Mold/Microbial Damage: A cursory non-intrusive visual screening within the accessed areas of buildings on the Property for evidence of systemic microbial problems, including visible mold growth, water damaged building materials or musty odors. It is emphasized that this cursory non-

intrusive visual screening does not constitute a comprehensive survey for moisture/mold/microbial damage. A more comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding the potential for moisture/mold/microbial damages at the Property.

NWI Wetlands: Review of US Fish and Wildlife Service National Wetland Inventory digitized data of mapped wetlands as presented in the attached EDR Radius Map plus Geocheck Report.

It is emphasized that, regardless of the wetlands data obtained via the EDR Geocheck-Physical Setting Source Addendum, a delineation of regulated wetlands by a qualified professional would be warranted to determine the presence or absence of regulated wetlands at the Property.

Lead in Drinking Water: Review of the potential for elevated levels of lead in the drinking water by determining the source of the drinking water supply and a review of available testing or compliance data reports.

2.2 Property Location/Legal Description

Property location and legal description details are described as follows:

Primary Street Address:	135 Main Street				
City:	Poughkeepsie	**County:**	Dutchess	**State:**	New York
Tax ID/Parcel Number:	Block 76, Lot 911				
Approx. Land Area:	2.20 acres				
Apprx. Latitude/Longitude:	North 41.7058760 degrees/West 73.9334410 degrees				
Additional Details (if appl.):	Historic Address Ranges of 5-27 N. Perry St (Bayeaux Street) and 127-149 Main Street				
Property Owner:	Admiral Halsey Apartments				
Zoning Designation:	R6 (Residential)				

2.3 Data Gaps

A *data gap* is defined by the ASTM as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. A data gap is only significant if other information and/or professional experience raises reasonable concerns involving the data gap and the ability to determine the presence or absence of recognized environmental conditions. The following table summarizes data gaps encountered during the assessment as well as a discussion of their significance.

Data Gap:	Significant (Yes/No)?	Discussion
Historical records data failure	No	The date and/or type of the first developed use of the Property was not documented. Records gaps exceeding five years were encountered; however, no significant site use changes are suspected during these intervals.

Response to agency records requests not received as of date of report.	No	Any additional information indicative of a REC will be forwarded upon receipt.

2.4 User Reliance

This report is for the exclusive use of the User(s) named on the front cover. No other party(ies) shall have any right to rely on the content of this report without first obtaining the consent of the original report User; and without obtaining written consent from Hillmann in the form of a letter of reliance or report recertification.

2.5 Significant Assumptions

The following significant assumptions are made:

- The site operations at the time of the site visit are assumed to reflect typical site conditions relative to potential environmental conditions and that no concealment of environmental conditions or releases by site owners or occupants has occurred. Likewise, it is assumed that no areas of the Property with potential environmental concerns or RECs were concealed or otherwise not reported, intentionally or unknowingly, by the Property owners/occupants and/or site escort at the time of the site visit.

- For the purpose of estimating the approximate direction of groundwater flow in the absence of site specific groundwater data, unless indicated otherwise, an assumption has been made that the gradient of groundwater flow follows the surface topography of the Property and immediate surrounding area.

2.6 General Limitations and Exceptions

2.6.1 Limitations

The report turnaround time specified by the contract agreement for this assessment may present a limitation to the availability of pertinent regulatory agency records. Such limitations, if encountered, are further specified in Section 4.4.

Significant limitations related to the condition or accessibility of the Property at the time of the site reconnaissance, if encountered, are reported in Section 5.1.

2.6.2 Other Exceptions or Deletions

No other exceptions or deletions from the ASTM Standard E 1527-13 are reported.

2.6.3 Special Terms and Conditions

This Phase I Environmental Site Assessment has been prepared using reasonable efforts in each phase of its work to identify recognized environmental conditions associated with hazardous substances, wastes and petroleum products at the Property. Findings within this report are based on information collected from observations made on the day of the site reconnaissance and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, site development, redevelopment, or other construction purposes. No representation or warranty is made that the past or current operations at the Property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes.

Findings, conclusions and recommendations presented in this report are based on visual observations of the Property, interviews conducted, the records reviewed, information provided by the Client, and/or a review of readily available and supplied drawings and documents. Information obtained during the assessment, whether written, graphic or verbal, provided by the Property contact(s) or as shown on any documents reviewed or received from the Property contact, owner or agent, or government agency source; is assumed to be accurate except as specifically stated otherwise in this report. Independent verification of the accuracy or completeness of all information reviewed or received during the course of this assessment is not made and excluded from the scope of work for this assessment. No warranty or guarantee is made of the accuracy or completeness of information that was obtained from ostensibly knowledgeable individuals, regulatory agency representatives or other secondary sources.

Regardless of the findings stated in this report, Hillmann is not responsible for consequences or conditions arising from facts that were concealed, withheld or not fully disclosed at the time the assessment was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The regulatory research is designed to meet the requirements of ASTM Standard E 1527-13. Hillmann can neither warrant nor guarantee the accuracy or completeness of the information obtained from the regulatory database report provider during the course of this assessment.

Subsurface conditions may differ from the conditions implied by the surface observations and can only be reliably evaluated through intrusive techniques.

Reasonable efforts have been made during this assessment to identify aboveground and underground storage tanks and ancillary equipment. Reasonable efforts are limited to information gained from visual observation of largely unobstructed areas, recorded database information held in public record and available information gathered from interviews. Such methods may not identify surficial and subsurface features that may have been hidden from view due to parked automobiles

and other vehicles, snow cover, vegetative growth, pavement, construction or debris pile storage or incorrect information from sources.

No guarantee, explicit or implied, is made that the records pertaining to historical ownership or occupancy which were reviewed represent a comprehensive or precise delineation of past Property ownership or tenancy for legal purposes.

The ASTM E1527-13 standard states that recommendations are not required to be included in a Phase I ESA report; however, further that recommendations are an additional service that may be useful in the User's analysis of landowner liability protections or business environmental risks; and that the User should consider whether recommendations for additional inquiries or other services are desired.

The recommended response actions to the identified RECs presented in Section 1.3, if any, are not intended to represent the only course(s) of action to take; nor does it imply any opinion as to the timing of the action. Furthermore, it is emphasized that additional response actions may become warranted depending on the outcome of the initial action(s) taken. Hillmann advises that consultation with legal counsel familiar with environmental and real estate law may be beneficial to the decision making process for the type and timing of a response action to identified RECs, if any.

Due to the limited nature of our review of potential Business Environmental Risks, the User of the report should consider whether to take additional action(s) to further define, properly manage and/or mitigate potential BERs.

In the event of any conflict between the terms and conditions of this report and the terms and conditions of the consulting services agreement for this project, the consulting services agreement shall control.

3.0 USER PROVIDED INFORMATION

The term "User" is defined by ASTM as the party seeking to use Practice E1527 to complete an environmental site assessment of the Property; specifically, the entities named on the front cover to which the report has been addressed.

3.1 Prior Environmental Reports/Documentation

The following prior environmental reports/documentation was provided:

Phase I Environmental Site Assessment, 135 Main Street, Poughkeepsie, NY 12601; prepared by Hillmann Consulting, LLC and dated April 8, 2019. The report stated the following:

> *"Subsurface testing conducted at the Property in 2007 and 2019 identified metals and SVOCs in soils and groundwater at concentrations exceeding regulatory cleanup standards. The identified contaminants were attributed to historical urban fill. Groundwater results in one location indicated VOC and PAH exceeding the regulatory cleanup standards. These compounds are indicative of a possible petroleum contamination due to recorded PID readings and staining observed in the corresponding soil boring. Due to the findings of the subsurface testing, the Property voluntarily procured a Soil and Groundwater Contamination Health and Safety Plan (EHI, 2007) that prescribed operational procedures for site personnel to follow during activities that disturb soil or groundwater. Since the identified urban fill and VOC contaminants in soil and groundwater are being managed in place under the Soil and Groundwater Contamination Health and Safety Plan, the metals, SVOCs, in soil and VOCs in groundwater are considered to be a REC in connection with the Property."*

Phase II Subsurface Investigation Report, 135 Main Street, Poughkeepsie, NY; prepared by Hillmann Consulting, LLC and dated April 8, 2019. The report stated the following:

> *"Laboratory results indicated various exceedances of the Unrestricted Use Soil Cleanup Level but not the Restricted-Residential Soil Cleanup Level. The various detections are suspected as attributed to the historic fill material located on the Property. Arsenic that was the only compound in soil detected above the RRUSCO in several soil samples. The Arsenic detections are suspected as attributed to historic property use as a manufactured gas plant or historic fill material.*
>
> *During site redevelopment activities, all soil slated for removal off-site should be disposed of in accordance with federal, state and local regulations.*
>
> *The metals exceedances detected in groundwater are suspected as attributed to turbidity/particulates suspended in groundwater associated with temporary well point installation and not dissolved groundwater contamination. Several of the detected metals including Sodium, Selenium, Magnesium, Beryllium, Silver, and Nickel, are typically naturally occurring/background conditions.*
>
> *Groundwater results from sample TWP-1 indicated VOC and PAH compounds in exceedance of the GQS. These compounds are indicative of possible petroleum contamination due to recorded PID readings and staining observed in the corresponding soil boring.*
>
> *During site redevelopment activities, groundwater dewatering, if needed, should be performed in accordance with all federal, state and local regulations."*

Tank Closure Site Assessment Report; Admiral Halsey Village, 135 Main St., Poughkeepsie, New York; prepared by Conrad GeoScience Corp; dated November 18, 1997. The report documented

tank closure activities for a former 10,000-gallon heating oil UST located in the courtyard behind the apartment building. Initially planned for closure by removal, the report stated that the tank was abandoned in place on October 17, 1997 due to the proximity of a natural gas utility pipe and difficulties removing an UST anchor point. Three soil samples were collected from the bottom of the tank excavation and submitted for VOC and SVOC analysis. No VOCs were detected in any of the samples collected. Seven SVOCs were detected at concentrations well below NYSDEC standards. The report concluded:

> *"Considering the integrity of the UST upon cleaning and attempted excavation, along with the lack of petroleum contaminated soils, there is no evidence of prior leakage or spillage from this tank. In addition, SVOCs detected are well below NYSDEC standards and, therefore, no remedial activity is required. The SVOCs present may represent residual coal tar. No information pertaining to groundwater quality, and the presence of these compounds in groundwater is available at this time."*

Phase I Environmental Site Assessment – Update, 135 Main Street, Poughkeepsie, New York 12601; prepared by Hillmann Consulting on behalf of Admiral Halsey, L.P., c/o Omni New York, LLC, August 28, 2007. The report concluded the following with regard to recognized environmental conditions (RECs) in connection with the Property:

> *"This update assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Property, except for the following:*
>
> *• A Limited Phase II Investigation report was prepared by Hillmann in March 2007 to evaluate two recognized environmental condition that were identified by Hillmann's prior Phase I ESA report. The RECs included a potential impact to the environment from a former coal gasification plant; and a historic underground storage tank (UST) that was identified by review of Sanborn Fire Insurance Maps of the Property. The investigation included the use of a GPR survey to identify any underground structures, utilities, or obstructions, and the collection and analysis of soil and groundwater samples. The results of the investigation identified the presence of residual contamination which could be attributed to the past manufactured gas plant usage. The Limited Phase II Investigation identified elevated levels of metals and PAHs in soils throughout the property. Hillmann understands that Omni has obtained a "Property Use and Work Plan" to protect against possible contamination exposure. This document provides insight on which procedures to follow during excavation activities. In addition, this document is site specific and will only pertain to the subject property. Hillmann has contacted the NYSDEC directly, and was informed that there is no requirement to report a spill to the NYSDEC. Therefore Hillmann does not recommend reporting the results to the NYSDEC. Hillmann notes that a Soil and Groundwater Contamination Health and Safety Plan was developed for the Property on behalf of Admiral Halsey LP, dated July 11, 2007."*

The August 28, 2007 Hillman Phase I ESA report also included a summary of a NYSDEC file review of the former Bayeaux Street Coal Gasification Plant. Documentation consisted of a series of reports concerning historic coal gasification plants located the City of Poughkeepsie. Much of the documentation pertained to a different historic coal gas plant located several blocks to the west of the Property along the Hudson River Waterfront. A Phase I investigation report of the Bayeaux Street Coal Gas Plant site was also included, as summarized below by the 2007 Phase I ESA:

> *Phase I Investigation Poughkeepsie (Bayeaux Street) Coal Gasification Plant Site, City of Poughkeepsie, Dutchess County, New York; prepared by EA Science and Technology of Middletown, New York; on behalf of Central Hudson Gas & electric Corporation, January 1987:*

The report indicated that a historic coal gas plant that formerly occupied the Property operated from approximately 1850 to 1911, at which time it was replaced by a Water Street plant located several blocks to the west. The report concluded the following:

"The available data are considered insufficient to prepare a final HRS (Hazard Ranking System) score for this site. There is no documentation of hazardous waste or contamination at the former Poughkeepsie Bayeaux Street Coal Gas Plant site. Groundwater soil quality data lacking."

"In order to prepare a final HRS score for this site, analytical data regarding the quality of the ground-water and soil, and characteristics of waste (if present), will be necessary, thus requiring performance of a Phase II investigation. The proposed Phase II study would include the performance of a soil vapor survey, the installation of 4 observation wells and the collection and analysis of ground-water and soil samples."

Limited Phase II Investigation, Admiral Halsey, 135 Main Street, Poughkeepsie, New York 12601; prepared by Hillmann Environmental Group LLC on behalf of Admiral Halsey, L.P., c/o Omni New York, LLC, May 2007.

The purpose of the Limited Phase II Investigation was to evaluate two RECs that were identified by a 2007 Phase I ESA report. The RECs included a potential impact to the environment from a former coal gasification plant; and a historic underground storage tank (UST) that was identified by review of Sanborn Fire Insurance Maps of the Property. The investigation included the use of a GPR survey to identify any underground structures, utilities, or obstructions, and the collection and analysis of soil samples. These samples were collected from boring locations in the asphalt parking lot, around the old UST and in the area of the historic coal gasification plant. A total of fourteen (14) soil and three (3) groundwater samples were collected and analyzed for parameters including volatile organic compounds (VOC), base neutrals and acid extractable (BNA), and Priority Pollutant List Metals.

The following is a summary of the conclusions of the Limited Phase II Investigation:

"Hillmann has completed a Limited Phase II Investigation at 135 Main Street to assess the impact of former coal gasification plant and UST located on site. The completed scope of work included a GPR survey, the advancement of subsurface borings utilizing a Geoprobe and hand auguring. The following has been concluded from this investigation.

1. *The results of the investigation have identified the presence of contamination which could be attributed to past site usage. The environmental concerns identified through laboratory and field observations are the presence of metals and Polynuclear Aromatic Hydrocarbons (PAHs) present in the soil and groundwater.*
2. *It appears that the contamination identified is the result of former coal gasification processes conducted on site.*
3. *Elevated levels of metals and PAHs are wide spread throughout the property. Minimal risk of exposure is expected in the areas of the parking lot and/or lawn area. Any excavation or prolonged contact with the subsurface soils may potentially cause exposure to the subsurface contaminants.*
4. *Due to the wide spread presence of elevated metals and PAHs around the property, Hillmann has determined that the contamination encountered is not from the UST, but as a result of the historic coal gasification plant. It is determined that the UST did not impact the surrounding environment.*
5. *Omni has decided to develop a raised garden bed system. This decision will protect the current residence using the garden area. A brief description of the garden area is described in the below section.*

6. *Additionally, Omni is in the process of obtaining a "Property Use and Work Plan" to protect against possible contamination exposure. This document will provide insight on which procedures to follow during excavation activities. This document will be site specific and will only pertain to the subject property. A copy of the work plan will be located at the facility."*

Vapor Intrusion Investigation, Admiral William F. Halsey Senior Village, 135 Main Street, Poughkeepsie, NY; prepared by Hillmann Environmental Group LLC on behalf of Admiral Halsey, L.P., c/o Omni New York, LLC, July 13, 2007.

The scope of work consisted of one round of sampling for VOCs by TO-15 Method. Samples were collected from the Sub-Basement, Maintenance Room, Community Room, on the 1st Floor Adjacent the Elevator, and on the 6th Floor Adjacent the Elevator. Also, one outdoor reference sample was collected. The conclusions and recommendations stated the following:

4.1 Conclusions
Based on Hillmann's review, indoor air quality is not anticipated to cause occupant illness or require immediate remediation. Based on the data that we have at this time, Hillmann has found no evidence that an increase health risk exists from the previous Manufactured Gas Plant (MGP). Although the NYSDOH or Hillmann recognize the upper range of the comparative data as a valid reference, it should be noted that very few samples would exceed this level present in some non-impacted homes. Furthermore, it should be noted that samples were collected from areas susceptible to organic vapors from maintenance products and processes.

4.2 Recommendations
Based on Hillmann's review of indoor sample results, indoor air quality is not anticipated to cause occupant illness or require immediate remediation. In order to conduct a comprehensive vapor intrusion assessment NYSDOH Guidelines recommend that sub-slab soil vapor samples be collected. Sub-slab samples are an important component used to compare with indoor and outdoor samples in order to evaluate current and potential human exposures (e.g. if the building's structural integrity or use changes) and determine the site-specific attenuation factors, which compares the ratio of indoor air to sub-slab vapor concentrations. Furthermore, it may be prudent for follow-up sampling to be conducted on a periodic basis (such as annual or bi-annual) to ensure these conditions do not change over time. If significant changes occur at the building (increase or decrease HVAC, digging, vibration, etc) the potential for vapor intrusion may increase."

Soil & Groundwater Contamination Health & Safety Plan, Admiral William F. Halsey Senior Village, 135 Main Street, Poughkeepsie, NY; prepared for Admiral Halsey L.P by Environmental Health Investigations, Inc.; dated July 11, 2007. The report established policy for managing potential exposures to chemicals which exist in low concentrations within the soil and ground water associated with the Admiral William F. Halsey Senior Village property located at 135 Main Street in Poughkeepsie, New York.

Supplemental Investigation of Poughkeepsie Bayeaux Street Site; prepared by Central Hudson & Electric Corporation, July 2006. This report detailed a supplemental investigation conducted following results finding from an August 1990 investigation and well installation. The 2006 investigation consisted of the installation of five soil borings in and around the former MGP structure at the site. Soil and monitoring well borings from 1990 consisted of fill material at various depths ranging from ground surface to approximately 8 feet below ground surface in most areas investigated. The four monitoring wells were installed at the Property to assess water quality in 1990. Based on the results from a 1990 Phase II investigation and 2006 supplemental investigation,

conclusions, Central Hudson requested that the NYSDEC delist the former Bayeaux Street site from the Inactive Hazardous Waste Disposal Site Program Registry and abandon all monitoring wells.

3.2 User Questionnaire

Section 6 of the ASTM E1527-13 standard describes certain tasks required to be performed by the report User in order to qualify for landowner liability protections to CERCLA liability. To assist the report User to meet these requirements, the ASTM E1527-13 standard recommends a questionnaire of inquiries (User Questionnaire) specified in 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31 be provided to the original report User. Hillmann has been informed by the User that, as a prospective lender, they have declined to complete the User Questionnaire.

Question:	Yes/No:	Detail:
Environmental liens that are filed or recorded against the property: Did a search of recorded land title records identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	NR	
Activity and use limitations that are in place on the property or that have been filed or recorded against the property: Did a search of recorded land title records (or judicial records where appropriate, identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	NR	
Specialized knowledge or experience of the person seeking to qualify for the LLP: Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	NR	
Relationship of the purchase price to the fair market value of the property if it were not contaminated: Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	NR	
Commonly Known or Reasonably Ascertainable Information: Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,		
-Do you know the past uses of the property?	NR	
-Do you know of specific chemicals that are present or were once present at the property?	NR	

Question:	Yes/No:	Detail:
-Do you know of spills or other chemical releases that have taken place at the property?	NR	
-Do you know of any environmental cleanups that have taken place at the property?	NR	
The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation: Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?	NR	
Litigation/Administrative Proceedings/Government Notices As the User of this ESA, do you have knowledge of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property; and (3) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.	NR	

NR-no response

3.3 Reason for Performing Phase I ESA

The User did not indicate the purpose of the assessment. In accordance with ASTM E1527-13, it is assumed that the Phase I ESA was being performed in order to qualify for landowner liability protection to CERCLA liability.

4.0 RECORDS REVIEW

4.1 Physical Setting Sources

The following physical setting sources were reviewed:

Source	Discussion
USGS 7.5 minute Topographic Map Data: (EDR Geocheck-Physical Setting Source Addendum)	The Property lies at an elevation of approximately 112 feet above mean sea level. An interpretation of topographic contour lines as well as a review of the EDR Geocheck-General Topographic Gradient suggested terrain sloping downward towards the west. The closest down gradient water body is the Hudson River, located approximately 1,900 feet to the West.
USDA SCS Soil Data: (EDR Geocheck-Physical Setting Source Addendum)	The soil type at the Property is classified as "Udorthents". This soil type is described as a gravelly loam surface texture and is well drained with an intermediate water holding capacity
Geologic Data: (EDR Geocheck-Physical Setting Source Addendum)	The geologic formation in the vicinity of the Property is described as a stratified sequence of the Paleozoic Era, Ordovician System, and Middle Ordovician Series.
Prior Env. Reports: (Section 3.1)	No additional relevant site specific geologic data was noted from a review of the prior environmental reports listed in Section 3.1.
Additional Sources/ Data:	No additional physical setting sources or data was obtained.
Groundwater Flow Discussion:	Based on a review of the above information as well as observation of the site, the direction of shallow groundwater flow at the site is inferred to be towards the west.
NWI Wetlands Data: (EDR Geocheck-Physical Setting Source Addendum)	No NWI mapped wetlands areas were depicted at the Property.

4.2 Historical Use – Property and Adjoining Properties

Research has been conducted in an attempt to develop a history of the previous uses of the property and surrounding area, in order to help identify the likelihood of past uses having led to RECs in connection with the property. Standard historical sources have been sought in an attempt to document the past uses of the Property as far back as it can be shown that the Property contained structures; or from the time the Property was first used for residential, agricultural, commercial, industrial or governmental purposes.

4.2.1 Fire Insurance Maps

A Certified Sanborn Map Report was obtained from EDR for a review of published historic fire insurance maps for the Property and surrounding area. The following is a summary of site uses and notable details depicted by the available maps:

Year(s)	Description	
1887	**Property**	The Property is developed along Main Street in the southern portion and southwest along Bayeaux Street with various commercial stores and businesses. The central of the property is developed with pottery maker including a coal shed. The northern portion of the property is a developed with portions of the Poughkeepsie Gas Light company, a manufactured gas plant. An iron gas holder is depicted at the northeast corner of the site.

Year(s)	Description	
	Adjoining Properties	The adjoining properties are depicted with a school house to the north; developed residential dwellings and vacant building to the west; developed commercial businesses to the south including drugstore, grocery, butcher, carpeting and wall paper shop, and laundry facility; developed commercial businesses to the southeast, and portions of the Poughkeepsie Gas Light Company to the northeast.
1895	**Property**	The Property is depicted as developed with commercials business to the south along Main Street and southwestern portion along Bayeaux Street, in the central portion with a factory for stone, earthenware and piping; and the buried foundation of manufactured gas tank on the northern portion.
	Adjoining Properties	No significant changes.
1913	**Property**	The Property is depicted as developed in the southern portion along Main Street and southwestern portion along Bayeaux Street with commercial business. Central portion of the property along Bayeaux Street depicts a gas and electric store. The Poughkeepsie Gas Light Company is no longer depicted.
	Adjoining Properties	The adjoining property to the north of the site is depicted as a tenement. A gasometer labeled as "Not Used) is depicted in the northwest. No other significant changes.
1950	**Property**	Bayeaux Street is now named North Perry Street. The Property is depicted as developed in the southern portion along Main Street and southwestern portion along North Perry Street with commercial business. Central portion of the property along North Perry Street depicts a poultry market and vacant building. The northern portion of the property depicts a private garage for automobiles and "J. Schrauths Sons Inc." is labeled across the north portion.
	Adjoining Properties	The adjoining property to the north of the site is depicted as vacant and boarded up. A scrap metal yard is depicted adjoining to the northwest. No other significant changes.
1952	**Property**	The garage structure at the northern portion of the Property is now labeled as an ice cream distribution warehouse instead of a private garage. A buried gasoline tank is depicted adjacent to the southeast corner of the garage. No other significant changes.
	Adjoining Properties	No other significant changes.
1990	**Property**	The Property is depicted with the Admiral William F Halsey Senior village for housing at the southern end and the remaining portion of the site with no improvements.
	Adjoining Properties	The adjoining properties are depicted as developed with a parking lot to the southwest with commercial businesses and apartments, northwest and east adjoining depicts multifamily residential dwellings. The north adjoining property is depicted as a playground. The southern adjoining properties are depicted as vacant lots.

A copy of the Certified Sanborn Map Report is attached in Appendix D.

4.2.2 City Directories

An EDR City Directory Abstract report was reviewed for data of former occupants of the Property's street address. The following is a generalized summary of the findings of city directory research for past occupants of the Property.

Property	
Occupant(s)	**Appr. Date Range**
Residential and Commercial Listings (127-149 Main Street)	1942 - 1970
Self Service Laundry (145 Main Street)	1963
Disabled American Veterans	2000

Property	
Occupant(s)	**Appr. Date Range**
Residential occupants of Admiral Williams F Halsey Senior Village (135 Main Street)	1980-1992, 2005-2014

The EDR City Directory Abstract report was also reviewed for listings of historic occupants of the adjoining properties. The following is a general summary of listings of historic adjoining property occupants:

Adjoining Properties		
Address(es)	**Historic Occupant(s)**	**Appr. Date Range**
130-150 Main Street	Various Residential and commercial listings including a motor vehicle bureau, funeral home, plumbing supply store	1942 – 1975
138-140 Main Street	Commercial listings including Irene Development Corp and River Valley Realty Corp, Peter J Liepmann MD LLC, & River Valley Care Center Inc	2000-2014
98-128 Main Street	Residential and Commercial listings including shoe repair, electronic store, restaurant, motor cycle repair shop, fruit market, linen supply company	1942 – 1980
110-116 Main Street	Various commercial listings including Ackerman Quinn Financial Services, Poughkeepsie Chamber of Commerce, Alternative Environmental Services, Marshall & Sterling Inc., etc.	1992-2014
113-125 Main Street	Residential and Commercial listings including a tavern, janitor supply	1942-1975
113-115 Main Street	Residential and Commercial listing including Milanese Restaurant	1975-2014
157 - 161 Main Street	Residential Listing	2010- 2014
12-42 North Perry Street	Residential listings	1942-2000

A copy of the EDR City Directory report is attached in Appendix D.

4.2.3 Historical Topographic Maps

Due to the availability of alternate historic sources, as well as the likelihood that this source would not provide any significant data, historical topographic maps were not researched for this assessment.

Year(s)	Summary	
	Property:	(not reviewed)
	Adjoining:	

4.2.4 Historical Aerial Photographs

Due to the availability of alternate historic sources, as well as the likelihood that this source would not provide any significant data, historical aerial photographs were not researched for this assessment.

Year(s)	Summary of Interpretation	
	Property:	(not reviewed)
	Adjoining:	

4.2.5 EDR High-Risk Historical Records

The EDR Radius Map™ report, which is discussed in greater detail in Section 4.3, provided a search of proprietary databases of potential historical high-risk uses at or in the vicinity of the Property. These databases include EDR Historic Cleaners – a database of property addresses with records of historical occupancy by suspected cleaners businesses; EDR Historic Auto – a database of property addresses with records of historical occupancy by potential automotive gas/filling stations and repair facilities; and EDR MGP- a database of sites historically occupied by manufactured gas plants and related facilities.

EDR Database	On-site Listings:	Adjoining/Off-Site Listings
Historic Cleaners: (on-site/adjoining only)	None	None
Historic Auto: (on-site/adjoining only)	None	None
MGP: (1-mile distance)	The Property is listed as a former MGP from as early as 1887 through approximately 1911.	Two additional MGP listings are identified within 1-mile search distance. One MGP site is located approximately 2,041 feet to the south-southwest of the Property. The second MGP site is located approximately 2,243 feet to the northwest of the Property.

4.2.6 Petroleum/Natural Gas Well Review

The historical record sources were reviewed for records of historic petroleum and/or natural gas wells at the Property. No record of any historical petroleum/natural gas wells at or adjoining the Property was identified.

4.2.7 Additional Historical Data

Where applicable, the following additional pertinent historical data was obtained:

Interviews/Anecdotal:	No additional pertinent historical data was obtained.
Local Gov't Records:	No additional pertinent historical data was obtained.
Prior Env. Reports: (Section 3.1)	Prior environmental reports reviewed as part of this assessment, as detailed in Section 3.1, did not provide additional pertinent detail of historical site usage.
Site Observations:	Indications of historic uses of the Property or adjoining properties were not observed during the site reconnaissance.
Other Sources:	No additional pertinent historical data was obtained.

4.2.8 Summary of Identified Historic Uses

The following table presents a summary of the types and approximate date ranges of identified prior uses of the Property:

Property	
Date Range	**Use**
1887 to 1913	Various commercial stores observed to the south of the property along Main street; Central portions of the property observed various commercial business; Northern portion of the property is observed with a manufactured gas plant.
1913 to 1952	Various commercial properties are observed in the south along Main Street. Central portions of the property is developed with commercial businesses, portions of a dairy and a vacant building; North portion of the property is developed with a private garage for automobiles.
Circa 1975 to Present	Senior Citizen Apartment Complex

The following table presents a summary of the types of identified prior uses of the adjoining properties:

Adjoining Properties	
Date Range	**Use**
1887 to present	Residential, commercial, and storage

4.2.9 Historical Records Data Failure

The ASTM E1527-13 standard defines data failure as a failure to achieve the ASTM specified historical research objectives after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. The objective is to identify all obvious uses of the property from the present, back to the property's first developed use, or back to 1940, whichever is earlier. Furthermore, records of historic use/conditions should be sought in intervals no less than approximately five years, unless the property conditions appear unchanged over a longer interval.

Objective	Met?	Detail	Significant?
First developed use/date determined?	No	The earliest documented use of the Property was a mix of commercial stores/businesses and a manufactured gas plant in 1887.	No

Objective	Met?	Detail	Significant?
Record sources at 5-year intervals back to 1940 or first developed use?	No	Historical record gaps exceeding five years were encountered. However, significant site-use changes or undiscovered site uses appear unlikely to have occurred during the record gaps.	No
All obvious prior uses identified?	Yes	See Section 4.2.8.	No

Please refer to Section 2.3 for additional discussion of data gaps and their significance to the findings of the assessment.

4.2.10 Historic Uses REC Discussion

The review of historical records did not indicate evidence of a REC in connection with the Property.

The central and north portions of the property were occupied by portions of a manufactured gas plant, currently known as the CH – Bayeaux Street Poughkeepsie MGP, from approximately the mid-19th to early-20th century. As further described in Section 4.3.1, the former MGP site is listed on the database of New York State Superfund sites and has undergone previous subsurface investigations with NYSDEC oversight due to the potential for subsurface impacts from the historical gas manufacturing operations. According to the NYSDEC published information, following the completions of site investigation work in 1990 and 2006, no significant MGP waste material was found and a NFA status was granted by NYSDEC on March 12, 2007.

The northern half of the Property was occupied by portions of a dairy in the mid-20th century, which included a garage structure and adjoining buried gasoline storage tank depicted by a 1952 historical fire insurance map. The site was redeveloped into the current configuration in the 1970s. Subsurface testing at the Property has not identified by evidence of a petroleum release in the vicinity of the historical UST; however, the disposition of the historical gasoline tank was not determined.

4.3 Standard Environmental Record Sources

A regulatory database report, titled EDR Radius Map™ Report, prepared by Environmental Data Resources of Shelton, CT was obtained and reviewed. The report provided a search of standard environmental record sources for listings of the Property, adjoining properties and sites within the surrounding area; and has been reviewed for the purpose of identifying listings suggesting a potential impact to the Property due to presence or migration of hazardous substances and/or petroleum products. Additional descriptions of the meaning and significance of the regulatory databases can be found in the regulatory database report in Appendix E. The EDR Radius Map™ Report provided a search of the following database categories in accordance with the requirements of the ASTM Standard E1527-13:

Regulatory Database	Search Distance
Fed. National Priorities List (NPL/a.k.a. "Superfund" sites) & Proposed NPL	1-mile
Fed. Delisted NPL	½-mile
Fed. Superfund Enterprise Management System (SEMS; formerly CERCLIS)	½-mile
Fed. SEMS-ARCHIVE (formerly known as CERCLIS NFRAP)	½-mile
Fed. RCRA Corrective Action Sites (CORRACTS)	1-mile
Fed. RCRA Transport/Storage/Disposal (TSD) sites	½-mile
Fed. RCRA Generators (LQG, SGQ & CESQG)	Site & Adjoining
Fed. Institutional Control/Engineering Control (IC/EC) Registries	Site only
Fed. Emergency Response Notification System (ERNS)	Site only
State/Tribal Hazardous Waste Sites (SHWS)	1-mile
State/Tribal Landfill and/or Solid Waste Disposal (LF/SWF)	½-mile
State/Tribal Leaking Storage Tanks	½-mile
State/Tribal Registered Storage Tanks	Site & Adjoining
State/Tribal IC/EC Registries	Site
State/Tribal Voluntary Cleanup Sites	½-mile
State/Tribal Brownfields	½-mile
Additional Federal, State, Tribal and Local Environmental Databases	Variable

Reported distances for adjoining listings discussed in Section 4.3.4, if applicable, are approximate and indicative of the presence of a public roadway or right-of-way between the adjoining site and Property.

The reported gradients indicated where applicable in Sections 4.3.4 and 4.3.5 have been estimated based on a number of factors including but not necessarily limited to field observation, review of topographic maps, database listing details and/or site specific geo-technical data.

4.3.1 Supplemental Database Listings

The regulatory database report was also reviewed for listings on supplemental databases, in addition to the Standard Environmental Record Sources. Any property or adjoining property listings on such databases of significant concern, if identified, is discussed in Sections 4.3.3 and 4.3.4. Otherwise, none of the other supplemental database listings identified by the regulatory database report are considered to be a REC in connection with the Property.

4.3.2 Limited Tier I Vapor Encroachment Screening

Limited analysis of the details of on-site, adjoining and vicinity database sites was conducted to identify potential sources of sub-surface vapor encroachment. This review was based on elements of the ASTM "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" (ASTM E 2600-15); and also on elements of "Methodology for Identifying the Area of Concern Around a Property Potentially Impacted by Vapor Migration from Nearby Contaminated Sources" (Buonicore, 2011-S-103-AWMA). Vicinity database sites pertaining to non-petroleum product releases within 1,760 feet of the Property in the up-gradient direction, 365 feet of the Property in the cross gradient direction and 100 feet of the Property in the down gradient direction; and vicinity database sites pertaining to petroleum product releases within 528 feet of the Property in the up-gradient direction, 165 feet of the Property in the cross gradient direction and 100 feet of the Property in the down gradient direction were reviewed to identify active contamination sites with the potential to affect subsurface vapor conditions at the subject property. The potential for vapor encroachment was considered in assessing whether or not a REC exists in connection with the Property when reviewing applicable sites within those distances.

Regulatory database sites with active petroleum or non-petroleum releases that are considered to constitute a vapor encroachment condition (VEC) to the Property, if any, are identified and discussed in Sections 4.3.3, 4.3.4 and 4.3.5.

4.3.3 Property Listings

The following listings of the Property were identified:

Name/Address:	Admiral William F. Halsey Senior Village, 135 Main Street
Database(s):	AST, UST
Data Discussion:	According to the database, a 10,000-gallon #2 heating oil UST was installed in 1976 and with the status "closed – removed" in 1997. The AST listing indicated a 10,000-gallon #2 heating oil tank installed in 2008 with the status "In Service". No indication of reported spills were noted for either tank.
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.
VEC Discussion:	Based on the available data, a VEC is not suspected.

Name/Address:	CH - Bayeaux Street Poughkeepsie MGP, Main Street and North Perry Street
Database(s):	SHWS/NY HSWDS
Data Discussion:	The HSWDS listing reflected information dated 2003 that the former Bayeaux Street MGP was listed as a potential hazardous waste disposal site. Although not listed by EDR on the SHWS database, a search of the NYSDEC Environmental Site Remediation database listed the former Bayeaux Street MGP (#314071) in the state superfund program with "C" (completed) classification. Further, the database details state *"Site was given a class of R. Decision was made on 3/12/07 to classify as N. Reclassified to C. This was the site of a small MGP on Main Street and North Perry Street in Poughkeepsie. A senior citizens housing development occupies the site today. The site is included in a multi-site Consent Order #D3-0134-89-05 1/12/90. A Site Assessment (PSA) was performed in 1990. No significant MGP waste material was found, and an NFA letter was sent on 03/12/07. As DER's experience with MGP sites grew, a few data gaps were identified in the original PSA. Central Hudson completed additional investigation work in 2006 to more completely cover the full footprint of the site with borings and test pits. The additional work confirmed the original conclusion that no significant MGP waste was present at the site. A letter stating this conclusion was issued on 03/12/07."*
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.
VEC Discussion:	Based on the available data, a VEC is not suspected.

