I. CALL TO ORDER

II. APPROVAL OF MEETING MINUTES

1. Approval of December 21, 2021 Meeting Minutes

III. PUBLIC HEARINGS FOR SITE PLANS/SPECIAL PERMITS/SUBDIVISIONS

1. MILTON STREET: MULTIFAMILY RESIDENTIAL DEVELOPMENT
The public hearing will be adjourned until the February 15, 2022 meeting as the applicant continues work with City and Town Engineering. Application for site plan review for multifamily residential development consisting of two buildings containing a total of 63 units, with a swimming pool and accessory surface parking. Owner/Applicant: Maselo Realty LLC; Consultant: Chazen Companies (Caren LoBrutto); Grid #6162-73-623227; Zoning District: Planned Residential District (PRD); File #2021-029

IV. SITE PLANS/SPECIAL PERMITS/SUBDIVISIONS

1. WALLACE CAMPUS: DEMOLITION, CONVERSION & NEW CONSTRUCTION
Application for Site Plan Review for demolition, conversion and new construction, resulting in a mixed use development with 187 dwelling units and 14,235 square feet of commercial space, with off-street parking and publically-accessible open space on the parcels at 319, 325, 327-329 and

331 Main Street. Redevelopment of the off-street parking area will also involve the properties at 302, 304, 306 and 310 Mill Street. Grid #6162-77-114098, 109079, 109077, 121116, 112116, 116114, 128113 and 6162-78-127091; Owner: 319 & 331 Main Street - IIC Properties, Inc., 327-329 Main Street - Key Main LLC, and 325 Main Street - Wallace Campus Manager LLC (Emanuel Kokinakis) (outright and by contract); Applicant: Wallace Campus Manager, LLC (A Larovere Consulting and Development, Mega Contracting Group, and Urban Green Equities); Consultant: Ken Casamento, LRC Group; Architect: SLCE Architects, LLP; Zoned: Poughkeepsie Innovation District Urban Village (PID-UV) and Historic Core (PID-HC). File #2020-01

2. 135 MAIN STREET: MULTIFAMILY RESIDENTIAL SUBDIVISION

Applications for Site Plan Review and Subdivision for subdivision of the property at 135 Main Street into two lots of record and construction of a new building containing 72 dwelling units on the new lot. Owner: Omni New York; Applicant: Tinkleman Architecture; Consultant: Ken Casamento/LRC Group; Grid #6062-76-911183; Zoning District: Urban Density Residence (R-6) District; File #2021-037 and 2021-038

3. 278 – 282 MAIN STREET: MIXED USE CONVERSION

Application for Site Plan Review for the conversion of the existing building, formerly a department store, to a mixed use building containing ground floor commercial space and a total of 24 dwelling units on the upper stories, including construction of a fifth story and a tower. Owner/Applicant: Kirchner Realty, Inc/Michael DeCordova; Consultant: Aryeh Siegel Architect; Zoning District: Poughkeepsie Innovation District - Historic Core Subdistrict (PID-HC) Grid #6162-77-059084, 6162-77-062084, 6162-77-065081, 6162-77-065083 and 6162-77-060075; File #2021-040

4. 39 PERSHING AVENUE: TWO-FAMILY RESIDENTIAL

Application for Site Plan/Special Permit Review relative to the proposed conversion of a vacant single family dwelling at 39 Pershing Avenue to a two-family dwelling. Waivers of certain site plan elements are requested. Owner: Pershing 39 LLC; Applicant: James Valencia; Consultant: Paul Tirums, PE; Zoning District: General Commercial (C-3) District; Grid #6162-80-461007; File #2021-068

CITY OF POUGHKEEPSIE
PLANNING BOARD MINUTES
DECEMBER 21, 2021

PRESENT
Anne Saylor, Acting Chair
Rosaura Andujar-McNeil
Nick Deluccia
Robert Mallory
Sean O'Donnell
Marjorie Smith
Brian Veltre

EXCUSED
Robert S. Levine, Esq

Staff Present: Natalie Quinn, Acting Development Director
Consultants: Chris Kroner, Terresa Bakner, Stu Messinger

Meeting was called to order at 6:06pm with the Pledge of Allegiance.

The Board approved the minutes of the November meeting on a motion by Robert Mallory, seconded by Nick Deluccia.

WALLACE CAMPUS: DEMOLITION, CONVERSION & NEW CONSTRUCTION
319, 325, 327-329, AND 331 MAIN STREET & 302, 304, 306 AND 310 MILL STREET
Site Plan application for demolition, conversion and new construction, resulting in a mixed use development with 187 dwelling units, 14,235 SF of retail commercial space, and publically-accessible open space on the parcels at 319, 325, 327-329 and 331 Main Street. Redevelopment of the off-street parking area will involve the properties at 302, 304, 306 and 310 Mill Street. Grid #6162-77-114098, 109079, 109077, 121116, 112116, 116114, 128113 and 6162-78-127091; Owner: 319 & 331 Main Street - IIC Properties, Inc., 327-329 Main Street - Key Main LLC, and 325 Main Street - Wallace Campus Manager LLC (Emanuel Kokinakis) (outright and by contract); Applicant: Wallace Campus Manager, LLC (A Larovere Consulting and Development, Mega Contracting Group, and Urban Green Equities); Consultant: Ken Casamento, LRC Group; Architect: SLCE Architects, LLP; Zoned: Poughkeepsie Innovation District Urban Village (PID-UV) and Historic Core (PID-HC). File #2020-010

Appearing on behalf of the application were Rachel Goodfriend, Jennifer VanTuyl and Andrew O'Grady, from MHA, who provided responses to public comments.

Natalie Quinn provided an overview of comments from the City's Engineering, Fire and Police Departments and the Dutchess County Planning Department.

Jennifer VanTuyl indicated that the engineer is happy to change the lighting as a condition of approval.

A tenant committee was recommended.

On a motion by Rosaura Andujar-McNeil, seconded by Nick DeLuccia, the public hearing was reopened. Speaking were:

- Theo Lawrence
- Carmella Schwab
- Michael DeCordova
- Craig Brendley, County Legislator
- Doug Nobiletti
- Laurie Sandow
- Norman Steinberg

During the public comment period, it was requested that the open space and parking available to the public be identified.

Written comments will be accepted until January 7, 2022.

On a motion by Robert Mallory, seconded by Marjorie Smith, the public hearing was closed, with Anne Saylor, Nick DeLuccia, Robert Mallory, Marjorie Smith and Brian Veltre voting aye and Rosaura Andujar Mc-Neil and Sean O'Donnell voting nay.

Sean O'Donnell asked how creative economy is supported by the proposal, and indicated he felt SEQR is too binary. Rosaura Andujar-McNeil indicated that decisions should not be made in a vacuum, and that she will continue to focus on long-term management and added vitality.

Following the closing of public hearing, the Board adopted the following resolution:

Resolution of the City of Poughkeepsie Planning Board
Negative Declaration of Environmental Significance
December 21, 2021

Whereas, the City of Poughkeepsie Planning Board (the "Planning Board") received a site plan application from Wallace Campus Manager, LLC (the "Applicant") for demolition, conversion and new construction resulting in a mixed use development with 187 dwelling units and 14,235 square feet of commercial space, with off-street parking and publicly-accessible open space on the parcels at 319, 325, 327-329 and 331 Main Street (the "Project"); and

Whereas, the Project also involves the redevelopment of the off-street parking area on the properties at 302, 304, 306 and 310 Mill Street. Grid # 6162-77-114098, 109079, 109077, 121116, 112116, 116114, 128113 and 6162-78-12091; and,

Whereas, the extensive application documents are available at and on file with the City's Building and Planning Departments and have been made available to the public on the City's website; and

Whereas, the Applicant first appeared before the Planning Board in June of 2020 and the Project and the Application materials have been continually revised since the initial submission and appearance with the last submission being made on December 7, 2021; and,

Whereas, the Applicant has appeared at nine Planning Board meetings, two of which were special meetings called specifically for the environmental review of the Project; and,

Whereas, the Planning Board identified the application as a Type 1 Action pursuant to the New York State Environmental Quality Review Act ("SEQRA") and declared its intent to serve as lead agency; and,

Whereas, the Planning Board directed City staff to coordinate the SEQRA review by sending the notice of intent to be lead agency accompanied by the Environmental Assessment Form Part 1 and the application to the other involved agencies, including among others, the Zoning Board of Appeals of the City of Poughkeepsie; and,

Whereas, no other involved agency object to the Planning Board being lead agency; and,

Whereas, the Planning Board declared itself lead agency for this Type 1 action and has received sufficient information to make a determination of significance as required by SEQRA; and,

Whereas, in making this written, reasoned elaboration of its determination of significance as required by SEQRA, the Planning Board carefully reviewed all of the application materials, all interested or involved agency comments, all public comments received on the Project, all City Department review comments on the Project, the expanded EAF Part 1, and the comments of the Planning Board's consultants who advised the Planning Board on the Project and on the determination of significance; and,

Whereas, the Planning Board deliberated on the SEQRA EAF Parts 2 and 3 and carefully reviewed them during two Planning Board workshops; and,

Whereas, in response to questions concerning the environmental impacts of the Project raised by the Planning Board, the Applicant made many changes to the Project and provided substantial additional information in support of the application; and,

Now, Therefore Be it Resolved, that the Planning Board, after careful consideration of the Application and all of the criteria of significance set forth in the SEQRA regulations at 6 NYCRR Part 617.7 as well as the SEQRA handbook and other NYSDEC guidance on SEQRA hereby approves the EAF Parts 2 and 3 attached as Exhibit A to this resolution and adopts the negative declaration of environmental significance finding that no significant adverse environmental impact will result from this Project and an environmental impact statement will not be required for this Project attached as Exhibit B to this resolution;

Be it Further Resolved, that the Planning Staff are hereby directed to publish the notice of the negative declaration in the Environmental Notice Bulletin, to provide a copy of this resolution with Exhibits A and B to the involved and interested agencies for this Project and take such other steps

as required by 6 NYCRR Sections 617.12 (b)(1) & (3) and 617.12(c) for the filing and distribution of documents.

Motion: Marjorie Smith
Second: Robert Mallory
Carried: 7:0:0

MILTON STREET: MULTIFAMILY RESIDENTIAL DEVELOPMENT
Application for site plan review relative to the proposed multi-residential development consisting of two buildings containing a total of 63 units, with a swimming pool and accessory surface parking. Owner/Applicant: Maselo Realty LLC; Consultant: Chazen Companies (Caren LoBrutto); Grid #6162-73-623227; Zoned Planned Residential District (PRD); File #2021-029

Further consideration of this application has been postponed to a future agenda as the applicant continues to work on site issues.

On a motion by Marjorie Smith, seconded by Brian Veltre, the public hearing was re-opened.

There were no speakers.

On a motion by Marjorie Smith, seconded by Nick DeLuccia, the Board voted to adjourn the public hearing to January 19, 2022.

278-282 MAIN STREET: COMMERCIAL/MULTIFAMILY MIXED USE CONVERSION
Application for Site Plan Review relative to the conversion of the existing building, formerly a department store, to a mixed use building containing ground floor commercial space and a total of 24 dwelling units on the upper stories, including construction of a fifth story and a tower and development of a courtyard. Owner/Applicant: Kirchner Realty, Inc/Michael DeCordova; Consultant: Aryeh Siegel Architect; Zoning District: Poughkeepsie Innovation District - Historic Core Subdistrict (PID-HC) Grid #6162-77-059084, 6162-77-062084, 6162-77-065081, 6162-77-065083 and 6162-77-060075; File #2021-040

Appearing on behalf of the application were Michael DeCordova, Areyeh Siegel, Lauren Butts and Eric Rogge.

- Site will be locked to public in evening
- Changes to lighting: removed taller ped lights, retained uplighting by is open to timer solution

Chris Kroner:

- Asked if the applicant can retain some mature tresses: existing tree species are Ledicia and Honey Locust
- Have Engineering review tree plantings and infrastructure in Wood Lane
- Appreciates restoration of façade
- Coloring of windows and brick
- Modulate screens

Sean O'Donnell supported Chris' request that the corners on the elevator tower be brick with corten detail; requested digital samples of brick and corten
Request update to application to reflect funding
Sean O'Donnell recommends native plantings
Request to have zoning review parcel and fencing: is south boundary considered a front yard?

The public hearing was opened on a motion by Marjorie Smith, seconded by Nick DeLuccia. Speakers were:

- Laurie Sandow

The public hearing was closed on a motion by Marjorie Smith, seconded by Nick DeLuccia.

198-204 HOOKER AVENUE
Application for Site Plan/Special Permit review relative to the conversion of the second floor of the existing building at 204 Hooker Avenue from 13 separate offices and 1 dwelling unit to a total of 6 dwelling units, with the first floor remaining commercial (florist, deli, liquor store and hair salon). Owner: 198 Hooker Avenue LLC (Sean Mulcahy); Applicant/Consultant: Paul Pilon, RA S&P Architects; Zone: Neighborhood Commercial (C-1) District; Grid #6161-48-444508; File #2021-049

Appearing on behalf of the application were Sean Mulcahy and Paul Pilon, who gave a project overview:

- 3 one-bedroom and 2 two-bedroom units
- Change window color to ebony black on Hooker Avenue
- Each unit will be permitted one off-street parking space

Sean O'Donnell appreciated change to windows

Currently there is no bicycle parking but applicant is willing to add this

Sean O'Donnell questioned the allocation of parking between residential and commercial components.

On a motion by Marjorie Smith, seconded by Brian Veltre, the Board opened the public hearing. Speakers were:

- Cheryl Benanti of Mildred Avenue

On a motion by Marjorie Smith, seconded by Nick DeLuccia, the Board closed the public hearing.

Following discussion, the board adopted the following resolution:

WHEREAS, the Planning Board has received an application for site plan/special permit approval for the conversion of the second floor of the existing building at 198-204 Hooker Avenue from 13

separate offices and 1 dwelling unit to a total of 6 dwelling units, with the first floor remaining commercial (florist, deli, liquor store and hair salon); and,

WHEREAS, this application for site plan is considered to be a Type 2 Action under SEQRA requiring no further action; and,

WHEREAS, a public hearing was held on December 21, 2021; and,

WHEREAS, at a meeting held on July 13, 2021 the Zoning Board of Appeals granted variances relative to the off-street parking, open space and landscaping requirements of the Zoning Ordinance; and,

WHEREAS, upon completion of the project, prior to the issuance of the final certificate of occupancy, an as-built site plan set shall be submitted to the Planning Department for certification of compliance with Planning Board approval; and

NOW THEREFORE BE IT FURTHER RESOLVED that the Board grant Site Plan/Special Permit approval relative to the conversion of the second floor of the existing building at 198-204 Hooker Avenue from 13 separate offices and 1 dwelling unit to a total of 6 dwelling units, with the first floor remaining commercial (florist, deli, liquor store and hair salon), provided that all conditions are satisfied, as follows:

- All comments from the Engineering Department and Fire Department shall be addressed to the satisfaction of each department;
- Bicycle parking shall be provided in the front.

Motion: Marjorie Smith
Second: Robert Mallory
Carried: 7:0:0

267 MILL STREET: SITE PLAN AMENDMENT
Application for Site Plan Amendment relative to the proposed conversion of a former office building to a multiple dwelling with a total of eight (8) dwelling units. The previous approval was for seven (7) units; Grid #6162-69-073173; Owner: Page Park Associates; Applicant: Kelly Libolt/Page Park Associates: Zoning District: Poughkeepsie Innovation District – Creative Edge (PID-CE); File #2020-044 (1)

Appearing on behalf of the application was Kelly Libolt, who indicated that the radon test was within allowed levels.

Following discussion, the Board adopted the following resolution:

WHEREAS, the Planning Board has received an application for amended site plan approval relative to the proposed conversion of the former office building at 267 Mill Street to a multiple dwelling containing a total of eight (8) dwelling units where seven (7) dwelling units were originally approved; and,

WHEREAS, WHEREAS, this application for site plan is considered a Type II under SEQR, and no further action is required; and,

WHEREAS, the action is more fully detailed on revised drawings dated 9/14/21, prepared by LRC Group, and related materials; and,

WHEREAS, at a meeting held on December 14, 2021 the Zoning Board of Appeals granted a variance relative to open space requirements of the Zoning Ordinance; and,

WHEREAS, upon completion of the project, prior to the issuance of the final certificate of occupancy, an as-built site plan set shall be submitted to the Planning Department for certification of compliance with Planning Board approval; and

NOW THEREFORE BE IT FURTHER RESOLVED that the Board grant Site Plan approval for the proposed conversion of the former office building at 267 Mill Street to a multiple dwelling containing a total of eight (8) dwelling units, File #2020-044(1), provided that all conditions of the original approval are satisfied, as follows and as updated:

- All comments from the Engineering Department shall be addressed to the satisfaction of the department, including the comments of November 8, 2021;
- Certification of dark sky compliant lighting on-site will be provided to the City Planning Department prior to the issuance of a Certificate of Occupancy;
- Building Department will review radon testing results

Motion: Marjorie Smith
Second: Brian Veltre
Carried: 7:0:0

29 NORTH HAMILTON STREET: ACCESSIBLE ENTRANCE ADDITION
Application for Site Plan review relative to the proposed construction of an addition to the front of the Family Partnership building at 29 North Hamilton Street to accommodate an accessible entrance and create communal meeting space. Owner: Family Services Inc; Applicant: Brian Doyle, CEO; Consultant: Model of Architecture Servicing Society, LLC (MASS); Zoning District: Medium High Density Residence (R-4) District; Grid #6162-76-238100; File #2021-061

Appearing on behalf of the application were Chris Kroner and Chris Lapine, who provided a project update:

- SHPO letter: no further concerns
- Engineering comments are being addressed
- Elevation changes: frameless glass door/narrow style

Sean O'Donnell supported single glass
Rosaura Andujar-McNeil question the design and utilization of green island

Following the discussion, the Board adopted the following resolution:

WHEREAS, the Planning Board has received an application for site plan approval proposed construction of an addition to the front of the Family Partnership building at 29 North Hamilton Street to accommodate an accessible entrance and create communal meeting space; and,

WHEREAS, WHEREAS, this application for site plan is considered a Type II under SEQR, and no further action is required; and,

WHEREAS, the action is more fully detailed on drawings dated 12.9.21, with selected revisions, prepared by MASS Design Group, Chazen Companies and others, with related materials; and,

WHEREAS, upon completion of the project, prior to the issuance of the final certificate of occupancy, an as-built site plan set shall be submitted to the Planning Department for certification of compliance with Planning Board approval; and

NOW THEREFORE BE IT FURTHER RESOLVED that the Board grant Site Plan approval for the proposed construction of an addition to the front of the Family Partnership building at 29 North Hamilton Street, File #2021-061, to accommodate an accessible entrance and create communal meeting space, with conditions as follows:

- All comments from the Engineering Department and County Planning Department shall be addressed to the satisfaction of those departments;
- Door height increased to 10 feet and remove transom with thin style and frame

Motion: Marjorie Smith
Second: Nick DeLuccia
Carried: 7:0:0

54-58 SMITH STREET: MULTI-FAMILY RESIDENTIAL
Site Plan application relative to the proposed change of use of a six-family dwelling and vacant one-story garage to an eight-family dwelling with an accessory maintenance building. Owner: Yitzchot Rottenburg, YRY Group LLC; Applicant: Ariel Rodriguez; Consultant: Chris Johnston and Thomas P. Cummings PE; Grid #6162-79-310112; Zoning District: R-4 District; #2020-003

Following discussion, the Board approved the following resolution:

WHEREAS, at the Planning Board meeting of November 17, 2020, the Board granted site plan approval for the above referenced project. A building permit has not yet been issued. Section 19-6.1(3)(a) empowers the Planning Board to extend, upon application, for good cause shown, the the validity of the approval, one time, for a period not to exceed one year from the date the original approval expires;" and,

WHEREAS, the applicant has filed a request for an extension with the Planning Board; and,

NOW THEREFORE BE IT RESOLVED that, under the provisions of section 19-6.1(3)(a) as outlined above, the Planning Board hereby grants the extension of the site plan approval for a period of one year from the expiration of the original approval. This extension will allow the applicant until November 17, 2022, to obtain a building permit for 54-58 Smith Street, File #2020-003.

Motion: Marjorie Smith
Second: Nick DeLuccia
Carried: 7:0:0

The meeting adjourned at 9:50pm.

If yes, provide the address of the facility, name of the property owner, number of spaces in the lot, number of spaces available for lease, and length of lease. Attach copy of lease. Additional information may be required by the Planning Board): _____

IX. RESIDENTIAL PROPOSALS

A) Type of Development: Multi-family housing
(Townhouse, condominium, multiple residence rental, etc.)

B) Unit Breakdown:

Number of efficiency or "studio" units: 46

Number of one (1) bedroom units: 92

Number of two (2) bedroom unit's 40

Number with three or more bedrooms: 9

Total number of units: 187

C) Is funding public? X Yes ____ No

If yes, describe funding source: NYS HFA Bond; 4% LIHTC and other sources

X. OFFICE PROPOSALS (____ Medical/Dental ____ Professional ____ Business)

A) Number of Employees: _____

B) Number of doctors/dentists/medical practitioners: _____

C) Days/Hours of Operation: _____

XI. SERVICE BUSINESS PROPOSALS

A) Specify Business: _____
(e.g., laundromat, drycleaner, beauty parlor, travel agency, banks)

B) Number of Employees: _____

C) Number of Washing Machines (for laundromat): _____

D) Days/Hours of Operation: _____

XII. MERCANTILE PROPOSALS (Retail X Wholesale _____)

A) Type of Mercantile (specify): TBD (14,213 SF)

B) Number of Employees: TBD

C) Days/Hours of Operation: Normal Business Hours

XIII. STANDARD RESTAURANT/FAST FOOD RESTAURANT/COFFEE SHOP/DONUT SHOP/NIGHTCLUB/DISCOTHEQUE/BAR PROPOSALS

A) Specify Use: _____

B) Number of seats (excluding bar stools and outdoor seating):_____

C) Meals served (i.e., breakfast, lunch, dinner): _____

D) Type of Menu: _____

E) Days/Hours of Operation: _____

F) Entertainment (live and/or recorded):_____

G) Will the restaurant contain a bar/lounge?: _____ Yes _____ No

H) If yes, how many seats at the bar? _____

I) Is a drive-through window proposed? _____

J) Is a walk-up window proposed? _____

K) Is an outdoor seating area proposed? _____

L) If yes, how many seats are proposed? _____

M) If yes, is outdoor cooking proposed? _____

XIV. INDUSTRIAL/COMMERCIAL PROPOSALS (Automobile repair, taxi, motor vehicle sales, warehouse, manufacturing, animal hospital, research facilities, etc.)

A) Specify Use: _____

B) Number of shifts (if any): _____

C) Number of employees: _____
(If shifts are proposed, list number of employees per shift)

E) Number of work bays (if automobile repair): _____

F) Days/Hours of operation: _____

XV. EDUCATIONAL/INSTITUTIONAL/RECREATIONAL PROPOSALS (e.g., Museums, Theatres, Conference Centers, Hotels, Motels, Hospitals, Nursing Homes, Assisted Living Facilities, Nursery Schools, Private Schools, Day Care Centers, Places of Worship, Marinas, Membership Clubs, etc.)

A) Specify: _____

B) Number of shifts (if any): _____

C) Number of employees: _____
(If shifts are proposed, list number of employees per shift)

D) Number of beds (hospitals, nursing homes, etc): _____

E) Number of seats in largest assembly space: _____

F) Number of classrooms (schools): _____

G) Number of rental units (hotels, motels, etc.) _____

H) Number of boat slips/courts (e.g., tennis, handball, etc.), alleys: _____

I) Days/Hours of Operation: _____

XVI. PROPOSALS NOT MENTIONED ABOVE (Please be specific):

Publicly accessible open space

XVII. APPLICANT CERTIFICATION

I, Emanuel Kokinakis, certify that the this application has addressed the objectives outlined in the Zoning Ordinance with consideration given to the public health, safety and welfare; the comfort and convenience of the public in general or the residents or users of the proposed development and of the immediate neighborhood.

The applicant certifies that all information contained herein is accurate and complete as of the date of this application.

Re: **Wallace Campus Project: January 2022 Planning Board Submission Supplemental Materials (Part I)**

Dear Ms. Quinn:

Enclosed are supplemental and revised materials to accompany the full Wallace Campus December 2021 Site Plan Submission. The supplemental materials address the following:

- Revised Lighting Plan (LP-1 and LP-2) which addresses key issues raised by County Planning regarding lighting levels. The enclosed reduces potential hot spots.
- Revised Landscape Plan (LL-1 and LL-2) addressing landscape screening and additional plantings for pollinators to address the related public comment.
- Revised rendered site plan that incorporates details presented at the January 2022 ZBA meeting.
- Responses to public comments received at the December 2021 Planning Board public hearing as well as written comments received by January 7th, 2022

A full response to Chazen's latest set of comments (Chazen letter dated December 22, 2021) is forthcoming.

Thank you,
Rachel Goodfriend

Re: **Wallace Campus Project: December 2021 Planning Board Submission**

Dear Ms. Quinn:

Enclosed is a proposed revised Site Plan submission designed to address the Planning Board, City consultant, County Planning Department, and public comments. The purpose of the Site Plan revision is to enhance compliance with the recently enacted PID zoning and confirm the Applicant's continuing efforts to work with the City to bring an excellent project to fruition.
Updates since our last November 2021 submission include:

- The modified Site Plan substantially increases the areas of landscape screening in the entrance drives along Mill Street, and pulls parking further into the site. The extent of the related zoning variances has been significantly minimized and the proposed appearance of the Mill Street side of the site has been improved. This required a parking lot redesign reducing the total parking spaces to 60 (from 62). Note that per zoning, 32 parking spaces are required but 60 spaces are proposed.

- A comprehensive list of required zoning variances was drafted in coordination with the City. The variance list outlining our efforts to reduce the number and extent of variances is included in the submission. We will prepare amendments to our existing ZBA application. The project does not require height variances.

- The EAF/SEQR and other project materials were updated to include comments received during the December 2, 2021 SEQR workshop with the City.

- Dutchess County Planning provided a response to the City's site plan referral. The County letter is attached to this cover letter. Note that County planning commented on the exterior lighting levels. The project has been designed to satisfy the City's security concerns with appropriate lighting. At the same time, the lighting fixtures will be dark sky compliant to address any County concerns. The County's overall recommendation was that "The Department recommends that the Board rely upon its own study of the facts in the case with due consideration of the above comments."

Features maintained:

- Contextual and High-Quality Architectural Design: The project maintains the same high-quality architecture in response to the public's and Board's comments about adhering to the context of the neighborhood's historic architecture.

- Pedestrian interconnection between Main Street and Mill Street: The plan maintains the Promenade and pedestrian walkway between Main Street and Mill Street.

- Wallace Green: The privately maintained, but publicly accessible green space known as Wallace Green, including the tiered seating area remains.

- Consolidation of entrances with neighboring properties/shared parking: The project continues to provide for consolidation of access into the block, sharing access and parking with adjoining properties at 302, 304, 306 Mill Street parcels and with Hudson River Housing.

The Wallace Campus December 2021 Planning Board submission includes:

- **Application for Site Plan form**
- **Revised Site Plan set** by LRC dated 12/7/21
- **Revised drawing set by SLCE** dated 12/7/21
- **Revised EAF/SEQR** dated 12/9/2021
- **Revised Project Narrative** dated 12/7/21
- **Responses to Chazen 11/15/21 comment letter**
- **Public Comment Responses** to November 2021 public comments
- **SWPPP** by LRC dated 12/7/21
- **Engineering Report** by LRC
- **Traffic and Parking Analysis** by Colliers dated 9/28/21 (updated to reflect 60 parking spots)
- **Zoning Variance Summary** outlining proposed variances and efforts to reduce the number and extent of variances.
- **Long term management memo** to address the Board's questions and concerns
- **Historics memo** addressing Board questions on the historic eligibility of the buildings slated for demolition as well as requests for architectural salvage efforts.

ALC
Planning & Development

Thank you for your thoughtful review of Wallace Campus. We look forward t working with you towards bringing the project to fruition.

Thank you,

Rachel Goodfriend

DEPARTMENT OF PLANNING AND DEVELOPMENT

December 9, 2021

To: Planning Board, City of Poughkeepsie
Re: ZR21-349, Wallace Campus Site Plan
Lots: 114098/109079/109077/112116/116114/121116/127091, Main Street and US44/NY55 (Mill St.)

The Dutchess County Department of Planning and Development has reviewed the subject referral within the framework of General Municipal Law (Article 12B, §239-l/m).

ACTION

The applicant is seeking site plan approval for the following:

- Restoration of the former Wallace Department Store building on Main Street, to contain a mix of non-residential and multi-family residential uses;
- Construction of a 5-story building on Main Street immediately west of the Wallace building (involving the demolition of three existing buildings) to contain residential and ground-floor retail uses;
- Construction of a 5-story addition to the Wallace building along the Catharine Street frontage, to contain residential and ground-floor retail uses;
- 187 units of mixed-income and supportive residential;
- Over 14,000 square feet of retail space, located primarily on the ground floors of all three buildings (note: daycare facility and climbing gym have been eliminated in exchange for additional retail space);
- A privately-owned public greenspace, and reconfiguration of parking and circulation patterns, in the interior of the block.

COMMENTS

We are pleased to see the applicant has incorporated local feedback and adjusted the proposal accordingly. In particular, the reduction of building heights to meet code, continued refinement of the architecture, and adjustments to the mix of unit sizes and target income levels are positive changes. Our only comment relates to lighting; it appears that changes have been made to the lighting plan which result in several areas showing unnecessarily high levels (e.g. between the Catharine and Wallace buildings (8+ fc), east of 310 Mill (3-5+ fc), and along the sidewalk east of Catharine Street building (3-4+ fc)). There are other small pockets of hot spots as well. The applicant could make modifications to the number, location and/or specs of the fixtures to create a lower (average of approximately one (1) footcandle), more even level of lighting site wide.

RECOMMENDATION

The Department recommends that the Board rely upon its own study of the facts in the case with due consideration of the above comments.

Eoin Wrafter, AICP, Commissioner

239 Planning/Zoning Referral - Exemption Communities

Please Fill in this section

Municipality: **City of Poughkeepsie**

Referring Agency: **Planning Board**

Tax Parcel Numbers(s): **1140980000, 1090790000, 1090770000, 1121160000, 1161140000, 1211160000, 1270910000**

Project Name: **Wallace Campus**

Applicant: **Wallace Campus Manager LLC**

Address of Property: **319 Main St, Poughkeepsie, NY 126010000**

Exempt Actions:*
239 Review is NOT Required

- Administrative Amendments (fees, procedures, penalties, etc.)
- Special Permits for residential uses (accessory apts, home occupations, etc.)
- Use Variances for residential uses
- Area Variances for residential uses
- Renewals/Extension of Site Plans or Special Permits that have no changes from previous approvals

No Authority to review these Actions

- Subdivisions / Lot Line Adjustments
- Interpretations

☐ Exempt Action submitted for informal review

Actions Requiring 239 Review

- ☐ Comprehensive/Master Plans
- ☐ Zoning Amendments (standards, uses, definitions, district regulations, etc.)
- ☐ Other Local Laws associated with zoning (wetlands, historic preservation, affordable housing, architectural review, etc.)
- ☐ Rezonings involving all map changes
- ☐ Architectural Review
- ☑ Site Plans (all)
- ☐ Special Permits for all non-residential uses
- ☐ Use Variances for all non-residential uses
- ☐ Area Variances for all non-residential uses
- ☐ Other (Describe):

Parcels within 500 feet of:

- ☑ State Road:
- ☐ County Road:
- ☐ State Property (with recreation area or public building)
- ☑ County Property (with recreation area or public building)
- ☐ Municipal Boundary
- ☐ Farm operation in an Agricultural District

Date Response Requested: **12/13/2021**

Entered By: **Knauss, Judith**

These actions are only exempt in municipalities that signed an intermunicipal agreemment with Dutchess County to that effect.

For County Office Use Only

Response From Dutchess County Department of Planning and Development

No Comments:

- ☐ Matter of Local Concern
- ☐ No Jurisdiction
- ☐ No Authority
- ☐ Withdrawn
- ☐ Incomplete - municipality must resubmit to County
- ☐ Exempt from 239 Review
- ☐ None

Comments Attached:

- ☑ Local Concern with Comments
- ☐ Conditional
- ☐ Denial
- ☐ Incomplete with Comments- municipality must resubmit to County
- ☐ Informal Comments Only (Action Exempt from 239 Review)

Date Submitted: **11/18/2021**	Notes: **Courier delivery to DCP.**	☑ Major Project
Date Received: **11/18/2021**		Referral #: **ZR21-349**
Date Requested: **12/13/2021**		
Date Required: **12/17/2021**	☐ Also mailed hard copy	Reviewer: Heather M. LaV

DEMOLITION NOTES:

1. CONTRACTOR SHALL NOTIFY "DIG SAFELY NEW YORK" AT 1-800-962-7692 AT LEAST TWO FULL WORKING DAYS PRIOR TO COMMENCEMENT OF ANY WORK IN ACCORDANCE WITH UFPO CODE RULE 53, 16 NYCRR PART 753.
2. ANY ITEM THAT MAY CONFLICT WITH SITE DEVELOPMENT AND IS NOT IDENTIFIED ON THIS PLAN SHALL BE BROUGHT TO THE ATTENTION OF THE OWNER AND DESIGN ENGINEER AS SOON AS POSSIBLE.
3. ADDITIONAL UNDERGROUND FACILITIES MAY BE PRESENT WITHIN THE LIMITS OF THE PROPOSED WORK. THE CONTRACTOR SHALL CONTACT ANY AND ALL PERSONNEL RESPONSIBLE FOR DETERMINING THE LOCATIONS.
4. PRIOR TO DEMOLISHING ANY BUILDINGS/STRUCTURES, THE CONTRACTOR SHALL PERFORM A PRE-DEMOLITION SURVEY IN ACCORDANCE WITH STATE AND FEDERAL REGULATIONS. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS AND APPROVALS BY THE AUTHORITY HAVING JURISDICTION.
5. CONFORM TO APPLICABLE CODE FOR DEMOLITION OF STRUCTURES, SAFETY OF ADJACENT STRUCTURES, DUST CONTROL, RUNOFF CONTROL, AND HAULING, DISPOSAL AND STORAGE OF DEBRIS.
6. PROVIDE, ERECT, AND MAINTAIN TEMPORARY BARRIERS AND SECURITY DEVICES.
7. MAINTAIN EXISTING UTILITIES TO REMAIN IN SERVICE AND PROTECT THEM AGAINST DAMAGE DURING SELECTIVE DEMOLITION OPERATIONS. DO NOT INTERRUPT EXISTING UTILITIES SERVING OPERATING FACILITIES, EXCEPT WHEN AUTHORIZED IN WRITING BY OWNER AND AUTHORITIES HAVING JURISDICTION.
8. WHEN DISTURBED, EXISTING FACILITIES SHALL BE REPAIRED OR REPLACED IN KIND AND IN ACCORDANCE WITH THE REQUIREMENTS OR THE DIRECTION OF THE AUTHORITY HAVING JURISDICTION. ASSOCIATED COSTS SHALL BE BORNE BY THE CONTRACTOR.
9. NOTIFY ADJACENT OWNERS OF WORK THAT MAY AFFECT THEIR PROPERTY, POTENTIAL NOISE, UTILITY OUTAGE, OR DISRUPTION. COORDINATE WITH OWNER.
10. PREVENT MOVEMENT OR SETTLEMENT OF ADJACENT STRUCTURES. PROVIDE BRACING AND SHORING.
11. LOCATE AND IDENTIFY ALL EXISTING UTILITIES WITHIN THE CONSTRUCTION AREA. DISCONNECT AND SEAL OR CAP OFF UTILITY SERVICES THAT WILL BE AFFECTED BY THIS PROJECT. NOTIFY AFFECTED UTILITY COMPANIES BEFORE STARTING WORK AND COMPLY WITH THEIR REQUIREMENTS. VERIFY THAT UTILITIES HAVE BEEN DISCONNECTED AND CAPPED. ABANDONMENT AND DISCONNECTION OF THE EXISTING WATER LINE MUST BE COORDINATED WITH THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. ABANDONMENT AND DISCONNECTION OF THE EXISTING SEWER LINE MUST BE COORDINATED WITH THE CITY OF POUGHKEEPSIE SEWER DEPARTMENT.
12. DEMOLISH AND REMOVE COMPONENTS IN AN ORDERLY AND CAREFUL MANNER.
13. PROTECT EXISTING FEATURES THAT ARE NOT TO BE DEMOLISHED.
14. CONDUCT OPERATIONS WITH MINIMUM INTERFERENCE TO PUBLIC OR PRIVATE ACCESS WAY.
15. MAINTAIN EGRESS AND ACCESS AT ALL TIMES. DO NOT CLOSE OR OBSTRUCT ROADWAYS, OR SIDEWALKS WITHOUT PERMITS.
16. CEASE OPERATIONS IMMEDIATELY IF ADJACENT STRUCTURES APPEAR TO BE IN DANGER. NOTIFY AUTHORITY HAVING JURISDICTION.
17. ROUGH GRADE AND COMPACT AREAS AFFECTED BY DEMOLITION TO MAINTAIN SITE GRADES AND CONTOURS.
18. FIELD VERIFY EXISTING CONDITIONS AND CORRELATE WITH REQUIREMENTS INDICATED ON DEMOLITION PLAN TO DETERMINE EXTENT OF SELECTIVE DEMOLITION REQUIRED.
19. MAINTAIN EXISTING UTILITIES TO REMAIN IN SERVICE AND PROTECT THEM AGAINST DAMAGE DURING SELECTIVE DEMOLITION OPERATION.
20. CONDUCT DEMOLITION OPERATIONS TO PREVENT INJURY TO PEOPLE AND DAMAGE TO ADJACENT BUILDINGS AND FACILITIES TO REMAIN. ENSURE SAFE PASSAGE OF PEOPLE AROUND SELECTIVE DEMOLITION AREA.
21. USE WATER MIST, TEMPORARY ENCLOSURES AND OTHER SUITABLE METHODS TO LIMIT THE SPREAD OF DUST AND DIRT. COMPLY WITH GOVERNING ENVIRONMENTAL PROTECTION REGULATIONS. DO NOT USE WATER WHEN IT MAY DAMAGE EXISTING CONSTRUCTION, SUCH AS ICE, FLOODING, OR POLLUTION.
22. REMOVE, TRANSPORT AND REMOVE DEBRIS IN A MANNER THAT WILL PREVENT SPILLAGE ON ADJACENT SURFACES AND AREAS AND MEET ALL APPROPRIATE DISPOSAL AND TRUCKING LAWS.
23. CLEAN ADJACENT STRUCTURES AND IMPROVEMENTS OF DUST, DIRT AND DEBRIS CAUSED BY SELECTIVE DEMOLITION OPERATIONS. RETURN ADJACENT AREAS TO CONDITION EXISTING BEFORE START OF SELECTIVE DEMOLITION.
24. PROMPTLY DISPOSE OF DEMOLISHED MATERIALS. ALL DEBRIS RESULTING FROM DEMOLITION ACTIVITIES SHALL BE DISPOSED OF OFF-SITE AT A FACILITY APPROVED TO RECEIVE THE DEBRIS. DO NOT ALLOW DEMOLISHED MATERIALS TO ACCUMULATE ON-SITE. DO NOT BURN DEMOLISHED MATERIALS ON-SITE.
25. NO BLASTING IS PROPOSED FOR THE PROJECT.
26. A MINIMUM OF TEN FEET OF EXISTING PIPE SHALL BE REMOVED AROUND ALL EXISTING MANHOLES, WHERE NEW PIPES ARE PROPOSED TO CONNECT.
27. IF ANY STORM DRYWELLS OR PREVIOUSLY UNIDENTIFIED UNDERGROUND STRUCTURES ARE IDENTIFIED AND EXHIBIT A SEWAGE/SEPTIC ODOR NOTIFY SITE ENGINEER AND TREAT AS SANITARY WASTE FOR DISPOSAL.
28. EXISTING SANITARY SEWER FOR SOUTH BUILDINGS TAKEN FROM HISTORICAL DATA.
29. THE CONTRACTOR SHALL COORDINATE WITH ARLINGTON FIRE DEPARTMENT FOR ACCESS LOCATIONS TO THE SITE DURING DEMOLITION / CONSTRUCTION.
30. THE ABANDONMENT, REMOVAL & DECOMMISSIONING OF ALL EXISTING SUBSURFACE DISPOSAL SYSTEMS AND SANITARY LINE COMPONENTS MAY BE CONSIDERED HAZARDOUS WASTE AND MUST BE REMOVED IN ACCORDANCE WITH THE PROCEDURES APPROVED BY THE DUTCHESS COUNTY DEPARTMENT OF HEALTH AND NYSDEC AND CERTIFIED BY A NYS PROFESSIONAL ENGINEER.
31. ALL EXISTING MONITORING WELLS ONSITE, ARE TO BE CUT AND CAPPED 4' BELOW GRADE AND FILLED WITH GROUT. WELLS ARE TO BE ABANDONED SHALL BE IN ACCORDANCE WITH DUTCHESS COUNTY DEPARTMENT OF HEALTH REGULATIONS.
32. KNOX BOX LOCKS ARE TO INSTALLED ON EACH OF THE EMERGENCY ACCESS POINTS OF THE TEMPORARY CHAIN LINK FENCE AND DAISY CHAINED TO THE CONTRACTORS PAD LOCK.
33. PRIOR TO THE START OF CONSTRUCTION OR EXCAVATION, TREE'S TO BE RETAINED SHALL BE PROTECTED BY SILT FENCE, SNOW FENCE, CONSTRUCTION FENCE, OR EQUAL, WHICH WILL BE PLACED AT THE DRIP LINE OR SEVERAL FEET BEYOND. HOWEVER, THE FENCING SHALL NOT CROSS PUBLIC SIDEWALKS. NO STORAGE OR STOCKPILING OF CONSTRUCTION MATERIALS, DEBRIS OR EQUIPMENT SHALL OCCUR WITHIN THE FENCED AREA.

CITY OF POUGHKEEPSIE WATER NOTES

1. ALL WATER MAINS SHALL BE CEMENT LINED DUCTILE IRON PIPE, CLASS 52 PUSH-ON JOINT, UNLESS OTHERWISE SPECIFIED BY OR APPROVED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. JOINTING SHALL EMPLOY "MEGALUG" CONNECTIONS, FIELD LOCK GASKET, OR AS ALTERNATIVELY SPECIFIED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. ALL WATER PIPING CONSTRUCTION SHALL BE TO THE SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. WET TAP OF PUBLIC WATER SYSTEM SHALL BE APPROVED AND SUPERVISED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. TAPPING SLEEVE SHALL BE STAINLESS STEEL OR APPROVED EQUAL. ALL MAINLINE VALVES SHALL BE RESILIENT WEDGE OR APPROVED EQUAL.

2. THE WATER LINE MAY BE FLEXED WITHIN PIPE SPECIFICATIONS OR LAID DEEPER IN AREAS WHERE A CROSSING WITH A SANITARY LINE OCCURS, TO ACHIEVE THE REQUIRED 1.5' VERTICAL SEPARATION DISTANCE. IF THIS DISTANCE CANNOT BE REASONABLY ACHIEVED, THE CONTRACTOR SHALL USE PRESSURE RATED SANITARY PIPE OF EQUAL OR GREATER RATING THAN THE PRESSURE CLASS FOR THE WATER LINE.

3. MINIMUM VERTICAL SEPARATION BETWEEN WATER MAINS AND SEWER PIPE SHALL BE 18 INCHES MEASURED FROM THE OUTSIDE OF THE PIPES AT THE POINT OF CROSSING. ONE FULL STANDARD LAYING LENGTH OF WATER MAIN SHALL BE CENTERED UNDER OR OVER THE SEWER SO THAT BOTH JOINTS WILL BE AS FAR FROM THE SEWER LINE AS POSSIBLE. IN ADDITION, WHEN THE WATER MAIN PASSES UNDER A SEWER, ADEQUATE STRUCTURAL SUPPORT (COMPACTED SELECT FILL) SHALL BE PROVIDED FOR THE SEWER TO PREVENT EXCESSIVE DEFLECTION OF JOINTS AND SETTLING OF THE SEWER PIPE ON THE WATER MAIN. MINIMUM HORIZONTAL SEPARATION BETWEEN PARALLEL WATER MAINS AND SEWER PIPES (INCLUDING MANHOLES AND VAULTS) SHALL BE 10 FEET MEASURED FROM THE OUTSIDE OF THE PIPES, MANHOLES, OR VAULTS.

4. ALL WATER MAINS SHALL HAVE A MINIMUM OF (5) FIVE FEET OF COVER FROM THE TOP OF THE MAIN TO FINISHED GRADE. THE CONTRACTOR SHALL CHECK ALL FINISHED GRADE STAKES BEFORE TRENCHING TO ENSURE THAT ALL INSTALLED WATER MAINS WILL HAVE THE REQUIRED COVER.

5. THE SUPPLIER OF WATER MUST RECEIVE AT LEAST 48-HOUR ADVANCE NOTIFICATION REQUESTING SAMPLING SERVICES. SAMPLING WILL NOT BE PERFORMED PRIOR TO RECEIPT FROM A NEW YORK STATE LICENSED OR REGISTERED DESIGN PROFESSIONAL (ENGINEER, ARCHITECT, OR LAND SURVEYOR WITH A SPECIAL EXEMPTION UNDER SECTION 7208(N) OF THE EDUCATION LAW) CERTIFYING THAT THE WATER SUPPLY IMPROVEMENTS, TESTING AND DISINFECTION PROCEDURES WERE COMPLETED IN ACCORDANCE WITH THE APPROVED PLANS, REPORTS, SPECIFICATIONS, AND ANY APPROVED AMENDMENTS. A NYSDOH CERTIFIED LABORATORY WILL COLLECT SAMPLES FOR FREE CHLORINE RESIDUAL, TOTAL, AND FECAL COLIFORM AND 24-HOUR BACTERIAL PLATE COUNT. THE CERTIFICATE OF COMPLIANCE, TESTING, AND SAMPLING RESULTS SHALL BE PROVIDED TO THE CITY WATER MAINTENANCE SUPERVISOR AND DUTCHESS COUNTY DEPARTMENT OF HEALTH AS A CONDITION OF APPROVAL FOR OPERATION.

6. THE CONTRACTOR SHALL COORDINATE THE TESTING WITH THE WATER DEPARTMENT SO AS TO MAINTAIN THE AMOUNT OF SERVICE INTERRUPTION TO EXISTING USERS TO THE LEAST EXTENT PRACTICABLE. WATER MAIN INSTALLATION AND TESTING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE PROJECT ENGINEER OR HIS DESIGNEE AS NECESSARY TO MEET CONDITIONS IN NOTE 5 ABOVE.

7. THE WATER MAIN SHALL BE PRESSURE LEAKAGE TESTED IN ACCORDANCE WITH THE MINIMUM REQUIREMENTS OF THE AWWA STANDARD C600 (LATEST REVISION) OR IN ACCORDANCE WITH MORE STRINGENT REQUIREMENTS IMPOSED BY THE SUPPLIER OF WATER. TEST TO FIRST VALVE WITHIN BUILDING.

8. THE WATER MAIN SHALL BE DISINFECTED EQUAL TO AWWA STANDARD FOR DISINFECTING WATER MAINS DESIGNATION C651 (LATEST REVISION). FOLLOWING DISINFECTION, THE WATER MAIN SHALL BE FLUSHED UNTIL THE CHLORINE CONCENTRATION IN THE WATER LEAVING THE MAIN IS NO HIGHER THAN THAT GENERALLY PREVAILING IN THE SYSTEM. THE PROJECT ENGINEER OR HIS DESIGNEE SHALL ALSO WITNESS DISINFECTION AND FLUSHING.

9. ALL WATER MAIN FITTINGS NOT RECEIVING 24-HOUR CHLORINE DISINFECTION CONTACT TIME MUST BE SWAB-DISINFECTED 30 MINUTES PRIOR TO INSTALLATION.

10. THE SAMPLING POINT(S) MUST BE DECONTAMINATED BY FLAMING.

11. FIRE HYDRANTS ARE NOT ACCEPTABLE SAMPLING POINTS, UNLESS OTHERWISE APPROVED BY SITE ENGINEER AND CITY OF POUGHKEEPSIE WATER DEPARTMENT.

12. FIRE HYDRANT WEEP HOLES (DRAINS) SHALL BE PLUGGED WHEN GROUND WATER IS ENCOUNTERED WITHIN SEVEN FEET OF THE FINISHED GRADE. WHEN DRAINS ARE PLUGGED, THE BARREL'S MUST BE PUMPED DRY AFTER USE DURING FREEZING WEATHER. SUCH HYDRANTS SHALL BE IDENTIFIED BY MARKINGS AS APPROVED BY THE CITY OF POUGHKEEPSIE.

13. PROPOSED WATER METERS LOCATED WITHIN THE METER PIT OR BUILDING SHALL BE A COMPATIBLE REMOTE STYLE TYPE (SENSUS), AND SHALL BE APPROVED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT PRIOR TO INSTALLATION. WATER METER SHALL BE EQUIPPED WITH (RADIO TYPE REMOTE READER) TRANSCEIVER PROVIDED BY METER MANUFACTURER AND INSTALLED AND PROGRAMMED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT.

14. THE WATER LINE SHALL BE INSTALLED AT A CONTINUOUS GRADE WITH NO ABRUPT HIGH POINTS OR LOW POINTS.

15. FINAL WATER DISTRIBUTION SYSTEM AND CERTIFICATION IS SUBJECT TO REVIEW, REVISION AND APPROVAL BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT AND THE DCDOH PRIOR TO APPROVAL TO OPERATE.

16. ALL WATER MAINS AND RELATED APPURTENANCES SHALL BE CONSTRUCTED TO THE LATEST STANDARDS AND SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE.

17. THE WATER MAIN SHALL NOT BE PLACED INTO SERVICE UNTIL SO AUTHORIZED BY THE CITY OF POUGHKEEPSIE.

18. ALL WATER SERVICE CONSTRUCTION SHALL BE SUBJECT TO INSPECTION BY THE CITY WATER DEPARTMENT PRIOR TO BACKFILLING. BEDDING AND PIPE ZONE MATERIAL SHALL BE COMPOSED OF CRUSHED STONE OR LIGHT GRAVEL HAVING A GRADATION LIMIT OF 3/4" MINUS. AN ACCEPTABLE MATERIAL SHALL MEET THE FOLLOWING REQUIREMENT:

SIEVE DESIGNATION	% PASSING
3/4"	100
NO.40	0-70
NO. 200	0-10

19. TRENCH BACKFILL SHALL BE WELL-GRADED SOIL AND GRAVEL MATERIAL. ALL PARTICLES SHALL HAVE A GRADATION OF 2" OR LESS. AN ACCEPTABLE MATERIAL SHALL MEET THE FOLLOWING REQUIREMENT:

SIEVE DESIGNATION	% PASSING
2 INCH	100
1/4 INCH	30-65
NO. 40	5-40
NO. 200	0-15

20. BEDDING AND BACKFILL MATERIAL SHALL BE STOCKPILED IN AMOUNTS NECESSARY FOR REASONABLE BACKFILLING REQUIREMENTS. A SIEVE ANALYSIS OF BEDDING OR BACKFILL MAY BE REQUIRED AT THE REQUEST OF THE CITY OF POUGHKEEPSIE.

21. THE SITE UTILITY CONTRACTOR SHALL BE RESPONSIBLE FOR ALL BURIED PIPING TO THE LOCATION OF THE PROPOSED BUILDING CONNECTION POINT (I.E. INSIDE THE BUILDING). THIS INCLUDES THE TESTING AND CERTIFICATION OF ALL WATER SERVICE WORK FROM THE CITY WATER CONNECTION POINT TO THE PROPOSED BUILDINGS INTERIOR CONNECTION POINT.

22. INDICATOR TAPE SHALL BE PLACED 12" BELOW FINISHED GRADE DIRECTLY ABOVE ALL WATERLINES.

23. ALL COPPER WATER SERVICE PIPING INSTALLATION, BACKFILL AND TESTING SHALL BE REVIEWED AND APPROVED BY THE CITY OF POUGHKEEPSIE WATER MAINTENANCE SUPERVISOR OR HIS DESIGNEE. BEDDING, PIPE ZONE, AND BACKFILL MATERIAL MUST BE SAND ONLY.

24. THE PIPE SUPPORTS FOR THE METER PIT SHALL BE MADE OF GALVANIZED STEEL AND SHALL BE ADJUSTABLE. THE SUPPORTS ARE TO BE PLACED ONLY BENEATH SPOOL PIECES AND NOT UNDER CRITICAL EQUIPMENT, METERS, ETC.

25. THREE AS-BUILT DRAWINGS WHICH INCLUDE VERIFICATION OF THE WATER INFRASTRUCTURE WILL BE PROVIDED TO THE PLANNING DEPARTMENT FOR DISSEMINATION TO THE ENGINEERING AND WATER DEPARTMENTS PRIOR TO ANY EASEMENT DEDICATION TO THE CITY.

CITY OF POUGHKEEPSIE SANITARY SEWER NOTES

1. FLOOR DRAINS, IF CONSTRUCTED, SHALL BE CONNECTED TO THE SANITARY SEWER. FLOOR DRAINS DO NOT INCLUDE FOUNDATION/FOOTER DRAIN: ALL DISCHARGES TO THE SANITARY SEWER SHALL COMPLY WITH THE EFFLUENT LIMITS OF THE LOCAL AND/OR DUTCHESS COUNTY SANITARY CODE.

2. DEFLECTION TESTS SHALL BE PERFORMED ON ALL FLEXIBLE PIPES. THE TESTS SHALL BE CONDUCTED AFTER FINAL BACKFILL HAS BEEN IN PLACE AT LEAST 5 DAYS. NO PIPE SHALL EXCEED A DEFLECTION OF 5% IF THE DEFLECTION TEST IS TO BE RUN USING A RIGID BALL OR MANDREL, IT SHALL HAVE A DIAMETER EQUAL TO 95% OF THE INSIDE DIAMETER OF THE PIPE. THE TEST SHALL BE PERFORMED WITHOUT MECHANICAL PULLING DEVICES.

3. SANITARY SEWERS AND APPURTENANCES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE LATEST STANDARDS AND SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE. ALL SANITARY SEWER SYSTEM COMPONENTS SHALL BE INSTALLED BY OR UNDER THE SUPERVISION OF A CITY OF POUGHKEEPSIE LICENSED PLUMBER IN ACCORDANCE WITH THE CITY PLUMBING CODE.

4. MAJOR EARTHWORK SHALL BE COMPLETED PRIOR TO INSTALLATION OF ANY SANITARY SEWER MAINS AND APPURTENANCES. AIR CONNECTING SEWER LINES SHALL BE FLUSHED BEFORE TESTED.

5. MAXIMUM ALLOWABLE INFILTRATION OR EXFILTRATION SHALL NOT EXCEED 100 GALLONS PER INCH DIAMETER PER MILE OF PIPE PER DAY FOR THE SANITARY SEWER. IF AN AIR TEST IS USED, THE TEST, AS A MINIMUM, SHALL CONFORM TO THE PROCEDURE DESCRIBED IN THE ASTM -F-1417 (1992) ENTITLED "STANDARD PRACTICE FOR INSTALLATION ACCEPTANCE OF GRAVITY SEWER LINES USING LOW PRESSURE AIR" (RE-APPROVED 1998). SANITARY MANHOLES SHALL BE VISUALLY INSPECTED AND TESTED FOR LEAKAGE BY EXFILTRATION OR VACUUM. VACUUM TESTING OF MANHOLES SHALL COMPLY WITH THE METHOD OUTLINED IN THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION TECHNICAL INFORMATION PAMPHLET (TIP) NO.15 (REVISED).

6. SANITARY SEWER MAINS ARE TO BE POLYVINYL CHLORIDE (PVC) AND SANITARY LATERALS SHALL BE PVC, SDR-35, UNLESS OTHERWISE NOTED.

7. FINAL SEWER COLLECTION SYSTEM LAYOUT IS SUBJECT TO REVIEW, REVISION AND APPROVAL BY THE CITY OF POUGHKEEPSIE SEWER DEPARTMENT.

8. ALL SANITARY PIPE AND/OR MANHOLES SHALL BE A MINIMUM OF TEN (10) HORIZONTAL FEET FROM THE WATER MAIN. SANITARY PIPE SHALL HAVE A MINIMUM 18" SEPARATION FROM ANY WATER MAIN OR WATER SERVICE LINE. IF FOR SOME REASON THIS SEPARATION CANNOT BE ACHIEVED, SANITARY SEWER PIPE IN THE AREA SHALL BE SDR-26 PRESSURE RATED PIPE, (OR BE ENCASED PER THE DETAIL ON DN-3) AND ONE FULL LENGTH OF WATER MAIN SHALL BE CENTERED UNDER OR OVER THE SEWER. ALL SANITARY SEWER CONSTRUCTION SHALL BE TO SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE SEWER DEPARTMENT.

9. ALL SANITARY TESTING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE PROJECT ENGINEER, AND CERTIFICATES OF COMPLIANCE WITH THE INSTALLATION SPECIFICATIONS, TEST STANDARDS, APPROVED PLANS OR APPROVED AMENDMENTS SHALL BE PROVIDED TO THE APPROPRIATE SEWER AUTHORITY AND THE DCDOH AS A CONDITION OF APPROVAL FOR OPERATION.

10. ALL SANITARY SEWER CONSTRUCTION SHALL BE SUBJECT TO INSPECTION BY THE CITY SEWER SUPERINTENDENT PRIOR TO BACKFILLING. PIPE BEDDING AND PIPE ZONE MATERIAL SHALL BE COMPOSED OF CRUSHED STONE OR GRAVEL, FREE OF SOFT NONDURABLE PARTICLES WITH THE FOLLOWING GRADATION REQUIREMENTS:

SIEVE DESIGNATION	% PASSING
3/4"	100
NO.40	0-70
NO. 200	0-10

ALL TRENCH BACKFILL MATERIAL SHALL BE APPROVED BY THE SUPERINTENDENT OF SEWERS AND MUST MEET THE FOLLOWING GRADATION REQUIREMENT:

SIEVE DESIGNATION	% PASSING
2 INCH	100
1/4 INCH	30-65
NO.40	5-40
NO. 200	0-15

BEDDING AND BACKFILL MATERIAL SHALL BE STOCKPILED IN AMOUNTS NECESSARY FOR REASONABLE BACKFILLING REQUIREMENTS. A SIEVE ANALYSIS OF BEDDING OR BACKFILL MAY BE REQUIRED AT THE REQUEST OF THE CITY OF POUGHKEEPSIE.

11. ALL NEW SANITARY SEWER MANHOLE COVERS SHALL BE NOMINAL 26" DIAMETER CAST IRON AND SHALL READ "SANITARY SEWER". FRAMES SHALL BE 8" IN HEIGHT AND THE FRAME AND COVER SHALL BE SYRACUSE CASTINGS NO.1 009 OR AN APPROVED EQUAL.

12. INDICATOR TAPE SHALL BE PLACED 12" BELOW FINISHED GRADE DIRECTLY ABOVE ALL SANITARY LINES.

13. LOCATION OF SEWER LATERAL CLEAN OUTS ARE TO BE PLACED AS SHOWN ON THE APPROVED SITE PLAN AND NOT TO EXCEED EVERY 75' MEASURED FROM THE SEWER MAIN CONNECTION OR AS DETERMINED BY THE CITY OF POUGHKEEPSIE SUPERINTENDENT OF SEWERS WHERE LOCATIONS ARE NOT SPECIFICALLY SHOWN.

14. EXTERNAL DROP MANHOLES SHALL BE USED FOR SEWERS ENTERING AT AN ELEVATION OF 24 INCHES OR HIGHER AT THE INLET OF A SEWER MANHOLE.

15. THREE AS-BUILT DRAWINGS WHICH INCLUDE VERIFICATION OF THE SEWER INFRASTRUCTURE INCLUDING RIMS AND INVERTS WILL BE PROVIDED TO THE PLANNING DEPARTMENT FOR DISSEMINATION TO THE ENGINEERING AND SEWER DEPARTMENTS PRIOR TO ANY EASEMENT DEDICATION TO THE CITY.

COMPACTION AND BACKFILL NOTES

UNLESS OTHERWISE SPECIFIED OR APPROVED BY THE SITE ENGINEER, ALL SITE SUBGRADE AND BACKFILL FOR ALL STRUCTURES INCLUDING, BUT NOT LIMITED TO, PARKING LOT SUBGRADE, ROAD SUBGRADE, CONCRETE PADS AND SIDEWALKS, WATER LINES AND STRUCTURES, SEWER LINES AND STRUCTURES, STORM LINES AND STRUCTURES, TRASH PADS/ENCLOSURES, AND SITE ELECTRICAL AND CONDUIT, SHALL BE COMPACTED IN ACCORDANCE WITH THE FOLLOWING STANDARD.

METHODS OF CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION (NYSDOT) STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED MAY 1, 2008, AND ALL ADDENDA THERETO

DECOMPACTION OF SOILS IN RECLAIMED AREAS:

THESE PROCEDURES SHALL BE FOLLOWED PRIOR TO INSTALLATION OF TOP SOIL OR INFILTRATION PRACTICES IN ANY AREA PREVIOUSLY IMPERVIOUS OR COMPACTED BY COSTRUCTION EQUIPMENT. FOR ALL AREAS TO BE RECLAIMED FOR STORMWATER INFILTRATION, THE AREA SHALL BE MARKED OFF WITH ORANGE SAFETY FENCE AFTER DEMOLITION AND PRIOR TO DECOMPACTION TO PREVENT FURTHER COMPACTION OF THE UNDERLYING SOILS.

AREAS RECLAIMED AS TOP SOIL:

A. APPLY 3" OF COMPOST OVER SUBSOIL AFTER SUBGRADE LEVELS HAVE BEEN REACHED AND IMMEDIATELY PRIOR TO PLACING PLANTING SOILS.

B. THE ENTIRE SUBGRADE AREA SHALL BE LOOSENED TO A MINIMUM DEPTH OF 12 INCHES UTILIZING THE BUCKET OF A BACK HOE, CAT MOUNTED RIPPER, TILLER, OR EQUIVALENT EQUIPMENT. ROCK PICK ONLY UNTIL UPLIFTED STONE/ROCK MATERIAL OF FOUR INCHES AND LARGER SIZE HAVE BEEN CLEARED FROM THE SITE.

C. ANY SUBGRADE AREAS WHICH HAVE BECOME HEAVILY COMPACTED (DEFINED AS EXCEEDING 86%-88% COMPACTION ASTM 698 STANDARD PROCTOR) INCLUDING, BUT NOT LIMITED TO, TEMPORARY PARKING AREAS, MATERIAL STOCKPILE AREAS, TEMPORARY ROADWAYS, CONSTRUCTION AREAS AND AREAS AROUND THE BUILDING, OTHER CONSTRUCTION AREAS, AREAS SHOWN ON THE PLANS, OR AREAS IDENTIFIED BY THE DESIGN PROFESSIONAL SHALL BE DEEP-SCARIFIED. IMMEDIATELY PRIOR TO PLACING SOILS, HEAVILY COMPACTED AREAS SHALL BE LOOSENED TO A MINIMUM DEPTH OF 18 INCHES USING THE TEETH OF A BACK HOE OR OTHER SUITABLE EQUIPMENT. FREQUENCY OF COMPACTION TESTS SHALL BE ONE PER 500 SQUARE FEET.

D. CONFIRM THAT THE SUBGRADE IS AT THE PROPER ELEVATION AND THAT NO FURTHER EARTHWORK IS REQUIRED TO BRING THE SUBGRADE TO PROPER ELEVATIONS. PROVIDE A REPORT TO THE DESIGN PROFESSIONAL THAT THE SUBGRADE HAS BEEN PLACED TO THE REQUIRED ELEVATIONS, HAS BEEN DECOMPACTED ACCORDING TO THE CONTRACT DOCUMENTS AND IS READY FOR INSPECTION AT LEAST 3 DAYS PRIOR TO PLACING INFILTRATION PRACTICES. PERFORM NO WORK UNTIL ELEVATIONS HAVE BEEN CONFIRMED AND THE AREA HAS BEEN ACCEPTED BY THE OWNER'S REPRESENTATIVE.

E. AFTER THE SOILS HAVE BEEN LOOSENED AND INSPECTED, TOPSOIL MAY BE SPREAD BY USING A WIDE-TRACK BULLDOZER SIZE D-5 OR SMALLER OR MAY BE DUMPED AND SPREAD WITH THE BUCKET OF A BACKHOE FROM THE EDGE OF THE LOOSENED AREA. NO RUBBER-TIRED EQUIPMENT OR HEAVY EQUIPMENT EXCEPT FOR A SMALL BULLDOZER SHALL PASS OVER THE SUBSOILS (SUBGRADE) AFTER THEY HAVE BEEN LOOSENED. IF THE CONTRACTOR PLANS TO UTILIZE SUCH AREAS FOR ANY USE OF HEAVY EQUIPMENT, THIS SHOULD BE CARRIED OUT PRIOR TO BEGINNING THE PROCESS OF LOOSENING SOILS OR FILLING IN THAT AREA, OR IT WILL HAVE TO BE RESCARIFIED AND MEET THIS SPECIFICATION REQUIREMENT.

AREAS RECLAIMED FOR STORMWATER INFILTRATION PRACTICES:

A. EXCAVATE AREA TO THE DEPTH OF THE PROPOSED BOTTOM OF THE INFILTRATION PRACTICE.

B. THE ENTIRE SUBGRADE AREA SHALL BE LOOSENED TO A MINIMUM DEPTH OF 12 INCHES BELOW PROPOSED SUBGRADE UTILIZING THE BUCKET OF A BACK HOE, CAT MOUNTED RIPPER, TILLER, OR EQUIVALENT EQUIPMENT. ROCK PICK UNTIL UPLIFTED STONE/ROCK MATERIAL OF FOUR INCHES AND LARGER SIZE HAVE BEEN CLEARED FROM THE SITE.

C. ANY SUBGRADE AREAS WHICH REMAIN HEAVILY COMPACTED (DEFINED AS EXCEEDING 86%-88% COMPACTION ASTM 698 STANDARD PROCTOR), AS SHOWN ON THE PLANS, OR AREAS IDENTIFIED BY THE DESIGN PROFESSIONAL SHALL BE DEEP-SCARIFIED. IMMEDIATELY PRIOR TO PLACING SOILS, HEAVILY COMPACTED AREAS SHALL BE LOOSENED TO A MINIMUM DEPTH OF 18 INCHES USING THE TEETH OF A BACK HOE OR OTHER SUITABLE EQUIPMENT. FREQUENCY OF COMPACTION TESTS SHALL BE ONE PER 500 SQUARE FEET.

D. CONFIRM THAT THE SUBGRADE IS AT THE PROPER ELEVATION AND THAT NO FURTHER EARTHWORK IS REQUIRED TO BRING THE SUBGRADE TO PROPER ELEVATIONS. PROVIDE A REPORT TO THE DESIGN PROFESSIONAL THAT THE SUBGRADE HAS BEEN PLACED TO THE REQUIRED ELEVATIONS, HAS BEEN DECOMPACTED ACCORDING TO THE CONTRACT DOCUMENTS AND IS READY FOR INSPECTION AT LEAST 3 DAYS PRIOR TO PLACING INFILTRATION PRACTICES. PERFORM NO WORK UNTIL ELEVATIONS HAVE BEEN CONFIRMED AND THE AREA HAS BEEN ACCEPTED BY THE OWNER'S REPRESENTATIVE.

E. AFTER THE SOILS HAVE BEEN LOOSENED AND INSPECTED, INFILTRATION PRACTICES MAY BE INSTALLED USING A WIDE-TRACK BULLDOZER SIZE D-5 OR SMALLER OR MAY BE PLACED, DUMPED, OR SPREAD WITH THE BUCKET OF A BACKHOE FROM THE EDGE OF THE LOOSENED AREA. NO RUBBER-TIRED EQUIPMENT OR HEAVY EQUIPMENT EXCEPT FOR A SMALL BULLDOZER SHALL PASS OVER THE SUBSOILS (SUBGRADE) AFTER THEY HAVE BEEN LOOSENED. IF THE CONTRACTOR PLANS TO UTILIZE SUCH AREAS FOR ANY USE OF HEAVY EQUIPMENT, THIS SHOULD BE CARRIED OUT PRIOR TO BEGINNING THE PROCESS OF LOOSENING SOILS OR FILLING IN THAT AREA, OR IT WILL HAVE TO BE RESCARIFIED AND MEET THIS SPECIFICATION REQUIREMENT.

F. WHEN INFILTRATION PRACTICES ARE LOCATED BELOW PAVEMENT THE AREA SHALL REMAIN FREE OF LARGE VEHICLES UNTIL THE PAVEMENT SUBBASE HAS BEEN INSTALLED.

G. FOR REFERENCE OF DECOMPACTION NOTES, SEE NYS DESIGN MANUAL SECTION 5.1.6 FOR DEEP RIPPING AND DECOMPACTION OF EXISTING AREAS THAT ARE PROPOSED FOR RESTORATION.

CITY OF POUGHKEEPSIE EROSION AND SILTATION CONTROL NOTES

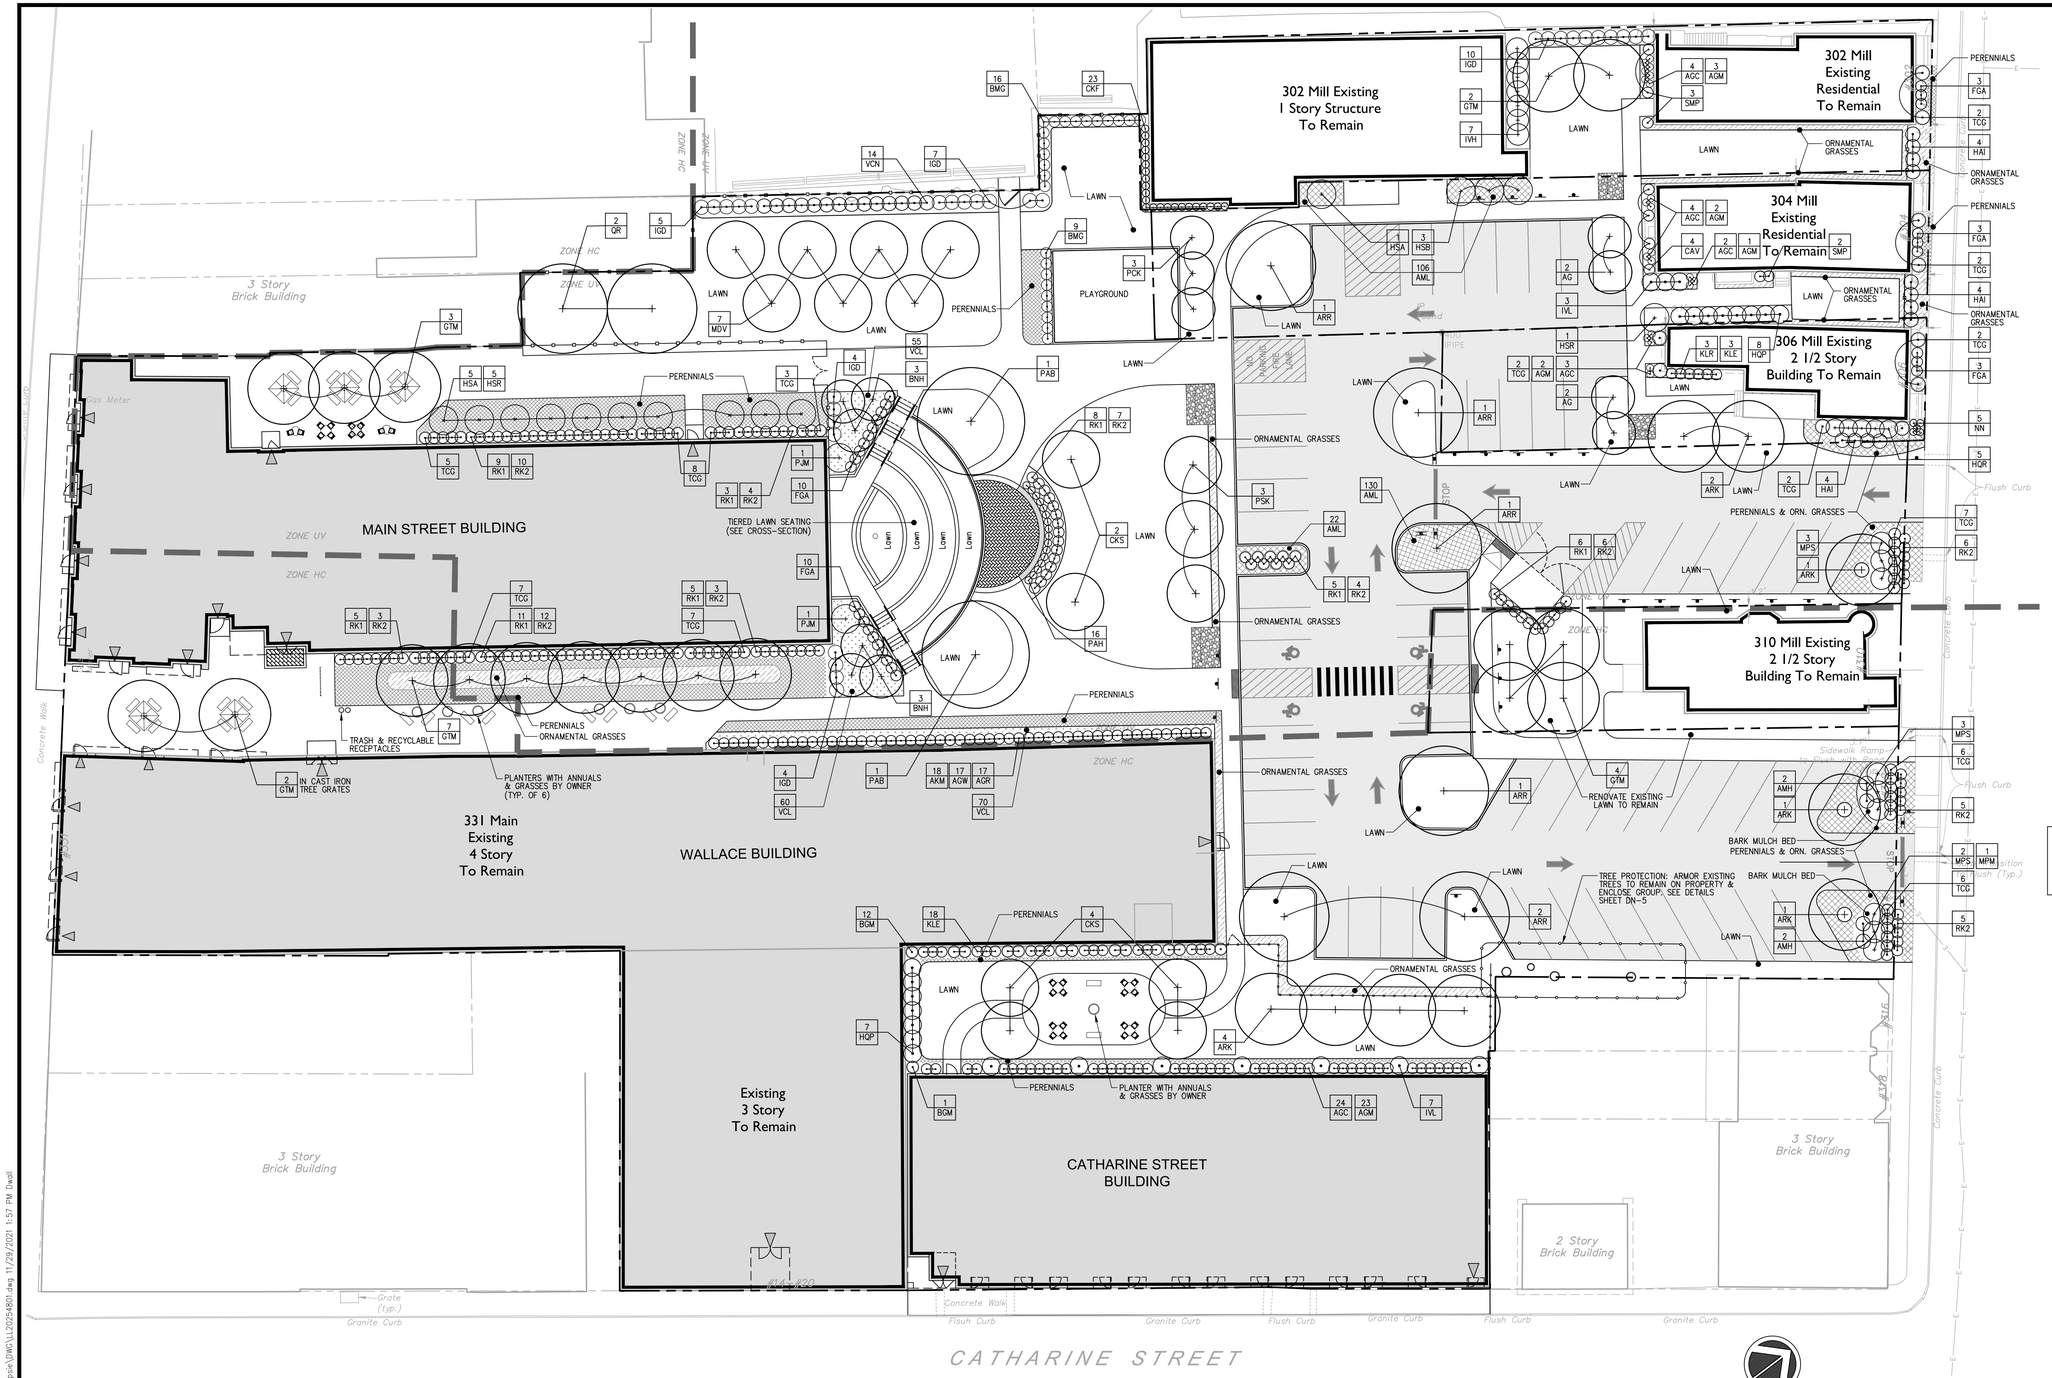
1. All unvegetated areas in excess of 10%, per direction of the Engineer, shall have temporary seeding of fast germinating rye, 10 to 15 #'s per 1,000 sq. ft.
2. Graded areas - upper elevations: Provide temporary drainage swales, 1% grade min., to direct runoff away from construction sites. Discharge areas to be acceptable to the Engineer.
3. Graded areas - lower elevations: Provide drainage swales, 1% min. grades, with staked and secured hay bale siltation. Location of hay bales and discharge areas per approval of Engineer.
4. Permanent seeded areas for erosion control: Mixture of perennial rye and blue and red fescue grasses (50/50), 15 to 25 #'s per 1,000 sq. ft., mulching at 5#'s per 1,000 sq. ft., fertilizer - 5.10.5 at 5#'s per 1,000 sq. ft. (if determined necessary by Engineer), with pegging and netting for grades in excess of 15%.
5. All permanent drainage interceptor swales to be seeded per Item 4 also.
6. All erosion control shall be in accordance with the latest "Urban Erosion and Sediment Control Guidebook" of the Dutchess County Soil and Water Conservation District.
7. All areas shall be seeded and mulched as soon as possible.
8. Grade as needed and feasible to permit the use of conventional equipment for seed bed preparation, seeding and mulch application.
9. Scarify all compacted soils prior to applying topsoil.
10. Apply topsoil per Standard #6 Table 6.1 of the Soil Erosion Control Guide Book.
11. Seed mix shall be as follows:
    Ky. Blue grass 20 lbs/ac.
    Creeping Red Fescue 40 lbs/ac.

GENERAL NOTES

1. ALL CONSTRUCTION SHALL COMPLY WITH CITY OF POUGHKEEPSIE REQUIREMENTS AND SPECIFICATIONS.
2. THE CONTRACTOR IS RESPONSIBLE FOR OBTAINING ALL NECESSARY PERMITS REQUIRED BY GOVERNMENT AGENCIES PRIOR TO CONSTRUCTION. THE CONTRACTOR SHALL POST ALL BONDS, PAY ALL FEES, PROVIDE PROOF OF INSURANCE AND PROVIDE TRAFFIC CONTROL NECESSARY FOR THIS WORK.
3. REFER TO OTHER PLANS AND DETAIL SHEETS FOR ADDITIONAL INFORMATION. THE CONTRACTOR SHALL VERIFY ALL SITE CONDITIONS IN THE FIELD AND CONTACT THE SITE ENGINEER IF THERE ARE ANY QUESTIONS OR CONFLICTS REGARDING THE CONSTRUCTION DOCUMENTS AND/OR FIELD CONDITIONS SO THAT APPROPRIATE REVISIONS CAN BE MADE PRIOR TO BIDDING. ANY CONFLICT BETWEEN DRAWINGS AND THE SPECIFICATIONS SHALL BE CONFIRMED WITH THE LOCAL CONSTRUCTION MANAGER PRIOR TO BIDDING.
4. REFER TO THE DETAIL SHEETS FOR PAVEMENT, CURBING, AND SIDEWALK INFORMATION.
5. ALTERNATIVE METHODS AND PRODUCTS OTHER THAN THOSE SPECIFIED MAY BE USED IF REVIEWED AND APPROVED BY THE SITE ENGINEER, AND THE APPROPRIATE REGULATORY AGENCIES PRIOR TO INSTALLATION.
6. THE CONTRACTOR SHALL RESTORE ANY OF THE FOLLOWING IF THEY ARE NOTED TO REMAIN: UTILITY STRUCTURE, PIPE, UTILITY, PAVEMENT, CURBS, SIDEWALKS, OR LANDSCAPED AREAS DISTURBED DURING CONSTRUCTION TO THEIR ORIGINAL CONDITION OR BETTER TO THE SATISFACTION OF THE CITY OF POUGHKEEPSIE.
7. TRAFFIC CONTROL MEASURES SHALL BE UTILIZED IN ACCORDANCE WITH CITY OF POUGHKEEPSIE AND NYSDOT.
8. PAVEMENT MARKINGS SHALL BE FAST DRYING TYPE IN ACCORDANCE WITH CITY OF POUGHKEEPSIE SPECIFICATIONS.
9. THE CONTRACTOR SHALL SUBMIT SHOP DRAWINGS OF ALL PRODUCTS, MATERIALS AND PLANT SPECIFICATIONS TO THE SITE ENGINEER AND OWNER FOR REVIEW AND APPROVAL PRIOR TO FABRICATION OR DELIVERY TO THE SITE. ALLOW A MINIMUM OF 14 WORKING DAYS FOR REVIEW. APPROVED SHOP DRAWINGS WILL BE PROVIDED BY THE ENGINEER AND COPIED TO THE CITY OF POUGHKEEPSIE.
10. THE CONTRACTOR SHALL PROVIDE AND MAINTAIN TRAFFIC DEVICES FOR PROTECTION OF VEHICLES AND PEDESTRIANS CONSISTING OF DRUMS, BARRIERS, SIGNS, LIGHTS, FENCES AND UNIFORMED TRAFFIC MEN AS REQUIRED OR ORDERED BY THE ENGINEER OR REQUIRED BY THE LOCAL GOVERNING AUTHORITIES. CONTRACTOR SHALL MAINTAIN ALL TRAFFIC LANES AND PEDESTRIAN WALKWAYS AT ALL TIMES UNLESS WRITTEN APPROVAL FROM THE CITY AND GOVERNING AUTHORITIES IS GRANTED.
11. THE PROJECT DRAWINGS ARE GENERALLY DIAGRAMMATIC IN INDICATING THE PRESENCE OF EXISTING UNDERGROUND UTILITIES. INFORMATION ON EXISTING UTILITIES HAS BEEN COMPILED FROM AVAILABLE INFORMATION INCLUDING UTILITY COMPANY AND MUNICIPAL RECORD MAPS AND FIELD SURVEY AND IS NOT GUARANTEED TO BE CORRECT OR COMPLETE. UTILITIES ARE SHOWN TO ALERT THE CONTRACTOR OF THEIR PRESENCE AND THE CONTRACTOR IS SOLELY RESPONSIBLE FOR DETERMINING ACTUAL LOCATIONS AND ELEVATIONS OF ALL UTILITIES AND SERVICES. WHEN THE UTILITIES ARE TO BE LEFT IN PLACE, THE CONTRACTOR SHALL PROVIDE ADEQUATE MEANS OF SUPPORT AND PROTECTION DURING THE EXCAVATION AND BACKFILLING OPERATIONS.
12. PRIOR TO DEMOLITION OR CONSTRUCTION THE CONTRACTOR SHALL CONTACT "CALL BEFORE YOU DIG" AT 1-800-962-7962 AT LEAST 72 HOURS BEFORE COMMENCEMENT OF WORK TO VERIFY ALL UTILITY LOCATIONS. CONTRACTOR SHALL NOT INTERRUPT EXISTING UTILITIES SERVICING FACILITIES OCCUPIED AND USED BY THE OWNER OR OTHERS DURING OCCUPIED HOURS.
13. IF ANY UNCHARTED OR INCORRECTLY CHARTED EXISTING PIPING OR OTHER UTILITY IS UNCOVERED DURING EXCAVATION, THE CONTRACTOR SHALL CONSULT THE SITE ENGINEER IMMEDIATELY FOR DIRECTIONS BEFORE PROCEEDING FURTHER WITH THE WORK.
14. STORAGE OF FLAMMABLE AND HAZARDOUS MATERIALS SHALL BE IN COMPLIANCE WITH THE NYS FIRE AND BUILDING CODE.
15. CONTRACTOR TO PROVIDE SITE ENGINEER WITH SUBMITTALS. ONCE APPROVED, COPIES WILL BE SUPPLIED TO CITY ENGINEER AND APPROPRIATE CITY DEPARTMENTS.
16. NO HERBICIDES OR PESTICIDES WILL BE USED DURING THE OPERATION OF THE SITE.

EROSION AND SEDIMENT CONTROL PLAN

1. LAND DISTURBANCE WILL BE KEPT TO A MINIMUM; RESTABILIZATION WILL BE SCHEDULED AS SOON AS PRACTICABLE.
2. SILTATION FENCE WILL BE INSTALLED AT ALL CULVERT OUTLETS AND ALONG THE TOE OF ALL CRITICAL CUT AND FILL SLOPES.
3. ALL EROSION AND SEDIMENTATION CONTROL MEASURES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE STANDARDS AND SPECIFICATIONS OF THE NEW YORK STATE EROSION & SEDIMENT CONTROL "BLUE BOOK" 2005.
4. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE INSTALLED PRIOR TO CONSTRUCTION WHENEVER POSSIBLE.
5. ALL CONTROL MEASURES SHALL BE MAINTAINED IN EFFECTIVE CONDITION THROUGHOUT THE CONSTRUCTION PERIOD.
6. ADDITIONAL CONTROL MEASURES SHALL BE INSTALLED DURING THE CONSTRUCTION PERIOD, IF NECESSARY OR REQUIRED.
7. SEDIMENT REMOVED FROM CONTROL STRUCTURES WILL BE DISPOSED OF IN A MANNER WHICH IS CONSISTENT WITH THE INTENT OF THE PLAN.
8. DUST CONTROL AND ANTI-TRACKING MAINTENANCE TO BE ADDRESSED AND RESOLVED ON A DAILY BASIS.



INSTALLATION OF SEDIMENTATION AND EROSION CONTROL MEASURES

I. SILTATION FENCE

A. DIG A SIX INCH TRENCH ON THE UPHILL SIDE OF THE DESIGNATED FENCE LINE LOCATION.

B. POSITION THE POST AT THE BACK OF THE TRENCH (DOWNHILL SIDE), AND HAMMER THE POST AT LEAST 2.0 FEET INTO THE GROUND.

C. LAY THE BOTTOM SIX INCHES OF THE FABRIC INTO THE TRENCH TO PREVENT UNDERMIN

PLANTING NOTES:

1. THE LANDSCAPE PLAN AND RELATED DETAILS ARE FOR LANDSCAPING INFORMATION ONLY. PLEASE REFER TO THE SITE, GRADING & EROSION CONTROL PLANS FOR ALL OTHER INFORMATION.
2. THE CONTRACTOR SHALL GUARANTEE THAT ALL PLANTS, TREES, AND SHRUBS SHALL BE HEALTHY AND FREE OF DISEASE FOR A PERIOD OF ONE YEAR AFTER SUBSTANTIAL COMPLETION AND ACCEPTANCE BY OWNER OR LANDSCAPE ARCHITECT. CONTRACTOR SHALL REPLACE ANY DEAD OR UNHEALTHY PLANTS AT CONTRACTOR'S EXPENSE. PLANT MATERIAL REPLACEMENTS SHALL BE GUARANTEED FOR ONE FULL YEAR FROM DATE OF REPLACEMENT. FINAL ACCEPTANCE SHALL BE MADE IF ALL PLANTS MEET THE GUARANTEE REQUIREMENTS INCLUDING MAINTENANCE. MAINTENANCE RESPONSIBILITIES INCLUDE CULTIVATING, SPRAYING, WEEDING, WATERING, TIGHTENING GUYS, PRUNING, FERTILIZING, MULCHING, AND ANY OTHER OPERATIONS NECESSARY TO MAINTAIN PLANT VIABILITY. MAINTENANCE SHALL BEGIN IMMEDIATELY AFTER PLANTING AND CONTINUE UNTIL THE END OF THE ONE YEAR GUARANTEE PERIOD.
3. THE CONTRACTOR SHALL SUPPLY ALL LABOR, PLANTS, AND MATERIALS IN QUANTITIES SUFFICIENT TO COMPLETE THE WORK SHOWN ON THE DRAWINGS AND LISTED IN THE PLANT SCHEDULE. IN THE EVENT OF A DISCREPANCY BETWEEN QUANTITIES SHOWN IN THE PLANT SCHEDULE AND THOSE REQUIRED BY THE DRAWINGS, THE LARGER SHALL APPLY.
4. ALL SHRUB MASSINGS SHALL BE MULCHED TO A DEPTH OF 4" WITH SHREDDED HARDWOOD BARK MULCH.
5. NO PLANT SHALL BE PLACED IN THE GROUND BEFORE ROUGH GRADING HAS BEEN COMPLETED AND APPROVED BY ENGINEER. STAKING THE LOCATION OF ALL TREES AND SHRUBS SHALL BE COMPLETED PRIOR TO PLANTING FOR APPROVAL BY THE OWNER OR LANDSCAPE ARCHITECT. STAKING OF THE INSTALLED TREE MUST BE COMPLETED THE SAME DAY AS IT IS INSTALLED. ALL TREES SHALL BE STAKED OR GUYED PER DETAIL. SEE SHEET DN-1 FOR PLANTING DETAILS.
6. COORDINATE PLANT MATERIAL LOCATIONS WITH SITE UTILITIES. SEE SITE LAYOUT, GRADING AND UTILITY DRAWINGS FOR STORM, SANITARY AND WATER LINES. SEE LIGHTING PLAN FOR ELECTRICAL AND LIGHTING LAYOUT AND DETAILS. UTILITY LOCATIONS ARE APPROXIMATE. EXERCISE CARE WHEN DIGGING IN AREAS OF POTENTIAL CONFLICT WITH UNDERGROUND OR OVERHEAD UTILITIES. THE CONTRACTOR IS RESPONSIBLE FOR ANY DAMAGE DUE TO CONTRACTOR'S NEGLIGENCE AND SHALL REPLACE OR REPAIR ANY DAMAGE AT CONTRACTOR'S EXPENSE.
7. LANDSCAPE PLANTING PITS MUST BE FREE DRAINING. PAVEMENT, COMPACTED SUBGRADE, AND BLASTED ROCK SHALL BE REMOVED FROM WITHIN TRAFFIC ISLANDS TO BE LANDSCAPED TO A DEPTH OF 2' OR TO A GREATER DEPTH IF REQUIRED BY PLANTING DETAILS OR SPECIFICATIONS. REPLACE SOIL WITHIN ISLANDS WITH MODERATELY COMPACTED LOAM OR SANDY LOAM FREE FROM STONES AND RUBBISH 1" OR GREATER IN DIAMETER AND ANY OTHER MATERIAL HARMFUL TO PLANT GROWTH AND DEVELOPMENT. PLANTING INSTALLATION WITHIN ISLANDS SHALL BE AS DETAILED AND CONTAIN PLANTING MIX AS SPECIFIED.
8. TIME OF PLANTING: NEW PLANT MATERIALS SHALL BE INSTALLED BETWEEN APRIL 1 AND JUNE 1, OR AFTER SEPTEMBER 15TH AND NO LATER THAN OCTOBER 31ST.
9. PLANTING SOIL MIXTURE FOR TREES AND SHRUBS:
   - 1 PART PEAT MOSS
   - 3 PARTS TOPSOIL
   - FERTILIZER/LIME (APPLY AS RECOMMENDED BY SOIL ANALYSIS)
   - MYCORHIZA INOCULANT – "TRANSPLANT 1–STEP" AS MANUFACTURED BY ROOTS, INC. OR APPROVED EQUAL.
     USE PER MANUFACTURER'S RECOMMENDATIONS FOR TREES AND SHRUBS.
10. TOPSOIL SHALL BE INSTALLED AT A MINIMUM DEPTH OF 6" IN LAWN AREAS. CONTRACTOR SHALL SUBMIT TOPSOIL TO A CERTIFIED TESTING LABORATORY TO DETERMINE pH, FERTILITY, ORGANIC CONTENT AND MECHANICAL COMPOSITION. THE CONTRACTOR SHALL SUBMIT THE TEST RESULTS FROM REGIONAL EXTENSION OFFICE OF USDA TO THE OWNER OR LANDSCAPE ARCHITECT FOR REVIEW AND APPROVAL. CONTRACTOR SHALL INCORPORATE AMENDMENTS FOR GOOD PLANT GROWTH AND PROPER SOIL ACIDITY RECOMMENDED FROM THE TOPSOIL TEST.
11. LAWN SEEDING MIXTURE:

    15% KENTUCKY BLUEGRASS (POA PRATENSIS – SINGLE VARIETY)
    15% PERENNIAL RYEGRASS (LOLIUM PERENNE)
    30% CREEPING RED FESCUE (FESTUCA RUBRA)
    25% CHEWINGS FESCUE (FESCTUCA RUBRA "JAMESTOWN II")
    15% HARD FESCUE (FESTUCA OVINA "RELIANT II")

    SEEDING RATE: 4.5 LBS PER 1,000 S.F. (ADD 10% TO QUANTITY IF HYDROSEEDED).

    SEEDING DATES: AUGUST 15 – OCTOBER 1 AND APRIL 15 – JUNE 15 UNLESS OTHERWISE APPROVED BY THE OWNER OR LANDSCAPE ARCHITECT.
12. ALL SLOPES GREATER THAN 3:1 RECEIVING A GRASS SEEDING MIXTURE SHALL BE COVERED WITH AN EROSION CONTROL BLANKET.
13. ALL DISTURBED AREAS NOT OTHERWISE DEVELOPED SHALL BE SEEDED WITH THE LAWN SEEDING MIXTURE.
14. TREE PROTECTION: PRIOR TO THE START OF CONSTRUCTION OR EXCAVATION, TREES TO BE RETAINED SHALL BE PROTECTED BY SILT FENCE, SNOW FENCE, CONSTRUCTION FENCE, OR EQUAL, WHICH WILL BE PLACED AT THE DRIP LINE OR SEVERAL FEET BEYOND. HOWEVER, THE FENCING SHALL NOT CROSS PUBLIC SIDEWALKS. NO STORAGE OR STOCKPILING OF CONSTRUCTION MATERIALS, DEBRIS OR EQUIPMENT SHALL OCCUR WITHIN THE FENCED AREA."

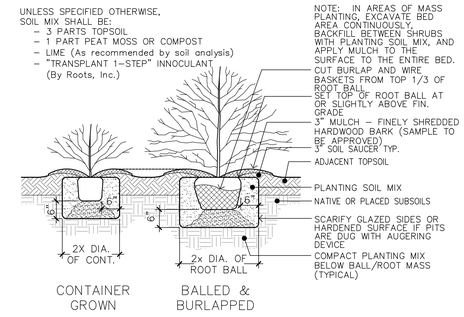
TREE PLANTING
Scale 1/2" = 1'–0"



SECTION THROUGH PERENNIAL BED

PERENNIAL NOTES:
1. BULB/CORM PERENNIALS TO BE PLANTED IN FALL. POTTED PERENNIALS MAY BE PLANTED APRIL 15 TO OCTOBER 1.
2. ROTOTILL FERTILIZER AND LIME INTO SOIL PRIOR TO PLANTING AND IN ACCORDANCE TO SOIL ANALYSIS RECOMMENDATIONS.
3. DO NOT OVER COMPACT PLANTING BED. WATER THOROUGHLY AFTER PLANTING BULBS.
4. ADJUST PLANTING DEPTH AS RECOMMENDED BY BULB SUPPLIER.
5. PROVIDE DRAINAGE AS REQUIRED (PERF PIPE 4" ADS) WHEN SUBGRADE IS CLASSIFIED AS A HEAVY SOIL OR EXCESSIVELY COMPACTED.

UNLESS SPECIFIED OTHERWISE, PERENNIAL BED SOIL MIX SHALL BE:
– 3 PARTS TOPSOIL
– 1 PART MANURE (WEED FREE)
– 1 PART PEAT MOSS OR COMPOST
– LIME (As recommended by soil analysis)
– "MILORGANITE" AT 5 LBS. PER 100 SF.

***See page 4 for LC8SLCP line art**

APPLICATIONS:
LiteFrame Commercial LC8SL is a 8" commercial grade LED downlight with available outputs between 1000-1800 lumens. This is suitable to replace most CFL downlighting applications, while realizing substantial energy and maintenance savings. Rated for a minimum of 50,000 hours life (70% lumen maintenance) with ambient plenum temperatures up to 35°C. Free Air Flow around the fixture is required for optimal life performance. This product is not recommended for use with 3rd party "FIREHAT" or insulation barriers.

HOUSING:
One-piece 22 gauge non-corrosive steel platform. Pre-wired J-box with snap-on cover for easy access. Snap-in connection from driver compartment allows easy installation of light engine/trim assembly and can be upgraded to accommodate technology improvements. Approved for 8 (4 in/4 out) No. 12 AWG conductors rated for 90°C through wiring.

REFLECTOR:
High purity aluminum, Alzak, iridescence suppressed, semi-diffuse reflector. Self-trim standard. Painted white self-trim (WT) available as option.

LED LIGHT ENGINE:
The LC8SL uses mid power Nichia LEDs, specifically mixed to provide a minimum of 80 CRI with 3 SDCM color consistency. The use of multiple mid power LEDs allows for optimal thermal management by effectively spreading the heat over a larger area and eliminating hot spots on the LEDs. A diffuse, yet highly transmissive lens obscures the view of the LEDs and creates a smooth, even look from below. The light engine is available in multiple Kelvin temperatures and the system is designed to provide optimal life and lumen maintenance (50,000 hours at 70% Lumen maintenance). The reflector/light engine assembly is mechanically retrained to the housing.

LED DRIVER:
The LC8SL utilizes a constant current LED driver. This same driver is capable of running all three different lumen outputs, resulting in a reduction of housing skus and simplified specification. The driver is UL8750, Class II compliant and universal 120V-277V.

DIMMING:
Comes standard with flicker-free 0-10V dimming to 10%. 0-10V to 1% dimming option is also available. See list of compatible dimmers on page 3. For the sizing of the control circuit, the dimming circuit may require up to 2mA of sink current.

INSTALLATION:
Light commercial bar hangers included. Universal adjustable mounting brackets also accept ½" EMT conduit or ½" or ¾" tubing channel (by others) or Prescolite 24" bar hangers (B24 or B6).

CERTIFICATIONS:
CSA certified to US and Canadian safety standards. Suitable for wet locations (SM and EMR damp location). ENERGY STAR Qualified.
This product qualifies as a "designated country construction material" per FAR 52.225-11 Buy American-Construction. Materials under Trade Agreements effective 6/10/2020. See Buy American Solutions.

WARRANTY:
5 year warranty. See www.prescolite.com for details.

Order housing, reflector, and accessories separately

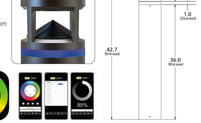
DATE: 5-28-21 LOCATION: 1234 Route 9G, Hyde Park, NY
TYPE: B PROJECT: Key Construction
CATALOG #: PA7R-CT-NU-3HS-12L-020-3K7-42A-DBS-x-UNV-x

FEATURES
- Traditional or Performance Optics
- Bluetooth® enabled RGBW accent
- Integral NEMA 3R Enclosure
- Dual receptacle power panel
- PA System capability
- IP65 optical system

DIMENSIONS



ADDITIONAL INFORMATION

LUMINOUS ACCENT:
- The Luminous Accent option adds an additional 1" / 25.4mm to the overall fixture height and may be controlled via wired DMX RDM or Bluetooth® wireless. The Luminous Accent shall be WDS.

HUBBELL LIGHTING RGBW REMOTE APP
- The Hubbell Lighting RGBW Remote application may be downloaded free of charge from the Apple App Store or Google Play.
- Color selection and adjustment.
- Camera function for color matching.
- Intensity slider for dimming/ramping up.
- Save and rename up to 10 presets.
- Group and rename fixtures.
- Fixture is password protected, refer to instructions to set unique password.

Specifications

J-box in wall by others
Shallow Cutoff Face Surface Mount

WF23 with LED

Light distribution
Shallow Cutoff Face

Surface Mount: Die-cast, low copper (<0.6% Cu) aluminum alloy with double side walls. Zinc plated steel mounting plate supplied for mounting to standard 3" or 4" junction box.

Face Plate: Die-cast, low copper (<0.6% Cu) aluminum alloy with vertical and horizontal double rifts covering the full hemisphere. Ribs are minimum ⅝" depth and ⅜" thickness. Secures to housing with four stainless steel captive socket head screws.
Shallow Cutoff Face: Solid upper half protruding 3¾" from housing and concave lower half.

Lens: Flat tempered glass, ⅜" minimum thickness with internal sandblast. Retained in face plate and sealed with a one-piece silicone gasket.

LED Optical System: A total of 9 LED emitters configured in a rectangular array comprised together as a module. One (1) module for 9 LED version and two (2) modules for 18 LED version. Available in 580nm, 3000K, 4200K and 5100K.

LED Driver: Rated for 9 or 18 LED, Universal voltage from 120 to 277V with a ±10% tolerance. -40°F starting temperature. All drivers are Underwriters Laboratories recognized.

Finish: Each luminaire receives a fade and abrasion resistant, electrostatically applied, thermally cured, triglycidal isocyanurate (TGIC) polyester powdercoat finish. Standard colors include (BL) Black, (DB) Dark Bronze, (WH) White, (PS) Platinum Silver, (SG) Stealth Gray, (LG) Light Gray, and (CC) Custom Color (Include RAL#.).

Finishing Items: Electrical modules and face plates. Each set of finishing items shall be in one container, clearly marked with the fixture catalog number.

CAUTION: Fixtures must be grounded in accordance with national, state, and/or local electrical codes. Failure to do so may result in serious personal injury.

SPECIFICATIONS

CONSTRUCTION
- Low copper aluminum alloy die-casting is designed as one-piece with internal cooling fins.
- Solid, cast aluminum wall creates a thermal barrier between the optical and electrical compartments.
- Molded silicone gasket throughout insures the sealing between the two compartments and provides ingress protection.
- Housing is designed with integral LED heat sink utilized for thermal transfer and for securing the location of each LED module.
- IK09 rated enclosure protects electrical equipment against external mechanical impacts.
- All external fasteners are stainless steel.
- One-piece low copper aluminum alloy die-cast lens frame is secured to housing with 6 screws.

OPTICS
- LEDs mount to a metal printed circuit board assembly (MCPCB).
- Optical lenses are clear injection molded PMMA acrylic.
- Optional Backlight Control on each LED module to completely control unwanted backlight.

INSTALLATION
- Fixtures must be grounded in accordance with national, state and/or local electrical codes. Failure to do so may result in serious personal injury.

ELECTRICAL
- Universal voltage, 120 through 277V with a ±10% tolerance. Driver is Underwriters Laboratories listed.
- High voltage configurations, 347/480. Driver has a 0-10V dimming interface for multi-level illumination options. Driver is Underwriters Laboratories listed.
- "Thermal Shield", secondary side, thermistor provides protection for the sustainable life of LED module and electronic components
- Drivers shall have greater than a 0.9 power factor, less than 20% harmonic distortion, and be suitable for operation in -40°C to 40°C ambient environments.
- Luminaire shall be capable of operating at 100% brightness in a 40°C environment. Both driver and optical array have integral thermal protection that will dim the luminaire upon detection of temperatures in excess of 85°C.
- Surge protection: 10,000k in parallel, 20,000k in series
- Wiring: No. 18AWM rated 105°C, wet rating.

CONTROLS
7PR
- Fully gasketed and wired 7-pin receptacle option. Easy access location above the electrical compartment. 7-pin construction allows for a user-defined interface and provides a controlled definition of operational performance. ANSI twist-lock control module by-others.

Standard customer operation modes:
- Traditional on/off photoelectric control.
- 5-pin wireless photoelectric control for added dimming feature.
- 7-pin wireless photoelectric control for for dimming and additional I/O connections for customer use.

CONSTRUCTION SPECIFICATIONS

1. STONE SIZE – USE 3"–4" ANGULAR STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT.
2. LENGTH – NOT LESS THAN 50 FEET (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY).
3. THICKNESS – NOT LESS THAN SIX (6) INCHES.
4. WIDTH – TWELVE (12) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY–FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.
5. FILTER CLOTH – WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER – ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE – THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS–OF–WAY, ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACTED ONTO PUBLIC RIGHTS–OF–WAY MUST BE REMOVED IMMEDIATELY.
8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON A AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

PLANTING NOTES:

1. THE LANDSCAPE PLAN AND RELATED DETAILS ARE FOR LANDSCAPING INFORMATION ONLY. PLEASE REFER TO THE SITE, GRADING & EROSION CONTROL PLANS FOR ALL OTHER INFORMATION.
2. THE CONTRACTOR SHALL GUARANTEE THAT ALL PLANTS, TREES, AND SHRUBS SHALL BE HEALTHY AND FREE OF DISEASE FOR A PERIOD OF ONE YEAR AFTER SUBSTANTIAL COMPLETION AND ACCEPTANCE BY OWNER OR LANDSCAPE ARCHITECT. CONTRACTOR SHALL REPLACE ANY DEAD OR UNHEALTHY PLANTS AT CONTRACTOR'S EXPENSE. PLANT MATERIAL REPLACEMENTS SHALL BE GUARANTEED FOR ONE FULL YEAR FROM DATE OF REPLACEMENT. FINAL ACCEPTANCE SHALL BE MADE IF ALL PLANTS MEET THE GUARANTEE REQUIREMENTS INCLUDING MAINTENANCE. MAINTENANCE RESPONSIBILITIES INCLUDE CULTIVATING, SPRAYING, WEEDING, WATERING, TIGHTENING GUYS, PRUNING, FERTILIZING, MULCHING, AND ANY OTHER OPERATIONS NECESSARY TO MAINTAIN PLANT VIABILITY. MAINTENANCE SHALL BEGIN IMMEDIATELY AFTER PLANTING AND CONTINUE UNTIL THE END OF THE ONE YEAR GUARANTEE PERIOD.
3. THE CONTRACTOR SHALL SUPPLY ALL LABOR, PLANTS, AND MATERIALS IN QUANTITIES SUFFICIENT TO COMPLETE THE WORK SHOWN ON THE DRAWINGS AND LISTED IN THE PLANT SCHEDULE. IN THE EVENT OF A DISCREPANCY BETWEEN QUANTITIES SHOWN IN THE PLANT SCHEDULE AND THOSE REQUIRED BY THE DRAWINGS, THE LARGER SHALL APPLY.
4. ALL SHRUB MASSINGS SHALL BE MULCHED TO A DEPTH OF 4" WITH SHREDDED HARDWOOD BARK MULCH.
5. NO PLANT SHALL BE PLACED IN THE GROUND BEFORE ROUGH GRADING HAS BEEN COMPLETED AND APPROVED BY ENGINEER. STAKING THE LOCATION OF ALL TREES AND SHRUBS SHALL BE COMPLETED PRIOR TO PLANTING FOR APPROVAL BY THE OWNER OR LANDSCAPE ARCHITECT. STAKING OF THE INSTALLED TREE MUST BE COMPLETED THE SAME DAY AS IT IS INSTALLED. ALL TREES SHALL BE STAKED OR GUYED PER DETAIL. SEE SHEET DN-1 FOR PLANTING DETAILS.
6. COORDINATE PLANT MATERIAL LOCATIONS WITH SITE UTILITIES. SEE SITE LAYOUT, GRADING AND UTILITY DRAWINGS FOR STORM, SANITARY AND WATER LINES. SEE LIGHTING PLAN FOR ELECTRICAL AND LIGHTING LAYOUT AND DETAILS. UTILITY LOCATIONS ARE APPROXIMATE. EXERCISE CARE WHEN DIGGING IN AREAS OF POTENTIAL CONFLICT WITH UNDERGROUND OR OVERHEAD UTILITIES. THE CONTRACTOR IS RESPONSIBLE FOR ANY DAMAGE DUE TO CONTRACTOR'S NEGLIGENCE AND SHALL REPLACE OR REPAIR ANY DAMAGE AT CONTRACTOR'S EXPENSE.
7. LANDSCAPE PLANTING PITS MUST BE FREE DRAINING. PAVEMENT, COMPACTED SUBGRADE, AND BLASTED ROCK SHALL BE REMOVED FROM WITHIN TRAFFIC ISLANDS TO BE LANDSCAPED TO A DEPTH OF 2' OR TO A GREATER DEPTH IF REQUIRED BY PLANTING DETAILS OR SPECIFICATIONS. REPLACE SOIL WITHIN ISLANDS WITH MODERATELY COMPACTED LOAM OR SANDY LOAM FREE FROM STONES AND RUBBISH 1" OR GREATER IN DIAMETER AND ANY OTHER MATERIAL HARMFUL TO PLANT GROWTH AND DEVELOPMENT. PLANTING INSTALLATION WITHIN ISLANDS SHALL BE AS DETAILED AND CONTAIN PLANTING MIX AS SPECIFIED.
8. TIME OF PLANTING: NEW PLANT MATERIALS SHALL BE INSTALLED BETWEEN APRIL 1 AND JUNE 1, OR AFTER SEPTEMBER 15TH AND NO LATER THAN OCTOBER 31ST.
9. PLANTING SOIL MIXTURE FOR TREES AND SHRUBS:
   - 1 PART PEAT MOSS
   - 3 PARTS TOPSOIL
   - FERTILIZER/LIME (APPLY AS RECOMMENDED BY SOIL ANALYSIS)
   - MYCORHIZA INOCULANT – "TRANSPLANT 1–STEP" AS MANUFACTURED BY ROOTS, INC. OR APPROVED EQUAL.

   USE PER MANUFACTURER'S RECOMMENDATIONS FOR TREES AND SHRUBS.
10. TOPSOIL SHALL BE INSTALLED AT A MINIMUM DEPTH OF 6" IN LAWN AREAS. CONTRACTOR SHALL SUBMIT TOPSOIL TO A CERTIFIED TESTING LABORATORY TO DETERMINE pH, FERTILITY, ORGANIC CONTENT AND MECHANICAL COMPOSITION. THE CONTRACTOR SHALL SUBMIT THE TEST RESULTS FROM REGIONAL EXTENSION OFFICE OF USDA TO THE OWNER OR LANDSCAPE ARCHITECT FOR REVIEW AND APPROVAL. CONTRACTOR SHALL INCORPORATE AMENDMENTS FOR GOOD PLANT GROWTH AND PROPER SOIL ACIDITY RECOMMENDED FROM THE TOPSOIL TEST.
11. LAWN SEEDING MIXTURE:

    15% KENTUCKY BLUEGRASS (POA PRATENSIS – SINGLE VARIETY)
    15% PERENNIAL RYEGRASS (LOLIUM PERENNE)
    30% CREEPING RED FESCUE (FESTUCA RUBRA)
    25% CHEWINGS FESCUE (FESCTUCA RUBRA "JAMESTOWN II")
    15% HARD FESCUE (FESTUCA OVINA "RELIANT II")

    SEEDING RATE: 4.5 LBS PER 1,000 S.F. (ADD 10% TO QUANTITY IF HYDROSEEDED).

    SEEDING DATES: AUGUST 15 – OCTOBER 1 AND APRIL 15 – JUNE 15 UNLESS OTHERWISE APPROVED BY THE OWNER OR LANDSCAPE ARCHITECT.
12. ALL SLOPES GREATER THAN 3:1 RECEIVING A GRASS SEEDING MIXTURE SHALL BE COVERED WITH AN EROSION CONTROL BLANKET.
13. ALL DISTURBED AREAS NOT OTHERWISE DEVELOPED SHALL BE SEEDED WITH THE LAWN SEEDING MIXTURE.
14. TREE PROTECTION: PRIOR TO THE START OF CONSTRUCTION OR EXCAVATION, TREES TO BE RETAINED SHALL BE PROTECTED BY SILT FENCE, SNOW FENCE, CONSTRUCTION FENCE, OR EQUAL, WHICH WILL BE PLACED AT THE DRIP LINE OR SEVERAL FEET BEYOND. HOWEVER, THE FENCING SHALL NOT CROSS PUBLIC SIDEWALKS. NO STORAGE OR STOCKPILING OF CONSTRUCTION MATERIALS, DEBRIS OR EQUIPMENT SHALL OCCUR WITHIN THE FENCED AREA."