4.3.4 Adjoining Property Listings

The following adjoining property listings were identified. Reported distances, where applicable, are approximate and indicative of the presence of a public roadway or right-of-way between the adjoining site and Property. The reported gradient has been estimated based on a number of factors including but not necessarily limited to field observation, review of topographic maps, database listing details and/or site specific geo-technical data.

Name/Address:	Salvation Army – 150 Main Street				
Database(s):	NY SPILLS				
Distance in feet:	86	**Direction:**	SSE	**Gradient:**	Up
Data Discussion:	According to the database, case number 1809200 was opened on December 1, 2018 when one gallon of fuel oil spilled onto the sidewalk due to a tank overfill. Corrective action was taken and the spill was closed on December 3, 2018				
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.				
VEC Discussion:	Based on the available data, a VEC is not suspected.				

Name/Address:	NYSDOT Project, 133 Main Street, Spill number 9604735				
Database(s):	NY SPILLS				
Distance in feet:		**Direction:**		**Gradient:**	
Data Discussion:	Although mistakenly listed as adjoining by EDR, the listing is actually for a site located in Carroll (Chautauqua County) , New York				
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.				
VEC Discussion:	Based on the available data, a VEC is not suspected.				

Name/Address:	River Care Nursing Home, 138-144 Main Street, Spill number 9714354				
Database(s):	UST, NY SPILLS				
Distance in feet:	1	**Direction:**	S	**Gradient:**	Cross
Data Discussion:	The UST listing indicated a 1500-gallon #2 fuel oil UST was installed in 1998 and has been closed by removal. According to the NY Spills listing, contamination was discovered during the removal of a 275 gallon AST from the basement of a demolished building. The spill case was closed on March 26, 1998.				
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.				
VEC Discussion:	Based on the available data, a VEC is not suspected.				

Name/Address:	115 Main Street, Spill number 9202522				
Database(s):	NY SPILLS				
Distance in feet:	130	**Direction:**	WSW	**Gradient:**	Down
Data Discussion:	According to the database, an air eliminator truck malfunctioned causing an oil leak to the paved street. Driver applied Speedi-Dri® and confirmed cleanup, and the spill case was closed on June 2, 1992.				
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.				
VEC Discussion:	Based on the available data, a VEC is not suspected.				

4.3.5 ASTM Search Distance Findings

The following is a discussion of non-adjoining sites identified as located within the ASTM specified search distance surrounding the Property. In order to keep this discussion informative and concise, discussion(s) is/are provided of the listed site(s) for each database category that appears most likely to impact the Property based on distance, area topography and/or regulatory status. Listings of sites within the applicable search distances not specifically discussed below were reviewed and

concluded not to be RECs in connection with the Property or VECs based on various factors including distance, area topography, known or inferred groundwater flow direction and/or regulatory status. Listings for the following databases, if identified, have been discussed above in Sections 4.3.3 and 4.3.4: Registered Storage Tanks, Federal RCRA Generators, Federal and State EC/IC, ERNS. A copy of the full regulatory database report, including available details of all listed sites, is included in Appendix E.

Federal NPL				**# of sites:**	1	**Search Distance:**	1-mile
Notable Listing:	Hudson River PCBs						
Distance in feet:	1,814	**Direction:**	W	**Gradient:**	Down		
Data Discussion:	The site is a 40-mile stretch of the Hudson River between Mechanicsville and Fort Edward. General Electric discharged an estimated 1 million pounds of PCBs into that stretch of water. The State has identified 40 hot spots with contaminated sediments greater than 50 parts per million. EPA has prepared a feasibility study and to evaluate alternative remedial actions under CERCLA. EPA approved funding for cleanup and two potential parties responsible for waste associated with this site have been notified.						
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.						
VEC Discussion:	Based on the available data, a VEC is not suspected.						

Federal Delisted NPL				**# of sites:**	0	**Search Distance:**	1-mile
Notable Listing:							
Distance in feet:		**Direction:**		**Gradient:**			
Data Discussion:							
REC Discussion:							
VEC Discussion:							

Federal SEMS				**# of sites:**	1	**Search Distance:**	½-mile
Notable Listing:	Hudson River PCBs						
Distance in feet:	1,814	**Direction:**	W	**Gradient:**	Down		
Data Discussion:	This site is discussed in the NPL section above						
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.						
VEC Discussion:	Based on the available data, a VEC is not suspected.						

Federal SEMS-ARCHIVE				**# of sites:**	2	**Search Distance:**	½-mile
Notable Listing:	Berncolors-Poughkeepsie Inc – 75 N Water St						
Distance in feet:	1,830	**Direction:**	NW	**Gradient:**	Down		
Data Discussion:	This is the closest SEMS-ARCHIVE site to the Property. The site was indicated as Removal Only Site (No Site Assessment Work Needed) and is not on the NPL.						
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.						
VEC Discussion:	Based on the available data, a VEC is not suspected.						

Federal CORRACTS				**# of sites:**	0	**Search Distance:**	1-mile
Notable Listing:	None						
Distance in feet:		**Direction:**		**Gradient:**			
Data Discussion:							
REC Discussion:							
VEC Discussion:							

Federal RCRA-TSD				**# of sites:**	0	**Search Distance:**	½-mile
Notable Listing:	None						
Distance in feet:		**Direction:**		**Gradient:**			
Data Discussion:							
REC Discussion:							
VEC Discussion:							

State HAZARDOUS WASTE SITE				**# of sites:**	4	**Search Distance:**	1-mile
Notable Listing:	HRH Lead Abatement Site – 55 Garden Street						
Distance in feet:	1,954	**Direction:**	E	**Gradient:**	Up		
Data Discussion:	This is the closest SHWS site to the Property. According to the database, *"The primary contaminant associated with the site is lead, which resulted from the abatement of lead paint… All lead resulting from the abatement was containerized and properly disposed off-site."*						
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.						
VEC Discussion:	Based on the available data, a VEC is not suspected.						

State SOLID WASTE FACILITY/LANDFILL				**# of sites:**	1	**Search Distance:**	½-mile
Notable Listing:	GF Refuse TF – 240 Main St						
Distance in feet:	1,264	**Direction:**	ESE	**Gradient:**	Up		
Data Discussion:	According to the database, this site is an inactive transfer station. This address is not listed on any additional regulatory databases.						
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.						
VEC Discussion:	Based on the available data, a VEC is not suspected.						

State LEAKING STORAGE TANKS				**# of sites:**	24	**Search Distance:**	½-mile
Notable Listing:	Apt Milanese – 111 Main St						
Distance in feet:	225	**Direction:**	W	**Gradient:**	Down		
Data Discussion:	All of the 24 LTANKS listings have a closed regulatory status and none are considered RECs						
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.						
VEC Discussion:	Based on the available data, a VEC is not suspected.						

State VOLUNTARY CLEANUP SITES				**# of sites:**	1	**Search Distance:**	½-mile
Notable Listing:	CH - Water St. - Poughkeepsie MGP – North Water Street						
Distance in feet:	2,128	**Direction:**	NW	**Gradient:**	Down		
Data Discussion:	According to the database, the former MGP operated from 1911 to 1950, with contaminant of concern coal tar leaking from the storage vessels and piping and still present in the subsurface. Some tars continually to discharge into the Hudson River sporadically. Several environmental investigations indicated coal tar contains high levels of dissolved BTEX, PAH and metal compounds that has impacted the subsurface of the site, bedrock and Hudson River. Based on the active investigation, the flow of contamination towards the Hudson River, elevation and distance from the Property, this listing is not considered a REC in connection of the Property.						
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.						
VEC Discussion:	Based on the available data, a VEC is not suspected.						

State BROWNFIELD SITES				# of sites:	4	Search Distance:	½-mile
Notable Listing:	Queen City Lofts – 178-188 Main St & 11 S. Bridge St.						
Distance in feet:	311	**Direction:**	SE	**Gradient:**	Up		
Data Discussion:	According to the database, the site was used for various industrial, commercial and residential purposes including a machine shop and laundry facility from as early as 1887 until the mid-1980s. Contamination was identified during a subsurface investigation attributed to historic fill and two USTs. Contamination is documented to be contained within the site boundaries. Based on the subsurface investigation and no contamination leaching offsite, this listing is not considered to be a REC in connection with the Property. Based on various factors including distance, area topography and/or site status, none of the other BROWNFIELDS listings are considered to be a REC for the Property.						
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.						
VEC Discussion:	Based on the available data, a VEC is not suspected.						

UNMAPPED/ORPHAN LIST SITES	
	Hillmann has also reviewed a list of unmapped sites (a.k.a. "Orphan List" sites) indicated by the database report. Unmapped sites that were identified as falling within an applicable specific search distance or warranting discussion have either been discussed in the preceding tables or are detailed below:
Notable Listings:	None

4.4 Additional Environmental Record Sources

Requests have been submitted to local, municipal and state agencies for pertinent records pertaining to the Property, particularly with regard to potential environmental concerns such as petroleum storage tanks, storage and usage of hazardous substances and petroleum products, and/or known or suspected environmental contamination. Where applicable, internet research of government environmental regulatory databases was also conducted, as well as a general cursory internet search of the Property address, for information indicative of a REC. The following table summarizes the findings of the research:

Source	Type of Request	Outcome
NYS Dept of Environmental Conservation	FOI request	A response was recieved stating that no records were found.
Dutchess County	FOI request	A response was recieved stating that no records were found.
City of Poughkeepsie	FOI request	A response was received indicating building department records were available however as of the date of this report no records have been received.
EPA Envirofacts	Online search	Hillmann reviewed available on-line records pertaining to the Property. No information indicative of a REC was identified.
Internet Search Engine	Online search	Hillmann reviewed available on-line records pertaining to the Property. No information indicative of a REC was identified.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

The site reconnaissance consisted of visual and/or physical observations of the Property and improvements, adjoining properties as viewed from the Property boundaries and the surrounding area based on visual observations from adjoining public thoroughfares. Building exteriors were observed at ground level, unless otherwise indicated. Where applicable, representative areas of building interiors were accessed and observed to the extent they were made safely accessible with the cooperation of the site escort.

Site Inspection Personnel:	Stephanie Lamb
Property Escort/Company:	Mr. Chris Green/ Reliant Realty
Inspection Date:	October 20, 2020
Weather Conditions:	Overcast, 60 degrees F

5.1.1 Significant Inaccessible Areas

No significant areas of the Property inaccessible at the time of the inspection were noted.

5.1.2 Significant Limiting Site Conditions

No significant limiting site conditions were noted at the time of the site reconnaissance.

5.2 General Site Setting

5.2.1 Site and Vicinity Characteristics

Abutting Roadways:	Main Street to the south; North Perry Street to the west
Current Property Use:	Residential Senior Housing
Evidence of Past Property Uses:	None observed.
Evidence of Past Adjoining Property Uses:	None observed.
Surrounding Area Uses:	Commercial, residential, park

5.2.2 Current Adjoining Property Uses

Dir	Street Address	Description
N	31-35 North Perry Street	City Park
NW	20 North Perry Street	Apartments (Residential Multifamily)
W	115 Main Street	Restaurant
SW	110 Main Street	Offices
S	140 Main Street	The Grand Rehabilitation & Nursing at River Valley
E	20 North Bridge Street	Apartments (Residential Multifamily)

No visual observations indicative of a potential environmental concern were noted on the adjoining properties.

5.2.3 Topographic Characteristics

Terrain:	Flat to gently sloping
Direction of Downward Slope:	Towards the west
On-site Water Bodies:	None observed
Other Significant Features:	None observed

5.2.4 General Description of Structures

Buildings/# of Floors	One building/13-story
Approx. Building Area:	85,800 ft²
Approx. Year Built:	1976
Ancillary Structures:	Heating Oil Storage Tank Building, 2 Small Sheds
Sources of Heating & Cooling:	Oil fired and electrical powered systems
Potable Water/Sewage Disposal:	Municipal utility connections

5.3 Interior & Exterior Observations

5.3.1 Storage/Usage of Hazardous Substances and Petroleum Products

The following hazardous substances and petroleum products were observed to be stored and used by property occupants:

Occupant	Substance	Qty/Container Type	Storage Conditions
Owner	Various cleaning and maintenance supplies	Multiple 1-5 gal Containers	In Maintenance Storage.

5.3.2 Drums

The following hazardous substance or petroleum product drums were noted on the Property:

One 55-gallon drum of floor cleaner was observed in the maintenance storage room. No signs of leaking or staining were observed in the area of the drum.

5.3.3 Unidentified Substance Containers

No unidentified substance containers suspected of containing hazardous substance or petroleum product were noted on the Property.

5.3.4 Other Hazardous Substances/Petroleum Products

No other containers of hazardous substances or petroleum products were noted on the Property.

5.3.5 Bulk Petroleum/Hazardous Material Storage Tanks

The following storage tanks for bulk petroleum or hazardous material storage were identified or reported to be present; or are suspected to be present based on visual observations:

AST/ UST	Product	Capacity	Construction	Year Installed	Status	Location/Notes
AST	No. 2 Fuel Oil	10,000-gal	Steel	2008	In Service	Within sheltered enclosure; no evidence of a release was observed.
UST	No. 2 Fuel Oil	10,000-gal	Steel	1976	Closed in Place	UST decommissioned in 1997; see UST closure report discussion in Section 3.1

Hillmann notes that the potential presence of abandoned USTs and/or associated buried piping at the Property cannot be ruled out. A 1952 Sanborn fire insurance map depicted a buried gasoline on the northeastern portion of the Property. The site was redeveloped into the current configuration in the 1970s. While subsurface testing at the Property has not identified by evidence of a petroleum release in the vicinity of the historical UST, the disposition of the historical gasoline tank was not determined.

5.3.6 PCBs in Oil Filled Electrical/Hydraulic Equipment

The existing site improvements were established prior to the ban of PCBs in 1979. The following oil-filled electrical/hydraulic equipment was identified at the Property:

One hydraulic trash compactor was observed in the compactor room. No signs of leaking or staining were observed in the area of the compactor motor.

5.3.7 Odors

No strong, pungent or noxious odors were noted at the Property.

5.3.8 Pools of Liquid

No standing water or pools of liquid likely to contain hazardous substances or petroleum products were noted at the Property.

5.3.9 Interior Stains or Corrosion

No interior stains or corrosion due to hazardous substance/petroleum products spills/releases were noted at the Property.

5.3.10 Interior Drains/Sumps

No floor drains or sump pits were noted at the Property other than for storm water or sewage management.

5.3.11 Exterior Pits/Ponds/Lagoons

No exterior pits, ponds or lagoons was identified on the Property in connection with waste treatment or disposal.

5.3.12 Stained Soil, Pavement/Stressed Vegetation

No stained soil, pavement or stressed vegetation was observed at the Property.

5.3.13 On-Site Solid Waste Disposal/Fill Material

No evidence of any on-site solid waste dumping was noted at the Property. No evidence of recently deposited fill materials was observed at the Property.

5.3.14 Waste Water

Sanitary sewage generated at the Property is discharged via a connection to the local public sewer system.

Storm water runoff at the Property is discharged via roof drains into the municipal sewer system.

No additional waste water discharges were identified at the Property.

5.3.15 Septic Systems

No septic systems were identified at the Property.

5.3.16 Wells

No potable, monitoring or other groundwater wells were identified at the Property.

5.3.17 Railroad Spurs

No railroad spurs were identified on the Property.

6.0 INTERVIEWS

6.1 Interviews with Past and Present Owners and Occupants

Subject	Name/Affiliation	Summary
Property Owner / Representative	Ms. Lori Ferguson & Mr. Chris Green / Reliant Realty	Ms. Ferguson was provided an environmental questionnaire and Ms. Ferguson and Mr. Green were interviewed during the site inspection. Pertinent information from the interview, where applicable, has been referenced in various sections of this report.
Property Occupants	Not applicable	Property occupants were not available for interview at the time of the assessment.
Past Owners, Occupants, Operators	Not applicable	Past owners/occupants of the Property were not available for interview at the time of the assessment.
Owners/Occupants of Adjoining or Nearby Properties	Not applicable	The Property was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews with adjoining or nearby property owners or occupants were not conducted.

6.2 Interviews with State and/or Local Government Officials

Written and on-line requests for environmental records of the Property from State and Local governmental agencies are detailed in Section 4.4.

7.0 BUSINESS ENVIRONMENTAL RISKS

In accordance with the contract agreement for this assessment, Hillmann has performed cursory reviews of several potential Business Environmental Risks (also known as "Non-Scope Considerations"). The ASTM E1527-13 standard defines the term business environmental risk (BER) as, *"a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice."*

7.1 Asbestos-Containing Material (ACM)

The contracted scope of work included a cursory visual screening of the accessed portions of buildings at the Property built prior to 1990 for suspect asbestos containing materials (ACM). The information provided in this section, where applicable, is limited to identification of potential suspect materials in the readily accessible and observed areas of the building, and their general condition. This is not intended to be a comprehensive survey for the presence of ACM, and no testing has been conducted.

Suspected ACM noted within the accessed building areas included floor tile and associated mastics, roofing materials, cover base and associated mastic, gypsum wallboard systems, suspended ceiling panels and thermal systems insulation.

Hillmann was provided with a copy of a prior asbestos survey report titled Asbestos Inspection Survey, Admiral Halsey Senior Housing Complex-135 Main Street, Poughkeepsie, NY; by Environmental Health Investigations, dated May 30, 2007. The survey was indicated to be non-intrusive. Fifty-six samples were collected for asbestos analysis. Identified ACM materials included roofing materials (assumed), floor tile and associated mastic, boiler flue insulation, rope-like boiler gasket and caulking/insulation.

7.2 Lead-Based Paint

The contracted scope of work included a cursory visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1980. This is not intended to constitute a comprehensive survey for LBP or potential lead hazards, and no testing has been conducted.

Painted surfaces observed within the accessed areas of the residential building were noted to be in good condition.

Hillmann was provided with a copy of a prior lead paint screening report titled Lead Paint Screening; by Environmental Health Investigations, dated October 9, 2007. See below for the conclusions from the Lead Paint Screening report prepared by EHI:

> *"Based on the results of the screening, no tested paint surfaces were found to contain lead paint. However, many of the wall tiles in the bathrooms throughout the facility tested positive for lead. The wall tiles are not considered a lead painted surface but do contain levels of lead in them greater than or equal to 1.0 mg/cm2. Contractors performing any renovation or demolition activities that will impact*

the wall tiles creating dust and debris should consult the Operations and Maintenance Plan to determine work practices and proper personal protective equipment."

7.3 Radon

Data compiled by the USEPA, as summarized by the regulatory database report, indicated that the Property is located in an area classified as Zone 1 or 'high risk' area for radon. Radon testing was not included in the scope of this assessment.

Hillmann was provided with a copy of a prior radon testing report titled Radon Testing; by Environmental Health Investigations, dated September 8, 2008. The main office, community room, and boiler room were the sample locations for the radon test. See below for the conclusions from the Lead Paint Screening report prepared by EHI:

"The US EPA has set an action level of 4.0 pico Curies per Liter (pCi/L) for a residence. The tests conducted at the Admiral Halsey are all well below the action level. The US EPA maintains a radon information website which includes copies of all publications, at www.epa.gov/iaq/radon."

7.4 Mold/Microbial Damage

As per the contracted scope of work, Hillmann conducted a cursory visual screening of the accessed areas of the building for evidence of significant damage to building materials and finishes as result of moisture intrusion and/or mold/microbial growth. Hillmann did not observe evidence of significant problems with moisture intrusion or mold/microbial growth at the Property.

7.5 NWI Mapped Wetlands

As indicated in the Physical Setting Source table of Section 4.1, no NWI mapped wetlands areas were depicted at the Property by the EDR Geocheck-Physical Setting Source Addendum (attached in Appendic E).

The scope of work for this assessment excludes a visual determination of regulated wetlands at the Property. It is emphasized that, regardless of the wetlands data obtained via the EDR Geocheck-Physical Setting Source Addendum, a delineation of regulated wetlands by a qualified professional would be warranted to determine the presence or absence of regulated wetlands at the Property.

7.6 Lead in Drinking Water

The scope of work for this assessment included a review of the potential for elevated levels of lead in drinking water by determining the source of the drinking water supply and a review of available compliance or testing data.

Potable water service at the Property is provided by a utility connection with the City of Poughkeepsie A recently published water quality report from the utility indicated compliance with USEPA water quality standards for lead in drinking water. A copy of the report has been attached in Appendix F.

RE: Phase I Environmental Site Assessment
135 Main Street
Poughkeepsie, NY 12601
Hillmann Project No: G62423

Dear Ms. Moronta:

Hillmann Consulting, LLC, is pleased to provide the results of our Phase I Environmental Site Assessment of the above referenced property. This assessment was performed in accordance with the scope and limitations of ASTM Practice E 1527-13, which is the latest version of the E1527 standard published by the ASTM.

We appreciate the opportunity to provide environmental due diligence services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact our office at 908-688-7800.

Sincerely,

Hillmann Consulting, LLC

Ryan K. Powell, P.G.

List of Abbreviations/Acronyms

Hillmann may use the following abbreviations and acronyms for common terminology described in our report. Not all abbreviations or acronyms may be applicable to this report:

ACM	– Asbestos Containing Material
AOC	– Area of Concern
AST	– Aboveground Storage Tank
ASTM	– American Society for Testing Materials
BER	– Business Environmental Risk
CEA	– Classification Exception Area
CERCLA	– Comprehensive Environmental Response Compensation and Liability Act
CERCLIS	– Comprehensive Environmental Response Compensation and Liability Information System
CESQG	– Conditionally Exempt Small Quantity Generator
COC	– Chemicals of Concern
CORRACTS	– Corrective Action Sites
CREC	– Controlled Recognized Environmental Condition
DNPL	– Delisted National Priority List
ENG	– Engineering
ERNS	– Emergency Response Notification System
FDNY	– Fire Department, City of New York
FOI/FOIA/FOIL	– Freedom of Information / Freedom of Information Act / Freedom of Information Letter
HVAC	– Heating Ventilation & Air Conditioning
HREC	– Historic Recognized Environmental Condition
IAQ	– Indoor Air Quality
INST	– Institutional
ISRA	– Industrial Site Recovery Act
LBP	– Lead-Based Paint
LQG	– Large Quantity Generator
LTANK	– Leaking Storage Tank
LUST	– Leaking Underground Storage Tank
SDS/MSDS	– Safety Data Sheet / Material Safety Data Sheet
NA	– Not Applicable
NCDOH	– Nassau County Department of Health
NFA	– No Further Action
NFRAP	– No Further Remedial Actions Planned
NJDEP	– New Jersey Department of Environmental Protection
NPDES	– National Pollutant Discharge Elimination System
NPL	– National Priority List
NYCDEP	– New York City Department of Environmental Protection
NYCDOB	– New York City Department of Buildings
NYSDEC	– New York State Department of Environmental Conservation
OPRA	– Open Public Records Act
PADEP	– Pennsylvania Department of Environmental Protection
PAH	– Polycyclic Aromatic Hydrocarbon
PCE	– Perchloroethylene
RAO	– Response Action Outcome
RCRA	– Resource Conservation and Recovery Act
RCRIS	– Resource Conservation and Recovery Information System
REC	– Recognized Environmental Condition
SCDHS	– Suffolk County Department of Health Services
SDG	– Significant Data Gap
SEMS	– Superfund Enterprise Management System
SRP	– Site Remediation Program
SQG	– Small Quantity Generator
SVOC	– Semi-Volatile Organic Compound
TCE	– Trichloroethylene
TSDF	– Treatment Storage and/or Disposal Facility
USEPA	– United States Environmental Protection Agency
UST	– Underground Storage Tank
VEC	– Vapor Encroachment Condition
VOC	– Volatile Organic Compound

1.0 FINDINGS, OPINIONS, AND CONCLUSIONS

Hillmann Consulting, LLC (Hillmann) performed a Phase I Environmental Site Assessment (ESA) at 135 Main Street, Poughkeepsie, New York (the Property). This assessment has been conducted in accordance with our contracted scope of work and the ASTM Standard Practice E 1527-13 for Phase I Environmental Site Assessments and All Appropriate Inquiries (AAI) Final Rule 40 CFR Part 312. This section contains a summary of findings, opinions and conclusions made by this assessment. However, this section, alone, does not constitute the complete assessment. The report must be read in its entirety.

1.1 Summary of Project Details

Project Name:		Admiral Halsey Apartments – New Construction			
Primary Street Address:		135 Main Street			
City:	Poughkeepsie	**County:**	Dutchess	**State:**	New York
Tax ID/Parcel Number:		Block 76, Lot 911			
Property Owner:		Omni New York, LLC			
Zoning Designation:		R-6 (Residential)			
Approx. Property Area:		2.20 acres			
Buildings/# of Floors		13 story plus sub-basement			
Approx. Building Area:		85,800 square feet			
Approx. Year Built:		Circa 1976			
Commercial Occupants:		Not applicable			
Current Use:		Senior citizen housing and landscaped property in the rear			
Prior Uses:		Commercial stores along Main Street. Former Coal MGP in the central and north portions of the property until approximately 1911			
Inspected By:		Mr. Ryan K. Powell			
Property Contact/Company:		Ms. Elizabeth Moronta			
Property Escort/Company:		Mr. Robert Poppo (Property Porter)			
Inspection Date:		March 20, 2019			
Weather Conditions:		Clear, 50 degrees F			

1.2 Findings Summary Table

PHASE I ENVIRONMENTAL SITE ASSESSMENT				
Assessment Subject	**No Notable Finding**	**Notable Findings**	**REC ?**	**Rpt. Ref.**
User Provided Info	X			3.0
Data Gaps	X			2.3
Property Regulatory Records Review		The Property was listed in the EDR report with AST and UST designations in the database. A 10,000-g. UST was closed in place in 1997.	No	4.3.1
Property Historical Records Review	X	Portions of the Property were occupied by a manufactured gas plant from mid-19th to early-20th century. A gasoline UST at the Property was depicted by 1952 fire insurance maps.	No	4.2
Site Reconnaissance	X			5.0
Interviews	X			6.0
Adjoining & Nearby Properties		The adjoining properties River Care Nursing Home - 138-144 Main Street and Milanese Restaurant - 115 Main Street are listed in the EDR report under the NY Spills database.	No	4.3.2 5.2.8
BUSINESS ENVIRONMENTAL RISKS / NON-ASTM SCOPE				
BER	**Not Applicable**	**Findings**		**Rep. Ref.**
Asbestos Containing Materials (ACM)		An Asbestos Inspection Survey conducted in May 2007 by EHI identified ACM in the form of roofing materials (assumed), floor tile and associated mastic, boiler flue insulation, rope-like boiler gasket and caulking/insulation.		7.1
Lead Based Paint (LBP)		A Lead Paint Screening conducted in October 2007 by EHI concluded that no lead painted surfaces were detected.		7.2
Radon		Three radon tests were performed 8/26/2008 through 8/28/2008 by EHI. Results indicated no exceedance of the EPA radon standards.		7.3
Mold		A limited cursory visual screening for evidence of mold/moisture intrusion did not identify any significant mold/microbial growth in the building.		7.4
Wetlands		The EDR Geocheck Physical Setting Source addendum depicted no state or federal (NWI) mapped wetlands on the Property.		7.5

1.3 Findings and Conclusions

1.3.1 Recognized Environmental Conditions

Hillmann has performed a Phase I Environmental Site Assessment in accordance with the scope and limitations of ASTM Practice E 1527-13 of the Property as described in Section 2 of this report. Any additions to, exceptions to, or deletions from this practice are also described in Section 2 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Property, except for the following:

RECOGNIZED ENVIRONMENTAL CONDITIONS	
REC #1	Subsurface testing conducted at the Property in 2007 and 2019 identified metals and SVOCs in soils and groundwater at concentrations exceeding regulatory cleanup standards. The identified contaminants were attributed to historical urban fill. Groundwater results in one location indicated VOC and PAH exceeding the regulatory cleanup standards. These compounds are indicative of a possible petroleum contamination due to recorded PID readings and staining observed in the corresponding soil boring. Due to the findings of the subsurface testing, the Property voluntarily procured a Soil and Groundwater Contamination Health and Safety Plan (EHI, 2007) that prescribed operational procedures for site personnel to follow during activities that disturb soil or groundwater. Since the identified urban fill and VOC contaminants in soil and groundwater are being managed in place under the Soil and Groundwater Contamination Health and Safety Plan, the metals, SVOCs, in soil and VOCs in groundwater are considered to be a REC in connection with the Property.
HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS	
	No HRECs were identified.
CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS	
	No CRECs were identified.
SIGNIFICANT DATA GAPS	
	No SDGs were identified.

1.3.2 REC Response Action Recommendations

The following table presents recommended response actions to the identified RECs for further investigation and/or corrective action:

REC RESPONSE ACTION SUMMARY TABLE	
REC #	**Response Action**
REC#1	Given the presence of metals, PAHs, and VOCs, in soil and groundwater, and the current plans for new construction at the site, the site specific management plan for handling site soils and groundwater should be updated and followed during planned construction activities.

1.3.3 Additional Findings

The following environmental conditions were identified, but are not considered to be a REC in connection with the Property:

NOTABLE ENVIRONMENTAL CONDITIONS	
1.	The central and northern portions of the property were occupied by portions of a manufactured gas plant, currently known as the CH – Bayeaux Street Poughkeepsie MGP, from approximately the mid-19th to early-20th century. As further described in Section 4.3.1, the former MGP site is listed on the database of New York State Superfund sites and has undergone previous subsurface investigations with NYSDEC oversight due to the potential for subsurface impacts from the historical gas manufacturing operations. According to the NYSDEC published information, following the completions of site investigation work in 1990 and 2006, no significant MGP waste material was found and a NFA status was granted by NYSDEC on March 12, 2007.
2.	A gasoline UST associated with a former dairy operation was depicted at the northeast portion of the Property by a 1952 fire insurance map. The entire property was redeveloped into the current senior housing complex in the mid-1970s. While disposition of the historical gasoline UST has not been determined, subsurface testing at the Property did not identify evidence of a petroleum release from the former gasoline UST.
3.	A 10,000-gallon above ground storage tank (AST) was observed in the rear of the building, central portion of the Property. The tank is enclosed with a brick structure and accessed via permanent step ladder fixed to the concrete enclosure. No evidence of leakage was observed at the time of the inspection.

4.	A 10,000-gallon #2 heating oil UST was closed in place in 1997. The UST closure was documented by a 1997 tank closure report by Conrad Geoscience, which concluded that all soil testing results were below NYSDEC standards.
5.	Hydraulic fluid is used inside the garbage compactor in the garbage compactor room. Based on the age of the construction, the original equipment may have utilized fluids containing PCBs. No evidence of a significant release was identified.
6.	Hillmann notes that the potential presence of abandoned USTs and/or associated buried piping at the Property cannot be ruled out. A 1952 Sanborn fire insurance map depicted a buried gasoline on the northeastern portion of the Property. The site was redeveloped into the current configuration in the 1970s. While subsurface testing at the Property has not identified by evidence of a petroleum release in the vicinity of the former UST, the disposition of the historical gasoline tank was not determined.

1.4 Environmental Professional Statement

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a *property* of the nature, history and setting of the subject *property*. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Ryan K. Powell, P.G.
Environmental Professional

2.0 INTRODUCTION

2.1 Purpose and Scope

This assessment was conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-13. The ASTM describes these methodologies as representing good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the "landowner liability protections," or "LLPs"): that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35) (B). The primary goal of the processes established by ASTM E1527-13 is to identify *recognized environmental conditions* in connection with the Property.

The term *recognized environmental condition (REC)* is defined by the ASTM as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

The ASTM has also defined the terms *historical recognized environmental conditions* and *controlled recognized environmental conditions* as two additional types of RECs. The term *historical recognized environmental condition (HREC)* is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls or engineering controls).

The term *controlled recognized environmental condition (CREC)* is defined as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

Conditions determined to be *"de minimis conditions"* are not considered to be RECs, HRECs or CRECs. *De minimis condition* is defined by the ASTM, "…as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

The chief components of this assessment are generally described as follows:

- A non-invasive visual reconnaissance of the Property and adjoining properties in accordance with ASTM guidelines for evidence of RECs.

- Interviews of past and present owners and occupants and state and local government officials, seeking information related to the potential presence of RECs at the Property.

- A review of standard physical record sources for available topographic, geologic and groundwater data.

- A review of standard historic record sources, such as fire insurance maps, city directories, aerial photographs, prior reports and interviews, etc., to determine prior uses of the Property from the present, back to the Property's first developed use, or back to 1940, whichever is earlier.

- A review of standard environmental record sources including federal and state environmental databases, and additional environmental record sources, to identify potential regulatory concerns with the Property, adjoining properties and properties located within the surrounding area.

An evaluation of environmental or other regulatory compliance matters is excluded from the scope of this assessment.

These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

2.1.1 Business Environmental Risks/Non-ASTM Scope Considerations

In accordance with our contract agreement, Hillmann may have addressed the following potential environmental subject matters that are outside of the requirements of the ASTM E1527-13 standard:

Asbestos-Containing Materials (ACM): A cursory non-intrusive visual screening for the presence of suspect ACM within the accessed areas of buildings built prior to 1990 on the Property. It is emphasized that this cursory non-intrusive visual screening does not constitute an asbestos survey/inspection of the premises. An asbestos survey/inspection should be sought by the report User(s) if more certainty is desired regarding ACM and potential asbestos hazards at the Property. Furthermore, a review of regulatory compliance matters pertaining to asbestos is excluded from the scope of work.

Lead-Based Paint (LBP): A cursory non-intrusive visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1980 on the Property. It is emphasized that this cursory non-intrusive visual screening does not constitute a comprehensive survey for LBP or potential lead hazards. A comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding LBP at the Property. Furthermore, a review of regulatory compliance matters pertaining to lead-based paint is excluded from the scope of work.

USEPA Designated Radon Potential: Review of general non-site specific data published by the USEPA regarding the Radon Zone classification for the area of the Property.

Mold: A cursory non-intrusive visual screening within the accessed areas of buildings on the Property for evidence of systemic microbial problems, including visible mold growth, water

damaged building materials or musty odors. It is emphasized that this cursory non-intrusive visual screening does not constitute a comprehensive survey for moisture/mold/microbial damage. A more comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding the potential for moisture/mold/microbial damages at the Property.

2.2 Property Location/Legal Description

Property location and legal description details are described as follows:

Primary Street Address:		135 Main Street			
City:	Poughkeepsie	**County:**	Dutchess	**State:**	New York
Tax ID/Parcel Number:		Block 76, Lot 911			
Approx. Land Area:		2.20 acres			
Approx. Latitude/Longitude:		North 41.7058760 degrees/West 73.9334410 degrees			
Additional Details (if appl.):		The Property address range includes the landscaped portion rear of the existing building			

2.3 Data Gaps

A *data gap* is defined by the ASTM as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. A data gap is only significant if other information and/or professional experience raises reasonable concerns involving the data gap and the ability to determine the presence or absence of recognized environmental conditions. The following table summarizes data gaps encountered during the assessment as well as a discussion of their significance.

Data Gap:	Significant (Yes/No)?	Discussion
Historical records data failure	Yes	See Section 4.2.9
Response to agency records requests not received as of date of report.	No	Any additional information indicative of a REC will be forwarded upon receipt.

2.4 User Reliance

This report is for the exclusive use of the User(s) named on the front cover. No other party(ies) shall have any right to rely on the content of this report without first obtaining the consent of the original report User; and without obtaining written consent from Hillmann in the form of a letter of reliance or report recertification.

2.5 Significant Assumptions

The following significant assumptions are made:

- Hillmann has assumed that the site operations at the time of the site visit reflect typical site conditions relative to potential environmental conditions and that no concealment of environmental conditions or releases by site owners or occupants has occurred. Likewise, Hillmann has also assumed that no areas of the Property with potential environmental concerns or RECs were concealed or otherwise not made known to us, intentionally or unknowingly, by the Property owners/occupants and/or site escort at the time of the site visit.

- For the purpose of estimating the approximate direction of groundwater flow in the absence of site specific groundwater data, unless indicated otherwise, Hillmann has assumed that the gradient of groundwater flow follows the surface topography of the Property and immediate surrounding area.

2.6 General Limitations and Exceptions

2.6.1 Limitations

The report turnaround time specified by the contract agreement for this assessment may present a limitation to Hillmann's ability to access and review pertinent regulatory agency records. Such limitations, if encountered, are further specified in Section 4.4.

Significant limitations related to the condition or accessibility of the Property at the time of the site reconnaissance, if encountered, are reported in Section 5.1.

2.6.2 Other Exceptions or Deletions

No other exceptions or deletions from the ASTM Standard E 1527-13 are reported.

2.6.3 Special Terms and Conditions

Hillmann has prepared this Phase I Environmental Site Assessment using reasonable efforts in each phase of its work to identify recognized environmental conditions associated with hazardous substances, wastes and petroleum products at the Property. Findings within this report are based on information collected from observations made on the day of the site reconnaissance and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, site development, redevelopment, or other construction purposes. Hillmann makes no representation or warranty that the past or current operations at the Property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes.

Findings, conclusions and recommendations presented in this report are based on our visual observations of the Property, interviews conducted, the records reviewed, information provided by the Client, and/or a review of readily available and supplied drawings and documents. Hillmann relies upon the information, whether written, graphic or verbal, provided by the Property contact(s) or as shown on any documents reviewed or received from the Property contact, owner or agent, or

municipal source; and assumes that information to be true and correct. Although there may have been some degree of overlap in the information provided by these various sources, Hillmann did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this assessment. Hillmann can neither warrant nor guarantee the accuracy or completeness of information that was obtained from ostensibly knowledgeable individuals, regulatory agency representatives or other secondary sources.

Regardless of the findings stated in this report, Hillmann is not responsible for consequences or conditions arising from facts that were concealed, withheld or not fully disclosed at the time the assessment was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The regulatory research is designed to meet the requirements of ASTM Standard E 1527-13. Hillmann can neither warrant nor guarantee the accuracy or completeness of the information obtained from the regulatory database report provider during the course of this assessment.

Subsurface conditions may differ from the conditions implied by the surface observations and can only be reliably evaluated through intrusive techniques.

Reasonable efforts have been made during this assessment to identify aboveground and underground storage tanks and ancillary equipment. “Reasonable efforts” are limited to information gained from visual observation of largely unobstructed areas, recorded database information held in public record and available information gathered from interviews. Such methods may not identify surficial and subsurface features that may have been hidden from view due to parked automobiles and other vehicles, snow cover, vegetative growth, pavement, construction or debris pile storage or incorrect information from sources.

Hillmann is not a professional title insurance firm and makes no guarantee, explicit or implied, that the records which were reviewed represent a comprehensive or precise delineation of past Property ownership or tenancy for legal purposes.

The ASTM E1527-13 standard states that recommendations are not required to be included in a Phase I ESA report; however, further that recommendations are an additional service that may be useful in the User’s analysis of landowner liability protections or business environmental risks; and that the User should consider whether recommendations for additional inquiries or other services are desired.

The recommended response actions to the identified RECs presented in Section 1.3, if any, are not intended to represent the only course(s) of action to take; nor does it imply any opinion as to the timing of the action. Furthermore, it is emphasized that additional response actions may become warranted depending on the outcome of the initial action(s) taken. Hillmann advises that consultation with legal counsel familiar with environmental and real estate law may be beneficial

to the decision making process for the type and timing of a response action to identified RECs, if any.

Due to the limited nature of our review of potential Business Environmental Risks, the User of the report should consider whether to take additional action(s) to further define, properly manage and/or mitigate potential BERs.

In the event of any conflict between the terms and conditions of this report and the terms and conditions of the consulting services agreement for this project, the consulting services agreement shall control.

3.0 USER PROVIDED INFORMATION

The term "User" is defined by ASTM as the party seeking to use Practice E1527 to complete an environmental site assessment of the Property; specifically, the entities named on the front cover to which the report has been addressed.

3.1 Prior Environmental Reports/Documentation

The following prior environmental investigation reports and documentation were provided to Hillmann:

Tank Closure Site Assessment Report; Admiral Halsey Village, 135 Main St., Poughkeepsie, New York; prepared by Conrad GeoScience Corp; dated November 18, 1997. The report documented tank closure activities for a former 10,000-gallon heating oil UST located in the courtyard behind the apartment building. Initially planned for closure by removal, the report stated that the tank was abandoned in place on October 17, 1997 due to the proximity of a natural gas utility pipe and difficulties removing an UST anchor point. Three soil samples were collected from the bottom of the tank excavation and submitted for VOC and SVOC analysis. No VOCs were detected in any of the samples collected. Seven SVOCs were detected at concentrations well below NYSDEC standards. The report concluded:

> *"Considering the integrity of the UST upon cleaning and attempted excavation, along with the lack of petroleum contaminated soils, there is no evidence of prior leakage or spillage from this tank. In addition, SVOCs detected are well below NYSDEC standards and, therefore, no remedial activity is required. The SVOCs present may represent residual coal tar. No information pertaining to groundwater quality, and the presence of these compounds in groundwater is available at this time."*

Phase I Environmental Site Assessment – Update, 135 Main Street, Poughkeepsie, New York 12601; prepared by Hillmann Consulting on behalf of Admiral Halsey, L.P., c/o Omni New York, LLC, August 28, 2007. The report concluded the following with regard to recognized environmental conditions (RECs) in connection with the Property:

> *"This update assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Property, except for the following:*
>
> *• A Limited Phase II Investigation report was prepared by Hillmann in March 2007 to evaluate two recognized environmental condition that were identified by Hillmann's prior Phase I ESA report. The RECs included a potential impact to the environment from a former coal gasification plant; and a historic underground storage tank (UST) that was identified by review of Sanborn Fire Insurance Maps of the Property. The investigation included the use of a GPR survey to identify any underground structures, utilities, or obstructions, and the collection and analysis of soil and groundwater samples. The results of the investigation identified the presence of residual contamination which could be attributed to the past manufactured gas plant usage. The Limited Phase II Investigation identified elevated levels of metals and PAHs in soils throughout the property. Hillmann understands that Omni has obtained a "Property Use and Work Plan" to protect against possible contamination exposure. This document provides insight on which procedures to follow during excavation activities. In addition, this document is site specific and will only pertain to the subject property. Hillmann has contacted the NYSDEC directly, and was informed that there is no requirement to report a spill to the NYSDEC. Therefore Hillmann does not recommend reporting the results to the NYSDEC. Hillmann notes that a*

Soil and Groundwater Contamination Health and Safety Plan was developed for the Property on behalf of Admiral Halsey LP, dated July 11, 2007."

The August 28, 2007 Hillman Phase I ESA report also included a summary of a NYSDEC file review of the former Bayeaux Street Coal Gasification Plant. Documentation consisted of a series of reports concerning historic coal gasification plants located the City of Poughkeepsie. Much of the documentation pertained to a different historic coal gas plant located several blocks to the west of the Property along the Hudson River Waterfront. A Phase I investigation report of the Bayeaux Street Coal Gas Plant site was also included, as summarized below by the 2007 Phase I ESA:

Phase I Investigation Poughkeepsie (Bayeaux Street) Coal Gasification Plant Site, City of Poughkeepsie, Dutchess County, New York; prepared by EA Science and Technology of Middletown, New York; on behalf of Central Hudson Gas & electric Corporation, January 1987:

The report indicated that a historic coal gas plant that formerly occupied the Property operated from approximately 1850 to 1911, at which time it was replaced by a Water Street plant located several blocks to the west. The report concluded the following:

"The available data are considered insufficient to prepare a final HRS (Hazard Ranking System) score for this site. There is no documentation of hazardous waste or contamination at the former Poughkeepsie Bayeaux Street Coal Gas Plant site. Groundwater soil quality data lacking."

"In order to prepare a final HRS score for this site, analytical data regarding the quality of the ground-water and soil, and characteristics of waste (if present), will be necessary, thus requiring performance of a Phase II investigation. The proposed Phase II study would include the performance of a soil vapor survey, the installation of 4 observation wells and the collection and analysis of ground-water and soil samples."

Limited Phase II Investigation, Admiral Halsey, 135 Main Street, Poughkeepsie, New York 12601; prepared by Hillmann Environmental Group LLC on behalf of Admiral Halsey, L.P., c/o Omni New York, LLC, May 2007.

The purpose of the Limited Phase II Investigation was to evaluate two RECs that were identified by a 2007 Phase I ESA report. The RECs included a potential impact to the environment from a former coal gasification plant; and a historic underground storage tank (UST) that was identified by review of Sanborn Fire Insurance Maps of the Property. The investigation included the use of a GPR survey to identify any underground structures, utilities, or obstructions, and the collection and analysis of soil samples. These samples were collected from boring locations in the asphalt parking lot, around the old UST and in the area of the historic coal gasification plant. A total of fourteen (14) soil and three (3) groundwater samples were collected and analyzed for parameters including volatile organic compounds (VOC), base neutrals and acid extractable (BNA), and Priority Pollutant List Metals.

The following is a summary of the conclusions of the Limited Phase II Investigation:

"Hillmann has completed a Limited Phase II Investigation at 135 Main Street to assess the impact of former coal gasification plant and UST located on site. The completed scope of work included a GPR survey, the advancement of subsurface borings utilizing a Geoprobe and hand auguring. The following has been concluded from this investigation.

1. *The results of the investigation have identified the presence of contamination which could be attributed to past site usage. The environmental concerns identified through laboratory and field observations are the presence of metals and Polynuclear Aromatic Hydrocarbons (PAHs) present in the soil and groundwater.*
2. *It appears that the contamination identified is the result of former coal gasification processes conducted on site.*
3. *Elevated levels of metals and PAHs are wide spread throughout the property. Minimal risk of exposure is expected in the areas of the parking lot and/or lawn area. Any excavation or prolonged contact with the subsurface soils may potentially cause exposure to the subsurface contaminants.*
4. *Due to the wide spread presence of elevated metals and PAHs around the property, Hillmann has determined that the contamination encountered is not from the UST, but as a result of the historic coal gasification plant. It is determined that the UST did not impact the surrounding environment.*
5. *Omni has decided to develop a raised garden bed system. This decision will protect the current residence using the garden area. A brief description of the garden area is described in the below section.*
6. *Additionally, Omni is in the process of obtaining a "Property Use and Work Plan" to protect against possible contamination exposure. This document will provide insight on which procedures to follow during excavation activities. This document will be site specific and will only pertain to the subject property. A copy of the work plan will be located at the facility."*

Vapor Intrusion Investigation, Admiral William F. Halsey Senior Village, 135 Main Street, Poughkeepsie, NY; prepared by Hillmann Environmental Group LLC on behalf of Admiral Halsey, L.P., c/o Omni New York, LLC, July 13, 2007.

The scope of work consisted of one round of sampling for VOCs by TO-15 Method. Samples were collected from the Sub-Basement, Maintenance Room, Community Room, on the 1st Floor Adjacent the Elevator, and on the 6th Floor Adjacent the Elevator. Also, one outdoor reference sample was collected. The conclusions and recommendations stated the following:

4.1 Conclusions
Based on Hillmann's review, indoor air quality is not anticipated to cause occupant illness or require immediate remediation. Based on the data that we have at this time, Hillmann has found no evidence that an increase health risk exists from the previous Manufactured Gas Plant (MGP). Although the NYSDOH or Hillmann recognize the upper range of the comparative data as a valid reference, it should be noted that very few samples would exceed this level present in some non-impacted homes. Furthermore, it should be noted that samples were collected from areas susceptible to organic vapors from maintenance products and processes.

4.2 Recommendations
Based on Hillmann's review of indoor sample results, indoor air quality is not anticipated to cause occupant illness or require immediate remediation. In order to conduct a comprehensive vapor intrusion assessment NYSDOH Guidelines recommend that sub-slab soil vapor samples be collected. Sub-slab samples are an important component used to compare with indoor and outdoor samples in order to evaluate current and potential human exposures (e.g. if the building's structural integrity or use changes) and determine the site-specific attenuation factors, which compares the ratio of indoor air to sub-slab vapor concentrations. Furthermore, it may be prudent for follow-up sampling to be conducted on a periodic basis (such as annual or bi-annual) to ensure these conditions do not change over time. If significant changes occur at the building (increase or decrease HVAC, digging, vibration, etc) the potential for vapor intrusion may increase."

Soil & Groundwater Contamination Health & Safety Plan, Admiral William F. Halsey Senior Village, 135 Main Street, Poughkeepsie, NY; prepared for Admiral Halsey L.P by Environmental Health Investigations, Inc.; dated July 11, 2007. The report established policy for managing potential exposures to chemicals which exist in low concentrations within the soil and ground water associated with the Admiral William F. Halsey Senior Village property located at 135 Main Street in Poughkeepsie, New York.

Supplemental Investigation of Poughkeepsie Bayeaux Street Site; prepared by Central Hudson & Electric Corporation, July 2006. This report detailed a supplemental investigation conducted following results finding from an August 1990 investigation and well installation. The 2006 investigation consisted of the installation of five soil borings in and around the former MGP structure at the site. Soil and monitoring well borings from 1990 consisted of fill material at various depths ranging from ground surface to approximately 8 feet below ground surface in most areas investigated. The four monitoring wells were installed at the Property to assess water quality in 1990. Based on the results from a 1990 Phase II investigation and 2006 supplemental investigation, conclusions, Central Hudson requested that the NYSDEC delist the former Bayeaux Street site from the Inactive Hazardous Waste Disposal Site Program Registry and abandon all monitoring wells.

Hillmann notes that a Phase II Site Investigation is being conducted by Hillmann concurrently with this Phase I ESA report and will be submitted under separate cover.

3.2 User Questionnaire

Section 6 of the ASTM E1527-13 standard describes certain tasks required to be performed by the report User in order to qualify for landowner liability protections to CERCLA liability. To assist the report User to meet these requirements, and as recommended by the ASTM E1527-13 standard, a Questionnaire of inquiries (User Questionnaire) specified in 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31 has been provided to the original report User. The following is a summary of the User's response:

Question:	Yes/No:	Detail:
Environmental liens that are filed or recorded against the property: Did a search of recorded land title records identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	NR	Questionnaire provided to User. Question not answered by User.
Activity and use limitations that are in place on the property or that have been filed or recorded against the property: Did a search of recorded land title records (or judicial records where appropriate, identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	NR	Questionnaire provided to User. Question not answered by User.
Specialized knowledge or experience of the person seeking to qualify for the LLP: Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you	Yes	

Question:	Yes/No:	Detail:
would have specialized knowledge of the chemicals and processes used by this type of business?		
Relationship of the purchase price to the fair market value of the property if it were not contaminated: Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	NR	Questionnaire provided to User. Question not answered by User.
Commonly Known or Reasonably Ascertainable Information: Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,		
-Do you know the past uses of the property?	No	
-Do you know of specific chemicals that are present or were once present at the property?	No	
-Do you know of spills or other chemical releases that have taken place at the property?	No	
-Do you know of any environmental cleanups that have taken place at the property?	No	
The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation: Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?	NR	Questionnaire provided to User. Question not answered by User.
Litigation/Administrative Proceedings/Government Notices As the User of this ESA, do you have knowledge of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property; and (3) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.	No	Questionnaire provided to User. Question not answered by User.

NR-no response

3.3 Reason for Performing Phase I ESA

The User did not indicate the purpose of the assessment. Hillmann assumes that the Phase I ESA was being performed in order to qualify for landowner liability protection to CERCLA liability.

4.0 RECORDS REVIEW

4.1 Physical Setting Sources

The following physical setting sources were reviewed:

Source	Discussion
USGS 7.5 minute Topographic Map Data: (EDR Geocheck-Physical Setting Source Addendum)	The Property lies at an elevation of approximately 112 feet above mean sea level on the New York 7.5 Minute Series Topographic Quadrangle map. The terrain at the Property is generally flat with a regional trend that slopes slightly downward to the west. The closest down gradient waster body is the Hudson River approximately 1,900 away to the west.
USDA SCS Soil Data: (EDR Geocheck-Physical Setting Source Addendum)	The soil type at the Property is classified as "Udorthents". The Udorthents designation is characterized by a gravelly loam surface texture and is well drained with an intermediate water holding capacity.
Geologic Data: (EDR Geocheck-Physical Setting Source Addendum)	The Property is underlain by a stratified sequence of materials of the Paleozoic Era., Ordovician System and Middle Ordovician Series. The depth to bedrock is typically greater than 60 inches below ground surface.
Wetlands Data: (EDR Geocheck-Physical Setting Source Addendum)	The EDR Geocheck Physical Setting Source addendum depicted no state or federal (NWI) mapped wetlands at the Property.
Additional Sources/ Data:	NA
Groundwater Flow Discussion:	Based on a review of the above information as well as past subsurface investigations at the Property, the direction of shallow groundwater flow at the site is inferred to be generally from east to west.

4.2 Historical Use – Property and Adjoining Properties

Hillmann has conducted research in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the Property. Standard historical sources have been sought in an attempt to document the past uses of the Property as far back as it can be shown that the Property contained structures; or from the time the Property was first used for residential, agricultural, commercial, industrial or governmental purposes.

4.2.1 Fire Insurance Maps

Hillmann obtained a Certified Sanborn Map Report from EDR in order to research published historic fire insurance maps for the Property and surrounding area. A copy of the report is included in Appendix D. The following is a summary of site use information interpreted from a review of the report: The property is not shown in the 1984 Sanborn Map.

Year(s)	Description	
1887	**Property**	The Property is developed along Main Street in the southern portion and southwest along Bayeaux Street with various commercial stores and businesses. The central of the property is developed with pottery maker including a coal shed. The northern portion of the property is a developed with portions of the Poughkeepsie Gas Light company, a manufactured gas plant. An iron gas holder is depicted at the northeast corner of the site.

Year(s)	Description	
	Adjoining Properties	The adjoining properties are depicted with a school house to the north; developed residential dwellings and vacant building to the west; developed commercial businesses to the south including drugstore, grocery, butcher, carpeting and wall paper shop, and laundry facility; developed commercial businesses to the southeast, and portions of the Poughkeepsie Gas Light Company to the northeast.
1895	**Property**	The Property is depicted as developed with commercials business to the south along Main Street and southwestern portion along Bayeaux Street, in the central portion with a factory for stone, earthenware and piping; and the buried foundation of manufactured gas tank on the northern portion.
	Adjoining Properties	No significant changes.
1913	**Property**	The Property is depicted as developed in the southern portion along Main Street and southwestern portion along Bayeaux Street with commercial business. Central portion of the property along Bayeaux Street depicts a gas and electric store. The Poughkeepsie Gas Light Company is no longer depicted.
	Adjoining Properties	The adjoining property to the north of the site is depicted as a tenement. A gasometer labeled as "Not Used) is depicted in the northwest. No other significant changes.
1950	**Property**	Bayeaux Street is now named North Perry Street. The Property is depicted as developed in the southern portion along Main Street and southwestern portion along North Perry Street with commercial business. Central portion of the property along North Perry Street depicts a poultry market and vacant building. The northern portion of the property depicts a private garage for automobiles and "J. Schrauths Sons Inc." is labeled across the north portion.
	Adjoining Properties	The adjoining property to the north of the site is depicted as vacant and boarded up. A scrap metal yard is depicted adjoining to the northwest. No other significant changes.
1952	**Property**	The garage structure at the northern portion of the Property is now labeled as an ice cream distribution warehouse instead of a private garage. A buried gasoline tank is depicted adjacent to the southeast corner of the garage. No other significant changes.
	Adjoining Properties	No other significant changes.
1990	**Property**	The Property is depicted with the Admiral William F Halsey Senior village for housing at the southern end and the remaining portion of the site with no improvements.
	Adjoining Properties	The adjoining properties are depicted as developed with a parking lot to the southwest with commercial businesses and apartments, northwest and east adjoining depicts multifamily residential dwellings. The north adjoining property is depicted as a playground. The southern adjoining properties are depicted as vacant lots.

4.2.2 City Directories

Hillmann obtained an EDR City Directory Abstract report to review data of historic occupants of the Property's street address. The following is a generalized summary of the findings of City Directory Research for past occupants of the Property, indicating occupants and the years indicated by the listings.

Property	
Occupant(s)	**Appr. Date Range**
Residential and Commercial Listings (127-149 Main Street)	1942 - 1970
Self Service Laundry (145 Main Street)	1963
Disabled American Veterans	2000

Residential occupants of Admiral Williams F Halsey Senior Village (135 Main Street)	1980-1992, 2005-2014

Hillmann also reviewed the EDR City Directory Abstract report for listings of historic occupants of the adjoining properties. The following is a general summary of listings of historic adjoining property occupants:

Adjoining Properties		
Address(es)	**Historic Occupant(s)**	**Appr. Date Range**
130-150 Main Street	Various Residential and commercial listings including a motor vehicle bureau, funeral home, plumbing supply store	1942 – 1975
138-140 Main Street	Commercial listings including Irene Development Corp and River Valley Realty Corp, Peter J Liepmann MD LLC, & River Valley Care Center Inc	2000-2014
98-128 Main Street	Residential and Commercial listings including shoe repair, electronic store, restaurant, motor cycle repair shop, fruit market, linen supply company	1942 – 1980
110-116 Main Street	Various commercial listings including Ackerman Quinn Financial Services, Poughkeepsie Chamber of Commerce, Alternative Environmental Services, Marshall & Sterling Inc., etc.	1992-2014
113-125 Main Street	Residential and Commercial listings including a tavern, janitor supply	1942-1975
113-115 Main Street	Residential and Commercial listing including Milanese Restaurant	1975-2014
157 - 161 Main Street	Residential Listing	2010- 2014
12-42 North Perry Street	Residential listings	1942-2000

4.2.3 Historical Topographic Map Review

Due to the availability of alternate historic sources, as well as the likelihood that this source would not provide any significant data, historical topographic maps were not researched for this assessment.

4.2.4 Aerial Photograph Review

Due to the availability of alternate historic sources, as well as the likelihood that this source would not provide any significant data, historical topographic maps were not researched for this assessment.

4.2.5 EDR High-Risk Historical Records

The EDR Radius Map™ report, which will be discussed in greater detail in Section 4.3, provided a search of proprietary databases of potential historical high-risk uses at or in the vicinity of the Property. These databases include EDR Historic Cleaners – a database of property addresses with records of historical occupancy by suspected cleaners businesses; EDR Historic Auto – a database of property addresses with records of historical occupancy by potential automotive gas/filling stations and repair facilities; and EDR MGP- a database of sites historically occupied by manufactured gas plants and related facilities.

EDR Historic Cleaners	No on-site or adjoining listings identified.
EDR Historic Auto	No on-site or adjoining listings identified.

EDR MGP	The Property is listed as a former MGP from as early as 1887 through approximately 1911. Two additional MGP listings are identified within 1-mile search distance. One MGP site is located approximately 2,041 feet to the south-southwest of the Property. The second MGP site is located approximately 2,243 feet to the northwest of the Property.

4.2.6 Petroleum/Natural Gas Well Review

Hillmann reviewed the historical record sources for evidence of historic petroleum and/or natural gas wells at the Property. No record of any historical petroleum/natural gas wells at the Property was identified.

4.2.7 Additional Historical Data

No additional prior historical data was reviewed except for the prior Phase I ESA report discussed in Section 3.1.

4.2.8 Summary of Identified Historic Uses

The following table presents a summary of the types and approximate timeframes of identified prior uses of the Property:

Property	
Years (Approx.)	**Use**
1887 to 1913	Various commercial stores observed to the south of the property along Main street; Central portions of the property observed various commercial business; Northern portion of the property is observed with a manufactured gas plant.
1913 to 1952	Various commercial properties are observed in the south along Main Street. Central portions of the property is developed with commercial businesses, portions of a dairy and a vacant building; North portion of the property is developed with a private garage for automobiles.
Circa 1975 to Present	Senior Citizen Apartment Complex

The following table presents a summary of the types of identified prior uses of the adjoining properties:

Adjoining Properties	
Years (Approx.)	**Use**
1887 to present	Residential, commercial, and storage

4.2.9 Historical Records Data Failure

The ASTM E1527-13 standard defines data failure as a failure to achieve the ASTM specified historical research objectives after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. The objective is to identify all obvious uses of the property from the present, back to the property's first developed use, or back to 1940, whichever is earlier. Furthermore, records of historic use/conditions should be sought in intervals no less than approximately five years, unless the property conditions appear unchanged over a longer interval.

Objective	Met?	Detail	Significant Data Gap?
First developed use/date determined?	No	The earliest determined uses consisted of a mix of commercial stores/businesses and a manufactured gas plant in 1887.	No
Record sources at 5-year intervals back to 1940 or first developed use?	No	Historical record gaps exceeding five years were encountered. However, significant site-use changes or undiscovered site uses appear unlikely to have occurred during the record gaps.	No
All obvious prior uses identified?	Yes	See Section 4.2.8.	No

Please refer to Section 2.3 for additional discussion of data gaps and their significance to the findings of the assessment.

4.2.10 Historic Uses REC Discussion

The central and north portions of the property were occupied by portions of a manufactured gas plant, currently known as the CH – Bayeaux Street Poughkeepsie MGP, from approximately the mid-19th to early-20th century. As further described in Section 4.3.1, the former MGP site is listed on the database of New York State Superfund sites and has undergone previous subsurface investigations with NYSDEC oversight due to the potential for subsurface impacts from the historical gas manufacturing operations. According to the NYSDEC published information, following the completions of site investigation work in 1990 and 2006, no significant MGP waste material was found and a NFA status was granted by NYSDEC on March 12, 2007.

The northern half of the Property was occupied by portions of a dairy in the mid-20th century, which included a garage structure and adjoining buried gasoline storage tank depicted by a 1952 historical fire insurance map. The site was redeveloped into the current configuration in the 1970s. Subsurface testing at the Property has not identified by evidence of a petroleum release in the vicinity of the historical UST; however, the disposition of the historical gasoline tank was not determined.

4.3 Standard Environmental Record Sources

Hillmann obtained a regulatory database report, titled EDR Radius Map™ Report, from Environmental Data Resources of Shelton, CT. The report provided a search of standard environmental record sources in general accordance with the requirements of the ASTM E1527-13. Hillmann has reviewed the regulatory database report, and a summary of findings has been presented in the following tables and report sections. Hillmann has also reviewed the list of unmapped sites (a.k.a. "Orphan List" sites). Unmapped sites identified as falling within an applicable specific search distance or warranting discussion in the report, if any, have been included in the information presented below. Detailed descriptions of the meaning and significance of the regulatory databases can be found in the regulatory database report in Appendix E.

Regulatory Database	Search Distance	Property Listed?	Adj. Properties Listed?	Total Listings Within Search Distance
Fed. NPL/Proposed NPL	1-mile	No	No	1
Fed. Delisted NPL	½-mile	No	No	0
Fed. SEMS	½-mile	No	No	1
Fed. SEMS-ARCHIVE	½-mile	No	No	2
Fed. RCRA CORRACTS	1-mile	No	No	0
Fed. RCRA TSD	½-mile	No	No	0

State/Tribal Brownfields	½-mile	No	No	3
Supplemental Regulatory Databases	Site & Adj.	No	Yes	

4.3.1 Property Listings

The following Property listings were identified:

- UST/AST – Admiral William F. Halsey Senior Village, 135 Main Street: According to the database, a 10,000-gallon #2 heating oil UST was installed in 1976 and with the status "closed – removed" in 1997. The AST listing indicated a 10,000-gallon #2 heating oil tank installed in 2008 with the status "In Service". No indication of reported spills were noted for either tank. Therefore, the UST/AST listings are not considered to be a REC in connection with the Property.

SHWS/NY HSWDS – CH - Bayeaux Street Poughkeepsie MGP, Main Street and North Perry Street: The HSWDS listing reflected information dated 2003 that the former Bayeaux Street MGP was listed as a potential hazardous waste disposal site. Although not listed by EDR on the SHWS database, a search of the NYSDEC Environmental Site Remediation database listed the former Bayeaux Street MGP (#314071) in the state superfund program with "C" (completed) classification. Further, the database details stated the following:

> *"Site was given a class of R. Decision was made on 3/12/07 to classify as N. Reclassified to C. This was the site of a small MGP on Main Street and North Perry Street in Poughkeepsie. A senior citizens housing development occupies the site today. The site is included in a multi-site Consent Order #D3-0134-89-05 1/12/90. A Site Assessment (PSA) was performed in 1990. No significant MGP waste material was found, and an NFA letter was sent on 03/12/07. As DER's experience with MGP sites grew, a few data gaps were identified in the original PSA. Central Hudson completed additional investigation work in 2006 to more completely cover the full footprint of the site with borings and test pits. The additional work confirmed the original conclusion that no significant MGP waste was present at the site. A letter stating this conclusion was issued on 03/12/07."*

Based on the database details discussed above, these listings are not considered to be a REC in connection with the Property.

4.3.2 Adjoining Property Listings

The following adjoining property listings were identified:

- NYSPILLS – NYSDOT Project, 133 Main Street, Spill number 9604735: Although mistakenly listed as adjoining by EDR, the listing is actually for a site located in Carroll (Chautauqua County) , New York and therefore is not a REC in connection with the Property.

- UST, NYSPILLS – River Care Nursing Home, 138-144 Main Street, Spill number 9714354: This site adjoins the Property to the south and is cross gradient based on area topography. The UST listing indicated a 1500-gallon #2 fuel oil UST was installed in 1998 and has been closed by removal. According to the NY Spills listing, contamination was discovered during the removal of a 275 gallon AST from the basement of a demolished building. The spill case was closed on March 26, 1998. Based on the description and regulatory statuses, these listings are not considered to be a REC in connection with the Property.

- NYSPILLS – 115 Main Street, Spill number 9202522: This site adjoins the Property to the west and is down gradient based on area topography. According to the database, an air eliminator truck malfunctioned causing an oil leak to the paved street. Driver applied Speedi-Dri® and confirmed cleanup, and the spill case was closed on June 2, 1992. Based on the description and regulatory status, this listing is not considered to be a REC in connection with the Property.

4.3.3 ASTM Search Distance Findings

The following is a summary of the findings of the regulatory database review with regard to sites identified as located within the ASTM specified search distance surrounding the Property. In order to keep this report informative and yet concise, Hillmann has provided a brief discussion of the listed site(s) for each database category that appears most likely to impact the Property based on

distance, topography and/or case status. A copy of the full regulatory database report, including available details of all listed sites, is included in Appendix E.

Note that listings for the following databases, if identified, would be discussed above in Sections 4.3.1 and 4.3.2: Registered Storage Tanks, Federal RCRA Generators, Federal and State INST and ENG Controls, ERNS.)

Federal NPL: One (1) NPL listing was identified within a one-mile radius of the Property. The listing named Hudson River PCBs, has no applicable street name and is located approximately 1,800 feet west of the Property and down gradient from the Property. The site is a 40-mile stretch of the Hudson River between Mechanicsville and Fort Edward. General Electric discharged an estimated 1 million pounds of PCBs into that stretch of water. The State has identified 40 hot spots with contaminated sediments greater than 50 parts per million. EPA has prepared a feasibility study and to evaluate alternative remedial actions under CERCLA. EPA approved funding for cleanup and two potential parties responsible for waste associated with this site have been notified. Based on the status, distance and nature of the site, this listing is not considered to be a REC in connection with the Property.

Federal Delisted NPL: No DNPL listings were identified within a ½-mile radius of the Property.

Federal SEMS (formerly CERCLIS): One (1) SEMS listings was identified within a ½-mile radius of the Property. The listing is named Hudson River PCBs. Please refer to the above section Federal NPL listing for description.

Federal SEMS-ARCHIVE (former CERC-NFRAP): Two (2) SEMS-ARCHIVE listings were identified within a ½-mile radius of the Property.

One site, Orchard Place (Qual Krom), 28 Orchard Place, is located approximately 2500-feet to the northeast and higher in elevation relative to the Property. The site was indicated as Removal Only Site (No Site Assessment Work Needed) and is not on the NPL. Based on the distance and status, this listing is not considered to be a REC in connection with the Property.

The other SEMS-Archive site, Bern Colors- 75 North Water Street, is located approximately 1,830 feet to the northwest and is lower in elevation relative to the Property. The site was indicated as Removal Only Site (No Site Assessment Work Needed) and is not on the NPL. Based on the distance and status, this listing is not considered to be a REC in connection with the Property.

Federal RCRA-CORRACTS: No CORRACTS listings were identified within a one-mile radius of the Property.

Federal RCRA-TSD: No TSD listings were identified within a ½-mile radius of the Property.

State/Tribal Hazardous Waste Sites: Four (4) SHWS listings were identified within a one-mile radius of the Property. The closest SHWS site, HRH Lead Abatement Site-55 Garden Street, is located approximately 1,954 feet to the east and up gradient of the Property. The site was listed due to lead abatement activities. Based on distance and nature of the site, this listing is not considered to be a REC in connection with the Property. Based on various factors including

distance, area topography and/or site status, none of the other SHWS listings are considered to be a REC for the Property.

State/Tribal Landfill/Solid Waste Disposal Sites: One SWF/LF listings was identified within a ½-mile radius of the Property. The site, G.F Refuse T.S-240 Main Street is located approximately 1,264 feet east-southeast and up gradient from the Property. Current description of the facility is an inactive/ retired transfer station. Based on the distance, description and inactive status, this listing is not considered to be a REC in connection with the Property.

State/Tribal Leaking Storage Tanks: Twenty-four (24) LTANKS listings were identified within a ½-mile radius of the Property. All 24 LTANKS sites within ½ mile were indicated to have closed case statuses. The closest LUST listing, Apt. Milanese-111 Main Street-spill number #9312029, is located approximately 225 feet to the west and downgradient of the Property. A tank test failure was reported on January 12, 1994 and the spill case was closed on January 19, 2004. Based on the closed spill case statuses, none of the 24 LTANKS sites identified by EDR within a ½ mile of the Property is considered to be a REC for the Property.

State/Tribal Voluntary Cleanup Sites: One (1) VCP listings was identified within a ½-mile radius of the Property. The site, CH-Water St. - Poughkeepsie MGP-North Water Street, is located approximately 2,128 feet to the northwest and down gradient of the Property. According to the database, the former MGP operated from 1911 to 1950, with contaminant of concern coal tar leaking from the storage vessels and piping and still present in the subsurface. Some tars continually to discharge into the Hudson River sporadically. Several environmental investigations indicated coal tar contains high levels of dissolved BTEX, PAH and metal compounds that has impacted the subsurface of the site, bedrock and Hudson River. Based on the active investigation, the flow of contamination towards the Hudson River, elevation and distance from the Property, this listing is not considered a REC in connection of the Property.

State/Tribal Brownfields: Four (4) BROWNFIELDS listings were identified within a ½-mile radius of the Property. The closest BROWNFIELDS site, Queen City Lofts, 178-182 Main Street, is located approximately 311 feet to the east-southeast and up gradient of the Property. According to the database, the site was used for various industrial, commercial and residential purposes including a machine shop and laundry facility from as early as 1887 until the mid-1980s. Contamination was identified during a subsurface investigation attributed to historic fill and two USTs. Contamination is documented to be contained within the site boundaries. Based on the subsurface investigation and no contamination leaching offsite, this listing is not considered to be a REC in connection with the Property. Based on various factors including distance, area topography and/or site status, none of the other BROWNFIELDS listings are considered to be a REC for the Property.

Review of the sites identified within the ASTM search parameters did not identify any nearby or surrounding area sites that are considered to be a REC in connection with the Property, unless as discussed otherwise previously in this section.

4.3.4 Tier I Vapor Encroachment Screening

Hillmann reviewed adjoining and vicinity database sites to identify potential off-site sources of sub-surface vapor encroachment. This review was based upon the current ASTM "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" (ASTM E 2600-15); and also utilizing the "Methodology for Identifying the Area of Concern Around a Property Potentially Impacted by Vapor Migration from Nearby Contaminated Sources" (Buonicore, 2011-S-103-AWMA). Vicinity database sites pertaining to non-petroleum product releases within 1,760 feet of the Property in the up-gradient direction, 365 feet of the Property in the cross gradient direction and 100 feet of the Property in the down gradient direction; and vicinity database sites pertaining to petroleum product releases within 528 feet of the Property in the up-gradient direction, 165 feet of the Property in the cross gradient direction and 100 feet of the Property in the down gradient direction were reviewed to identify active contamination sites with the potential to affect subsurface vapor conditions at the subject property. The potential for vapor encroachment was considered in assessing whether or not a REC exists in connection with the Property when reviewing applicable sites within those distances.

Hillmann did not identify sites with active petroleum or non-petroleum releases within the search criteria specified in the preceding paragraph that are considered to be RECs due to a risk of vapor encroachment. Additional discussion, where applicable, has been provided in Sections 4.3.2 and 4.3.3.

4.4 Additional Environmental Record Sources

4.4.1 Supplemental Database Listings

Hillmann reviewed the regulatory database report for listings on supplemental databases that were searched in addition to the Standard Environmental Record Sources. Any property or adjoining property listings on such databases, if identified, would be discussed in Section 4.3.1 and 4.3.2. None of the other supplemental database listings identified by the regulatory database report are considered to be a REC in connection with the Property.