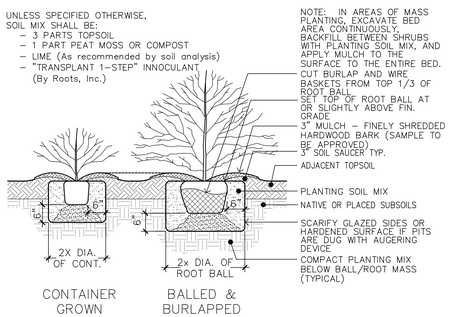
TREE PLANTING
Scale 1/2" = 1'–0"



SECTION THROUGH PERENNIAL BED

PERENNIAL NOTES:
1. BULB/CORM PERENNIALS TO BE PLANTED IN FALL. POTTED PERENNIALS MAY BE PLANTED APRIL 15 TO OCTOBER 1.
2. ROTOTILL FERTILIZER AND LIME INTO SOIL PRIOR TO PLANTING AND IN ACCORDANCE TO SOIL ANALYSIS RECOMMENDATIONS.
3. DO NOT OVER COMPACT PLANTING BED. WATER THOROUGHLY AFTER PLANTING BULBS.
4. ADJUST PLANTING DEPTH AS RECOMMENDED BY BULB SUPPLIER.
5. PROVIDE DRAINAGE AS REQUIRED (PERF PIPE 4" ADS) WHEN SUBGRADE IS CLASSIFIED AS A HEAVY SOIL OR EXCESSIVELY COMPACTED.

UNLESS SPECIFIED OTHERWISE, PERENNIAL BED SOIL MIX SHALL BE:
– 3 PARTS TOPSOIL
– 1 PART MANURE (WEED FREE)
– 1 PART PEAT MOSS OR COMPOST
– LIME (As recommended by soil analysis)
– "MILORGANITE" AT 5 LBS. PER 100 SF.

ANNUAL / PERENNIAL AND GROUND COVER BEDS
Scale 1/2" = 1'–0"

SHRUB PLANTING
Scale 1/2" = 1'–0"

NOTE REGARDING PLANT SOURCING:
1. ALL WOODY AND HERBACEOUS PLANT MATERIAL (TREES, SHRUBS, PERENNIALS AND GRASSES) SHALL BE SOURCED FROM NURSERIES WITHIN 50 MILES OF THE PROJECT SITE AND SHALL BE GROWN FROM STOCK WITHIN 180 MILES OF THE PROJECT SITE.
2. WLDFLOWER PLUGS (SUCH AS MILKWEED SPECIES) SHALL BE FROM SEED STOCK GATHERED IN THE WLD WITHIN NEW YORK STATE (PREFERRED), CONNECTICUT, MASSACHUSETTS OR NEW JERSEY.

NOTE REGARDING POLLINATORS:
1. ADDITIONAL SHRUB SPECIES HAVE BEEN ADDED TO LIST AND CERTAIN PLANTS ON THE PLAN SUBSTITUTED IN ORDER TO INCREASE THE DIVERSITY AND QUANTITY OF NECTAR PLANTS FOR POLLINATORS.
2. SIMILARLY, ADDITIONAL PERENNIAL FLOWER SPECIES HAVE BEEN ADDED TO LIST AND WILDFLOWERS, SPECIFICALLY 3 TYPES OF MILKWEEDS, HAVE BEEN IN ORDER TO INCREASE THE DIVERSITY AND QUANTITY OF NECTAR PLANTS FOR POLLINATORS.

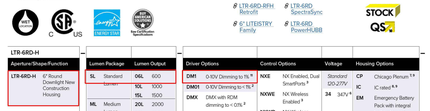
LTR-6RD



LITEISTRY 6" ROUND DOWNLIGHT

LITEISTRY

FEATURES

- 6" architectural LED downlight delivering 600 – 9000 lm
- Five beam distributions from 0.3 to 1.1 Spacing Criteria
- Quiet reflector appearance with superior 50° optical cutoff
- 2700K – 5000K, 80+ and 90+ CRI options
- Available for New Construction (non-IC), IC and Chicago Plenum applications
- Variety of dimming protocol options including 0–10V, DALI, DMX, Lutron Forward Phase, and EcoSystem
- NX Distributed Intelligence™ wired and wireless controls capability available

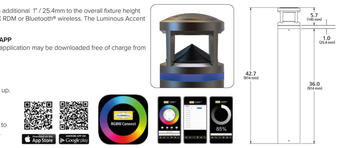
Pavilion

FEATURES

- Traditional or Performance Optics
- Bluetooth® enabled RGBW accent
- Integral NEMA 3R Enclosure
- Dual receptacle power panel
- PA System capability
- IP65 optical system

DIMENSIONS

ADDITIONAL INFORMATION



LUMINOUS ACCENT:

- The Luminous Accent option adds an additional 1" / 25.4mm to the overall fixture height and may be controlled via wired DMX RDM or Bluetooth® wireless. The Luminous Accent shall be: KGB.

HUBBELL LIGHTING RGBW REMOTE APP

- The Hubbell Lighting RGBW Remote application may be downloaded free of charge from the Apple App Store or Google Play.
- Color selection and adjustment.
- Camera function for color matching.
- Intensity slider for dimming/ramping up.
- Save and rename up to 10 presets.
- Group and rename fixtures.
- Fixture is password protected, refer to instructions to set unique password.

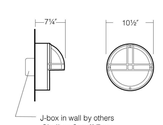
W3 and W4 Wall

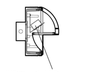
KIM LIGHTING

LED Wall Forms® **WF23**
Shallow Cutoff Face Surface Mount, Round
revision 10/24/14 • kl_wf23led_spec.pdf

Type: Small Wall Lights W3 and W4 - mounted at 9 and 10' lens height
Job: Wallace Campus - Poughkeepsie
Catalog number: W3: WF23-9L3KUV-DB
W4: WF23-18L3KUV-DB



WF23 / / / /
Fixture | Electrical Module | Finish | Options



See page 2

Approvals:

Date:
Page: 1 of 2

Specifications

Surface Mount: Die-cast, low copper (<0.6% Cu) aluminum alloy with double side walls. Zinc plated steel mounting plate supplied for mounting to standard 3" or 4" junction box.

Face Plate: Die-cast, low copper (<0.6% Cu) aluminum alloy with vertical and horizontal double ribs covering the full hemisphere. Ribs are minimum ⅝" depth and ⅜" thickness. Secures to housing with four stainless steel captive socket head screws.

Shallow Cutoff Face: Solid upper half protruding 3¾" from housing and concave lower half.

Lens: Flat tempered glass, ⅛" minimum thickness with internal sandblast. Retained in face plate and sealed with a one-piece silicone gasket.

LED Optical System: A total of 9 LED emitters configured in a rectangular array comprised together as a module. One (1) module for 9 LED version and two (2) modules for 18 LED version. Available in 580nm, 3000K, 4200K and 5100K.

LED Driver: Rated for 9 or 18 LED. Universal voltage from 120 to 277V with a ±10% tolerance. -40°F starting temperature. All drivers are Underwriters Laboratories recognized.

Finish: Each luminaire receives a fade and abrasion resistant, electrostatically applied, thermally cured, triglycidal isocyanurate (TGIC) polyester powdercoat finish. Standard colors include (BL) Black, (DB) Dark Bronze, (WH) White, (PS) Platinum Silver, (SG) Stealth Gray, (LG) Light Gray, and (CC) Custom Color (Include RAL#.).

Finishing Items: Electrical modules and face plates. Each set of finishing items shall be in one container, clearly marked with the fixture catalog number.

CAUTION: Fixtures must be grounded in accordance with national, state, and/or local electrical codes. Failure to do so may result in serious personal injury.

SPECIFICATIONS

CONSTRUCTION

- Low copper aluminum alloy die-casting is designed as one-piece with internal cooling fins.
- Solid, cast aluminum wall creates a thermal barrier between the optical and electrical compartments.
- Molded silicone gasket throughout insures the sealing between the two compartments and provides ingress protection.
- Housing is designed with integral LED heat sink utilized for thermal transfer and for securing the location of each LED module.
- IK09 rated enclosure protects electrical equipment against external mechanical impacts.
- All external fasteners are stainless steel.
- One-piece low copper aluminum alloy die-cast lens frame is secured to housing with 6 screws.

OPTICS

- LEDs mount to a metal printed circuit board assembly (MCPCB).
- Optical lenses are clear injection molded PMMA acrylic.
- Optional Backlight Control on each LED module to completely control unwanted backlight.

INSTALLATION

- Fixtures must be grounded in accordance with national, state and/or local electrical codes. Failure to do so may result in serious personal injury.

ELECTRICAL

- Universal voltage, 120 through 277V with a ±10% tolerance. Driver is Underwriters Laboratories listed.
- High voltage configurations, 347/480. Driver has a 0-10V dimming interface for multi-level illumination options. Driver is Underwriters Laboratories listed.
- "Thermal Shield", secondary side, thermistor provides protection for the sustainable life of LED module and electronic components
- Drivers shall have greater than a 0.9 power factor, less than 20% harmonic distortion, and be suitable for operation in -40°C to 40°C ambient environments.
- Luminaire shall be capable of operating at 100% brightness in a 40°C environment. Both driver and optical array have integral thermal protection that will dim the luminaire upon detection of temperatures in excess of 85°C.
- Surge protection: 10,000k in parallel, 20,000k in series
- Wiring: No. 18AWM rated 105°C, wet rating.

CONTROLS

7PR

- Fully gasketed and wired 7-pin receptacle option. Easy access location above the electrical compartment. 7-pin construction allows for a user-defined interface and provides a controlled definition of operational performance. ANSI twist-lock control module by-others.

Standard customer operation modes:

- Traditional on/off photoelectric control.
- 5-pin wireless photoelectric control for added dimming feature.
- 7-pin wireless photoelectric control for for dimming and additional I/O connections for customer use.

Map Notes

1. Unauthorized alteration or addition to a survey map bearing a licensed land surveyor's seal is a violation of section 7209, subdivision 2, of the New York State Education Law.
2. Only copies from the original of this survey marked with an original of the land surveyor's seal shall be considered to be a true copy.
3. The above certification shall run only to the person for whom the survey is prepared , and on his behalf to the title company, governmental agency and lending institution. Certifications are not transferable to additional institutions or subsequent owners.
4. North Arrow and bearings are referenced to the North American Datum (NAD) of 1983 projected onto the New York East State Plane Coordinate based on GPS observations made on February 10, 2020 utilizing the Keystone KeyNetGPS VRS GPS network.
5. Field survey was completed on March 12, 2020.
6. Reference is made to the following maps:
   A. "Map of Survey Prepared for Urban Green Equities LLC, City of Poughkeepsie, Dutchess County, New York.", scale 1"=20', dated February 7, 2020, prepared by J. Williams Komisar, L.L.S.
   B. "Survey of Con-Mar Realty, Inc., City of Poughkeepsie, Dutchess Co., N.Y.," scale 1"=10', dated October 5, 1962, prepared by John Drumgould, map on file in the Dutchess County Clerk's Office as map #3097.
   C. "Map of Property in Poughkeepsie Formerly Belonging to the Estate of Smith Thompson," dated April 26, 1848, prepared by L.M. Northrop, map on file in the Dutchess County Clerk's Office as map #109.
   D. Map prepare by John Ogden Surveyor, scale 1"=30', dated September 22, 1925, map on file in the Dutchess County Clerk's Office as map #1405.
   E. Map of Garden Street, dated June 15, 1970, map on file in the Dutchess County Clerk's Office as map #1636.
7. Property is located in Zone "X" areas determined to be located outside of the 0.2% annual chance floodplain as depicted on Flood Insurance Rate Map (FIRM) Panel 0358E, Dutchess County, New York, City of Poughkeepsie, community number 360222, map number 36027C0358E, effective date: May 2, 2012.

Map Notes Con't.

8. The subsurface utilities depicted hereon conform to the following Utility Quality Levels, as defined by the American Society of Civil Engineers (ASCE) in Document CI/ASCE 38-02 titled "Standard Guidelines for the Collection and Depiction of Existing Subsurface Utility Data":
   - Sanitary Sewer: QLC
   - Storm Sewer: QLC
   - Water: QLC and QLD
   - Natural Gas: QLC and QLD
   - Electric: QLC and QLD
   - Communications: QLC and QLD

   The subsurface utilities were compiled from parol evidence, record drawings, and surficial evidence located during the field survey. The Surveyor has not physically exposed the subsurface utilities, and makes no guarantee that the subsurface utilities depicted hereon comprise all such utilities within the surveyed area, either in service or abandoned. The Surveyor further does not warrant or guarantee that the subsurface utilities are in the exact location depicted, though they have been plotted, in accordance with the standard of care, from information available.

   The contractor is required to utilize the local utility one call system prior to excavation for the purpose of verifying the subsurface utilities in the area.
9. Reference is made to the following Commitment for Title Insurance issued by Chicago Title Insurance Company:
   a. Parcel G&E – Commitment Title Number CT20-00618-D, date of application 09/14/2020
   b. Parcel F – Commitment Title Number CT20-00584-D, date of application 09/02/2020
   c. Parcel G – Commitment Title Number CT20-00619-D, date of application 09/14/2020
10. There is no observable evidence on the subject property of earth moving, building construction, or building additions within recent months.
11. There is no observable evidence on the subject property of changes in street right-of-way lines either completed or proposed, or observable evidence on the subject property of recent street or sidewalk repairs.
12. There is no observable evidence on the subject property of use as a solid waste dump, sump or sanitary landfill.

Map Notes Con't.

13. There is no observable evidence of field delineation of wetlands on the subject property.
14. There is no observable evidence on the subject property of watercourses or water bodies such as streams, lakes or ponds.
15. There is no observable evidence on the subject property of gravesites, cemeteries, or burial grounds.
16. Except as depicted or noted, there are no observable easements or rights of way of on the subject property which the undersigned has been advised.
17. Except as depicted or noted on the survey, there are no observable above-ground encroachments of (a) improvements on the subject property upon adjoining properties, streets, or alleys or (b) improvements on adjoining properties, streets, or alleys upon the subject property.
18. The subject property has access to and from Main Street and Mill Street, a duly dedicated and accepted public street or highway.
19. The total number of marked parking spaces on the subject parcel is 58, including 1 designated handicapped space.
20. Except as depicted or noted hereon there are no party walls located on the subject property.
21. There are no gaps, gores, or overlaps in the legal description.

Certification

To: Chicago Title Insurance Company
Levittown 25-23 Alternative Fund, Inc., its successors and/or assigns

This is to certify that this map or plat and the survey on which it is based were made in accordance with the 2016 Minimum Standard Detail Requirements for ALTA/ACSM Land Title Surveys, jointly established and adopted by ALTA and NSPS, and includes items 1, 2, 3, 4, 6a, 6b, 7a, 7b1)(2), 7c, 8, 9, 10a, 11, 13, 14, 16, 17, 18, 19, 20 & 21 of Table A thereof. The field work was completed on February 17, 2021.

I hereby declare this map to be prepared in accordance with the Code of Practice of the New York State Association of Land Surveyors, adopted October, 1979 and revised through July 18, 1997.

Record Legal Description

The land referred to herein below is situated in the County of Dutchess, State of New York, and described as follows:

PARCEL "A"
Area: 9,450 S.F.
0.22 Acres

Beginning at a point in the southerly right of way line of Mill Street said point being the following five (5) courses and distances from the intersection of the said southerly right of way line of Mill Street with the westerly street line of Catherine Street N63°56'22"W 157.41 feet, N63°56'39"W 34.32 feet, N62°50'02"W 45.52 feet, N22°32'13"W 4.55 feet and N63°59'52"W 75.45 feet said beginning point is also the northwest corner of Parcel "B" and the northeast corner of herein described parcel;

Thence running southerly, easterly and southerly again the following three (3) courses and distances along said Parcel "B" S23°45'23"W 176.42 feet, S65°55'32"E 7.00 feet and S24°04'29"W 44.30 feet to a point in the northerly property line of Parcel "D" the previous three (3) courses and distances is partially along the face of a concrete block & brick building;

Thence running N65°55'32"W 26.75 feet along said Parcel "B" to a point in the easterly property line of land now or formerly of City of Poughkeepsie;

Thence running northerly, westerly, and northerly again the following three (3) courses and distances along land now or formerly of said City of Poughkeepsie N24°04'28"E 2.30 feet, N65°55'32"W 21.00 feet and N23°28'16"E 219.85 feet to a point in the southerly right of way line of Mill Street (Route 44/55);

Thence running S63°59'53"E 42.10 feet along the said southerly right of way line of Mill Street to the point or place of beginning.

PARCEL "B"
Area: 8,851 S.F.
0.20 Acres

Beginning at a point in the southerly right of way line of Mill Street said point being the following five (5) courses and distances from the intersection of the said southerly right of way line of Mill Street with the westerly street line of Catherine Street N63°56'22"W 157.41 feet, N63°56'39"W 34.32 feet, N62°50'02"W 45.52 feet, N22°32'13"W 4.55 feet and N63°59'52"W 34.28 feet said beginning point is also the northwest corner of Parcel "C" and the northeast corner of herein described parcel;

Thence running southerly the following two (2) courses and distances along Parcel "C" S23°21'23"W 73.25 feet and S22°53'54"W 62.08 feet to an iron pipe found at the southwest corner of said Parcel "C";

Thence running southerly and westerly the following two (2) courses and distances along Parcel "D" S22°32'14"W 80.49 feet and N66°45'52"W 36.35 feet to a point in the easterly property line of Parcel "A";

Thence running the following three (3) courses and distances along said Parcel "A" N24°04'29"E 41.30 feet, N65°55'32"W 7.00 feet and N23°45'23"E 176.42 feet to a point in the southerly right of way line of Mill Street (Route 44/55) the previous three (3) courses and distances are partially along the face of a concrete block and brick building;

Thence running S63°59'52"E 41.17 feet along the said southerly right of way line of Mill Street to the point or place of beginning.

PARCEL "C"
Area: 4,616 S.F.
0.11 Acres

Beginning at a point in the southerly right of way line of Mill Street said point being the following three (3) courses and distances from the intersection of the said southerly right of way line of Mill Street with the westerly street line of Catherine Street N63°56'22"W 157.41 feet, N63°56'39"W 34.32 feet and N62°50'02"W 45.52 feet said beginning point is also the northwest corner of Parcel "D" and on the easterly property line of the herein described parcel;

Thence running southerly and westerly the following two (2) courses and distances along said Parcel "D" S23°24'41"W 130.65 feet and N64°10'31"W 33.72 feet to an iron pipe found in the easterly property line of Parcel "B";

Thence running northerly the following two (2) courses and distances along said Parcel "B" N23°53'47" 62.08 feet and N23°21'23"E 73.25 feet to a point in the southerly right of way line of Mill Street (Route 44/55);

Thence running easterly and southerly the following two (2) courses and distances along the said right of way line of Mill Street (Route 44/55) S63°59'52"E 34.28 feet and S22°32'13"W 4.55 feet to the point or place of beginning.

PARCEL "D"
Area: 49,421 S.F.
1.13 Acres

Beginning at a point in the southerly right of way line of Mill Street said point being the following two (2) courses and distances from the intersection of the said southerly right of way line of Mill Street with the westerly street line of Catherine Street N63°56'22"W 157.41 feet and N63°56'39"W 34.32 feet said beginning point is the northwest corner of land now or formerly of HRH Neighborhood Housing Development Fund Company, Inc. and the northeast corner of the herein described parcel;

Thence running southerly and easterly the following two (2) courses and distances along land now or formerly of said HRH Neighborhood Housing Development Fund Company, Inc. S24°03'48"W 131.00 feet and S62°50'32"E 34.33 feet to a point in the westerly property line of Parcel "E";

Thence running southerly the following three (3) courses and distances along the said westerly property line of Parcel "E" S23°58'22"W 59.66 feet, S22°58'41"W 76.94 feet and S23°32'36"W 117.89 feet to the northeast corner of Parcel "G" the previous three (3) courses and distances being partially along the face of a brick building;

Thence running westerly, southerly, westerly again and southerly again the following four (4) courses and distances along said Parcel "G" and Parcel "F" partially by each N64°23'32"W 16.05 feet, S26°31'38"W 17.12 feet, N62°21'12"W 36.44 feet the previous three (3) courses and distances being along the face of two (2) brick buildings and S26°58'18"W 110.00 feet to a point in the northerly street line of Main Street the previous courses and distance being through a portion of the brick building of Parcel "F" along the face there of;

Thence running N63°19'11"W 54.50 feet along the said northerly street line of Main Street to the southeast corner of land now or formerly of 317 Main Mall;

Thence running northerly, westerly, northerly again, westerly again, and northerly the following eight (8) courses and distances along land now or formerly of said 317 Main Mall and land now or formerly of Barclay Street, LLC partly be each N25°03'17"E 54.09 feet, N65°54'52"W 1.00 feet, N24°05'08"E 38.17 feet, N17°55'08"E 8.58 feet, N23°45'08"E 24.00 feet, the previous five (5) courses and distances being along the face of a building N67°14'52"W 20.42 feet, N24°5'08"E 48.33 feet and N65°24'52"W 20.75 feet to a point in the easterly property line of land now or formerly of 313 Poughkeepsie Inc.;

Thence running northerly, westerly and northerly again the following three (3) courses and distances along land now or formerly of said 313 Poughkeepsie Inc. and land now or formerly of City of Poughkeepsie partly be each N23°42'08"E 86.90 feet, N65°55'32"W 20.80 feet and N24°04'28"E 28.20 feet to a point in the southerly property line of Parcel "A";

Thence running easterly, northerly, easterly again, and northerly again the following four (4) courses and distances along said Parcel "A" and Parcel "B" partly by each S65°55'32"E 26.75 feet, N24°04'28"E 3.00 feet, S66°45'52"W 36.35 feet and N23°22'14"E 80.49 feet to an iron pipe found at the southwest corner of Parcel "C";

Thence running easterly and northerly the following two (2) courses and distances along said Parcel "C" S64°10'31"E 33.72 feet and N23°24'41"E 130.65 feet to a point in the southerly right of line of Mill Street;

Thence running S62°50'02"E 45.52 feet along the said southerly right of way line of Mill Street to the point or place of beginning.

Record Legal Description

PARCEL "E"
Area: 53,953 S.F.
1.24 Acres

Beginning at a point in the southerly right of way line of Mill Street said point N63°56'22"W 86.89 feet from the intersection of the said southerly right of way line of Mill Street with the westerly street line of Catherine Street said beginning point is the northwest corner of land now or formerly of Komal Garewal and the northeast corner of the herein described parcel;

Thence running southerly, easterly, southerly again and easterly again the following four (4) courses and distances along land now or formerly of said Komal Garewal, land now or formerly of Steven G. Johnson and land now or formerly of JT Lawrence Properties, LLC partly by each S25°12'28"W 111.26 feet, S64°47'52"E 20.74 feet, S24°22'08"W 1.83 feet and S85°30'42"E 66.50 feet to a point in the westerly street line of Catherine Street;

Thence running southerly the following four (4) courses and distances along the said westerly street line of Catherine Street S24°54'36"W 50.36 feet, S27°00'13"W 10.91 feet, S24°21'06"W 101.72 feet and S24°45'23"W 80.26 feet to the northeast corner of land now or formerly of Two Catherine Street, LLC the previous course and distance being along the face of a brick building;

Thence running westerly and southerly the following four (4) courses and distances along land now or formerly of said Two Catherine Street, LLC and land now or formerly of 337–81, LLC partly by each N65°04'57"W 95.04 feet, S24°06'46"W 64.75 feet, S64°59'12"E 0.58 feet and S25°00'48"W 93.86 feet to a point in the northerly street line of Main Street the previous four (4) courses and distances being generally along the face of a brick building;

Thence running N62°44'22"W 56.72 feet along the said northerly street line of Main Street to the southeast corner of Parcel "G";

Thence running northerly the following eight (8) courses and distances along said Parcel "G", Parcel "D" and land now or formerly of HRH Neighborhood Housing Development Fund Company, Inc. partially by each N26°50'13"E 49.92 feet, N30°21'52"W 0.44 feet, N23°04'13"E 41.28 feet, N25°44'47"E 36.16 feet, N23°32'36"E 117.89 feet, N22°58'41"E 76.94 feet, N23°58'22"E 59.66 feet and N24°04'13"E 131.66 feet to a point in the southerly right of way line of Mill Street (Route 44/55);

Thence running S63°56'22"E 70.72 feet along the said southerly right of way line of Mill Street to the point or place of beginning.

PARCEL "F"
Area: 2,115 S.F.
0.05 Acres

Beginning at a point in the northerly street line of Main Street said point being the following three (3) courses and distances from the intersection of the said northerly street line of Main Street with the westerly street line of Catherine Street N62°42'05"W 94.25 feet, N62°42'37"W 56.72 feet and N62°44'22"W 37.20 feet said beginning point is the southwest corner of Parcel "G" and the southeast corner of the herein described parcel;

Thence running N62°21'12"W 19.22 feet along the said northerly street line of Main Street to the southeast corner of Parcel "D";

Thence running northerly, and easterly the following two (2) courses and distances along said Parcel "D" N26°58'18"E 110.00 feet the previous course and distance being through a portion of the brick building on Parcel "D" and along the face and S62°21'12"E 19.23 feet to the northwest corner of Parcel "G";

Thence running S26°58'33"W 110.01 feet along said Parcel "G" to the point or place of beginning.

PARCEL "G"
Area: 4,232 S.F.
0.10 Acres

Beginning at a point in the northerly street line of Main Street said point being the following two (2) courses and distances from the intersection of the said northerly street line of Main Street with the westerly street line of Catherine Street N62°42'05"W 94.25 feet and N62°42'37"W 56.72 feet said beginning point is the southwest corner of Parcel "E" and the southeast corner of the herein described parcel;

Thence running N62°44'22"W 37.20 feet along the said northerly street line of Main Street to the southeast corner of Parcel "F";

Thence running N26°58'33"W 110.01 feet along Parcel "F" to a point in the southerly property line of Parcel "D" the previous course and distance being along the face of two brick buildings;

Thence running easterly, northerly and easterly again the following three (3) courses and distances along said Parcel "D" S62°21'12"E 17.21 feet, N26°31'38"E 17.12 feet and S64°33'32"E 16.05 feet to a point in the westerly property line of Parcel "E" the previous three (3) courses and distances being along the face of a brick building;

Thence running southerly the following four (4) courses and distances along the westerly property line of said Parcel "E", S25°44'33"W 36.16 feet, S23°04'13"W 41.28 feet, S30°21'52"E 0.44 feet and S26°58'33"W 49.92 feet to the point or place of beginning.

PARCELS "D – G"
Area: 53,953 S.F.
1.24 Acres

Beginning at a point in the southerly right of way line of Mill Street said point N63°56'22"W 86.89 feet from the intersection of the said southerly right of way line of Mill Street with the westerly street line of Catherine Street said beginning point is the northwest corner of land now or formerly of Komal Garewal and the northeast corner of the herein described parcel;

Certification

To: Chicago Title Insurance Company
Leviticus 25:23 Alternative Fund, Inc., its successors and/or assigns

This is to certify that this map or plat and the survey on which it is based were made in accordance with the 2016 Minimum Standard Detail Requirements for ALTA/ACSM Land Title Surveys, jointly established and adopted by ALTA and NSPS, and includes items 1, 2, 3, 4, 6a, 6b, 7a, 7b(1)(2), 7c, 8, 9, 10a, 11, 13, 14, 16, 17, 18, 19, 20 & 21 of Table A thereof. The field work was completed on February 17, 2021.

I hereby declare this map to be prepared in accordance with the Code of Practice of the New York State Association of Land Surveyors, adopted October, 1996, and revised through July 18, 1997.

JOHN J. WAGENBLATT L.S. No. 050,547

Resolution of the City of Poughkeepsie Planning Board
Negative Declaration of Environmental Significance
December 21, 2021

Whereas, the City of Poughkeepsie Planning Board (the "Planning Board") received a site plan application from Wallace Campus Manager, LLC (the "Applicant") for demolition, conversion and new construction resulting in a mixed use development with 187 dwelling units and 14,235 square feet of commercial space, with off-street parking and publicly-accessible open space on the parcels at 319, 325, 327-329 and 331 Main Street (the "Project"); and

Whereas, the Project also involves the redevelopment of the off-street parking area on the properties at 302, 304, 306 and 310 Mill Street. Grid # 6162-77-114098, 109079, 109077, 121116, 112116, 116114, 128113 and 6162-78-12091; and

Whereas, the extensive application documents are available at and on file with the City's Building and Planning Departments and have been made available to the public on the City's website; and

Whereas, the Applicant first appeared before the Planning Board in June of 2020 and the Project and the Application materials have been continually revised since the initial submission and appearance with the last submission being made on December 7, 2021; and

Whereas, the Applicant has appeared at nine Planning Board meetings, two of which were special meetings called specifically for the environmental review of the Project; and

Whereas, the Planning Board identified the application as a Type 1 Action pursuant to the New York State Environmental Quality Review Act ("SEQRA") and declared its intent to serve as lead agency; and

Whereas, the Planning Board directed City staff to coordinate the SEQRA review by sending the notice of intent to be lead agency accompanied by the Environmental Assessment Form Part 1 and the application to the other involved agencies, including among others, the Zoning Board of Appeals of the City of Poughkeepsie; and

Whereas, no other involved agency object to the Planning Board being lead agency; and

Whereas, the Planning Board declared itself lead agency for this Type 1 action and has received sufficient information to make a determination of significance as required by SEQRA; and

Whereas, in making this written, reasoned elaboration of its determination of significance as required by SEQRA, the Planning Board carefully reviewed all of the application materials, all interested or involved agency comments, all public comments received on the Project, all City Department review comments on the Project, the expanded EAF Part 1, and the comments of the Planning Board's consultants who advised the Planning Board on the Project and on the determination of significance; and

Whereas, the Planning Board deliberated on the SEQRA EAF Parts 2 and 3 and carefully reviewed them during two Planning Board workshops; and

Whereas, in response to questions concerning the environmental impacts of the Project raised by the Planning Board, the Applicant made many changes to the Project and provided substantial additional information in support of the application;

Now, Therefore Be it Resolved, that the Planning Board, after careful consideration of the Application and all of the criteria of significance set forth in the SEQRA regulations at 6 NYCRR Part 617.7 as well as the SEQRA handbook and other NYSDEC guidance on SEQRA hereby approves the EAF Parts 2 and 3 attached as Exhibit A to this resolution and adopts the negative declaration of environmental significance finding that no significant adverse environmental impact will result from this Project and an environmental impact statement will not be required for this Project attached as Exhibit B to this resolution;

Be it Further Resolved, that the Planning Staff are hereby directed to publish the notice of the negative declaration in the Environmental Notice Bulletin, to provide a copy of this resolution with Exhibits A and B to the involved and interested agencies for this Project and take such other steps as required by 6 NYCRR Sections 617.12 (b)(1) & (3) and 617.12(c) for the filing and distribution of documents.

Full Environmental Assessment Form
Part 2 - Identification of Potential Project Impacts

Project : Wallace Campus
Date : 12/14/21

Part 2 is to be completed by the lead agency. Part 2 is designed to help the lead agency inventory all potential resources that could be affected by a proposed project or action. We recognize that the lead agency's reviewer(s) will not necessarily be environmental professionals. So, the questions are designed to walk a reviewer through the assessment process by providing a series of questions that can be answered using the information found in Part 1. To further assist the lead agency in completing Part 2, the form identifies the most relevant questions in Part 1 that will provide the information needed to answer the Part 2 question. When Part 2 is completed, the lead agency will have identified the relevant environmental areas that may be impacted by the proposed activity.

If the lead agency is a state agency **and** the action is in any Coastal Area, complete the Coastal Assessment Form before proceeding with this assessment.

Tips for completing Part 2:

- Review all of the information provided in Part 1.
- Review any application, maps, supporting materials and the Full EAF Workbook.
- Answer each of the 18 questions in Part 2.
- If you answer "**Yes"** to a numbered question, please complete all the questions that follow in that section.
- If you answer "**No"** to a numbered question, move on to the next numbered question.
- Check appropriate column to indicate the anticipated size of the impact.
- Proposed projects that would exceed a numeric threshold contained in a question should result in the reviewing agency checking the box "Moderate to large impact may occur."
- The reviewer is not expected to be an expert in environmental analysis.
- If you are not sure or undecided about the size of an impact, it may help to review the sub-questions for the general question and consult the workbook.
- When answering a question consider all components of the proposed activity, that is, the "whole action".
- Consider the possibility for long-term and cumulative impacts as well as direct impacts.
- Answer the question in a reasonable manner considering the scale and context of the project.

1. Impact on Land
Proposed action may involve construction on, or physical alteration of, the land surface of the proposed site. (See Part 1. D.1)
If "Yes", answer questions a - j. If "No", move on to Section 2.

☐ NO ☑ YES

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may involve construction on land where depth to water table is less than 3 feet.	E2d	NO ☑	☐
b. The proposed action may involve construction on slopes of 15% or greater.	E2f	NO ☑	☐
c. The proposed action may involve construction on land where bedrock is exposed, or generally within 5 feet of existing ground surface.	E2a	NO ☑	☐
d. The proposed action may involve the excavation and removal of more than 1,000 tons of natural material.	D2a	☑ SMALL	☐
e. The proposed action may involve construction that continues for more than one year or in multiple phases.	D1e	☑ SMALL	☐
f. The proposed action may result in increased erosion, whether from physical disturbance or vegetation removal (including from treatment by herbicides).	D2e, D2q	☑ NO	☐
g. The proposed action is, or may be, located within a Coastal Erosion hazard area.	B1i	NO ☑	☐
h. Other impacts: _____ _____		☑ NO	☐

2. Impact on Geological Features

The proposed action may result in the modification or destruction of, or inhibit access to, any unique or unusual land forms on the site (e.g., cliffs, dunes, minerals, fossils, caves). (See Part 1. E.2.g) ☑ NO ☐ YES

If "Yes", answer questions a - c. If "No", move on to Section 3.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. Identify the specific land form(s) attached: _____ _____	E2g	☐	☐
b. The proposed action may affect or is adjacent to a geological feature listed as a registered National Natural Landmark. Specific feature: _____	E3c	☐	☐
c. Other impacts: _____ _____		☐	☐

3. Impacts on Surface Water

The proposed action may affect one or more wetlands or other surface water bodies (e.g., streams, rivers, ponds or lakes). (See Part 1. D.2, E.2.h) ☑ NO ☐ YES

If "Yes", answer questions a - l. If "No", move on to Section 4.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may create a new water body.	D2b, D1h	☐	☐
b. The proposed action may result in an increase or decrease of over 10% or more than a 10 acre increase or decrease in the surface area of any body of water.	D2b	☐	☐
c. The proposed action may involve dredging more than 100 cubic yards of material from a wetland or water body.	D2a	☐	☐
d. The proposed action may involve construction within or adjoining a freshwater or tidal wetland, or in the bed or banks of any other water body.	E2h	☐	☐
e. The proposed action may create turbidity in a waterbody, either from upland erosion, runoff or by disturbing bottom sediments.	D2a, D2h	☐	☐
f. The proposed action may include construction of one or more intake(s) for withdrawal of water from surface water.	D2c	☐	☐
g. The proposed action may include construction of one or more outfall(s) for discharge of wastewater to surface water(s).	D2d	☐	☐
h. The proposed action may cause soil erosion, or otherwise create a source of stormwater discharge that may lead to siltation or other degradation of receiving water bodies.	D2e	☐	☐
i. The proposed action may affect the water quality of any water bodies within or downstream of the site of the proposed action.	E2h	☐	☐
j. The proposed action may involve the application of pesticides or herbicides in or around any water body.	D2q, E2h	☐	☐
k. The proposed action may require the construction of new, or expansion of existing, wastewater treatment facilities.	D1a, D2d	☐	☐

l. Other impacts: _____ _____		☐	☐

4. Impact on groundwater

The proposed action may result in new or additional use of ground water, or may have the potential to introduce contaminants to ground water or an aquifer. (See Part 1. D.2.a, D.2.c, D.2.d, D.2.p, D.2.q, D.2.t)

☑ NO ☐ YES

If "Yes", answer questions a - h. If "No", move on to Section 5.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may require new water supply wells, or create additional demand on supplies from existing water supply wells.	D2c	☐	☐
b. Water supply demand from the proposed action may exceed safe and sustainable withdrawal capacity rate of the local supply or aquifer. Cite Source: _____	D2c	☐	☐
c. The proposed action may allow or result in residential uses in areas without water and sewer services.	D1a, D2c	☐	☐
d. The proposed action may include or require wastewater discharged to groundwater.	D2d, E2l	☐	☐
e. The proposed action may result in the construction of water supply wells in locations where groundwater is, or is suspected to be, contaminated.	D2c, E1f, E1g, E1h	☐	☐
f. The proposed action may require the bulk storage of petroleum or chemical products over ground water or an aquifer.	D2p, E2l	☐	☐
g. The proposed action may involve the commercial application of pesticides within 100 feet of potable drinking water or irrigation sources.	E2h, D2q, E2l, D2c	☐	☐
h. Other impacts: _____ _____		☐	☐

5. Impact on Flooding

The proposed action may result in development on lands subject to flooding. (See Part 1. E.2)

☑ NO ☐ YES

If "Yes", answer questions a - g. If "No", move on to Section 6.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may result in development in a designated floodway.	E2i	☐	☐
b. The proposed action may result in development within a 100 year floodplain.	E2j	☐	☐
c. The proposed action may result in development within a 500 year floodplain.	E2k	☐	☐
d. The proposed action may result in, or require, modification of existing drainage patterns.	D2b, D2e	☐	☐
e. The proposed action may change flood water flows that contribute to flooding.	D2b, E2i, E2j, E2k	☐	☐
f. If there is a dam located on the site of the proposed action, is the dam in need of repair, or upgrade?	E1e	☐	☐

g. Other impacts: _____ _____		☐	☐

6. Impacts on Air

The proposed action may include a state regulated air emission source. (See Part 1. D.2.f., D.2.h, D.2.g) ☑ NO ☐ YES

If "Yes", answer questions a - f. If "No", move on to Section 7.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. If the proposed action requires federal or state air emission permits, the action may also emit one or more greenhouse gases at or above the following levels:			
i. More than 1000 tons/year of carbon dioxide (CO_2)	D2g	☐	☐
ii. More than 3.5 tons/year of nitrous oxide (N_2O)	D2g	☐	☐
iii. More than 1000 tons/year of carbon equivalent of perfluorocarbons (PFCs)	D2g	☐	☐
iv. More than .045 tons/year of sulfur hexafluoride (SF_6)	D2g	☐	☐
v. More than 1000 tons/year of carbon dioxide equivalent of hydrochloroflourocarbons (HFCs) emissions	D2g	☐	☐
vi. 43 tons/year or more of methane	D2h	☐	☐
b. The proposed action may generate 10 tons/year or more of any one designated hazardous air pollutant, or 25 tons/year or more of any combination of such hazardous air pollutants.	D2g	☐	☐
c. The proposed action may require a state air registration, or may produce an emissions rate of total contaminants that may exceed 5 lbs. per hour, or may include a heat source capable of producing more than 10 million BTU's per hour.	D2f, D2g	☐	☐
d. The proposed action may reach 50% of any of the thresholds in "a" through "c", above.	D2g	☐	☐
e. The proposed action may result in the combustion or thermal treatment of more than 1 ton of refuse per hour.	D2s	☐	☐
f. Other impacts: _____ _____		☐	☐

7. Impact on Plants and Animals

The proposed action may result in a loss of flora or fauna. (See Part 1. E.2. m.-q.) ☑ NO ☐ YES

If "Yes", answer questions a - j. If "No", move on to Section 8.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may cause reduction in population or loss of individuals of any threatened or endangered species, as listed by New York State or the Federal government, that use the site, or are found on, over, or near the site.	E2o	☐	☐
b. The proposed action may result in a reduction or degradation of any habitat used by any rare, threatened or endangered species, as listed by New York State or the federal government.	E2o	☐	☐
c. The proposed action may cause reduction in population, or loss of individuals, of any species of special concern or conservation need, as listed by New York State or the Federal government, that use the site, or are found on, over, or near the site.	E2p	☐	☐
d. The proposed action may result in a reduction or degradation of any habitat used by any species of special concern and conservation need, as listed by New York State or the Federal government.	E2p	☐	☐

e. The proposed action may diminish the capacity of a registered National Natural Landmark to support the biological community it was established to protect.	E3c	☐	☐
f. The proposed action may result in the removal of, or ground disturbance in, any portion of a designated significant natural community. Source: _____	E2n	☐	☐
g. The proposed action may substantially interfere with nesting/breeding, foraging, or over-wintering habitat for the predominant species that occupy or use the project site.	E2m	☐	☐
h. The proposed action requires the conversion of more than 10 acres of forest, grassland or any other regionally or locally important habitat. Habitat type & information source: _____ _____	E1b	☐	☐
i. Proposed action (commercial, industrial or recreational projects, only) involves use of herbicides or pesticides.	D2q	☐	☐
j. Other impacts: _____ _____		☐	☐

8. Impact on Agricultural Resources

The proposed action may impact agricultural resources. (See Part 1. E.3.a. and b.) ☑ NO ☐ YES

If "Yes", answer questions a - h. If "No", move on to Section 9.

	Relevant Part I Question(s)	**No, or small impact may occur**	**Moderate to large impact may occur**
a. The proposed action may impact soil classified within soil group 1 through 4 of the NYS Land Classification System.	E2c, E3b	☐	☐
b. The proposed action may sever, cross or otherwise limit access to agricultural land (includes cropland, hayfields, pasture, vineyard, orchard, etc).	E1a, Elb	☐	☐
c. The proposed action may result in the excavation or compaction of the soil profile of active agricultural land.	E3b	☐	☐
d. The proposed action may irreversibly convert agricultural land to non-agricultural uses, either more than 2.5 acres if located in an Agricultural District, or more than 10 acres if not within an Agricultural District.	E1b, E3a	☐	☐
e. The proposed action may disrupt or prevent installation of an agricultural land management system.	El a, E1b	☐	☐
f. The proposed action may result, directly or indirectly, in increased development potential or pressure on farmland.	C2c, C3, D2c, D2d	☐	☐
g. The proposed project is not consistent with the adopted municipal Farmland Protection Plan.	C2c	☐	☐
h. Other impacts: _____		☐	☐

9. Impact on Aesthetic Resources

The land use of the proposed action are obviously different from, or are in sharp contrast to, current land use patterns between the proposed project and a scenic or aesthetic resource. (Part 1. E.1.a, E.1.b, E.3.h.)

☑ NO ☐ YES

If "Yes", answer questions a - g. If "No", go to Section 10.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. Proposed action may be visible from any officially designated federal, state, or local scenic or aesthetic resource.	E3h	☐	☐
b. The proposed action may result in the obstruction, elimination or significant screening of one or more officially designated scenic views.	E3h, C2b	☐	☐
c. The proposed action may be visible from publicly accessible vantage points: i. Seasonally (e.g., screened by summer foliage, but visible during other seasons) ii. Year round	E3h	 ☐ ☐	 ☐ ☐
d. The situation or activity in which viewers are engaged while viewing the proposed action is: i. Routine travel by residents, including travel to and from work ii. Recreational or tourism based activities	E3h E2q, E1c	 ☐ ☐	 ☐ ☐
e. The proposed action may cause a diminishment of the public enjoyment and appreciation of the designated aesthetic resource.	E3h	☐	☐
f. There are similar projects visible within the following distance of the proposed project: 0-1/2 mile ½ -3 mile 3-5 mile 5+ mile	D1a, E1a, D1f, D1g	☐	☐
g. Other impacts: _____ _____		☐	☐

10. Impact on Historic and Archeological Resources

The proposed action may occur in or adjacent to a historic or archaeological resource. (Part 1. E.3.e, f. and g.)

☐ NO ☑ YES

If "Yes", answer questions a - e. If "No", go to Section 11.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may occur wholly or partially within, or substantially contiguous to, any buildings, archaeological site or district which is listed on the National or State Register of Historical Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places.	E3e	☑ SMALL	☐
b. The proposed action may occur wholly or partially within, or substantially contiguous to, an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory.	E3f	☑ SMALL	☐
c. The proposed action may occur wholly or partially within, or substantially contiguous to, an archaeological site not included on the NY SHPO inventory. Source: _____	E3g	☑ NO	☐

d. Other impacts: _____ _____		☐	☐
e. If any of the above (a-d) are answered "Moderate to large impact may occur", continue with the following questions to help support conclusions in Part 3:			
i. The proposed action may result in the destruction or alteration of all or part of the site or property.	E3e, E3g, E3f	☐	☐
ii. The proposed action may result in the alteration of the property's setting or integrity.	E3e, E3f, E3g, E1a, E1b	☐	☐
iii. The proposed action may result in the introduction of visual elements which are out of character with the site or property, or may alter its setting.	E3e, E3f, E3g, E3h, C2, C3	☐	☐

11. Impact on Open Space and Recreation

The proposed action may result in a loss of recreational opportunities or a reduction of an open space resource as designated in any adopted municipal open space plan.
(See Part 1. C.2.c, E.1.c., E.2.q.)
If "Yes", answer questions a - e. If "No", go to Section 12.

☑ NO ☐ YES

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may result in an impairment of natural functions, or "ecosystem services", provided by an undeveloped area, including but not limited to stormwater storage, nutrient cycling, wildlife habitat.	D2e, E1b E2h, E2m, E2o, E2n, E2p	□	□
b. The proposed action may result in the loss of a current or future recreational resource.	C2a, E1c, C2c, E2q	□	□
c. The proposed action may eliminate open space or recreational resource in an area with few such resources.	C2a, C2c E1c, E2q	□	□
d. The proposed action may result in loss of an area now used informally by the community as an open space resource.	C2c, E1c	□	□
e. Other impacts: _____ _____		□	□

12. Impact on Critical Environmental Areas

The proposed action may be located within or adjacent to a critical environmental area (CEA). (See Part 1. E.3.d)
If "Yes", answer questions a - c. If "No", go to Section 13.

☑ NO ☐ YES

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may result in a reduction in the quantity of the resource or characteristic which was the basis for designation of the CEA.	E3d	□	□
b. The proposed action may result in a reduction in the quality of the resource or characteristic which was the basis for designation of the CEA.	E3d	□	□
c. Other impacts: _____ _____		□	□

13. Impact on Transportation
The proposed action may result in a change to existing transportation systems. ☐ NO ☑ YES
(See Part 1. D.2.j)
If "Yes", answer questions a - f. If "No", go to Section 14.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. Projected traffic increase may exceed capacity of existing road network.	D2j	NO ☑	☐
b. The proposed action may result in the construction of paved parking area for 500 or more vehicles.	D2j	NO ☑	☐
c. The proposed action will degrade existing transit access.	D2j	NO ☑	☐
d. The proposed action will degrade existing pedestrian or bicycle accommodations.	D2j	NO ☑	☐
e. The proposed action may alter the present pattern of movement of people or goods.	D2j	NO ☑	☐
f. Other impacts: The project will result in increased demand for off-street parking. The project will result in the need for signal timing improvements.		☑ SMALL	☐

14. Impact on Energy
The proposed action may cause an increase in the use of any form of energy. ☐ NO ☑ YES
(See Part 1. D.2.k)
If "Yes", answer questions a - e. If "No", go to Section 15.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action will require a new, or an upgrade to an existing, substation.	D2k	NO ☑	☐
b. The proposed action will require the creation or extension of an energy transmission or supply system to serve more than 50 single or two-family residences or to serve a commercial or industrial use.	D1f, D1q, D2k	☑ NO	☐
c. The proposed action may utilize more than 2,500 MWhrs per year of electricity.	D2k	NO ☑	☐
d. The proposed action may involve heating and/or cooling of more than 100,000 square feet of building area when completed.	D1g	☑ NO	☐
e. Other Impacts: The project will result in increased energy use below the above thresholds.		☑ SMALL	☐

15. Impact on Noise, Odor, and Light
The proposed action may result in an increase in noise, odors, or outdoor lighting. ☑ NO ☐ YES
(See Part 1. D.2.m., n., and o.)
If "Yes", answer questions a - f. If "No", go to Section 16.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may produce sound above noise levels established by local regulation.	D2m	□	□
b. The proposed action may result in blasting within 1,500 feet of any residence, hospital, school, licensed day care center, or nursing home.	D2m, E1d	□	□
c. The proposed action may result in routine odors for more than one hour per day.	D2o	□	□

d. The proposed action may result in light shining onto adjoining properties.	D2n	☐	☐
e. The proposed action may result in lighting creating sky-glow brighter than existing area conditions.	D2n, E1a	☐	☐
f. Other impacts: _____ _____		☐	☐

16. Impact on Human Health

The proposed action may have an impact on human health from exposure to new or existing sources of contaminants. (See Part 1.D.2.q., E.1. d. f. g. and h.) ☐ NO ☑ YES

If "Yes", answer questions a - m. If "No", go to Section 17.

	Relevant Part I Question(s)	No,or small impact may cccur	Moderate to large impact may occur
a. The proposed action is located within 1500 feet of a school, hospital, licensed day care center, group home, nursing home or retirement community.	E1d	☑ SMALL	☐
b. The site of the proposed action is currently undergoing remediation.	E1g, E1h	☑ SMALL	☐
c. There is a completed emergency spill remediation, or a completed environmental site remediation on, or adjacent to, the site of the proposed action.	E1g, E1h	☑ SMALL	☐
d. The site of the action is subject to an institutional control limiting the use of the property (e.g., easement or deed restriction).	E1g, E1h	☑ SMALL	☐
e. The proposed action may affect institutional control measures that were put in place to ensure that the site remains protective of the environment and human health.	E1g, E1h	☑ NO	☐
f. The proposed action has adequate control measures in place to ensure that future generation, treatment and/or disposal of hazardous wastes will be protective of the environment and human health.	D2t	☑ NO	☐
g. The proposed action involves construction or modification of a solid waste management facility.	D2q, E1f	☑ NO	☐
h. The proposed action may result in the unearthing of solid or hazardous waste.	D2q, E1f	☑ SMALL	☐
i. The proposed action may result in an increase in the rate of disposal, or processing, of solid waste.	D2r, D2s	☑ SMALL	☐
j. The proposed action may result in excavation or other disturbance within 2000 feet of a site used for the disposal of solid or hazardous waste.	E1f, E1g E1h	☑ NO	☐
k. The proposed action may result in the migration of explosive gases from a landfill site to adjacent off site structures.	E1f, E1g	☑ NO	☐
l. The proposed action may result in the release of contaminated leachate from the project site.	D2s, E1f, D2r	☑ NO	☐
m. Other impacts: See below. _____ _____		☑ SMALL	☐

The site currently contaminated from past use. A Brownfield's Cleanup agreement has been entered into with the NYSDEC. The anticipated cleanup involves removal of existing contaminated soils under the supervision of NYSDEC pursuant to investigative and remedial work plans under NYSDEC's instructions.

17. Consistency with Community Plans

The proposed action is not consistent with adopted land use plans. ☑ NO ☐ YES
(See Part 1. C.1, C.2. and C.3.)
If "Yes", answer questions a - h. If "No", go to Section 18.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action's land use components may be different from, or in sharp contrast to, current surrounding land use pattern(s).	C2, C3, D1a E1a, E1b	☐	☐
b. The proposed action will cause the permanent population of the city, town or village in which the project is located to grow by more than 5%.	C2	☐	☐
c. The proposed action is inconsistent with local land use plans or zoning regulations.	C2, C2, C3	☐	☐
d. The proposed action is inconsistent with any County plans, or other regional land use plans.	C2, C2	☐	☐
e. The proposed action may cause a change in the density of development that is not supported by existing infrastructure or is distant from existing infrastructure.	C3, D1c, D1d, D1f, D1d, Elb	☐	☐
f. The proposed action is located in an area characterized by low density development that will require new or expanded public infrastructure.	C4, D2c, D2d D2j	☐	☐
g. The proposed action may induce secondary development impacts (e.g., residential or commercial development not included in the proposed action)	C2a	☐	☐
h. Other: _____ _____		☐	☐

18. Consistency with Community Character

The proposed project is inconsistent with the existing community character. ☐ NO ☑ YES
(See Part 1. C.2, C.3, D.2, E.3)
If "Yes", answer questions a - g. If "No", proceed to Part 3.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may replace or eliminate existing facilities, structures, or areas of historic importance to the community.	E3e, E3f, E3g	☑ SMALL	☐
b. The proposed action may create a demand for additional community services (e.g. schools, police and fire)	C4	☑ SMALL	☐
c. The proposed action may displace affordable or low-income housing in an area where there is a shortage of such housing.	C2, C3, D1f D1g, E1a	☑ NO	☐
d. The proposed action may interfere with the use or enjoyment of officially recognized or designated public resources.	C2, E3	☑ NO	☐
e. The proposed action is inconsistent with the predominant architectural scale and character.	C2, C3	☑ NO	☐
f. Proposed action is inconsistent with the character of the existing natural landscape.	C2, C3 E1a, E1b E2g, E2h	☑	☐
g. Other impacts: The project will promote environmental justice. _____		☑ SMALL	☐

PRINT FULL FORM

Wallace Campus Project
EAF Part 3
Identification and Evaluation of Potential Project Impacts
Draft 12/14/21

1. ***Impact on Land***
Proposed action may involve construction on, or physical alteration of the land surface of the proposed site.

Part 2 FEAF 1.d. The proposed action may involve the excavation and removal of more than 1,000 tons of natural material.

The project is likely to result in the excavation of more than 1,000 tons of soil because of the need to remove potentially contaminated soil. This will result in an improvement to the quality of the environment. See 16, Impact on Human Health, below, for discussion of this impact. See 1.e below for a discussion of truck traffic.

Part 2 FEAF 1.e. The proposed action may involve construction that continues for more than one year or in multiple phases.

Construction is expected to last 24 months. This will result in ongoing construction related impacts and disturbance to the neighborhood. Such impacts are likely to include increased traffic due to construction and construction related noise, dust and odor impacts. Depth to bedrock is in excess of 40 feet and therefore blasting is unlikely to be required.

The Project Sponsor will be required to employ Best Practices to limit construction impacts. Such practices shall include:

1) Designation of routes for construction trucks to access and stage at the site. This includes trucks removing contaminated soil (see 16, Impact on Human Health, below).

2) Preparation of a dust suppression plan to be implemented during dry periods or other times when blowing dust occurs.

3) Implementation of the March 2, 2021, revised December 7, 2021, and as subsequently amended, Stormwater Pollution and Prevention Plan's (SWPPP's) erosion and sediment control measures including temporary seeding, sediment traps, silt fences, stabilized construction entrances, silt sacks, and other methods described in the NYSDEC Standards and Specifications for Erosion and Sediment Control.

4) All construction vehicles and equipment will be well maintained and operated in an efficient manner. Construction equipment will be required to be equipped with noise attenuation devices and mufflers. In particular, the mufflers on all construction equipment will be fully functional and well maintained by the construction contractor.

5) Construction will be limited to the hours of 6:30 am to 9:00 pm, Monday through Friday, per City Code.

10. ***Impact on Historic and Archeological Resources***
The proposed action may occur in or adjacent to a historic or archaeological resource.

Part 2 FEAF 10.a. The proposed action may occur wholly or partially within, or substantially contiguous to, any buildings, archeological site or district which is listed on the National or State Register of Historical Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation (OPRHP) to be eligible for listing on the State Register of Historic Places.

Portions of the Project Site are located in the City's Mill Street Historic District and adjoining properties are State/National Historic Register listed.

On May 7, 2021 the National Park Service determined that the Wallace Building appeared to meet the criteria for listing on the National Register. The Applicant applied to OPRHP for National Register Nomination for the Wallace Building (331 Main and 14-20 Catharine). This application received preliminary approval on May 7, 2021 indicating that the building will likely be listed in the National Register of Historic Places if nominated by the State Historic Preservation Office pursuant to the procedures set forth in 36 CFR Part 60. Designation to the State and National Registers is likely to happen in 2022. The Applicant has also applied to the National Park Service for Commercial Rehabilitation Tax Credits, which application is also under review.

The Project was submitted to OPRHP for Consistency Review. By letter dated May 18, 2021, the OPRHP determined that the buildings at 319, 325 and 327-329 Main Street were not eligible for the Historic Register. OPRHP further found that with the understanding that none of the new construction will have an interior connection to the Wallace Department Store Building, it is the OPRHP's opinion that the demolition and replacement of the buildings at 319, 325 and 327-329 Main Street will have No Adverse Effect on historic resources provided that the following conditions are met:

1. The Part-2 Federal Commercial Tax Credit application for the Wallace Department Store at 331 Main Street must be reviewed and approved by the National Parks Service.

2. A demolition and construction protection plan for the neighboring historic buildings must be developed and implemented.

The City of Poughkeepsie conducted a survey of potentially historic buildings in 1976-77. That survey identified 59 properties that should be nominated to the National Register but did not include the buildings at 319, 325 and 327-329 Main Street. Poughkeepsie's Historic District and Landmark's Preservation Commission (HDLPC) has its own historic register; none of these buildings are on the register. The City also declined to list these buildings when a comprehensive study of Main Street was done.