4.4.2 Local Agency & Internet Research

Hillmann has submitted requests to local and municipal agencies for pertinent records pertaining to the Property, particularly with regard to potential environmental concerns such as petroleum storage tanks, storage and usage of hazardous substances and petroleum products, and/or known or suspected environmental contamination. Hillmann also conducted online research of government environmental regulatory databases where available, as well as a general cursory internet search of the Property address, for information indicative of a REC. The following table summarizes the findings of the research:

Source	Type of Request	Outcome
City of Poughkeepsie	FOI	A response was received indicating building department records were available however as of the date of this report no records have been received.
Dutchess County	FOI	A response was received indicating no records were found.

Source	Type of Request	Outcome
New York State Department of Environmental Conservation	FOI	A response was received indicating no records were found.
USEPA Envirofacts search http://www.epa.gov/enviro/index.html	Internet Search	The Property addresses were searched. No information indicative of a REC was identified.
www.google.com	Internet Search	The Property addresses were searched. No information indicative of a REC was identified.
Other:		

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

The site reconnaissance consisted of visual and/or physical observations of the Property and improvements, adjoining properties as viewed from the Property boundaries and the surrounding area based on visual observations from adjoining public thoroughfares. Building exteriors were observed at ground level, unless otherwise indicated. Where applicable, Hillmann accessed and observed representative areas of building interiors to the extent they were made safely accessible with the cooperation of the site escort.

Site Inspection Personnel:	Mr. Ryan K Powell
Property Escort/Company:	Mr. Robert Poppo
Inspection Date:	March 20, 2019
Weather Conditions:	Clear, 50 degrees F

5.1.1 Significant Inaccessible Areas

Hillmann is not aware of any significant areas of the Property that were inaccessible at the time of the inspection.

5.2 General Site Setting

5.2.1 Site and Vicinity Characteristics

The Property is approximately 2.20-acre in size and located on the north side of Main Street and east of North Perry Street. The site is east of North Perry Street and west of North Bridge Street. The lot is improved with an existing 13 story senior apartment building in the southern portion of the property with landscaped area to the north.

5.2.2 Topographic Characteristics

The terrain of the Property appeared to be relatively flat. No natural surface water bodies were noted at the Property.

5.2.3 General Description of Structures

A 13-story senior apartment building is located on the southern portion of the property. Several additional outbuildings were observed on the property including two storage sheds, gazebo, and brick enclosure that houses a 10,000 gallon capacity heating oil AST.

5.2.4 Sources of Heating and Cooling

The Property is heated by a two natural gas-fired boiler system located in the sub-basement. Ground floor of building utilized forced air for heating and cooling. Upper floors containing apartments

utilize baseboard heat. Cooling for upper floor apartments are provided by mobile/window air conditioning units.

5.2.5 Potable Water Source/Sewage Disposal System

The Property is currently serviced by water or sewer by the City of Poughkeepsie.

5.2.6 Current Use(s) of the Property

The Property is currently utilized as a senior housing complex.

5.2.7 Past Use(s) of the Property

No obvious indication of past Property usage likely to have involved the use, treatment, storage, disposal or generation of hazardous substances or petroleum products was observed at the time of the site visit. Please refer to Section 4.2 for findings of historical site use research.

5.2.8 Current Use(s) of the Adjoining Properties

The following table describes the current uses of the adjoining properties:

Dir	Street Address	Description
N	31-35 North Perry Street	City Park
NW	20 North Perry Street	Apartment Complex (Residential Multifamily)
W	115 Main Street	Milanese Restaurant w/ asphalt parking lot
SW	110 Main Street	Marshall & Sterling Insurance
S	140 Main Street	The Grand Rehabilitation & Nursing at River Valley
E	20 North Bridge Street	Bridge Park Apartments (Residential Multifamily)

No visual observations indicative of a potential environmental concern were noted on the adjoining properties.

5.2.9 Past Use(s) of the Adjoining Properties

No indication of past uses of the adjoining properties was noted at the time of the site visit. Please refer to Section 4.2 for the findings of historical site use research.

5.2.10 Current/Past Uses of Surrounding Area

The vicinity of the Property consists primarily of residential and commercial. No indications of past Property uses that differ substantially from current conditions were observed at the time of the site visit.

5.3 Interior & Exterior Observations

5.3.1 Storage/Usage of Hazardous Substances and Petroleum Products

The following hazardous substances and petroleum products were observed to be stored and used by property occupants:

Occupant	Substance	Qty/Container Type	Storage Conditions
Admiral Wm. F Halsey Apts	No. 2 Fuel Oil	10,000 gallon AST	Inside an enclosure with roof

5.3.2 Drums

No drums were observed at the Property.

5.3.3 Unidentified Substance Containers

No unidentified containers suspected of containing hazardous substances or petroleum products were noted on the Property.

5.3.4 Other Hazardous Substances/Petroleum Products

No other containers of hazardous substances or petroleum products were noted on the Property at the time of the site visit.

5.3.5 Bulk Petroleum/Hazardous Material Storage Tanks

The following storage tanks for bulk petroleum or hazardous material storage were identified or reported to be present; or are suspected to be present based on visual observations:

AST/ UST	Product	Capacity	Construction	Year Installed	Status	Location/Notes
AST	No. 2 Fuel Oil	10,000 gal	Steel	2008	Good	Within sheltered enclosure; no evidence of a release was observed.
UST	No. 2 Fuel Oil	10,000 gal	Steel	1976	Closed in place	UST decommissioned in 1997; see UST closure report discussion in Section 3.1

Hillmann notes that the potential presence of abandoned USTs and/or associated buried piping at the Property cannot be ruled out. A 1952 Sanborn fire insurance map depicted a buried gasoline on the northeastern portion of the Property. The site was redeveloped into the current configuration in the 1970s. While subsurface testing at the Property has not identified by evidence of a petroleum release in the vicinity of the historical UST, the disposition of the historical gasoline tank was not determined.

5.3.6 PCBs in Electrical/Hydraulic Equipment

Hydraulic fluid is used inside the garbage compactor in the garbage compactor room. Based on the

age of the construction, the original equipment may have utilized fluids containing PCBs. No evidence of a significant release was identified.

5.3.7 Odors

No strong, unusual or pungent odors were noted on the Property.

5.3.8 Pools of Liquid

No standing water or pools of liquid likely to contain hazardous substances or petroleum products were noted at the Property.

5.3.9 Interior Stains or Corrosion

No interior stains or corrosion due to hazardous substance/petroleum products spills/releases were observed.

5.3.10 Interior Drains/Sumps

No floor drains or sump pits were noted at the Property other than for storm water or sewage management.

5.3.11 Exterior Pits/Ponds/Lagoons

No evidence of exterior pits, ponds or lagoons was identified on the Property in connection with waste treatment or disposal.

5.3.12 Stained Soil, Pavement/Stressed Vegetation

No stained soil, pavement or stressed vegetation was observed at the Property.

5.3.13 On-Site Solid Waste Disposal/Fill Material

No evidence of on-site solid waste dumping was noted at the Property.

5.3.14 Wastewater

Storm water runoff generated on-site is discharged into the municipal sewer system. No other waste discharges were noted at the Property.

5.3.15 Septic Systems

No indication of a septic system was noted on the Property.

5.3.16 Wells

No indication of a well was noted on the Property.

5.3.17 Railroad Spurs

No railroad spurs were noted on the Property at the time of the assessment.

6.0 INTERVIEWS

6.1 Interviews with Past and Present Owners and Occupants

Subject	Name/Affiliation	Summary
Property Owner / Representative	Omni / Elizabeth Moronta Robert Poppo-porter	Hillmann forwarded an environmental questionnaire to be completed by a representative of the Property. A response was not received prior to report completion. Mr. Poppo was interviewed during the site reconnaissance. In addition, Omni provided several prior environmental report and related documentation, which were previously discussed in Section 3.1.
Property Occupants	Not applicable	The Property was fully occupied with tenants and building workers.
Past Owners, Occupants, Operators	Not applicable	Past owners/occupants of the Property were not available for interview at the time of the assessment.
Owners/Occupants of Adjoining or Nearby Properties	Not applicable	Occupants of adjoining nearby properties were not available for interview during the time of the assessment.

6.2 Interviews with State and/or Local Government Officials

Written and on-line requests for environmental records of the Property from State and Local governmental agencies are detailed in Section 4.4.2.

7.0 BUSINESS ENVIRONMENTAL RISKS

In accordance with the contract agreement for this assessment, Hillmann has performed cursory reviews of several potential Business Environmental Risks (also known as "Non-Scope Considerations"). The ASTM E1527-13 standard defines the term business environmental risk (BER) as, *"a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice."*

7.1 Asbestos-Containing Material (ACM)

The contracted scope of work included a cursory visual screening of the accessed portions of buildings at the Property built prior to 1990 for suspect asbestos containing materials (ACM). The information provided in this section, where applicable, is limited to identification of potential suspect materials and their general condition. This is not intended to be a comprehensive survey for the presence of ACM, and no testing has been conducted.

Suspect ACM observed at the site included floor tile and associated mastics, roofing materials, cover base and associated mastic, gypsum wallboard systems, suspended ceiling panels and thermal systems insulation.

Hillmann was provided with a copy of a prior asbestos survey report titled Asbestos Inspection Survey, Admiral Halsey Senior Housing Complex-135 Main Street, Poughkeepsie, NY; by Environmental Health Investigations, dated May 30, 2007. The survey was indicated to be non-intrusive. Fifty-six samples were collected for asbestos analysis. Identified ACM materials included roofing materials (assumed), floor tile and associated mastic, boiler flue insulation, rope-like boiler gasket and caulking/insulation.

7.2 Lead-Based Paint (LBP)

The contracted scope of work included a cursory visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1980. In general, painted surfaces within the apartment units and common areas was observed to be in good overall condition.

Hillmann was provided with a copy of a prior lead paint screening report titled Lead Paint Screening; by Environmental Health Investigations, dated October 9, 2007. See below for the conclusions from the Lead Paint Screening report prepared by EHI:

> *"Based on the results of the screening, no tested paint surfaces were found to contain lead paint. However, many of the wall tiles in the bathrooms throughout the facility tested positive for lead. The wall tiles are not considered a lead painted surface but do contain levels of lead in them greater than or equal to 1.0 mg/cm2. Contractors performing any renovation or demolition activities that will impact the wall tiles creating dust and debris should consult the Operations and Maintenance Plan to determine work practices and proper personal protective equipment."*

7.3 Radon

Based on information obtained from data obtained by the US EPA, the Property is located in an area designated by the USEPA with a high potential for radon concentrations that exceed current USEPA action guidelines. Dutchess County is classified as a Zone 1 or 'high risk' area for radon.

Hillmann was provided with a copy of a prior radon testing report titled Radon Testing; by Environmental Health Investigations, dated September 8, 2008. The main office, community room, and boiler room were the sample locations for the radon test. See below for the conclusions from the Lead Paint Screening report prepared by EHI:

> *"The US EPA has set an action level of 4.0 pico Curies per Liter (pCi/L) for a residence. The tests conducted at the Admiral Halsey are all well below the action level. The US EPA maintains a radon information website which includes copies of all publications, at www.epa.gov/iaq/radon."*

7.4 Mold/Microbial Damage

A limited cursory visual screening for evidence of significant damage to building materials and finishes as result of moisture intrusion was conducted during the ESA. No mold/microbial growth was not observed.

7.5 Wetlands

The EDR Geocheck Physical Setting Source addendum depicted no state or federal (NWI) mapped wetlands on the Property.

HILLMANN
CONSULTING

April 8, 2019

Ms. Elizabeth Moronta
Omni New York LLC
909 Third Avenue, 21st Floor
New York, NY 10022

Re: Phase II Subsurface Investigation Report
135 Main Street
Poughkeepsie, NY
Hillmann Project #G6-2423

Dear Ms. Moronta:

As requested, Hillmann Consulting, LLC (Hillmann) conducted a Phase II Subsurface Investigation at 135 Main Street, Poughkeepsie, New York. Based on a previous Phase I Environmental Site Assessment (ESA) completed April 2019, several Controlled Recognized Environmental Conditions (CRECs) were noted at the Property from past investigations and findings including past subsurface investigation and analysis conducted by Hillmann in 2007. The investigation identified semi-volatile organic compounds (SVOCs) and metals in soil and groundwater but was attributed to historic urban material. Historic property use at the Property includes a mid-19 century to early 20th century manufactured gas plant and use of a underground storage tank (UST) for gasoline depicted in a 1952 fire insurance map. A 10,000 gallon underground storage tank (UST) also exists at the Property rear of the current building has been closed in place in 1997.

In addition to the CRECs noted at the Property, the rear landscaped portion of the Property is slated for construction activities. No current RECs were identified in the ESA. This Phase II Investigation was conducted to further assess whether the subsurface soil and groundwater was impacted from historic Property use and excavation and dewatering purposes. This Phase II Subsurface Investigation Report presents the findings and recommendations associated with the investigative activities conducted by Hillmann.

FIELD ACTIVITIES (MARCH 20, 2019)

Hand auguring and direct push technology (i.e. Geoprobe®) was used to advance eight borings, SB1 through SB8, in potential areas of concern indicated by the Phase I ESA and to classify soil in planned redevelopment activities. Hand auguring was completed from ground surface to 2 feet below ground surface (bgs) with the drilling completing the remainder of the borings. Borings depths were advanced between 6-10 feet bgs. Boring refusal and bedrock was not encountered.

All recovered soil was field screened using visual and olfactory senses as well as a photoionization detector (PID). Soil stratigraphy consisted of mainly fill material in all soil borings; extending from below ground surface to boring termination. A total of eight soil samples were collected with one sample collected per

boring. Field screening of boring of SB1 indicated a mild petroleum odor and soil staining at the 9-10 foot bgs interval with a PID reading at 10.9ppm. Soil boring logs are included on the attached Table 3.

Groundwater was observed in each boring at various depths ranging from 3-5 feet bgs. Three borings (SB1, SB3 and SB8) were converted to temporary well points (TWP) for collection of groundwater. TWP construction consisted of slotted ¾ inch diameter PVC well pipe inserted into the designated boring with the top approximately 1 foot above the ground surface. Prior to purging, static groundwater levels were measured in these areas prior to collection and depth to water ranged from 6.23 - 6.75 bgs. A peristaltic pump with dedicated tubing was utilized to purge groundwater for collection.

Soil and groundwater samples were placed in laboratory approved containers and kept cool during transport to a New York certified laboratory under chain of custody protocol. Samples were analyzed for the Target Analyte List/Target Compound List (TAL/TCL+30) which includes: Volatile Organic Compounds (VOCs) by EPA method 8260 and Semi-Volatile Organic Compounds (SVOCs) by EPA method 8270, pesticides and polychlorinated biphenyls (PCBs) by EPA method 8081 and 8082 and TAL metals by EPA method 6010.

All sampling locations are shown on the attached Figure 1.

RESULTS

The soil and groundwater samples were compared to the applicable New York State Department of Environmental Conservation's (NYSDEC) Soil Cleanup Objectives (SCOs) for Unrestricted Use (UU) and Restricted-Residential Use (RRU) and Technical & Operational Guidance Series (TOGS) Groundwater Quality Standards (GQS); respectively.

Laboratory results indicated exceedances of VO compound Acetone in soil samples S-5 (0.076 mg/kg) and S-7 (0.6 mg/kg) above the UUSCO standards but below RRUSCO. Three pesticides were in exceedance above the UUSCO but below the RRUSCO in sample S-5 including 4,4'-DDE (0.121 mg/kg), 4,4'-DDT (0.256 mg/kg), and Dieldrin (0.00547 mg/kg).

Metal compound arsenic was detected in exceedance of both UUSCO and RRUSCO in four samples: S-2 (61 mg/kg), S-3 (57.2 mg/kg), S-4 (16.8 mg/kg) and S-6 (21.1 mg/kg). Arsenic was also in exceedance of the UUSCO but below the RRUSCO in sample S-8 (14.1 mg/kg).

Metal compound Copper was identified in soil sample S-6 (53.3 mg/kg), Lead identified in soil sample S-5 (159 mg/kg), and Zinc identified in soil samples S-4 (152 mg/kg) and S-5 (208 mg/kg): all detections were above the UUSCO but below the RRUSCO.

The results of all other analyzed compounds were detected or below the applicable NYSDEC SCOs.

The groundwater samples were compared to the NYSDEC GQS. Several Polycyclic Aromatic Hydrocarbons (PAHs) compounds in samples TWP-1 and TWP-3 and VO compounds in sample TWP-1 were detected in exceedance of the GQS.

TWP-1 PAH compounds in exceedance of the applicable GQS include Benzo(a)anthracene (38 µg/L); Benzo(a)pyrene (29 µg/L); Benzo(b)fluoranthene (22 µg/L); Benzo(k)fluoranthene (23 µg/L), Chrysene (27 µg/L), Fluoranthene (68 µg/L) , and Indeno(1,2,3-cd)pyrene (17 µg/L), Naphthalene (150 µg/L) and Pyrene (58 µg/L). Analyzed VOCs in this location also indicated exceedances above the GQS including 1,2,4-Trimethylbenzene (16 µg/L), 1,3,5-Trimethylbenzene (6.6 µg/L), Benzene (2.7 µg/L), Naphthalene (480 µg/L), o-Xylene (11µg/L), and p/m Xylene (29 µg/L) .

TWP-3 PAH compounds in exceedance of the GWS include Benzo(a)anthracene (2.9 µg/L); Benzo(a)pyrene (3.2 µg/L); Benzo(b)fluoranthene (2.7 µg/L); Benzo(k)fluoranthene (2.6 µg/L), Chrysene (2.8 µg/L), and Indeno(1,2,3-cd)pyrene (2.1 µg/L).

Several metal compounds were detected in exceedance of the GQS in samples TWP-1 and TWP-8. Cyanide was identified in sample TWP-3 (547 µg/L) above the GQS.

A summary of the groundwater results is included as Table 2. Full laboratory data package for both soil and groundwater is including soil as Attachment A.

CONCLUSIONS AND RECOMMEDATIONS

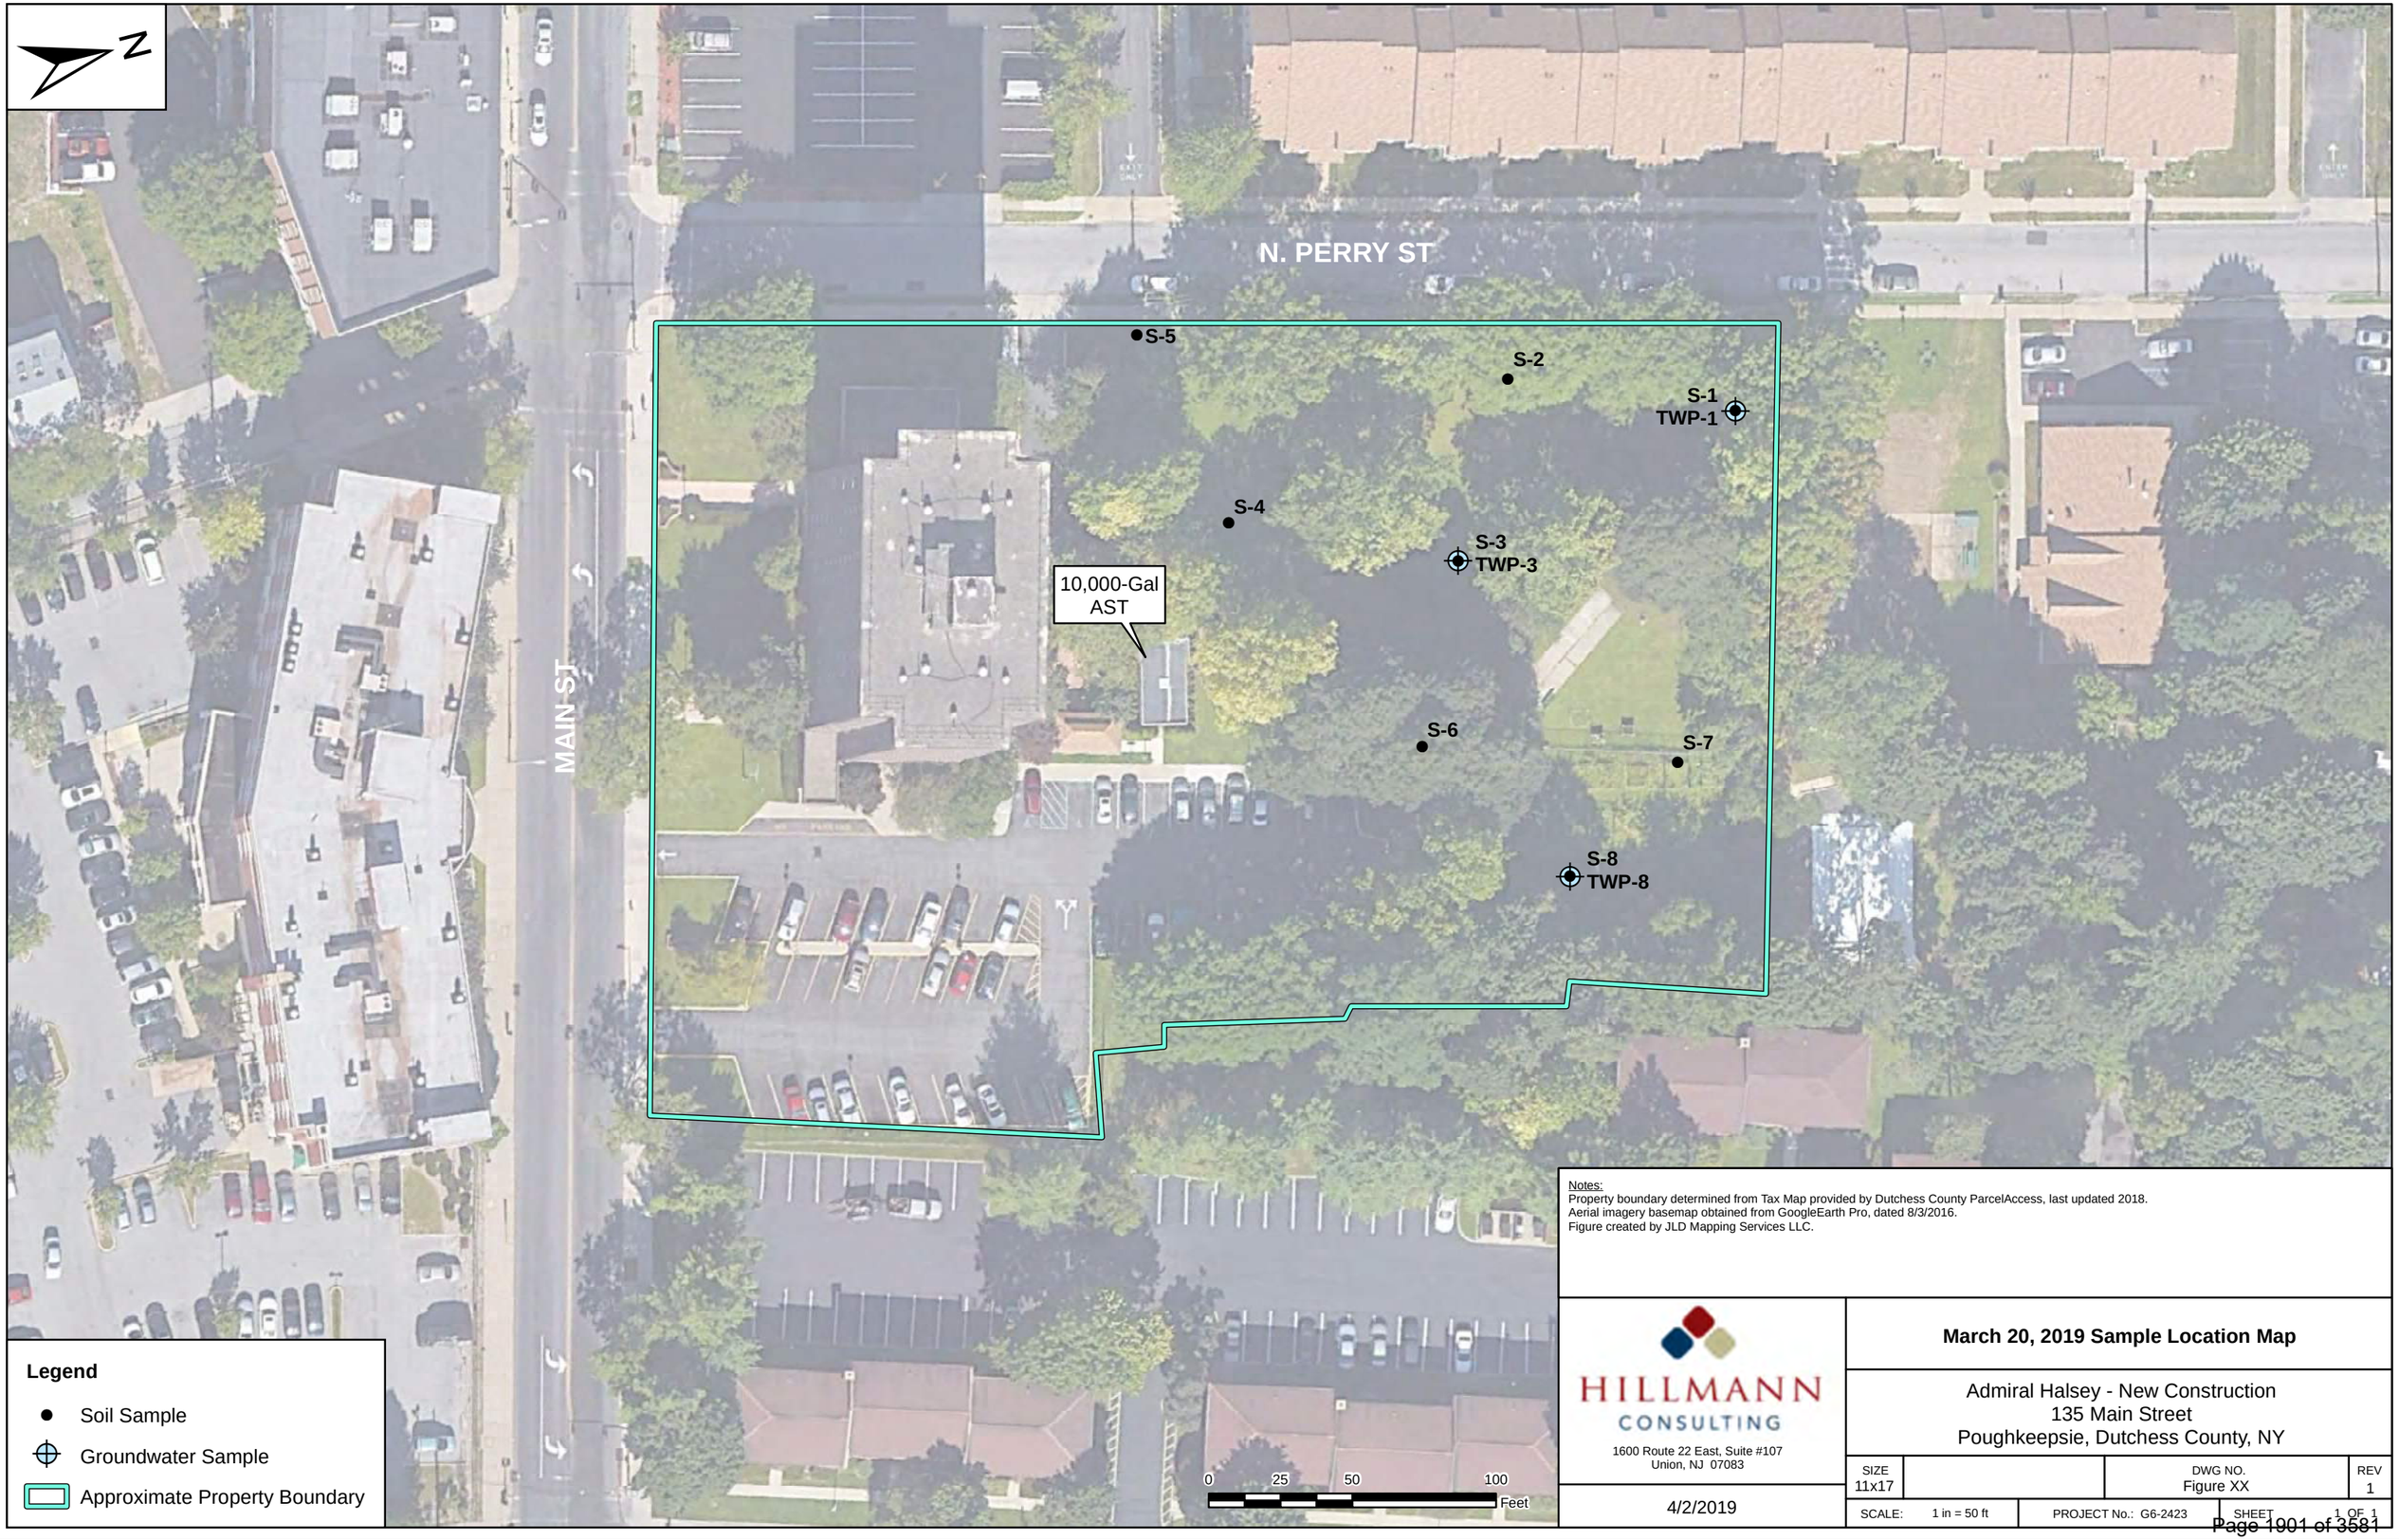
Laboratory results indicated various exceedances of the Unrestricted Use Soil Cleanup Level but not the Restricted-Residential Soil Cleanup Level. The various detections are suspected as attributed to the historic fill material located on the Property. Arsenic that was the only compound in soil detected above the RRUSCO in several soil samples. The Arsenic detections are suspected as attributed to historic property use as a manufactured gas plant or historic fill material.

During site redevelopment activities, all soil slated for removal off-site should be disposed of in accordance with federal, state and local regulations.

The metals exceedances detected in groundwater are suspected as attributed to turbidity/particulates suspended in groundwater associated with temporary well point installation and not dissolved groundwater contamination. Several of the detected metals including Sodium, Selenium, Magnesium, Beryllium, Silver, and Nickel, are typically naturally occurring/background conditions.

Groundwater results from sample TWP-1 indicated VOC and PAH compounds in exceedance of the GQS. These compounds are indicative of possible petroleum contamination due to recorded PID readings and staining observed in the corresponding soil boring.

During site redevelopment activities, groundwater dewatering, if needed, should be performed in accordance with all federal, state and local regulations.



We thank you for the opportunity to provide you with our services. If you have any questions or comments, please feel free to contact us at any time.

Sincerely,

Hillmann Consulting, LLC

Ryan K. Powell, P.G.
Environmental Scientist

Chris Hirschmann, CHMM

Results in Yellow Highlight displays exceedance above the UUSCO regulatory standard
Results in Green Highlight displays exceedance above both UUSCO & RRUSCO regulatory standard
J = Concentration detected at a value below the RL and above the MDL for target compounds
P = The RPD between the results for the two columns exceeds the method-specified criteria

NS = No Standard Available
I = The lower value for the two columns has been reported due to obvious interference
ND = Analyzed for but Not Detected at the MDL

Results in Yellow Highlight displays exceedance above the UUSCO regulatory standard
Results in Green Highlight displays exceedance above both UUSCO & RRUSCO regulatory standard
J = Concentration detected at a value below the RL and above the MDL for target compounds
P = The RPD between the results for the two columns exceeds the method-specified criteria

NS = No Standard Available
I = The lower value for the two columns has been reported due to obvious interference
ND = Analyzed for but Not Detected at the MDL

Results in Yellow Highlight displays exceedance above the UUSCO regulatory standard
Results in Green Highlight displays exceedance above both UUSCO & RRUSCO regulatory standard
J = Concentration detected at a value below the RL and above the MDL for target compounds
P = The RPD between the results for the two columns exceeds the method-specified criteria

NS = No Standard Available

ND = Analyzed for but Not Detected at the MDL

Table 2 - Groundwater Results - VOCs, Metals

Results in Blue Highlight displays exceedance above the Groundwater Effluent Limitations
NS = No Standard Available
ND = Analyzed for but Not Detected at the MDL
J = Concentration detected at a value below the RL and above the MDL for target compounds

P = The RPD between the results for the two columns exceeds the method-specified criteria

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

The WG1219094-2 LCS recovery, associated with L1911169-09 through -11, is below the acceptance criteria for benzoic acid (0%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

PCBs

L1911169-10: The surrogate recoveries were outside the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (20%/26%) and decachlorobiphenyl (23%/22%); however, the criteria were achieved upon re-extraction outside of holding time. The results of both extractions are reported.

L1911169-11: The sample has elevated detection limits due to limited sample volume available for analysis.

WG1219258-3: The internal standard (IS) response for 1-bromo-2-nitrobenzene was above the acceptance criteria; however, the sample was not re-analyzed due to obvious interferences isolated to the primary column.

Pesticides

L1911169-07: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

L1911169-07: The surrogate recoveries are below the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (0%) and decachlorobiphenyl (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

L1911169-11: The sample has elevated detection limits due to limited sample volume available for analysis.

Total Metals

L1911169-01 through -08: The sample has elevated detection limits for all elements, with the exception of

Project Name:	G6-2423	**Lab Number:**	L1911169
Project Number:	G6-2423	**Report Date:**	03/29/19

Case Narrative (continued)

mercury, due to the dilution required by matrix interferences encountered during analysis.

L1911169-11: The sample has elevated detection limits for all elements, with the exception of mercury, due to the prep dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	G6-2423	**Lab Number:**	L1911169
Project Number:	G6-2423	**Report Date:**	03/29/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 6860: SCM: Perchlorate

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

RE: Phase I Environmental Site Assessment-Update
135 Main Street
Poughkeepsie, New York 12601
Hillmann Project No. E3-2155

Dear Ms. Reed:

Hillmann Group, LLC, is pleased to provide the results of our Phase I Environmental Site Assessment Update of the above referenced property. This assessment was performed in accordance with the scope and limitations of ASTM Practice E 1527-05.

This report is for the exclusive use of the entities named on the front cover, its affiliates, designates and assignees, rating agencies, prospective bond holders and bond holders, and no other party shall have any right to rely on any service provided by Hillmann Group, LLC, without prior written consent.

In addition, this report is addressed to Citibank, NA (Citibank), such other persons as may be designated by Citibank and their respective successors and assigns. Special Conditions include (i) the Report may be relied upon by Citibank in determining whether to make a loan evidenced by a note ("the Property Note") secured by the Property, (ii) the Report may be relied upon by any purchaser in determining whether to purchase the Property Note from Citibank and any rating agency rating securities issued by, or representing an interest in, the Mortgage Note, (iii) the Report may be referred to in and included with materials offering for sale the Property Note or an interest in the Property Note, (iv) persons who

acquire the Property Note or an interest in the Property Note may rely on the Report, and (v) the Report speaks only as of its date in the absence of a specific written update of the Report.

We appreciate the opportunity to provide engineering services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact the undersigned at 908-688-7800.

Very Truly Yours,
Hillmann Group, LLC

David Rutherford
Director, Due Diligence Services

1.0 EXECUTIVE SUMMARY

At the request of Admiral Halsey LP (Client), Hillmann Group, LLC (Hillmann), performed a Phase I Environmental Site Assessment Update (ESA-U) of the property located at 135 Main Street in Poughkeepsie, New York (the Property). This report updates a previous Phase I ESA of the Property that was completed by Hillmann on January 22, 2007. This assessment has been conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-05 for Phase I Environmental Site Assessments.

1.1 Property Summary Table

A summary of the pertinent details of the project is provided below:

PROJECT SUMMARY TABLE					
Name of Client		Admiral Halsey LP			
Client Project No.:		None Provided			
Client Contact:		Ms. Courtney Reed			
Description of Project		Phase I Environmental Site Assessment			
Property Name:		135 Main Street			
Property Address:		135 Main Street			
City:	Poughkeepsie	**County:**	Dutchess	**State:**	New York
Tax Map designation:		**Block:**	76	**Lot:**	911
Property Area:		2.20 acres			
Building Area:		Approximately 98,000 ft²			
Property Usage:		Residential			
Year Built:		1975			
Property Owner:		Admiral William F. Halsey Village I SR			
Zoning Information:		Not Provided			
Assessment Personnel:		Mr. Chris Hirschmann/Ms. Theresa Serrano			
Accompanied/Escorted By:		Ms. Sue Kimmerle, Property Manager			
Property Contact Phone Number:		Ms. Sue Kimmerle, (845) 471-9788			
Inspection Date:		March 27 & June 15, 21 & 22, 2007			

1.2 Summary of Findings

The following table summarizes the individual sections of this assessment. This table, alone, does not constitute the complete assessment. The report must be reviewed in its entirety.

FINDINGS SUMMARY				
ASSESSMENT SECTION	ACCEPTABLE	O&M RECOM'D	REC/ FURTHER ACTION	REF. SECTION
Historical Review	X			5.0
Regulatory Review	X			8.0
Site Use	X			3.2/6.2
Hazardous Materials	X			6.3
USTs	X			6.6
ASTs	X			6.6
PCBs	X			6.7
Waste / Discharges	X			6.4/6.5
ACM	X			7.1
Lead Paint	X			7.2
Drinking Water Quality	X			6.11
Radon	X			7.3
Adjoining/Surrounding Area	X			3.6

1.3 Conclusions

Hillmann has performed a Phase I Environmental Site Assessment – Update in accordance with the scope and limitations of ASTM Practice E 1527-05 of the Property as described in Section 3 of this report. Any additions to, exceptions to, or deletions from this practice are described in Section 2 of this report. This update assessment has revealed no evidence of *recognized environmental conditions* (RECs) in connection with the Property, except for the following:

- A Limited Phase II Investigation report was prepared by Hillmann in March 2007 to evaluate two recognized environmental condition that were identified by Hillmann's prior Phase I ESA report. The RECs included a potential impact to the environment from a former coal gasification plant; and a historic underground storage tank (UST) that was identified by review of Sanborn Fire Insurance Maps of the Property. The investigation included the use of a GPR survey to identify any underground structures, utilities, or obstructions, and the collection and analysis of soil and groundwater samples. The results of the investigation identified the presence of residual contamination which could be

attributed to the past manufactured gas plant usage. The Limited Phase II Investigation identified elevated levels of metals and PAHs in soils throughout the property. Hillmann understands that Omni has obtained a "Property Use and Work Plan" to protect against possible contamination exposure. This document provides insight on which procedures to follow during excavation activities. In addition, this document is site specific and will only pertain to the subject property. Hillmann has contacted the NYSDEC directly, and was informed that there is no requirement to report a spill to the NYSDEC. Therefore Hillmann does not recommend reporting the results to the NYDEC. Hillmann notes that a *Soil and Groundwater Contamination Health and Safety Plan* was developed for the Property on behalf of Admiral Halsey LP, dated July 11, 2007.

Hillmann has also performed cursory evaluations for ASTM "Non-Scope" items, such as asbestos-containing materials, lead-based paint, radon and mold. Our observations and research identified no concerns in addition to those discussed by the prior Phase I ESA, except as follows:

- Property management provided a copy of an Asbestos Inspection Survey and Operations and Maintenance Program of the property prepared by EHI and dated June 15, 2007. The survey report identifies the presence of asbestos containing floor tile and associated mastic, boiler flue insulation, boiler gasket material and electrical insulation at the Property. Given that an O&M Program has been prepared, no further investigation is recommended at this time regarding asbestos.

1.4 Recommendations

Based on the findings of the Phase I Environmental Site Assessment Update, Hillmann recommends no additional environmental study at this time.

2.0 PURPOSE AND LIMITATIONS

2.1 Purpose and Scope

Hillmann Group, LLC, was retained by Omni to conduct a Phase I Environmental Site Assessment Update of the Property in accordance with the scope of work detailed in the Hillmann Group contact. The purpose of this report is to update the findings of Hillmann's previously completed assessment of the Property dated January 22, 2007.

This assessment was conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-05. The ASTM describes these methodologies as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

The term *recognized environmental conditions (RECs)* is defined by the ASTM as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not *REC*s.

The chief components of this update assessment are described as follows:

- A visual inspection of the Property and adjoining properties for evidence of recognized environmental conditions; and or conditions that have changed since the field inspection of the prior Phase I ESA.

- An updated review of regulatory records and data as per ASTM guidelines. This includes a regulatory review of federal and state environmental databases, and other local environmental records, within specific search distances defined by the ASTM.

- Interviews with property representatives regarding the current environmental condition of the Property.

- Review and summary of any environmental investigation reports conducted since the date of the prior Phase I ESA.

These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

2.2 Inaccessible Locations

Hillmann is not aware of any notable areas of the Property that were excluded from our visual inspection.

2.3 Limitations and Exceptions

Site inspections for the assessment update were conducted on March 27, 2007 in conjunction with the Phase II Investigation activities on the exterior of the Property; and on June 15, 21 & 22, 2007 in conjunction with assessment for vapor intrusion within the existing building. Historic research data gaps are detailed in Section 5, if applicable. No other exceptions or deletions from the ASTM Standard E 1527-05 are reported.

2.4 Abbreviations/Acronyms

Hillmann may use the following abbreviations and acronyms for common terminology described in our report. Not all abbreviations or acronyms may be applicable to this report:

ACM – Asbestos-containing Material
AST – Aboveground Storage Tank
ASTM – American Standard for Testing Materials
FOIA – Freedom of Information Act
HVAC – Heating Ventilation & Air Conditioning
HREC – Historic Recognized Environmental Condition
IAQ – Indoor Air Quality
LBP – Lead-based Paint
LTANK – Leaking Storage Tank
MSDS – Material Safety Data Sheet
REC – Recognized Environmental Condition
UST – Underground Storage Tank

2.5 Special Terms and Conditions

Hillmann has prepared this Phase I Environmental Site Assessment Update using reasonable efforts in each phase of its work to identify recognized environmental conditions associated with hazardous substances, wastes and petroleum products at the Property. The methodology of this Phase I Environmental Site Assessment Update was consistent with the ASTM Standard Practice for E 1527-05. Findings within this report are based on information collected from observations made on the day of the site investigation and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation or other construction purposes. Hillmann makes no representation or warranty that the past or current

operations at the Property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes.

Findings, conclusions and recommendations presented in this report are based on our visual observations of the Property, the municipal research findings reasonably obtained, information provided by the Client, and/or a review of readily available and supplied drawings and documents. Hillmann relies completely on the information, whether written, graphic or verbal, provided by the subject Property contact(s) or as shown on any documents reviewed or received from the subject Property contact, owner or agent, or municipal source, and assumes that information to be true and correct. Although there may have been some degree of overlap in the information provided by these various sources, Hillmann did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this assessment.

Regardless of the findings stated in this report, Hillmann is not responsible for consequences or conditions arising from facts that were concealed, withheld or not fully disclosed at the time the assessment was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The report focuses on the Property and neighboring properties that could impact the Property. Neighboring properties listed in governmental environmental records are identified within specific search distances. The search distance varies depending upon the particular government record being checked. The regulatory research is designed to meet the requirements of ASTM Standard E 1527-05. The information provided in the regulatory database report is assumed to be correct and complete.

Subsurface conditions may differ from the conditions implied by the surface observations and can only be reliably evaluated through intrusive techniques.

Reasonable efforts have been made during this assessment to identify aboveground and underground storage tanks and ancillary equipment. “Reasonable efforts” are limited to information gained from visual observation of largely unobstructed areas, recorded database information held in public record and available information gathered from interviews. Such methods may not identify subsurface equipment that may have been hidden from view due to parked automobiles and other vehicles, snow cover, vegetative growth, pavement, construction or debris pile storage or incorrect information from sources.

Hillmann is not a professional title insurance firm and makes no guarantee, explicit or implied, that the records which were reviewed represent a comprehensive or precise delineation of past Property ownership or tenancy for legal purposes.

3.0 USER PROVIDED INFORMATION

Review of title records is not included in the scope of work for this assessment project. No information regarding environmental liens or activity and use limitations was provided to Hillmann by the Client.

Other than their knowledge of the environmental conditions related to historic USTs and the historical manufactured gas plant operations, no indication of any specialized knowledge or experience regarding the Property was reported to Hillmann by the client.

No indication of any commonly known or reasonably ascertainable information was provided by the Client.

No information was provided by the Client to Hillmann regarding a reduction in value of the Property value due to environmental problems or conditions.

It is Hillmann's understanding that the Phase I ESA was being performed to assist in obtaining financing for development issues.

4.0 PROPERTY DESCRIPTION

No significant changes were noted in the physical condition and characteristics of the Property since the prior ESA was site reconnaissance was completed. No changes in the use of the property were noted since the prior ESA. The property is utilized as a senior housing complex.

No significant changes in the occupancy or usage of the adjoining properties since the time of the prior ESA were noted.

The following describes adjacent and abutting properties:

DIRECTION	DESCRIPTION
North-	Apartments
East-	Apartments
South-	Senior housing across Main Street
West-	Single-family residential across North Perry Street

5.0 HISTORICAL RECORDS REVIEW

5.1 Summary of Historic Records Review Findings from Prior ESA

During the prior Phase I ESA, Hillmann conducted research in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the Property. Standard historical sources were sought in an attempt to document the past uses of the Property as far back as it can be shown that the Property contained structures; or from the time the Property was first used for residential, agricultural, commercial, industrial or governmental purposes.

The existing apartment building at the Property was originally constructed circa 1975. Prior to the current use, the Property was improved for various commercial uses including retail stores, a dairy facility, a pottery facility and a coal gas works. Potential historic use impacts typically associated with historic coal gasification plants to the Property may include residual contamination generated by operations at the gas works site, including but not limited to coal tar and polyaromatic hydrocarbons (PAHs), and residual contamination generated by operations at the dairy site, including oil, grease and gasoline range organics.

5.2 Prior Investigation Reports:

Since the completion of the prior Phase I ESA, Hillmann has conducted the following additional environmental investigations of the Property:

Limited Phase II Investigation, dated May 2007, prepared on behalf of Admiral Halsey, L.P., c/o Omni New York, LLC.

> The purpose of the Limited Phase II Investigation report was to evaluate two recognized environmental conditions that were identified by Hillmann's prior Phase I ESA report. The RECs included a potential impact to the environment from a former coal gasification plant; and a historic underground storage tank (UST) that was identified by review of Sanborn Fire Insurance Maps of the Property. The investigation included the use of a GPR survey to identify any underground structures, utilities, or obstructions, and the collection of soil samples. These samples were collected from borings through the asphalt parking lot, around the old UST and in the area of the historic coal gasification plant, on March 27, 2007. A Geoprobe drill rig was utilized to obtain nine (9) soil and three (3) groundwater samples, with five (5) additional soil samples obtained by hand auguring. The general sample types, locations and depths were selected to determine the overall extent and magnitude of potential contamination resulting from the former site use. The samples were analyzed for volatile organic compounds (VOC), base neutrals and acid extractable (BNA), and Priority Pollutant List Metals at an accredited laboratory.
>
> The following is a summary of the conclusions of the Limited Phase II Investigation:
>
> 1. The results of the investigation have identified the presence of contamination which could be attributed to past site usage. The environmental concerns identified through laboratory and field observations are the presence of metals and Polynuclear Aromatic Hydrocarbons (PAHs) present in the soil and groundwater. It appears that the contamination identified is

the result of former coal gasification processes conducted on site. Elevated levels of metals and PAHs are wide spread throughout the property. Minimal risk of exposure is expected in the areas of the parking lot and/or lawn area. Any excavation or prolonged contact with the subsurface soils may potentially cause exposure to the subsurface contaminants. Due to the wide spread presence of elevated metals and PAHs around the property, Hillmann has determined that the contamination encountered did not originate from the historic UST, but as a result of the historic coal gasification plant. The historic UST was not found to have impacted the surrounding environment. Hillmann understands that Omni is in the process of obtaining a "Property Use and Work Plan" to protect against possible contamination exposure. This document will provide insight on which procedures to follow during excavation activities. This document will be site specific and will only pertain to the subject property. A copy of the work plan will be located at the facility.

The following items were recommended by the Limited Phase II Investigation:

1. Hillmann recommends leveling out the current garden area, then placing an impermeable membrane, as a separating layer, on top of the current soil surface to prevent any current contamination from possibly impacting clean soil in the garden area. A minimum of two (2) feet of certified, clean soil should be placed on top of the impermeable membrane and the garden beds assembled on top of this layer of clean soil. This should prevent the root systems of plants growing in the garden from reaching and possibly absorbing contamination from soils below the impermeable layer. This remediation technique should also protect residents or other individuals working in the garden from contaminants present in the soil.

2. It is recommended that air monitoring be performed on the first level of the housing complex due to the publications of vapor intrusion possibilities. Air monitoring will determine if there is any vapor intrusion present at the subject property. Hillmann is currently under contract wit Omni to provide air-monitoring testing.

3. The former Bayeaux Street manufacturing gas plant (MGP) was located on the corner of Main Street and North Perry (formerly Bayeaux Street), and is currently occupied by Admiral Halsey Senior Village. Hillmann has contacted the NYSDEC directly, and was informed that although compounds have been identified on site at levels above current clean up standards, there is no requirement to report a spill to the NYSDEC. Therefore Hillmann does not recommend reporting the results to the NYDEC at this time provided the completed "Property Use and Work Plan" is maintained on site, and is provided to any person conducting work below the surface at this site.

<u>Vapor Intrusion Investigation</u>, dated July 9, 2007, prepared on behalf of Admiral William F. Halsey Senior Center.

This report was conducted at the recommendation of the Hillmann Limited Phase II Investigation to further investigate the potential for vapor intrusion due to residual subsurface impacts from a historic manufactured gas plant (MGP) located at the Property. The work included a Pre-Inspection of the site with a visual inspection and measurements of Volatile Organic Compounds (VOCs) with a Photo Ionization Detector (PID); and vapor intrusion sampling consisting of the placement of six (6) summa canisters for a total duration of 24 hours. The summa canisters were analyzed for VOCs via the TO-15 Method as required for compliance with USEPA and NYDOH guidelines.

The report found that observed testing results were not indicative of vapor intrusion due to abandoned manufactured gas plants (MGP). The majority of the results were below the limit of detection for the analytical method employed. A small fraction of the results exceeded the limit of detection. These exceedances were randomly located and the constituents are consistent with common cleaning products. None of the areas with observed concentrations had a combination of components that could be associated with MGP vapor intrusions. In addition, the levels are likely to be transient and of little concern. Similar levels are often observed in occupied living spaces that have no potential for MGP vapor intrusion.

The report concluded that indoor air quality was not anticipated to cause occupant illness or require immediate remediation. Follow-up investigating and sampling should be conducted in the areas where increased volatile organic compounds (not suspected of being vapor intrusion) exist. Furthermore, the follow-up sampling on a periodic basis may be prudent (such as annual or bi-annual) to ensure these conditions do not change over time. If significant changes occur at the building (increase or decrease HVAC, digging, vibration, etc) the potential for vapor intrusion may increase.

Soil & Groundwater Contamination Health & Safety Plan, dated July 11, 2007, prepared on behalf of Admiral Halsey L.P by Environmental Health Investigations, Inc.

This report establishes the policy for managing potential exposures to chemicals which exist in low concentrations within the soil and ground water associated with the Admiral William F. Halsey Senior Village property located at 135 Main Street in Poughkeepsie, New York.

6.0 SITE RECONNAISSANCE/INTERVIEWS

6.1 Site Reconnaissance/Interviews

Hillmann revisited the Property on March 27, 2007 in conjunction with the Phase II Investigation activities on the exterior of the Property; and on June 15, 21 & 22, 2007 in conjunction with assessment for vapor intrusion within the existing building.

During Hillmann's observations of the property during the subsequent visits did not reveal via visual inspection any environmental conditions substantially different from those encountered during the prior Phase I ESA. No additional evidence of any recognized environmental conditions were encountered.

Property management completed an environmental questionnaire that was provided in conjunction with this assessment update. Ms. Sue Kimmerle of Admiral Halsey Senoir Village completed the questionnaire on behalf of the property management. The completed questionnaire did not indicate any evidence of recognized environmental conditions other than those discussed in the prior Phase I ESA.

7.0 NON-ASTM SCOPE CONCERNS

7.1 Asbestos-Containing Material (ACM)

Property management provided a copy of an Asbestos Inspection Survey and Operations and Maintenance Program of the property prepared by EHI and dated June 15, 2007. The survey report identifies the presence of asbestos containing floor tile and associated mastic, boiler flue insulation, boiler gasket material and electrical insulation at the Property.

7.2 Lead-Based Paint

Based on age of the building, lead-based paint may be present at the Property. In general, painted surfaces in the occupied areas of the building were noted to be in good condition with no significant areas of peeling or chipping noted.

7.3 Radon

Radon is a naturally occurring, colorless, odorless gas that is a byproduct of the decay of radioactive materials potentially present in bedrock and soil. Radon gas may enter the lowest level of a building through floor cracks, structural joints or plumbing conduits. The United States Environmental Protection Agency (USEPA) guidance level for annual residential exposure to radon is 4.0 picocuries per liter of air (pCi/L). The guidance level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

Based on information obtained from data obtained by the US EPA, the Property is located in an area with a high potential for radon concentrations that exceed current USEPA action guidelines. Dutchess County is classified as a Zone 1 or ‘high risk’ area for radon. Radon tests have been conducted for the zip code 12601 and have shown results less than the action level of 4Pci/L. The average result for the living areas was 1.690 pCi/L, and for basements was 3.630 pCi/L.

7.4 Mold

Hillmann conducted a cursory inspection of the accessed areas of building interior for amplified mold growth and conditions conducive to amplified mold growth. No evidence of amplified mold growth, or conditions conducive to amplified mold growth, was noted at the time of the assessment.

8.0 REGULATORY RECORD REVIEWS

The databases discussed in this section, provided by Environmental Data Resources of Milford, CT, were reviewed for information regarding documented and/or suspected releases of regulated hazardous substances and/or petroleum products on or near the Property. Hillmann also reviewed the "unmappable" listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that cannot be plotted with confidence, but are identified as being located within the general area of the Property based on the partial street address, city name or zip code. In general, a listing cannot be mapped due to inaccurate or incomplete address information in the database that was supplied by the corresponding regulatory agency. Any listings from the unmappable summary that were identified by Hillmann as a result of the area reconnaissance and/or cross-referencing to mapped listings are included in the corresponding database discussion within this section.

REGULATORY DATABASE	SEARCH DISTANCE	ON-SITE LISTINGS	ADJ. PROPERTY LISTINGS	TOTAL WITHIN SEARCH DISTANCE
Fed. NPL	1-mile	0	0	0
Fed. Delisted NPL	1-mile	0	0	0
Fed. CERCLIS	½-mile	0	0	0
Fed. CERCLIS-NFRAP	½-mile	0	0	1
Fed. RCRA CORRACTS	1-mile	0	0	0
Fed. RCRA TSD	½-mile	0	0	0
Fed. RCRA Gen.	Site & Adj.	0	0	
Fed. ERNS	Site	0		
State & Tribal equiv. NPL	1-mile	0	0	0
State & Tribal equiv. CERCLIS	½-mile	0	0	0
State & Tribal SWF/LF	½-mile	0	0	1
State & Tribal LTANK	½-mile	0	0	23
State & Tribal Registered Stor. Tank	½-mile	1	1	
State & Tribal Eng. Control List	½-mile	0	0	0
State & Tribal Inst. Control List	½-mile	0	0	0
State & Tribal VCP	½-mile	0	0	0
State & Tribal Eng. Brownfields	½-mile	0	0	0

- *The results of the review for each database are discussed below. The locations for the facilities discussed in this section are shown on the figures in the EDR report, included as Appendix E. Facilities listed on databases that are greater than 1 mile distant from the Subject Property are situated too far away to present a recognized environmental condition. Consequently, only those facilities that are located within a mile and are situated in a presumed up gradient location are discussed in detail below. Certain facilities listed on databases are recognized to present an environmental condition only if they are within a ¼ mile or ½ mile distant from the Subject Property.*

- *According to the EPA Policy Toward Owners of Property Containing Contaminated Aquifers, dated July 3, 1995, the EPA will not take enforcement action against a property owner who owns property under which is an aquifer contaminated by subsurface migration from an off site source or sources. Therefore, the Subject Property owner would not be liable for any contamination of the underlying aquifer that was attributed to an off-site source.*

Tribal Jurisdiction: The Property is not located within an area that is under Tribal jurisdiction.

8.1 Federal Agency Record Review

EPA - The National Priorities List (NPL), also known as the Superfund list, is the United States Environmental Protection Agency (EPA) listing of uncontrolled or abandoned hazardous waste sites. These sites are targeted for possible long-term remedial action under the Superfund Act of 1980. The list is primarily based on the EPA's Hazardous Ranking System.

- The Property was not listed as an NPL facility.
- No NPL listings were identified within a one-mile radius of the Property.

EPA – Delisted NPL Site List (DNPL) provides a list of sites formerly listed on the NPL that have since been "de-listed" after the EPA has determined that no further response is appropriate.

- The Property was not listed as a DNPL facility.
- No DNPL listings were identified within a ½-mile radius of the Property.

EPA - The Resource Conservation and Recovery Information System (RCRIS) is a database of facilities, which generate or treat, store or dispose of EPA regulated hazardous waste, or meet other applicable requirements of the Resource Conservation and Recovery Act (RCRA). Inclusion on this database does not imply that mishandling or a release of hazardous waste has occurred at the facility. RCRIS categories are as follows:

Treatment, Storage, and Disposal Facilities (TSD). Facilities listed under TSD are sites that treat, store and/or dispose of EPA regulated hazardous waste.

- The Property was not listed as TSD facility.
- No TSD listings were identified within a ½-mile radius of the Property.

Corrective Action (CORRACTS) list is a list of hazardous waste treatment, storage or disposal facilities and other RCRIS facilities (due to past interim status or storage of hazardous waste beyond 90 days) that have been notified by the USEPA to undertake corrective action under RCRA.

- The Property was not listed as a CORRACTS facility.

- No CORRACTS listings were identified within a one-mile radius of the Property.

Large Quantity Generators (LQG). Facilities listed under LQG either generate more than 1000 kg of EPA regulated hazardous waste per month, or meet other applicable requirements of RCRA.

- Neither the Property nor any adjoining properties were identified on the LQG database.

Small Quantity Generators (SQG). Facilities listed under SQG either generate from 100 kilograms (kg) to 1000 kg of EPA regulated hazardous waste per month, or meet other applicable requirements of RCRA.

- Neither the Property nor any adjoining properties were identified on the SQG database.

EPA - The Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) is the EPA database of known or suspected uncontrolled or abandoned hazardous waste sites. These sites have either been investigated, or are currently under investigation, by the EPA for the release or threatened release of hazardous substances.

- The Property was not identified on the CERCLIS database.

- No CERCLIS listings were identified within a ½-mile radius of the Property.

EPA – CERCLIS-NFRAP (No Further Remedial Action Planned) is the EPA database of archived sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time.

- The Property was not identified on the CERCLIS-NFRAP database.

- One (1) CERCLIS-NFRAP listing was identified within a ½-mile radius of the Property. The listed site is identified as Berncolors-Poughkeepsie, Inc. at 75 North Water Street, located approximately 1,795 feet to the northwest and down gradient from the Property based on area topography. Considering the NFRAP status of the listing, distance and topographic relation, this site is not considered a recognized environmental condition in connection with the Property.

EPA - The Emergency Response Notification System (ERNS) is a national database used to store information concerning the sudden and/or accidental release of hazardous substances, including petroleum, in quantities greater than the reportable quantity, as maintained at the National Response Center. The database contains preliminary information from spill reports made to various federal departments including the EPA.

- No listings were identified for the Property.

8.2 State Agency Record Review

State Hazardous Waste Sites (SHWS) database contains potential or confirmed hazardous substance release properties. This is the state equivalent to NPL *and* CERCLIS.

- The Property was not identified on the SHWS database.
- No SHWS listings were identified within a one-mile radius of the Property.

Solid Waste Facility/Landfill (SWF/LF) list provides information on the location of registered state landfills and associated transfer facilities.

- The Property was not identified on the SWF/LF database.
- One (1) SWF/LF listing was identified within a ½-mile radius of the Property. The listed site is identified as G.F. Refuse Transfer Station at 240 Main Street, located approximately 1,495 feet to the east-southeast and cross gradient from the Property based on area topography. No violations were reported. Considering the status of the listing, distance and topographic relation, this site is not considered a recognized environmental condition in connection with the Property.

Leaking Storage Tank (LTANK) is a comprehensive listing of all reported active and inactive leaking storage tank sites.

- The Property was not identified on the LTANK database.
- Twenty-three (23) LTANK listings were identified within a ½-mile radius of the Property. The closest listing in proximity to the Property is identified as Poughkeepsie City School at 12 South Terry Street, located approximately 270 feet to the south-southeast and cross gradient from the Property based on area topography. The case is reported as "Closed" on October 9, 1992. Considering the status of the listing, distance and topographic relation, this site is not considered a recognized environmental condition in connection with the Property.

Registered Storage Tank Database is the listing of registered storage tank sites. This includes the NYSDEC AST and UST databases.

- The Property was not identified on the AST database.
- No adjoining properties were identified on the AST database.
- The Property was identified on the UST and Historical UST databases as a closed UST facility, PBS #3-601156, with a single steel 10,000-gallon fuel oil UST reported as closed on October 1, 1997.

- One (1) adjoining property was identified on the UST database. The site is identified as River Care Nursing Home at 139-144 Main Street, located to the south across Main Street and topographically cross gradient from the Property based on area topography. The database reported one 1,500-gallon steel heating oil UST at this facility. This site was not listed on the LTANK or NY Spills database with any active spill cases. Considering the status of the listing and topographic relation, this site is not considered a recognized environmental condition in connection with the Property.

Engineering Controls Site Listing (ENG Controls) list provides information on the location of remediation sites using engineering controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

- The Property was not identified on the ENG Control database.

- No ENG Control listings were identified within a ½-mile radius of the Property.

Institutional Controls Site Listing (INST Controls) list provides information on the location of remediation sites using institutional controls as part of the response action. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

- The Property was not identified on the INST Control database.

- No INST Control listings were identified within a ½-mile radius of the Property.

Voluntary Cleanup Program (VCP) list provides information on the location of sites involved in a Voluntary Cleanup Program. Under a Voluntary Cleanup Program, a property owner will voluntarily enter into an agreement with a state or local environmental regulatory agency to conduct investigation and remediation for specific area(s) of concern.

- The Property was not identified on the VCP database.

- No VCP listings were identified within a ½-mile radius of the Property.

Brownfields (BF) list provides information on the location of sites involved in a state or local Brownfields program.

- The Property was not identified on the BF database.

- No BF listings were identified within a ½-mile radius of the Property.

The Property is not identified on any other database not covered by the ASTM standards.

Review of the remaining sites identified with the ASTM search parameters did not identify any sites that are considered to be recognized environmental conditions in connection with the Property.

8.3 Local Government Agencies

City of Poughkeepsie:
Hillmann submitted Freedom of Information Act request letters to the City of Poughkeepsie requesting available file information regarding the Property. A response was not received prior to the issuance of this report.

9.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Hillmann has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

RE: Phase I Environmental Site Assessment
135 Main Street
Poughkeepsie, New York 12601
Hillmann Project No. E3-1931

Dear Ms. Chou:

Hillmann Group, LLC, is pleased to provide the results of our Phase I Environmental Site Assessment of the above referenced property. This assessment was performed in accordance with the scope and limitations of ASTM Practice E 1527-05.

This report is for the exclusive use of the entities named on the front cover, its affiliates, designates and assignees, rating agencies, prospective bond holders and bond holders, and no other party shall have any right to rely on any service provided by Hillmann Group, LLC, without prior written consent.

We appreciate the opportunity to provide engineering services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact the undersigned at 908-688-7800.

Very Truly Yours,
Hillmann Group, LLC

1.0 EXECUTIVE SUMMARY

At the request of Omni (Client), Hillmann Group, LLC (Hillmann), performed a Phase I Environmental Site Assessment (ESA) of the property located at 135 Main Street in Poughkeepsie, New York (the Property). This assessment has been conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-05 for Phase I Environmental Site Assessments.

1.1 Property Summary Table

A summary of the pertinent details of the project is provided below:

PROJECT SUMMARY TABLE					
Name of Client	Omni				
Client Project No.:	None Provided				
Client Contact:	Lulu Chou				
Description of Project	Phase I Environmental Site Assessment				
Property Name:	135 Main Street				
Property Address:	135 Main Street				
City:	Poughkeepsie	**County:**	Dutchess	**State:**	New York
Tax Map designation:		**Block:**	76	**Lot:**	911
Property Area:	2.20 acres				
Building Area:	Approximately 98,000 ft²				
Property Usage:	Residential				
Year Built:	1975				
Property Owner:	Admiral William F. Halsey Village I SR				
Zoning Information:	Not Provided				
Assessment Personnel:	Ms. Stephanie Myers				
Accompanied/Escorted By:	Ms. Sue Kimmerle, Property Manager				
Property Contact Phone Number:	Ms. Sue Kimmerle, (845) 471-9788				
Inspection Date:	November 14, 2006				
Weather Conditions:	Cloudy, 55º F				

1.2 Summary of Findings

The following table summarizes the individual sections of this assessment. This table, alone, does not constitute the complete assessment. The report must be reviewed in its entirety.

FINDINGS SUMMARY				
ASSESSMENT SECTION	ACCEPTABLE	O&M RECOM'D	REC/ FURTHER ACTION	REF. SECTION
Historical Review			X	5.0
Regulatory Review	X			8.0
Site Use	X			3.2/6.2

USTs			X	6.6
ASTs	X			6.6
PCBs	X			6.7
Waste / Discharges	X			6.4/6.5
ACM			X	7.1
Lead Paint	X			7.2
Drinking Water Quality	X			6.11
Radon	X			7.3
Adjoining/Surrounding Area	X			3.6

1.3 Conclusions

Hillmann has performed a Phase I Environmental Site Assessment in accordance with the scope and limitations of ASTM Practice E 1527-05 of the Property as described in Section 3 of this report. Any additions to, exceptions to, or deletions from this practice are described in Section 2 of this report. This assessment has revealed no evidence of *recognized environmental conditions* (RECs) in connection with the Property, except for the following:

- Prior to the current use, the Property was improved for various commercial uses including retail stores, a dairy facility, a pottery facility and a coal gas plant. Potential historic use impacts to the Property may include residual contamination generated by operations at the gas works site, including, but not limited to, coal tar and polyaromatic hydrocarbons (PAHs), and residual contamination generated by operations at the dairy site, including oil, grease and gasoline range organics, as well as the indicated presence of a gasoline UST on historic Sanborn maps. The Dutchess County Environmental Health Department, in response to an information request, indicated that Property is the site of the former Bayeaux

Street Coal Gasification Plant and referenced a NYSDEC regulatory case # (314070). The NYSDEC case file was requested and obtained for review. The case file contained a 1987 Phase I Investigation report of the former Bayeaux Street Coal Gas Plant. The Phase I report concluded that there was insufficient data to adequately characterize the site; and recommended a Phase II study. No documentation of any subsequent Phase II investigation was contained in the NYSDEC Case File.

- Ms. Sue Kimmerle of the Admiral W. F. Halsey Senior Village indicated that a 10,000-gallon heating oil UST was closed in place on the Property in 1976 and that soil and groundwater sampling was previously conducted within the last ten to fifteen years in the area of the former gas works on the Property. Hillmann was not provided with documentation regarding the UST closure and subsurface sampling.

- The Property was identified on the UST regulatory database with a single steel 10,000-gallon fuel oil UST with the status "closed". The site contact indicated that the former UST was filled with a concrete slurry and closed in place on the Property in 1991. Evidence of this UST was not observed on the Property during the site assessment. Documentation regarding the closure of the UST was not provided for review.

This assessment has revealed the following notable conditions:

- The Property utilizes one hydraulic trash compactor unit located in the basement. Considering the age of construction (1975), hydraulic fluid within the system may contain PCBs. No evidence of any significant release was observed from the trash compactor unit on the Property.

Hillmann has also performed cursory evaluations for ASTM "Non-Scope" items, such as asbestos-containing materials, lead-based paint, radon and mold. Our observations and research identified the following potential concerns:

- A limited visual screening for asbestos-containing materials (ACM) was conducted during the assessment. Suspect non-friable materials observed in good condition included suspended ceiling tiles, sheetrock, vinyl floor tiles and roofing materials. Suspect friable materials observed in damaged condition included approximately 15 square feet of boiler insulation, approximately 15 linear feet of pipe insulation and approximately 15 square feet of spray-on fireproofing. Additional suspect materials may be present in areas not specifically accessed; or in areas that are enclosed behind walls and above ceilings.

- Based on age of the building, lead-based paint may be present at the Property. In general, painted surfaces in the occupied areas of the building were noted to be in good condition with no significant areas of peeling or chipping noted.

- The Property is located in an EPA designated high-risk area for Radon; however county and local testing data reviewed did not indicate the Property zip code to be a high risk area.

1.4 Recommendations

- Copies of any prior soil and groundwater testing of the Property should be sought for review. In the absence of such Phase II data, a Phase II Site Assessment should be considered to determine whether the soil and groundwater at the Property was impacted by the former gas works and historic gasoline UST. Estimated cost budget for Phase II Site Assessment - $10,000 to $15,000.

- Documentation of the closure of the 10,000-gallon heating oil UST should be provided for review. If the documentation is not available from the Property, a Phase II Site Assessment should be considered to determine if the former UST impacted soil and groundwater at the property. See previous paragraph for estimated cost budget.

- If the Property is to be redeveloped, Hillmann recommends that any soil material, which is to be disturbed and or excavated during the proposed development, should be properly characterized prior to off-site disposal. If the material is suspected to contain hazardous material and/or waste, it should be stockpiled on site and further assessed by properly trained personnel. This assessment may include collection of soil samples for waste characterization analysis. In addition, if any storage tanks or other sub-grade systems are discovered during the redevelopment, the systems should be properly removed in accordance with all applicable rules and regulations.

- Prior to any renovations or alterations of the Property, sampling of any suspect ACM should be conducted. If ACM is identified, compliance with all regulations regarding these materials, including appropriate notifications, is recommended.

- Prior to any renovations or alterations at the Property, sampling of any suspect lead-based paint should be conducted. If lead-based paint is identified, the borrower is required to comply with all regulations regarding these materials, including appropriate notifications.

2.0 PURPOSE AND LIMITATIONS

2.1 Purpose and Scope

Hillmann Group, LLC, was retained by Omni to conduct a Phase I Environmental Site Assessment of the Property in accordance with the scope of work detailed in the Hillmann Group contact.

This assessment was conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-05. The ASTM describes these methodologies as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

The term *recognized environmental conditions (RECs)* is defined by the ASTM as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not *REC*s.

The chief components of this assessment are described as follows:

- Review and discussion of current Property conditions regarding the presence or absence of hazardous chemicals/petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or medical wastes; electrical equipment that utilizes oils which potentially contain PCBs; and bulk storage tanks (above or below ground).

- Review and discussion of the usage of adjacent and nearby properties to identify the potential for contamination (if present and/or suspected) to migrate onto the Property.

- Summary of physical characteristics of the Property through a review of available topographic, geologic and groundwater data.

- Research of the historic uses of the Property through a review of reasonably ascertainable standard sources, such as fire insurance maps, city directories, aerial photographs, prior reports and interviews.

- A regulatory review of federal and state environmental databases, and other local environmental records, within specific search distances defined by the ASTM.

These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

A cursory evaluation for the following "Non-ASTM" concerns, such as the following:

- Suspect Asbestos-containing Materials
- Lead-based Paint
- USEPA Designated Radon Potential
- Indoor Air Quality (IAQ)/Mold

2.2 Inaccessible Locations

Hillmann is not aware of any notable areas of the Property that were excluded from our visual inspection.

2.3 Limitations and Exceptions

Historic research data gaps are detailed in Section 5, if applicable. No other exceptions or deletions from the ASTM Standard E 1527-05 are reported.

2.4 Abbreviations/Acronyms

Hillmann may use the following abbreviations and acronyms for common terminology described in our report. Not all abbreviations or acronyms may be applicable to this report:

ACM – Asbestos-containing Material
AST – Aboveground Storage Tank
ASTM – American Standard for Testing Materials
FOIA – Freedom of Information Act
HVAC – Heating Ventilation & Air Conditioning
HREC – Historic Recognized Environmental Condition
IAQ – Indoor Air Quality
LBP – Lead-based Paint
LTANK – Leaking Storage Tank
MSDS – Material Safety Data Sheet
REC – Recognized Environmental Condition
UST – Underground Storage Tank

2.5 Special Terms and Conditions

Hillmann has prepared this Phase I Environmental Site Assessment using reasonable efforts in each phase of its work to identify recognized environmental conditions associated with hazardous substances, wastes and petroleum products at the Property. The methodology of this Phase I Environmental Site Assessment was consistent with the ASTM Standard Practice for E 1527-05. Findings within this report are based on information collected from observations

made on the day of the site investigation and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation or other construction purposes. Hillmann makes no representation or warranty that the past or current operations at the Property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes.

Findings, conclusions and recommendations presented in this report are based on our visual observations of the Property, the municipal research findings reasonably obtained, information provided by the Client, and/or a review of readily available and supplied drawings and documents. Hillmann relies completely on the information, whether written, graphic or verbal, provided by the subject Property contact(s) or as shown on any documents reviewed or received from the subject Property contact, owner or agent, or municipal source, and assumes that information to be true and correct. Although there may have been some degree of overlap in the information provided by these various sources, Hillmann did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this assessment.

Regardless of the findings stated in this report, Hillmann is not responsible for consequences or conditions arising from facts that were concealed, withheld or not fully disclosed at the time the assessment was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The report focuses on the Property and neighboring properties that could impact the Property. Neighboring properties listed in governmental environmental records are identified within specific search distances. The search distance varies depending upon the particular government record being checked. The regulatory research is designed to meet the requirements of ASTM Standard E 1527-05. The information provided in the regulatory database report is assumed to be correct and complete.