The Planning Board engaged an architect, Mass Design Group, to assist in reviewing the architecture of the project. The purpose of this review is to ensure that building architecture is compatible with the historic character of project site buildings as well as the Mill Street Historic District.

The Planning Board and its consultant engaged in extensive dialogue with the Applicant concerning the building architecture. This dialogue resulted in the downsizing of the proposed buildings and the elimination of the need for height variances.

The proposed renovation scope for the Wallace building includes preservation of the Art Deco Main Street exterior, and a limestone façade that will remain unchanged from the second floor to the roof. Transparency will be added to the first floor (per historic images). The east and west facades will have new window penetrations, reworking existing, non-historic penetrations. Internal elements to be retained include utilizing the existing stairways and maintaining the historically significant painted dome at the fourth-floor ceiling. The Applicant has also agreed to retain the former Wallace Department Store sign.

The Wallace project improves and is compatible with the streetscape along Mill Street, enhances landscaping at the driveway entrances, and presents fully finished rear (north) elevations of the buildings to enhance pedestrian and driver views along the Mill Street corridor and into the site. Views into the site from the north will include views of Wallace Green and enhanced plantings within and around parking areas.

The Applicant has also worked with an architectural salvage company (Zarborski Emporium) to repurpose the interiors of 325 and 331 Main Street. The company has declined to utilize any items at 319 Main Street. 325 Main Street is fully occupied. The Applicant has agreed to allow access for potential architectural salvage once it is vacated. The Applicant has reached out to the Historic Albany Foundation to see if any exterior features of 319, 325 and 329 Main Street can be preserved and donated. The Applicant has also reached out to the HDLPC to photo document the buildings as the Commission requested.

Part 2 FEAF 10.b. The proposed action may occur wholly or partially within, or substantially contiguous to, an area designated as sensitive for archeological sites on the NY State Historic Preservation Office (SHPO) archeological site inventory.

The Project was submitted to OPRHP for Consistency Review. A Consistency Determination was issued on May 18, 2021. See 10.a above.

13. Impact on Transportation
The proposed action may result in a change to existing transportation systems.

Part 2 FEAF 13.f. Other Impacts. The Project will result in an increased demand for off-street parking.

The Applicant submitted a parking analysis dated September 28, 2021 and revised December 7, 2021. The analysis reflected modifications to the project as a result of the site plan review process, which included a reduction in units, elimination of the day care facility and fitness center/climbing gym and an increase in retail/commercial space.

The revised plan results in simplification of the parking and circulation patterns because of the elimination of the daycare facility and associated drop-off/pick-up areas.

The Applicant will provide a permanent access easement to the owner of the three Mill Street lots for the benefit of owners and tenants, to access the parking areas located on these lots via the Wallace Campus access drives. The Shared Parking Agreement would maintain the allocation of dedicated parking (12 spaces) to the three Mill Street lots in compliance with the PID zoning. Pursuant to a separate Shared Parking Agreement with the Hudson River Housing (“HRH”) property at 310 Mill Street, the Applicant would be granted a permanent easement for improvements within the HRH property in exchange for HRH employees use of six Wallace parking spaces during working hours 8 am to 6 pm Monday to Friday. The six spaces would be available for Wallace Campus parking outside of those hours.

Overall, the project incorporates 60 parking spaces, while 32 spaces are required by zoning. Together with the 32 spaces required for the project, the total required spaces is 50 spaces during HRH office hours and 44 spaces all other times on Weekdays and all day on weekends.
Part 2 FEAF 13.f. Other Impacts. The Project will result in increased demand for off-street parking and will result in the need for signal timing improvements.

The project will hold occasional public performances/community gatherings within the Wallace Green and tiered seating area. The parking accommodations for these performances/gatherings can be accommodated by available on-street parking in the area of the site as was identified in the February 27 parking study. The Applicant has obtained letters expressing interest from several local organizations.

By e-mail dated May 13, 2021 The New York State DOT advised that the Applicant will be responsible for signal timing improvements and an upgrade to a traffic controller. These are improvements that are routinely made when traffic patterns change and would not have any significant adverse impact on traffic patterns.

14. Impact on Energy
The proposed action may cause an increase in the use of any form of energy.

Part 2 FEAF 14.e. Other Impacts: The Project will result in an increase in energy use.

The Project will result in an increased demand for energy in the form of electricity. The increase is less than the thresholds in this Part 2 screening question.

Additionally, the Applicant is proposing to employ Green Building Practices under the Enterprise Green Community program. The Planning Board's engineer, the Chazen Companies, performed an analysis of the Enterprise Green Community Program and found in a report issued March 30, 2021 that it is of similar or greater value in terms of water use, energy efficiency, stormwater management and carbon emissions when compared with the LEED Gold Certification Program.

No significant adverse energy impacts are therefore anticipated.

16. Impact on Human Health
The proposed action may have an impact on human health from exposure to new or existing sources of contaminants.

Part 2 FEAF 16.a. The proposed action is located within 1,500 feet of a school, hospital, licensed day care center, group home, nursing home or retirement community.

The Project is located within 1,500 feet of the More Young Children Magnet Elementary School, Clinton Elementary School, Hudson River Healthcare, Inc., Community Family Development, and Humble Life Family Daycare. However, the project will not generate noise or other forms of pollution and therefore is not anticipated to impact such facilities.

Part 2 FEAF 16.b. The site of the proposed action is currently undergoing remediation.

The subject property has historically been used for commercial uses, including automotive repair, machining operations, furniture finishing, laundry activities, and gasoline underground storage tanks. As a result, the site has been subject to multiple environmental investigations.

Soils at multiple locations throughout the site, ranging in depth from one to seven feet below the parking lot surface, are impacted by Polycyclic Aromatic Hydrocarbons (PAH) and metals (mercury and lead) above Residential Use Soil Clean-up Objectives (i.e. the level of clean soil that must be achieved to allow construction of a residential use). No significant levels of Volatile Organic Carbons pesticides or PCBs have been found in the soils. Additional vapor investigation is warranted to determine whether soil vapor intrusion poses a risk to future building occupants.

The Applicant submitted a Brownfield Cleanup Program (BCP) Application and Remedial Investigation Work Plan (RIWP) to the NYSDEC on January 28, 2021 and a Letter of Completeness was issued on February 16, 2021. A public comment period concluded on March 26, 2021. The Applicant and DEC executed the RIWP on April 16, 2021. The site will therefore be remediated to BCP standards. It is anticipated that the site will be cleaned up to Track 1 standards. Track 1 is the highest standard and results in no restrictions to site use.

Based on the foregoing, no significant impacts to human health are anticipated.

Part 2 FEAF 16.c. There is a completed emergency spill remediation or a completed environmental site remediation on, or adjacent to, the site of the proposed action.

See 16.b above. Environmental remediation is ongoing and will soon be completed.

Part 2 FEAF 16.e The proposed action may affect institutional control measures that were put in place to ensure that the site remains protective of the environment and human health.

While there are no institutional controls currently in place, the Brownfield Site Clean-up Agreement executed with the DEC on April 19, 2021 provides for the possibility of future institutional controls. Such controls, if enacted, would be intended to be protective of the environment and human health.

Part 2 FEAF 16.h. The proposed action may result in the unearthing of solid or hazardous waste.

See b. above for a discussion of this issue.

Part 2 FEAF 16.i. The proposed action may result in an increase in the rate of disposal, or processing, of solid waste.

Project residents will generate solid waste, just as they do in their existing living situations. The project will be equipped with recycling collection facilities. No significant adverse impacts related to solid waste are anticipated.

18. Consistency with Community Character
The proposed project is inconsistent with the existing community character.

Part 2 FEAF 18.a. The proposed action may replace or eliminate existing facilities, structures, or areas of historic importance to the community.

See 10.a above for a discussion of this impact.

Part 2 FEAF 18.b. The proposed action may create a demand for additional community services (e.g. schools, police and fire).

The Project will make demands on community resources similar to any residential project. To the extent that residents relocate from elsewhere in the City to this new affordable housing development, such demands will be relocated, but not changed. The City Police and Fire Departments have indicated their ability to provide services to the project without adverse impacts by letters dated December 14, 2021.

The Project's demands on community resources are therefore not anticipated to be significant.

Part 2 FEAF 18.g. Other. The proposed action will promote environmental justice.

The Project promotes environmental justice because it provides an opportunity for people to leave substandard housing. By providing new workforce housing in the City low wage earners are afforded the opportunity to live in a new building, with attractive amenities, on existing bus lines, and near to educational and work options. The workforce housing will be open to anyone who qualifies and there will be no discrimination on the basis of gender, race or other characteristics. The housing will be subject to all FHA and state funding requirements. The apartments will also provide thirty units of supportive housing and the Applicant has provided information to the City Planning Board on the management of the housing and the apartments overall which includes staffing and security measures to help ensure the success of the supportive and workforce housing.

Determination of Significance by City of Poughkeepsie Planning Board as SEQRA Lead Agency for the Wallace Campus Project

The Wallace Campus project involves demolition, conversion and new construction, resulting in a mixed use development with 187 dwelling units and 14,235 square feet of commercial space with off-street parking and publicly available open space on the parcels at 319, 325, 327-329 and 331 Main Street, including redevelopment of an existing off-street parking area with access to Mill Street which is used by 302, 304 and 306 Mill St (the "Project"). This redevelopment Project is located in the Poughkeepsie Innovation District ("PID") in the PID-Historic Core ('HC") and PID-Urban Village ("UV").

When the application was first submitted the Project involved 214 mixed income affordable housing units, a daycare center and climbing wall, as well as retail space. The Project was seeking a litany of area variances including for a number of stories on the new buildings. Today the application is seeking site plan approval for 187 multi-family units and 14,213 square feet of retail/commercial space. While the Project is now arguably an unlisted action the proximity of historic structures to the Project, as well as the Wallace Building itself, requires that this Project still be treated as a Type 1 action.

The Project has been revised to address the Planning Board's questions and concerns, to address involved and interested agency comments, to respond to public comments and to make the Project more conforming with the PID-HC and PID-UV zoning. Although the Project is still seeking a small number of area variances from the City ZBA, these variances predominately relate to changes to an existing parking lot off Mill Street which has been in its current condition for decades and which will be aesthetically and operationally improved by the parking lot resurfacing and restriping, changes in flow and landscaping, among other changes. The Wallace Green portion of the Project will provide a link between the buildings and the parking lot, and a pedestrian walkway that extends from Main Street through to the parking lot. The Wallace Green will provide a public gathering and entertainment area as well as a green space for the residents of the buildings.

The re-use and refurbishment of the 118,536 square feet Wallace Building, an existing, 118,536 square feet, underutilized four story building with a tall parapet on Main Street will result in the preservation and adaptive reuse of a National Register of Historic Places designated building. The restored Wallace Building will have 69 units of housing with 7649 square feet of retail space.

The demolition and replacement of the three Main Street buildings adjacent to the Wallace Building with a new 81,813 square feet, 5 story Main Street building which has 69 residential units and 3,309 square feet of retail space fronting on Main Street is also part of the Project. The architects for the Applicant and the Wallace Campus Manager, LLC worked closely with the Planning Board and the architects advising the Planning Board to reduce the scale of the proposed Main Street Building which was originally proposed to have two additional floors and to enhance the design of the architectural features to evoke the historical forms of buildings along Main Street and to adjust the horizontal banding, fenestration and parapet.

The new five story building on Catharine Street is 60,145 square feet. The building will have 49 residential units and 3,255 square feet of commercial space. The new buildings are being designed to meet Enterprise Green Communities Program certification standards. The City's consultant, Chazen Companies, compared this program to the LEEDs gold certification program and determined that the Enterprise Green Communities Program would provide the same type of environmental benefits and were specifically created for this type of multi-family housing and mixed-use space. The multi-family housing for the entire Project is comprised of a total of 157 work force, affordable units and 30 supportive housing units. At the request of the community and the Planning Board the Applicant changed the mix of the units to provide more bedrooms in a number of units to facilitate residential opportunities for larger families.

In examining whether the Project will have a significant adverse environmental effect, the Planning Board examined each of the criteria of significance as follows:

(1) **A substantial adverse change in existing air quality, ground or surface water quality or quantity, traffic or noise levels, a substantial increase in solid waste production, a substantial increase in potential for erosion, flooding, leaching or drainage problems**—

The existing air quality will not change. The only use of energy for the operation of the Project is air handling units that will be used to heat and cool the buildings, likely fueled with natural gas or propane. All such units are exempt air emission points pursuant to the NYSDEC regulations. While dust can be created during demolition and construction, the demolition plan and the Stormwater Pollution Prevention Plan will be implemented during demolition and construction to ensure that any dust is controlled. The noise associated with construction will be temporary and will occur during the hours set by the City Code for construction. The construction area will be surrounded by existing impervious areas. There are no surface waters or wetlands on the Project site so there will be no potential for erosion, flooding, leaching or drainage problems. The City's consultants have reviewed the SWPPP and found that it meets the NYSDEC requirements for the control of stormwater during construction and post construction. Overall, the Project will result in a decrease in impervious areas due to the Wallace Green area and the landscaping in the parking lot. No substantial adverse environmental impacts will occur in these areas as a result of the Project.

(2) The removal or destruction of large quantities of vegetation or fauna; substantial interference with the movement of any resident or migratory fish or wildlife species; impacts on a significant habitat area, substantial adverse impacts on a threatened or endangered species of animal or plan, or the habitat of such a species; or other significant adverse impacts to natural resources--

Vegetation will be added to the area and some impervious surfaces will be replaced with pervious green spaces. No wildlife species of concern or threatened or endangered species are present. This is an urban area and the type of species of wildlife (squirrels, pigeons,

etc.) that may use the site are tolerant of human activity and are opportunistic. There are no significant habitat areas or any significant adverse impacts to natural resources as none exist on the Project site. No substantial adverse environmental impacts will occur in these areas as a result of the Project.

(3) **The impairment of the environmental characteristics of a critical environmental area as designated pursuant to section 617.14(g) of this Part --**

There are no Critical Environmental Areas designated on or near the Project Site and therefore no significant adverse environmental impacts related to a CEA.

(4) **The creation of a material conflict with a community's current plans or goals as officially approved or adopted—**

The Project site is located within the Poughkeepsie Innovation District. According to the City Ordinance establishing the PID, the PID-Policy Framework implements the principles advanced by the Poughkeepsie City Center Revitalization Plan and the Main Street Economic Development Strategy. The Ordinance exists to "revitalize the City of Poughkeepsie's historic central business district though the fostering of a walkable mixed-use neighborhood that supports quality residential development, institutional spaces for learning and socializing, as well as work spaces for Poughkeepsie's creative and innovative businesses." The PID expressly allows the development of multi-family housing and encourages ground floor commercial opportunities to preserve the storefronts of the historic central business district, to provide for pedestrian engagement at the storefront level. The Ordinance also indicates that one of the goals is to develop "Strategies for retaining and enhancing affordable housing with the PID and for remediating and redeveloping vacant properties, including surface parking lots." Within the PID are the PID-HC (Historic Core) and PID-UV (Urban Village). The PID HC encourages pedestrian activity and also the preservation of historic architecture and requiring new development to complement the existing character of the corridor. The PID UV encourages higher-density multi-family residential uses with ground floor commercial uses like restaurants, bars, retail, personal services and galleries. To encourage redevelopment more than one principle building or use is allowed on a lot or parcel to encourage mixed uses. In the PID-HC multi-family dwellings do not even require site plan review. In the PID-UV, multi-family dwellings do require site plan review.

The Wallace Campus Project is wholly consistent with the Community's officially adopted goals as expressed in the PID and the studies leading up to its establishment. The Project has proposed multi-family housing that is affordable, work force housing. The thirty units of affordable supportive housing will have caseworkers and others who assist those in the housing to obtain any assistance they may need.

The Project was redesigned to decrease the number of units to 187 overall with the goal of decreasing the height and number of stories of the buildings in order to keep them consistent with the height of the existing Wallace Building which is being preserved and adaptively reused. The amount of commercial space in the buildings was increased consistent with the goals of the PID to have an engaging pedestrian first floor to encourage activity in the area. The Main Street building which is new was designed to be consistent with the historical appearance of buildings

in the PID-HC. The aesthetics of the design have been carefully reviewed by the architects advising the City Planning Board as well as by the Planning Board members during many review meetings. The Applicant has been responsive to feedback and has established creative ways, such as recreating murals on the side of buildings and proposing to reuse historic features, such as the Wallace Building sign in the redevelopment efforts.

The Project has also proposed new buildings in areas that were underdeveloped and used for parking or vacant space and is contributing to the redesign and refurbishment of an existing underutilized parking lot along Mill Street that will aid the existing properties that use the parking already and that will provide more than the required amount of parking for this Project. The Wallace Green is also a feature, along with the pedestrian walkway with amenities, that upgrades the site and removes impervious areas and replaces them with pedestrian friendly spaces.

Throughout the review process the design of the buildings, the parking and the greenspace was revised and enhance to have the Project come into greater conformance with the PID-HC and UV. The area variances that are left relate more to existing non-conforming limitations. All of the area variances that remain are set forth on the Deputy Zoning Administrator's Zoning Determination. They do not represent notable departures from the policies and goals of the PID. No significant adverse environmental impacts will result from this Project to the community's current plans or goals as officially approved or adopted.

(5) **The impairment of the character or quality of important historical, archeological, architectural or aesthetic resources or of existing community or neighborhood character—**

The Project does not impair the character or quality of important historical, archeological, architectural or aesthetic resources of existing community or neighborhood character. Many public commentors spoke fondly of the dates when department store retail was available in the downtown core. Unfortunately the days for such uses have passed and the Wallace Campus area is characterized today by structures that are underused, have been demolished and not replaced, or have been so overtaken by circumstances that they no longer have historic value. The Project Applicant has worked closely with the NYS Office of Parks, Recreation and Historic Places to characterize the structures in the Wallace Campus. The existing buildings that are going to be demolished for the new Main Street Building have been determined by the state to have no historic significance finding that they are not eligible for listing on the State or National Registers of Historic Places. Moreover, the City in its own efforts to survey historically significant buildings did not identify any of these buildings as worthy of being nominated to the State or National Registers of Historic Places and none have been nominated for or placed on the Historic District and Landmark's Preservation Commission's historic register.

The Project proposes to replace these structures with one Main Street structure that is aesthetically pleasing and consistent with historic architectural forms in the City. The architects for the Wallace Campus Project undertook a review of historic structures on Main Street and used that information to guide the design of the proposed building. The Project proposes to adaptively reuse the Wallace Building. The OPRHP has confirmed its eligibility for listing on the State and /or national registers of Historic Places. The National Park Service has also confirmed its eligibility for

nomination. This will enable the Applicant to use Historic Tax Credits in the preservation and reuse of the Wallace Building. The Applicant is restoring its historic appearance at the street level to compliment the proposed commercial space. Many of the interior spaces of distinction are being preserved and restored.

The Catharine Street building is infill development, in an area of the City that used to have a structure or structures but which were demolished many years ago. The goal with this building was to make it aesthetically pleasing and consistent with the surrounding buildings some of which have been recently developed. Overall, the Project design is consistent with the goals of the PID and the character of the structures existing in the community in a way that is consistent with the PID.

This Project does not have a significant adverse impact on any eligible historic structure or impairment of existing community or neighborhood character.

(6) **A major change in the use of either the quantity or type of energy**—

There will not be a major change in the use of either the quantity or type of energy. The buildings will have HVAC systems to heat and cool the buildings. They will use fuel that is commonly available in the City. The buildings will be either new or refurbished and restored which will make them more energy efficient. The Project will follow the Enterprise Green Communities Green Building Certification program. The City's consultant, Chazen, issued a report to the Planning Board concluding that the Enterprise Green Communities Green Building Certification Program is of similar or greater value in terms of water use, energy efficiency, stormwater management, and carbon emissions as LEED Gold Certification. The addition of green space is also beneficial, where, as here it replaces impervious areas, primarily comprised of asphalt. The impact on energy usage will be positive and will not represent a significant adverse environmental impact.

(7) **The creation of a hazard to human health**--

The Project will result in the construction of new buildings that meet all Code requirements. The housing will be designed to current high standards. The buildings will have security and the outdoor open spaces will be monitored as well. The Wallace Green will provide an area for those living in the buildings to spend time outdoors and the area, although it will be privately owned and maintained, will also be available for public use and provide pedestrian linkages through to Mill Street. The Wallace Building has been entered into the NYS Brownfields Program administered by the NYSDEC. The Wallace Campus Partners LLC have signed a remediation agreement with the NYSDEC and have proposed a workplan to NYSDEC which has been approved. The goal of the process is to have that portion of the Project Site cleaned up to residential standards which is the highest level leaving the least amount of contamination behind. The workplan is required to take steps to ensure through monitoring that dust containing contamination is strictly controlled during the remedial phase of the Project. The existing contamination resulted from past uses in the Wallace building. The clean up of these contaminated areas, along with the redevelopment of this portion of the City represents an environmental

improvement and will not create any hazards to human health or any significant adverse environmental impacts.

(8) **A substantial change in the use or intensity of use, of land including agricultural, open spaces or recreational resources, or in its capacity to support existing uses--**

The proposed Project is consistent with the PID zoning and its goal of redeveloping underutilized areas within the City. Moreover, the number of multifamily units proposed for each building is consistent with the density of development of similar buildings throughout the City. Like the Lucky Platt building across Main Street, multifamily uses are being developed in connection with the reuse of historic buildings. This Project will increase open, green space and refurbish an existing run down parking area. The PID goal is to have infill development consistent with the character of the City and providing uses that can increase pedestrian and economic activity in the PID. For an urban area, the proposed current size and height of the new buildings is consistent with the PID and is not a substantial change in the use or intensity of use of this area of the City. The change in use or intensity of use will not result in any significant adverse environmental impacts.

(9) **The encouraging or attracting of a large number of people to a place or places for more than a few days, compared to the number of people that would come to such place absent the action--**

This criteria does not apply to the proposed project. The City through its efforts to redevelop the PID is seeking to encourage the reuse of this area through the establishment of commercial uses and multi-family housing, including affordable housing. Greater pedestrian activity by those who live in the City is anticipated to increase economic activity in this area of the City due to the redevelopment of the Wallace building and the construction of two new buildings.

(10) **The creation of a material demand for other actions that would result in one or more of the above consequences—**

Some have suggested that the proposed multi-family housing may have an adverse impact on community services, primarily police and fire services that the City provides. The City Planning Department coordinated with the Police and Fire Departments and provided them with the most up to date plans and met with them to answer any questions. As a result both the Police and Fire Departments have confirmed in writing that they are able to serve the Project as proposed. The Police Department has suggested that the gates may not be necessary to block off the pedestrian way and Wallace Green at night and that the City Planning Department should require them to be installed at a later date if necessary. The refurbishment of the Wallace Building and the construction of two new buildings provide the Fire Department with no concerns because the buildings will all be fitted with Code compliant firematic fixtures. In their current state the existing structures to be demolished and the Wallace Building represent more of a fire fighting concern.

Water and sewer services are public services provided by the City. The Project's projected use of water and production of sewage is within the existing capacity of the City's sewer and water departments based on their and Chazen's review of the Project. The Project's effect on community services will not result in a significant adverse environmental impact.

(11) Changes in two or more elements of the environment no one of which has a significant impact on the environment, but when considered together result in a substantial adverse impact on the environment;

The evaluation of the criteria above establish that none of the aspects of the project have the potential to have a significant adverse impact on the environment. This is also the case when you consider the Project as a whole or any of the elements of the environment together.

(12) Two or more related actions undertaken, funded or approved by an agency , none of which has or would have a significant impact on the environment, but when considered cumulatively would meet one or more of the criteria in this subdivision.

Similarly, the Project sets forth a comprehensive approach to the redevelopment of this portion of the City. The Applicant has not attempted to segment review of the Project by dividing it up into smaller pieces. The approach here is consistent with the PID which encourages the development of Projects that address large blocks such as that represented by the Wallace Campus project. This allows for the redevelopment of existing buildings, the construction of new buildings, the establishment of pedestrian ways and green space, as well as the refurbishment of parking that may be used by the Project, as well as surrounding businesses and multi-family dwelling units. The improvement of the shared parking and the cooperation among landowners is necessary for the redevelopment of existing urban areas like the PID.

The Planning Board as lead agency has completed Parts 2 and 3 of the EAF and closely examined the criteria established in SEQRA for making a determination of significance. The Planning Board determines that the Project will not result in a significant adverse environmental impact and that an Environmental Impact Statement will not be required for this Project.

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Applicant/Sponsor Information.

Name of Action or Project: Wallace Campus		
Project Location (describe, and attach a general location map): 319 Main Street, 325 Main Street, 327-329 Main Street, and 331 Main Street, City of Poughkeepsie		
Brief Description of Proposed Action (include purpose or need): See Supporting Information, attached.		
Name of Applicant/Sponsor: Wallace Campus Manager, LLC	Telephone: (718) 932-6342 E-Mail: EKokinakis@megagroup.ny	
Address: Mega Development, 48-02 25th Ave, Suite 400		
City/PO: New York	State: NY	Zip Code: 11103
Project Contact (if not same as sponsor; give name and title/role): Emanuel Kokinakis	Telephone: (718) 932-6342 E-Mail: EKokinakis@megagroup.ny	
Address: Mega Development, 48-02 25th Ave, Suite 400		
City/PO: New York	State: NY	Zip Code: 11103
Property Owner (if not same as sponsor):	Telephone: E-Mail:	
Address:		
City/PO:	State:	Zip Code:

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

Government Entity	If Yes: Identify Agency and Approval(s) Required	Application Date (Actual or projected)
a. City Counsel, Town Board, or Village Board of Trustees ☑Yes ☐No	City of Poughkeepsie Common Council/Industrial Development Agency (for property tax abatement)	TBD
b. City, Town or Village Planning Board or Commission ☑Yes ☐No	City of Poughkeepsie Planning Board - Site Plan Approval	Spring 2020
c. City, Town or Village Zoning Board of Appeals ☑Yes ☐No	City of Poughkeepsie ZBA - see attached list of variances	TBD
d. Other local agencies ☐Yes ☑No		
e. County agencies ☑Yes ☐No	Referral from Planning Board and ZBA to Dutchess County Planning	November 2021
f. Regional agencies ☐Yes ☑No		
g. State agencies ☑Yes ☐No	SHPO; DOT; DEC; DOH; HCR; HFA; Empire State Development.	Various
h. Federal agencies ☑Yes ☐No	NPS (Historic Tax Credits)	Spring 2020

i. Coastal Resources.

i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes ☑No

ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes ☑No

iii. Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes ☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes ☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☐Yes ☑No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway; Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☑Yes ☐No

If Yes, identify the plan(s):

Hudson River Valley National Heritage Area; Poughkeepsie Innovation District; EnZone Type AB.

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No

If Yes, identify the plan(s):

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
PID-Historic Core and PID-Urban Village

b. Is the use permitted or allowed by a special or conditional use permit? ☐ Yes ☑ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
i. What is the proposed new zoning for the site? _____

C.4. Existing community services.

a. In what school district is the project site located? City of Poughkeepsie School District

b. What police or other public protection forces serve the project site?
City of Poughkeepsie Police Department

c. Which fire protection and emergency medical services serve the project site?
City of Poughkeepsie Fire Department

d. What parks serve the project site?
The nearest park is Mansion Square Park located approximately 0.2 mile from the Site. The applicant is also proposing to create privately owned public green space on a portion of the Site.

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Mixed-use development: residential and commercial. Also pedestrian and passive open space amenities.

b. a. Total acreage of the site of the proposed action? 2.52 acres
b. Total acreage to be physically disturbed? 2.52 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 2.52 acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☐ Yes ☑ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
_____
ii. Is a cluster/conservation layout proposed? ☐ Yes ☑ No
iii. Number of lots proposed? _____
iv. Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will the proposed action be constructed in multiple phases? ☐ Yes ☑ No
i. If No, anticipated period of construction: 24 months
ii. If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

f. Does the project include new residential uses? ☑ Yes ☐ No
If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase				187 Apartments
At completion of all phases				1 Phase only

g. Does the proposed action include new non-residential construction (including expansions)? ☑ Yes ☐ No
If Yes,
i. Total number of structures 3
ii. Dimensions (in feet) of largest proposed structure: 59'11" height; 85' 11" width; and 325' 6" length
iii. Approximate extent of building space to be heated or cooled: 256,814 square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☐ Yes ☑ No
If Yes,
i. Purpose of the impoundment: _____
ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☐ Other specify:
_____
iii. If other than water, identify the type of impounded/contained liquids and their source.
_____
iv. Approximate size of the proposed impoundment. Volume: _____ million gallons; surface area: _____ acres
v. Dimensions of the proposed dam or impounding structure: _____ height; _____ length
vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete):
_____

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? ☑ Yes ☐ No
(Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite)
If Yes:
i .What is the purpose of the excavation or dredging? Construction/soil remediation
ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?
- Volume (specify tons or cubic yards): 10,000-12,000 cubic yards
- Over what duration of time? Approximately 8 weeks

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.
Likely urban fill, requiring management and disposal as a non-hazardous regulated waste. Management and disposal will be governed by NYSDEC approved RAWP under BCP, including CAMP implementation.
iv. Will there be onsite dewatering or processing of excavated materials? ☐ Yes ☑ No
If yes, describe. _____
_____
v. What is the total area to be dredged or excavated? TBD acres
vi. What is the maximum area to be worked at any one time? TBD acres
vii. What would be the maximum depth of excavation or dredging? TBD feet
viii. Will the excavation require blasting? ☐ Yes ☑ No
ix. Summarize site reclamation goals and plan: _____
See attached Supporting Information. Total volume and area to be excavated will be a function of the remedy chosen for the site as determined in the NYSDEC approved RAWP. The site will be cleaned up to Track 1 standards.

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐ Yes ☑ No
If Yes:
i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): _____
_____

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

_____

_____

_____

_____

iii. Will the proposed action cause or result in disturbance to bottom sediments? ☐Yes ☐No

If Yes, describe: _____

iv. Will the proposed action cause or result in the destruction or removal of aquatic vegetation? ☐Yes ☐No

If Yes:

- acres of aquatic vegetation proposed to be removed: _____
- expected acreage of aquatic vegetation remaining after project completion: _____
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access): _____

_____

- proposed method of plant removal: _____
- if chemical/herbicide treatment will be used, specify product(s): _____

v. Describe any proposed reclamation/mitigation following disturbance: _____

_____

c. Will the proposed action use, or create a new demand for water? ☑Yes ☐No

If Yes:

i. Total anticipated water usage/demand per day: 22,067± gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☑Yes ☐No

If Yes:

- Name of district or service area: City of Poughkeepsie
- Does the existing public water supply have capacity to serve the proposal? ☑Yes ☐No
- Is the project site in the existing district? ☑Yes ☐No
- Is expansion of the district needed? ☐Yes ☑No
- Do existing lines serve the project site? ☑Yes ☐No

iii. Will line extension within an existing district be necessary to supply the project? ☐Yes ☑No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

_____

- Source(s) of supply for the district: _____

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☑No

If, Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- Proposed source(s) of supply for new district: _____

v. If a public water supply will not be used, describe plans to provide water supply for the project: _____

_____

vi. If water supply will be from wells (public or private), what is the maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑Yes ☐No

If Yes:

i. Total anticipated liquid waste generation per day: 22,067± gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each): _____

sanitary wastewater

_____

iii. Will the proposed action use any existing public wastewater treatment facilities? ☑Yes ☐No

If Yes:

- Name of wastewater treatment plant to be used: City of Poughkeepsie Water Pollution Control Plant
- Name of district: City of Poughkeepsie
- Does the existing wastewater treatment plant have capacity to serve the project? ☑Yes ☐No
- Is the project site in the existing district? ☑Yes ☐No
- Is expansion of the district needed? ☐Yes ☑No

- Do existing sewer lines serve the project site? ☑ Yes ☐ No
- Will a line extension within an existing district be necessary to serve the project? ☐ Yes ☑ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐ Yes ☑ No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge or describe subsurface disposal plans):

N/A

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: _____

N/A

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☑ Yes ☐ No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or 1.78 acres (impervious surface)

_____ Square feet or 2.52 acres (parcel size)

ii. Describe types of new point sources. No new point sources - project is decreasing the amount of impervious surface by approximately 1 acre

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

On-site stormwater management structures

- If to surface waters, identify receiving water bodies or wetlands: _____

N/A

- Will stormwater runoff flow to adjacent properties? ☐ Yes ☑ No

iv. Does the proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☑ Yes ☐ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☑ Yes ☐ No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

Heavy equipment will be utilized during construction of new buildings that are components of the proposed project.

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

N/A

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

HVAC units to provide heat and A/C for the buildings

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐ Yes ☑ No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐ Yes ☐ No

ii. In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☑Yes ☐No

If Yes:

i. When is the peak traffic expected (Check all that apply): ☑ Morning ☑ Evening ☐Weekend ☐ Randomly between hours of _____ to _____.

ii. For commercial activities only, projected number of truck trips/day and type (e.g., semi trailers and dump trucks): _____

iii. Parking spaces: Existing 121 Proposed 60 Net increase/decrease -61

iv. Does the proposed action include any shared use parking? ☑Yes ☐No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:

Consolidation of existing driveways with 302, 304, 306 Mill street. Four driveway connections to Mill Street.

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☑Yes ☐No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☑Yes ☐No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☑Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☑Yes ☐No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action:

33,811,819 MBtu-this takes into account energy consumed on-site plus energy consumed during generation for/transmission to the site (CEQR Table 15-1)

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):

Central Hudson Gas & Electric

iii. Will the proposed action require a new, or an upgrade, to an existing substation? ☐Yes ☑No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: 6:30 a.m. - 9:00 p.m.
- Saturday: N/A
- Sunday: N/A
- Holidays: N/A

ii. During Operations:

- Monday - Friday: 24 hours
- Saturday: 24 hours
- Sunday: 24 hours
- Holidays: TBD- reduced hours most holidays

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☑ Yes ☐ No

If yes:

i. Provide details including sources, time of day and duration:

Per City of Poughkeepsie Code of Ordinances, Section 13 1/2-6, construction will be limited to the hours of 6:30 a.m. - 9:00 p.m. weekdays. Ambient noise levels will not be exceeded during operation.

ii. Will the proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☑ No

Describe: _____

n. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

See Submission Set, pages LP-1 and LP-2

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☑ No

Describe: _____

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

i. Product(s) to be stored _____

ii. Volume(s) _____ per unit time _____ (e.g., month, year)

iii. Generally, describe the proposed storage facilities: _____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☑ No

If Yes:

i. Describe proposed treatment(s):

ii. Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☑ Yes ☐ No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: 14,750 - 19,100 tons per length of construction (unit of time)
- Operation : 15 tons per month (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: Where possible construction materials will be reused or recycled. Soil will go out under a beneficial use determination (BUD) whenever possible, which will significantly reduce the amount of solid waste estimated above.
- Operation: A recycling program will be instituted and all residents will be encouraged to separate recyclable materials out from general household garbage.

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: All solid waste will be disposed of appropriately at a yet to be determined facility.
- Operation: City of Poughkeepsie Recycling and Sanitation

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

ii. Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will the proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☑ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

Unlikely to present - waste characterization sampling performed prior to site remediation under the BCP will identify any such materials, which, if present, will be managed and disposed of per the RAWP.

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☑ Urban ☐ Industrial ☑ Commercial ☐ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☑ Other (specify): construction

ii. If mix of uses, generally describe:

The property is located in an urban setting, with most properties developed for mixed-use (commercial/residential) and commercial uses. Uses at adjoining properties include an active construction site across Catharine Street, & buildings used for commercial and mixed commercial/residential uses

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	2.52	1.78	-0.74
• Forested	0	0	0
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)	0	0	0
• Agricultural (includes active orchards, field, greenhouse etc.)	0	0	0
• Surface water features (lakes, ponds, streams, rivers, etc.)	0	0	0
• Wetlands (freshwater or tidal)	0	0	0
• Non-vegetated (bare rock, earth or fill)	0	0	0
• Other Describe: Wallace Green & Landscaped Areas	0	.73	+.73

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☑ No

i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☑ Yes ☐ No

If Yes,

i. Identify Facilities:

More Young Children Magnet Elementary School, Clinton Elementary School, Hudson River Healthcare Inc., Community Family Development, Humble Life Family Daycare

e. Does the project site contain an existing dam? ☐ Yes ☑ No

If Yes:

i. Dimensions of the dam and impoundment:

- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____

iii. Provide date and summarize results of last inspection:

_____

_____

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Has the facility been formally closed? ☐ Yes ☐ No

- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:

_____

_____

iii. Describe any development constraints due to the prior solid waste activities: _____

_____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☑ Yes ☐ No

If Yes:

i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

The site was used for activities including automotive repair, machining operations, furniture finishing, laundry activities (potentially involving use of chlorinated solvents), and use of gasoline underground storage tanks (USTs). Site will be characterized and remediated under the BCP.

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☑ Yes ☐ No

If Yes:

i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☑ Yes ☐ No

☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____

☑ Yes – Environmental Site Remediation database — Provide DEC ID number(s): BCP C314134

☐ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures: _____

N/A

iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☑ Yes ☐ No

If yes, provide DEC ID number(s): B001483, E314110, C314130

iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):

B001483 - remediation completed, ongoing maintenance required, engineering controls on-site
E314110 - ERP App submitted and withdrawn, non-registry site
C314130 - Crannell Square, under construction, likely Track 1 cleanup under BCP

v. Is the project site subject to an institutional control limiting property uses? ☐ Yes ☑ No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

If the project fails to achieve Track 1 Cleanup under BCP, institutional and/or engineering controls may be imposed on the site as part of the remedy. Based on data available to date, the site will achieve Track 1, supporting the conclusion that such controls will be unnecessary.

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? 41 - 62 feet

b. Are there bedrock outcroppings on the project site? ☐ Yes ☑ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? _____%

c. Predominant soil type(s) present on project site:
Urban Land Soils 100 %
_____ _____%
_____ _____%

d. What is the average depth to the water table on the project site? Average: 15 feet

e. Drainage status of project site soils:
☑ Well Drained: 100 % of site
☐ Moderately Well Drained: _____% of site
☐ Poorly Drained _____% of site

f. Approximate proportion of proposed action site with slopes:
☑ 0-10%: 100 % of site
☐ 10-15%: _____% of site
☐ 15% or greater: _____% of site

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☐ Yes ☑ No

ii. Do any wetlands or other waterbodies adjoin the project site? ☐ Yes ☑ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☐ Yes ☐ No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name _____ Classification _____
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name _____ Approximate Size _____
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☐ No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100-year Floodplain? ☐ Yes ☑ No

k. Is the project site in the 500-year Floodplain? ☐ Yes ☑ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:

i. Name of aquifer: _____

m. Identify the predominant wildlife species that occupy or use the project site:

typical urban wildlife

n. Does the project site contain a designated significant natural community? ☐ Yes ☑ No

If Yes:

i. Describe the habitat/community (composition, function, and basis for designation):

ii. Source(s) of description or evaluation:

iii. Extent of community/habitat:

- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐ Yes ☑ No

If Yes:

i. Species and listing (endangered or threatened):

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐ Yes ☑ No

If Yes:

i. Species and listing:

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐ Yes ☑ No

If yes, give a brief description of how the proposed action may affect that use:

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐ Yes ☑ No

If Yes, provide county plus district name/number:

b. Are agricultural lands consisting of highly productive soils present? ☐ Yes ☑ No

i. If Yes: acreage(s) on project site?

ii. Source(s) of soil rating(s):

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐ Yes ☑ No

If Yes:

i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature

ii. Provide brief description of landmark, including values behind designation and approximate size/extent:

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐ Yes ☑ No

If Yes:

i. CEA name:

ii. Basis for designation:

iii. Designating agency and date:

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? ☑ Yes ☐ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☑ Historic Building or District

ii. Name: Portions of Site are located in the Upper Mill Street Historic District and adjoining properties are listed (see Attachments J & K)

iii. Brief description of attributes on which listing is based:

Age and past uses (see Supporting Information)

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☑ Yes ☐ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

i. Describe possible resource(s): _____

ii. Basis for identification: _____

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☑ Yes ☐ No

If Yes:

i. Identify resource: Walkway over the Hudson, FDR, Springside, College Hill, Kaal Rock, Victor C. Waryas, Eastman, Pulaski, Dongan, Wheaton

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): State/local parks, State historic trail (walkway only)

iii. Distance between project and resource: between 0.2 to 5 miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

i. Identify the name of the river and its designation: _____

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

Applicant/Sponsor Name Wallace Campus Managers, LLC Date 12/9/2021

Signature _____ Title Managing Member

PRINT FORM

1.0 INTRODUCTION

1.1. Project Summary

The Project Site consists of the entirety of the contiguous parcels known as 319 Main Street (Block 77, Lot 114098); 325 Main Street (Block 77, Lot 109079); 327-329 Main Street (Block 7, Lot 109077); and 331 Main Street (Block 78, Lot 127091), City of Poughkeepsie, New York (see Figures 1-4). The Applicant, Wallace Campus Manager, LLC, is proposing the renovation of the existing building at 331 Main Street and the construction of two new, mixed-use residential and commercial buildings. The Project will include 187 new dwelling units, on-site parking for vehicles, facilities for bike parking and circulation, and a sidewalk/footpath system throughout the campus. All parcels in the project are owned by Wallace Campus Manager, LLC.

1.2. Site Description and Project Details

The Site is a 2.52-acre commercial property, which is abutted by Mill Street to the north and Main Street to the South (see Figure 3). The southern portion of 319 Main Street currently contains a two-story building (former restaurant and club). The 325 and 327-329 Main Street lots each contain a four-story building with rear two-story sections (former bookstore and residence, and active office building, respectively), and the southern/central portions of 331 Main Street contain a four-story building with a three-story section to the east, utilized for offices and light manufacturing. The remaining northern portions of 319 and 331 Main Street contain paved parking areas, walkways, and yards. The development proposal includes 187 units of mixed-income rental housing and 14,213 sf of commercial space. New construction will only take place in areas where there has been previous ground disturbance and the development will not directly impact wetlands or the Fall Kill Creek (located approximately 650 feet northeast of the property). The buildings will occupy approximately 1.1 acre and the “Wallace Green,” an area of landscaped green space in a park-like setting, will occupy .57-acre of the 2.52-acre property. The remaining space will be used for parking and additional open space.

1.3. Anticipated Funding/Permits/Approvals

Table 1 provides a list of the funding/approvals/permits that are anticipated for the project.

AGENCY	FUNDING/APPROVAL/PERMIT
City of Poughkeepsie Planning Board	Site Plan Approval
City of Poughkeepsie Zoning Board of Appeals	Possible Variances[1]
City of Poughkeepsie Common Council	Possible PILOT
City of Poughkeepsie Industrial Development Agency	Possible Sales Tax relief
Dutchess County Department of Health	Water and Sewer Connections
Dutchess County Department of Planning and Development	GML 239m referral
New York's State Historic Preservation Office	Listing Wallace Campus Building on State and National Registers of Historic Places; Historic Tax Credits
New York State Department of Transportation	Highway Work Permit; Driveways
New York State Department of Environmental Conservation	BCA; BCP Tax Credit; SPDES GP-0-20-001
New York State Housing and Community Renewal	Site Alteration Letter; Low-Income Tax Credit
New York State Empire State Development	Potential Funding Source
Federal Home Loan Bank of New York	Potential Funding Source
National Park Service	Historic Tax Credits

2.0 SITE CONDITIONS

The project site, first developed prior to 1887, has primarily been used for commercial purposes with some limited historical residential use. The most significant commercial uses, including automotive repair, machining operations, furniture finishing, laundry activities (potentially involving use of

[1] See discussion in Attachment B

chlorinated solvents), and use of gasoline underground storage tanks (USTs) occurred at the eastern portion of the site near Catherine Street.

2.1. Early Investigations 2005 to 2013

GBTS reviewed the following environmental reports, prepared for portions of the property:

- Phase I ESA of 327-329 Main Street, John R. Bien, P.E., December 2005;
- Phase I ESA of 331 Main Street, Ecosystems Strategies, Inc., June 2013; and,
- Limited Phase II Subsurface Investigation for 331 Main Street (Lot D, "Phase II SSI"), Greenstar Environmental Solutions, LLC, August 2013.

No notable environmental conditions were identified at the 327-329 Main Street parcel; at the 331 Main Street parcel, however, former automotive repair activities and a historical gasoline underground storage tank (UST) were identified as Recognized Environmental Conditions. According to a conversation with an employee for the City of Poughkeepsie Fire Department, an "unofficial notation in a log book" indicated that Lot D had two, 1,000-gallon tanks removed on June 15, 1979 (location unknown).

The Limited Phase II SSI was conducted on the northeastern portion of 331 Main Street along Catharine Street. Fieldwork included a ground penetrating radar survey, advancement of six soil borings in the vicinity of the former automotive repair facility (SB-01 and SB-02) and the suspect UST (SB-03 through SB-06), and collection of groundwater samples from two borings (SB-04 and SB-06) converted to temporary monitoring wells.

The GPR survey did not indicate the presence of any USTs. No field evidence of petroleum contamination was encountered at any boring location, and laboratory analysis of three soil samples (SB-02, SB-04, and SB-06) did not document the presence of any volatile organic compounds (VOCs) or semi-volatile organic compounds (SVOCs). Low levels of lead were detected in two groundwater samples; however, the report notes that the lead detection was likely due to suspended soil particles. No VOCs or significant levels of SVOCs were detected in groundwater.

2.2. Recent Investigations: 2020

Recent investigations include the following:

- Geotechnical report for Wallace Campus Buildings ("Geotech Report"), Daniel G. Loucks, P.E. Geotechnical Engineering, September 8, 2020; and,
- Phase II ESA for the Wallace Campus, GBTS, October 2020.

The Geotech Report documents subsurface site conditions on several portions of the property. Subsurface soils throughout the site are generally comprised of an upper layer of fill extending from between 1 and 7 feet bsg. A sandy-gravelly layer underlies the fill layer to depths ranging between 17 to

23 feet bsg, which is underlain by a layer of dense silty clayey soils to depths ranging between 23 to 51 feet bsg. Weathered shale bedrock is reported to be at depths ranging between 41 to 62 feet bsg.

Soils at multiple locations throughout the Site, in an interval ranging from approximately 1 to 7 feet below the parking lot surface, are impacted by PAHs and metals (mercury and lead) above Restricted Residential Use Soil Cleanup Objectives (RRU SCOs). No significant levels of VOCs, SVOCs, pesticides or PCBs were found in soil samples collected for general screening purposes, and no significant levels of VOCs were found in soil vapor or in groundwater samples, suggesting that on-site contamination is limited to PAHs and metals impacts in soils. The source of this PAH and metal contamination is unknown, but may be related to historical commercial uses, impacts from building demolition, or the placement of fill materials.

Existing soil vapor data are limited in areas of proposed building footprints. Due to the urban nature of the Site, additional soil vapor investigation is warranted to determine whether soil vapor intrusion poses a risk to future building occupants.

2.3. Current Regulatory Status

A Brownfield Cleanup Program (BCP) Application and a Remedial Investigation Work Plan (RIWP) were submitted for the site to NYSDEC on January 28, 2021 and a Letter of Completeness was issued on February 16, 2021. The Application's Public Comment period concluded on March 26, 2021. Wallace Campus Manager LLC executed the Brownfield Cleanup Agreement (BCA) with the State on April 19, 2021 (see Attachment A) and the RIWP was finalized in March 2021. It is anticipated that a RIR and RAWP will be submitted to the NYSDEC by December 2021 and NYSDEC could potentially issue the Decision Document for the site in April 2022.

3.0 LAND USE, ZONING, AND PUBLIC POLICY

3.1. Land Use and Zoning

The project site was first developed prior to 1887 and has included commercial and some limited residential use although its recent history has, like other parts of downtown Poughkeepsie, been of underutilization and vacancy. In 2019 the Poughkeepsie Innovation District (PID) rezoning was undertaken by the City to put in place a framework to encourage and govern future development of the core commercial section of the city's downtown into an economic center anchored by increased residential population and a creative economy. Located in the central northern portion of the PID, the project site is zoned PID-Historic Core and PID-Urban Village.

The PID zoning regulations were enacted in 2019, after an extensive planning study, with the purpose of revitalizing the City's historic Central Business District through the fostering of a walkable mixed-use neighborhood that supports quality residential development and institutional spaces for learning and socializing, as well as work spaces for Poughkeepsie's creative and innovative businesses. One of the six

key components of the PID District Framework is the retention and enhancement of affordable housing with the PID.

The proposed Wallace Campus Project would be a significant moment in the ongoing realization of the City's vision as expressed in the PID rezoning. It includes quality affordable housing, meeting one of the six key components of the District Framework. It also fulfills a number of other goals of the PID, including: restoring an area with large expanses of underutilized space; restoring the architectural street wall integrity on Catherine Street; creating Wallace Green, a dynamic open space available for public use; creating a pedestrian connection mid-block between Main Street and Mill Street; providing buildings that are of excellent architectural design; and, providing mixed use development on Main Street, including ground floor retail.

Deputy Zoning Administrator Judith Knauss has issued a zoning interpretation dated March 31, 2021 concluding that, as to all three buildings, "All proposed uses are permitted in both the PID-UV and PID-HC, pursuant to the provisions of Section 19-3.37 Table 3.37-1 of the Zoning Ordinance." The uses in the project are multi-family residential and retail. Multi-family units in the PID-HC District and retail in the PID-HC District less than 10,000 SF per building are uses which do not require site plan review.

In response to comments, the project was redesigned to bring the heights of all buildings into conformity with zoning bulk requirements, eliminating two stories on the Main Street building and one story on the Catharine Street building. All buildings now comply with height regulations in the PID and the two new buildings are both lower in height than the existing Wallace building. The project requires several set back/area variances of bulk requirements relating to building and parking setback and frontage occupancy (frontage not occupied by buildings) relating to pre-existing buildings and access drives. The Applicant has been able to substantially minimize these variances (see Attachment B). The Deputy Zoning Administrator has addressed the proposed site plan amendments in the December 2021 submission and determined that, while the same area variances are required relating to the site driveways facing Mill Street, the extent of those variances has been reduced.

Further information regarding zoning can be found in Attachments C and D, which contain a full project description and statement of compliance with applicable PID building design requirements.

3.2. Public Policy

City of Poughkeepsie Comprehensive Plan, 1998

The City updated its Comprehensive Plan in 1998 with a focus on three areas: Main Street, the Cottage Street Business District, and the Waterfront. These areas were identified as being critically important to the City's future growth. Other areas of interest updated in the Plan included neighborhood planning issues, the City's Zoning Code, and recreational resources. The Plan outlines the following goals:

- Goal #1: A Traditional Downtown and Main Street;
- Goal #2: Neighborhoods with a Strong Sense of Community;
- Goal #3: A Vibrant Waterfront for Commerce and Recreation;

- Goal #4: Increased Employment Opportunities;
- Goal #5: User-Friendly Transportation Systems;
- Goal #6: A Regional Center for Commerce, Medicine, and Government; and
- Goal #7: The Creation of New Economic Opportunities.

The Plan states with regard to Goal #2 that, "City government can play a strong role in making the City a safe, healthy place to live. Policies and decisions on zoning issues that define and protect neighborhood character, and capital investment in parks, sidewalks, and streets, should be in keeping with this goal."

Wallace Campus adheres to this goal by providing outdoor amenity spaces to benefit residents and the public. A public pedestrian walkway will provide new connectivity between Main Street and Mill Street, beginning at a new Promenade entrance between the Wallace and Main Street buildings, and proceeding through the campus to Mill Street, near the intersection with Conklin. The new pedestrian walkway also provides access to an inviting central Green ("Wallace Green") that provides landscaping, play areas, a garden, tiered seating gathering area, and internal pedestrian access between the new buildings and the landscaped internal parking area. Vehicular access to the site is provided through consolidation of existing entrances from Mill Street. Through agreements with adjoining lots fronting on Mill Street (302, 304, 306 and 310 Mill Street), the Project will eliminate two existing curb cuts on Mill Street, provide additional Green space around and between existing buildings fronting on Mill Street, in addition to enhancing the pedestrian use of Mill Street via the new Wallace Green walkway between Main and Mill Streets. Additionally, Goal #2 states that "the City should also support renovation and reuse of vacant buildings, and removal and replacement of dilapidated structures." Wallace Campus supports this goal by renovating and repurposing the long dormant Wallace Campus Department Store and by replacing the old vacant, or otherwise underutilized, buildings west of the Wallace Campus Department Store with a new 81,813 SF building.

Goal #4 states that "the City should maintain a wide variety of employment opportunities for its residents and for workers living outside the City." The proposed project will provide 14,213 sf of commercial space, including new retail spaces along the Main Street pedestrian frontage, which will create new employment opportunities for residents and workers living outside the City. The proposed action is therefore consistent.

Dutchess County Hudson River Valley Greenway Compact Plan, 2000

Dutchess County is one of 13 counties that make up the Hudson River Valley Greenway, which was established by the State by the Hudson River Valley Greenway Act of 1991. In March 2000, the Hudson River Valley Greenway Council approved the Dutchess County Greenway Compact Plan, "Greenway Connections: Greenway Compact Program and Guides for Dutchess County Communities." The Greenway was created to facilitate the development of a voluntary regional strategy for preserving scenic, natural, historic, cultural, and recreational resources while encouraging compatible economic development and maintaining the tradition of home rule for land use decision-making. By Local Law Number 1 of 2002, the City became a participating community in the Greenway Compact, and adopted a statement of land use policies, principles and guides entitled, "Greenway Connections: Greenway

Compact Program and Guides for Dutchess County Communities." The City requires that consideration of the Greenway Compact Plan policies, principles, and guides be used to supplement other established land use policies in the City where discretionary decisions are made. The proposed development is anticipated to adhere to the purpose of the plan, as it will provide multifamily housing within a site design that encourages conservation of natural and historic resources. Therefore, the proposed action is consistent.

4.0 COMMUNITY SERVICES

4.1. Emergency Services

Fire emergency/ambulance service is provided by the City of Poughkeepsie. According to the City website, the Fire Department is a 64-man career-staffed department that protects 31,000 people living in an area of 4.78 square miles. It operates three fire stations that respond to almost 5,000 calls per year. The City's apparatus includes four engines, two ladder trucks, one rescue vehicle, and a fire/rescue boat. Water for fire protection is obtained from the City of Poughkeepsie water supply. A truck turning radius plan will be submitted during the site plan review. It is anticipated that there is sufficient firefighting capability to meet the minimal increase in demand related to the proposed 187 new residential units. The City of Poughkeepsie Police Department, with support from Dutchess County Sheriff's Department and NYS Police, provides police protection.

5.0 NATURAL RESOURCES

5.1. Soils

Soils in the vicinity of the subject property are likely to be derived from glacial till deposits, which overlie greywacke and shale bedrock (see Attachment E). According to the Natural Resources Conservation Service and information contained in the Dutchess County Soil Survey, soils at the project site consist entirely of Urban Land Soils (see Attachment F). The Urban Land designation identifies areas where at least 80% of the surface is covered by buildings, parking areas or other impervious structures, and specific soil and bedrock characteristics are generally not well known. The presence of on-site structures suggests that soils located on the property may have been altered by cutting, regrading, and/or filling activities.

Previous site investigations conducted at eastern-central portion of 331 Main Street documented soils consisting of a mixture of sand, silt, and silty clay. Bedrock was not encountered during the advancement of soil borings to a maximum depth of 20 feet below surface grade (bsg). Depth to bedrock is not reported for Urban Land soils and bedrock outcrops were not observed on the property. Shallow groundwater flow in the vicinity of the property is likely to generally follow surficial topography and be toward the Fall Kill Creek. Groundwater was encountered at approximately 15 feet bsg during previous investigations at 331 Main Street.

5.2. Habitats

According to the NYSDEC Environmental Resource Mapper and the Poughkeepsie National Resource Inventory (see Figure 7 and Attachment E), there is no known occurrence of endangered, threatened, or rare species on or in the immediate vicinity of the project site.

5.3. Water Resources

According to the Poughkeepsie NRI (Attachment E), there is a NYSDEC Class C stream, Fall Kill Creek (Regulation 862-393) located approximately 650 feet northeast of the Project Site. Class C streams are not regulated by the NYSDEC. No waterbodies or wet areas were observed within the boundaries of the Project Site or in the immediate vicinity during previous site inspections. Federal and state mapping data do not identify any other classified surface waterbodies, wet areas, or regulated wetlands on or in the immediate vicinity of the property (Figures 8-9).

5.4. Floodplain

According to the Poughkeepsie NRI Water Resources Map (Attachment E), the Project Site and the area immediately surrounding it are not within a flood hazard area. FEMA's National Flood Layer Flood Insurance Rate Map (FIRM Panel 36027C0358E) the Site is located within Zone X, which has a 0.2% annual chance of flooding (Figure 10). There will be a substantial buffer and distance between the proposed development and the Fall Kill and the implementation of the SWPPP will ensure that no significant adverse impacts to the floodplain will occur.