Subsurface conditions may differ from the conditions implied by the surface observations and can only be reliably evaluated through intrusive techniques.

Reasonable efforts have been made during this assessment to identify aboveground and underground storage tanks and ancillary equipment. “Reasonable efforts” are limited to information gained from visual observation of largely unobstructed areas, recorded database information held in public record and available information gathered from interviews. Such methods may not identify subsurface equipment that may have been hidden from view due to parked automobiles and other vehicles, snow cover, vegetative growth, pavement, construction or debris pile storage or incorrect information from sources.

Hillmann is not a professional title insurance firm and makes no guarantee, explicit or implied, that the records which were reviewed represent a comprehensive or precise delineation of past Property ownership or tenancy for legal purposes.

3.0 PROPERTY DESCRIPTION

3.1 Property Location

The Property is located at 135 Main Street in Poughkeepsie, New York and is identified as Block 76, Lot 911 on the Duchess County, New York tax map. The latitude is North 41. 70540 degrees; longitude is West 73.93400 degrees.

3.2 Site and Vicinity Characteristics

The Property consists of an irregular shaped 2.20-acre parcel that fronts on the northeast corner of the intersection of Main Street and North Perry Street. The county-designated use of the site is *Apartments*. The area surrounding the Property is developed primarily with residential and commercial properties.

3.3 Current Use of the Property

The Property is currently occupied as a senior housing complex. No industrial process operations are conducted on the site.

3.4 Description of Property Improvements

The Property is developed with a 13-story plus basement, approximately 98,000-ft², apartment building constructed in 1975 and surface-level parking. The building has a masonry exterior and flat built-up roof system. Interior construction finishes noted during the assessment included and sheetrock walls, carpeted and vinyl tiled floors and suspended acoustic tile and sheetrock ceilings.

3.5 Utilities/Source of Heating

The Property is heated by a natural gas-fired boiler system located in the basement. Natural gas service is provided to the Property by the Hess Corporation. Electric service is provided by Central Hudson Power. Water and sewer services are provided by the City of Poughkeepsie.

3.6 Current Uses of the Adjoining Properties

The following describes adjacent and abutting properties:

DIRECTION	DESCRIPTION
North-	Apartments
East-	Apartments
South-	Senior housing across Main Street
West-	Single-family residential across North Perry Street

3.7 Physical Setting

3.7.1 Topography:

Based on a review of the United States Geological Survey (USGS) Poughkeepsie, New York 7.5 Minute Series Topographic Quadrangle Map, the Property is located at approximately 112 feet above mean sea level. The terrain at the Property is generally flat with a regional trend that slopes slightly downward to the west. The closest down gradient water body is the Hudson River.

3.7.2 Soils

Based on the United States Department of Agriculture - Soil Conservation Service data, the soil type at the Property is classified as Udorthents. This soil type is characterized by a loam surface texture and is well drained with an intermediate water holding capacity.

3.7.3 Geology

The property is underlain by a stratified sequence of materials of the Paleozoic Era, Ordovician System and Middle Ordovician Series. The depth to bedrock is typically greater than 60 inches.

3.7.4 Hydrology

Site specific data regarding depth to groundwater and groundwater flow direction was not available to Hillmann at the time of the assessment. Based on the topography noted at the Property, as well as review of the 7.5 minute series USGS topographic map showing the Property, groundwater is expected to flow generally to the west. Groundwater levels and/or flow direction(s) may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures or dewatering operations.

Wetlands are not suspected at the Property. The closest waterway is the Hudson River, located approximately 3/8 of a mile to the west.

According to the FEMA Flood Plain Panel #3602220001B, the property is not located within a 100 or 500 year flood zone.

4.0 USER PROVIDED INFORMATION

4.1 Title Records/Environmental Liens/Activity and Use Limitations

Review of title records is not included in the scope of work for this assessment project. No information regarding environmental liens or activity and use limitations was provided to Hillmann by the Client.

4.2 Specialized Knowledge or Experience

No indication of any specialized knowledge or experience regarding the Property was recorded to Hillmann by the client.

4.3 Commonly Known or Reasonably Ascertainable Information

No indication of any commonly known or reasonably ascertainable information was provided by the Client.

4.4 Property Value Reduction due to Environmental Conditions

No information was provided by the Client to Hillmann regarding a reduction in value of the Property value due to environmental problems or conditions.

4.5 Reason for Performing Phase I ESA

It is Hillmann's understanding that the Phase I ESA was being performed to assist in determining future development issues.

5.0 HISTORICAL RECORDS REVIEW

Hillmann has conducted research in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the Property. Standard historical sources have been sought in an attempt to document the past uses of the Property as far back as it can be shown that the Property contained structures; or from the time the Property was first used for residential, agricultural, commercial, industrial or governmental purposes.

5.1 Sanborn Fire Insurance Maps

Fire insurance maps were created for insurance underwriters and often contain information regarding the uses of individual structures and the locations of fuel and/or chemical storage tanks that may have been on a particular property. These maps were generally prepared for urban areas beginning in the middle to late 1880s and continuing generally into the 1990s.

A search of Sanborn Fire Insurance Maps for the Property and surrounding area was conducted by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. Maps from 1887, 1895, 1913, 1950, 1952 and 1990 were provided.

The northern half of the Property is improved on the 1887 map with a portion of the "Poughkeepsie Gas Light Co." with multiple structures, including offices, coke and lime sheds, boiler houses, ash house, clarifier house and a large iron gas holder (tank). The southern half of the Property is improved with "A. Caire Poughkeepsie Pottery" with multiple structures, including wood sheds, clay house and baking oven house; and with multiple store structures fronting on Main Street.

The 1895 map indicates that the gas works site is abandoned, with the "foundation of gas tank underground" indicated. The remaining portions of the Property are generally unchanged.

The Property is shown on the 1913 map with a single small dwelling and small store on the former gas works site. The former pottery factory portion of the Property is indicated as a furniture warehouse and upholstery facility. The southern portion of the Property portion fronting on Main Street appears generally unchanged.

The Property is shown on the 1950 and 1952 maps with a portion of the "J. Schrauths Sons Division of Borden Co." facility on the areas of the site formerly occupied by the gas works and furniture warehouse, with several structures including an ice cream distribution center/parking garage with an oil pit and gasoline tank (GT) indicated, ice storage building, poultry market and a vacant building. The southern portion of the Property portion fronting on Main Street appears generally unchanged.

The Property is shown on the 1990 map with only a single 13-story apartment building indicated as "Adm. W. F. Halsey Senior Village" situated in the southwest corner of the lot. No other structures are indicated on the site. The date of construction is indicated as 1975-76.

5.2 Historical Topographic Map Review

A search of Historical Topographic Maps was provided for the Property and surrounding area by EDR. Maps from 1903, 1943, 1947, 1957, 1982 and 1995 were provided. No improvements to the Property are indicated on the 1903 and 1943 maps. The Property is depicted on the 1947, 1957, 1982 and 1995 maps in an area shaded to indicate dense development. The exact improvements are not shown.

5.3 Historic City Directories

City Directories provide listings, arranged by street address, of businesses and residences for the year in which the directory was published. A City Directory Abstract report was obtained from EDR. Directories for the years 1970 through 1995 at five-year intervals were provided. Based on the review of the report, the Property address, 135 Main Street, was not listed in the 1970 directory. The address was listed in the 1975 through 1995 directories as "Admiral William F. Halsey Senior Village Apartments".

5.4 Aerial Photograph Review

A search of Aerial Photographs for the Property and surrounding area was conducted by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. No Aerial Photograph coverage was available for this area.

5.5 Prior Investigation Reports

No prior investigations reports were provided to Hillmann for review.

Hillmann conducted a file review with the New York State Department of Environmental Conservation concerning the former Bayeaux Street Coal Gasification Plant. Documentation consisting of a series of reports concerning historic coal gasification plants located the City of Poughkeepsie were provided by the NYSDEC for review. Much of the documentation pertained to a historic coal gas plant located several blocks to the west of the Property along the Hudson River waterfront. A Phase I Investigation report of the Bayeaux Street Coal Gas Plant site was also included and is summarized below:

Phase I Investigation, Poughkeepsie (Bayeaux Street) Coal Gasification Plant Site, City of Poughkeepsie, Dutchess County, New York; prepared by EA Science and Technology of Middletown, New York; on behalf of Central Hudson Gas & Electric Corporation, January 1987:

The report indicated that a historic coal gas plant that formerly occupied the Property operated from approximately 1850 to 1911, at which time it was replaced by the Water Street plant located several blocks to the west. The report concluded the following:

> *"The available data are considered insufficient to prepare a final HRS (Hazard Ranking System) score for this site. There is no documentation of hazardous waste or*

contamination at the former Poughkeepsie Bayeaux Street Coal Gas Plant site. Ground water and soil quality data are lacking.

"In order to prepare a final HRS score for this site, analytical data regarding the quality of the ground-water and soil, and characteristics of waste (if present), will be necessary, thus requiring performance of a Phase II investigation. The proposed Phase II study would include the performance of a soil vapor survey, the installation of 4 observation wells and the collection and analysis of ground-water and soil samples."

No evidence of any subsequent Phase II studies or any other further investigation of the property concerning the former coal gas plant 3was noted in the NYSDEC files.

5.6 Knowledgeable Parties

Ms. Stephanie Myers of Hillmann completed an environmental questionnaire for the Property along with Ms. Sue Kimmerle of the Admiral W. F. Halsey Senior Village. Ms. Kimmerle indicated that a supermarket was located on the Property prior to development of the current improvements; a 10,000-gallon heating oil UST was closed in place on the Property in 1991; and soil and groundwater sampling was previously conducted in the area of the former gas works on the Property. Hillmann was not provided with documentation regarding the UST closure and subsurface sampling. Ms. Kimmerle indicated that she has been associated with the Property for 22 years.

5.7 Summary and Conclusion of Historic Use Research

The existing apartment building at the Property was originally constructed circa 1975. Prior to the current use, the Property was improved for various commercial uses including retail stores, a dairy facility, a pottery facility and a coal gas works. Potential historic use impacts to the Property may include residual contamination generated by operations at the gas works site, including but not limited to coal tar and polyaromatic hydrocarbons (PAHs), and residual contamination generated by operations at the dairy site, including oil, grease and gasoline range organics, as well as the indicated presence of a gasoline UST.

5.8 Data Gaps

Historic land use data prior to 1887 was not readily available at the time of the assessment. The date of the first developed use of the Property was not determined. The earliest usage of the Property determined by this assessment was industrial and commercial. It is Hillmann's opinion that further assessment of this data gap is not likely to result in findings that would significantly alter the conclusions of this assessment.

6.0 SITE RECONNAISSANCE/INTERVIEWS

6.1 Interviews

Ms. Stephanie Myers of Hillmann conducted the site reconnaissance on November 14, 2006. Ms. Myers was escorted during the site reconnaissance by Ms. Sue Kimmerle, the Property Manager. An environmental questionnaire for the Property was complete by Ms. Myers and Ms. Kimmerle.

6.2 Property Use

The Property is currently occupied as a senior housing complex. No industrial process operations are conducted on the site.

6.3 Hazardous Substance/Petroleum Products Storage/Handling

No significant hazardous substance/petroleum product storage or handling was noted at the Property at the time of the assessment, other than routine quantities of janitorial and maintenance products.

No evidence of any spills, releases of hazardous substances or petroleum products was noted at the Property during the site reconnaissance.

6.4 Waste Generation, Storage and Disposal

Municipal solid waste generated at the Property is stored in a container and disposed of by the municipal hauling service provided by the City of Poughkeepsie. No evidence of the generation, storage or disposal of hazardous waste was observed at the Property during the site reconnaissance.

6.5 Waste Discharges

Sanitary sewage generated at the Property is discharged into municipal sewer lines for off-site treatment. Storm water at the Property drains into the municipal storm water sewer system. No other waste discharges were noted at the Property. No material concerns were noted with either discharge.

6.6 Bulk Petroleum Storage Tanks

No evidence of current or historic aboveground storage tanks (ASTs) or underground storage tanks (USTs) was observed on the Property during the site reconnaissance.

The site contact indicated that a 10,000-gallon heating oil UST on the Property was closed in place adjacent to the north side exterior of the building in 1991. Documentation regarding the closure of the UST was not provided.

The Property was identified in the regulatory database report, provided by EDR, as a closed UST site, PBS #3-601156, with a single steel 10,000-gallon fuel oil UST reported as closed on October 1, 1997. Hillmann notes that the "closed" status date provided by the EDR report differs from the date provided by the site contact. A copy of the UST closure report should be provided for review, if available.

The Property was not identified in the regulatory database report as an AST site, LTANK or Spills site.

6.7 Polychlorinated Biphenyls (PCBs)

The Property utilizes one hydraulic trash compactor unit located in the basement. Considering the age of construction (1975), hydraulic fluid within the system may contain PCBs. No evidence of any significant release was observed from the trash compactor unit on the Property.

No additional suspected PCB containing electrical or hydraulic equipment was identified at the Property.

6.8 Drains/Sumps

According to the property escort, the drains discharge into the municipal sanitary sewer system. No staining or other evidence of a hazardous material release was noted in the vicinity of the drains. No sump pump was noted on the Property.

6.9 Exterior Pits/Ponds/Lagoons

No evidence of pits, ponds or lagoons was identified on the Property in connection with waste treatment or disposal.

6.10 Stained Soil, Pavement/Stressed Vegetation

No staining of soils or pavement, or evidence of stressed vegetation, was noted during the assessment.

6.11 Drinking Water/Wells/Septic Systems

Drinking water is provided to the Property by the City of Poughkeepsie. No groundwater wells or septic systems were noted at the Property during the assessment.

6.12 Fill Material

No evidence of recently deposited or non-native fill materials was noted at the Property.

7.0 NON-ASTM SCOPE CONCERNS

7.1 Asbestos-Containing Material (ACM)

Based on the age of the building, asbestos-containing materials may be present in the building. Hillmann conducted a limited visual screening of the building for suspect ACM as part of this assessment. The following suspect ACM was noted at the Property:

Material	Location	Appr. Qty.	Friability	Condition
Vinyl floor tile	Throughout	N/A	Non-friable	Good
Acoustic ceiling Tile	Throughout	N/A	Non-friable	Good
Sheetrock	Throughout	N/A	Non-friable	Good
Pipe Insulation	Maintenance Room	15 lf	Friable	Damaged
Boiler Insulation	Boiler Room	15 sf	Friable	Damaged
Spray-on Fireproofing	Maintenance Room	15 sf	Friable	Damaged

7.2 Lead-Based Paint

Based on age of the building, lead-based paint may be present at the Property. In general, painted surfaces in the occupied areas of the building were noted to be in good condition with no significant areas of peeling or chipping noted.

7.3 Radon

Radon is a naturally occurring, colorless, odorless gas that is a byproduct of the decay of radioactive materials potentially present in bedrock and soil. Radon gas may enter the lowest level of a building through floor cracks, structural joints or plumbing conduits. The United States Environmental Protection Agency (USEPA) guidance level for annual residential exposure to radon is 4.0 picocuries per liter of air (pCi/L). The guidance level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

Based on information obtained from data obtained by the US EPA, the Property is located in an area with a high potential for radon concentrations that exceed current USEPA action guidelines. Dutchess County is classified as a Zone 1 or ‘high risk’ area for radon. Radon tests have been conducted for the zip code 12601 and have shown results less than the action level of 4Pci/L. The average result for the living areas was 1.690 pCi/L, and for basements was 3.630 pCi/L.

7.4 Mold

Hillmann conducted a cursory inspection of the accessed areas of building interior for amplified mold growth and conditions conducive to amplified mold growth. No evidence of amplified mold growth, or conditions conducive to amplified mold growth, was noted at the time of the assessment.

8.0 REGULATORY RECORD REVIEWS

The databases discussed in this section, provided by Environmental Data Resources of Milford, CT, were reviewed for information regarding documented and/or suspected releases of regulated hazardous substances and/or petroleum products on or near the Property. Hillmann also reviewed the "unmappable" listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that cannot be plotted with confidence, but are identified as being located within the general area of the Property based on the partial street address, city name or zip code. In general, a listing cannot be mapped due to inaccurate or incomplete address information in the database that was supplied by the corresponding regulatory agency. Any listings from the unmappable summary that were identified by Hillmann as a result of the area reconnaissance and/or cross-referencing to mapped listings are included in the corresponding database discussion within this section.

REGULATORY DATABASE	SEARCH DISTANCE	ON-SITE LISTINGS	ADJ. PROPERTY LISTINGS	TOTAL WITHIN SEARCH DISTANCE
Fed. NPL	1-mile	0	0	0
Fed. Delisted NPL	1-mile	0	0	0
Fed. CERCLIS	½-mile	0	0	0
Fed. CERCLIS-NFRAP	½-mile	0	0	1
Fed. RCRA CORRACTS	1-mile	0	0	0

State & Tribal Eng. Brownfields	½-mile	0	0	0

- *The results of the review for each database are discussed below. The locations for the facilities discussed in this section are shown on the figures in the EDR report, included as Appendix E. Facilities listed on databases that are greater than 1 mile distant from the Subject Property are situated too far away to present a recognized environmental condition. Consequently, only those facilities that are located within a mile and are situated in a presumed up gradient location are discussed in detail below. Certain facilities listed on databases are recognized to present an environmental condition only if they are within a ¼ mile or ½ mile distant from the Subject Property.*

- *According to the EPA Policy Toward Owners of Property Containing Contaminated Aquifers, dated July 3, 1995, the EPA will not take enforcement action against a property owner who owns property under which is an aquifer contaminated by subsurface migration from an off site source or sources. Therefore, the Subject Property owner would not be liable for any contamination of the underlying aquifer that was attributed to an off-site source.*

Tribal Jurisdiction: The Property is not located within an area that is under Tribal jurisdiction.

8.1 Federal Agency Record Review

EPA - The National Priorities List (NPL), also known as the Superfund list, is the United States Environmental Protection Agency (EPA) listing of uncontrolled or abandoned hazardous waste sites. These sites are targeted for possible long-term remedial action under the Superfund Act of 1980. The list is primarily based on the EPA's Hazardous Ranking System.

- The Property was not listed as an NPL facility.
- No NPL listings were identified within a one-mile radius of the Property.

EPA – Delisted NPL Site List (DNPL) provides a list of sites formerly listed on the NPL that have since been "de-listed" after the EPA has determined that no further response is appropriate.

- The Property was not listed as a DNPL facility.
- No DNPL listings were identified within a ½-mile radius of the Property.

EPA - The Resource Conservation and Recovery Information System (RCRIS) is a database of facilities, which generate or treat, store or dispose of EPA regulated hazardous waste, or meet other applicable requirements of the Resource Conservation and Recovery Act (RCRA). Inclusion on this database does not imply that mishandling or a release of hazardous waste has occurred at the facility. RCRIS categories are as follows:

Treatment, Storage, and Disposal Facilities (TSD). Facilities listed under TSD are sites that treat, store and/or dispose of EPA regulated hazardous waste.

- The Property was not listed as TSD facility.
- No TSD listings were identified within a ½-mile radius of the Property.

Corrective Action (CORRACTS) list is a list of hazardous waste treatment, storage or disposal facilities and other RCRIS facilities (due to past interim status or storage of hazardous waste beyond 90 days) that have been notified by the USEPA to undertake corrective action under RCRA.

- The Property was not listed as a CORRACTS facility.

- No CORRACTS listings were identified within a one-mile radius of the Property.

Large Quantity Generators (LQG). Facilities listed under LQG either generate more than 1000 kg of EPA regulated hazardous waste per month, or meet other applicable requirements of RCRA.

- Neither the Property nor any adjoining properties were identified on the LQG database.

Small Quantity Generators (SQG). Facilities listed under SQG either generate from 100 kilograms (kg) to 1000 kg of EPA regulated hazardous waste per month, or meet other applicable requirements of RCRA.

- Neither the Property nor any adjoining properties were identified on the SQG database.

EPA - The Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) is the EPA database of known or suspected uncontrolled or abandoned hazardous waste sites. These sites have either been investigated, or are currently under investigation, by the EPA for the release or threatened release of hazardous substances.

- The Property was not identified on the CERCLIS database.

- No CERCLIS listings were identified within a ½-mile radius of the Property.

EPA – CERCLIS-NFRAP (No Further Remedial Action Planned) is the EPA database of archived sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time.

- The Property was not identified on the CERCLIS-NFRAP database.

- One (1) CERCLIS-NFRAP listing was identified within a ½-mile radius of the Property. The listed site is identified as Berncolors-Poughkeepsie, Inc. at 75 North Water Street, located approximately 1,795 feet to the northwest and down gradient from the Property based on area topography. Considering the NFRAP status of the listing, distance and topographic relation, this site is not considered a recognized environmental condition in connection with the Property.

EPA - The Emergency Response Notification System (ERNS) is a national database used to store information concerning the sudden and/or accidental release of hazardous substances, including petroleum, in quantities greater than the reportable quantity, as maintained at the National Response Center. The database contains preliminary information from spill reports made to various federal departments including the EPA.

- No listings were identified for the Property.

8.2 State Agency Record Review

State Hazardous Waste Sites (SHWS) database contains potential or confirmed hazardous substance release properties. This is the state equivalent to NPL *and* CERCLIS.

- The Property was not identified on the SHWS database.
- No SHWS listings were identified within a one-mile radius of the Property.

Solid Waste Facility/Landfill (SWF/LF) list provides information on the location of registered state landfills and associated transfer facilities.

- The Property was not identified on the SWF/LF database.
- One (1) SWF/LF listing was identified within a ½-mile radius of the Property. The listed site is identified as G.F. Refuse Transfer Station at 240 Main Street, located approximately 1,495 feet to the east-southeast and cross gradient from the Property based on area topography. No violations were reported. Considering the status of the listing, distance and topographic relation, this site is not considered a recognized environmental condition in connection with the Property.

Leaking Storage Tank (LTANK) is a comprehensive listing of all reported active and inactive leaking storage tank sites.

- The Property was not identified on the LTANK database.
- Nineteen (19) LTANK listings were identified within a ½-mile radius of the Property. The closest listing in proximity to the Property is identified as Poughkeepsie City School at 12 South Terry Street, located approximately 270 feet to the south-southeast and cross gradient from the Property based on area topography. The case is reported as "Closed" on October 9, 1992. Considering the status of the listing, distance and topographic relation, this site is not considered a recognized environmental condition in connection with the Property.

Registered Storage Tank Database is the listing of registered storage tank sites. This includes the NYSDEC AST and UST databases.

- The Property was not identified on the AST database.
- No adjoining properties were identified on the AST database.
- The Property was identified on the UST and Historical UST databases as a closed UST facility, PBS #3-601156, with a single steel 10,000-gallon fuel oil UST reported as closed on October 1, 1997.

- One (1) adjoining property was identified on the UST database. The site is identified as River Care Nursing Home at 139-144 Main Street, located to the south across Main Street and topographically cross gradient from the Property based on area topography. The database reported one 1,500-gallon steel heating oil UST at this facility. This site was not listed on the LTANK or NY Spills databases. Considering the status of the listing and topographic relation, this site is not considered a recognized environmental condition in connection with the Property.

Engineering Controls Site Listing (ENG Controls) list provides information on the location of remediation sites using engineering controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

- The Property was not identified on the ENG Control database.

- No ENG Control listings were identified within a ½-mile radius of the Property.

Institutional Controls Site Listing (INST Controls) list provides information on the location of remediation sites using institutional controls as part of the response action. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

- The Property was not identified on the INST Control database.

- No INST Control listings were identified within a ½-mile radius of the Property.

Voluntary Cleanup Program (VCP) list provides information on the location of sites involved in a Voluntary Cleanup Program. Under a Voluntary Cleanup Program, a property owner will voluntarily enter into an agreement with a state or local environmental regulatory agency to conduct investigation and remediation for specific area(s) of concern.

- The Property was not identified on the VCP database.

- No VCP listings were identified within a ½-mile radius of the Property.

Brownfields (BF) list provides information on the location of sites involved in a state or local Brownfields program.

- The Property was not identified on the BF database.

- No BF listings were identified within a ½-mile radius of the Property.

The Property is not identified on any other database not covered by the ASTM standards.

Review of the remaining sites identified with the ASTM search parameters did not identify any sites that are considered to be recognized environmental conditions in connection with the Property.

8.3 Local Government Agencies

City of Poughkeepsie Building Department:
Hillmann submitted Freedom of Information Act request letters to the Building Department requesting available file information regarding the Property. A response was received indicating that no files pertaining to the Property were available.

Dutchess County Department of Health:
Hillmann submitted Freedom of Information Act request letters to the County Division of Environmental Health Services requesting available file information regarding the Property. A response was received indicating that the Property is the site of the former Bayeaux Street Coal Gasification Plant. No specific files or data pertaining to the Property were indicated to be available. Files on two nearby properties were indicated to be available. The response also referenced NYSDEC # 314070.

New York State Department of Environmental Conservation:
Hillmann requested files from the NYSDEC concerning the former Bayeaux Street Coal Gasification Plant. Documentation consisting of a series of reports concerning historic coal gasification plants located the City of Poughkeepsie were provided by the NYSDEC for review. Much of the documentation pertained to a historic coal gas plant located several blocks to the west of the Property along the Hudson River waterfront. A Phase I Investigation report of the Bayeaux Street Coal Gas Plant site was also included and is summarized in Section 5.5.

9.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Hillmann has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

David H. Rutherford

Executive Summary

As requested, Hillmann Environmental Group, LLC (Hillmann) conducted a Limited Phase II Investigation at 135 Main Street, which is located in Poughkeepsie, New York.

The Phase II soil investigation was conducted to evaluate the potential impact to the environment from a former coal gasification plant and underground storage tank (UST) located within the site. The investigation included the use of a GPR survey to identify any underground structures, utilities, or obstructions, and the collection of soil samples. These samples were collected from borings through the asphalt parking lot, around the old UST and in the area of the historic coal gasification plant, on March 27, 2007. A Geoprobe drill rig was utilized to obtain nine (9) soil and three (3) groundwater samples, with five (5) additional soil samples obtained by hand auguring. The general sample types, locations and depths were selected to determine the overall extent and magnitude of potential contamination resulting from the former site use. The samples were analyzed for volatile organic compounds (VOC), base neutrals and acid extractable (BNA), and Priority Pollutant List Metals at an accredited laboratory.

1.0 Introduction

As requested, Hillmann Environmental Group, LLC (Hillmann) conducted a Limited Phase II Investigation for 135 Main Street, in Poughkeepsie, New York. The investigation was conducted to determine if the former operations of the site had caused an impact to the environment along with the underground storage tank (UST)**.** Details of the site, activities and findings are provided in the following sections.

2.0 Site Description & Background

The site is located at the corner of Main Street and North Perry Street. The county-designated use of the site is Apartments. The Property is currently being operated as a senior housing complex. No industrial process operations are conducted on the site. The northern portion of the property was utilized as a coal gasification plant in the late nineteenth and early twentieth centuries. The area surrounding the Property is developed primarily with residential and commercial properties. In the late 1970's a 10,000-gallon heating oil underground storage tank (UST) was installed but only placed in service for one year since installation.

A report from Conrad GeoScience Corporation dated November 18, 1997 was obtained after the Limited Phase II Investigation was completed. The report stated that there was no evidence that the UST leaked. Conrad GeoScience Corp. contractors tried to remove the tank, during these activities, the bottom anchors failed to be removed, and a natural gas line was discovered to overly the west end of the UST. Based on the anchoring of the UST and the gas line, a decision was made to close the tank in place. Three soil samples were taken from the bottom of the excavation. On October 17, 1997 the UST was filled with 45 cubic yards of concrete. Soil samples were analyzed for VOCs (Volatile Organic compounds) and SVOCs (Semi-Volatile Organic Compounds). No VOC compounds were detected in the soil samples, but several SVOC compounds were detected below the NYSDEC standards. At this time Conrad GeoScience Corp. concluded that the SVOCs detected might represent residual coal tar, which is a bi-product of the coal gasification processes.

3.0 Areas of concern

Hillman identified the following areas of concern, which were addressed in the Limited Phase II Investigation.

1. Existence of an underground storage tank (UST) underneath the courtyard behind the 13-story apartment building.
2. Historic Coal Gasification Plant located on the northern end of the property.

4.0 Initial Scope of Work

Hillmann will employ ground-penetrating radar (GPR) along the north side of the building to locate the storage tank. A description of ground-penetrating radar is as follows: GPR is applied by transmitting signals into the subsurface. Subsurface structures and other forms of interference deflect the signals. The GPR survey is non-invasive. Data is collected in the form of anomalies that represent the subsurface interference. These anomalies are likely to identify the shape of a subsurface structure, however, interfering factors may limit the accuracy and cause inconclusive results. Such interfering factors include conglomerated soil media (e.g., rocks, bricks, construction debris, etc.), soil moisture, re-bar in foundations or slabs, and vibration caused by nearby construction activities. Under ideal conditions, the depth of penetration is 8-12 feet below ground surface (bgs). In addition to GPR, Hillmann will also employ specialized subsurface magnetometers, magnetic pipe locators (MPL) and other types of subsurface geophysical investigation instrumentation.

Hillmann will also employ direct push boring equipment (a.k.a. Geoprobe®) to advance subsurface borings in selected areas around the subject property. A description of direct push boring equipment is as follows: The Geoprobe® unit consists of a vehicle-mounted hydraulic ram that forces four foot long barrel shaped probes into the ground with a pneumatic hammer. The probes will collect continuous four-foot sections of earth in an acetate liner to examine for contamination and extract a soil sample for laboratory analysis. Hillmann will attempt to advance the borings into the local water table or to a depth of 16 feet if subsurface conditions permit. Hillmann will attempt to advance a total of 15 borings; 10 within the fenced grass area and vicinity of the suspected closed UST and five in the parking lot. One soil sample will be collected from each boring for a total of 15 soil samples. Hillmann will attempt to collect three groundwater samples via temporary wells.

Groundwater samples will be analyzed at an accredited laboratory for volatile organic compounds (VOC), base neutrals and acid extractables (BNA) and priority pollutant list metals. The results will be compared to applicable New York State Department of Environmental Conservation (NYSDEC) Groundwater Quality Standards, listed in Chapter 10, Part 703.

Soil samples will be analyzed at an accredited laboratory for volatile organic compounds (VOC), base neutrals and acid extractables (BNA) and priority pollutant list metals. The results will be compared to applicable New York State regulatory limits for soil listed in the Technical Administrative Guidance Memorandum (TAGM): 4046.

5.0 Summary of Field Activities

A GPR investigation was performed along the north side of the building on March 12, 2007. The GPR investigation did reveal evidence that was indicative of a UST. An area located below the courtyard that indicated a positive metallic response was identified, and borings were advanced near the markings. Due to the presence of snow and snow piles around the subject UST, the GPR investigation was limited. Although the GPR Investigation was limited due to the piles of snow, sufficient information was obtained to locate the UST.

A total of five (5) hand auger borings were completed around the north end of the property on March 27, 2007. The boring locations were selected to be representative of the overall extent of potential soil contamination from the previously identified coal gasification plant. The approximate locations of the borings and sampling location are provided on the attached site plans.

Four (4) Geoprobe borings were completed in the location of the former UST, with a groundwater sample collected at the location labeled B3. Four (4) borings were advanced through the asphalt parking lot located east of the subject building, with groundwater samples collected at the locations labeled B1, and B14. One (1) additional Geoprobe boring was completed on the north

section of the property, but groundwater was not accessible at this location. The approximate locations of the borings are provided on the attached site plan.

The Geoprobe borings were advanced to a maximum depth of eight (8) feet below ground surface (bgs). The groundwater table was encountered at approximately 7.5 feet bgs. Soil samples were taken at a depth of 7 feet bgs. Contamination should be concentrated at a depth of 7-8 feet bgs due to the rise and fall of the groundwater table. Three borings were advanced to 12 feet to facilitate installation of temporary wells for groundwater collection. Soil samples were collected from each boring utilizing dedicated disposable sampling devices. The samples were placed in laboratory-supplied containers, and packed on ice for transport to a certified testing laboratory for volatile organic compounds (VOC), base neutrals and acid extractables (BNA), and priority pollutant list metals.

6.0 Applicable Standard

Individual compounds detected were compared to the soil criteria listed in the NYSDEC Technical and Administrative Guidance Memorandum (TAGM): "Determination of Soil Cleanup Objectives & Cleanup Levels." The applicable standards are listed under the column titled "Cleanup Objective."

All results in mg/kg (ppm)
ND = No Detection
NA = Not Available
SB = Background levels for lead vary widely. Average levels in undeveloped, rural areas may range from 4-61 ppm. Average background levels in metropolitan or suburban areas or near highways are much higher and typically range from 200-500 ppm.

8.0 Summary of Analytical Results

Samples B1, B12-B14, B1 (groundwater), and B14 (groundwater) were taken from the parking lot area on the eastern portion of the property. Samples B2, B5-B9 were taken from the northern portion of the property where the historic coal gasification plant was located. Samples B3, B4, B10, B11 and B3 (groundwater) were taken from around the UST. All of the soil samples collected within the site contained contaminant levels, which were above the New York State regulatory limits listed in TAGM 4046. All groundwater samples collected within the site contained contaminant levels, which were above the New York State regulatory limits. (See Tables 1, 2 and 3)

9.0 Evaluation of Environmental Impact

The laboratory results and observations made on site while completing the borings indicate the presence of contamination that may have resulted from the former coal gasification plant described within the previously referenced Phase I.

9.1 Contaminant Exposure

The subsurface materials encountered throughout the property consisted of locally found soil, brick fragments and/or coal ash. This would indicate that historic fill might underlie the property. As with areas previously used for industrial processes, historic fill typically contains levels of heavy metals and polycyclic aromatic hydrocarbons (PAH's), which are above current NYSDEC regulatory limits.

Elevated levels of metals and PAHs are wide spread throughout the property. Minimal risk of exposure is expected in the areas of the parking lot. The parking lot has about 6 inches of asphalt capping the soil located below. Human exposure to the soil located below the parking lot is not expected under normal conditions and operations. Any excavation or prolonged contact with the subsurface soils may potentially cause exposure to the subsurface contaminants.

Subsurface materials encountered beneath the park and lawn areas also contain elevated levels of metals and PAHs. Minimum to no risk is to be expected in the areas of the park area based on the normal use and operation. Any excavation or prolonged contact with the subsurface soils may potentially cause exposure to the subsurface contaminants.

Materials contained in the public garden area are expected to contain similar levels of soil contamination. In this area, increased soil exposure and possible ingestion of plant matter is expected. As a result of these activities, increased risk of human exposure is possible. Hillmann has been informed that the owner intends to install additional site controls which would prevent contact with the soils in this area. When completed, these measures would virtually eliminate the risk of exposure to the residents.

Samples taken from around the UST indicate elevated levels of metals and PAHs. Due to the wide spread presence of elevated metals and PAHs around the property, Hillmann has determined that the contamination encountered is not from the UST, but as a result of the historic coal gasification plant. It is determined that the UST did not impact the surrounding environment.

9.2 Local Usage of Groundwater

Local groundwater is not used for potable purposes. Due to the levels of contamination found within each soil sample, contaminants are not expected to migrate to the local drinking water supply. Therefore, any contamination potentially originating from the subject property is not anticipated to affect the local drinking water supply.

9.3 Evaluation of Ecological Receptors

The only ecological receptor in the vicinity of the subject property is the Hudson River, which is located approximately 1,881 feet to the west.

10.0 Conclusions & Recommendations

Hillmann has completed a Limited Phase II Investigation at 135 Main Street to assess the impact of former coal gasification plant and UST located on site. The completed scope of work included a GPR survey, the advancement of subsurface borings utilizing a Geoprobe and hand auguring.

The following has been concluded from this investigation.

1. The results of the investigation have identified the presence of contamination which could be attributed to past site usage. The environmental concerns identified through laboratory and field observations are the presence of metals and Polynuclear Aromatic Hydrocarbons (PAHs) present in the soil and groundwater.

2. It appears that the contamination identified is the result of former coal gasification processes conducted on site.

3. Elevated levels of metals and PAHs are wide spread throughout the property. Minimal risk of exposure is expected in the areas of the parking lot and/or lawn area. Any excavation or prolonged contact with the subsurface soils may potentially cause exposure to the subsurface contaminants.

4. Due to the wide spread presence of elevated metals and PAHs around the property, Hillmann has determined that the contamination encountered is not from the UST, but as a result of the historic coal gasification plant. It is determined that the UST did not impact the surrounding environment.

5. Omni has decided to develop a raised garden bed system. This decision will protect the current residence using the garden area. A brief description of the garden area is described in the below section.

6. Additionally, Omni is in the process of obtaining a “Property Use and Work Plan” to protect against possible contamination exposure. This document will provide insight on which procedures to follow during excavation activities. This document will be site specific and will only pertain to the subject property. A copy of the work plan will be located at the facility.

Hillmann Environmental Group, LLC, has recommended the following.

1. Hillmann recommends leveling out the current garden area, then placing an impermeable membrane, as a separating layer, on top of the current soil surface to prevent any current contamination from possibly impacting clean soil in the garden area. A minimum of two (2) feet of certified, clean soil should be placed on top of the impermeable membrane and the garden beds assembled on the top of this layer of clean soil. This should prevent the root systems of plants growing in the garden from reaching and possibly absorbing contamination from soils below the impermeable layer. This remediation technique should also protect residents or other individuals working in the garden from contaminants present in the soil.

2. It is recommended that air monitoring be performed on the first level of the housing complex due to the publications of vapor intrusion possibilities. Air monitoring will determine if there is any vapor intrusion present at the subject property. Hillmann is currently under contract wit Omni to provide air-monitoring testing.

3. The former Bayeaux Street manufacturing gas plant (MGP) was located on the corner of Main Street and North Perry (formerly Bayeaux Street), and is currently occupied by Admiral Halsey Senior Village. Hillmann has contacted the NYSDEC directly, and was informed that although compounds have been identified on site at levels above current clean up standards, there is no requirement to report a spill to the NYSDEC. Therefore Hillmann does not recommend reporting the results to the NYDEC at this time provided the completed "Property Use and Work Plan" is maintained on site, and is provided to any person conducting work below the surface at this site.

11.0 Certification of Responsible Party

As owner/agent of 135 Main Street, Poughkeepsie, New York, I have read this report and acknowledge its content. I hereby confirm that the content is true to the best of my knowledge.

Executive Summary

As requested, Hillmann Environmental Group, LLC (Hillmann) conducted a Limited Phase II Investigation at 135 Main Street, which is located in Poughkeepsie, New York.

The Phase II soil investigation was conducted to evaluate the potential impact to the environment from a former coal gasification plant and underground storage tank (UST) located within the site. The investigation included the use of a GPR survey to identify any underground structures, utilities, or obstructions, and the collection of soil samples. These samples were collected from borings through the asphalt parking lot, around the old UST and in the area of the historic coal gasification plant, on March 27, 2007. A Geoprobe drill rig was utilized to obtain nine (9) soil and three (3) groundwater samples, with five (5) additional soil samples obtained by hand auguring. The general sample types, locations and depths were selected to determine the overall extent and magnitude of potential contamination resulting from the former site use. The samples were analyzed for volatile organic compounds (VOC), base neutrals and acid extractable (BNA), and Priority Pollutant List Metals at an accredited laboratory.

1.0 Introduction

As requested, Hillmann Environmental Group, LLC (Hillmann) conducted a Limited Phase II Investigation for 135 Main Street, in Poughkeepsie, New York. The investigation was conducted to determine if the former operations of the site had caused an impact to the environment along with the underground storage tank (UST). Details of the site, activities and findings are provided in the following sections.

2.0 Site Description & Background

The site is located at the corner of Main Street and North Perry Street. The county-designated use of the site is Apartments. The Property is currently being operated as a senior housing complex. No industrial process operations are conducted on the site. The northern portion of the property was utilized as a coal gasification plant in the late nineteenth and early twentieth centuries. The area surrounding the Property is developed primarily with residential and commercial properties. In the late 1970's a 10,000-gallon heating oil underground storage tank (UST) was installed but only placed in service for one year since installation.

A report from Conrad GeoScience Corporation dated November 18, 1997 was obtained after the Limited Phase II Investigation was completed. The report stated that there was no evidence that the UST leaked. Conrad GeoScience Corp. contractors tried to remove the tank, during these activities, the bottom anchors failed to be removed, and a natural gas line was discovered to overly the west end of the UST. Based on the anchoring of the UST and the gas line, a decision was made to close the tank in place. Three soil samples were taken from the bottom of the excavation. On October 17, 1997 the UST was filled with 45 cubic yards of concrete. Soil samples were analyzed for VOCs (Volatile Organic compounds) and SVOCs (Semi-Volatile Organic Compounds). No VOC compounds were detected in the soil samples, but several SVOC compounds were detected below the NYSDEC standards. At this time Conrad GeoScience Corp. concluded that the SVOCs detected might represent residual coal tar, which is a bi-product of the coal gasification processes.

3.0 Areas of concern

Hillman identified the following areas of concern, which were addressed in the Limited Phase II Investigation.

1. Existence of an underground storage tank (UST) underneath the courtyard behind the 13-story apartment building.
2. Historic Coal Gasification Plant located on the northern end of the property.

4.0 Initial Scope of Work

Hillmann will employ ground-penetrating radar (GPR) along the north side of the building to locate the storage tank. A description of ground-penetrating radar is as follows: GPR is applied by transmitting signals into the subsurface. Subsurface structures and other forms of interference deflect the signals. The GPR survey is non-invasive. Data is collected in the form of anomalies that represent the subsurface interference. These anomalies are likely to identify the shape of a subsurface structure, however, interfering factors may limit the accuracy and cause inconclusive results. Such interfering factors include conglomerated soil media (e.g., rocks, bricks, construction debris, etc.), soil moisture, re-bar in foundations or slabs, and vibration caused by nearby construction activities. Under ideal conditions, the depth of penetration is 8-12 feet below ground surface (bgs). In addition to GPR, Hillmann will also employ specialized subsurface magnetometers, magnetic pipe locators (MPL) and other types of subsurface geophysical investigation instrumentation.

Hillmann will also employ direct push boring equipment (a.k.a. Geoprobe®) to advance subsurface borings in selected areas around the subject property. A description of direct push boring equipment is as follows: The Geoprobe® unit consists of a vehicle-mounted hydraulic ram that forces four foot long barrel shaped probes into the ground with a pneumatic hammer. The probes will collect continuous four-foot sections of earth in an acetate liner to examine for contamination and extract a soil sample for laboratory analysis. Hillmann will attempt to advance the borings into the local water table or to a depth of 16 feet if subsurface conditions permit. Hillmann will attempt to advance a total of 15 borings; 10 within the fenced grass area and vicinity of the suspected closed UST and five in the parking lot. One soil sample will be collected from each boring for a total of 15 soil samples. Hillmann will attempt to collect three groundwater samples via temporary wells.

Groundwater samples will be analyzed at an accredited laboratory for volatile organic compounds (VOC), base neutrals and acid extractables (BNA) and priority pollutant list metals. The results will be compared to applicable New York State Department of Environmental Conservation (NYSDEC) Groundwater Quality Standards, listed in Chapter 10, Part 703.

Soil samples will be analyzed at an accredited laboratory for volatile organic compounds (VOC), base neutrals and acid extractables (BNA) and priority pollutant list metals. The results will be compared to applicable New York State regulatory limits for soil listed in the Technical Administrative Guidance Memorandum (TAGM): 4046.

5.0 Summary of Field Activities

A GPR investigation was performed along the north side of the building on March 12, 2007. The GPR investigation did reveal evidence that was indicative of a UST. An area located below the courtyard that indicated a positive metallic response was identified, and borings were advanced near the markings. Due to the presence of snow and snow piles around the subject UST, the GPR investigation was limited. Although the GPR Investigation was limited due to the piles of snow, sufficient information was obtained to locate the UST.

A total of five (5) hand auger borings were completed around the north end of the property on March 27, 2007. The boring locations were selected to be representative of the overall extent of potential soil contamination from the previously identified coal gasification plant. The approximate locations of the borings and sampling location are provided on the attached site plans.

Four (4) Geoprobe borings were completed in the location of the former UST, with a groundwater sample collected at the location labeled B3. Four (4) borings were advanced through the asphalt parking lot located east of the subject building, with groundwater samples collected at the locations labeled B1, and B14. One (1) additional Geoprobe boring was completed on the north

section of the property, but groundwater was not accessible at this location. The approximate locations of the borings are provided on the attached site plan.

The Geoprobe borings were advanced to a maximum depth of eight (8) feet below ground surface (bgs). The groundwater table was encountered at approximately 7.5 feet bgs. Soil samples were taken at a depth of 7 feet bgs. Contamination should be concentrated at a depth of 7-8 feet bgs due to the rise and fall of the groundwater table. Three borings were advanced to 12 feet to facilitate installation of temporary wells for groundwater collection. Soil samples were collected from each boring utilizing dedicated disposable sampling devices. The samples were placed in laboratory-supplied containers, and packed on ice for transport to a certified testing laboratory for volatile organic compounds (VOC), base neutrals and acid extractables (BNA), and priority pollutant list metals.

6.0 Applicable Standard

Individual compounds detected were compared to the soil criteria listed in the NYSDEC Technical and Administrative Guidance Memorandum (TAGM): "Determination of Soil Cleanup Objectives & Cleanup Levels." The applicable standards are listed under the column titled "Cleanup Objective."

SB = Background levels for lead vary widely. Average levels in undeveloped, rural areas may range from 4-61 ppm. Average background levels in metropolitan or suburban areas or near highways are much higher and typically range from 200-500 ppm.

8.0 Summary of Analytical Results

Samples B1, B12-B14, B1 (groundwater), and B14 (groundwater) were taken from the parking lot area on the eastern portion of the property. Samples B2, B5-B9 were taken from the northern portion of the property where the historic coal gasification plant was located. Samples B3, B4, B10, B11 and B3 (groundwater) were taken from around the UST. All of the soil samples collected within the site contained contaminant levels, which were above the New York State regulatory limits listed in TAGM 4046. All groundwater samples collected within the site contained contaminant levels, which were above the New York State regulatory limits. (See Tables 1, 2 and 3)

9.0 Evaluation of Environmental Impact

The laboratory results and observations made on site while completing the borings indicate the presence of contamination that may have resulted from the former coal gasification plant described within the previously referenced Phase I.

9.1 Contaminant Exposure

The subsurface materials encountered throughout the property consisted of locally found soil, brick fragments and/or coal ash. This would indicate that historic fill might underlie the property. As with areas previously used for industrial processes, historic fill typically contains levels of heavy metals and polycyclic aromatic hydrocarbons (PAH's), which are above current NYSDEC regulatory limits.

Elevated levels of metals and PAHs are wide spread throughout the property. Minimal risk of exposure is expected in the areas of the parking lot. The parking lot has about 6 inches of asphalt capping the soil located below. Human exposure to the soil located below the parking lot is not expected under normal conditions and operations. Any excavation or prolonged contact with the subsurface soils may potentially cause exposure to the subsurface contaminants.

Subsurface materials encountered beneath the park and lawn areas also contain elevated levels of metals and PAHs. Minimum to no risk is to be expected in the areas of the park area based on the normal use and operation. Any excavation or prolonged contact with the subsurface soils may potentially cause exposure to the subsurface contaminants.

Materials contained in the public garden area are expected to contain similar levels of soil contamination. In this area, increased soil exposure and possible ingestion of plant matter is expected. As a result of these activities, increased risk of human exposure is possible. Hillmann has been informed that the owner intends to install additional site controls which would prevent contact with the soils in this area. When completed, these measures would virtually eliminate the risk of exposure to the residents.

Samples taken from around the UST indicate elevated levels of metals and PAHs. Due to the wide spread presence of elevated metals and PAHs around the property, Hillmann has determined that the contamination encountered is not from the UST, but as a result of the historic coal gasification plant. It is determined that the UST did not impact the surrounding environment.

9.2 Local Usage of Groundwater

Local groundwater is not used for potable purposes. Due to the levels of contamination found within each soil sample, contaminants are not expected to migrate to the local drinking water supply. Therefore, any contamination potentially originating from the subject property is not anticipated to affect the local drinking water supply.

9.3 Evaluation of Ecological Receptors

The only ecological receptor in the vicinity of the subject property is the Hudson River, which is located approximately 1,881 feet to the west.

10.0 Conclusions & Recommendations

Hillmann has completed a Limited Phase II Investigation at 135 Main Street to assess the impact of former coal gasification plant and UST located on site. The completed scope of work included a GPR survey, the advancement of subsurface borings utilizing a Geoprobe and hand auguring.

The following has been concluded from this investigation.

1. The results of the investigation have identified the presence of contamination which could be attributed to past site usage. The environmental concerns identified through laboratory and field observations are the presence of metals and Polynuclear Aromatic Hydrocarbons (PAHs) present in the soil and groundwater.

2. It appears that the contamination identified is the result of former coal gasification processes conducted on site.

3. Elevated levels of metals and PAHs are wide spread throughout the property. Minimal risk of exposure is expected in the areas of the parking lot and/or lawn area. Any excavation or prolonged contact with the subsurface soils may potentially cause exposure to the subsurface contaminants.

4. Due to the wide spread presence of elevated metals and PAHs around the property, Hillmann has determined that the contamination encountered is not from the UST, but as a result of the historic coal gasification plant. It is determined that the UST did not impact the surrounding environment.

5. Omni has decided to develop a raised garden bed system. This decision will protect the current residence using the garden area. A brief description of the garden area is described in the below section.

6. Additionally, Omni is in the process of obtaining a "Property Use and Work Plan" to protect against possible contamination exposure. This document will provide insight on which procedures to follow during excavation activities. This document will be site specific and will only pertain to the subject property. A copy of the work plan will be located at the facility.

Hillmann Environmental Group, LLC, has recommended the following.

1. Hillmann recommends leveling out the current garden area, then placing a layer of clay or filter fabric on top of the current soil surface to separate the current contamination from clean soils of the raised garden areas. A sufficient layer of clean soil should be placed on top of the separating layer. After all clean soil is built up and contained to sufficient depth; the raised garden beds should be assembled on top of the layer of clean soil. A sufficient height from ground surface to the top of the garden beds should be achieved. This sufficient height will ensure that the root systems of plants growing in the garden will not breach the separating layer and possibly absorb and contamination from soils located below the garden. This remediation technique should provide ample depth to protect residents or other individuals working in the garden from contaminates present in the soil during gardening activities.

2. It is recommended that air monitoring be performed on the first level of the housing complex due to the publications of vapor intrusion possibilities. Air monitoring will determine if there is any vapor intrusion present at the subject property. Hillmann is currently under contract wit Omni to provide air-monitoring testing.

3. The former Bayeaux Street manufacturing gas plant (MGP) was located on the corner of Main Street and North Perry (formerly Bayeaux Street), and is currently occupied by Admiral Halsey Senior Village. Hillmann has contacted the NYSDEC directly, and was informed that although compounds have been identified on site at levels above current clean up standards, there is no requirement to report a spill to the NYSDEC. Therefore Hillmann does not recommend reporting the results to the NYDEC at this time provided the completed "Property Use and Work Plan" is maintained on site, and is provided to any person conducting work below the surface at this site.

11.0 Certification of Responsible Party

As owner/agent of 135 Main Street, Poughkeepsie, New York, I have read this report and acknowledge its content. I hereby confirm that the content is true to the best of my knowledge.

SECTION 1 – EXECUTIVE SUMMARY

1.1 General

On June 15, 21, and 22, 2007, Hillmann Environmental Group, LLC (Hillmann), conducted Vapor Intrusion Investigations of the Admiral William F. Halsey Senior Village, located at 135 Main Street in Poughkeepsie, NY. The investigation was conducted to evaluate the potential impact of remaining materials from a former Manufactured Gas Plant (MGP) on the subject property.

On June 15, 2007 a Pre-Inspection was conducted by Mr. Trevor Wescott of Hillmann. The Pre-Inspections consisted of a visual inspection and measurements of Volatile Organic Compounds (VOCs) with a Photo Ionization Detector (PID). The PID measurements were utilized for determining the potential presence of compounds in the air which may interfere with the Vapor Intrusion Investigation.

On June 21 through 22, 2007 vapor intrusion sampling was conducted by Mr. Trevor Wescott and Mr. Shane Bielawski of Hillmann. The vapor intrusion investigation consisted of the placement of six (6) summa canisters for a total duration of 24 hours. The summa canisters were analyzed for VOCs via the TO-15 Method as required for compliance with USEPA and NYDOH guidelines.

1.2 Background Introduction

Vapor intrusion refers to the migration of vapors from subsurface contaminant sources into buildings. Sources include but are not limited to: manufactured gas plants, underground storage tanks, drycleaners, other manufacturing processes, etc. Environmental and or building factors may increase the potential for vapor intrusion if a source is present. These factors include the following: soil conditions, volatile organic compound concentrations, source locations, groundwater conditions, surface confining layer, fractures in bedrock and/or tight clay soils, underground conduits, weather conditions, biodegradation processes, operation of HVAC systems, fireplaces, heated buildings, air exchange rates, foundation type, foundation integrity and subsurface features that penetrate the building's foundation.

1.3 Site Background

The Admiral William F. Halsey Senior Village consists of a stand alone, thirteen story building located at 135 Main Street in Poughkeepsie, NY.

A manufactured gas plant existed on the premises prior to the current building.

1.4 Manufactured Gas Plants (MGPs)

Manufactured Gas Plants (MGPs) were utilized between the early 1800s and mid 1900s in order to convert coal and/or oil and/or water into fuel for the purposes of heating, lighting, cooking, etc. The process of converting these raw materials into a usable fuel also produced waste byproducts in the form of coal tar and other purified wastes. Coal tar deposits left from these MGPs are the source of concern for vapor intrusion into buildings constructed on, or adjacent to, these deposits. Coal tar can be divided into two categories, namely BTEX and Polycyclic Aromatic Hydrocarbons (PAHs). BTEX consists of benzene, toluene, ethylbenzene and xylenes, which are considered volatile organic compounds. PAHs consist of many semi-volatile organic compounds.

1.5 Applicable Studies

In order to evaluate whether vapor intrusion is or may be occurring at a particular site, background airborne concentrations need to be evaluated. The studies and limited discussion of such that were utilized as background criteria are the following:

New York State Department of Health (NYSDOH) 2003: Study of Volatile organic Chemicals in Air of Fuel Oil Heated Homes. The benchmark used in this study is the upper fences, which is calculated as 1.5 times the interquartile range (difference between the 25^{th} and 75^{th} percentile values) above the 75^{th} percentile value. It is a boundary estimate used to account for outliers in the data. This study encompassed 104 single family fuel oil heated homes throughout New York State. Samples were collected for two hours in SUMMA canisters and analyzed via EPA TO-15 Methodology. Limitations in this study design were the exclusion of New York City, only fuel heated homes were selected and the homes were not randomly selected.

Environmental Protection Agency (EPA) 2001: Building Assessment and Survey Evaluation (BASE) Database. The benchmark used in this study is the 90^{th} percentile value. The study encompassed 100 randomly selected public and commercial office buildings. Samples were collected for 9 hours with the SUMMA canister and analyzed via TO-14 methodology and by sorbent tube for 8 hours and analyzed via TO1 Methodology Limitations in this study design were it only represented office type settings and different analysis/methodologies with non overlapping agreement in results.

New York State Department of Health (NYSDOH) 1997: Control Home Database. The benchmark used in this study is the 90^{th} percentile value. The study encompassed 53 residences in the New York State that are considered control homes. Due to the length of time of the study (from 1989-1996), a number of methodologies along with sampling criteria were utilized during the study which often varied in the length of time homes were sampled. Limitations in this study design were the small sampling size of homes, varying detection limits and multiple methodologies.

Environmental Protection Agency (EPA) 1988: National Ambient Volatile Organic Compounds (VOCs) Data Base Update. The benchmark used in this study is the 75^{th} percentile value. The study encompassed office and residential spaces. Limitations in this study design were the use of both residential and office spaces, sample size for some of the analytes is small. Limitations in the use of this study in comparison to the data in vapor intrusion studies is the data may be dated in the use of current indoor air quality exposures.

1.6 Scope of the Investigation

The vapor intrusion evaluation consisted of one round of sampling for VOCs by TO-15 Method. Samples were collected from the Sub-Basement, Maintenance Room, Community Room, on the 1st Floor Adjacent the Elevator, and on the 6th Floor Adjacent the Elevator. Also, during the sampling events, one outdoor reference sample was collected.

1.7 Findings

Hillmann has evaluated the sampling data from the round of sampling and compared these concentrations to four published studies by both the EPA and the NYSDOH. The observed data are not indicative of vapor intrusion due to abandoned manufactured gas plants (MGP). The majority of the results were below the limit of detection for the analytical method employed. A small fraction of the results exceeded the limit of detection. These exceedances were randomly located and the constituents are consistent with common cleaning products. None of the areas with observed concentrations had a combination of components that could be associated with MGP vapor intrusions. In addition, the levels are likely to be transient and of little concern. Similar levels are often observed in occupied living spaces that have no potential for MGP vapor intrusion.

Samples sent to EMSL Laboratory

*EPA Database shows value of 0 mg/m^3 as 75^{th} percentile, but this is likely a typographical error as they show 32 mg/m^3 as the 50^{th} percentile. Based on the EPA's published range of data, a value of 0 mg/m^3 for the 75^{th} percentile is mathematically impossible.

Although there were detections of numerous chemicals, these chemicals represent a wide variety of uses and are not indicative of MGP vapor intrusion. Furthermore, only a small percentage of samples exceed values typical of homes and offices as described by the US EPA and NYSDOH studies.

1.8 Conclusions and Recommendations

Based on Hillmann's review of indoor sample results, indoor air quality is not anticipated to cause occupant illness or require immediate remediation. In order to conduct a comprehensive vapor intrusion assessment NYSDOH Guidelines recommend that sub-slab soil vapor samples be collected. Sub-slab samples are an important component used to compare with indoor and outdoor samples in order to evaluate current and potential human exposures (e.g. if the building's structural integrity or use changes) and determine the site-specific attenuation factors, which compares the ratio of indoor air to sub-slab vapor concentrations. Furthermore, it may be prudent for follow-up sampling to be conducted on a periodic basis (such as annual or bi-annual) to ensure these conditions do not change over time. If significant changes occur at the building (increase or decrease HVAC, digging, vibration, etc) the potential for vapor intrusion may increase.

SECTION 2 - INTRODUCTION

2.1 General

On June 15, 21, and 22, 2007, Hillmann Environmental Group, LLC (Hillmann), conducted Vapor Intrusion Investigations of the Admiral William F. Halsey Senior Village, located at 135 Main Street in Poughkeepsie, NY. The investigation was conducted to evaluate the potential impact of remaining materials from a former Manufactured Gas Plant (MGP) on the subject property.

On June 15, 2007 a Pre-Inspection was conducted by Mr. Trevor Wescott of Hillmann. The Pre-Inspections consisted of a visual inspection and measurements of Volatile Organic Compounds (VOCs) with a Photo Ionization Detector (PID). The PID measurements were utilized for determining the potential presence of compounds in the air which may interfere with the Vapor Intrusion Investigation.

On June 21 through 22, 2007 vapor intrusion sampling was conducted by Mr. Trevor Wescott and Mr. Shane Bielawski of Hillmann. The vapor intrusion investigation consisted of the placement of six (6) summa canisters for a total duration of 24 hours. The summa canisters were analyzed for VOCs via the TO-15 Method as required for compliance with USEPA and NYDOH guidelines.

The vapor intrusion inspection was performed under guidance of the New York State Department of Health Center of Environmental Health Bureau of Environmental Exposure Investigation (NYSDOH CEH BEEI). The document is intended as general guidance for evaluating vapor intrusion in the State of New York. The methodology is a reasonable and practical approach to identifying and addressing current and potential human exposures to vapor intrusion.

The inspection and sampling were performed by trained industrial hygienists using Environmental Protection Agency (EPA) and National Institute for Occupational Safety and Health (NIOSH) sampling techniques. Samples were analyzed at an appropriately accredited laboratory. These samples, representative of a narrow time frame, were for screening purposes only and were not intended to represent definitive exposure levels.

2.2 Sampling Parameters and Methodology

Hillmann selected the sampling parameters based on consultations with the Client, the laboratories performing the analysis and our in-house experts. The chosen parameters for the pre-inspection walk-through were direct read volatile organic compounds via (PID). During the vapor intrusion investigation the chosen parameter was volatile organic compounds via TO-15 Method.

PRE-INSPECTION

All areas that were to be sampled were inspected for conditions that could interfere with the proposed analysis. The investigator utilized a handheld PID to identify preexisting conditions that were generating volatile organic compound vapors. Where identified, the source was removed prior to sampling. The investigator also conducted a visual inspection of the area to assure that there would be no problems with the selected sampling locations.

VAPOR INTRUSION INVESTIGATION

Volatile Organic Compounds (VOCs) were collected by drawing air through a 6 Liter Summa Canister and analyzed for VOCs via the TO-15 Method. These canisters were evacuated to a vacuum of 30 lbs per square inch. Samples were collected for a total duration of 24 hours. This method has been recognized by the USEPA and the NYS DOH as the appropriate sampling method for vapor intrusion investigations and is capable of reaching limits of detection below the levels established by the USEPA and the NYDEC. At the completion of sampling, the canisters were collected and delivered to an accredited laboratory for analysis. Samples were sent EMSL in Westmont, for analysis.

SECTION 3 – DISCUSSION

3.1 Pre-Inspection (Visual Observations and VOCs via PID)

The pre-inspections consisted of visual observations along with measurements of VOCs with a Photo Ionization Detector (PID). [Hillmann personnel] made verbal recommendations made to [who? Identify] at the time of the pre-inspections for removal of potential interferences [with] the TO-15 sampling event based on these visual observations and PID measurements. It was observed that the housekeeping and maintenance personnel are storing multiple chemicals throughout the facility. These chemicals ranged from normal cleaning products to paints and thinners. While the storage of small volumes of these materials for daily use is not a threat to occupants, their presence does present a potential interference with the investigation's data collection.

3.2 Vapor Intrusion Investigation (VOCs via TO-15 Method)

The vapor intrusion evaluation consisted of one round of sampling for VOCs by TO-15 Method in the subject building. Samples were collected from the Sub-Basement, Maintenance Room, Community Room, on 1st Floor Adjacent the Elevator, and on the 6th Floor Adjacent the Elevator. Also, during the sampling events, one outdoor reference sample was collected.

Hillmann has evaluated the sampling data from the round of sampling and compared these concentrations to four published studies by both the EPA and the NYSDOH. Based on the sampling data, Hillmann has not identified concentrations of volatile organic compounds that are likely to be associated with manufactured gas byproducts. The identified compounds included items such as acetone (a lab contaminant), ethanol (cleaning products), and petroleum hydrocarbons (products of auto emissions). While some of these compounds are also found in MGPs, none of the properties showed evidence of a combination of compounds that would indicate impact from the previous manufacturing processes.

Weather Conditions on Sampling Days

Date	Mean Temperature (ºF)	Precipitation (inches)
June 15, 2007	**64**	**0.0**
June 21, 2007	**66**	**0.0**
June 22, 2007	**64**	**0.0**

www.wunderground.com/history

Summary of Exceedances by Building

BUILDING LOCATION	DATE OF SAMPLING	Weather Conditions		Parameters above guidance levels (EPA BASE)
EMSL SAMPLES		**TEMP**	**PRECIP.**	
Sub-Basement	6-21-07 to 6-22-07	66/64° F	0.0/0.0	0
Maintenance Room	6-21-07 to 6-22-07	66/64° F	0.0/0.0	3
Community Room	6-21-07 to 6-22-07	66/64° F	0.0/0.0	0
1st Floor Adjacent Elevator	6-21-07 to 6-22-07	66/64° F	0.0/0.0	1
6th Floor Adjacent Elevator	6-21-07 to 6-22-07	66/64° F	0.0/0.0	0
Ambient-Rear of Building	6-21-07 to 6-22-07	66/64° F	0.0/0.0	0

Samples results do not appear to show any spatial or temporal trend, nor is there any indication of an interaction with the weather.

SECTION 4 – CONCLUSIONS AND RECOMMENDATIONS

4.1 Conclusions

Based on Hillmann's review, indoor air quality is not anticipated to cause occupant illness or require immediate remediation. Based on the data that we have at this time, Hillmann has found no evidence that an increase health risk exists from the previous Manufactured Gas Plant (MGP). Although the NYSDOH or Hillmann recognize the upper range of the comparative data as a valid reference, it should be noted that very few samples would exceed this level present in some non-impacted homes. Furthermore, it should be noted that samples were collected from areas susceptible to organic vapors from maintenance products and processes.

4.2 Recommendations

Based on Hillmann's review of indoor sample results, indoor air quality is not anticipated to cause occupant illness or require immediate remediation. In order to conduct a comprehensive vapor intrusion assessment NYSDOH Guidelines recommend that sub-slab soil vapor samples be collected. Sub-slab samples are an important component used to compare with indoor and outdoor samples in order to evaluate current and potential human exposures (e.g. if the building's structural integrity or use changes) and determine the site-specific attenuation factors, which compares the ratio of indoor air to sub-slab vapor concentrations. Furthermore, it may be prudent for follow-up sampling to be conducted on a periodic basis (such as annual or bi-annual) to ensure these conditions do not change over time. If significant changes occur at the building (increase or decrease HVAC, digging, vibration, etc) the potential for vapor intrusion may increase.

SECTION 5 – APPENDICES

5.1 List of Abbreviations

AIHA	American Industrial Hygiene Association
ACGIH	American Conference of Governmental Industrial Hygienists
ASHRAE	American Society of Heating, Refrigeration and Air-conditioning Engineers
CDC	Centers for Disease Control
EPA	Environmental Protection Agency
NAAQS	National Ambient Air Quality Standard
NIOSH	National Institute for Occupational Safety and Health
OSHA	Occupational Safety and Health Administration
CFU/m^3	Colony forming units per cubic meter of air
F/cc	Fibrous dust per cubic centimeter of air
HVAC	Heating, ventilation & air-conditioning
mg/m^3	Milligrams per cubic meter of air
PEL	Permissible exposure level. This is the enforceable standard.
pCi/L	Picocuries per liter of air
ppm	Parts per million
TLV	Threshold limit value
TWA	Time weighted average

REPORT OF FINDINGS

Radon Testing

Admiral Halsey, Poughkeepsie, New York

On Behalf Of:

Admiral Halsey, LP
C/o Omni New York LLC
885 Second Avenue
31st Floor, Suite C
New York, NY 10017

Testing Conducted: August 26 thru August 28, 2008
Report Dated: September 8, 2008

EHI Project #: 0561-2481

Admiral Halsey, LP
C/o Omni New York, LLC
Poughkeepsie, NY

Radon Testing
August 26-28, 2008
EHI Project #: 0561-2481

1.0 Introduction

Environmental Health Investigations, Inc. (EHI) was retained by Admiral Halsey, LP, C/o of Omni New York, LLC to conduct radon testing at the Admiral Halsey facility in Poughkeepsie, New York. The testing commenced on August 26, 2008 and concluded on August 28, 2008.

The testing was conducted by Ms. Lisa LiLoia of EHI.

2.0 Methodology

Radon is a colorless, odorless, naturally occurring, radioactive inert gas formed by the radioactive decay of the element Radium. Radium can be found in rock formations that underlie the foundation of a building or residence. Therefore, radon testing is conducted in the lowest level suitable for occupancy in a particular building. Should there be no basement level, the lowest occupied level is acceptable. In the case of Admiral Halsey the lowest occupied levels are called "Ground Floor". Open building conditions, i.e. open doors and windows, were prevalent due to the season, summer. No fans or other air handling equipment were in use, these items could have affected the outcome of the tests.

Testing began on August 26, 2008 at 3 locations. The canisters, 1 in each location, were placed in unobtrusive locations to avoid curiosity-based disturbances and were a minimum of 20 inches off the floor. The US EPA recommends that a short-term Radon test be conducted for at least 48 hours and could extend up to 90 days. At Admiral Halsey, the 48 hour protocol was followed. The tests are passive and require only activation, time logs and de-activation.

On August 28, 2007, Ms. LiLoia returned to the sites and retrieved the canisters. The

canisters were then sent to a NYS ELAP-certified laboratory for analysis.

3.0 Results

Results were received on September 2, 2008. The following is a summary of findings.

Location	Sample #	Start Time	Finish Time	Duration	Result (pCi/L)
Main Office	R-016822	8-26-08 1:28 PM	8-28-08 2:05 PM	48 hrs. 37 mins.	<1.8
Community Room	R-016821	8-26-08 1:21 PM	8-28-08 2:00 PM	48 hrs. 39 mins.	<1.8
Boiler Room	R-017504	8-26-08 1:30 pm	8-28-08 2:08 PM	48 hrs. 38 mins.	<1.8

4.0 Conclusions

The US EPA has set an action level of 4.0 pico Curies per Liter (pCi/L) for a residence.

The tests conducted at the Admiral Halsey are all well below the action level. The US EPA maintains a radon information website which includes copies of all publications, at www.epa.gov/iaq/radon

Radon Health Risk Information

Radon is the second leading cause of lung cancer, after smoking. The US Environmental Protection Agency (EPA) and the Surgeon General strongly recommend taking further action when the home's radon test results are 4.0 pCi/L (picocuries per liter of air), or greater. Radon levels less than 4 pCi/L still pose some risk and in many cases may be reduced. If the radon level in your home is between 2.0 and 4.0 pCi/L, EPA recommends that you consider mitigation. The national average indoor radon level is about 1.3 pCi/L. The higher a home's radon level, the greater the health risk to the occupants. Smokers and former smokers are at especially high risk. There are straightforward ways to mitigate a home's radon problem that are not too costly. Even homes with very high levels can be reduced to below 4.0 pCi/L. EPA recommends that only EPA or State approved contractors be utilized to perform radon mitigation.

Re: Lead Paint Screening
Admiral Halsey
135 Main St.
Poughkeepsie, NY
EHI Project #: 0561-2156A

Dear Ms. Reed:

Environmental Health Investigations, Inc. (EHI) was retained by Admiral Halsey, LP to conduct an XRF lead paint screening at the Admiral Halsey located at 135 Main Street in Poughkeepsie, New York. The lead paint screening was performed on September 25 & 26, 2007 by Mr. Jean-Paul von Doehren and Ms. Lisa Liloia of EHI.

EHI personnel conducted a walk through of various apartments throughout the facility to identify painted surfaces which were to be tested. An RMD-XRF was used to measure the amount of lead in paint for the various painted surfaces inside the apartments and in the common spaces throughout the facility. The RMD-XRF is capable of analyzing multiple layers of paint for the presence of lead. Lead paint is defined as a paint containing quantities of lead greater than or equal to 1.0 mg/cm^2.

Based on the results of the screening, no tested paint surfaces were found to contain lead paint. However, many of the wall tiles in the bathrooms throughout the facility tested positive for lead. The wall tiles are not considered a lead painted surface but do contain levels of lead in them greater than or equal to 1.0 mg/cm^2. Contractors performing any renovation or demolition activities that will impact the wall tiles creating dust and debris should consult the Operations and Maintenance Plan to determine work practices and proper personal protective equipment. The results for all tested surfaces are listed in the attached report.

Please feel free to contact me if you have any questions regarding this report.

Very Truly Yours,

J. P. Von D

This report represents the conditions, locations and materials identified at the time of the inspection. The results are valid only for the time at which the inspection occurred. No past and/or future inferences should be made based on the data contained in this report. No warranty, express or limited is made. This inspection was performed utilizing generally accepted industry standards and equipment at the time it was conducted.

This report relates only to those surfaces required for testing by the client. The only tests that exceeded the EPA limit of greater than or equal to 1.0 mg/cm^2 were tile walls found in the bathrooms. These tests have been highlighted in gray in the attached report.

This report should be accessible to contractors who may work at this location in the future. Consistent testing combinations were used throughout the referenced property; if a component was tested in a particular area, the result is valid for other like components in that area.

This report was generated for the sole use of Environmental Health Investigation, Inc. and its client. Use by any other parties is strictly forbidden without consent, in writing, from EHI. This report should be used in its entirety.

Re: Asbestos Inspection
Admiral Halsey Senior Housing
Poughkeepsie, NY

Dear Ms. Reed,

Attached is our report relevant to the asbestos inspection conducted at the above referenced location.

We will be forwarding you the Asbestos Operations & Maintenance Plan under separate cover.

Please let me know if you have any questions.

Very truly yours,

John A. Sekelsky
Senior Project Manager

1.0 Introduction

Environmental Health Investigations, Inc. (EHI) was retained by Omni New York, LLC to conduct an asbestos inspection of the Admiral Halsey Senior Housing Complex located at 135 Main Street, Poughkeepsie, New York. This survey was conducted on the days of May 16 and 17, 2007 by Mr. John Sekelsky and Mr. Jean Paul von Doehren of EHI both of whom are certified New York State Inspectors.

2.0 Observations & Methods

The Admiral Halsey Senior Housing Complex located at 135 Main Street consists of thirteen floors with approximately ten apartments on each floor and penthouse areas. EHI conducted a walkthrough of this premises and identified materials which could potentially contain asbestos. Samples of these suspect materials were collected and submitted to EMSL Analytical Laboratories, Inc., New York, NY for analysis.