6.0 UTILITIES

6.1. Water and Wastewater

Municipal water and sewer service currently serve the project site. According to the New York State Department of Environmental Conservation (NYSDEC) *Design Standards for Intermediate Sized Wastewater Treatment Systems*, March 2014, with a 20% reduction for the use of modern water saving fixtures, the proposed project is expected to require water usage of 22,067± gallons per day (see Table 1, below). The existing demand is 28,106 ± gallons per day resulting in a net reduction of approximately 6,039± gallons per day. It is anticipated that the City's municipal water system has capacity to serve the proposed use. The Site Utilities Plan, shows the locations of all fire and domestic water mains, as well as the locations of all sanitary sewage mains.

Table 1. Calculations for Water/Sewer Usage

PROPOSED RE-DEVELOPMENT WATER/SEWER						
Location	**Use**	**Size**		**Rate***		**Flow (GPD)**
Parcel D - Wallace Bldg	Residential	69	Beds	110	Per Bedroom	7,590
Parcel D - Wallace Bldg	Retail	7,649	sq ft	0.08	Per sq ft	612
Parcel D - Wallace Bldg	Employees	13	Employees	15	Per employee	195
Parcel D - Main Str Bldg	Residential	69	Beds	110	Per Bedroom	7,590
Parcel D - Main Str Bldg	Retail	3,309	sq ft	0.08	Per sq ft	265
Parcel D - Main Str Bldg	Employees	6	per	15	Per sq ft	90
Parcel D - Catherine Str Bldg	Residential	49	Beds	110	Per Bedroom	5,390
Parcel D - Catherine Str Bldg	Retail	3,255	sq ft	0.08	Per sq ft	260
Parcel D - Catherine Str Bldg	Employees	5	per	15	Per sq ft	75
					Total Proposed Daily Flow:	**22,067**

6.2. Stormwater

The proposed project will require greater than one acre of disturbance and will require coverage under the State Pollutant Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Construction Activity. A SWPPP has been prepared in conformance with the most current New York State Stormwater Management Design Manual and New York State Standards and Specifications for Erosion and Sediment Control (see Attachment G). Stormwater will be directed to on-site stormwater management structures. Therefore, the proposed project is not expected to result in any adverse impacts in regard to stormwater.

7.0 TRAFFIC AND PARKING

The Site is currently accessed via two existing driveway connections to Mill Street (U.S. Route 44/NYS Route 55). Under current conditions, these two driveways are not currently connected internally; however, as part of the proposed development these driveways are proposed to be connected by an internal parking area providing for internal circulation between the driveways. Mill Street is a three-lane roadway that accommodates only westbound traffic in the vicinity of the Site. The roadway is under the jurisdiction of the New York State Department of Transportation (NYSDOT). Any modifications to the proposed driveways including, repaving, signing, striping, and concrete sidewalk modifications along the Mill Street Site frontage will require a Highway Work Permit to be obtained from the NYSDOT. This also includes any work within the NYSDOT Right-of-Way associated with the closure of the existing driveways to 302, 304, and 306 Mill Street.

Based on the Parking and Traffic analysis (see Attachment H), the required parking for the proposed Wallace Campus development (50 spaces during Hudson River Housing office hours and 44 spaces at all other times) will not exceed the proposed parking supply (60 spaces). In addition, the required parking needs associated with the proposed seasonal public performances and community gatherings (to be

held at the tiered seating area within the Wallace Green) can be accommodated during both the Weekday evening and Weekend periods, when there is anticipated to be an excess of 500 available public parking spaces in the vicinity of the Site. Furthermore, the proposed development is not anticipated to have any significant traffic related impacts on the surrounding area intersections.

8.0 HISTORIC AND ARCHAEOLOGICAL RESOURCES

According to the Poughkeepsie NRI (Attachment E), several adjoining properties are listed as historic sites or are located within the Upper Mill Street Historic District.

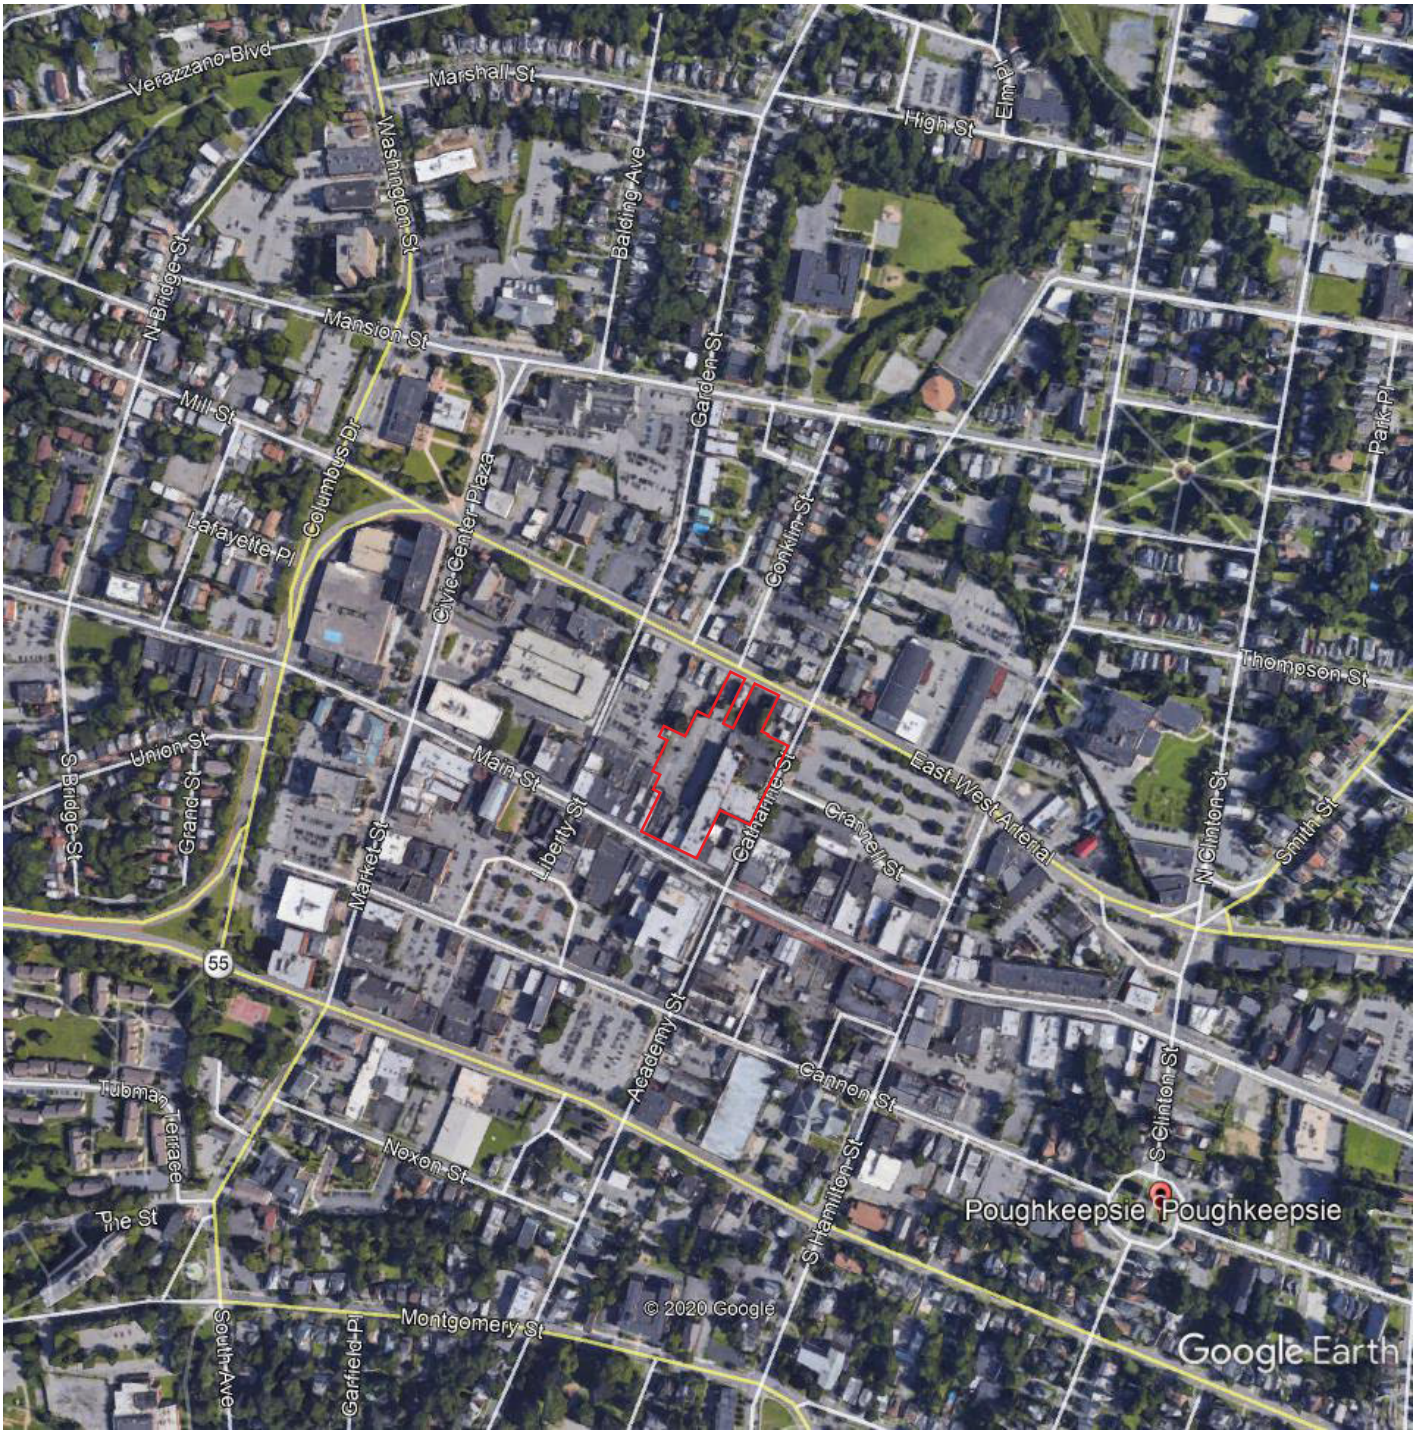
Landmark Consulting LLC, the preservation consulting firm hired by the Wallace Campus development team, authored the Commercial Rehabilitation Tax Credit Part 1 application for certification to pursue the rehab incentive program. The Part 1 application and draft National Register Nomination for the Wallace Building (331 Main and 14-20 Catharine) received preliminary approval (see Attachment I) on May 7, 2021, indicating that the building will likely be listed in the National Register of Historic Places if nominated by the State Historic Preservation Officer according to procedures set forth in 36 CFR Part 60. Official designation to the State and National Registers is likely to happen in 2021-22.

An additional online submission was entered into the SHPO CRIS requesting a general evaluation of the Project Sites historical and archaeological resources. A letter dated May 18, 2021 (see Attachment J) indicated that the project is not anticipated to result in any adverse impacts assuming the following conditions are met:

- The Part-2 Federal Commercial Tax Credit application for the Wallace Department Store at 331 Main Street must be reviewed and approved by the National Parks Service.
- A demolition and construction protection plan for the neighboring historic buildings must be developed and implemented. This plan should include physical protection options – if necessary, as well as include monitoring of the historic resources during the proposed work.

If these conditions cannot be met, or if there are substantive changes to the project, consultation with the NYS Office of Parks, Recreation, and Historic Preservation will resume.

The Applicant has also worked with an architectural salvage company to assure that architectural resources of interest within the buildings at 317, 325, and 327-329 are preserved prior to the demolition of those structures. Those buildings have already been inspected for such purpose and resources identified. All proceeds from the sale of items will be donated by the Applicant to Mid-Hudson Heritage Center. Further information regarding issues of historic importance can be found in Attachment K.



The Wallace Campus project is near the upper Mill Street historic district. The Wallace project improves the streetscape along Mill Street, enhances landscaping at the driveway entrances, and presents fully finished rear (north) elevations of the buildings to enhance pedestrian and driver views along the Mill Street corridor and into the site. Views into the site from the north will also include views of the Wallace Green, a central green space in the project, and the enhanced plantings within and around the parking areas. The Wallace plan also eliminates unneeded driveway curb cuts along Mill Street and

substitutes vegetated space. A Historic Resource Inventory for adjoining properties and a map of City of Poughkeepsie historic districts are included as Attachments L and M, respectively.

9.0 RECREATIONAL RESOURCES

Mural Square, a nearby open space, is located on the northern side of Main Street, approximately 400 feet west of the Site. According the Poughkeepsie NRI (Attachment E), no other recreational resources are located on or in the immediate vicinity of the Site.

NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION
BROWNFIELD CLEANUP PROGRAM
ECL §27-1401 *et seq.*

In the Matter of a Remedial Program for **BROWNFIELD SITE CLEANUP AGREEMENT Index No. C314134-04-21**

Wallace Campus
DEC Site No:C314134
Located at: 319, 325, 327-329 & 331 Main Street
Dutchess County
Poughkeepsie, NY 12601
Hereinafter referred to as "Site"

by:
Wallace Campus Manager LLC
c/o Mega Development LLC 48-02 25th Ave, Ste 400, Astoria, NY 11103
Hereinafter referred to as "Applicant"

WHEREAS, the Department of Environmental Conservation ("Department") is authorized to administer the Brownfield Cleanup Program ("BCP") set forth in Article 27, Title 14 of the Environmental Conservation Law ("ECL"); and

WHEREAS, the Applicant submitted an application received by the Department on November 18, 2020; and

WHEREAS, the Department has determined that the Site and Applicant are eligible to participate in the BCP.

NOW, THEREFORE, IN CONSIDERATION OF AND IN EXCHANGE FOR THE MUTUAL COVENANTS AND PROMISES, THE PARTIES AGREE TO THE FOLLOWING:

I. Applicant Status

The Applicant, Wallace Campus Manager LLC, is participating in the BCP as a Volunteer as defined in ECL 27-1405(1)(b).

II. Tangible Property Tax Credit Status

The Site is not located in a City having a population of one million or more. It is therefore presumed that the Site is eligible for tangible property tax credits.

III. Real Property

The Site subject to this Brownfield Cleanup Agreement (the "BCA" or "Agreement") consists of approximately 2.480 acres, a Map of which is attached as Exhibit "A", and is described as follows:

Tax Map/Parcel No.: 6162-77-114098
Street Number: 319 Main Street, Poughkeepsie
Owner: IIC Properties Inc.

Tax Map/Parcel No.: 6162-77-109079
Street Number: 325 Main Street, Poughkeepsie
Owner: Wallace Campus Manager LLC

Tax Map/Parcel No.: 6162-77-109077
Street Number: 327-329 Main Street, Poughkeepsie
Owner: Key Main LLC

Tax Map/Parcel No.: 6162-78-127091
Street Number: 331 Main Street, Poughkeepsie
Owner: IIC Properties Inc.

IV. Communications

A. All written communications required by this Agreement shall be transmitted by United States Postal Service, by private courier service, by hand delivery, or by electronic mail.

1. Communication from Applicant shall be sent to:

Michael Kilmer
New York State Department of Environmental Conservation
Division of Environmental Remediation
21 South Putt Corners Rd
New Paltz, NY 12561-1620

B. The Department and Applicant reserve the right to designate additional or different addressees for communication on written notice to the other. Additionally, the Department reserves the right to request that the Applicant provide more than one paper copy of any work plan or report.

C. Each party shall notify the other within ninety (90) days after any change in the addresses listed in this paragraph or in Paragraph III.

V. Miscellaneous

A. Applicant acknowledges that it has read, understands, and agrees to abide by all the terms set forth in Appendix A - "Standard Clauses for All New York State Brownfield Site Cleanup Agreements" which is attached to and hereby made a part of this Agreement as if set forth fully herein.

B. In the event of a conflict between the terms of this BCA (including any and all attachments thereto and amendments thereof) and the terms of Appendix A, the terms of this BCA shall control.

C. The effective date of this Agreement is the date it is signed by the Commissioner or the Commissioner's designee.

DATED: April 19, 2021

THIS BROWNFIELD CLEANUP AGREEMENT IS HEREBY APPROVED, Acting by and Through the Department of Environmental Conservation as Designee of the Commissioner,

By: _____
Michael J. Ryan, P.E., Director

APPENDIX A

STANDARD CLAUSES FOR ALL NEW YORK STATE BROWNFIELD SITE CLEANUP AGREEMENTS

The parties to the Brownfield Site Cleanup Agreement (hereinafter "BCA" or "Agreement") agree to be bound by the following clauses which are hereby made a part of the BCA. The word "Applicant" herein refers to any party to the Agreement, other than the New York State Department of Environmental Conservation (herein after "Department").

I. Citizen Participation Plan

Within twenty (20) days after the effective date of this Agreement, Applicant shall submit for review and approval a written citizen participation plan prepared in accordance with the requirements of Environmental Conservation Law (ECL) § 27-1417 and 6 NYCRR §§ 375-1.10 and 375-3.10. Upon approval, the Citizen Participation Plan shall be deemed to be incorporated into and made a part of this Agreement.

II. Development, Performance, and Reporting of Work Plans

A. Work Plan Requirements

The work plans ("Work Plan" or "Work Plans") under this Agreement shall be prepared and implemented in accordance with the requirements of ECL Article 27, Title 14, 6 NYCRR §§ 375-1.6(a) and 375-3.6, and all applicable laws, rules, regulations, and guidance documents. The Work Plans shall be captioned as follows:

1. "Remedial Investigation Work Plan" if the Work Plan provides for the investigation of the nature and extent of contamination within the boundaries of the Site and, if the Applicant is a "Participant", the extent of contamination emanating from such Site. If the Applicant is a "Volunteer" it shall perform a qualitative exposure assessment of the contamination emanating from the Site in accordance with ECL § 27-1415(2)(b) and Department guidance;

2. "Remedial Work Plan" if the Work Plan provides for the development and implementation of a Remedial Program for contamination within the boundaries of the Site and, if the Applicant is a "Participant", the contamination that has emanated from such Site;

3. "IRM Work Plan" if the Work Plan provides for an interim remedial measure; or

4. "Site Management Plan" if the Work Plan provides for the identification and implementation of institutional and/or engineering controls as well as any necessary monitoring and/or operation and maintenance of the remedy.

5. "Supplemental" if additional work plans other than those set forth in II.A.1-4 are required to be prepared and implemented.

B. Submission/Implementation of Work Plans

1. The first proposed Work Plan to be submitted under this Agreement shall be submitted no later than thirty (30) days after the effective date of this Agreement. Thereafter, the Applicant shall submit such other and additional work plans as determined in a schedule to be approved by the Department.

2. Any proposed Work Plan shall be submitted for the Department's review and approval and shall include, at a minimum, a chronological description of the anticipated activities to be conducted in accordance with current guidance, a schedule for performance of those activities, and sufficient detail to allow the Department to evaluate that Work Plan. The Department shall use best efforts in accordance with 6 NYCRR § 375-3.6(b) to approve, modify, or reject a proposed Work Plan within forty-five (45) days from its receipt or within fifteen (15) days from the close of the comment period, if applicable, whichever is later.

i. Upon the Department's written approval of a Work Plan, such Department-approved Work Plan shall be deemed to be incorporated into and made a part of this Agreement and shall be implemented in accordance with the schedule contained therein. All work undertaken as part of a remedial program for a Site must be detailed in a department-approved Work Plan or a submittal approved in form and content by the Department.

ii. If the Department requires modification of a Work Plan, the reason for such modification shall be provided in writing and the

provisions of 6 NYCRR § 375-1.6(d)(3) shall apply.

iii. If the Department disapproves a Work Plan, the reason for such disapproval shall be provided in writing and the provisions of 6 NYCRR § 375-1.6(d)(4) shall apply.

3. A Site Management Plan, if necessary, shall be submitted in accordance with the schedule set forth in the IRM Work Plan or Remedial Work Plan.

C. Submission of Final Reports

1. In accordance with the schedule contained in an approved Work Plan, Applicant shall submit a Final Report for an Investigation Work Plan prepared in accordance with ECL § 27-1411(1) and 6 NYCRR § 375-1.6. If such Final Report concludes that no remediation is necessary, and the Site does not meet the requirements for Track 1, Applicant shall submit an Alternatives Analysis prepared in accordance with ECL § 27-1413 and 6 NYCRR § 375-3.8(f) that supports such determination.

2. In accordance with the schedule contained in an approved Work Plan, Applicant shall submit a Final Engineering Report certifying that remediation of the Site has been performed in accordance with the requirements of ECL §§ 27-1419(1) and (2) and 6 NYCRR § 375-1.6. The Department shall review such Report, the submittals made pursuant to this Agreement, and any other relevant information regarding the Site and make a determination as to whether the goals of the remedial program have been or will be achieved in accordance with established timeframes; if so, a written Certificate of Completion will be issued in accordance with ECL § 27-1419, 6 NYCRR §§ 375-1.9 and 375-3.9.

3. Within sixty (60) days of the Department's approval of a Final Report, Applicant shall submit such additional Work Plans as it proposes to implement. In addition, Applicant shall include with every report submitted to the Department a schedule for the submission of any subsequent work plan required to meet the requirements of ECL Article 27 Title 14. Failure to submit any additional Work Plans within such period shall, unless other Work Plans are under review by the Department or being implemented by Applicant, result in the termination of this Agreement pursuant to Paragraph XII.

D. Review of Submittals other than Work Plans

1. The Department shall timely notify Applicant in writing of its approval or disapproval of each submittal other than a Work Plan in accordance with 6 NYCRR § 375-1.6. All Department-approved submittals shall be incorporated into and become an enforceable part of this Agreement.

2. If the Department disapproves a submittal covered by this Subparagraph, it shall specify the reason for its disapproval and may request Applicant to modify or expand the submittal. Within fifteen (15) days after receiving written notice that Applicant's submittal has been disapproved, Applicant shall elect in writing to either (i) modify or expand it within thirty (30) days of receipt of the written notice of disapproval; (ii) complete any other Department-approved Work Plan(s); (iii) invoke dispute resolution pursuant to Paragraph XIII; or (iv) terminate this Agreement pursuant to Paragraph XII. If Applicant submits a revised submittal and it is disapproved, the Department and Applicant may pursue whatever remedies may be available under this Agreement or under law. All work undertaken as part of a remedial program, including work undertaken pursuant to submittals other than Work Plans, must be approved by the department prior to implementation by the Applicant.

E. Department's Determination of Need for Remediation

The Department shall determine upon its approval of each Final Report dealing with the investigation of the Site whether remediation, or additional remediation as the case may be, is needed for protection of public health and the environment.

1. If the Department makes a preliminary determination that remediation, or additional remediation, is not needed for protection of public health and the environment, the Department shall notify the public of such determination and seek public comment in accordance with ECL § 27-1417(3)(f). The Department shall provide timely notification to the Applicant of its final determination following the close of the public comment period.

2. If the Department determines that additional remediation is not needed and such determination is based upon use restrictions, Applicant shall cause to be recorded an Environmental Easement in accordance with 6 NYCRR § 375-1.8(h).

3. If the Department determines that remediation, or additional remediation, is needed, Applicant may elect to submit for review and approval a proposed Remedial Work Plan (or modify an existing Work Plan for the Site) for a remedy selected upon due consideration of the factors set forth in ECL § 27-1415(3) and 6 NYCRR § 375-1.8(f). A proposed Remedial Work Plan addressing the Site's remediation will be noticed for public comment in accordance with ECL § 27-1417(3)(f) and the Citizen Participation Plan developed pursuant to this Agreement. If the Department determines following the close of the public comment period that modifications to the proposed Remedial Work Plan are needed, Applicant agrees to negotiate appropriate modifications to such Work Plan. If Applicant elects not to develop a Work Plan under this Subparagraph then this Agreement shall terminate in accordance with Paragraph XII. If the Applicant elects to develop a Work Plan, then it will be reviewed in accordance with Paragraph II.D above.

F. Institutional/Engineering Control Certification

In the event that the remedy for the Site, if any, or any Work Plan for the Site, requires institutional or engineering controls, Applicant shall submit a written certification in accordance with 6 NYCRR §§ 375-1.8(h)(3) and 375-3.8(h)(2).

III. Enforcement

Except as provided in Paragraph V, this Agreement shall be enforceable as a contractual agreement under the laws of the State of New York. Applicant shall not suffer any penalty except as provided in Paragraph V, or be subject to any proceeding or action if it cannot comply with any requirement of this Agreement as a result of a Force Majeure Event as described at 6 NYCRR § 375-1.5(b)(4) provided Applicant complies with the requirements set forth therein.

IV. Entry upon Site

A. Applicant hereby agrees to provide access to the Site and to all relevant information regarding activities at the Site in accordance with the provisions of ECL § 27-1431. Applicant agrees to provide the Department upon request with proof of access if it is not the owner of the Site.

B. The Department shall have the right to periodically inspect the Site to ensure that the use of the property complies with the terms and conditions of this Agreement. The Department will generally conduct such inspections during business hours, but retains the right to inspect at any time.

C. Failure to provide access as provided for under this Paragraph may result in termination of this Agreement pursuant to Paragraph XII.

V. Payment of State Costs (Applicable only to Applicants with Participant Status)

A. Within forty-five (45) days after receipt of an itemized invoice from the Department, Applicant shall pay to the Department a sum of money which shall represent reimbursement for State Costs as provided by 6 NYCRR § 375-1.5 (b)(3)(i).

B. Costs shall be documented as provided by 6 NYCRR § 375-1.5(b)(3)(ii). The Department shall not be required to provide any other documentation of costs, provided however, that the Department's records shall be available consistent with, and in accordance with, Article 6 of the Public Officers Law.

C. Each such payment shall be made payable to the "Commissioner of NYSDEC" and shall be sent to:

Division of Management and Budget
New York State Department of Environmental Conservation
625 Broadway, 10th Floor
Albany, New York 12233-4900

D. Each party shall provide written notification to the other within ninety (90) days of any change in the foregoing addresses.

E. If Applicant objects to any invoiced costs under this Agreement, the provisions of 6 NYCRR §§ 375-1.5 (b)(3)(v) and (vi) shall apply.

Objections shall be sent to the Department as provided under subparagraph V.C above.

F. In the event of non-payment of any invoice within the 45 days provided herein, the Department may seek enforcement of this provision pursuant to Paragraph III or the Department may commence an enforcement action for non-compliance with ECL § 27-1409(2) and ECL § 71-4003.

VI. Liability Limitation

Subsequent to the issuance of a Certificate of Completion pursuant to this Agreement, Applicant shall be entitled to the Liability Limitation set forth at ECL § 27-1421, subject to the terms and conditions stated therein and to the provisions of 6 NYCRR §§ 375-1.9 and 375-3.9.

VII. Reservation of Rights

A. Except as provided in Subparagraph VII.B, Applicant reserves all rights and defenses under applicable law to contest, defend against, dispute, or disprove any action, proceeding, allegation, assertion, determination, or order of the Department, including any assertion of remedial liability by the Department against Applicant, and further reserves all rights including the rights to notice, to be heard, to appeal, and to any other due process respecting any action or proceeding by the Department, including the enforcement of this Agreement. The existence of this Agreement or Applicant's compliance with it shall not be construed as an admission of any liability, fault, wrongdoing, or violation of law by Applicant, and shall not give rise to any presumption of law or finding of fact which shall inure to the benefit of any third party.

B. Notwithstanding the foregoing, Applicant hereby waives any right it may have to make a claim pursuant to Article 12 of the Navigation Law with respect to the Site and releases the State and the New York Environmental Protection and Spill Compensation Fund from any and all legal or equitable claims, suits, causes of action, or demands whatsoever with respect to the Site that Applicant may have as a result of Applicant's entering into or fulfilling the terms of this Agreement.

VIII. Indemnification

Applicant shall indemnify and hold the Department, the State of New York, and their representatives and employees harmless from any claim, suit, action, and cost of every name and description arising out of or resulting from the fulfillment or attempted fulfillment of this Agreement by Applicant prior to the Termination Date except for those claims, suits, actions, and costs arising from the State's gross negligence or willful or intentional misconduct by the Department, the State of New York, and/or their representatives and employees during the course of any activities conducted pursuant to this Agreement. In the event that the Applicant is a Participant, this provision shall also include the Trustee of the State's Natural Resources. The Department shall provide Applicant with written notice no less than thirty (30) days prior to commencing a lawsuit seeking indemnification pursuant to this Paragraph.

IX. Change of Use

Applicant shall notify the Department at least sixty (60) days in advance of any change of use, as defined in ECL § 27-1425, which is proposed for the Site, in accordance with the provisions of 6 NYCRR § 375-1.11(d). In the event the Department determines that the proposed change of use is prohibited, the Department shall notify Applicant of such determination within forty-five (45) days of receipt of such notice.

X. Environmental Easement

A. Within thirty (30) days after the Department's approval of a Remedial Work Plan which relies upon one or more institutional and/or engineering controls, or within sixty (60) days after the Department's determination pursuant to Subparagraph II.E.2 that additional remediation is not needed based upon use restrictions, Applicant shall submit to the Department for approval an Environmental Easement to run with the land in favor of the State which complies with the requirements of ECL Article 71, Title 36 and 6 NYCRR § 375-1.8(h)(2). Applicant shall cause such instrument to be recorded with the recording officer for the county in which the Site is located within thirty (30) days after the Department's approval of such instrument. Applicant shall provide the Department with a copy of such instrument certified by the recording officer to be a true and faithful copy within thirty (30) days of such recording (or such longer period of time as may be required to obtain a certified copy

provided Applicant advises the Department of the status of its efforts to obtain same within such thirty (30) day period), which shall be deemed to be incorporated into this Agreement.

B. Applicant or the owner of the Site may petition the Department to modify or extinguish the Environmental Easement filed pursuant to this Agreement at such time as it can certify that the Site is protective of public health and the environment without reliance upon the restrictions set forth in such instrument. Such certification shall be made by a Professional Engineer or Qualified Environmental Professional as defined at 6 NYCRR § 375-1.2(ak) approved by the Department. The Department will not unreasonably withhold its consent.

XI. Progress Reports

Applicant shall submit a written progress report of its actions under this Agreement to the parties identified in Subparagraph III.A.1 of the Agreement by the 10th day of each month commencing with the month subsequent to the approval of the first Work Plan and ending with the Termination Date, unless a different frequency is set forth in a Work Plan. Such reports shall, at a minimum, include: all actions relative to the Site during the previous reporting period and those anticipated for the next reporting period; all approved activity modifications (changes of work scope and/or schedule); all results of sampling and tests and all other data received or generated by or on behalf of Applicant in connection with this Site, whether under this Agreement or otherwise, in the previous reporting period, including quality assurance/quality control information; information regarding percentage of completion; unresolved delays encountered or anticipated that may affect the future schedule and efforts made to mitigate such delays; and information regarding activities undertaken in support of the Citizen Participation Plan during the previous reporting period and those anticipated for the next reporting period.

XII. Termination of Agreement

Applicant or the Department may terminate this Agreement consistent with the provisions of 6 NYCRR §§ 375-3.5(b), (c), and (d) by providing written notification to the parties listed in Paragraph IV of the Agreement.

XIII. Dispute Resolution

A. In the event disputes arise under this Agreement, Applicant may, within fifteen (15) days after Applicant knew or should have known of the facts which are the basis of the dispute, initiate dispute resolution in accordance with the provisions of 6 NYCRR § 375-1.5(b)(2).

B. All cost incurred by the Department associated with dispute resolution are State costs subject to reimbursement pursuant to Paragraph V of Appendix A of this Agreement, if applicable.

C. Notwithstanding any other rights otherwise authorized in law or equity, any disputes pursuant to this Agreement shall be limited to Departmental decisions on remedial activities. In no event shall such dispute authorize a challenge to the applicable statute or regulation.

XIV. Miscellaneous

A. If the information provided and any certifications made by Applicant are not materially accurate and complete, this Agreement, except with respect to Applicant's obligations pursuant to Paragraphs V, if applicable, and VII.B, and VIII, shall be null and void ab initio fifteen (15) days after the Department's notification of such inaccuracy or incompleteness or fifteen (15) days after issuance of a final decision resolving a dispute pursuant to Paragraph XIII, whichever is later, unless Applicant submits information within that fifteen (15) day time period indicating that the information provided and the certifications made were materially accurate and complete. In the event this Agreement is rendered null and void, any Certificate of Completion and/or Liability Limitation that may have been issued or may have arisen under this Agreement shall also be null and void ab initio, and the Department shall reserve all rights that it may have under law.

B. By entering into this Agreement, Applicant agrees to comply with and be bound by the provisions of 6 NYCRR §§ 375-1, 375-3 and 375-6; the provisions of such subparts that are referenced herein are referenced for clarity and convenience only and the failure of this Agreement to specifically reference any particular regulatory provision is not intended to imply that such provision is not applicable to activities performed under this Agreement.

C. The Department may exempt Applicant from the requirement to obtain any state or local

permit or other authorization for any activity conducted pursuant to this Agreement in accordance with 6 NYCRR §§ 375-1.12(b), (c), and (d).

D. 1. Applicant shall use "best efforts" to obtain all Site access, permits, easements, approvals, institutional controls, and/or authorizations necessary to perform Applicant's obligations under this Agreement, including all Department-approved Work Plans and the schedules contained therein. If, despite Applicant's best efforts, any access, permits, easements, approvals, institutional controls, or authorizations cannot be obtained, Applicant shall promptly notify the Department and include a summary of the steps taken. The Department may, as it deems appropriate and within its authority, assist Applicant in obtaining same.

2. If an interest in property is needed to implement an institutional control required by a Work Plan and such interest cannot be obtained, the Department may require Applicant to modify the Work Plan pursuant to 6 NYCRR § 375-1.6(d)(3) to reflect changes necessitated by Applicant's inability to obtain such interest.

E. The paragraph headings set forth in this Agreement are included for convenience of reference only and shall be disregarded in the construction and interpretation of any provisions of this Agreement.

F. 1. The terms of this Agreement shall constitute the complete and entire agreement between the Department and Applicant concerning the implementation of the activities required by this Agreement. No term, condition, understanding, or agreement purporting to modify or vary any term of this Agreement shall be binding unless made in writing and subscribed by the party to be bound. No informal advice, guidance, suggestion, or comment by the Department shall be construed as relieving Applicant of its obligation to obtain such formal approvals as may be required by this Agreement. In the event of a conflict between the terms of this Agreement and any Work Plan submitted pursuant to this Agreement, the terms of this Agreement shall control over the terms of the Work Plan(s). Applicant consents to and agrees not to contest the authority and jurisdiction of the Department to enter into or enforce this Agreement.

2. i. Except as set forth herein, if Applicant desires that any provision of this Agreement be changed, Applicant shall make timely written application to the Commissioner with copies to the parties in Subparagraph IV.A.1 of the Agreement.

ii. If Applicant seeks to modify an approved Work Plan, a written request shall be made to the Department's project manager, with copies to the parties listed in Subparagraph IV.A.1 of the Agreement.

iii. Requests for a change to a time frame set forth in this Agreement shall be made in writing to the Department's project attorney and project manager; such requests shall not be unreasonably denied and a written response to such requests shall be sent to Applicant promptly.

G. 1. If there are multiple parties signing this Agreement, the term "Applicant" shall be read in the plural, the obligations of each such party under this Agreement are joint and several, and the insolvency of or failure by any Applicant to implement any obligations under this Agreement shall not affect the obligations of the remaining Applicant(s) under this Agreement.

2. If Applicant is a partnership, the obligations of all general partners (including limited partners who act as general partners) under this Agreement are joint and several and the insolvency or failure of any general partner to implement any obligations under this Agreement shall not affect the obligations of the remaining partner(s) under this Agreement.

3. Notwithstanding the foregoing Subparagraphs XIV.G.1 and 2, if multiple parties sign this Agreement as Applicants but not all of the signing parties elect to implement a Work Plan, all Applicants are jointly and severally liable for each and every obligation under this Agreement through the completion of activities in such Work Plan that all such parties consented to; thereafter, only those Applicants electing to perform additional work shall be jointly and severally liable under this Agreement for the obligations and activities under such additional Work Plan(s). The parties electing not to implement the additional Work Plan(s) shall have no obligations under this Agreement relative to the activities set forth in such Work Plan(s). Further, only those Applicants electing to implement such additional Work Plan(s) shall be

eligible to receive the Liability Limitation referenced in Paragraph VI.

4. Any change to parties pursuant to this Agreement, including successors and assigns through acquisition of title, is subject to approval by the Department, after submittal of an application acceptable to the Department.

H. Applicant shall be entitled to receive contribution protection and/or to seek contribution to the extent authorized by ECL § 27-1421(6) and 6 NYCRR § 375-1.5(b)(5).

I. Applicant shall not be considered an operator of the Site solely by virtue of having executed and/or implemented this Agreement.

J. Applicant and Applicant's agents, grantees, lessees, sublessees, successors, and assigns shall be bound by this Agreement. Any change in ownership of Applicant including, but not limited to, any transfer of assets or real or personal property, shall in no way alter Applicant's responsibilities under this Agreement.

K. Unless otherwise expressly provided herein, terms used in this Agreement which are defined in ECL Article 27 or in regulations promulgated thereunder shall have the meaning assigned to them under said statute or regulations.

L. Applicant's obligations under this Agreement shall not be deemed to constitute any type of fine or penalty.

M. In accordance with 6 NYCRR § 375-1.6(a)(4), the Department shall be notified at least 7 days in advance of, and be allowed to attend, any field activities to be conducted under a Department approved work plan, as well as any pre-bid meetings, job progress meetings, substantial completion meeting and inspection, and final inspection and meeting; provided, however that the Department may be excluded from portions of meetings where privileged matters are discussed.

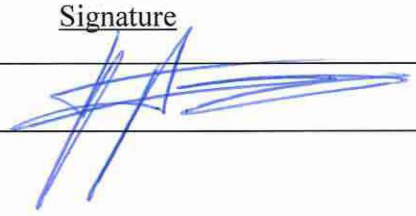
N. In accordance with 6 NYCRR § 375-1.11(a), all work plans; reports, including all attachments and appendices, and certifications, submitted by a remedial party shall be submitted in print, as well as in an electronic format acceptable to the Department.

O. This Agreement may be executed for the convenience of the parties hereto, individually or in combination, in one or more counterparts, each of which shall be deemed to have the status of an executed original and all of which shall together constitute one and the same.

WALLACE CAMPUS MANAGER LLC AUTHORIZATION TO COMPLETE REMEDIAL REQUIREMENTS

The undersigned, being all of the members of Wallace Campus Manager LLC, a New York limited liability company (the "Company") hereby certify as of November___, 2020, as follows and adopt the following resolutions and authorize the Company to authorize and direct Hercules Argyriou (the "Authorized Signatory") to take the following actions on behalf of the Company:

WHEREAS, the Company desires to authorize the Authorized Signatory to undertake actions necessary to redevelop 319, 325, 327-329 and 331 Main Street, Poughkeepsie, NY, 12601; Section 6162, Block 77, Lots 109077, 109079, 114098, and Section 6162, Block 78, Lot 127091. (the "Property" or the "Site").



WHEREAS, in connection with the redevelopment of the Property, the Company has or will prepare and submit an application to participate in the New York State Brownfield Cleanup Program ("BCP") and, if accepted into the BCP, enter into a Brownfield Cleanup Agreement ("BCA"); file related documents with the New York State Department of Environmental Conservation ("DEC") to participate in the BCP; and undertake certain environmental remediation work related thereto consistent with applicable laws, regulations and guidance under the BCP (collectively referred to as the "Remedial Program Requirements");

NOW THEREFORE, BE IT

RESOLVED, the Authorized Signatory be, and hereby is, authorized and directed, in the name of and on behalf of the Company, to execute and to deliver all applications, documents and instruments required to effectuate the BCA (including execution of the BCA), and make any filings required to comply with the BCA consistent with the Remedial Program Requirements; and be it further;

RESOLVED, that this Authorization may be signed in any number of counterparts, including but not limited to electronic, and shall become effective as of the date herein below written when each person named below shall have signed a copy hereof; and

RESOLVED, The Authorized Signatory is authorized to bind the Company as an Authorized Signatory for the purposes set forth in this Authorization, the signature set forth opposite his name below is his actual signature:

Authorized Signatory	Signature
Hercules Argyriou	

IN WITNESS WHEREOF, the undersigned have signed and sealed this Member Consent on November 12, 2020.

Zoning Variance List

ELIMINATION AND MINIMIZATION OF PROJECT VARIANCES

The original Site Plan (May 2021) required a number of area variances, including a 2-story height variance for the Main Street building and a 1-story variance for the Catharine Street building. During the summer of 2021, the Applicants met with their design team to minimize variances to the maximum extent possible. The October 2021 site plan improvements eliminated all height variances, bringing both new buildings into conformance with height regulations and assuring that they are lower in height than the existing Wallace building.

In addition to totally eliminating these two height variances, which were the most substantial variances sought, the Applicant has now been able to materially reduce the extent of the landscaping/parking lot variances relating to the two existing driveways into the site from Mill Street. The driveways have existed at their current width since the mid 1950's, and so are a pre-existing condition. There is presently no landscaping at the Mill Street frontage of either driveway (see photos of existing conditions). Nonetheless, because the development of the Wallace Campus is a comprehensive redevelopment of a large site, the Zoning Administrator has ruled that the new PID standards are applicable, and variances are required. The Applicant has developed a modified Site Plan relating to the parking entrances from Mill Street that substantially increase the areas of landscape screening in the entrance drives, and pulls parking further into the site, away from Mill Street. While the same types of variances are required, the *extent* of the variances has been significantly minimized.

The December 2021 site plan ("reduced variance plan") accomplishes the following on each of the Mill Street Driveways:

- It narrows the width of the drive aisles.
- Expands the width of the landscaped area along each driveway frontage, and thus the percentage of the opening that is occupied with landscape screening. While this screening doesn't technically meet the requirement of "frontage occupancy," which requires a building, it does serve to screen views into the site and provide a finished streetscape.
- It expands the depth of landscape screening in the drive aisles
- It significantly increases the area of landscaping along Mill Street.

These measures materially improve existing conditions. They are shown on the following chart:

CHART SHOWING CHANGES IN DRIVEWAY WIDTHS & LANDSCAPING AT MILL STREET ENTRANCES

Westerly Drive	**May 2021 ("Variance Plan")**	**December 2021 ("Reduced Variance Plan")**
Frontage (in feet)	45.5 FT	45.5 FT
Drive Lanes	2	1
Drive aisle width	24 feet	16 FT
Landscape width	4.8 FT (west side) 5.9 FT (east side)	7.5 FT (west side) 22 FT (east side)
Landscape depth (min)	0 FT	10.8 FT
Landscape depth (max)	24 FT	24 FT
Landscape area	144 SF	473 SF

Easterly Drive	**May 2021 ("Variance Plan")**	**December 2021 ("Reduced Variance Plan")**
Frontage width (in feet)	70.7 FT	70.7 FT
# Drive Lanes	2	1
Drive aisle width	24 FT	16 FT
Landscape width	19 FT (west side) 21 FT (east side)	20 FT (west side) 24 FT (east side)
Landscape depth (min)	1 FT	12 FT
Landscape depth (max)	12 FT	24 FT
Landscape area	254 SF	729 SF

COMPARISON OF MAY 2021 VARIANCES AND DECEMBER 2021 REDUCED VARIANCES

I. HEIGHT VARIANCES:

SECTION	REQ/PROHIBITED	MAY 2021 VARIANCES	DECEMBER 2021 VARIANCES
19-3.37(8) Table 3.37-2(b)	5 Story maximum height	Allow 7 story height – Main Street Building	VARIANCE ELIMINATED
19-3.37(8) Table 3.37-2(b)	5 Story maximum height	Allow 6 story height for Catharine Street building	VARIANCE ELIMINATED

II. VARIANCES REGARDING EXISTING MILL STREET DRIVEWAYS AND SCREENING OF VIEWS INTO PARKING LOTS:

WESTERLY DRIVE:

Landscape Screening

SECTION	REQ/PROHIBITED	MAY 2021 VARIANCES	DECEMBER 2021 VARIANCES
19-3.37(13)(b)2 19-3.37(13)(g)(2)(i)	Parking spaces must be setback at least 40 feet from front property line	Parking spaces within 2.5 feet of front property line; minimal landscaping (144 SF) and two drive aisles	Landscaping now covers 29.5 feet of the 45.5 foot frontage, at depths ranging from 10.8 to 24 feet (473 SF); one drive aisle
19-3.37(7)(b)(2)	Parking spaces must be on the interior of a lot and not visible from the street		

Frontage Occupancy

SECTION	REQ/PROHIBITED	MAY 2021 VARIANCES	DECEMBER 2021 VARIANCES
19-3.37(8) Table 3.37-2(h)	80% minimum Frontage occupancy	0% frontage occupancy (pre-existing) with minimal landscaping screening two drive aisles	Drive aisle width reduced from 24 feet to 16 feet. Landscaping covers 29.5 feet of the 45.5 feet frontage, at depths ranging from 10.8 to 24 feet

SECTION	REQ/PROHIBITED	MAY 2021 VARIANCES	DECEMBER 2021 VARIANCES

EASTERN DRIVE:

Landscape Screening

SECTION	REQ/PROHIBITED	MAY 2021 VARIANCES	DECEMBER 2021 VARIANCES
19-3.37(13)(b)2 19-3.37(13)(g)(2)(i)	Parking spaces must be setback at least 40 feet from front property line	Parking spaces within 1.5 feet of the front property line; minimal landscaping (254 SF) and two drive aisles	Landscaping at frontage now covers 44 feet of the total 70.7 FT frontage at depths ranging from 12 to 24 feet (729 SF); one drive aisle
19-3.37(7)(b)(2)	Parking spaces must be on the interior of a lot and not visible from the street		

Frontage Occupancy

SECTION	REQ/PROHIBITED	MAY 2021 VARIANCES	DECEMBER 2021 VARIANCES
19-3.37(8) Table 3.37-2(h)	100% minimum Frontage occupancy PID-HC Subdistrict	0% frontage occupancy (pre-existing) with minimal landscaping screening two drive aisles	Drive aisle reduced from 24 feet to 16 feet; landscaping covers 44 feet of 70.7 FT frontage at depths ranging from 12 to 24 feet

Placement of Islands

SECTION	REQ/PROHIBITED	MAY 2021 VARIANCES	DECEMBER 2021 VARIANCES
19-3.37(13)(g)(2)(iii)	Parking rows with more than 8 spaces require a landscape island every ninth parking space	In eastern drive, eliminated islands within both rows while providing minimal landscaping along frontage (see above)	Eliminate island in both rows, but provide extensive landscaping at the Mill Street frontage (see above)

Project Narrative

December 7, 2021

WALLACE CAMPUS: PROJECT NARRATIVE (REDUCED SIZE PROJECT)

OVERVIEW:

Wallace Campus is a mixed-use development in the eastern half of the city block surrounded by Main Street, Catharine Street, and Mill Street, within the heart of the Poughkeepsie Innovation District (PID) redevelopment area. The project will consolidate several existing underutilized lots to create a 2.52 acre through lot with frontages on Main Street, Catharine Street, and Mill Street. **The Project includes approximately 256,814 gross square feet *(reduced from 277,333 GSF)*** of building redevelopment and new construction, weaving together the restoration of the long dormant Wallace Department Store, including the construction of two new buildings with architectural style and massing which reflect existing context and urban form conducive to place-making. **The buildings will provide 14,213 sf of commercial space including 6,416 sf of new retail spaces along the Main Street pedestrian frontage, 5,797 GSF of commercial space along the Catharine Street frontage, and 2,000 GSF in cellar spaces. The remainder of the Project buildings will be devoted to providing 187 much-needed mixed-income housing rental units (including one super's unit), which will help restore and grow residential and pedestrian activity within the Poughkeepsie Innovation District.**

Wallace Campus also reclaims underutilized blacktop improving the permeability of the site and creating a significant public outdoor greenspace, called "Wallace Green," to benefit residents and the public. The promenade entry to the Green from Main Street creates a full mid-block pedestrian through-route to Mill Street. The Wallace Green Walkway integrates views and access to the Green itself, which provides landscaping, play areas, a tiered seating gathering area, and internal pedestrian access between the new buildings and the landscaped internal parking area.

Vehicular access to the site is provided through consolidation of existing entrances from Mill Street, eliminating two dangerous blind driveways. Through agreements with adjoining lots fronting on Mill Street (302, 304, 306 Mill Street and the Hudson River Housing property at 310 Mill Street), the Project will eliminate two existing curb cuts, and related blind driveways, on Mill Street, provide additional green space around and between existing buildings fronting on Mill Street, in addition to enhancing the pedestrian use of Mill Street via the new Wallace Green walkway between Main and Mill Streets.

DEVELOPMENT TEAM AND PROJECT VISION:

Wallace Campus Manager, LLC, and its development team has over 30 years of experience developing, fully renting-up, and successfully operating mixed-income housing and

mixed-use spaces similar to Wallace Campus. The Development Team has designed its Project to foster the growth of Poughkeepsie's Innovation District by adding much needed reasonably priced, quality-built, housing stock, commercial, and community green spaces to the City's Downtown. The Wallace Campus development model is focused on drawing current and future residents of the City of Poughkeepsie to live, work, and prosper in the City's Downtown. Central purposes of the PID zoning initiative include reclamation of underutilized sites, particularly those with large expanses of blacktop, recreation of street walls, respect for historic context, and creation of new urban spaces that inspire pedestrian activity. The Wallace Campus responds to all of these aims.

RESTORATION AND ADAPTIVE REUSE OF THE HISTORIC WALLACE DEPARTMENT STORE BUILDING:

The project will restore and adaptively reuse the former Wallace Department Store at 331 Main Street, an existing 4-story, 118,536 square foot structure with a tall parapet along Main Street that brings it to a height comparable to other 5-story buildings along Main Street. The Wallace building has been underutilized for many years.

The Project proposes to renovate the former Wallace Department Store building (c. 1880's) to its appearance as a signature building in Poughkeepsie's "period of significance" as a mercantile center in the Hudson Valley during the 19th and 20th Centuries. The Luckey Platt building across the street housed the Wallace Department Store's major competing department store during the 1800's and the Luckey Platt building is listed on the National Register. The proposed Wallace restoration was reviewed by the New York State Historic Preservation Office to be considered as a standalone historically significant building. Landmark Consulting LLC, the Wallace preservation consulting firm, authored the Commercial Rehabilitation Tax Credit Part 1 application for certification to pursue the rehab incentive program for the Wallace Building. The Part 1 application and draft National Register Nomination for the Wallace Building (331 Main and 14-20 Catharine) was reviewed and approved by New York State Historic Preservation Office (SHPO) and the National Park Service (NPS).

The proposed adaptive reuse of the building will create 3,085 SF of commercial retail space with multiple storefronts on the ground floor along the Main Street frontage and 2,564 SF of commercial retail space on the ground floor of the Wallace Extension building along Catharine Street, with an additional 2,000 SF of commercial space in the cellar.

The 3,085 SF of commercial retail space on the ground floor of Main Street in the historic building will have transparency wrapping around the westerly edge of the building at the entrance to a public promenade and the Wallace Green walkway. The remainder of the main Wallace Building will be adaptively reused for rental apartment units, all accessed by an

entrance along the western side of the building, just behind the commercial tenancies and facing the new Wallace Promenade.

Wallace Building rehabilitation:

The proposed renovation scope for the Wallace building includes preservation of the Art Deco Main Street exterior, a limestone façade, that will remain unchanged from the second floor to the roof. Transparency will be added to the first-floor façade (per historic images) opening the ground floor space in a welcoming manner to improve the commercial viability of the space and the pedestrian experience on Main Street, consistent with the PID's zoning requirements. The east and west facades will have new window penetrations, reworking existing, non-historic penetrations.

While the interior of the building will be modified to accommodate new residential and commercial uses, important internal elements will be retained, including circulation within the building, which utilizes beautiful existing stairways and a historically significant painted dome at the fourth-floor ceiling. The Project Sponsor is also exploring the possibility of incorporating the historic Wallace Logo sign in the restoration of the exterior of the building.

The Wallace existing extension is a 3-story annex to the main building, constructed in 1860 which is accessed both internally through the main Wallace building and from Catharine Street. The exterior of this annex is in good condition and will be rehabilitated to its existing aesthetic. The existing circulation structure within the Wallace building contributes to the building's active living design, promoting the use of stairs as a healthy alternative to constant elevator use. The unit distribution of the Wallace Building includes:

Wallace Rehab Building:

STUDIO	1 BR	2 BR	3 BR	**TOTAL**
20	37	12	0	**69**

CONSTRUCTION OF A NEW MAIN STREET BUILDING:

West of the Wallace Department store, a new 81,302 SF building will be constructed ("the Main Street Building"). The Main Street Building will involve the demolition of 319 and 325 Main Street. The buildings have been visually inspected and have been determined that they are in sub-par condition and have been vacant for several years. The Main Street building is 5 stories tall which is the permitted height for the designated zoning and was reduced from 7 stories previously proposed. Both proposed new buildings on the site are being designed to meet Enterprise Green Communities Program certification standards which ensures the buildings will be energy efficient and sustainable.

The Main Street building frontage has been designed with multiple storefronts directly facing Main Street with 3,309 of retail space. The transparency extends around the corner of the building into the promenade, where it will reflect similar transparency in the Wallace Building to the east.

The remainder of the Main Street Building will house new rental apartment units, all accessed by an entrance along the eastern side of the building, just behind the commercial tenancies and facing the new Wallace Promenade. The unit distribution of the Main Street Building includes:

Main Street New Construction Building:

STUDIO	1 BR	2 BR	3 BR	**TOTAL**
12	34	19	4	**69**

The architecture of the Main Street Building, and its scale and massing, have been designed to blend with the historic context of Main Street, as described by SLCE Architects at Planning Board presentations, and represented on the architectural plans and conceptual renderings. See discussion in the following section on PID Standards. The clock that faces the Main Street in the current building will be removed and utilized in the Wallace Building. Initial plans are to either incorporate the clock in the main lobby or utilize it at Wallace Green.

CONSTRUCTION OF NEW BUILDING ON CATHARINE STREET:

The second proposed new building in the project is a 59,450 square foot building fronting onto Catharine Street ("the Catharine Street Building"). The Catharine Street building is five stories tall (reduced from six stories previously proposed). This building replaces an underutilized parking lot, to create a street wall along Catharine Street that is reflective of the historic buildings in the neighborhood. The architectural design features elements and colors that complement the existing building to its south, as well as the surrounding neighborhood. Both new project buildings are being designed to meet Enterprise Green Communities Program certification standards.

The ground floor of the Catharine Street Building will contain approximately 3,255 square feet of commercial space. The architectural design of the ground floor space features a number of doors facing Catharine Street, making this ground floor space easily adaptable to retail use in the future. The design for this building features 100% frontage occupancy along Catharine Street. Residential uses occupy the upper 4 floors of the building as well as the rear of the ground floor. The unit distribution of the Catharine Street building includes:

Catharine Street Building:

STUDIO	1 BR	2 BR	3 BR	**TOTAL**
14	21	9	5	**49**

WALLACE GREEN:

A central feature of the Wallace Campus is the Wallace Green, which contains a public landscaped green space in a park-like setting. This will be one of the only greenspaces in the downtown/PID area, and will therefore create a unique and important feature in the broader and evolving context of the City's redevelopment. The Green will be maintained by the private owner of Wallace Campus, including litter control, landscaping, and general property maintenance and security. The Green is readily accessible to residents of the Wallace Campus as the residential buildings include lobbies with doorways entering onto the pedestrian promenade that passes along the Green. The Green will be open for public access via Main Street and Mill Street. The Green features numerous seating options, in addition to the landscaped lawns and planted areas. The walking paths through the space provide direct access by tenants from the parking area. They also encourage pedestrian movement through the site, and provide access to short term public bicycle parking. 24/7 security monitoring via an integrated camera system and ample lighting will ensure the green space remains a safe and welcoming space at all hours.

A unique feature on the southern portion of the Green is a multi-tiered seating area. The semi-circular shape tiered seating encourages spontaneous small group gatherings of local residents and visitors for conversation, an outdoor meal, a game of chess, meditation, reading, etc. The tiered seating allows for a small performance area, which offers opportunities for artist readings or small performances, focusing on acoustic uses. The use for events is a secondary use, it's function as a flexible and informal gathering space for residents and green space visitors remains the primary use of the space.

The development team plans to actively program the space. Based on initial outreach, a several local organizations and businesses have expressed interest in utilizing the Wallace Green. Uses include but are not limited to children yoga, exercise classes, film screenings, and live comedy shows. Attached are letters of interests to conduct programming at Wallace Green.