This survey was non-intrusive in that it was limited to inspection of common areas and a number of unoccupied apartments. No attempts were made to discover and open any walls in which pipes may exist. Those pipes that were inspected were either uninsulated or insulated with fiberglass. However, the pipeline elbows/fittings on those lines insulated with fiberglass were covered with a suspect cementitious insulation. The roofing materials associated with this building were not sampled. The building operations manager informed EHI that the roof is relatively new and was tested in the past and shown not to contain asbestos. However, no documentation verifying these results was offered. Therefore, the roofing materials are assumed to contain asbestos in this report. The doors of the apartments and stairways on the occupied

floors are labeled by the Underwriter Laboratories Company and are described as being hollow. One door for the electrical room on the first floor allowed assess to a paper insulation. This materials was sampled. No other doors were opened and checked for the presence of suspect material.

Primary analysis of all samples was done via Polarized Light Microscopy. Those samples of non friable organically bound, e.g., floor tiling and mastics, identified as not being asbestos containing by Polarized Light Microscopy were also analyzed by Transmission Electron Microscopy (TEM). The survey was conducted in the manner described in 40 CFR Par 763 Subpart E and New York State Regulations.

3.0 Results

A summary of the results for the collected and analyzed samples is provided in the table below:

Sample #	Type of Material	Location	Asbestos Regulated YES or No
AHS-051607-1	Sheetrock w/ Spackle	Penthouse - Electrical Switch Room	No
AHS-051607-1A	Sheetrock w/ Spackle	In Ceiling Plenum - Hallway Outside Apt 1201 - 12th Floor	No
AHS-051607-1B	Sheetrock w/ Spackle	In Ceiling Plenum - Hallway Outside Apt 1102 - 11th Floor	No
AHS-051607-1C	Sheetrock w/ Spackle	Ceiling Plenum - Top of Column - Day Room - Ground Floor	No
AHS-051707-1D	Sheetrock w/ Spackle	Ceiling Plenum - Top of Column - Main Corridor - Ground Floor	No
AHS-051607-2	Sheetrock Ceiling Tile	Penthouse Top of Stairway - At Door to Roof - Outside Storeroom	No

Sample #	Type of Material	Location	Asbestos Regulated YES or No
AHS-051607-2A	Sheetrock Ceiling Tile	Penthouse Top of West Stairway - At Door to Roof	No
AHS-051707-2B	Sheetrock Ceiling Tile	Garage Compactor Room - Ground Floor	No
AHS-051607-3	1'x1' Floor Tiling - Tan w/ Brown Streak & Mastic	Refuse Chute Room - 12th Floor	**Tile=YES Mastic=YES**
AHS-051607-3A	1'x1' Floor Tiling - Tan w/ Brown Streaks & Mastic	Refuse Chute Room - 3rd Floor	**Tile=YES Mastic=YES**
AHS-051607-3B	1'x1' Floor Tiling - Tan w/ Brown Streak & Mastic	Refuse Chute Room - 2nd Floor	**Tile=YES Mastic=YES**
AHS-051607-4	Mastic Associated with Wall Cove Molding	Refuse Chute Room - 12th Floor	No
AHS-051607-4A	Mastic Associated with Wall Cove Molding	Wall in Stairway - 10th Floor	**No**
AHS-051607-4B	Mastic Associated with Wall Cove Molding	6th Floor Hallway - By Elevators	No
AHS-051607-5	Window Caulking	Old Caulking - Under Window Ledge - Outside Window Apt. 1103 - 11th Floor	No
AHS-051607-5A	Window Caulking	Old Caulking - Under Window Ledge - Outside Window Apt. 601 - 6th Floor	No
AHS-051607-5B	Window Caulking	Old Caulking - Under Window Ledge - Outside Window Apt. 310 - 3rd Floor	No
AHS-051607-5C	Window Caulking	Outside Front of Building - Window for Office	No
AHS-051607-6	Caulking	East Stairway - 4th Floor - Between Stairs and Wall	No
AHS-051607-6A	Caulking	West Stairway - 4th Floor - Between Stairs and Wall	No

Sample #	Type of Material	Location	Asbestos Regulated YES or No
AHS-051607-7	Caulking/Insulation	Inside Conduit Sleeve for Telephone Lines in Floor - Refuse Chute Closet - 2nd Floor	YES
AHS-051607-7A	Caulking/Insulation	Inside Conduit Sleeve for Telephone Lines in Floor - Refuse Chute Closet - 6th Floor	YES
AHS-051607-7B	Caulking/Insulation	Inside Conduit Sleeve for Telephone Lines in Floor - Refuse Chute Closet - 1st Floor	YES
AHS-051607-8	Fireproofing	Structural Beam Inside Elevator Shaft	No
AHS-051607-8A	Fireproofing	Structural Beam Inside Elevator Shaft	No
AHS-051607-8B	Fireproofing	Structural Beam Inside Elevator Shaft	No
AHS-051607-9	1'x1' Floor Tiling - White w/ Grey Streaks	Inside Day Room Kitchen - Ground Floor	No
AHS-051607-10	4'x2' Ceiling Tile - Off-White w/ Pinholes	Inside Day Room - Ground Floor	No
AHS-051607-10A	4'x2' Ceiling Tile - Off-White w/ Pinholes	Inside Day Room Kitchen - Ground Floor	No
AHS-051607-10B	4'x2' Ceiling Tile - Off-White w/ Pinholes	Inside Day Room - Ground Floor	No
AHS-051607-11	4'x2' Ceiling Tile - White w/ Pinholes	Inside Day Room - Ground Floor	No
AHS-051607-11A	4'x2' Ceiling Tile - White w/ Pinholes	Inside Day Room - Ground Floor	No
AHS-051607-11B	4'x2' Ceiling Tile - White w/ Pinholes	Inside Day Room - Ground Floor	No
AHS-051707-12	Fireproofing	Structural Beam Inside Day Room MER/Fan Room - Ground Floor	No
AHS-051707-12A	Fireproofing	Electrical Meter Room - Ground Floor	No

Sample #	Type of Material	Location	Asbestos Regulated YES or No
AHS-051707-12B	Fireproofing	Maintenance Garage - Ground Floor	No
AHS-051707-13	4'x2' Ceiling Tile - White w/Gouges Pinholes	Main Corridor - Outside Restrooms - Ground Floor	No
AHS-051707-13A	4'x2' Ceiling Tile - White w/Gouges Pinholes	Men's Restroom - Ground Floor	No
AHS-051707-13B	4'x2' Ceiling Tile - White w/Gouges Pinholes	Main Corridor - Outside Elevators - Ground Floor	No

Sample #	Type of Material	Location	Asbestos Regulated YES or No
AHS-051707-17A	Rope-like Boiler Gasket	Boiler Room - Ground Floor - Back of Boiler 1	YES
AHS-051707-17B	Rope-like Boiler Gasket	Boiler Room - Ground Floor - Front of Boiler 2	Not Analyzed
AHS-051707-18	Boiler Flue Insulation - Bottom Layer	Boiler 2 - Boiler Room - Ground Floor	No
AHS-051707-18A	Boiler Flue Insulation - Bottom Layer	Boiler 1- Boiler Room - Ground Floor	YES
AHS-051707-18B	Boiler Flue Insulation - Bottom Layer	Boiler 1- Boiler Room - Ground Floor	Not Analyzed
AHS-051707-19	Sheetrock	Boiler Room Ceiling - Ground Floor	NO
AHS-051707-19A	Sheetrock	Boiler Room Ceiling - Ground Floor	NO
AHS-051707-19B	Sheetrock	Boiler Room Ceiling - Ground Floor	NO

4.0 Summary of Asbestos Materials

Material	Location	Approximate Quantity
Roof Membrane (Assumed)	Main Roof	6,500 Square Feet
Roof Flashing (Assumed)	Main Roof	800 Square Feet
Pitch Pockets (Assumed)	Main Roof	80 Square Feet
Roof Membrane & Flashing (Assumed)	Day Room Roof	800 Square Feet
Roof Membrane & Flashing (Assumed)	SE Corner of Building	400 Square Feet
1'x1' Floor Tiling - Tan w/ Brown Streak & Associated Mastic	Floors 1 - 12 Ground Floor (Assumed to Exist Under Carpeting in Main Corridor & Office)	5,000 Square Feet per Floor 800 Square Feet Total= 60,700

Material	Location	Approximate Quantity
Boiler Flue Insulation	Boiler Room - Boilers 1 & 2	120 Square Feet
Rope-like Boiler Gasket	Boiler Room - Boilers 1 & 2 Front & Back	60 Linear Feet
Caulking/Insulation	Telephone Conduit Floor Sleeve - Refuse Chute Closet - Floors 1 - 12	1 Square Foot per Floor Total=12 Square Feet

5.0 Discussion

The roofing materials associated with the Admiral Halsey Senior Housing Complex are assumed to contain asbestos until samples are taken and analysis shows these materials are asbestos containing. As mentioned above this survey was conducted in a non-intrusive manner and suspect asbestos materials contained within existing doors, walls, ceiling and or floor not accessed during this survey may exist. Any suspect materials not sampled and shown not to be asbestos containing must be treated as being asbestos containing.

Those materials known or assumed to be asbestos are identified above. It is recommended that an Operations and Maintenance Plan be generated so as to inform all affected parties of the existence of these asbestos materials and standardize procedures for their maintenance and treatment. Any activities, e.g., demolition and/or renovation activities, that will or may cause the disturbance of the identified asbestos materials should be preceded by the abatement or removal of these materials by a licensed New York State abatement contractor in accordance with all applicable local, state and federal regulations.

EMSL maintains liability limited to cost of analysis. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. The above test report relates only to the items tested. This test report must not be used to claim product endorsement by NVLAP or any agency of the U.S. Government. EMSL bears no responsibility for sample collection activities or analytical method limitations. The results in this report meet all requirements of the NELAC Standards unless otherwise noted. The laboratory is not responsible for the accuracy of results when requested to physically separate and analyze layered samples. PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB's. Quantitative TEM is currently the only method that can be used to determine if a NOB material can be considered or treated as non-asbestos containing.

ACCREDITATIONS: NVLAP #101048-9 and NY STATE ELAP #11506

July 14, 2006

Gardiner Cross
Engineering Geologist 3
NYSDEC
Division of Environmental Remediation
625 Broadway
Albany, New York 12233

Re: Poughkeepsie Bayeaux Street Site

Dear Mr. Cross:

On May 17, 2006, Central Hudson Gas & Electric Corporation (Central Hudson) conducted a supplemental investigation at the former Bayeaux Street manufactured gas plant (MGP) site, in Poughkeepsie, New York. The additional investigation was conducted at the request of the New York State Department of Environmental Conservation (NYSDEC) and in accordance with the NYSDEC-approved work scope dated April 18, 2006 to supplement observations from previous investigations. Specifically, during the Phase II Investigation completed 1990, MGP-impacted soils and groundwater were not observed in five borings and four monitoring wells (Figure 1). The findings of the 1990 investigation were subsequently summarized in Phase II Investigation Report, Bayeaux Street Site dated August, 1990 (BBL).

The former Bayeaux Street MGP is located on the corner of Main Street and North Perry Street (formerly Bayeaux Street) in the City of Poughkeepsie, Dutchess County, New York. The site is currently occupied by the Admiral Halsey Senior Village and neighboring townhouses to the east.

The 2006 investigation consisted of the installation of five soil boring (BSB-06-6 through BSB-06-10, Figure 1) in and around former MGP structures at the site as follows:

- Two soil borings were installed on the northern perimeter of the site near former purifying structures (BSB-06-6 and BSB-06-7);
- One soil boring was installed within the former 50-foot diameter gas holder (BSB-06-8); and
- Two soil borings were installed within the former 90-foot diameter gas holder (BSB-06-9 and BSB-06-10).

Soil borings were advanced using a tractor-mounted push/percussion drill rig to depths ranging between 14.5 and 24 feet below ground surface (bgs). Soil samples were continuously collected using 4 foot Macro Core® sampling barrels with disposable PVC liners. Recovered soil samples were classified with respect to predominant soil types, moisture content, and the presence of any visual or olfactory impacts. Soils were continuously field screened using a photoionization detector (PID). Detailed descriptions of the soils encountered are contained in the attached boring logs.

284 South Avenue
Poughkeepsie, NY 12601

(845) 452-2000
www.CHEngergyGroup.com

The following table summarizes the field observations at each boring location. In addition, this summary table includes the 1990 boring observations.

Boring	*Boring Observations*	*Potential Impacts Observed*	*PID Readings*
MW-1	0-4 ft. – Sand and gravel fill (little brick/coal) 4-10 ft. – Sand 10-12 ft. Silt 12-18 ft. - Clay	None	2-4 ft. – 1.8 ppm 14-16 ft. – 1.8 ppm
MW-2	0-2 ft. Sand fill (some brick) 2-14 ft. Silt (sand and gravel lense at 8 ft.) 14 -18 ft. Sand and gravel 18-20 ft. Weathered bedrock	None	2-4 ft. – 0.2 ppm 4-6 ft. – 0.2 ppm 8-10 ft. – 0.1 ppm
MW-3	0-6 ft. – Sand and brick fill 6-14 ft. - Sand, Sand and gravel 14-15.5 ft. – Weathered bedrock	None	0-2 ft. – 0.9 ppm 2-4 ft. – 0.6 ppm 4-6 ft. – 0.8 ppm 8-10 ft. – 1.4 ppm 10-12 ft. – 0.4 ppm 12-14 ft. – 0.1 ppm
MW-4	0-8 ft. - Sand and brick fill 8-12 ft. – Sand 12-15 ft. – Gravel 15.5-16.5 ft. – Weathered bedrock	None	0-2 ft. – 0.2 ppm 2-4 ft. – 0.1 ppm
BB-5	0-14 ft. - Brick, ash, concrete fill 14-15.4 ft. - Silt	Staining 12 to 15 ft.	0-2 ft. – 1.1 ppm 2-4 ft. – 1.9 ppm 4-6 ft. – 1.7 ppm 10-12 ft. – 1.1 ppm 12-14 ft. – 1.6 ppm 14-15 ft. – 4.8 ppm
BSB-06-6	0-7 ft –Sand (trace cinders) 7-18 ft.- Silt and Sand	None	Non-detect
BSB-06-7	0-4 ft –Sand (trace cinders) 4-5 ft- Concrete 5-14.5 ft.- Silt	None	Non-detect
BSB-06-8	0-4 ft –Sand (little cinders/brick) 4-8 ft.-Cinders and brick 8-16.25 ft. – Cinders and slag 16.25 ft. Sand	Faint odor below 8.0 ft. bgs	9.0 ft. – 0.6ppm 10.0 ft. – 1.1ppm 11.0 ft. – 0.7ppm 14.0 ft. – 0.4ppm 16.4 ft. – 1.3ppm
BSB-06-9	0-4 ft –Sand and cinders 4-6 ft.- Silt and sand 6-16 ft. -Silt 16-19 ft. – Sand 19-21 ft. – Sand and gravel 21-24 ft. - Silt	None	Non-detect
BSB-06-10	0-1.5 ft. - Sand (little cinders/brick) 1.5-2 ft. - Concrete 2-5 ft. - Sand (little cinders/brick) 5-16 ft.- Silt	Faint odor from 12 to 16 ft. bgs	13.0 ft. – 1.7ppm 14.0 ft. – 4.3ppm 15.0 ft. – 1.8ppm

In summary, MGP related non-aqueous phase liquids (NAPLs) were not observed in the 2006 or the 1990 soil borings. The staining observed in 1990 soil boring BB-5 was not observed in 2006 soil boring BSB-06-8.

Furthermore, soils were recovered for observation in the 6 to 10 foot interval at boring BSB-06-8, located within the former 50-foot gas holder, and thus fill in the gap missing in the subsurface record for soil boring BB-5. As summarized above, NAPL- impacted soils were not observed at soil boring BSB-06-8.

Based on the 1990 Phase II Investigation and the 2006 supplemental investigation, Central Hudson requests that NYSDEC delist the former Bayeaux Street site from the Inactive Hazardous Waste Disposal Site Program Registry. Furthermore, Central Hudson requests NYSDEC approval to abandon monitoring wells MW-1 through MW-4. If you have any questions or comments regarding this letter report, please contact me at 845-486-5691.

Sincerely,

Central Hudson Gas & Electric Corporation

Nicholas Kowalczyk
Assistant Environmental Specialist

1. INTRODUCTION

This Health and Safety Plan establishes the policy for managing potential exposures to chemicals which exist in low concentrations within the soil and ground water associated with the Admiral William F. Halsey Senior Village property located at 135 Main Street in Poughkeepsie, New York. The specific intent of this program is to protect the health of occupants, visitors, custodial and maintenance personnel while they are on the property as well as any contractor or other entity that needs or is assigned to disturb the soil and/or ground water on this property. This program is designed to (1) prevent exposure to the existing soil and ground water for said persons; (2) provide means by which to prevent the migration of these contaminants; (3) provide a description of standard operating procedures to mitigate exposure for those persons who must disturb the soil and/or ground water; and (4) provide standard procedures regarding the monitoring of site conditions and exposure of those persons involved in soil and/or ground water disturbance. This plan will be in effect until it can be shown that all soil and ground water contamination has been eradicated.

This program shall go into effect upon acquisition of the property by Admiral Halsey, LP. The presence of contaminants in the soil and ground water on the property does not mean that the health of occupants in endangered. The levels of contamination found are low and potential health effects will only occur with direct exposure. Such exposures are not likely given the normal activities connected with the properties current use. However, some extraordinary activities, e.g., soil excavation, may cause persons to come in contact with and become exposed to the existing contaminants. By complying with all provisions of this Health & Safety plan, occupants will be assuring a safe building environment.

2. PROGRAM RESPONSIBILITIES

2.1 H&S Plan Coordinator

The Coordinator of this H&S Plan for Admiral Halsey Senior Housing Complex is Ms. Sue Kimmerle. The H&S Plan Coordinator can be reached at 845-626-9788. After normal business hours, or in the event of an emergency, contact Ms. Sue Kimmerle at 845-471-8194 or Mr. Paul Pancio at 845-625-8194. Responsibilities of the H&S Plan Coordinator are as follows:

1. Inform and respond to tenant, employee and contractor inquiries regarding the presence of soil and ground water contaminants.

2. Maintain records associated with this plan. These may include, but are not limited to, soil and ground water sampling data, records for personal exposure monitoring, manifests for soil and/or ground water disposal, and periodic surveillance data.

3. Coordinate activities and operations involving the disturbance of the property's sub-surface and/or ground water as required. Including assurance of use of proper protective equipment (PPE) by workers who may become exposed to contaminants, the provision of exposure monitoring to ensure the proper PPE is used and the proper decontamination of workers and used equipment that come into contact with contaminated soil and/or ground water.

4. Obtain and maintain all required permits and make all necessary notifications involving all interested local, state and federal agencies regarding the disturbance and possible storage or disposal of contaminated soil and/or ground water.

5. Coordinate for the characterization and proper storage and/or disposal of disturbed soils and/or ground water and keep and maintain all pertaining records, e.g., waste manifests.

4. Arrange and coordinate for the availability and provision of medical and emergency services as required.

3. INVENTORY OF SOIL & GROUND WATER CONTAMINATES ON THE PROPERTY

A Phase II investigation performed by Hillman Environmental Group, LLC in May 2007 included the collection and analysis of soil bore samples and ground water samples. The results of these analyses show that the soil and ground water appear to contain low levels of contamination by heavy metal and semi-volatile organic compounds most likely resulting from past operations, i.e. a coal gasification facility, conducted on this site and/or nearby sites. Provided below is a description of the chemical contaminates found and a description of their properties and established exposure limits. The OSHA permissible exposure limits represent the amount of a given chemical a worker can be exposed to within an eight hour time period as a time weighted average (TWA). The established Immediately Dangerous to Life and Health (IDLH) level for each chemical is also provided. This concentration represents the levels at which worker exposure can cause immediate mortality or severe health effects. The IDLH acts as a measure of a chemical's toxicity. The lower the IDLH concentration the more toxic the chemical. The information provided in this summary was collected utilizing the NIOSH Pocket Guide to Chemical Hazards (NIOSH Publication No. 2005-151) or available Material Safety Data Sheets (MSDS). The chemicals listed are those identified in the Phase II report which exceed the cleanup objectives promulgated under the NYDEC's *Technical and Administrative Guidance , 1994* (TAGM 4046) and referenced in the Phase II report.

Chemical Name	Acetone (Soil)
OSHA PEL IDLH	1000 ppm TWA 2500 ppm
Exposure Routes	inhalation, ingestion, skin and/or eye contact
Incompatibilities & Reactivities	Oxidizers, Acids
Target Organs	Eyes, skin, respiratory system, central nervous system
Symptoms	Irritation eyes, nose, throat; headache, dizziness, central nervous system depression; dermatitis
PPE	Level D
First Aid	Eye: Irrigate immediately Skin: Soap wash immediately Breathing: Respiratory support Swallow: Medical attention immediately

Chemical Name	Arsenic (Soil & Ground Water)
OSHA PEL IDLH	0.010 mg/m^3 TWA 5.0 mg/m^3
Exposure Routes	Inhalation, Skin Absorption, Skin &/or Eye Contact
Incompatibilities & Reactivities	Strong Oxidizers, Bromide azide, Hydrogen gas can react w/ inorganic Arsenic to form highly toxic Arsine gas
Target Organs	Liver, Kidneys, Skin, Lungs, Lymphatic System Possible Carcinogen - Lungs & Lymphatic System
Symptoms	Ulceration of nasal septum, dermatitis, gastrointestinal disturbances, peripheral neuropathy, respiratory irritation, hyperpigmentation of skin, [potential occupational carcinogen]
PPE	Level D
First Aid	Wash Skin w/ Soapy Water & Irrigate Eyes on Contact If Swallowed Seek Immediate Medical Attention Respiratory Support for Breathing

Chemical Name	**Beryllium (Soil & Ground Water)**
OSHA PEL **IDLH**	**0.002 mg/m^3 TWA; 0.005 mg/m^3 Ceiling** **4 mg/m^3**
Exposure Routes	**Inhalation, Skin &/or Eye Contact**
Incompatibilities & Reactivities	**Acids, Caustics, Chlorinated Hydrocarbons, Oxidizers, Molten Lithium**
Target Organs	**Eyes, Skin, Lungs, Respiratory System** **Possible Carcinogen - Lungs**
Symptoms	**Berylliosis (Chronic Exposure), Eye Irritation, Dermatitis**
PPE	**Level D**
First Aid	**Wash Skin w/ Soapy Water & Irrigate Eyes on Contact** **Breathing - Fresh Air**

Chemical Name	**2-Butanone (MEK) (Soil)**
OSHA PEL **IDLH**	**200 ppm TWA** **3000 ppm**
Exposure Routes	**inhalation, ingestion, skin and/or eye contact**
Incompatibilities & Reactivities	**Strong oxidizers, amines, ammonia, inorganic acids, caustics, isocyanates, pyridines**
Target Organs	**Respiratory System, Eyes, Skin, Central Nervous System**
Symptoms	**Irritation eyes, skin, nose; headache; dizziness; vomiting; dermatitis**
PPE	**Level D**
First Aid	**Eye: Irrigate immediately** **Skin: Water wash immediately** **Breathing: Fresh air** **Swallow: Medical attention immediately**

Chemical Name	Cadmium (Ground Water)
OSHA PEL IDLH	0.005 mg/m^3 TWA 9 mg/m^3
Exposure Routes	Inhalation, Ingestion
Incompatibilities & Reactivities	Strong Oxidizers, Elemental Sulfur, Selenium, Tellurium
Target Organs	Respiratory System, Kidney, Prostate, Blood Possible Carcinogen - Prostate, Lungs
Symptoms	Pulmonary edema, dyspnea (breathing difficulty), cough, chest tightness, substernal (occurring beneath the sternum) pain; headache; chills, muscle aches; nausea, vomiting, diarrhea; anosmia (loss of the sense of smell), emphysema, proteinuria, mild anemia; [potential occupational carcinogen]
PPE	Level D
First Aid	Wash Skin w/ Soapy Water & Irrigate Eyes on Contact If Swallowed Seek Immediate Medical Attention Respiratory Support for Breathing

Chemical Name	Chromium (Soil & Ground Water)
OSHA PEL IDLH	1.0 mg/m^3 TWA 250 mg/m^3
Exposure Routes	Inhalation, Ingestion, Skin &/or Eye Contact
Incompatibilities & Reactivities	Strong Oxidizers, Alkalis
Target Organs	Respiratory System, Eyes, Skin
Symptoms	Irritation eyes, skin; lung fibrosis (histologic)
PPE	Level D
First Aid	Wash Skin w/ Soapy Water & Irrigate Eyes on Contact If Swallowed Seek Immediate Medical Attention Respiratory Support for Breathing

Chemical Name	Copper (Soil & Ground Water)
OSHA PEL IDLH	1.0 mg/m^3 TWA 100 mg/m^3
Exposure Routes	Inhalation, Ingestion, Skin &/or Eye Contact
Incompatibilities & Reactivities	Oxidizers, Alkalis, Sodium azide, Acetylene
Target Organs	Respiratory System, Eyes, Skin, Liver, Kidneys (increased risk of Wilson's Disease)
Symptoms	Irritation eyes, respiratory system; cough, dyspnea (breathing difficulty), wheezing; [potential occupational carcinogen]
PPE	Level D
First Aid	Wash Skin w/ Soapy Water & Irrigate Eyes on Contact If Swallowed Seek Immediate Medical Attention Respiratory Support for Breathing

Chemical Name	Lead (Soil & Ground Water)
OSHA PEL IDLH	1.0 mg/m^3 TWA 100 mg/m^3
Exposure Routes	Inhalation, Ingestion, Skin &/or Eye Contact
Incompatibilities & Reactivities	Oxidizers, Alkalis, Sodium azide, Acetylene
Target Organs	Respiratory System, Eyes, Skin, Liver, Kidneys (increased risk of Wilson's Disease)
Symptoms	Irritation eyes, respiratory system; cough, dyspnea (breathing difficulty), wheezing; [potential occupational carcinogen]
PPE	Level D
First Aid	Wash Skin w/ Soapy Water & Irrigate Eyes on Contact If Swallowed Seek Immediate Medical Attention Respiratory Support for Breathing

Chemical Name	**Mercury (Soil & Ground Water)**
OSHA PEL **IDLH**	**0.05 mg/m^3 TWA. 0.1 mg/m^3 Ceiling** **10 mg/m^3**
Exposure Routes	**Inhalation, Skin Absorption, Ingestion, Skin &/or Eye Contact**
Incompatibilities & Reactivities	**Acetylene, ammonia, chlorine dioxide, azides, calcium (amalgam formation), sodium carbide, lithium, rubidium, copper**
Target Organs	**Respiratory System, Eyes, Skin, Central Nervous System, Kidneys**
Symptoms	**Irritation eyes, skin; cough, chest pain, dyspnea (breathing difficulty), bronchitis, pneumonitis; tremor, insomnia, irritability, indecision, headache, lassitude (weakness, exhaustion); stomatitis, salivation; gastrointestinal disturbance, anorexia, weight loss; proteinuria**
PPE	**Level D**
First Aid	**Wash Skin w/ Soapy Water & Irrigate Eyes on Contact** **If Swallowed Seek Immediate Medical Attention** **Respiratory Support for Breathing**

Chemical Name	**Nickle (Soil & Ground Water)**
OSHA PEL **IDLH**	**1 mg/m^3 TWA** **10 mg/m^3**
Exposure Routes	**inhalation, ingestion, skin and/or eye contact**
Incompatibilities & Reactivities	**Strong acids, sulfur, selenium, wood & other combustibles, nickel nitrate**
Target Organs	**Respiratory System, Eyes, Skin, Central Nervous System, Kidneys - Possible Carcinogen - Lung & Nasal**
Symptoms	**Sensitization dermatitis, allergic asthma, pneumonitis; [potential occupational carcinogen]**
PPE	**Level D**
First Aid	**Water Flush Immediately** **If Swallowed Seek Immediate Medical Attention** **Respiratory Support for Breathing**

Chemical Name	**Selenium (Soil & Ground Water)**
OSHA PEL **IDLH**	**0.2 mg/m^3 TWA. 0.1 mg/m^3 Ceiling** **1 mg/m^3**
Exposure Routes	**inhalation, ingestion, skin and/or eye contact**
Incompatibilities & Reactivities	**Acids, strong oxidizers, chromium trioxide, potassium bromate, cadmium**
Target Organs	**Eyes, skin, respiratory system, liver, kidneys, blood, spleen**
Symptoms	**Irritation eyes, skin, nose, throat; visual disturbance; headache; chills, fever; dyspnea (breathing difficulty), bronchitis; metallic taste, garlic breath, gastrointestinal disturbance; dermatitis; eye, skin burns; in animals: anemia; liver necrosis, cirrhosis; kidney, spleen damage**
PPE	**Level D**
First Aid	**Eye: Irrigate immediately** **Skin: Soap wash immediately** **Breathing: Respiratory support** **Swallow: Medical attention immediately**

Chemical Name	**Zinc (Soil & Ground Water)**
OSHA PEL **IDLH**	**OSHA PEL†: TWA 5 mg/m^3 (fume) TWA 15 mg/m^3 (total dust) TWA 5 mg/m^3 (resp dust)** **500 mg/m^3**
Exposure Routes	**inhalation, ingestion, skin and/or eye contact**
Incompatibilities & Reactivities	**Chlorinated rubber (at 419°F), water [Note: Slowly decomposed by water.]**
Target Organs	**Respiratory system**
Symptoms	**Metal fume fever: chills, muscle ache, nausea, fever, dry throat, cough; lassitude (weakness, exhaustion); metallic taste; headache; blurred vision; low back pain; vomiting; malaise (vague feeling of discomfort); chest tightness; dyspnea (breathing difficulty), rales, decreased pulmonary function**
PPE	**Level D**
First Aid	**Breathing: Respiratory support**

Chemical Name	Benzo(a)nthracene (Soil & Ground Water)
OSHA PEL IDLH	Not Available Not Available
Exposure Routes	inhalation, ingestion, skin and/or eye contact
Incompatibilities & Reactivities	Not Available
Target Organs	Not Available - Possible Carcinogen
Symptoms	Not Available
PPE	Level D
First Aid	Breathing: Fresh air, rest. Skin: Remove contaminated clothes. Rinse and then wash skin with water Eyes: First rinse with plenty of water for several minutes (remove contact lenses if easily possible), then take to Ingestion: Rinse mouth.

Chemical Name	Benzo(a)pyrene as Pyrene (Soil & Ground Water)
OSHA PEL IDLH	0.2 mg/m^3 TWA. 0.1 mg/m^3 Ceiling 80 mg/m^3
Exposure Routes	inhalation, skin and/or eye contact
Incompatibilities & Reactivities	Strong oxidizers
Target Organs	skin, respiratory system, liver, kidneys
Symptoms	Dermatitis, bronchitis, [potential occupational carcinogen]
PPE	Level D
First Aid	Eye: Irrigate immediately Skin: Soap wash immediately Breathing: Respiratory support Swallow: Medical attention immediately

Chemical Name	**Chrysene (Soil & Ground Water)**
OSHA PEL **IDLH**	**0.2 mg/m^3 TWA. 0.1 mg/m^3 Ceiling** **80 mg/m^3**
Exposure Routes	**inhalation, skin and/or eye contact**
Incompatibilities & Reactivities	**Strong oxidizers**
Target Organs	**skin, respiratory system, liver, kidneys**
Symptoms	**Dermatitis, bronchitis, [potential occupational carcinogen]**
PPE	**Level D**
First Aid	**Eye: Irrigate immediately** **Skin: Soap wash immediately** **Breathing: Respiratory support** **Swallow: Medical attention immediately**

Chemical Name	**Indeno(1,2,3-cd))pyrene as Pyrene (Ground Water)**
OSHA PEL **IDLH**	**0.2 mg/m^3 TWA. 0.1 mg/m^3 Ceiling** **80 mg/m^3**
Exposure Routes	**inhalation, skin and/or eye contact**
Incompatibilities & Reactivities	**Strong oxidizers**
Target Organs	**skin, respiratory system, liver, kidneys**
Symptoms	**Dermatitis, bronchitis, [potential occupational carcinogen]**
PPE	**Level D**
First Aid	**Eye: Irrigate immediately** **Skin: Soap wash immediately** **Breathing: Respiratory support** **Swallow: Medical attention immediately**

Exact information pertaining to the characteristics of and exposure limits for the following chemicals could not be found: benzo(b)fluoranthene, benzo(k)fluoranthene and dibenzo(a,h)anthracene.

4. Operational Procedures

These procedures are to be employed concerning any action that may cause the disturbance of the sub-surface of the property and/or ground water and may possibly cause residents, employees, contractors, etc. to come in contact with the same.

1. The effected workers, contractors, residents, etc. shall be informed of the presence of possibly contaminated soil and ground water. They are to be informed about precautions, including the use of PPE, to be used to prevent contact with and exposure to any potentially contaminated soil and/or ground water. The minimum level of PPE used should be Level D protection. This would include the wearing of dedicated work clothing that covers the whole body, dedicated work shoes or the wearing of boots that can be washed clean, gloves, safety glasses and hard hat. It is also important that safety precautions associated with the use of any tools or machinery be strictly adhered to.

2. The area (zone) in which any drilling, digging, excavating and any other sub-surface work is to be performed should be demarcated and secured so as only those authorized and properly protected may enter. This may include the erection of fencing or barricades around the perimeter of the work zone and/or the use of security personnel.

3. In order to mitigate possible exposure all excavation, digging, drilling, etc. of soil should be accompanied by measures for dust suppression. This would include the application of water to the soil during the conduct of these tasks so as to significantly lessen the probability the soil would become airborne and create breathable dust.

4. All excavated or removed soil or groundwater should be collected and stored in a designated area within the secured work zone. This may entail the collection and storage of ground water in drums. When active work is not being conducted any collected soil should be covered, e.g., by tarping, and measures should be taken to ensure that run-off and erosion of the collected soil does not take place. This could include the placement of a barrier, e.g., hay bales, around the base of the collected soil.

5. Measures would need to be taken to ensure that disturbed soil is not transferred outside the secured work zone. This would include the establishment of a equipment wash area in which any machinery , tools and soil apparel, e.g. dirt work boots, be cleaned of soil that may become attached to them. Water used to cleanse the soiled machinery, tools, equipment, etc. should be collected and drummed until a determination can be made whether it should be disposed of as contaminated or not.

6. Any soil and/or groundwater to be taken out of the secured work zone should first be categorized by a qualified entity to determine whether the soil and/or groundwater being removed would need to be transported and disposed of as a hazardous material. If so categorized, the soil and/or ground water must be packaged, transported and disposed of in accordance with all applicable local, state and federal regulations. It would be the responsibility of the H&S coordinator to ensure that all necessary notifications are completed and all pertinent records, e.g., waste manifests, are obtained and properly filed.

7. It is imperative that the safety of all workers involved in the conduct of work that will cause the disturbance of the soil subsurface and/or groundwater at this site be protected. This would include that the appropriate PPE is used and that all safety measures involving all potential physical and environmental hazards be provided for and adhered to. Included in this would be protection from extremes in weather conditions. Provisions should be made to protect the workers from exposure to harmfully cold temperatures and from the advent of heat stress or stroke.

8. An emergency response program should be instituted and maintained. This would include making all necessary coordinations with local emergency response departments and the provision of timely medical care. A buddy system should be in place so that if a worker is injured or infirmed, aid can be quickly provided. The phone number for, and a route to, the nearest hospital emergency room should be made available to the effected workers and conspicuously posted at the work site.

9. To help ensure that the possibility of exposure to workers is removed, no smoking, eating, or drinking is to be allowed in the work zone. The workers should smoke, eat and drink only in dedicated areas away from the work zone. Provision of a means by which the workers may clean themselves when exiting the work zone should be made. Also a dedicated rest room to be used only by the workers should be provided.

10. Until final categorization of any disturbed soil and/or groundwater is made, all used, soiled or wetted clothing worn by the workers should not be taken off site. If the disturbed soil and/or groundwater and, thereby, the used clothing is deemed contaminated, the clothing is to be collected and disposed of with the soil and/or groundwater. The workers should be provided an area in which they may make a change between work and street clothing at the start and the end of each work shift.

11. It is recommended that personal monitoring of the workers be conducted by a qualified entity in order to provide a worker exposure assessment and to ensure the proper PPE is being employed.

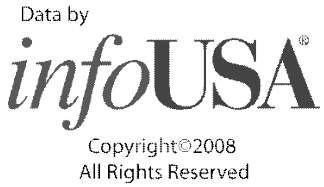
EXECUTIVE SUMMARY



DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Certified Sanborn® Map Report

03/12/19

Site Name:

Admiral Halsey - New Construc
135 Main Street
Poughkeepsie, NY 12601
EDR Inquiry # 5587159.3

Client Name:

Hillmann Environmental Co.
1600 Route 22 East
Union, NJ 07083
Contact: Joanne Bedkowski

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sanborn® Library search results

Certification #: 9DDD-4BC1-939C

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Hillmann Environmental Co. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.