WALLACE GREEN WALKWAY: CREATION OF A NEW PROMENADE AND PEDESTRIAN CONNECTIVITY BETWEEN MAIN STREET AND MILL STREET:

The PID Zoning encourages the creation of new pedestrian throughways on large parcels to break up large parcels (19-3.37(12) (c)(1)(ii)). In response to comments requesting exploration of a more direct and seamless pedestrian connection through the project to

create a mid-block pedestrian connection between Main Street and Mill Street, the Applicant has created a direct pedestrian walkway path from Main Street to Mill Street, close to its intersection with Conklin Street. The portion of the walkway nearest Main Street forms the Wallace Campus Promenade, which begins with a wide and inviting pedestrian gathering place where the commercial transparencies of the Main Street Building and Wallace Building wrap around the corners of the respective buildings. This area also leads to the primary entrances to the residential portions of both buildings, just behind the commercial tenancies. The Promenade then continues northward, drawing pedestrians by the inviting views into the Wallace Green just ahead. The Promenade then turns into an open walkway following along the easterly side of the Green and along the westerly side of the Wallace building. The walkway then proceeds through the Wallace Campus internal parking area, passing a connecting sidewalk which proceeds east to connect to the Catharine Street building. After crossing the landscaped parking area, the Walkway then proceeds along the western side of the Hudson River Housing building to reach Mill Street, near its intersection with Conklin Street. In addition to improving pedestrian circulation, this Walkway also provides an opportunity for additional landscaping around the Hudson River Housing building and allows the rear of the Hudson River Housing parcel to provide additional green space within the overall setting.

VEHICULAR ACCESS FROM MILL STREET, CIRCULATION, PARKING, LANDSCAPING: A central accomplishment of the Wallace Campus Project is the replacement of an area of impervious land, a former underutilized parking lot, with green space and public access. To connect these improvements to Mill Street as well as Main Street, substantial consideration has been given to improving access to the property from Mill Street and improving the streetscape and visual character of the Mill Street frontage and views into the site. Mill Street has served as the only vehicular access to the site for many years. The Wallace Campus circulation and parking improvements plan includes upgrades to the existing two main entrances on Mill Street and the vehicular circulation plan for substantially safer and efficient access to and from the Wallace Campus. There is presently no landscaping at the Mill Street frontage of existing driveways. The current Wallace Campus Site Plan substantially increases the areas of landscape screening in the proposed entrance drives and pulls parking further into the site, away from Mill Street, greatly improving the appearance of the site from Mill Street.

The Wallace Campus drawings set forth the boundaries of the Wallace campus consolidated lot and shows the site plan for that lot. Four adjoining parcels outside the Wallace campus are also shown on the drawing set, for the limited purpose of depicting the off-site improvements to be made on those properties pursuant to shared parking and easement agreements, and to show the manner in which those physical improvements and access provisions will improve pedestrian and vehicular circulation in the neighborhood, as well as landscaping, lighting, and community character. The project sponsor will enter into shared parking and permanent access easement agreements with the owners of these adjoining

parcels, which will be approved by the planning board as part of the project approvals. The drawing set depicts the off-site work to be performed by the project sponsor on these parcels to implement the shared parking and access agreements. The work on 302, 304 and 306 mill street ("the 3 mill street lots") would eliminate two existing curb cuts on mill street (between 302 and 304 mill and between 304 and 306 mill), and provide additional green space on those lots, including along the mill street frontage to replace those driveways. The Wallace campus owner will provide a permanent access easement to the owner of the 3 Mill Street lots for the benefit of owners and tenants, to access the parking areas located on these lots via the Wallace campus access drives. The shared parking agreement would maintain the allocation of dedicated parking (12 spaces) to the 3 Mill Street lots in compliance with the PID zoning. Lighting improvements, pedestrian walkways, and stormwater improvements will be provided to serve the offsite shared parking areas in the same manner as the parking areas on the Wallace campus parcel. Pursuant to a separate shared parking agreement with the Hudson river housing (“HRH") property, the project sponsor will be granted a permanent easement to construct pedestrian sidewalk paths within the Hudson river housing property connecting to mill street and providing access from that parking area to the rear entrance to the HRH office building, and parking improvements along the HRH lot southerly boundary that integrate with the Wallace campus parking area, and to place the other improvements shown on the approved plans, including a portion of the project dumpster. Lighting improvements and landscaping will be installed as shown on the drawing set. The project sponsor will provide HRH with a permanent access easement to use the two Wallace campus mill street entrances and exits for access to, and use of, 6 parking spaces which are located on Wallace campus property directly abutting the westerly boundary of HRH's property (as shown on the drawing set), which spaces will be reserved for use by HRH employees during working hours 8am to 6pm Monday to Friday. The 6 spaces to be available for Wallace campus parking outside of those hours.

Lighting improvements and landscaping will be installed as shown on the Drawing Set. Overall, the proposed Wallace Campus development incorporates 60 parking spaces to serve the commercial and residential uses and public space. Please refer to the attached letter of Colliers Engineering and Design addressing parking calculations. **Overall, the Project provides 60 parking spaces while only a total of 32 spaces are required per zoning.** The development team is proposing to maintain these extra parking spaces in the development plan.

Re: Wallace Campus: 11/05/21 Reduced Size Plan/PID Building Standards

Dear Ms. Quinn:

Included in the Applicant's submission today is the SLCE Architectural Drawing Set. This plan set illustrates compliance with the PID building design standards. Additionally, this letter briefly summarizes compliance with those standards.

PID Building Design Standards: 19-3.37 (10):

(a) FRONT FAÇADE TRANSPARENCY REQUIREMENTS:

1. There is no mirrored, reflective or darkly tinted glass. Glass used in the three buildings to be transparent low-e, double pane argon filled insulated glass. See Z-001 for extent of glass.

2. No security grills are proposed at any of the buildings.

3. No curtains, blinds, or posters are proposed at the ground floor for any of the buildings. See Z-001 for transparency percentages.

(b) FRONTAGES: SLCE has chosen a Shopfront Type C Frontage Type for all three buildings. See sheets A-200A thru A-200E

(c) DESIGN AND ARCHITECTURE:

1. Entrance Orientation: All 3 buildings have main entrance or entrances on the front façade. Maximum distance between entrances is attained. See Site Plan SP-1

2. Shopfront entrance orientation: Principal pedestrian entrances for all 3 buildings are directly connected to the sidewalk. Principal entrances to shopfronts are highlighted with architectural features.

3. Historic rehabilitation: SLCE Architects engaged in substantial research to assure that their proposed new construction reflects the traditional

architecture of Main Street in building and roof forms, window proportions, materials, colors and details.

With our site in the heart of the historic core, our proposal seeks to take its cues from the existing and historical fabric of Main Street, creating a gateway which reinforces the pedestrian connection from Main Street to Mill Street, near its intersection with Conklin, and passing through a new greenspace (Wallace Green) centrally located on the proposed campus. This new pedestrian connection is designed to be similar in scale to the pedestrian connection between Main Street and Mill Street via Garden St. further west on Main Street.

The existing urban fabric on Main Street is characterized by a finer grain of buildings interrupted by medium and larger scale lots, with our site spanning between the medium scale of the existing Wallace building and the finer grain of main mall row. Our proposal for Main Street mediates between the large scale and stoic quality of the existing Wallace and Luckey Platt buildings and the refined ornament and articulation of the buildings on Main Mall Row.

We were particularly interested in the Cast Iron Building - the way it turns the corner from Main Street to Garden St. by continuing the Main St. façade material and terminating at a setback, giving the effect of a thickened façade, as well as division of the facade into a clear base, middle, & top w/ a highly articulated cornice.

In the historical images of the Wallace building and Windsor hotel, a few things struck us. One was the way the canopy at the storefront level really begins to help activate the street level. We also found the rhythmic structure of the Windsor hotel piers successful at creating continuity along the storefront edge as it turns the corner from Catharine to Main Street. And in the Morgan house hotel photo where the canopies and window shades create a remarkable streetscape.

In Plan, the Main Street building forms a tee pushed to the western edge of the site. At the connection of the tee SLCE introduced a recess in the plan to visually separate the building into two volumes, and allow the stem of the tee to realign with the kink in the Wallace Building and prevent the path from narrowing toward the park while the volume on Main Street remains parallel to Main. It also provides a clear termination to the commercial spaces which wrap into the pedestrian walkway encouraging the pedestrian connection and shortening the perceived distance to the park. The façade is predominately brick with cast stone accents, a precast base, and precast cornice. The windows run in a regular grid with deep returns and articulation of the brick achieved through corbeling. The windows terminate with arched openings at the upper floor to accentuate the building top, similar to the historical buildings on Main Street.

The precast base is conceived as a series of structural piers continuing the rhythm of the Windsor hotel. Between the piers are inserted metal panel canopies and aluminum storefronts, defining the pedestrian edge. We are also introducing ornamental relief to the precast base inspired by the pressed tin ceilings of the existing Wallace building.

The Main street building cornice mimics the depth and section profile of the Cast Iron Building Cornice, while following the stepped silhouette of 311 Main Street. This gives the façade a proportion that is more in keeping with the proportions of the historical buildings on Main Street.

Our design for the Catharine Street building is intended to complement the Wallace building extension facing Catharine Street. The building is divided into three zones with precast structural piers and aluminum storefront along the base, a center zone of brick (taking its material cue from the existing Wallace building extension), ornamental precast, and articulated cornice. The upper zone is conceived as an enlarged cornice with a change to white brick and inserting a spandrel panel and accent mullion, unifying the openings. SLCE is using the same spandrel treatment at the 4th floor and ornamental precast at the remaining slab edges to give a hierarchy of scales to the façade. The remaining windows are separated by a small brick pier which is mirrored around each of the structural columns. These small piers add a secondary rhythm to the façade while keeping the windows proportional to the openings found in the historical district. The ground floor incorporates canopies and the structural piers to open and activate the street level.

4. Blank walls: No visible façade of any of the buildings is blank. We have paid particular attention to the sides of the buildings that face the Wallace Green Walkway and the Green. These are also important facades that frame the view from Mill Street, which will form an important entrance to the side for both vehicles and pedestrians. A custom mural is proposed for the western wall of the Main Street Building visible above the existing building in the adjacent lot. The mural is intended to reference and replace the historical painted signage on the Eastern wall of the Wallace Building. See building elevations and renderings A-20A through A-215.

5. Façade articulation: Facades along all three buildings are broken up with divisions in materials, separate entrances and windows. Awnings are also used. Building articulation continues to wrap around the corners of Main Street and Wallace buildings to invite patrons and visitors into the pedestrian mid-block connector and provide access to residential entrances. The façade of the Catharine Street building has multiple doors and window treatments. See elevations.

6. Awnings: Awnings for the three buildings are to be Aluminum Composite Panels over a recessed entry and extend 3’-4’ beyond the building face. Scale drawings are provided to show height. See A-200A through A-200E.

7. Roofs: All roofs have been designed to conceal mechanical equipment. See detailed elevations and roof plans in the March 2021 submission set, and

accompanying diagrams demonstrating that neither rooftop bulkheads nor rooftop mechanicals will be visible from the street or adjoining properties. Mechanicals will be low in height and will be totally screened. Attached diagrams show limited hatched area within which mechanicals can be located (A-104A Main Street Bldg.; A-103B Catharine Street Bldg.; A104C Wallace Bldg) and showing that the mechanicals as so screened will not be visible from the street or adjacent properties. (Z-002)

Main St Building – The roof will be a high albedo built-up roof system. Proposed elevator/stair and boiler room bulkheads for the building are located within the section of the building that is located within the PID-UV zoning sub-district. These cover 1,563 sf (11.6%) of the horizontal area of the roof and are set-back from Main Street 42'-8" from the face of the building (see A-104A). Mechanical equipment on the roof, required for the proposed residential units, will be limited to placement within the hatched area shown on A-103C. The overall height of the mechanical units, including any concrete pad or dunnage required for support, will be @ 5'-6" max., and will be screened using a 6'-0" high perforated metal screen, as depicted in the attached drawings. Please see the sightline analysis (drawing 1&3 on Z-002) demonstrating that both the mechanical equipment and screen will not be visible from adjacent properties and streets.

Catharine Street Building - The roof will be a high albedo built-up roof system. The roof plan of the Catherine Street building shows proposed elevator/stair and boiler room bulkheads which cover 1,636 sf (17%) of the horizontal area of the roof and sit 30'-8" from Catharine Street, and from the face of the building (see A-103B). Mechanical equipment on the roof required for the proposed residential units, will be limited to placement within the hatched area shown on A-103C. The overall height of the mechanical units, including any concrete pad or dunnage required for support, will be @ 5'-6" max., and will be screened using a 6'-0" high perforated metal screen, as depicted in the attached drawings. Please see the sightline analysis (drawing 2 on Z-002) demonstrating that both the mechanical equipment and screen will not be visible from view from adjacent properties and streets.

Wallace Building – The existing roof of the Wallace building will be replaced and repaired to match the existing roof as required. No new additions to the roof are proposed. Any mechanical equipment on the roof required for the proposed residential units and to be placed on the roof of either the Wallace building or the Wallace building extension, will be limited to within the hatched area shown on Drawing A-103C. The overall height of the mechanical units , including any concrete pad or dunnage required for support, will be @ 5'-6" maximum, and will be screened using a 6'-0" high perforated metal screen, as depicted in the attached drawings. Please

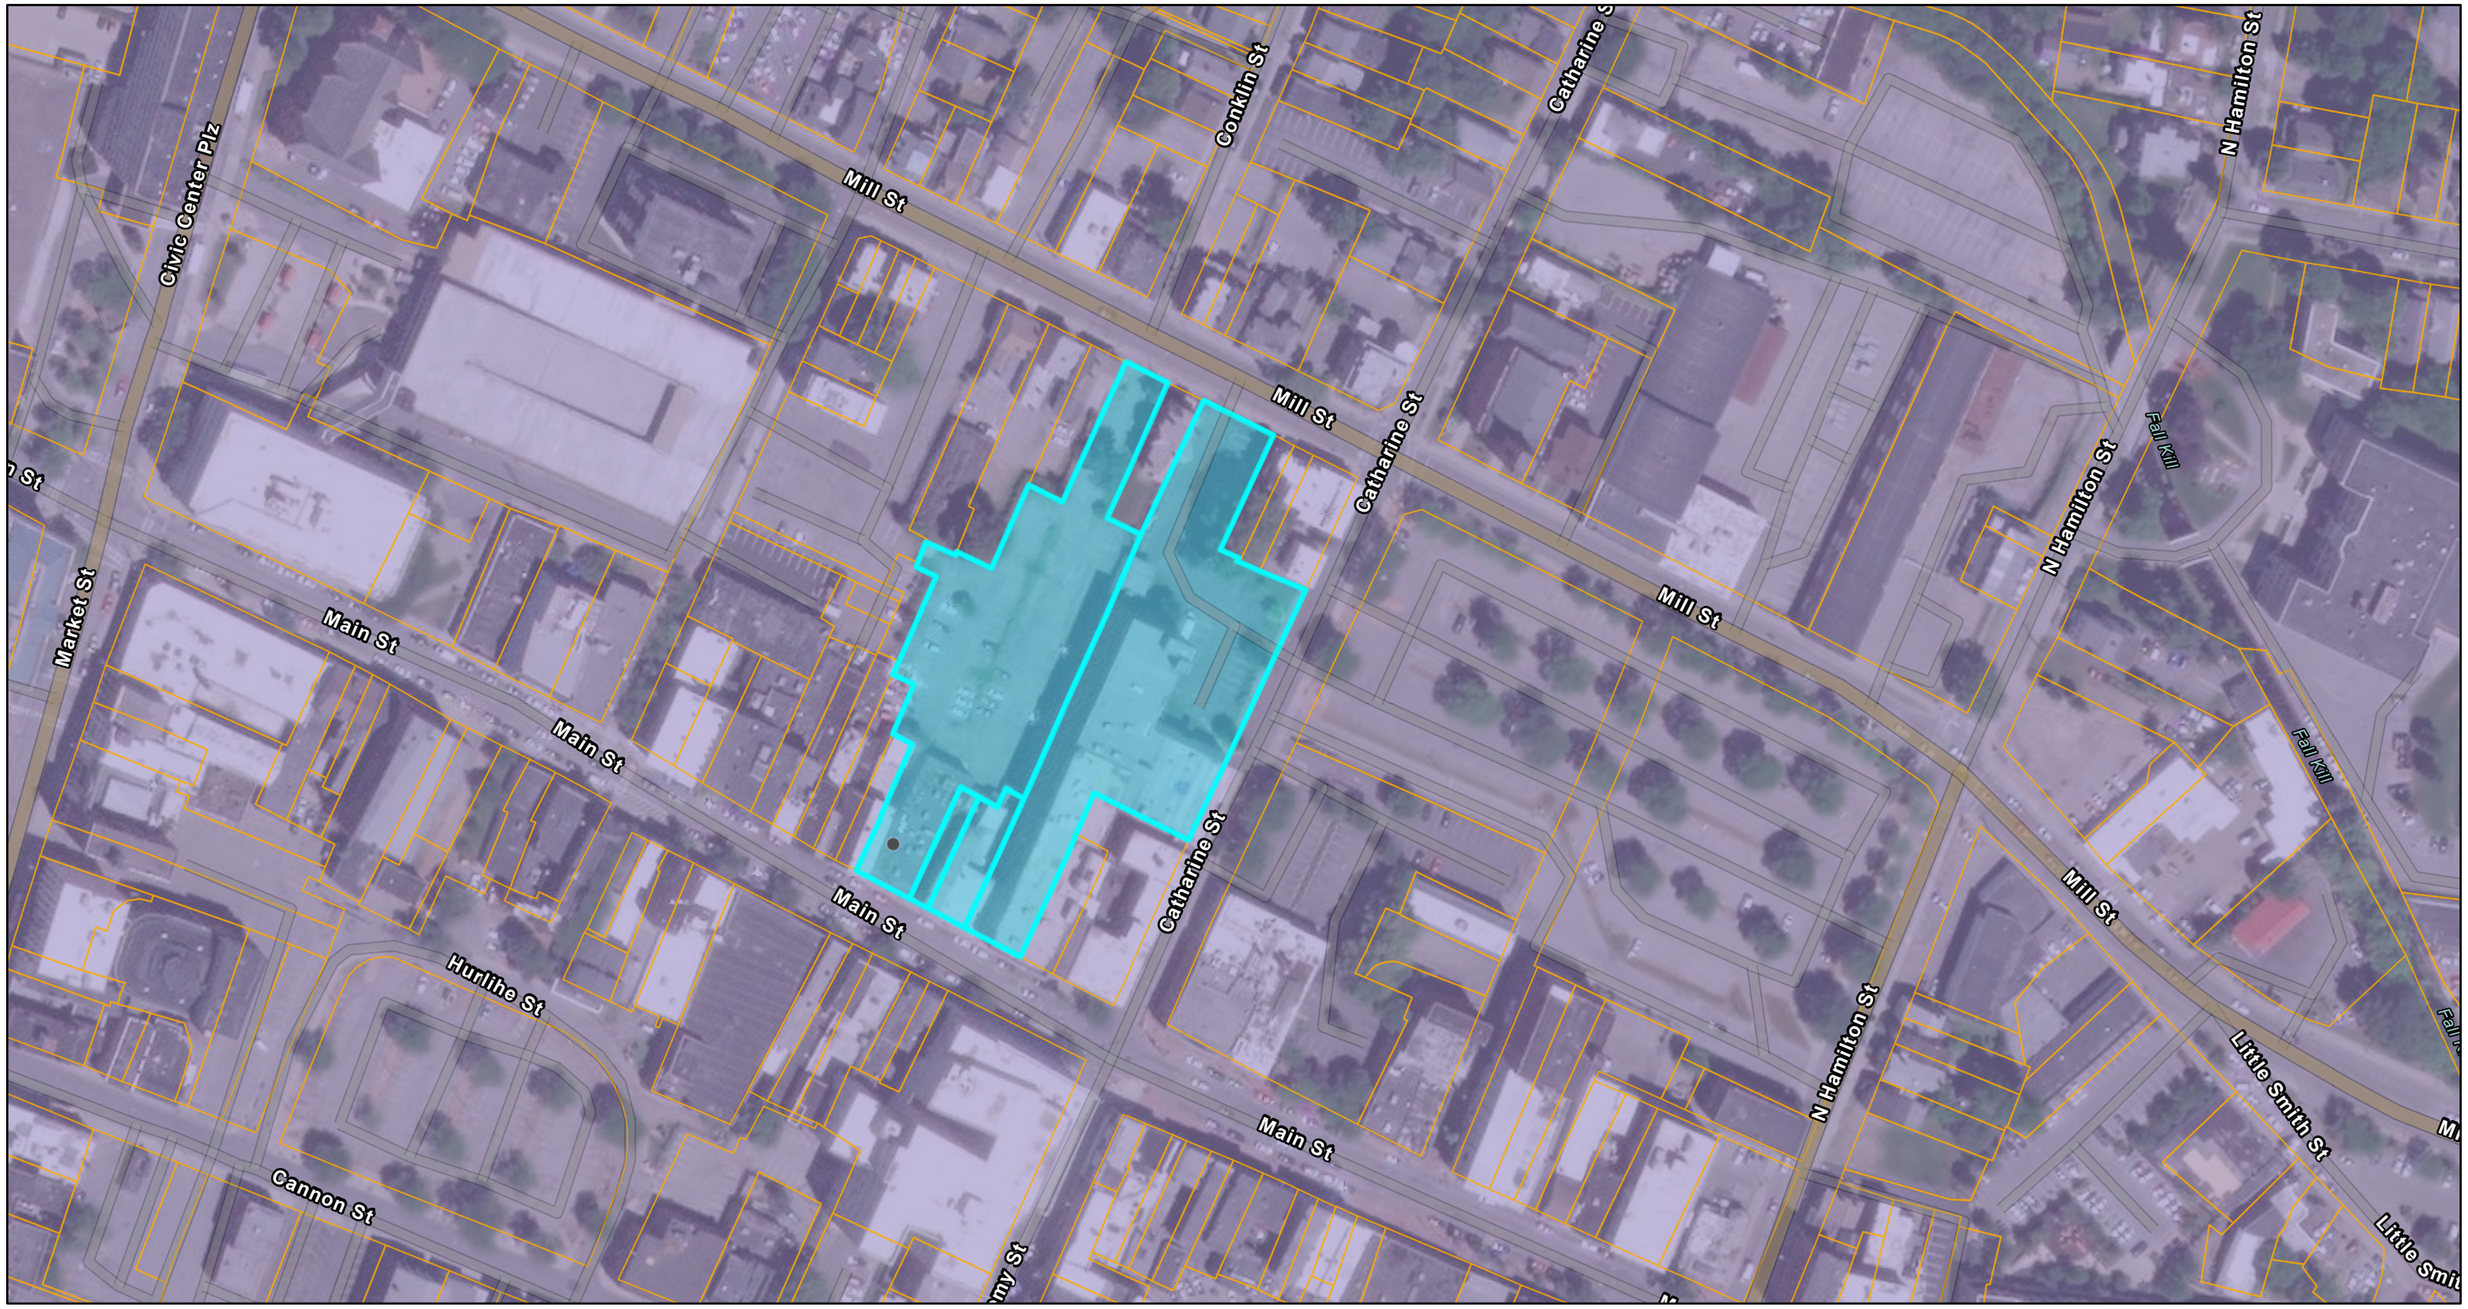
see the sightline analysis (drawings 1 & 5 on Z-002) demonstrating that both the mechanical equipment and screen will not be visible from adjacent properties and streets.

8. Screening: Roof Screening will be a perforated metal screen finished to match the metal of the window frames of the buildings. Mechanical equipment will be located away from the edge of the buildings to further shield from view. See drawings referred to in previous section.

   As noted, the submitted drawings support the compliance of our buildings. We are happy to discuss any questions you may have in this regard.

9. Drawing Revisions: To accommodate upper-story setback per 19-3.37(8)(f) and 19-3.24(4)(e), the Main Street building was setback approximately 5' x 27' on all floors facing 317 Main Street. This provided a minimum of 5' distance from the existing windows previously blocked in the original building massing design. All existing windows are located on Sheet A-102A.

Very truly yours,



SLCE Architects

Saky Yakas, Partner

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for Dutchess County, New York

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

Map Scale: 1:4,380 if printed on A portrait (8.5" x 11") sheet.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Dutchess County, New York
Survey Area Data: Version 17, Jun 11, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Oct 7, 2013—Feb 26, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Dutchess County, New York

Ur—Urban land

Map Unit Setting

National map unit symbol: 9rjb
Mean annual precipitation: 41 to 47 inches
Mean annual air temperature: 45 to 50 degrees F
Frost-free period: 115 to 195 days
Farmland classification: Not prime farmland

Map Unit Composition

Urban land: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Urban Land

Typical profile

H1 - 0 to 6 inches: variable

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8s
Hydric soil rating: Unranked

Minor Components

Udorthents, smoothed

Percent of map unit: 5 percent
Hydric soil rating: No

Udorthents, wet substratum

Percent of map unit: 3 percent
Hydric soil rating: No

Unnamed soils, undisturbed

Percent of map unit: 1 percent
Hydric soil rating: Unranked

Rock outcrop

Percent of map unit: 1 percent
Hydric soil rating: Unranked

1.0 INTRODUCTION

This Water Quality and Quantity Plan and Stormwater Pollution Prevention Plan (SWPPP) have been prepared pursuant to the Environmental Protection Agencies' (EPA) and the New York State Department of Environmental Conservations (NYSDEC) Phase II Storm Water Regulations. All parties, as defined below, are responsible for executing the SWPPP and for complying with the requirements set forth in the EPA's National Pollution Discharge Elimination System (NPDES) General Permit, the NYSDEC's State Pollution Discharge Elimination System (SPDES) General Permit GP-0-20-001, and any local governing agencies having jurisdiction with regard to erosion and sediment control.

The purpose of the SWPPP, described herein, is to provide for the proper control and treatment of water quality and quantity impacts due to the proposed project. These controls and treatments will be achieved through the use of appropriate features such as conveyance piping and underground drywells. The goal is to manage the post-development storm water discharge to match or improve on the pre-development conditions, provide necessary water quality treatment and quality control for the new development and prevent discharge of pollutants into receiving waters, in keeping with the afore-noted regulations and best management practices as described within the New York State Erosion and Sediment Control Manual and the New York State Stormwater Design Manual.

This SWPPP outlines methods that Owner/Developers and Contractors can use to adjust construction practices in a way that will retain surface water quality and prevent sediment laden runoff from entering rivers, streams, estuaries, wetlands and other sensitive environments. This SWPPP describes methods for permanent stormwater management features in the design and runoff management during the construction phase.

1.1 Responsibilities of the Participants

It is the responsibility of the Owner/Developer, General Contractor and subcontractors to comply with the measures set forth in this SWPPP and implement pollutant control measures which retain surface water quality and prevent sediment laden runoff from entering rivers, streams, estuaries, wetlands and other sensitive environments. The following outlines the responsibilities of all participants.

Owner/Developer's Qualified Representative

1. Prepare this Water Quality and Water Quantity Report and SWPPP using good Engineering practices, best management practices and in compliance with NYSDEC Phase II Storm Water Regulations. The Owner/Developer, General Contractor and all Sub Contractors involved in earth disturbance during construction must certify this Plan by signing the certifying statement contained in **Appendix A**.
2. Prepare the Notice of Intent (NOI) for the Owner/Developer for submission to the NYSDEC at least 5 days prior to commencement of construction.
3. The SWPPP that has been prepared for the job site shall include certification forms and a completed and signed NOI.
4. Provide copies of the SWPPP and the "Acknowledgement of Notice of Intent" to the local government agencies having jurisdiction or regulatory control over the project.
5. Review the site prior to the beginning of construction and certify in an inspection report that the appropriate pre-construction erosion and sediment control measures outlined herein, and

that are required by the NYSDEC SPDES General Permit, have been installed and will operate as designed.

6. Conduct on-site inspections every 7 days for general compliance with the SWPPP and the NYSDEC SPDES General Permit. Inspection reports will be provided to the Owner/Developer within 24-hours of the field inspection. Any problem areas or areas in need of additional stabilization shall be made clear to the Owner/Developer. The Owner/Developer and the authorized person who is responsible for the overall operation of the site, such as a project manager or site superintendent, must certify these reports by signing the certifying statements contained at the end of the reports and must be maintained in the on-site log book as described below.
7. Review onsite Contractors SWPPP records to ensure compliance and update them as required or necessary.
8. Update the SWPPP each time there is a significant modification to the design or construction which may have a significant effect on the potential for discharge of pollutants into receiving waters.
9. When construction is complete, provide the Owner/Developer with certification that an inspection has been completed verifying that the site has undergone final stabilization.
10. When the site has undergone final stabilization, prepare the Notice of Termination (NOT) for the Owner/Developer for submission to the NYSDEC.

Owner/Developer/Operator/Permittee

The following is a summary of the Owner/Developer's responsibilities:

1. Sign the NOI contained in **Appendix B** and certify the SWPPP by signing the Owner/Developer's Certification statement contained in **Appendix A** of this report. The NOI should be submitted to:

   NYSDEC "Notice of Intent"
   Bureau of Water Permits
   625 Broadway
   Albany, New York 12233-3505

2. When the Owner/Developer receives a letter of "Acknowledgement of Notice of Intent" from the NYSDEC, post a copy of this letter at the site for public viewing on a kiosk, in a construction field trailer, in model home, etc. A copy should also be forwarded to the Owner/Developer's Qualified Representative for the project file.
3. Post at the site with the "Acknowledgement of Notice of Intent" a SWPPP inspection activity log for public viewing on a monthly basis.
4. Ensure that a log book, containing all the required documentation, is kept on site and made available for inspection upon request. The book should contain an extra copy of the "Acknowledgement of Notice of Intent", a copy of this Water Quality and Water Quantity and SWPPP report, weekly SWPPP inspection reports, SWPPP inspection quarterly reports and a copy of the SPDES General Permit.
5. Ensure the SWPPP report, inspection reports and inspection quarterly summaries are certified by an authorized person who has responsibility for the overall operation of the site such as a project manager or site superintendent. Certification of these documents is executed by signing the certifying statements contained in **Appendix A** and at the end of the inspection reports.

6. Require the General Contractor and all Sub Contractors involved with construction activity that disturbs site soils, to fully implement the SWPPP and the requirements set forth in the SPDES General Permit. The SWPPP should be certified by the General Contractor and all Sub Contractors involved with earth disturbance during construction by signing the certifying statement in **Appendix A**.

7. Upon project completion and when the site has reached final stabilization, the Owner/Developer should sign the Notice of Termination (NOT) prepared by the Owner/Developer's Qualified Representative and submit to:

   NYSDEC "Notice of Termination"
   Bureau of Water Permits
   625 Broadway
   Albany, New York 12233-3505

8. Retain all site records and documentation including Engineering reports, SWPPP reports, SWPPP inspection reports and all records of data used to complete the NOI for a minimum of 3 years from the date the site reached final stabilization.

9. Provide an Operation & Maintenance (O&M) manual to the new Owner/Developer who is expected to conduct the necessary O&M over the life of the structures as described in Section 10.0 of this report.

Contractors and Sub-Contractors

The following is a summary of the Contractor's responsibilities:

1.0 Implement fully the SWPPP while following the Phasing Plan and the requirements set forth in the SPDES General Permit. Certify the SWPPP by signing the Contractor's Certification statement contained in **Appendix A** of this report.

2.0 Provide the names and addresses of all subcontractors' involved in construction activities that disturb site soils for inclusion in the SWPPP.

3.0 Ensure all Sub Contractors involved in construction activities that disturb site soils implement fully the SWPPP and the requirements set forth in the SPDES General Permit. All Sub Contractors must certify the SWPPP by signing the Contractor's Certification statement contained in **Appendix A** of this report.

4.0 Conduct inspections on a regular basis of the erosion and sedimentation controls installed at the site. Maintain and repair as necessary all erosion and sedimentation controls.

2.0 SITE DESCRIPTION

This section briefly describes existing and proposed hydrologic and hydraulic conditions at and around the project site as they relate to Surface Water Management planning considerations. Subsequent sections contain a description of the manner in which site runoff will be managed to minimize effects on areas adjacent to the site.

2.1 Location

The Wallace Campus is 2.52 acres consisting of 4 parcels located at 319, 325, 327-329, 331 Main Street, in the City of Poughkeepsie. The properties are identified as Tax ID#'s 6162-77-114098, 109079, 109077 and 6162-78-127091. Parcels 6162-77-121116, 116114, 116113 and 112116 are adjoining lots only part of site work for parking no utilities are proposed. The site is located on the north side of Main Street, the west side of Catharine Street, and the south side of Mill Street (Westbound Arterial). The project has UTM coordinates of 589367 Easting and 4617455 Northing.

Figure 1: Location Map

2.2 Topography

Elevations are mainly flat throughout the property. There is not much grade change from one side of the property to the other. The proposed buildings will be situated so that there is access to the buildings from all sides. The proposed site walks are all handicap accessible. The site is broken into many drainage areas. Some flow to an existing system located in Mill Street and others flow towards existing drywells located on site.

2.3 Land Cover and Site Development

The existing land cover consists of a combination of impervious building structures, asphalt pavement and grass area. Currently there are eleven existing buildings on the site. The buildings are surrounded by walkways, parking areas and grass areas. Four of the buildings will be removed and two buildings will be constructed in their place. The existing parking areas will be removed, and grassed areas will be constructed. Parking for the buildings will be available on site. The existing water shed has 2.91 acres of impervious surface. The proposed development will eliminate 0.42 acres of impervious area for a total of 2.49 acres of impervious surface.

2.4 Soils

Soils mantling the site have been classified by the United States Department of Agriculture (USDA) Soil Survey of Dutchess County, New York. The following soils groups are present, based on the afore-noted mapping:

1. Ur: Urban Land

According to NRCS soil hydraulic classifications Ur is a "Class D". The results of the onsite soil tests can be found in **Appendix D**.

2.5 Rainfall Data

Rainfall data utilized in the modeling and the analysis was obtained from NRCS & NRCC Extreme Precipitation in New York and New England, an interactive web tool for extreme precipitation analysis. The data used is specific to Poughkeepsie NY and various 24-hour storm events are presented below. A record of the extreme precipitation data is included in Appendix D.

Rainfall data utilized in the modeling and the analysis was obtained from Exhibit 10.1 in the New York State Department of Environmental Conservation publication entitled, "New York Guidelines for Urban Erosion and Sediment Control". The data used is specific to Dutchess County and various 24-hour storm events are presented below.

24-Hour Storm Event	24-hour rainfall
1 year	2.61
2 year	3.16
10 year	4.68
25 year	5.85
100 year	8.22

2.6 Streams and Water Bodies

There are no streams or water bodies located onsite.

2.7 Wetlands and Floodplains

There are no wetlands or floodplains located onsite.

2.8 Historical and Cultural Resources

The project area will be reviewed in accordance with Section 106 of the National Historic Preservation Act of 1966.

3.0 PROJECT DESCRIPTION

Tax Lots 6162-78-127091, 6162-77-114098, 109077, & 109079 will be combined into one tax parcel. The proposed project will demolish the existing buildings at 319, 325, and 327-329 main street and will replace them with a new building which will include retail and residential units. The existing building at #331 Main Street will be repurposed to include commercial area, fitness area, and residential area. The project will also include a new building to be located along Catharine Street and will have commercial daycare and residential area within it. The project will include modifications to the surrounding parking, sidewalk, and landscaping. The site will be graded to avoid any surface ponding and blend into the landscape. The project has been designed to incorporate proposed and existing drywells as stormwater treatment practices. Each of the drywells have at least 10 feet of separation distance to the proposed and existing buildings to ensure that no flooding within the building occurs.

4.0 METHODOLOGY

The stormwater design approach for this project will accommodate all NYS DEC requirements and will ensure that water quality and water quantity volumes are managed accordingly. The methodology for designing the stormwater management, as well as, the erosion and sediment control structures for this project are as follows:

1. Evaluate the hydrologic condition of the tributary area using the USDA-SCS Technical Release No. 20 (June 1986) Methods.
2. Determine peak flows from each watershed, for various storm events, using the Hydro CAD computer program.
3. Determine the water quality volume, runoff reduction volume, channel protection volume, overbank flood protection volume and extreme storm flood protection volume for each drainage area that requires mitigation. Design the mitigation program to the DEC water quality and quantity methodology for each affected area.
4. Perform hydrologic routings for the selected stormwater systems using the Hydro CAD computer program. Examine and compare the output for the DEC design criteria, and also for peak elevations and peak outflows for both pre and post-development conditions as may be prescribed by the local authority.
5. Design the erosion and sedimentation control structures, and prepare engineering calculations for the design of channels and conveyance piping in accordance with the "New York Standards and Specifications for Erosion and Sediment Control", July 2016, New York State Department of Environmental Conservation".

4.1 Green Infrastructure Planning Guidelines

The proposed project has been designed to implement as many green infrastructure planning guidelines as possible. All of the guidelines are not always applicable or cannot be achieved. The planning methods are discussed below.

Preservation of Undisturbed Areas

The proposed project is located in a portion of the site that has been disturbed in the past. There are no significant undisturbed areas to place into permanent conservation; however, the undisturbed slopes to the south of the project will remain.

Preservation of Buffers

There are no existing stream, river, or wetland vegetated buffers on the project site.

Reduction of Clearing and Grading

The proposed project is located in a previously disturbed area which has already been cleared in the past. This reduces the need for further clearing and grading on the property.

Locating Development in Less Sensitive Areas

As described above, the project is located in an area of the site that has been previously disturbed.

Open Space Design

The proposed development is designed so the buildings are grouped together.

Soil Restoration

Any soil disturbed during the course of construction will be restored in accordance with the NYSDEC Stormwater Design Manual, Section 5.1.6.

Roadway Reduction

There are no proposed roads in this project. The drive aisles are the minimum allowed by the City code.

Sidewalk Reduction

The sidewalks are the minimum width required to meet code and area only proposed where needed to provide safe and adequate pedestrian circulation.

Driveway Reduction

The drive aisles are the minimum required by code.

Cul-de-sac Reduction

There are no proposed cul-de-sacs or dead ends. The layout has a continuous drive aisle to achieve sufficient vehicle access while eliminating the need for large unnecessary dead ends.

Building Footprint Reduction

As a redevelopment project, several existing buildings on the site will be removed.

Parking Reduction

As a redevelopment project, the majority of the site is currently parking and will be partially eliminated to add green space and reduce parking to the minimum required.

5.0 HYDROLOGIC AND HYDRAULIC ANALYSIS

Stormwater Management Design has the purpose of improving the quality of surface water runoff from all impervious areas and providing retention for increased runoff quantities that may occur. For the proposed project, the appropriate methodology to manage stormwater is to capture and treat runoff for quality and quantity control for the site.

The hydrologic analysis was performed uses the Hydro CAD stormwater modeling software, and all data regarding areas has been calculated in AutoCAD. Soils information has been obtained through mapping per the NRCS Dutchess County Soils Survey, onsite deep tests and infiltration tests. The results of the Hydraulic Analysis can be found in **Appendix C**.

5.1 Proposed Runoff Treatment – Water Quality

By allowing stormwater runoff to infiltrate back into the ground we are able to minimize the impacts on the surround surface waters and treat the runoff through exfiltration into the sub surface soils. The evaluation of the site to determine the water quality volumetric requirements follow strictly the procedures presented in chapters 4 & 5 of the New York State Stormwater Design Manual, and is provided in full in **Appendix D**.

The table below summarizes the volumes required and provided for runoff reduction and water quality; Detailed calculations can be found in **Appendix D.**

Overall there is a reduction of impervious in this area. The discharge rate is reduced and the reduction in impervious surface will reduce the potential for pollutants. Based on the size, location, and site features it is not the ideal location to treat runoff.

Water quality requirements for the proposed project will be achieved via a runoff reduction practice. Runoff reduction practices will satisfy the minimum required runoff reduction volume (RRv) by use of direct infiltration via drywells.

Pretreatment

For the proposed drywells, pretreatment has been provided in sumps in the catch basins and yard drains prior to entering the drywells. The four yard drains provide 200 cf of pretreatment and the three catch basins provide 120 cf of pretreatment storage for a total of 320 cf of storage.

5.2 Proposed Stormwater Management – Water Quality

The design observation points have been modeled in Hydro CAD and represents the total flow leaving the project drainage areas. Two different drainage points have been evaluated based on the proposed site development. The drainage analysis points are shown on the pre and post drainage area maps in **Appendix E.** The table below displays the peak discharge rates for the design points and demonstrates that discharge rates for post construction are less than or equal to what is currently produced at the design points meeting the requirements of Overbank Flood Protection and Extreme Flood protection.

Channel Protection Volume is not required if the Runoff Reduction volume is reduced onsite through runoff reduction techniques or infiltration practices.

Peak Flow Discharge Rate DP-1

6.0 PERMANENT STORMWATER MANAGEMENT FEATURES

6.1 Conveyance Piping

Storm runoff from developed areas will be conveyed to and through the stormwater system by a series of underground piping and surface flows. Due to relatively small watershed areas associated with each catch basin, the SCS Unit Hydrograph TR-55/TR-20 Method and inlet capacities for circular pipes were used for pipe sizing. In general, piping is designed such that:

- All proposed piping is sized to accommodate the peak flow from the 25-year 24-hour storm, as prescribed by the local authority.
- Flow capacity is sufficient to convey runoff to the receiving discharge points
- Strength is sufficient to withstand the soil cover and vehicle loads.
- In some instances the existing site drainage system is not capable of conveying all of the runoff contributing to the drainage structure. The model shows that the basins fill and sheet flow overland to the next available drainage structure in large storm events. In no cases does the "surcharging" exceed 6 inches. In these locations the post condition has been improved to convey the flow or reduce the "surcharging".

6.2 Drywells

Monthly Maintenance

- Check all inflow pipes and clear of any debris
- Check all outflow pipes and clear of any debris
- Check to ensure drywell is draining between storm cycles.

Annual Maintenance

- Check depth of drywell to ensure greater than 25% storage capacity remains.
- If less than 25% contract Vacuum truck services to clean debris from Drywell.
- If drywell is not draining between storms, contract vacuum truck to clean debris.

7.0 STORMWATER EROSION AND SEDIMENT CONTROLS

Several types of permanent and temporary storm water pollutant controls are required to be installed and implemented for pre-construction, during construction and post-construction as shown on the Construction Plans and per the NYSDEC SPDES General Permit. Guidelines and recommendations can be found in the "New York State Standards and Specifications for Erosion and Sediment Control."

The permanent storm water management system has been designed to accommodate peak storm flows utilizing catch basins, piping and grass swales.

Selection of temporary storm water controls will be on an "as needed basis" and will depend on the specific conditions of the site. Since site characteristics can change significantly during construction, it is important to monitor the site regularly to ensure the proper selection and implementation of the necessary controls. These controls include, but are not limited to, silt fence, drainage swales, check dams, hay bales, stone construction entrances, sediment traps and seeding and mulching.

7.1 Erosion and Sediment Controls

Temporary Stabilization

Silt fences, drainage swales, stabilized stone construction entrances, erosion control blankets, and seeding and mulching, as well as, other controls will be utilized as temporary surface water management features. See the Erosion and Sediment Control Plan(s) and details sheets for the location, size, quantity and details of the temporary stormwater management features as described below.

Silt Fence

Silt fence will be used as necessary to reduce the sediment load in the receiving drainage ditches and as a perimeter sediment control device. In addition, silt fencing will be placed on the downslope sides of all disturbed areas 5 ft. from the toe of the slope until more permanent drainage and erosion control structures are established. In cases with environmentally sensitive areas adjacent to the downslope sides of disturbed areas, silt fencing should be placed at the toe of the slope outside the sensitive area. All silt fence are to be 36" minimum length with built in woven wire mesh (min. 6X6 14 ½ gauge) unless otherwise specified on the construction details.

Inlet Protection

Storm drain inlet protection measures prevent soils, sediment, and debris from entering storm basins. In unpaved areas inlet protection shall consist of a row of silt fence completely encircling the drain inlet. In paved areas inlet protection can consist of stone and block, silt sox, or hanging filter traps as specified on the plans.

Stabilized Stone Construction Entrance

A construction entrance is used at all entrances and exists to construction activities. The stone construction entrance is stabilized to reduce tracking of mud and dirt onto surrounding roads and surfaces.

Seeding and Mulching

Seeding and mulching is one of the most important and underutilized erosion control practices. Exposed earths pose the greatest risks for erosion and sediment. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within fourteen (14) days from the date the current soil

disturbance activity ceased. Temporarily Ceased means that an existing disturbed area will not be disturbed again within 14 calendar days of the previous soil disturbance.

Soil Stockpile

A soil stockpile is formed with soil excavated to provide proper building elevations. Stockpiled soil is later used to contour the surface to the desired grades, removed from the site, or the material is used for reclamation/restoration of the region following the removal of roads and facilities. All soils piled onsite must be completely enclosed by silt fence around the toe of the slope. The site fence should be installed a minimum of 2 feet from the toe of the slope. The soil pile should have a maximum side slope of 1V:2H. All soil piles must be stabilized with seed and mulch or covered with a plastic tarp if the soil will not be used within fourteen (14) days from the date the current soil pile was created.

Permanent Stabilization

Permanent stormwater stabilization measures include catch basins, piping and other stormwater structures as described in sections 5 and 6. In all instances, the structures associated with the stormwater management system have been sized to accommodate peak flows from the appropriate storm events as required by the governing municipality. All lawns, basins and swales will be permanently seeded and mulched and maintained as necessary to prevent over growth.

Concrete Washout Areas

Concrete washouts are used to contain concrete and liquids when the chutes of concrete mixers and hoppers are cleaned after a delivery. The washout facility consolidates the liquids and allows them to harden for easy disposal. This prevents contaminated liquids from flowing offsite or leaching into the groundwater aquifer.

7.2 Other Pollutant Controls

Paints and Solvents

During construction temporary structures such as construction trailers may be moved on site to store items such as paints, solvents and gasoline pertinent to the continuation of construction activities. The intention of these structures is to shelter potential contaminants from stormwater and reduce the potential of toxic chemicals from entering the stormwater runoff due to construction activities.

Solvents and detergents that will be used for regular cleaning and maintenance of construction vehicles or temporary structures may be stored on-site. Solvents shall be used in cleaning machinery pursuant to 6 NYCRR Part 750. After use, solvents shall be disposed of in approved containers and removed from site at scheduled intervals.

Fuels

Fuel for construction equipment shall either be obtained from a licensed distributor of petroleum products or from an approved above ground storage tank on site. A distributor may be contracted to arrive on site periodically and fill all equipment as necessary. All distributors of petroleum products must have adequate liability insurance to mitigate and clean up any spills that occur on site as well as obtain appropriate permits and licenses from the NYSDEC. All above ground storage tanks with a combined capacity of 1,100 gallons shall be registered with the NYSDEC pursuant to 6 NYCRR Part 614 Standards for New and Substantially Modified Petroleum Storage Facilities.

Fuel from construction vehicles may come into contact with stormwater when vehicles are stored outside. Good housekeeping and preventative maintenance procedures shall be implemented to ensure fuel spills and leaks are minimized during refueling and storage. Any small-scale fuel or oil spills must be

remedied immediately and contaminated soils shall be disposed of appropriately. A licensed spill prevention and response team shall handle large-scale gasoline spills.

Oil and other petroleum products may be stored on site, in limited quantities, to ensure the continued operation of construction equipment in the event a scheduled delivery is unavailable. Items shall be stored in their original containers within temporary structures and shall not be exposed to stormwater. Used oil and petroleum products shall be stored in approved containers until recycled or disposed of at an approved disposal facility.

Temporary Facilities

Temporary sanitary facilities may be located on site for construction workers. This facility shall be located in an accessible and visible location. Such a facility shall be leak and tip proof. A waste management company may be contracted to arrive on site and provide the routine pumping and sanitization of the facility. Such a company shall have adequate liability insurance to mitigate and clean up any spills that occur on site as well as appropriate permits and licenses from the NYSDEC.

Dust Control

Construction vehicles shall enter and exit the site at the stabilized construction entrance. The construction entrance will trap dust and mud that would otherwise be carried off-site by construction traffic. Water trucks will be used as needed during construction to reduce dust generated on the site. The general contractor will provide dust control in compliance with applicable local and state dust control regulations. The construction entrances will be maintained during the life of the construction and repaired, and/or cleaned, periodically to ensure proper function.

Dewatering

If dewatering is required the water must be free of silt and sediment prior to discharge offsite or to any existing water bodies. If sediment is present, methods of sediment removal may include, but are not limited to; silt bags, temporary sediment traps, temporary sediment basins, or sheet flow across stabilized vegetated surfaces. As the quantity and quality of water cannot accurately be determined prior to excavation dewatering practices must be determined during construction and should be approved by the site engineer prior to commencing any dewatering activities.

Solid Waste

No solid materials are allowed to be discharged from the site with stormwater. All solid waste shall be collected and placed in containers. The containers will be emptied periodically by a contract trash disposal service and hauled away from the site.

Thermal Pollution

Stormwater that comes in contact with roadways, driveways, parking lots or other impermeable surfaces may increase in temperature during warm weather. If stormwater is discharged into surface water bodies, the temperature of the water body may also increase, potentially threatening plant and animal species sensitive to temperature changes as well as providing an environment that may cause nuisance species to flourish.

After development is complete, impervious areas shall be graded to channel water to catch basins and culverts, which in turn convey stormwater to the stormwater management basin. All stormwater shall be stored and treated within the basins and shall be released over a 24 hour period, which shall minimize the potential for raising the temperature of any downstream water bodies.

7.3 Best Management Practices

Throughout construction, care shall be taken to ensure sediment does not enter surface water bodies and chemicals do not enter stormwater, potentially contaminating surface and groundwater supplies. The following Best Management Practices (BMP) shall be observed to maintain responsible environmental practices on the construction site.

Good Housekeeping

Good housekeeping is essential to reducing the risk of contaminating runoff waters during every stage of construction. The General Contractor shall ensure supervisors train each employee in good housekeeping practices as they pertain to the implementation of this SWPPP.

Immediately following mobilization, the General Contractor shall take an inventory of all equipment and containers containing hazardous or toxic materials and submit this inventory to the Owner/Developer to keep on-site with this Stormwater Pollution Prevention Plan. This inventory shall be updated regularly to reflect changes in the quantity or type of hazardous and toxic materials stored on site. In the event of a spill, the Spill Response Team can refer to the inventory if the contents of the spill are unknown.

All equipment shall be operational while it is stored on site. Inspections shall be conducted regularly to ensure all equipment is free of leaks and that oil and grease are not in contact with soils or stormwater. Portable equipment such as chain saws, drills, as well as hand tools, must be placed within a trailer or under cover at the end of each work day.

A storage area shall be designated on-site where all hazardous or toxic materials are stored. Each employee shall return the materials to the designated storage area following use. Chemicals including oil, grease, solvents and detergents shall be stored on-site in approved containers only. Used chemicals shall be disposed of in refuse containers and removed periodically. Containers shall be regularly inspected to ensure the integrity of the container and sealed to prevent leaks.

A scheduled clean-up shall occur at the end of each workweek. During this clean up, empty containers of solvents, oils, grease, paints and detergents shall be disposed of, containers of gasoline shall be placed in trailers where they are not in contact with stormwater and the inventory shall be updated. Empty containers shall not be permitted on the ground.

Preventative Maintenance

All on-site vehicles must be inspected regularly for oil and grease leaks. All leaks shall be repaired immediately upon obtaining the appropriate equipment. If the leak cannot be fixed immediately, it shall be temporarily mitigated to prevent the flow of contaminants onto the soil and potentially into the stormwater. If necessary, the reservoir will be drained to stop the flow of contaminants or the vehicle will be moved under cover. Drip pans shall be used when performing any maintenance or cleaning on construction vehicles.

Spill Prevention and Response

The safety of employees and neighbors shall be of utmost concern when hazardous or toxic chemicals are stored or utilized on-site. Safety Data Sheets (SDS) shall be obtained for all toxic or hazardous substances that are stored on-site to provide employees with a valuable database in assessing risk in the event of a spill.

Any above ground storage tanks on site shall be installed pursuant to 6 NYCRR Part 614. According to the New York State "Minimum Standards for New and Substantially Modified Above Ground Storage Facilities", all tanks installed must meet or exceed the design criteria in one or more of the following design or manufacturing standards: UL No. 142, UL No. 58, API Standard No. 650, API Standard No. 620, CAN4-S601-M84 or CAN4-S630-M84. Tanks constructed of wood, concrete, aluminum, fiberglass reinforced plastic as well as riveted or bolted steel tanks are not permitted. All tanks must have installed leak detection systems, secondary containment, corrosion protection, and undergo periodic monitoring pursuant to all Part 614 requirements.

Should a spill occur, a licensed spill contractor will be contacted to mitigate the potential negative effects of a spill. Additionally, the NYSDEC must be notified of a release of petroleum products. The General Contractor shall have trained employees knowledgeable in the location of sorbent, brooms, rags and mops in the event of a small-scale spill. An inventory of equipment and its location shall be posted in a visible location as well as kept in proximity to this Pollution Prevention Plan. If the General Contractor does not have Hazardous Materials trained employees on site, a firm that specializes in handling spills, soil and water contamination shall be called.

After a spill occurs, all personnel not trained in hazardous materials spill response shall be asked to evacuate the immediate area. The NYSDEC Spill Response Team shall be called to investigate the spill and determine if additional actions should be taken to ensure the safety of personnel and nearby residents. Should any employee have a suspected injury, a local emergency squad must be contacted immediately.

8.0 CONSTRUCTION SEQUENCE SCHEDULING

The scale of site construction does not necessitate that this project be a phased construction project; However, the construction will be sequenced to limit the exposed soils to reduce the amount of sediments in runoff water and ultimately preserve the quality of surface waters. The construction method selected is designed to combine development with responsible land management as well as protection of sensitive environments both within the proposed development and the surrounding area.

Temporary and permanent stabilization methods will be implemented before construction begins and will be continuously modified throughout the project to provide the best methods for stormwater management and pollution prevention. For more details pertaining to construction sequence, please refer to the "NYSDEC Instruction Manual for Stormwater Construction Permit" pages 23-26. A typical and sample ordering of site construction activities is as follows:

Pre-Construction Activities

- Identify all natural resources and mark and protect them as necessary i.e trees, vegetation, limits of disturbance.
- Identify on-site and downstream surface water bodies and install controls to protect them from sedimentation.
- Establish temporary stone construction entrance pads to capture mud and debris from the tires of construction vehicles.
- Install perimeter sediment controls such as silt fences, as shown on the project plans.
- Install temporary construction fencing as shown on the project plans or as directed by the site engineer.

- All earth disturbances during this phase should be limited to work necessary to install erosion and sedimentation controls.

During Construction Activities

- Complete building demolition in accordance with notes and procedures identified on the demolition plan.
- As site grading is completed install runoff and drainage controls as shown on the project plans and as necessary. These controls should reduce run-off flow rates and velocities, as well as, divert off site and clean run-off.
- Stabilize the conveyance system i.e. ditches, swales, berms etc. by seeding, mulching and installing rock check dams.
- Utilize practices to infiltrate stormwater runoff as much as possible when applicable.
- Stabilize all stormwater runoff outlets as shown on the project plans and as necessary.
- Limit soil disturbance to small areas and preserve as much of the existing vegetation as practical.
- Complete all underground utility improvements prior to installation of hard surface improvements.
- All topsoil stockpiles should be staged in an area away from surface waters and storm drains and should be protected and stabilized.
- Earth disturbance is not allowed in established buffers, within any regulated distance from wetlands, or within the high water line of a body of water affected by tidal action or other such protected zones.
- At any location where surface run-off from disturbed or graded areas may flow off-site, sedimentation control measures must be installed to prevent sedimentation from being transported.
- Regular inspections and maintenance should be performed as described in the following section.

Post-Construction Activities

- Identify the permanent structural or non-structural practices that will remain on the site.
- Provide an Operation & Maintenance (O&M) manual to the new Owner/Developer who is expected to conduct the necessary O&M over the life of the structures as described in Section 10.0 of this report.

9.0 IMPLEMENTING THE SWPP

9.1 Employee Training

All employees involved in site-development activities shall be aware of the stipulations outlined in this SWPPP as it pertains to their everyday activities. All such employees must be able to recognize potential problems and have the ability to provide either temporary or permanent stabilization measures, as appropriate, to mitigate stormwater runoff before problems occur. The NYSDEC periodically holds workshops on erosion and sediment control. It is recommended that the affected and responsible on-site personnel attend these workshops to ensure training is current and up to date. Contact the NYSDEC for more information.

9.2 Site Inspections

The Owner/Developer must have a qualified professional conduct an assessment of the site prior to the commencement of construction and certify in an inspection report that the appropriate erosion and sediment controls described in this SWPPP have been adequately installed or implemented to ensure overall preparedness of the site for the commencement of construction. A qualified professional is

defined as a Professional Engineer or Landscape Architect licensed to practice in New York State, or is a Certified Professional in Erosion and Sediment Control (CPESC). Once construction begins regular inspection of construction activities by the qualified professional are required at least once every 7 days to ensure deficiencies regarding erosion and sedimentation are reported and corrected. It is the responsibility of the Contractor to continuously monitor construction activities to ensure the measures outlined in this report are being implemented.

Areas which have not been fully stabilized, areas used for materials storage and all structural control measures must be inspected once every 7 calendar days to monitor erosion and assess the risk of sedimentation. For sites where soil disturbance activities are on-going and the owner operator has received authorization in accordance with Part II.C.3 to disturb greater than five (5) acres of soil at any one time, the qualified inspector shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days. For areas construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and temporary stabilization measures have been applied to all disturbed areas, the qualified inspector shall conduct a site inspection at least once every (30) calendar days.

A thorough site evaluation shall be performed to determine the continued applicability of the permit, and assess the need to make any changes that have not already been reflected in this SWPPP. The SWPPP shall be reviewed to evaluate its overall effectiveness in preventing sediment laden stormwater runoff. Temporary and permanent stabilization methods shall be assessed and new methods shall be established, should any method be determined to be inadequate.

A copy of the SWPPP must be maintained on site at all times in the field log book. The Owner/Developer must maintain a record of all inspection reports with the on site SWPPP. The SWPPP and inspection reports must be maintained on site and be made available to the permitting authority upon request.

9.3 Maintenance

It shall be necessary to maintain all temporary controls installed as well as vegetative measures across the site. Maintenance shall also be necessary to ensure the permanent structural features, such as underground chambers, catch basins and conveyance piping remain optimally functional and continue to reduce the risk of sediment loading of surface water bodies. All controls shall be repaired or replaced as necessary and as noted on the inspection reports as prepared by the Owner/Developer's Qualified Representative.

During construction, maintenance of these stabilization measures shall be the responsibility of the General Contractor or appropriate Sub Contractors. Vegetative plantings must not be allowed to become overgrown. Vegetation shall be removed should it be ineffective and be replaced with a variety of grasses, trees and shrubs more suitable for preventing stormwater runoff. Silt fences must be inspected regularly to ensure that they are still effective and their capability to reduce stormwater runoff has not been reduced due to prolonged sun exposure.

Piping and catch basin sumps shall be cleaned out periodically to prevent the collection of sediment that will reduce the maximum flow. Sediment must be removed from sediment basins, infiltration basins or traps whenever their capacity has been reduced by 50 percent of their design capacity.

Guidelines and recommendations for installation and maintenance practices can be found in the "New York State Standards and Specifications for Erosion and Sediment Control"

9.4 Progress Reports and Summaries

Progress reports shall be completed by the General Contractor and all Sub Contractors weekly to document any conditions, which may affect adherence to the construction schedule and may ultimately result in changes to the stormwater pollution prevention plan.

Each progress report must contain the project, date, weather conditions and a brief description of progress made throughout the week, including the use of temporary and permanent stabilization measures on all exposed soils. The progress reports shall be filed with this SWPPP in the on-site log book.

Additionally, as described in Section 1.1 of this report, the Owner/Developer's Qualified Representative will prepare weekly inspection reports and quarterly summaries. These reports should be maintained in the on site log book as well.

9.5 Certification

Prior to starting construction, the Owner/Developer must certify that to the best of their knowledge this SWPPP was prepared in accordance with the requirements in the NYSDEC SPDES General Permit and that it meets all federal, state and local erosion and sediment control requirements. The certifying statement is presented in **Appendix A** of this report.

The General Contractor and all appropriate Sub Contractors are responsible for reading and understanding the SWPPP and are also required to certify the SWPPP by signing the certifying statement presented in **Appendix A** of this report.

All inspection reports and inspection quarterly summaries are to be certified by an authorized person who has responsibility for the overall operation of the site such as a project manager or site superintendent. Certification of these documents is executed by signing the certifying statements presented at the end of the inspection reports.

10.0 POST CONSTRUCTION INSPECTION & MAINTENANCE

Post-construction, regularly scheduled inspections and maintenance will be necessary to ensure the permanent structural features such as the stormwater management basins and the conveyance system components remain optimally functional and continue to reduce the risk of sediment loading of surface water bodies. Follow manufactures guidelines and the detailed construction installation and maintenance guidelines included in **Appendix A** for all stormwater management practices.

When construction is complete, the Contractor will remain responsible for the site until the entire site has reached final stabilization. The site is considered stabilized when all soil disturbing activities have been completed and a uniform, perennial vegetative cover, with a density of 80%, has been established or equivalent stabilization measures, such as the use of mulches or geotextiles, have been employed on all unpaved areas and areas not covered by permanent structures. Weekly inspections should continue until the site has reached this point.

At the time of final stabilization, the Owner/Developer's Qualified Representative shall perform a final inspection of the site and certify that the site has successfully undergone final stabilization using either vegetative or structural stabilization methods and that all temporary erosion and sediment controls such as silt fence, not needed for long term use, have been removed. All storm water practices must be clean and free of sediment and or debris or must be cleaned by the contractor prior to turning the maintenance

responsibilities over to the Owner/Developer. At this point, the Owner/Developer is responsible for the following:

1. Submit to the NYSDEC a NOT prepared by the Owner/Developer's Qualified Representative as described in Section 1.1 of this report.
2. Identify all the permanent stormwater management structures that have been constructed and provide the New Owner/Developer with an Operations and Maintenance (O&M) manual that will be necessary in order for the structures to function properly after the site has been stabilized. Section 10.0 of this report satisfies the O&M requirements
3. Transfer the Water Quality and Quantity Report and SWPPP to the New Owner/Developer.
4. Certify that the permanent structures have been constructed as described by this plan and the drawings.

The new Owner/Developer shall overtake responsibility of inspecting and maintaining drainage and erosion control features over the lifetime of the structures. Maintenance personnel, employed by the New Owner/Developer, must be aware of the SWPPP and should be trained to recognize signs that stabilization measures may not be performing optimally or are failing. The inspection of on-site stabilization measures will become part of routine preventative maintenance practiced by the New Owner/Developer and his employees.

10.1 Inspection

Overall Site Inspection

The overall site, embankments, vegetation and stormwater conveyance system components including catch basins, culverts, swales and outlets should be inspected regularly. The inspections should include but are not limited to:

1. Density and condition of vegetation and ground cover.
2. Erosion, differential settlement or cracking of embankment.
3. Bulging or sliding of toe of embankments.
4. Sedimentation of on-site or downstream water bodies.
5. Sedimentation of culverts or swales.
6. Sedimentation of lawn areas, paved areas, within the sand filter units or catch basin sumps.
7. Accumulation of pollutants, including oils or grease in catch basin sumps.
8. Damage or fatigue of storm sewer structures or associated components.

Water Quality Practice Inspection (if applicable)

All water quality practices and all associated features should be inspected regularly. The inspections should include but are not limited to:

1. Density and condition of vegetation and ground cover.
2. All features of the practice should be clear of brush and tree growth.
3. Erosion, differential settlement or cracking of basin embankments.
4. Bulging or sliding of toe of embankments.
5. Presence of animal burrows.
6. Evidence of clogging or sedimentation at inlets or outlets.
7. Erosion of the flow path through the detention basin.
8. Spillways should be inspected for structural integrity.
9. Spillways should be clear of obstructions.
10. Inlet/outlet riprap should be inspected for scour and dislodged stones and obstructions should be removed.
11. Accumulation of sediments at inlets, outlets and silt traps.

Detailed inspection checklists for each of the Stormwater Management Practices can be found in **Appendix A**.

10.2 Maintenance

Overall Site Maintenance

Maintaining vegetative and structural measures for soil protection is necessary to keep the storm water system functioning properly. Maintenance should occur on a regular basis and should include but is not limited to:

Seasonal Maintenance

1. Vegetated areas should be maintained to promote vigorous and dense growth. Lawn areas should be mowed at least three times a year but may require more frequent mowing's depending on the growth rate.
2. Trees and unwanted vegetation should be removed from inlet structures, outlet structures, banks, and berms to prevent clogging or weakening of the berms and structures.
3. Paved areas should be swept at least twice a year and in the early spring for removal of deicing materials.
4. Accumulation of litter and debris should be removed during each mowing or sweep operation.
5. Structural components of the storm sewer system such as culverts and catch basins which require repair or replacement should be addressed immediately following identification.
6. Cleanout of catch basin sumps should occur when accumulation of sediments and debris are within six inches of the catch basin outlet pipe.
7. Swale and drainage way maintenance will include periodic mowing, occasional spot reseeding and weed control. Weeds and woody plants should be eradicated or cut back since they reduce the efficiency of the drainage way.
8. Rip rap lined inlet and outlets that show signs of scour should be repaired. Weed and brush growth at the inlets and outlets should be controlled as needed.

Winter Maintenance

1. Remove snow and ice from inlet structures, basin inlet and outlet structures and away from culvert end sections.
2. Snow removed from paved areas should not be piled at inlets/outlets of the stormwater management basin.
3. Use of deicing materials should be limited to sand and environmentally friendly chemical products. Use of salt mixtures should be kept to a minimum.
4. Sand used for deicing should be clean, course material free of fines, silt, and clay.
5. Materials used for de-icing should be removed during the early spring by sweeping and/or vacuuming.

Underground Practices Maintenance

1. A consistent schedule of inspection shall be observed for all system components to insure continued effective operation.
2. Areas surrounding the surface access points shall be kept clear of overgrowth.
3. All inspections shall be logged. A specific schedule, on a quarterly basis, shall be maintained by the system owner/operator and a periodic replacement of the water quality practice media shall be schedule for minimally every two years.
4. Accumulation of litter and debris should be removed during each mowing or sweep operation.

5. Structural components of the system which require repair or replacement should be addressed immediately following identification.
6. Spillways should be cleared of obstructions.
7. Inlet/outlet riprap damage due to scour should be repaired.

For any proprietary practices refer to manufacturer specifications for additional maintenance requirements. Detailed maintenance checklists for each of the Stormwater Management Practices can be found in **Appendix A**.

11.0 CONCLUSION

The Engineer has designed a NYSDEC-compliant Stormwater Management Plan for the Wallace Campus project. Overall, the proposed stormwater management system reduces and/or eliminates the impacts of the proposed re-development by controlling and treating stormwater using catch basins, storm-sewer piping, and drywells. Offsite storm discharges and velocities for the proposed project are less than what currently exists. The stormwater management system will function adequately and will not adversely affect adjacent or downstream properties provided it is constructed and maintained as outlined in this plan and as shown on the site plans.

I. PRE-CONSTRUCTION MEETING DOCUMENTS

Project Name _____

Permit No. _____**Date of Authorization**_____

Name of Operator _____

Prime Contractor _____

a. Preamble to Site Assessment and Inspections -The Following Information To Be Read By All Person's Involved in The Construction of Stormwater Related Activities:

The Operator agrees to have a qualified professional[1] conduct an assessment of the site prior to the commencement of construction[2] and certify in this inspection report that the appropriate erosion and sediment controls described in the SWPPP have been adequately installed or implemented to ensure overall preparedness of the site for the commencement of construction.

Prior to the commencement of construction, the Operator shall certify in this site logbook that the SWPPP has been prepared in accordance with the State's standards and meets all Federal, State and local erosion and sediment control requirements.

When construction starts, site inspections shall be conducted by the qualified professional at least every 7 calendar days and within 24 hours of the end of a storm event of 0.5 inches or greater (Construction Duration Inspections). The Operator shall maintain a record of all inspection reports in this site logbook. The site logbook shall be maintained on site and be made available to the permitting authorities upon request. The Operator shall post at the site, in a publicly accessible location, a summary of the site inspection activities on a monthly basis (Monthly Summary Report).

The operator shall also prepare a written summary of compliance with this general permit at a minimum frequency of every three months (Operator's Compliance Response Form), while coverage exists. The summary should address the status of achieving each component of the SWPPP.

Prior to filing the Notice of Termination or the end of permit term, the Operator shall have a qualified professional perform a final site inspection. The qualified professional shall certify that the site has undergone final stabilization[3] using either vegetative or structural stabilization methods and that all temporary erosion and sediment controls (such as silt fencing) not needed for long-term erosion control have been removed. In addition, the Operator must identify and certify that all permanent structures described in the SWPPP have been constructed and provide the owner(s) with an operation and maintenance plan that ensures the structure(s) continuously functions as designed.

1 "Qualified Professional means a person knowledgeable in the principles and practice of erosion and sediment controls, such as a Certified Professional in Erosion and Sediment Control (CPESC), soil scientist, licensed engineer or someone working under the direction and supervision of a licensed engineer (person must have experience in the principles and practices of erosion and sediment control).

2 "Commencement of construction" means the initial removal of vegetation and disturbance of soils associated with clearing, grading or excavating activities or other construction activities.

3 "Final stabilization" means that all soil-disturbing activities at the site have been completed and a uniform, perennial vegetative cover with a density of eighty (80) percent has been established or equivalent stabilization measures (such as the use of mulches or geotextiles) have been employed on all unpaved areas and areas not covered by permanent structures.

b. Operators Certification

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. Further, I hereby certify that the SWPPP meets all Federal, State, and local erosion and sediment control requirements. I am aware that false statements made herein are punishable as a class A misdemeanor pursuant to Section 210.45 of the Penal Law. "

d. Pre-construction Site Assessment Checklist (NOTE: Provide comments below as necessary)

1. Notice of Intent, SWPPP, and Contractors Certification:

Yes No NA

[ ] [ ] [ ] Has a Notice of Intent been filed with the NYS Department of Conservation?
[ ] [ ] [ ] Is the SWPPP on-site? Where?_____
[ ] [ ] [ ] Is the Plan current? What is the latest revision date?_____
[ ] [ ] [ ] Is a copy of the NOI (with brief description) onsite? Where?_____
[ ] [ ] [ ] Have all contractors involved with stormwater related activities signed a contractor's certification?

Pre-construction Site Assessment Checklist (continued)

2. Resource Protection

Yes No NA

[ ] [ ] [ ] Are construction limits clearly flagged or fenced?

[ ] [ ] [ ] Important trees and associated rooting zones, on-site septic system absorption fields, existing vegetated areas suitable for filter strips, especially in perimeter areas, have been flagged for protection.

[ ] [ ] [ ] Creek crossings installed prior to land-disturbing activity, including clearing and blasting.

3. Surface Water Protection

Yes No NA

[ ] [ ] [ ] Clean stormwater runoff has been diverted from areas to be disturbed.

[ ] [ ] [ ] Bodies of water located either on site or in the vicinity of the site have been identified and protected.

[ ] [ ] [ ] Appropriate practices to protect on-site or downstream surface water are installed.

[ ] [ ] [ ] Are clearing and grading operations divided into areas <5 acres?

4. Stabilized Construction Entrance

Yes No NA

[ ] [ ] [ ] A temporary construction entrance to capture mud and debris from construction vehicles before they enter the public highway has been installed.

[ ] [ ] [ ] Other access areas (entrances, construction routes, equipment parking areas) are stabilized immediately as work takes place with gravel or other cover.

[ ] [ ] [ ] Sediment tracked onto public streets is removed or cleaned on a regular basis.

5. Perimeter Sediment Controls

Yes No NA

[ ] [ ] [ ] Silt fence material and installation comply with the standard drawing and specifications.

[ ] [ ] [ ] Silt fences are installed at appropriate spacing intervals

[ ] [ ] [ ] Sediment/detention basin was installed as first land disturbing activity.

[ ] [ ] [ ] Sediment traps and barriers are installed.

6. Pollution Prevention for Waste and Hazardous Materials

Yes No NA

[ ] [ ] [ ] The Operator or designated representative has been assigned to implement the spill prevention avoidance and response plan.

[ ] [ ] [ ] The plan is contained in the SWPPP on page _____

[ ] [ ] [ ] Appropriate materials to control spills are onsite. Where? _____

II. CONSTRUCTION DURATION INSPECTIONS

a. Directions:
Inspection Forms will be filled out during the entire construction phase of the project.
Required Elements:

(1) On a site map, indicate the extent of all disturbed site areas and drainage pathways. Indicate site areas that are expected to undergo initial disturbance or significant site work within the next 14-day period;

(2) Indicate on a site map all areas of the site that have undergone temporary or permanent stabilization;

(3) Indicate all disturbed site areas that have not undergone active site work during the previous 14-day period;

Inspect all sediment control practices and record the approximate degree of sediment accumulation as a percentage of sediment storage volume (for example, 10 percent, 20 percent, 50 percent);

(5) Inspect all erosion and sediment control practices and record all maintenance requirements such as verifying the integrity of barrier or diversion systems (earthen berms or silt fencing) and containment systems (sediment basins and sediment traps). Identify any evidence of rill or gully erosion occurring on slopes and any loss of stabilizing vegetation or seeding/mulching. Document any excessive deposition of sediment or ponding water along barrier or diversion systems. Record the depth of sediment within containment structures, any erosion near outlet and overflow structures, and verify the ability of rock filters around perforated riser pipes to pass water; and

(6) Immediately report to the Operator any deficiencies that are identified with the implementation of the SWPPP.

SITE PLAN/SKETCH

_____ _____

Inspector (print name) **Date of Inspection**

_____ _____

Qualified Professional (print name) **Qualified Professional Signature**

The above signed acknowledges that, to the best of his/her knowledge, all information provided on the forms is accurate and complete.

Maintaining Water Quality

Yes No NA

[ ] [ ] [ ] Is there an increase in turbidity causing a substantial visible contrast to natural conditions?

[ ] [ ] [ ] Is there residue from oil and floating substances, visible oil film, or globules or grease?

[ ] [ ] [ ] All disturbance is within the limits of the approved plans.

[ ] [ ] [ ] Have receiving lake/bay, stream, and/or wetland been impacted by silt from project?

Housekeeping

1. General Site Conditions

Yes No NA

[ ] [ ] [ ] Is construction site litter and debris appropriately managed?

[ ] [ ] [ ] Are facilities and equipment necessary for implementation of erosion and sediment control in working order and/or properly maintained?

[ ] [ ] [ ] Is construction impacting the adjacent property?

[ ] [ ] [ ] Is dust adequately controlled?

2. Temporary Stream Crossing

Yes No NA

[ ] [ ] [ ] Maximum diameter pipes necessary to span creek without dredging are installed.

[ ] [ ] [ ] Installed non-woven geotextile fabric beneath approaches.

[ ] [ ] [ ] Is fill composed of aggregate (no earth or soil)?

[ ] [ ] [ ] Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

Runoff Control Practices

1. Excavation Dewatering

Yes No NA

[ ] [ ] [ ] Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.

[ ] [ ] [ ] Clean water from upstream pool is being pumped to the downstream pool.

[ ] [ ] [ ] Sediment laden water from work area is being discharged to a silt-trapping device.

[ ] [ ] [ ] Constructed upstream berm with one-foot minimum freeboard.

2. Level Spreader

Yes No NA

[ ] [ ] [ ] Installed per plan.

[ ] [ ] [ ] Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.

[ ] [ ] [ ] Flow sheets out of level spreader without erosion on downstream edge.

3. Interceptor Dikes and Swales

Yes No NA

[ ] [ ] [ ] Installed per plan with minimum side slopes 2H:1V or flatter.

[ ] [ ] [ ] Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.

[ ] [ ] [ ] Sediment-laden runoff directed to sediment trapping structure

Runoff Control Practices (continued)

4. Stone Check Dam

Yes No NA

[ ] [ ] [ ] Is channel stable? (flow is not eroding soil underneath or around the structure).
[ ] [ ] [ ] Check is in good condition (rocks in place and no permanent pools behind the structure).
[ ] [ ] [ ] Has accumulated sediment been removed?.

5. Rock Outlet Protection

Yes No NA

[ ] [ ] [ ] Installed per plan.
[ ] [ ] [ ] Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles

Yes No NA

[ ] [ ] [ ] Stockpiles are stabilized with vegetation and/or mulch.
[ ] [ ] [ ] Sediment control is installed at the toe of the slope.

2. Revegetation

Yes No NA

[ ] [ ] [ ] Temporary seedings and mulch have been applied to idle areas.
[ ] [ ] [ ] 4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control

1. Stabilized Construction Entrance

Yes No NA

[ ] [ ] [ ] Stone is clean enough to effectively remove mud from vehicles.
[ ] [ ] [ ] Installed per standards and specifications?
[ ] [ ] [ ] Does all traffic use the stabilized entrance to enter and leave site?
[ ] [ ] [ ] Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence

Yes No NA

[ ] [ ] [ ] Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
[ ] [ ] [ ] Joints constructed by wrapping the two ends together for continuous support.
[ ] [ ] [ ] Fabric buried 6 inches minimum.
[ ] [ ] [ ] Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation is ___% of design capacity.

Sediment Control (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes No NA

[ ] [ ] [ ] Installed concrete blocks lengthwise so open ends face outward, not upward.
[ ] [ ] [ ] Placed wire screen between No. 3 crushed stone and concrete blocks.
[ ] [ ] [ ] Drainage area is 1acre or less.
[ ] [ ] [ ] Excavated area is 900 cubic feet.
[ ] [ ] [ ] Excavated side slopes should be 2:1.
[ ] [ ] [ ] 2" x 4" frame is constructed and structurally sound.
[ ] [ ] [ ] Posts 3-foot maximum spacing between posts.
[ ] [ ] [ ] Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
[ ] [ ] [ ] Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation ___% of design capacity.

4. Temporary Sediment Trap

Yes No NA

[ ] [ ] [ ] Outlet structure is constructed per the approved plan or drawing.
[ ] [ ] [ ] Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes No NA

[ ] [ ] [ ] Basin and outlet structure constructed per the approved plan.
[ ] [ ] [ ] Basin side slopes are stabilized with seed/mulch.
[ ] [ ] [ ] Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS
b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

Tax Map Numbers

1. Provide the Geographic Coordinates for the project site in NYTM Units. To do this you **must** go to the NYSDEC Stormwater Interactive Map on the DEC website at:

www.dec.ny.gov/imsmaps/stormwater/viewer.htm

Zoom into your Project Location such that you can accurately click on the centroid of your site. Once you have located your project site, go to the tool boxes on the top and choose "i"(identify). Then click on the center of your site and a new window containing the X, Y coordinates in UTM will pop up. Transcribe these coordinates into the boxes below. For problems with the interactive map use the help function.

X Coordinates (Easting): 589376

Y Coordinates (Northing): 4617452

2. What is the nature of this construction project?

○ **New Construction**

○ **Redevelopment with increase in impervious area**

● **Redevelopment with no increase in impervious area**

3. Select the predominant land use for both pre and post development conditions.
SELECT ONLY ONE CHOICE FOR EACH

Pre-Development Existing Land Use

- ○ FOREST
- ○ PASTURE/OPEN LAND
- ○ CULTIVATED LAND
- ○ SINGLE FAMILY HOME
- ○ SINGLE FAMILY SUBDIVISION
- ○ TOWN HOME RESIDENTIAL
- ○ MULTIFAMILY RESIDENTIAL
- ○ INSTITUTIONAL/SCHOOL
- ○ INDUSTRIAL
- ● COMMERCIAL
- ○ ROAD/HIGHWAY
- ○ RECREATIONAL/SPORTS FIELD
- ○ BIKE PATH/TRAIL
- ○ LINEAR UTILITY
- ○ PARKING LOT
- ○ OTHER

Post-Development Future Land Use

- ○ SINGLE FAMILY HOME — Number of Lots
- ○ SINGLE FAMILY SUBDIVISION
- ○ TOWN HOME RESIDENTIAL
- ○ MULTIFAMILY RESIDENTIAL
- ○ INSTITUTIONAL/SCHOOL
- ○ INDUSTRIAL
- ● COMMERCIAL
- ○ MUNICIPAL
- ○ ROAD/HIGHWAY
- ○ RECREATIONAL/SPORTS FIELD
- ○ BIKE PATH/TRAIL
- ○ LINEAR UTILITY (water, sewer, gas, etc.)
- ○ PARKING LOT
- ○ CLEARING/GRADING ONLY
- ○ DEMOLITION, NO REDEVELOPMENT
- ○ WELL DRILLING ACTIVITY *(Oil, Gas, etc.)
- ○ OTHER

***Note**: for gas well drilling, non-high volume hydraulic fractured wells only

4. In accordance with the larger common plan of development or sale, enter the total project site area; the total area to be disturbed; existing impervious area to be disturbed (for redevelopment activities); and the future impervious area constructed within the disturbed area. (Round to the nearest tenth of an acre.)

Total Site Area	Total Area To Be Disturbed	Existing Impervious Area To Be Disturbed	Future Impervious Area Within Disturbed Area
3.1	3.1	2.9	2.4

5. Do you plan to disturb more than 5 acres of soil at any one time? ○ **Yes** ● **No**

6. Indicate the percentage of each Hydrologic Soil Group(HSG) at the site.

A	B	C	D
%	%	%	100 %

7. Is this a phased project? ○ **Yes** ● **No**

8. Enter the planned start and end dates of the disturbance activities.

Start Date 04/01/2022 – **End Date** 04/01/2024

9. Identify the nearest surface waterbody(ies) to which construction site runoff will discharge.

Name

Fall Kill Creek

9a. Type of waterbody identified in Question 9?

- ○ Wetland / State Jurisdiction On Site (Answer 9b)
- ○ Wetland / State Jurisdiction Off Site
- ○ Wetland / Federal Jurisdiction On Site (Answer 9b)
- ○ Wetland / Federal Jurisdiction Off Site
- ○ Stream / Creek On Site
- ● Stream / Creek Off Site
- ○ River On Site
- ○ River Off Site
- ○ Lake On Site
- ○ Lake Off Site
- ○ Other Type On Site
- ○ Other Type Off Site

9b. How was the wetland identified?

- ○ Regulatory Map
- ○ Delineated by Consultant
- ○ Delineated by Army Corps of Engineers
- ○ Other (identify)

10. Has the surface waterbody(ies) in question 9 been identified as a 303(d) segment in Appendix E of GP-0-20-001? ○ **Yes** ● **No**

11. Is this project located in one of the Watersheds identified in Appendix C of GP-0-20-001? ○ **Yes** ● **No**

12. Is the project located in one of the watershed areas associated with AA and AA-S classified waters? ○ **Yes** ● **No**
If no, skip question 13.

13. Does this construction activity disturb land with no existing impervious cover and where the Soil Slope Phase is identified as an E or F on the USDA Soil Survey? ○ **Yes** ● **No**
If Yes, what is the acreage to be disturbed?

.

14. Will the project disturb soils within a State regulated wetland or the protected 100 foot adjacent area? ○ **Yes** ● **No**

15. Does the site runoff enter a separate storm sewer system (including roadside drains, swales, ditches, culverts, etc)? ● **Yes** ○ **No** ○ **Unknown**

16. What is the name of the municipality/entity that owns the separate storm sewer system?

CITY OF POUGHKEEPSIE

17. Does any runoff from the site enter a sewer classified as a Combined Sewer? ○ **Yes** ● **No** ○ **Unknown**

18. Will future use of this site be an agricultural property as defined by the NYS Agriculture and Markets Law? ○ **Yes** ● **No**

19. Is this property owned by a state authority, state agency, federal government or local government? ○ **Yes** ● **No**

20. Is this a remediation project being done under a Department approved work plan? (i.e. CERCLA, RCRA, Voluntary Cleanup Agreement, etc.) ○ **Yes** ● **No**

21. Has the required Erosion and Sediment Control component of the SWPPP been developed in conformance with the current NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book)? ● **Yes** ○ **No**

22. Does this construction activity require the development of a SWPPP that includes the post-construction stormwater management practice component (i.e. Runoff Reduction, Water Quality and Quantity Control practices/techniques)? ● **Yes** ○ **No**
If No, skip questions 23 and 27-39.

23. Has the post-construction stormwater management practice component of the SWPPP been developed in conformance with the current NYS Stormwater Management Design Manual? ○ **Yes** ● **No**

24. The Stormwater Pollution Prevention Plan (SWPPP) was prepared by:

- ● **Professional Engineer (P.E.)**
- ○ **Soil and Water Conservation District (SWCD)**
- ○ **Registered Landscape Architect (R.L.A)**
- ○ **Certified Professional in Erosion and Sediment Control (CPESC)**
- ○ **Owner/Operator**
- ○ **Other**

SWPPP Preparer Certification

I hereby certify that the Stormwater Pollution Prevention Plan (SWPPP) for this project has been prepared in accordance with the terms and conditions of the GP-0-20-001. Furthermore, I understand that certifying false, incorrect or inaccurate information is a violation of this permit and the laws of the State of New York and could subject me to criminal, civil and/or administrative proceedings.

First Name RODNEY **MI** E

Last Name MORRISON

Signature

Date 10/25/2021

25. Has a construction sequence schedule for the planned management practices been prepared? ○ Yes ○ No

26. Select **all** of the erosion and sediment control practices that will be employed on the project site:

Temporary Structural

- ○ Check Dams
- ○ Construction Road Stabilization
- ● Dust Control
- ○ Earth Dike
- ○ Level Spreader
- ○ Perimeter Dike/Swale
- ○ Pipe Slope Drain
- ○ Portable Sediment Tank
- ○ Rock Dam
- ○ Sediment Basin
- ○ Sediment Traps
- ● Silt Fence
- ● Stabilized Construction Entrance
- ● Storm Drain Inlet Protection
- ○ Straw/Hay Bale Dike
- ○ Temporary Access Waterway Crossing
- ○ Temporary Stormdrain Diversion
- ○ Temporary Swale
- ○ Turbidity Curtain
- ○ Water bars

Biotechnical

- ○ Brush Matting
- ○ Wattling

Vegetative Measures

- ○ Brush Matting
- ○ Dune Stabilization
- ○ Grassed Waterway
- ● Mulching
- ○ Protecting Vegetation
- ○ Recreation Area Improvement
- ● Seeding
- ○ Sodding
- ○ Straw/Hay Bale Dike
- ○ Streambank Protection
- ○ Temporary Swale
- ● Topsoiling
- ○ Vegetating Waterways

Permanent Structural

- ○ Debris Basin
- ○ Diversion
- ○ Grade Stabilization Structure
- ● Land Grading
- ○ Lined Waterway (Rock)
- ○ Paved Channel (Concrete)
- ○ Paved Flume
- ○ Retaining Wall
- ○ Riprap Slope Protection
- ○ Rock Outlet Protection
- ○ Streambank Protection

Other

Post-construction Stormwater Management Practice (SMP) Requirements

Important: Completion of Questions 27-39 is not required if response to Question 22 is No.

27. Identify all site planning practices that were used to prepare the final site plan/layout for the project.

- ● **Preservation of Undisturbed Areas**
- ● **Preservation of Buffers**
- ● **Reduction of Clearing and Grading**
- ● **Locating Development in Less Sensitive Areas**
- ● **Roadway Reduction**
- ● **Sidewalk Reduction**
- ● **Driveway Reduction**
- ○ **Cul-de-sac Reduction**
- ● **Building Footprint Reduction**
- ● **Parking Reduction**

27a. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6("Soil Restoration") of the Design Manual (2010 version).

- ● All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).
- ○ Compacted areas were considered as impervious cover when calculating the **WQv Required**, and the compacted areas were assigned a post-construction Hydrologic Soil Group (HSG) designation that is one level less permeable than existing conditions for the hydrology analysis.

28. Provide the total Water Quality Volume (WQv) required for this project (based on final site plan/layout).

Total WQv Required

0.05 **acre-feet**

29. Identify the RR techniques (Area Reduction), RR techniques(Volume Reduction) and Standard SMPs with RRv Capacity in Table 1 (See Page 9) that were used to reduce the Total WQv Required(#28).

Also, provide in Table 1 the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

Note: Redevelopment projects shall use Tables 1 and 2 to identify the SMPs used to treat and/or reduce the WQv required. If runoff reduction techniques will not be used to reduce the required WQv, skip to question 33a after identifying the SMPs.

Table 1 - Runoff Reduction (RR) Techniques and Standard Stormwater Management Practices (SMPs)

	Total Contributing Area (acres)		Total Contributing Impervious Area(acres)
RR Techniques (Area Reduction)			
○ Conservation of Natural Areas (RR-1)		and/or	
○ Sheetflow to Riparian Buffers/Filters Strips (RR-2)		and/or	
○ Tree Planting/Tree Pit (RR-3)		and/or	
○ Disconnection of Rooftop Runoff (RR-4)		and/or	
RR Techniques (Volume Reduction)			
○ Vegetated Swale (RR-5)			
○ Rain Garden (RR-6)			
○ Stormwater Planter (RR-7)			
○ Rain Barrel/Cistern (RR-8)			
○ Porous Pavement (RR-9)			
○ Green Roof (RR-10)			0.045
Standard SMPs with RRv Capacity			
○ Infiltration Trench (I-1)			
○ Infiltration Basin (I-2)			
○ Dry Well (I-3)			1.48
○ Underground Infiltration System (I-4)			
○ Bioretention (F-5)			
○ Dry Swale (O-1)			
Standard SMPs			
○ Micropool Extended Detention (P-1)			
○ Wet Pond (P-2)			
○ Wet Extended Detention (P-3)			
○ Multiple Pond System (P-4)			
○ Pocket Pond (P-5)			
○ Surface Sand Filter (F-1)			
○ Underground Sand Filter (F-2)			
○ Perimeter Sand Filter (F-3)			
○ Organic Filter (F-4)			
○ Shallow Wetland (W-1)			
○ Extended Detention Wetland (W-2)			
○ Pond/Wetland System (W-3)			
○ Pocket Wetland (W-4)			
○ Wet Swale (O-2)			

Table 2 - Alternative SMPs (DO NOT INCLUDE PRACTICES BEING USED FOR PRETREATMENT ONLY)

Alternative SMP	Total Contributing Impervious Area(acres)
○ **Hydrodynamic**	
○ **Wet Vault**	
○ **Media Filter**	
○ **Other** [ ]	

Provide the name and manufacturer of the Alternative SMPs (i.e. proprietary practice(s)) being used for WQv treatment.

Name [ ]

Manufacturer [ ]

Note: Redevelopment projects which do not use RR techniques, shall use questions 28, 29, 33 and 33a to provide SMPs used, total WQv required and total WQv provided for the project.

30. Indicate the Total RRv provided by the RR techniques (Area/Volume Reduction) and Standard SMPs with RRv capacity identified in question 29.

Total RRv provided

[ ][ ]0.[0][5][ ] **acre-feet**

31. Is the Total RRv provided (#30) greater than or equal to the total WQv required (#28).

● **Yes** ○ **No**

If Yes, go to question 36.
If No, go to question 32.

32. Provide the Minimum RRv required based on HSG.
[Minimum RRv Required = (P)(0.95)(Ai)/12, Ai=(S)(Aic)]

Minimum RRv Required

[ ][ ][ ].[ ][ ][ ] **acre-feet**

32a. Is the Total RRv provided (#30) greater than or equal to the Minimum RRv Required (#32)?

○ **Yes** ○ **No**

If Yes, go to question 33.
Note: Use the space provided in question #39 to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). A detailed evaluation of the specific site limitations and justification for not reducing 100% of the WQv required (#28) must also be included in the SWPPP.
If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

33. Identify the Standard SMPs in Table 1 and, if applicable, the Alternative SMPs in Table 2 that were used to treat the remaining total WQv(=Total WQv Required in 28 - Total RRv Provided in 30).

Also, provide in Table 1 and 2 the total impervious area that contributes runoff to each practice selected.

Note: Use Tables 1 and 2 to identify the SMPs used on Redevelopment projects.

33a. Indicate the Total WQv provided (i.e. WQv treated) by the SMPs identified in question #33 and Standard SMPs with RRv Capacity identified in question 29.

WQv Provided

[ ][ ][ ].[ ][ ][ ] **acre-feet**

Note: For the standard SMPs with RRv capacity, the WQv provided by each practice = the WQv calculated using the contributing drainage area to the practice - RRv provided by the practice. (See Table 3.5 in Design Manual)

34. Provide the sum of the Total RRv provided (#30) and the WQv provided (#33a). [ ][ ][ ].[ ][ ][ ]

35. Is the sum of the RRv provided (#30) and the WQv provided (#33a) greater than or equal to the total WQv required (#28)? ○ **Yes** ○ **No**

If Yes, go to question 36.
If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

36. Provide the total Channel Protection Storage Volume (CPv) required and provided or select waiver (36a), if applicable.

CPv Required

[ ][ ][ ].[ ][ ][ ] **acre-feet**

CPv Provided

[ ][ ][ ].[ ][ ][ ] **acre-feet**

36a. The need to provide channel protection has been waived because:

○ Site discharges directly to tidal waters or a fifth order or larger stream.

● Reduction of the total CPv is achieved on site through runoff reduction techniques or infiltration systems.

37. Provide the Overbank Flood (Qp) and Extreme Flood (Qf) control criteria or select waiver (37a), if applicable.

Total Overbank Flood Control Criteria (Qp)

Pre-Development

[ ]1[5].[7][ ][ ] **CFS**

Post-development

[ ][ ]8.[5][ ][ ] **CFS**

Total Extreme Flood Control Criteria (Qf)

Pre-Development

[ ]2[7].[8][ ][ ] **CFS**

Post-development

[ ]1[6].[8][ ][ ] **CFS**

37a. The need to meet the Qp and Qf criteria has been waived because:

- ○ Site discharges directly to tidal waters or a fifth order or larger stream.
- ● Downstream analysis reveals that the Qp and Qf controls are not required

38. Has a long term Operation and Maintenance Plan for the post-construction stormwater management practice(s) been developed? ● **Yes** ○ **No**

If Yes, Identify the entity responsible for the long term Operation and Maintenance

WALLACE CAMPUS MANAGER, LLC

39. Use this space to summarize the specific site limitations and justification for not reducing 100% of WQv required(#28). (See question 32a) This space can also be used for other pertinent project information.

40. Identify other DEC permits, existing and new, that are required for this project/facility.

- ○ Air Pollution Control
- ○ Coastal Erosion
- ○ Hazardous Waste
- ○ Long Island Wells
- ○ Mined Land Reclamation
- ○ Solid Waste
- ○ Navigable Waters Protection / Article 15
- ○ Water Quality Certificate
- ○ Dam Safety
- ○ Water Supply
- ○ Freshwater Wetlands/Article 24
- ○ Tidal Wetlands
- ○ Wild, Scenic and Recreational Rivers
- ○ Stream Bed or Bank Protection / Article 15
- ○ Endangered or Threatened Species(Incidental Take Permit)
- ○ Individual SPDES
- ○ SPDES Multi-Sector GP [N][Y][R][ ][ ][ ][ ][ ][ ]
- ○ Other [ ]
- ○ None

41. Does this project require a US Army Corps of Engineers Wetland Permit? ○ **Yes** ● **No**
If Yes, Indicate Size of Impact. [ ][ ][ ][ ][ ].[ ]

42. Is this project subject to the requirements of a regulated, traditional land use control MS4? ● **Yes** ○ **No**
(If No, skip question 43)

43. Has the "MS4 SWPPP Acceptance" form been signed by the principal executive officer or ranking elected official and submitted along with this NOI? ● **Yes** ○ **No**

44. If this NOI is being submitted for the purpose of continuing or transferring coverage under a general permit for stormwater runoff from construction activities, please indicate the former SPDES number assigned. [N][Y][R][ ][ ][ ][ ][ ][ ]

Owner/Operator Certification

I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted.

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity

Please indicate your permit identification number: NYR ___ ___ ___ ___ ___ ___

I. Owner or Operator Information

1. Owner/Operator Name:

2. Street Address:

3. City/State/Zip:

4. Contact Person: | 4a.Telephone:

4b. Contact Person E-Mail:

II. Project Site Information

5. Project/Site Name:

6. Street Address:

7. City/Zip:

8. County:

III. Reason for Termination

9a. □ All disturbed areas have achieved final stabilization in accordance with the general permit and SWPPP. ***Date final stabilization completed** (month/year): _____

9b. □ Permit coverage has been transferred to new owner/operator. Indicate new owner/operator's permit identification number: NYR ___ ___ ___ ___ ___ ___
(Note: Permit coverage can not be terminated by owner identified in I.1. above until new owner/operator obtains coverage under the general permit)

9c. □ Other (Explain on Page 2)

IV. Final Site Information:

10a. Did this construction activity require the development of a SWPPP that includes post-construction stormwater management practices? □ yes □ no (If no, go to question 10f.)

10b. Have all post-construction stormwater management practices included in the final SWPPP been constructed? □ yes □ no (If no, explain on Page 2)

10c. Identify the entity responsible for long-term operation and maintenance of practice(s)?

_____

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity - continued

10d. Has the entity responsible for long-term operation and maintenance been given a copy of the operation and maintenance plan required by the general permit? □ yes □ no

10e. Indicate the method used to ensure long-term operation and maintenance of the post-construction stormwater management practice(s):

□ Post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain practice(s) have been deeded to the municipality.

□ Executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s).

□ For post-construction stormwater management practices that are privately owned, a mechanism is in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the owner or operator's deed of record.

□ For post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university or hospital), government agency or authority, or public utility; policy and procedures are in place that ensures operation and maintenance of the practice(s) in accordance with the operation and maintenance plan.

10f. Provide the total area of impervious surface (i.e. roof, pavement, concrete, gravel, etc.) constructed within the disturbance area? _____ (acres)

11. Is this project subject to the requirements of a regulated, traditional land use control MS4? □ yes □ no

(If Yes, complete section VI - "MS4 Acceptance" statement

V. Additional Information/Explanation:

(Use this section to answer questions 9c. and 10b., if applicable)

VI. MS4 Acceptance - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative (Note: Not required when 9b. is checked -transfer of coverage)

I have determined that it is acceptable for the owner or operator of the construction project identified in question 5 to submit the Notice of Termination at this time.

SPDES GENERAL PERMIT
FOR STORMWATER DISCHARGES

From

CONSTRUCTION ACTIVITY

Permit No. GP- 0-20-001

Issued Pursuant to Article 17, Titles 7, 8 and Article 70

of the Environmental Conservation Law

Effective Date: January 29, 2020 Expiration Date: January 28, 2025

John J. Ferguson

Chief Permit Administrator

1-23-20

Authorized Signature Date

Address: NYS DEC
Division of Environmental Permits
625 Broadway, 4th Floor
Albany, N.Y. 12233-1750

PREFACE

Pursuant to Section 402 of the Clean Water Act ("CWA"), stormwater *discharges* from certain *construction activities* are unlawful unless they are authorized by a *National Pollutant Discharge Elimination System ("NPDES")* permit or by a state permit program. New York administers the approved State Pollutant Discharge Elimination System (SPDES) program with permits issued in accordance with the New York State Environmental Conservation Law (ECL) Article 17, Titles 7, 8 and Article 70.

An *owner or operator* of a *construction activity* that is eligible for coverage under this permit must obtain coverage prior to the *commencement of construction activity*. Activities that fit the definition of "*construction activity*", as defined under 40 CFR 122.26(b)(14)(x), (15)(i), and (15)(ii), constitute construction of a *point source* and therefore, pursuant to ECL section 17-0505 and 17-0701, the *owner or operator* must have coverage under a SPDES permit prior to *commencing construction activity*. The *owner or operator* cannot wait until there is an actual *discharge* from the *construction site* to obtain permit coverage.

***Note: The italicized words/phrases within this permit are defined in Appendix A.**

Part 1. PERMIT COVERAGE AND LIMITATIONS

A. Permit Application

This permit authorizes stormwater *discharges* to *surface waters of the State* from the following *construction activities* identified within 40 CFR Parts 122.26(b)(14)(x), 122.26(b)(15)(i) and 122.26(b)(15)(ii), provided all of the eligibility provisions of this permit are met:

1. *Construction activities* involving soil disturbances of one (1) or more acres; including disturbances of less than one acre that are part of a *larger common plan of development or sale* that will ultimately disturb one or more acres of land; excluding *routine maintenance activity* that is performed to maintain the original line and grade, hydraulic capacity or original purpose of a facility;

2. *Construction activities* involving soil disturbances of less than one (1) acre where the Department has determined that a *SPDES* permit is required for stormwater *discharges* based on the potential for contribution to a violation of a *water quality standard* or for significant contribution of *pollutants* to *surface waters of the State.*

3. *Construction activities* located in the watershed(s) identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

B. Effluent Limitations Applicable to Discharges from Construction Activities

*Discharge*s authorized by this permit must achieve, at a minimum, the effluent limitations in Part I.B.1. (a) – (f) of this permit. These limitations represent the degree of effluent reduction attainable by the application of best practicable technology currently available.

1. Erosion and Sediment Control Requirements - The *owner or operator* must select, design, install, implement and maintain control measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. The selection, design, installation, implementation, and maintenance of these control measures must meet the non-numeric effluent limitations in Part I.B.1.(a) – (f) of this permit and be in accordance with the New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, using sound engineering judgment. Where control measures are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must include in the *Stormwater Pollution Prevention Plan* (“SWPPP”) the reason(s) for the

deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

a. **Erosion and Sediment Controls.** Design, install and maintain effective erosion and sediment controls to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such controls must be designed, installed and maintained to:

   (i) *Minimize* soil erosion through application of runoff control and soil stabilization control measure to *minimize pollutant discharge*s;

   (ii) Control stormwater *discharge*s, including both peak flowrates and total stormwater volume, to *minimize* channel and *streambank* erosion and scour in the immediate vicinity of the *discharge* points;

   (iii) *Minimize* the amount of soil exposed during *construction activity*;

   (iv) *Minimize* the disturbance of *steep slopes*;

   (v) *Minimize* sediment *discharge*s from the site;

   (vi) Provide and maintain *natural buffer*s around surface waters, direct stormwater to vegetated areas and maximize stormwater infiltration to reduce *pollutant discharge*s, unless *infeasible*;

   (vii) *Minimize* soil compaction. Minimizing soil compaction is not required where the intended function of a specific area of the site dictates that it be compacted;

   (viii) Unless *infeasible*, preserve a sufficient amount of topsoil to complete soil restoration and establish a uniform, dense vegetative cover; and

   (ix) *Minimize* dust. On areas of exposed soil, *minimize* dust through the appropriate application of water or other dust suppression techniques to control the generation of pollutants that could be discharged from the site.

b. **Soil Stabilization**. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within fourteen (14) days from the date the current soil disturbance activity ceased. For construction sites that *directly discharge* to one of the 303(d) segments

listed in Appendix E or is located in one of the watersheds listed in Appendix C, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. See Appendix A for definition of *Temporarily Ceased*.

c. **Dewatering**. *Discharge*s from *dewatering* activities, including *discharge*s from *dewatering* of trenches and excavations, must be managed by appropriate control measures.

d. **Pollution Prevention Measures**. Design, install, implement, and maintain effective pollution prevention measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such measures must be designed, installed, implemented and maintained to:

(i) *Minimize* the *discharge* of *pollutants* from equipment and vehicle washing, wheel wash water, and other wash waters. This applies to washing operations that use clean water only. Soaps, detergents and solvents cannot be used;

(ii) *Minimize* the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste, hazardous and toxic waste, and other materials present on the site to precipitation and to stormwater. Minimization of exposure is not required in cases where the exposure to precipitation and to stormwater will not result in a *discharge* of *pollutants*, or where exposure of a specific material or product poses little risk of stormwater contamination (such as final products and materials intended for outdoor use) ; and

(iii) Prevent the *discharge* of *pollutants* from spills and leaks and implement chemical spill and leak prevention and response procedures.

e. **Prohibited *Discharges*.** The following *discharge*s are prohibited:

(i) Wastewater from washout of concrete;

(ii) Wastewater from washout and cleanout of stucco, paint, form release oils, curing compounds and other construction materials;

(iii) Fuels, oils, or other *pollutants* used in vehicle and equipment operation and maintenance;

(iv) Soaps or solvents used in vehicle and equipment washing; and

(v) Toxic or hazardous substances from a spill or other release.

f. Surface Outlets. When discharging from basins and impoundments, the outlets shall be designed, constructed and maintained in such a manner that sediment does not leave the basin or impoundment and that erosion at or below the outlet does not occur.

C. Post-construction Stormwater Management Practice Requirements

1. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must select, design, install, and maintain the practices to meet the *performance criteria* in the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015, using sound engineering judgment. Where post-construction stormwater management practices ("SMPs") are not designed in conformance with the *performance criteria* in the Design Manual, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must design the practices to meet the applicable *sizing criteria* in Part I.C.2.a., b., c. or d. of this permit.

a. Sizing Criteria for New Development

(i) Runoff Reduction Volume ("RRv"): Reduce the total Water Quality Volume ("WQv") by application of RR techniques and standard SMPs with RRv capacity. The total WQv shall be calculated in accordance with the criteria in Section 4.2 of the Design Manual.

(ii) Minimum RRv and Treatment of Remaining Total WQv: Construction activities that cannot meet the criteria in Part I.C.2.a.(i) of this permit due to site limitations shall direct runoff from all newly constructed impervious areas to a RR technique or standard SMP with RRv capacity unless infeasible. The specific site limitations that prevent the reduction of 100% of the WQv shall be documented in the SWPPP.

For each impervious area that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered infeasible.

In no case shall the runoff reduction achieved from the newly constructed impervious areas be less than the Minimum RRv as calculated using the criteria in Section 4.3 of the Design Manual. The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

(iii) Channel Protection Volume ("Cpv"): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
(1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
(2) The site discharges directly to tidal waters, or fifth order or larger streams.

(iv) *Overbank* Flood Control Criteria ("Qp"): Requires storage to attenuate the post-development 10-year, 24-hour peak discharge rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
(1) the site discharges directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

(v) Extreme Flood Control Criteria ("Qf"): Requires storage to attenuate the post-development 100-year, 24-hour peak discharge rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
(1) the site discharges directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

b. *Sizing Criteria* for *New Development* in Enhanced Phosphorus Removal Watershed

(i) Runoff Reduction Volume (RRv): Reduce the total Water Quality Volume (WQv) by application of RR techniques and standard SMPs with RRv capacity. The total WQv is the runoff volume from the 1-year, 24 hour design storm over the post-developed watershed and shall be

calculated in accordance with the criteria in Section 10.3 of the Design Manual.

(ii) Minimum RRv and Treatment of Remaining Total WQv: *Construction activities* that cannot meet the criteria in Part I.C.2.b.(i) of this permit due to *site limitations* shall direct runoff from all newly constructed *impervious areas* to a RR technique or standard SMP with RRv capacity unless *infeasible*. The specific *site limitations* that prevent the reduction of 100% of the WQv shall be documented in the SWPPP. For each *impervious area* that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered *infeasible.*

In no case shall the runoff reduction achieved from the newly constructed *impervious areas* be less than the Minimum RRv as calculated using the criteria in Section 10.3 of the Design Manual. The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

(iii) Channel Protection Volume (Cpv): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
(1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
(2) The site *discharge*s directly to tidal waters, or fifth order or larger streams.

(iv) *Overbank* Flood Control Criteria (Qp): Requires storage to attenuate the post-development 10-year, 24-hour peak *discharge* rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
(1) the site *discharge*s directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

(v) Extreme Flood Control Criteria (Qf): Requires storage to attenuate the post-development 100-year, 24-hour peak *discharge* rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
(1) the site *discharge*s directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

c. Sizing Criteria for Redevelopment Activity

(i) Water Quality Volume (WQv): The WQv treatment objective for *redevelopment activity* shall be addressed by one of the following options. *Redevelopment activities* located in an Enhanced Phosphorus Removal Watershed (see Part III.B.3. and Appendix C of this permit) shall calculate the WQv in accordance with Section 10.3 of the Design Manual. All other *redevelopment activities* shall calculate the WQv in accordance with Section 4.2 of the Design Manual.

(1) Reduce the existing *impervious cover* by a minimum of 25% of the total disturbed, *impervious area*. The Soil Restoration criteria in Section 5.1.6 of the Design Manual must be applied to all newly created pervious areas, or

(2) Capture and treat a minimum of 25% of the WQv from the disturbed, *impervious area* by the application of standard SMPs; or reduce 25% of the WQv from the disturbed, *impervious area* by the application of RR techniques or standard SMPs with RRv capacity., or

(3) Capture and treat a minimum of 75% of the WQv from the disturbed, *impervious area* as well as any additional runoff from tributary areas by application of the alternative practices discussed in Sections 9.3 and 9.4 of the Design Manual., or

(4) Application of a combination of 1, 2 and 3 above that provide a weighted average of at least two of the above methods. Application of this method shall be in accordance with the criteria in Section 9.2.1(B) (IV) of the Design Manual.

If there is an existing post-construction stormwater management practice located on the site that captures and treats runoff from the *impervious area* that is being disturbed, the WQv treatment option selected must, at a minimum, provide treatment equal to the treatment that was being provided by the existing practice(s) if that treatment is greater than the treatment required by options 1 – 4 above.

(ii) Channel Protection Volume (Cpv): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.

(iii) *Overbank* Flood Control Criteria (Qp): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.

(iv) Extreme Flood Control Criteria (Qf): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site

d. Sizing Criteria for Combination of Redevelopment Activity and New Development

Construction projects that include both New Development and Redevelopment Activity shall provide post-construction stormwater management controls that meet the sizing criteria calculated as an aggregate of the Sizing Criteria in Part I.C.2.a. or b. of this permit for the New Development portion of the project and Part I.C.2.c of this permit for Redevelopment Activity portion of the project.

D. Maintaining Water Quality

The Department expects that compliance with the conditions of this permit will control *discharge*s necessary to meet applicable *water quality standards*. It shall be a violation of the *ECL* for any discharge to either cause or contribute to a violation of *water quality standards* as contained in Parts 700 through 705 of Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York, such as:

1. There shall be no increase in turbidity that will cause a substantial visible contrast to natural conditions;

2. There shall be no increase in suspended, colloidal or settleable solids that will cause deposition or impair the waters for their best usages; and

3. There shall be no residue from oil and floating substances, nor visible oil film, nor globules of grease.

If there is evidence indicating that the stormwater *discharge*s authorized by this permit are causing, have the reasonable potential to cause, or are contributing to a violation of the *water quality standards*; the *owner or operator* must take appropriate corrective action in accordance with Part IV.C.5. of this general permit and document in accordance with Part IV.C.4. of this general permit. To address the *water quality standard* violation the *owner or operator* may need to provide additional information, include and implement appropriate controls in the SWPPP to correct the problem, or obtain an individual SPDES permit.

If there is evidence indicating that despite compliance with the terms and conditions of this general permit it is demonstrated that the stormwater *discharge*s authorized by this permit are causing or contributing to a violation of *water quality standards*, or if the Department determines that a modification of the permit is necessary to prevent a violation of *water quality standards*, the authorized *discharge*s will no longer be eligible for coverage under this permit. The Department may require the *owner or operator* to obtain an individual SPDES permit to continue discharging.

E. Eligibility Under This General Permit

1. This permit may authorize all *discharges* of stormwater from *construction activity* to *surface waters of the State* and *groundwaters* except for ineligible *discharges* identified under subparagraph F. of this Part.

2. Except for non-stormwater *discharges* explicitly listed in the next paragraph, this permit only authorizes stormwater *discharge*s; including stormwater runoff, snowmelt runoff, and surface runoff and drainage, from *construction activities*.

3. Notwithstanding paragraphs E.1 and E.2 above, the following non-stormwater discharges are authorized by this permit: those listed in 6 NYCRR 750-1.2(a)(29)(vi), with the following exception: "Discharges from firefighting activities are authorized only when the firefighting activities are emergencies/unplanned"; waters to which other components have not been added that are used to control dust in accordance with the SWPPP; and uncontaminated *discharge*s from *construction site* de-watering operations. All non-stormwater discharges must be identified in the SWPPP. Under all circumstances, the *owner or operator* must still comply with *water quality standards* in Part I.D of this permit.

4. The *owner or operator* must maintain permit eligibility to *discharge* under this permit. Any *discharges* that are not compliant with the eligibility conditions of this permit are not authorized by the permit and the *owner or operator* must either apply for a separate permit to cover those ineligible *discharges* or take steps necessary to make the *discharge* eligible for coverage.

F. Activities Which Are Ineligible for Coverage Under This General Permit

All of the following are **not** authorized by this permit:

1. *Discharge*s after *construction activities* have been completed and the site has undergone *final stabilization*;

2. *Discharge*s that are mixed with sources of non-stormwater other than those expressly authorized under subsection E.3. of this Part and identified in the SWPPP required by this permit;

3. *Discharges* that are required to obtain an individual SPDES permit or another SPDES general permit pursuant to Part VII.K. of this permit;

4. *Construction activities* or *discharges* from *construction activities* that may adversely affect an *endangered or threatened species* unless the *owner or*

operator has obtained a permit issued pursuant to 6 NYCRR Part 182 for the project or the Department has issued a letter of non-jurisdiction for the project. All documentation necessary to demonstrate eligibility shall be maintained on site in accordance with Part II.D.2 of this permit;

5. *Discharges* which either cause or contribute to a violation of *water quality standards* adopted pursuant to the *ECL* and its accompanying regulations;

6. *Construction activities* for residential, commercial and institutional projects:

   a. Where the *discharge*s from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and

   b. Which are undertaken on land with no existing *impervious cover*; and

   c. Which disturb one (1) or more acres of land designated on the current United States Department of Agriculture ("USDA") Soil Survey as Soil Slope Phase "D", (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase "E" or "F" (regardless of the map unit name), or a combination of the three designations.

7. *Construction activities* for linear transportation projects and linear utility projects:

   a. Where the *discharge*s from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and

   b. Which are undertaken on land with no existing *impervious cover*; and

   c. Which disturb two (2) or more acres of land designated on the current USDA Soil Survey as Soil Slope Phase "D" (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase "E" or "F" (regardless of the map unit name), or a combination of the three designations.

8. *Construction activities* that have the potential to affect an *historic property*, unless there is documentation that such impacts have been resolved. The following documentation necessary to demonstrate eligibility with this requirement shall be maintained on site in accordance with Part II.D.2 of this permit and made available to the Department in accordance with Part VII.F of this permit:

   a. Documentation that the *construction activity* is not within an archeologically sensitive area indicated on the sensitivity map, and that the *construction activity* is not located on or immediately adjacent to a property listed or determined to be eligible for listing on the National or State Registers of Historic Places, and that there is no new permanent building on the *construction site* within the following distances from a building, structure, or object that is more than 50 years old, or if there is such a new permanent building on the *construction site* within those parameters that NYS Office of Parks, Recreation and Historic Preservation (OPRHP), a Historic Preservation Commission of a Certified Local Government, or a qualified preservation professional has determined that the building, structure, or object more than 50 years old is not historically/archeologically significant.

      - 1-5 acres of disturbance - 20 feet
      - 5-20 acres of disturbance - 50 feet
      - 20+ acres of disturbance - 100 feet, or

   b. DEC consultation form sent to OPRHP, and copied to the NYS DEC Agency Historic Preservation Officer (APO), and
      (i) the State Environmental Quality Review (SEQR) Environmental Assessment Form (EAF) with a negative declaration or the Findings Statement, with documentation of OPRHP's agreement with the resolution; or
      (ii) documentation from OPRHP that the *construction activity* will result in No Impact; or
      (iii) documentation from OPRHP providing a determination of No Adverse Impact; or
      (iv) a Letter of Resolution signed by the owner/operator, OPRHP and the DEC APO which allows for this *construction activity* to be eligible for coverage under the general permit in terms of the State Historic Preservation Act (SHPA); or

   c. Documentation of satisfactory compliance with Section 106 of the National Historic Preservation Act for a coterminous project area:

(i) No Affect
(ii) No Adverse Affect
(iii) Executed Memorandum of Agreement, or

d. Documentation that:

(i) SHPA Section 14.09 has been completed by NYS DEC or another state agency.

9. *Discharge*s from *construction activities* that are subject to an existing SPDES individual or general permit where a SPDES permit for *construction activity* has been terminated or denied; or where the *owner or operator* has failed to renew an expired individual permit.

Part II. PERMIT COVERAGE

A. How to Obtain Coverage

1. An *owner or operator* of a *construction activity* that is not subject to the requirements of a regulated, traditional land use control MS4 must first prepare a SWPPP in accordance with all applicable requirements of this permit and then submit a completed Notice of Intent (NOI) to the Department to be authorized to discharge under this permit.

2. An *owner or operator* of a *construction activity* that is subject to the requirements of a *regulated, traditional land use control MS4* must first prepare a SWPPP in accordance with all applicable requirements of this permit and then have the SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department. The *owner or operator* shall have the “MS4 SWPPP Acceptance” form signed in accordance with Part VII.H., and then submit that form along with a completed NOI to the Department.

3. The requirement for an *owner or operator* to have its SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department does not apply to an *owner or operator* that is obtaining permit coverage in accordance with the requirements in Part II.F. (Change of *Owner or Operator*) or where the *owner or operator* of the *construction activity* is the *regulated, traditional land use control MS4* . This exemption does not apply to *construction activities* subject to the New York City Administrative Code.

B. Notice of Intent (NOI) Submittal

1. Prior to December 21, 2020, an owner or operator shall use either the electronic (eNOI) or paper version of the NOI that the Department prepared. Both versions of the NOI are located on the Department's website (http://www.dec.ny.gov/). The paper version of the NOI shall be signed in accordance with Part VII.H. of this permit and submitted to the following address:

   NOTICE OF INTENT
   NYS DEC, Bureau of Water Permits
   625 Broadway, 4th Floor
   Albany, New York 12233-3505

2. Beginning December 21, 2020 and in accordance with EPA's 2015 NPDES Electronic Reporting Rule (40 CFR Part 127), the *owner or operator* must submit the NOI electronically using the *Department's* online NOI.

3. The *owner or operator* shall have the SWPPP preparer sign the "SWPPP Preparer Certification" statement on the NOI prior to submitting the form to the Department.

4. As of the date the NOI is submitted to the Department, the *owner or operator* shall make the NOI and SWPPP available for review and copying in accordance with the requirements in Part VII.F. of this permit.

C. Permit Authorization

1. An *owner or operator* shall not *commence construction activity* until their authorization to *discharge* under this permit goes into effect.

2. Authorization to *discharge* under this permit will be effective when the *owner or operator* has satisfied all of the following criteria:

   a. project review pursuant to the State Environmental Quality Review Act ("SEQRA") have been satisfied, when SEQRA is applicable. See the Department's website (http://www.dec.ny.gov/) for more information,

   b. where required, all necessary Department permits subject to the *Uniform Procedures Act ("UPA")* (see 6 NYCRR Part 621), or the equivalent from another New York State agency, have been obtained, unless otherwise notified by the Department pursuant to 6 NYCRR 621.3(a)(4). *Owners or operators* of *construction activities* that are required to obtain *UPA* permits

must submit a preliminary SWPPP to the appropriate DEC Permit Administrator at the Regional Office listed in Appendix F at the time all other necessary *UPA* permit applications are submitted. The preliminary SWPPP must include sufficient information to demonstrate that the *construction activity* qualifies for authorization under this permit,

c. the final SWPPP has been prepared, and

d. a complete NOI has been submitted to the Department in accordance with the requirements of this permit.

3. An *owner or operator* that has satisfied the requirements of Part II.C.2 above will be authorized to *discharge* stormwater from their *construction activity* in accordance with the following schedule:

   a. For *construction activities* that are <u>not</u> subject to the requirements of a *regulated, traditional land use control MS4*:

      (i) Five (5) business days from the date the Department receives a complete electronic version of the NOI (eNOI) for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.; or

      (ii) Sixty (60) business days from the date the Department receives a complete NOI (electronic or paper version) for *construction activities* with a SWPPP that has <u>not</u> been prepared in conformance with the design criteria in technical standard referenced in Part III.B.1. or, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C., the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, or;

      (iii) Ten (10) business days from the date the Department receives a complete paper version of the NOI for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.

b. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*:

(i) Five (5) business days from the date the Department receives both a complete electronic version of the NOI (eNOI) and signed "*MS4* SWPPP Acceptance" form, or

(ii) Ten (10) business days from the date the Department receives both a complete paper version of the NOI and signed "MS4 SWPPP Acceptance" form.

4. Coverage under this permit authorizes stormwater *discharges* from only those areas of disturbance that are identified in the NOI. If an *owner or operator* wishes to have stormwater *discharges* from future or additional areas of disturbance authorized, they must submit a new NOI that addresses that phase of the development, unless otherwise notified by the Department. The *owner or operator* shall not *commence construction activity* on the future or additional areas until their authorization to *discharge* under this permit goes into effect in accordance with Part II.C. of this permit.

D. General Requirements For Owners or Operators With Permit Coverage

1. The *owner or operator* shall ensure that the provisions of the SWPPP are implemented from the *commencement of construction activity* until all areas of disturbance have achieved *final stabilization* and the Notice of Termination ("NOT") has been submitted to the Department in accordance with Part V. of this permit. This includes any changes made to the SWPPP pursuant to Part III.A.4. of this permit.

2. The *owner or operator* shall maintain a copy of the General Permit (GP-0-20-001), NOI, *NOI Acknowledgment Letter*, SWPPP, MS4 SWPPP Acceptance form, inspection reports, responsible contractor's or subcontractor's certification statement (see Part III.A.6.), and all documentation necessary to demonstrate eligibility with this permit at the *construction site* until all disturbed areas have achieved *final stabilization* and the NOT has been submitted to the Department. The documents must be maintained in a secure location, such as a job trailer, on-site construction office, or mailbox with lock. The secure location must be accessible during normal business hours to an individual performing a compliance inspection.

3. The *owner or operator* of a *construction activity* shall not disturb greater than five (5) acres of soil at any one time without prior written authorization from the Department or, in areas under the jurisdiction of a *regulated, traditional land*

use control MS4, the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*). At a minimum, the *owner or operator* must comply with the following requirements in order to be authorized to disturb greater than five (5) acres of soil at any one time:

a. The *owner or operator* shall have a *qualified inspector* conduct **at least** two (2) site inspections in accordance with Part IV.C. of this permit every seven (7) calendar days, for as long as greater than five (5) acres of soil remain disturbed. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

b. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. The soil stabilization measures selected shall be in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016.

c. The *owner or operator* shall prepare a phasing plan that defines maximum disturbed area per phase and shows required cuts and fills.

d. The *owner or operator* shall install any additional site-specific practices needed to protect water quality.

e. The *owner or operator* shall include the requirements above in their SWPPP.

4. In accordance with statute, regulations, and the terms and conditions of this permit, the Department may suspend or revoke an *owner's or operator's* coverage under this permit at any time if the Department determines that the SWPPP does not meet the permit requirements or consistent with Part VII.K..

5. Upon a finding of significant non-compliance with the practices described in the SWPPP or violation of this permit, the Department may order an immediate stop to all activity at the site until the non-compliance is remedied. The stop work order shall be in writing, describe the non-compliance in detail, and be sent to the *owner or operator*.

6. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*, the *owner or operator* shall notify the

regulated, traditional land use control MS4 in writing of any planned amendments or modifications to the post-construction stormwater management practice component of the SWPPP required by Part III.A. 4. and 5. of this permit. Unless otherwise notified by the *regulated, traditional land use control MS4*, the *owner or operator* shall have the SWPPP amendments or modifications reviewed and accepted by the *regulated, traditional land use control MS4* prior to commencing construction of the post-construction stormwater management practice.

E. Permit Coverage for Discharges Authorized Under GP-0-15-002

1. Upon renewal of SPDES General Permit for Stormwater Discharges from *Construction Activity* (Permit No. GP-0-15-002), an *owner or operator* of *a construction activity* with coverage under GP-0-15-002, as of the effective date of GP- 0-20-001, shall be authorized to *discharge* in accordance with GP- 0-20-001, unless otherwise notified by the Department.

   An *owner or operator* may continue to implement the technical/design components of the post-construction stormwater management controls provided that such design was done in conformance with the technical standards in place at the time of initial project authorization. However, they must comply with the other, non-design provisions of GP-0-20-001.

F. Change of Owner or Operator

1. When property ownership changes or when there is a change in operational control over the construction plans and specifications, the original *owner or operator* must notify the new *owner or operator*, in writing, of the requirement to obtain permit coverage by submitting a NOI with the Department. For *construction activities* subject to the requirements of a *regulated, traditional land use control MS4,* the original *owner or operator* must also notify the MS4, in writing, of the change in ownership at least 30 calendar days prior to the change in ownership.

2. Once the new *owner or operator* obtains permit coverage, the original *owner or operator* shall then submit a completed NOT with the name and permit identification number of the new *owner or operator* to the Department at the address in Part II.B.1. of this permit. If the original *owner or operator* maintains ownership of a portion of the *construction activity* and will disturb soil, they must maintain their coverage under the permit.

3. Permit coverage for the new *owner or operator* will be effective as of the date the Department receives a complete NOI, provided the original *owner or*

operator was not subject to a sixty (60) business day authorization period that has not expired as of the date the Department receives the NOI from the new *owner or operator*.

Part III. STORMWATER POLLUTION PREVENTION PLAN (SWPPP)

A. General SWPPP Requirements

1. A SWPPP shall be prepared and implemented by the *owner or operator* of each *construction activity* covered by this permit. The SWPPP must document the selection, design, installation, implementation and maintenance of the control measures and practices that will be used to meet the effluent limitations in Part I.B. of this permit and where applicable, the post-construction stormwater management practice requirements in Part I.C. of this permit. The SWPPP shall be prepared prior to the submittal of the NOI. The NOI shall be submitted to the Department prior to the *commencement of construction activity*. A copy of the completed, final NOI shall be included in the SWPPP.

2. The SWPPP shall describe the erosion and sediment control practices and where required, post-construction stormwater management practices that will be used and/or constructed to reduce the *pollutants* in stormwater *discharges* and to assure compliance with the terms and conditions of this permit. In addition, the SWPPP shall identify potential sources of pollution which may reasonably be expected to affect the quality of stormwater *discharges*.

3. All SWPPPs that require the post-construction stormwater management practice component shall be prepared by a *qualified professional* that is knowledgeable in the principles and practices of stormwater management and treatment.

4. The *owner or operator* must keep the SWPPP current so that it at all times accurately documents the erosion and sediment controls practices that are being used or will be used during construction, and all post-construction stormwater management practices that will be constructed on the site. At a minimum, the *owner or operator* shall amend the SWPPP, including construction drawings:

    a. whenever the current provisions prove to be ineffective in minimizing *pollutants* in stormwater *discharges* from the site;

b. whenever there is a change in design, construction, or operation at the *construction site* that has or could have an effect on the *discharge* of *pollutants*;

c. to address issues or deficiencies identified during an inspection by the *qualified inspector,* the Department or other regulatory authority; and

d. to document the final construction conditions.

5. The Department may notify the *owner or operator* at any time that the SWPPP does not meet one or more of the minimum requirements of this permit. The notification shall be in writing and identify the provisions of the SWPPP that require modification. Within fourteen (14) calendar days of such notification, or as otherwise indicated by the Department, the *owner or operator* shall make the required changes to the SWPPP and submit written notification to the Department that the changes have been made. If the *owner or operator* does not respond to the Department's comments in the specified time frame, the Department may suspend the *owner's or operator's* coverage under this permit or require the *owner or operator* to obtain coverage under an individual SPDES permit in accordance with Part II.D.4. of this permit.

6. Prior to the *commencement of construction activity*, the *owner or operator* must identify the contractor(s) and subcontractor(s) that will be responsible for installing, constructing, repairing, replacing, inspecting and maintaining the erosion and sediment control practices included in the SWPPP; and the contractor(s) and subcontractor(s) that will be responsible for constructing the post-construction stormwater management practices included in the SWPPP. The *owner or operator* shall have each of the contractors and subcontractors identify at least one person from their company that will be responsible for implementation of the SWPPP. This person shall be known as the *trained contractor.* The *owner or operator* shall ensure that at least one *trained contractor* is on site on a daily basis when soil disturbance activities are being performed.

   The *owner or operator* shall have each of the contractors and subcontractors identified above sign a copy of the following certification statement below before they commence any *construction activity*:

   "I hereby certify under penalty of law that I understand and agree to comply with the terms and conditions of the SWPPP and agree to implement any corrective actions identified by the *qualified inspector* during a site inspection. I also understand that the *owner or operator* must comply with

the terms and conditions of the most current version of the New York State Pollutant Discharge Elimination System ("SPDES") general permit for stormwater *discharge*s from *construction activities* and that it is unlawful for any person to cause or contribute to a violation of *water quality standards*. Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations"

In addition to providing the certification statement above, the certification page must also identify the specific elements of the SWPPP that each contractor and subcontractor will be responsible for and include the name and title of the person providing the signature; the name and title of the *trained contractor* responsible for SWPPP implementation; the name, address and telephone number of the contracting firm; the address (or other identifying description) of the site; and the date the certification statement is signed. The *owner or operator* shall attach the certification statement(s) to the copy of the SWPPP that is maintained at the *construction site*. If new or additional contractors are hired to implement measures identified in the SWPPP after construction has commenced, they must also sign the certification statement and provide the information listed above.

7. For projects where the Department requests a copy of the SWPPP or inspection reports, the *owner or operator* shall submit the documents in both electronic (PDF only) and paper format within five (5) business days, unless otherwise notified by the Department.

B. Required SWPPP Contents

1. Erosion and sediment control component - All SWPPPs prepared pursuant to this permit shall include erosion and sediment control practices designed in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Where erosion and sediment control practices are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must demonstrate *equivalence* to the technical standard. At a minimum, the erosion and sediment control component of the SWPPP shall include the following:

    a. Background information about the scope of the project, including the location, type and size of project

b. A site map/construction drawing(s) for the project, including a general location map. At a minimum, the site map shall show the total site area; all improvements; areas of disturbance; areas that will not be disturbed; existing vegetation; on-site and adjacent off-site surface water(s); floodplain/floodway boundaries; wetlands and drainage patterns that could be affected by the *construction activity*; existing and final contours ; locations of different soil types with boundaries; material, waste, borrow or equipment storage areas located on adjacent properties; and location(s) of the stormwater *discharge*(s);

c. A description of the soil(s) present at the site, including an identification of the Hydrologic Soil Group (HSG);

d. A construction phasing plan and sequence of operations describing the intended order of *construction activities*, including clearing and grubbing, excavation and grading, utility and infrastructure installation and any other activity at the site that results in soil disturbance;

e. A description of the minimum erosion and sediment control practices to be installed or implemented for each *construction activity* that will result in soil disturbance. Include a schedule that identifies the timing of initial placement or implementation of each erosion and sediment control practice and the minimum time frames that each practice should remain in place or be implemented;

f. A temporary and permanent soil stabilization plan that meets the requirements of this general permit and the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, for each stage of the project, including initial land clearing and grubbing to project completion and achievement of *final stabilization*;

g. A site map/construction drawing(s) showing the specific location(s), size(s), and length(s) of each erosion and sediment control practice;

h. The dimensions, material specifications, installation details, and operation and maintenance requirements for all erosion and sediment control practices. Include the location and sizing of any temporary sediment basins and structural practices that will be used to divert flows from exposed soils;

i. A maintenance inspection schedule for the contractor(s) identified in Part III.A.6. of this permit, to ensure continuous and effective operation of the erosion and sediment control practices. The maintenance inspection

schedule shall be in accordance with the requirements in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016;

j. A description of the pollution prevention measures that will be used to control litter, construction chemicals and construction debris from becoming a *pollutant* source in the stormwater *discharges*;

k. A description and location of any stormwater *discharges* associated with industrial activity other than construction at the site, including, but not limited to, stormwater *discharges* from asphalt plants and concrete plants located on the *construction site*; and

l. Identification of any elements of the design that are not in conformance with the design criteria in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Include the reason for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. Post-construction stormwater management practice component – The *owner or operator* of any construction project identified in Table 2 of Appendix B as needing post-construction stormwater management practices shall prepare a SWPPP that includes practices designed in conformance with the applicable *sizing criteria* in Part I.C.2.a., c. or d. of this permit and the *performance criteria* in the technical standard, New York State Stormwater Management Design Manual dated January 2015

   Where post-construction stormwater management practices are not designed in conformance with the *performance criteria* in the technical standard, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

   The post-construction stormwater management practice component of the SWPPP shall include the following:

   a. Identification of all post-construction stormwater management practices to be constructed as part of the project. Include the dimensions, material specifications and installation details for each post-construction stormwater management practice;

b. A site map/construction drawing(s) showing the specific location and size of each post-construction stormwater management practice;

c. A Stormwater Modeling and Analysis Report that includes:
   (i) Map(s) showing pre-development conditions, including watershed/subcatchments boundaries, flow paths/routing, and design points;

   (ii) Map(s) showing post-development conditions, including watershed/subcatchments boundaries, flow paths/routing, design points and post-construction stormwater management practices;

   (iii) Results of stormwater modeling (i.e. hydrology and hydraulic analysis) for the required storm events. Include supporting calculations (model runs), methodology, and a summary table that compares pre and post-development runoff rates and volumes for the different storm events;

   (iv) Summary table, with supporting calculations, which demonstrates that each post-construction stormwater management practice has been designed in conformance with the *sizing criteria* included in the Design Manual;

   (v) Identification of any *sizing criteria* that is not required based on the requirements included in Part I.C. of this permit; and

   (vi) Identification of any elements of the design that are not in conformance with the *performance criteria* in the Design Manual. Include the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the Design Manual;

d. Soil testing results and locations (test pits, borings);

e. Infiltration test results, when required; and

f. An operations and maintenance plan that includes inspection and maintenance schedules and actions to ensure continuous and effective operation of each post-construction stormwater management practice. The plan shall identify the entity that will be responsible for the long term operation and maintenance of each practice.

3. Enhanced Phosphorus Removal Standards - All construction projects identified in Table 2 of Appendix B that are located in the watersheds identified in Appendix C shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the applicable *sizing criteria* in Part I.C.2. b., c. or d. of this permit and the *performance criteria,* Enhanced Phosphorus Removal Standards included in the Design Manual. At a minimum, the post-construction stormwater management practice component of the SWPPP shall include items 2.a - 2.f. above.

C. Required SWPPP Components by Project Type

Unless otherwise notified by the Department, *owners or operators* of *construction activities* identified in Table 1 of Appendix B are required to prepare a SWPPP that only includes erosion and sediment control practices designed in conformance with Part III.B.1 of this permit. *Owners or operators* of the *construction activities* identified in Table 2 of Appendix B shall prepare a SWPPP that also includes post-construction stormwater management practices designed in conformance with Part III.B.2 or 3 of this permit.

Part IV. INSPECTION AND MAINTENANCE REQUIREMENTS

A. General Construction Site Inspection and Maintenance Requirements

1. The *owner or operator* must ensure that all erosion and sediment control practices (including pollution prevention measures) and all post-construction stormwater management practices identified in the SWPPP are inspected and maintained in accordance with Part IV.B. and C. of this permit.

2. The terms of this permit shall not be construed to prohibit the State of New York from exercising any authority pursuant to the ECL, common law or federal law, or prohibit New York State from taking any measures, whether civil or criminal, to prevent violations of the laws of the State of New York or protect the public health and safety and/or the environment.

B. Contractor Maintenance Inspection Requirements

1. The *owner or operator* of each *construction activity* identified in Tables 1 and 2 of Appendix B shall have a *trained contractor* inspect the erosion and sediment control practices and pollution prevention measures being implemented within the active work area daily to ensure that they are being maintained in effective operating condition at all times. If deficiencies are identified, the contractor shall

begin implementing corrective actions within one business day and shall complete the corrective actions in a reasonable time frame.

2. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *trained contractor* can stop conducting the maintenance inspections. The *trained contractor* shall begin conducting the maintenance inspections in accordance with Part IV.B.1. of this permit as soon as soil disturbance activities resume.

3. For construction sites where soil disturbance activities have been shut down with partial project completion, the *trained contractor* can stop conducting the maintenance inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational.

C. Qualified Inspector Inspection Requirements

The *owner or operator* shall have a *qualified inspector* conduct site inspections in conformance with the following requirements:

[Note: The *trained contractor* identified in Part III.A.6. and IV.B. of this permit **cannot** conduct the *qualified inspector* site inspections unless they meet the *qualified inspector* qualifications included in Appendix A. In order to perform these inspections, the *trained contractor* would have to be a:

- licensed Professional Engineer,
- Certified Professional in Erosion and Sediment Control (CPESC),
- New York State Erosion and Sediment Control Certificate Program holder
- Registered Landscape Architect, or
- someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity].

1. A *qualified inspector* shall conduct site inspections for all *construction activities* identified in Tables 1 and 2 of Appendix B, with the exception of:

   a. the construction of a single family residential subdivision with 25% or less *impervious cover* at total site build-out that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located

in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

b. the construction of a single family home that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

c. construction on agricultural property that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres; and

d. *construction activities* located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

2. Unless otherwise notified by the Department, the *qualified inspector* shall conduct site inspections in accordance with the following timetable:

a. For construction sites where soil disturbance activities are on-going, the *qualified inspector* shall conduct a site inspection at least once every seven (7) calendar days.

b. For construction sites where soil disturbance activities are on-going and the *owner or operator* has received authorization in accordance with Part II.D.3 to disturb greater than five (5) acres of soil at any one time, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

c. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *qualified inspector* shall conduct a site inspection at least once every thirty (30) calendar days. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to reducing the frequency of inspections.

d. For construction sites where soil disturbance activities have been shut down with partial project completion, the *qualified inspector* can stop conducting inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to the shutdown. If soil disturbance activities are not resumed within 2 years from the date of shutdown, the *owner or operator* shall have the *qualified inspector* perform a final inspection and certify that all disturbed areas have achieved *final stabilization,* and all temporary, structural erosion and sediment control measures have been removed*;* and that all post-construction stormwater management practices have been constructed in conformance with the SWPPP by signing the "*Final Stabilization*" and "Post-Construction Stormwater Management Practice" certification statements on the NOT. The *owner or operator* shall then submit the completed NOT form to the address in Part II.B.1 of this permit.

e. For construction sites that directly *discharge* to one of the 303(d) segments listed in Appendix E or is located in one of the watersheds listed in Appendix C, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

3. At a minimum, the *qualified inspector* shall inspect all erosion and sediment control practices and pollution prevention measures to ensure integrity and effectiveness, all post-construction stormwater management practices under construction to ensure that they are constructed in conformance with the SWPPP, all areas of disturbance that have not achieved *final stabilization,* all points of *discharge* to natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site*, and all points of *discharge* from the *construction site*.

4. The *qualified inspector* shall prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report shall include and/or address the following:

a. Date and time of inspection;

b. Name and title of person(s) performing inspection;

c. A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection;

d. A description of the condition of the runoff at all points of *discharge* from the *construction site*. This shall include identification of any *discharges* of sediment from the *construction site*. Include *discharges* from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow;

e. A description of the condition of all natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site* which receive runoff from disturbed areas. This shall include identification of any *discharges* of sediment to the surface waterbody;

f. Identification of all erosion and sediment control practices and pollution prevention measures that need repair or maintenance;

g. Identification of all erosion and sediment control practices and pollution prevention measures that were not installed properly or are not functioning as designed and need to be reinstalled or replaced;

h. Description and sketch of areas with active soil disturbance activity, areas that have been disturbed but are inactive at the time of the inspection, and areas that have been stabilized (temporary and/or final) since the last inspection;

i. Current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards;

j. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices and pollution prevention measures; and to correct deficiencies identified with the construction of the post-construction stormwater management practice(s);

k. Identification and status of all corrective actions that were required by previous inspection; and

l. Digital photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The *qualified inspector* shall also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.

5. Within one business day of the completion of an inspection, the *qualified inspector* shall notify the *owner or operator* and appropriate contractor or subcontractor identified in Part III.A.6. of this permit of any corrective actions that need to be taken. The contractor or subcontractor shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.

6. All inspection reports shall be signed by the *qualified inspector.* Pursuant to Part II.D.2. of this permit, the inspection reports shall be maintained on site with the SWPPP.

Part V. TERMINATION OF PERMIT COVERAGE

A. Termination of Permit Coverage

1. An *owner or operator* that is eligible to terminate coverage under this permit must submit a completed NOT form to the address in Part II.B.1 of this permit. The NOT form shall be one which is associated with this permit, signed in accordance with Part VII.H of this permit.

2. An *owner or operator* may terminate coverage when one or more the following conditions have been met:

   a. Total project completion - All *construction activity* identified in the SWPPP has been completed; and all areas of disturbance have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices have been constructed in conformance with the SWPPP and are operational;

b. Planned shutdown with partial project completion - All soil disturbance activities have ceased; and all areas disturbed as of the project shutdown date have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational;

c. A new *owner or operator* has obtained coverage under this permit in accordance with Part II.F. of this permit.

d. The *owner or operator* obtains coverage under an alternative SPDES general permit or an individual SPDES permit.

3. For *construction activities* meeting subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *qualified inspector* perform a final site inspection prior to submitting the NOT. The *qualified inspector* shall, by signing the "*Final Stabilization*" and "Post-Construction Stormwater Management Practice certification statements on the NOT, certify that all the requirements in Part V.A.2.a. or b. of this permit have been achieved.

4. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4* and meet subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *regulated, traditional land use control MS4* sign the "MS4 Acceptance" statement on the NOT in accordance with the requirements in Part VII.H. of this permit. The *regulated, traditional land use control MS4* official, by signing this statement, has determined that it is acceptable for the *owner or operator* to submit the NOT in accordance with the requirements of this Part. The *regulated, traditional land use control MS4* can make this determination by performing a final site inspection themselves or by accepting the *qualified inspector*'s final site inspection certification(s) required in Part V.A.3. of this permit.

5. For *construction activities* that require post-construction stormwater management practices and meet subdivision 2a. of this Part, the *owner or operator* must, prior to submitting the NOT, ensure one of the following:

a. the post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain such practice(s) have been deeded to the municipality in which the practice(s) is located,

b. an executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s),

c. for post-construction stormwater management practices that are privately owned, the *owner or operator* has a mechanism in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the *owner or operator's* deed of record,

d. for post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university, hospital), government agency or authority, or public utility; the *owner or operator* has policy and procedures in place that ensures operation and maintenance of the practices in accordance with the operation and maintenance plan.

Part VI. REPORTING AND RETENTION RECORDS

A. Record Retention

The *owner or operator* shall retain a copy of the NOI, NOI Acknowledgment Letter, SWPPP, MS4 SWPPP Acceptance form and any inspection reports that were prepared in conjunction with this permit for a period of at least five (5) years from the date that the Department receives a complete NOT submitted in accordance with Part V. of this general permit.

B. Addresses

With the exception of the NOI, NOT, and MS4 SWPPP Acceptance form (which must be submitted to the address referenced in Part II.B.1 of this permit), all written correspondence requested by the Department, including individual permit applications, shall be sent to the address of the appropriate DOW Water (SPDES) Program contact at the Regional Office listed in Appendix F.

Part VII. STANDARD PERMIT CONDITIONS

A. Duty to Comply

The *owner or operator* must comply with all conditions of this permit. All contractors and subcontractors associated with the project must comply with the terms of the SWPPP. Any non-compliance with this permit constitutes a violation of the Clean Water

Act (CWA) and the ECL and is grounds for an enforcement action against the *owner or operator* and/or the contractor/subcontractor; permit revocation, suspension or modification; or denial of a permit renewal application. Upon a finding of significant non-compliance with this permit or the applicable SWPPP, the Department may order an immediate stop to all *construction activity* at the site until the non-compliance is remedied. The stop work order shall be in writing, shall describe the non-compliance in detail, and shall be sent to the *owner or operator*.

If any human remains or archaeological remains are encountered during excavation, the *owner or operator* must immediately cease, or cause to cease, all *construction activity* in the area of the remains and notify the appropriate Regional Water Engineer (RWE). *Construction activity* shall not resume until written permission to do so has been received from the RWE.

B. Continuation of the Expired General Permit

This permit expires five (5) years from the effective date. If a new general permit is not issued prior to the expiration of this general permit, an *owner or operator* with coverage under this permit may continue to operate and *discharge* in accordance with the terms and conditions of this general permit, if it is extended pursuant to the State Administrative Procedure Act and 6 NYCRR Part 621, until a new general permit is issued.

C. Enforcement

Failure of the *owner or operator,* its contractors, subcontractors, agents and/or assigns to strictly adhere to any of the permit requirements contained herein shall constitute a violation of this permit. There are substantial criminal, civil, and administrative penalties associated with violating the provisions of this permit. Fines of up to $37,500 per day for each violation and imprisonment for up to fifteen (15) years may be assessed depending upon the nature and degree of the offense.

D. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for an *owner or operator* in an enforcement action that it would have been necessary to halt or reduce the *construction activity* in order to maintain compliance with the conditions of this permit.

E. Duty to Mitigate

The *owner or operator* and its contractors and subcontractors shall take all reasonable steps to *minimize* or prevent any *discharge* in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

F. Duty to Provide Information

The *owner or operator* shall furnish to the Department, within a reasonable specified time period of a written request, all documentation necessary to demonstrate eligibility and any information to determine compliance with this permit or to determine whether cause exists for modifying or revoking this permit, or suspending or denying coverage under this permit, in accordance with the terms and conditions of this permit. The NOI, SWPPP and inspection reports required by this permit are public documents that the *owner or operator* must make available for review and copying by any person within five (5) business days of the *owner or operator* receiving a written request by any such person to review these documents. Copying of documents will be done at the requester's expense.

G. Other Information

When the *owner or operator* becomes aware that they failed to submit any relevant facts, or submitted incorrect information in the NOI or in any of the documents required by this permit , or have made substantive revisions to the SWPPP (e.g. the scope of the project changes significantly, the type of post-construction stormwater management practice(s) changes, there is a reduction in the sizing of the post-construction stormwater management practice, or there is an increase in the disturbance area or *impervious area*), which were not reflected in the original NOI submitted to the Department, they shall promptly submit such facts or information to the Department using the contact information in Part II.A. of this permit. Failure of the *owner or operator* to correct or supplement any relevant facts within five (5) business days of becoming aware of the deficiency shall constitute a violation of this permit.

H. Signatory Requirements

1. All NOIs and NOTs shall be signed as follows:

    a. For a corporation these forms shall be signed by a responsible corporate officer. For the purpose of this section, a responsible corporate officer means:

(i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or

(ii) the manager of one or more manufacturing, production or operating facilities, provided the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

b. For a partnership or sole proprietorship these forms shall be signed by a general partner or the proprietor, respectively; or

c. For a municipality, State, Federal, or other public agency these forms shall be signed by either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal agency includes:

(i) the chief executive officer of the agency, or

(ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of EPA).

2. The SWPPP and other information requested by the Department shall be signed by a person described in Part VII.H.1. of this permit or by a duly authorized representative of that person. A person is a duly authorized representative only if:

a. The authorization is made in writing by a person described in Part VII.H.1. of this permit;

b. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field,

superintendent, position of *equivalent* responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position) and,

c. The written authorization shall include the name, title and signature of the authorized representative and be attached to the SWPPP.

3. All inspection reports shall be signed by the *qualified inspector* that performs the inspection.

4. The MS4 SWPPP Acceptance form shall be signed by the principal executive officer or ranking elected official from the *regulated, traditional land use control MS4,* or by a duly authorized representative of that person.

   It shall constitute a permit violation if an incorrect and/or improper signatory authorizes any required forms, SWPPP and/or inspection reports.

I. Property Rights

The issuance of this permit does not convey any property rights of any sort, nor any exclusive privileges, nor does it authorize any injury to private property nor any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations. *Owners or operators* must obtain any applicable conveyances, easements, licenses and/or access to real property prior to *commencing construction activity*.

J. Severability

The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit shall not be affected thereby.

K. Requirement to Obtain Coverage Under an Alternative Permit

1. The Department may require any owner or operator authorized by this permit to apply for and/or obtain either an individual SPDES permit or another SPDES general permit. When the Department requires any discharger authorized by a general permit to apply for an individual SPDES permit, it shall notify the discharger in writing that a permit application is required. This notice shall

include a brief statement of the reasons for this decision, an application form, a statement setting a time frame for the owner or operator to file the application for an individual SPDES permit, and a deadline, not sooner than 180 days from owner or operator receipt of the notification letter, whereby the authorization to discharge under this general permit shall be terminated. Applications must be submitted to the appropriate Permit Administrator at the Regional Office. The Department may grant additional time upon demonstration, to the satisfaction of the Department, that additional time to apply for an alternative authorization is necessary or where the Department has not provided a permit determination in accordance with Part 621 of this Title.

2. When an individual SPDES permit is issued to a discharger authorized to *discharge* under a general SPDES permit for the same *discharge*(s), the general permit authorization for outfalls authorized under the individual SPDES permit is automatically terminated on the effective date of the individual permit unless termination is earlier in accordance with 6 NYCRR Part 750.

L. Proper Operation and Maintenance

The *owner or operator* shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the *owner or operator* to achieve compliance with the conditions of this permit and with the requirements of the SWPPP.

M. Inspection and Entry

The *owner or operator* shall allow an authorized representative of the Department, EPA, applicable county health department, or, in the case of a *construction site* which *discharges* through an *MS4*, an authorized representative of the *MS4* receiving the discharge, upon the presentation of credentials and other documents as may be required by law, to:

1. Enter upon the owner’s or operator's premises where a regulated facility or activity is located or conducted or where records must be kept under the conditions of this permit;

2. Have access to and copy at reasonable times, any records that must be kept under the conditions of this permit; and

3. Inspect at reasonable times any facilities or equipment (including monitoring and control equipment), practices or operations regulated or required by this permit.

4. Sample or monitor at reasonable times, for purposes of assuring permit compliance or as otherwise authorized by the Act or ECL, any substances or parameters at any location.

N. Permit Actions

This permit may, at any time, be modified, suspended, revoked, or renewed by the Department in accordance with 6 NYCRR Part 621. The filing of a request by the *owner or operator* for a permit modification, revocation and reissuance, termination, a notification of planned changes or anticipated noncompliance does not limit, diminish and/or stay compliance with any terms of this permit.

O. Definitions

Definitions of key terms are included in Appendix A of this permit.

P. Re-Opener Clause

1. If there is evidence indicating potential or realized impacts on water quality due to any stormwater discharge associated with construction activity covered by this permit, the owner or operator of such discharge may be required to obtain an individual permit or alternative general permit in accordance with Part VII.K. of this permit or the permit may be modified to include different limitations and/or requirements.

2. Any Department initiated permit modification, suspension or revocation will be conducted in accordance with 6 NYCRR Part 621, 6 NYCRR 750-1.18, and 6 NYCRR 750-1.20.

Q. Penalties for Falsification of Forms and Reports

In accordance with 6NYCRR Part 750-2.4 and 750-2.5, any person who knowingly makes any false material statement, representation, or certification in any application, record, report or other document filed or required to be maintained under this permit, including reports of compliance or noncompliance shall, upon conviction, be punished in accordance with ECL §71-1933 and or Articles 175 and 210 of the New York State Penal Law.

R. Other Permits

Nothing in this permit relieves the *owner or operator* from a requirement to obtain any other permits required by law.

APPENDIX A – Acronyms and Definitions

Acronyms

APO – Agency Preservation Officer
BMP – Best Management Practice
CPESC – Certified Professional in Erosion and Sediment Control
Cpv – Channel Protection Volume
CWA – Clean Water Act (or the Federal Water Pollution Control Act, 33 U.S.C. §1251 et seq)
DOW – Division of Water
EAF – Environmental Assessment Form
ECL - Environmental Conservation Law
EPA – U. S. Environmental Protection Agency
HSG – Hydrologic Soil Group
MS4 – Municipal Separate Storm Sewer System
NOI – Notice of Intent
NOT – Notice of Termination
NPDES – National Pollutant Discharge Elimination System
OPRHP – Office of Parks, Recreation and Historic Places
Qf – Extreme Flood
Qp – Overbank Flood
RRv – Runoff Reduction Volume
RWE – Regional Water Engineer
SEQR – State Environmental Quality Review
SEQRA - State Environmental Quality Review Act
SHPA – State Historic Preservation Act
SPDES – State Pollutant Discharge Elimination System
SWPPP – Stormwater Pollution Prevention Plan
TMDL – Total Maximum Daily Load
UPA – Uniform Procedures Act
USDA – United States Department of Agriculture
WQv – Water Quality Volume

Definitions

All definitions in this section are solely for the purposes of this permit.

Agricultural Building – a structure designed and constructed to house farm implements, hay, grain, poultry, livestock or other horticultural products; excluding any structure designed, constructed or used, in whole or in part, for human habitation, as a place of employment where agricultural products are processed, treated or packaged, or as a place used by the public.

Agricultural Property –means the land for construction of a barn, *agricultural building*, silo, stockyard, pen or other structural practices identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State" prepared by the Department in cooperation with agencies of New York Nonpoint Source Coordinating Committee (dated June 2007).

Alter Hydrology from Pre to Post-Development Conditions - means the post-development peak flow rate(s) has increased by more than 5% of the pre-developed condition for the design storm of interest (e.g. 10 yr and 100 yr).

Combined Sewer - means a sewer that is designed to collect and convey both "sewage" and "stormwater".

Commence (Commencement of) Construction Activities - means the initial disturbance of soils associated with clearing, grading or excavation activities; or other construction related activities that disturb or expose soils such as demolition, stockpiling of fill material, and the initial installation of erosion and sediment control practices required in the SWPPP. See definition for "*Construction Activity(ies)*" also.

Construction Activity(ies) - means any clearing, grading, excavation, filling, demolition or stockpiling activities that result in soil disturbance. Clearing activities can include, but are not limited to, logging equipment operation, the cutting and skidding of trees, stump removal and/or brush root removal. Construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility.

Construction Site – means the land area where *construction activity(ies)* will occur. See definition for "*Commence (Commencement of) Construction Activities"* and "*Larger Common Plan of Development or Sale" also.*

Dewatering – means the act of draining rainwater and/or groundwater from building foundations, vaults or excavations/trenches.

Direct Discharge (to a specific surface waterbody) - means that runoff flows from a *construction site* by overland flow and the first point of discharge is the specific surface waterbody, or runoff flows from a *construction site* to a separate storm sewer system

and the first point of discharge from the separate storm sewer system is the specific surface waterbody.

Discharge(s) - means any addition of any pollutant to waters of the State through an outlet or *point source*.

Embankment –means an earthen or rock slope that supports a road/highway.

Endangered or Threatened Species – see 6 NYCRR Part 182 of the Department's rules and regulations for definition of terms and requirements.

Environmental Conservation Law (ECL) - means chapter 43-B of the Consolidated Laws of the State of New York, entitled the Environmental Conservation Law.

Equivalent (Equivalence) – means that the practice or measure meets all the performance, longevity, maintenance, and safety objectives of the technical standard and will provide an equal or greater degree of water quality protection.

Final Stabilization - means that all soil disturbance activities have ceased and a uniform, perennial vegetative cover with a density of eighty (80) percent over the entire pervious surface has been established; or other equivalent stabilization measures, such as permanent landscape mulches, rock rip-rap or washed/crushed stone have been applied on all disturbed areas that are not covered by permanent structures, concrete or pavement.

General SPDES permit - means a SPDES permit issued pursuant to 6 NYCRR Part 750-1.21 and Section 70-0117 of the ECL authorizing a category of discharges.

Groundwater(s) - means waters in the saturated zone. The saturated zone is a subsurface zone in which all the interstices are filled with water under pressure greater than that of the atmosphere. Although the zone may contain gas-filled interstices or interstices filled with fluids other than water, it is still considered saturated.

Historic Property – means any building, structure, site, object or district that is listed on the State or National Registers of Historic Places or is determined to be eligible for listing on the State or National Registers of Historic Places.

Impervious Area (Cover) - means all impermeable surfaces that cannot effectively infiltrate rainfall. This includes paved, concrete and gravel surfaces (i.e. parking lots, driveways, roads, runways and sidewalks); building rooftops and miscellaneous impermeable structures such as patios, pools, and sheds.

Infeasible – means not technologically possible, or not economically practicable and achievable in light of best industry practices.

Larger Common Plan of Development or Sale - means a contiguous area where multiple separate and distinct *construction activities* are occurring, or will occur, under one plan. The term “plan” in “larger common plan of development or sale” is broadly defined as any announcement or piece of documentation (including a sign, public notice or hearing, marketing plan, advertisement, drawing, permit application, State Environmental Quality Review Act (SEQRA) environmental assessment form or other documents, zoning request, computer design, etc.) or physical demarcation (including boundary signs, lot stakes, surveyor markings, etc.) indicating that *construction activities* may occur on a specific plot.

For discrete construction projects that are located within a larger common plan of development or sale that are at least 1/4 mile apart, each project can be treated as a separate plan of development or sale provided any interconnecting road, pipeline or utility project that is part of the same “common plan” is not concurrently being disturbed.

Minimize – means reduce and/or eliminate to the extent achievable using control measures (including best management practices) that are technologically available and economically practicable and achievable in light of best industry practices.

Municipal Separate Storm Sewer (MS4) - a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

(i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, stormwater, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to surface waters of the State*;*
(ii) Designed or used for collecting or conveying stormwater;
(iii) Which is not a *combined sewer*; and
(iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

National Pollutant Discharge Elimination System (NPDES) - means the national system for the issuance of wastewater and stormwater permits under the Federal Water Pollution Control Act (Clean Water Act).

Natural Buffer –means an undisturbed area with natural cover running along a surface water (e.g. wetland, stream, river, lake, etc.).

New Development – means any land disturbance that does not meet the definition of Redevelopment Activity included in this appendix.

New York State Erosion and Sediment Control Certificate Program – a certificate program that establishes and maintains a process to identify and recognize individuals who are capable of developing, designing, inspecting and maintaining erosion and sediment control plans on projects that disturb soils in New York State. The certificate program is administered by the New York State Conservation District Employees Association.

NOI Acknowledgment Letter - means the letter that the Department sends to an owner or operator to acknowledge the Department's receipt and acceptance of a complete Notice of Intent. This letter documents the owner's or operator's authorization to discharge in accordance with the general permit for stormwater discharges from *construction activity*.

Nonpoint Source - means any source of water pollution or pollutants which is not a discrete conveyance or *point source* permitted pursuant to Title 7 or 8 of Article 17 of the Environmental Conservation Law (see ECL Section 17-1403).

Overbank –means flow events that exceed the capacity of the stream channel and spill out into the adjacent floodplain.

Owner or Operator - means the person, persons or legal entity which owns or leases the property on which the *construction activity* is occurring; an entity that has operational control over the construction plans and specifications, including the ability to make modifications to the plans and specifications; and/or an entity that has day-to-day operational control of those activities at a project that are necessary to ensure compliance with the permit conditions.

Performance Criteria – means the design criteria listed under the "Required Elements" sections in Chapters 5, 6 and 10 of the technical standard, New York State Stormwater Management Design Manual, dated January 2015. It does not include the Sizing Criteria (i.e. WQv, RRv, Cpv, Qp and Qf) in Part I.C.2. of the permit.

Point Source - means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, vessel or other floating craft, or landfill leachate collection system from which *pollutants* are or may be discharged.

Pollutant - means dredged spoil, filter backwash, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand and industrial, municipal, agricultural waste and ballast discharged into water; which may cause or might reasonably be expected to cause pollution of the waters of the state in contravention of the standards or guidance values adopted as provided in 6 NYCRR Parts 700 et seq .

Qualified Inspector - means a person that is knowledgeable in the principles and practices of erosion and sediment control, such as a licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder or other Department endorsed individual(s).

It can also mean someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided that person has training in the principles and practices of erosion and sediment control. Training in the principles and practices of erosion and sediment control means that the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect has received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect shall receive four (4) hours of training every three (3) years.

It can also mean a person that meets the *Qualified Professional* qualifications in addition to the *Qualified Inspector* qualifications.

Note: Inspections of any post-construction stormwater management practices that include structural components, such as a dam for an impoundment, shall be performed by a licensed Professional Engineer.

Qualified Professional - means a person that is knowledgeable in the principles and practices of stormwater management and treatment, such as a licensed Professional Engineer, Registered Landscape Architect or other Department endorsed individual(s). Individuals preparing SWPPPs that require the post-construction stormwater management practice component must have an understanding of the principles of hydrology, water quality management practice design, water quantity control design, and, in many cases, the principles of hydraulics. All components of the SWPPP that involve the practice of engineering, as defined by the NYS Education Law (see Article 145), shall be prepared by, or under the direct supervision of, a professional engineer licensed to practice in the State of New York.

Redevelopment Activity(ies) – means the disturbance and reconstruction of existing impervious area, including impervious areas that were removed from a project site within five (5) years of preliminary project plan submission to the local government (i.e. site plan, subdivision, etc.).

Regulated, Traditional Land Use Control MS4 - means a city, town or village with land use control authority that is authorized to discharge under New York State DEC's

SPDES General Permit For Stormwater Discharges from Municipal Separate Stormwater Sewer Systems (MS4s) or the City of New York's Individual SPDES Permit for their Municipal Separate Storm Sewer Systems (NY-0287890).

Routine Maintenance Activity - means *construction activity* that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility, including, but not limited to:

- Re-grading of gravel roads or parking lots,
- Cleaning and shaping of existing roadside ditches and culverts that maintains the approximate original line and grade, and hydraulic capacity of the ditch,
- Cleaning and shaping of existing roadside ditches that does not maintain the approximate original grade, hydraulic capacity and purpose of the ditch if the changes to the line and grade, hydraulic capacity or purpose of the ditch are installed to improve water quality and quantity controls (e.g. installing grass lined ditch),
- Placement of aggregate shoulder backing that stabilizes the transition between the road shoulder and the ditch or *embankment*,
- Full depth milling and filling of existing asphalt pavements, replacement of concrete pavement slabs, and similar work that does not expose soil or disturb the bottom six (6) inches of subbase material,
- Long-term use of equipment storage areas at or near highway maintenance facilities,
- Removal of sediment from the edge of the highway to restore a previously existing sheet-flow drainage connection from the highway surface to the highway ditch or *embankment*,
- Existing use of Canal Corp owned upland disposal sites for the canal, and
- Replacement of curbs, gutters, sidewalks and guide rail posts.

Site limitations – means site conditions that prevent the use of an infiltration technique and or infiltration of the total WQv. Typical site limitations include: seasonal high groundwater, shallow depth to bedrock, and soils with an infiltration rate less than 0.5 inches/hour. The existence of site limitations shall be confirmed and documented using actual field testing (i.e. test pits, soil borings, and infiltration test) or using information from the most current United States Department of Agriculture (USDA) Soil Survey for the County where the project is located.

Sizing Criteria – means the criteria included in Part I.C.2 of the permit that are used to size post-construction stormwater management control practices. The criteria include; Water Quality Volume (WQv), Runoff Reduction Volume (RRv), Channel Protection Volume (Cpv), *Overbank* Flood (Qp), and Extreme Flood (Qf).

State Pollutant Discharge Elimination System (SPDES) - means the system established pursuant to Article 17 of the ECL and 6 NYCRR Part 750 for issuance of permits authorizing discharges to the waters of the state.

Steep Slope – means land area designated on the current United States Department of Agriculture ("USDA") Soil Survey as Soil Slope Phase "D", (provided the map unit name is inclusive of slopes greater than 25%) , or Soil Slope Phase E or F, (regardless of the map unit name), or a combination of the three designations.

Streambank – as used in this permit, means the terrain alongside the bed of a creek or stream. The bank consists of the sides of the channel, between which the flow is confined.

Stormwater Pollution Prevention Plan (SWPPP) – means a project specific report, including construction drawings, that among other things: describes the construction activity(ies), identifies the potential sources of pollution at the *construction site*; describes and shows the stormwater controls that will be used to control the pollutants (i.e. erosion and sediment controls; for many projects, includes post-construction stormwater management controls); and identifies procedures the *owner or operator* will implement to comply with the terms and conditions of the permit. See Part III of the permit for a complete description of the information that must be included in the SWPPP.

Surface Waters of the State - shall be construed to include lakes, bays, sounds, ponds, impounding reservoirs, springs, rivers, streams, creeks, estuaries, marshes, inlets, canals, the Atlantic ocean within the territorial seas of the state of New York and all other bodies of surface water, natural or artificial, inland or coastal, fresh or salt, public or private (except those private waters that do not combine or effect a junction with natural surface waters), which are wholly or partially within or bordering the state or within its jurisdiction. Waters of the state are further defined in 6 NYCRR Parts 800 to 941.

Temporarily Ceased – means that an existing disturbed area will not be disturbed again within 14 calendar days of the previous soil disturbance.

Temporary Stabilization - means that exposed soil has been covered with material(s) as set forth in the technical standard, New York Standards and Specifications for Erosion and Sediment Control, to prevent the exposed soil from eroding. The materials can include, but are not limited to, mulch, seed and mulch, and erosion control mats (e.g. jute twisted yarn, excelsior wood fiber mats).

Total Maximum Daily Loads (TMDLs) - A TMDL is the sum of the allowable loads of a single pollutant from all contributing point and *nonpoint source*s. It is a calculation of the maximum amount of a pollutant that a waterbody can receive on a daily basis and still meet *water quality standards*, and an allocation of that amount to the pollutant's sources. A TMDL stipulates wasteload allocations (WLAs) for *point source* discharges, load allocations (LAs) for *nonpoint source*s, and a margin of safety (MOS).

Trained Contractor - means an employee from the contracting (construction) company, identified in Part III.A.6., that has received four (4) hours of Department endorsed

training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the *trained contractor* shall receive four (4) hours of training every three (3) years.

It can also mean an employee from the contracting (construction) company, identified in Part III.A.6., that meets the *qualified inspector* qualifications (e.g. licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder, or someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity).

The *trained contractor* is responsible for the day to day implementation of the SWPPP.

Uniform Procedures Act (UPA) Permit - means a permit required under 6 NYCRR Part 621 of the Environmental Conservation Law (ECL), Article 70.

Water Quality Standard - means such measures of purity or quality for any waters in relation to their reasonable and necessary use as promulgated in 6 NYCRR Part 700 et seq.

APPENDIX B – Required SWPPP Components by Project Type

Table 1
Construction Activities that Require the Preparation of a SWPPP That Only Includes Erosion and Sediment Controls

The following construction activities that involve soil disturbances of one (1) or more acres of land, but less than five (5) acres:

- Single family home not located in one of the watersheds listed in Appendix C or not *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family residential subdivisions with 25% or less impervious cover at total site build-out and not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E
- Construction of a barn or other *agricultural building*, silo, stock yard or pen.

The following construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land:

All construction activities located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Installation of underground, linear utilities; such as gas lines, fiber-optic cable, cable TV, electric, telephone, sewer mains, and water mains
- Environmental enhancement projects, such as wetland mitigation projects, stormwater retrofits and stream restoration projects
- Pond construction
- Linear bike paths running through areas with vegetative cover, including bike paths surfaced with an impervious cover
- Cross-country ski trails and walking/hiking trails
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are not part of residential, commercial or institutional development;
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that include incidental shoulder or curb work along an existing highway to support construction of the sidewalk, bike path or walking path.
- Slope stabilization projects
- Slope flattening that changes the grade of the site, but does not significantly change the runoff characteristics

Table 1 (Continued) CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT ONLY INCLUDES EROSION AND SEDIMENT CONTROLS

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Spoil areas that will be covered with vegetation
- Vegetated open space projects (i.e. recreational parks, lawns, meadows, fields, downhill ski trails) excluding projects that *alter hydrology from pre to post development* conditions,
- Athletic fields (natural grass) that do not include the construction or reconstruction of *impervious area* and do not *alter hydrology from pre to post development* conditions
- Demolition project where vegetation will be established, and no redevelopment is planned
- Overhead electric transmission line project that does not include the construction of permanent access roads or parking areas surfaced with *impervious cover*
- Structural practices as identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State", excluding projects that involve soil disturbances of greater than five acres and construction activities that include the construction or reconstruction of impervious area
- Temporary access roads, median crossovers, detour roads, lanes, or other temporary impervious areas that will be restored to pre-construction conditions once the construction activity is complete

Table 2

CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Single family home located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family home that disturbs five (5) or more acres of land
- Single family residential subdivisions located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family residential subdivisions that involve soil disturbances of between one (1) and five (5) acres of land with greater than 25% impervious cover at total site build-out
- Single family residential subdivisions that involve soil disturbances of five (5) or more acres of land, and single family residential subdivisions that involve soil disturbances of less than five (5) acres that are part of a larger common plan of development or sale that will ultimately disturb five or more acres of land
- Multi-family residential developments; includes duplexes, townhomes, condominiums, senior housing complexes, apartment complexes, and mobile home parks
- Airports
- Amusement parks
- Breweries, cideries, and wineries, including establishments constructed on agricultural land
- Campgrounds
- Cemeteries that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Commercial developments
- Churches and other places of worship
- Construction of a barn or other *agricultural building* (e.g. silo) and structural practices as identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State" that include the construction or reconstruction of *impervious area*, excluding projects that involve soil disturbances of less than five acres.
- Golf courses
- Institutional development; includes hospitals, prisons, schools and colleges
- Industrial facilities; includes industrial parks
- Landfills
- Municipal facilities; includes highway garages, transfer stations, office buildings, POTW's, water treatment plants, and water storage tanks
- Office complexes
- Playgrounds that include the construction or reconstruction of impervious area
- Sports complexes
- Racetracks; includes racetracks with earthen (dirt) surface
- Road construction or reconstruction, including roads constructed as part of the construction activities listed in Table 1

Table 2 (Continued)

CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Parking lot construction or reconstruction, including parking lots constructed as part of the construction activities listed in Table 1
- Athletic fields (natural grass) that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Athletic fields with artificial turf
- Permanent access roads, parking areas, substations, compressor stations and well drilling pads, surfaced with *impervious cover,* and constructed as part of an over-head electric transmission line project, wind-power project, cell tower project, oil or gas well drilling project, sewer or water main project or other linear utility project
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a residential, commercial or institutional development
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a highway construction or reconstruction project
- All other construction activities that include the construction or reconstruction of *impervious area* or *alter the hydrology from pre to post development* conditions, and are not listed in Table 1

APPENDIX C – Watersheds Requiring Enhanced Phosphorus Removal

Watersheds where *owners or operators* of construction activities identified in Table 2 of Appendix B must prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the Enhanced Phosphorus Removal Standards included in the technical standard, New York State Stormwater Management Design Manual ("Design Manual").

- Entire New York City Watershed located east of the Hudson River **-** Figure 1
- Onondaga Lake Watershed **-** Figure 2
- Greenwood Lake Watershed **-**Figure 3
- Oscawana Lake Watershed – Figure 4
- Kinderhook Lake Watershed – Figure 5

Figure 1 - New York City Watershed East of the Hudson

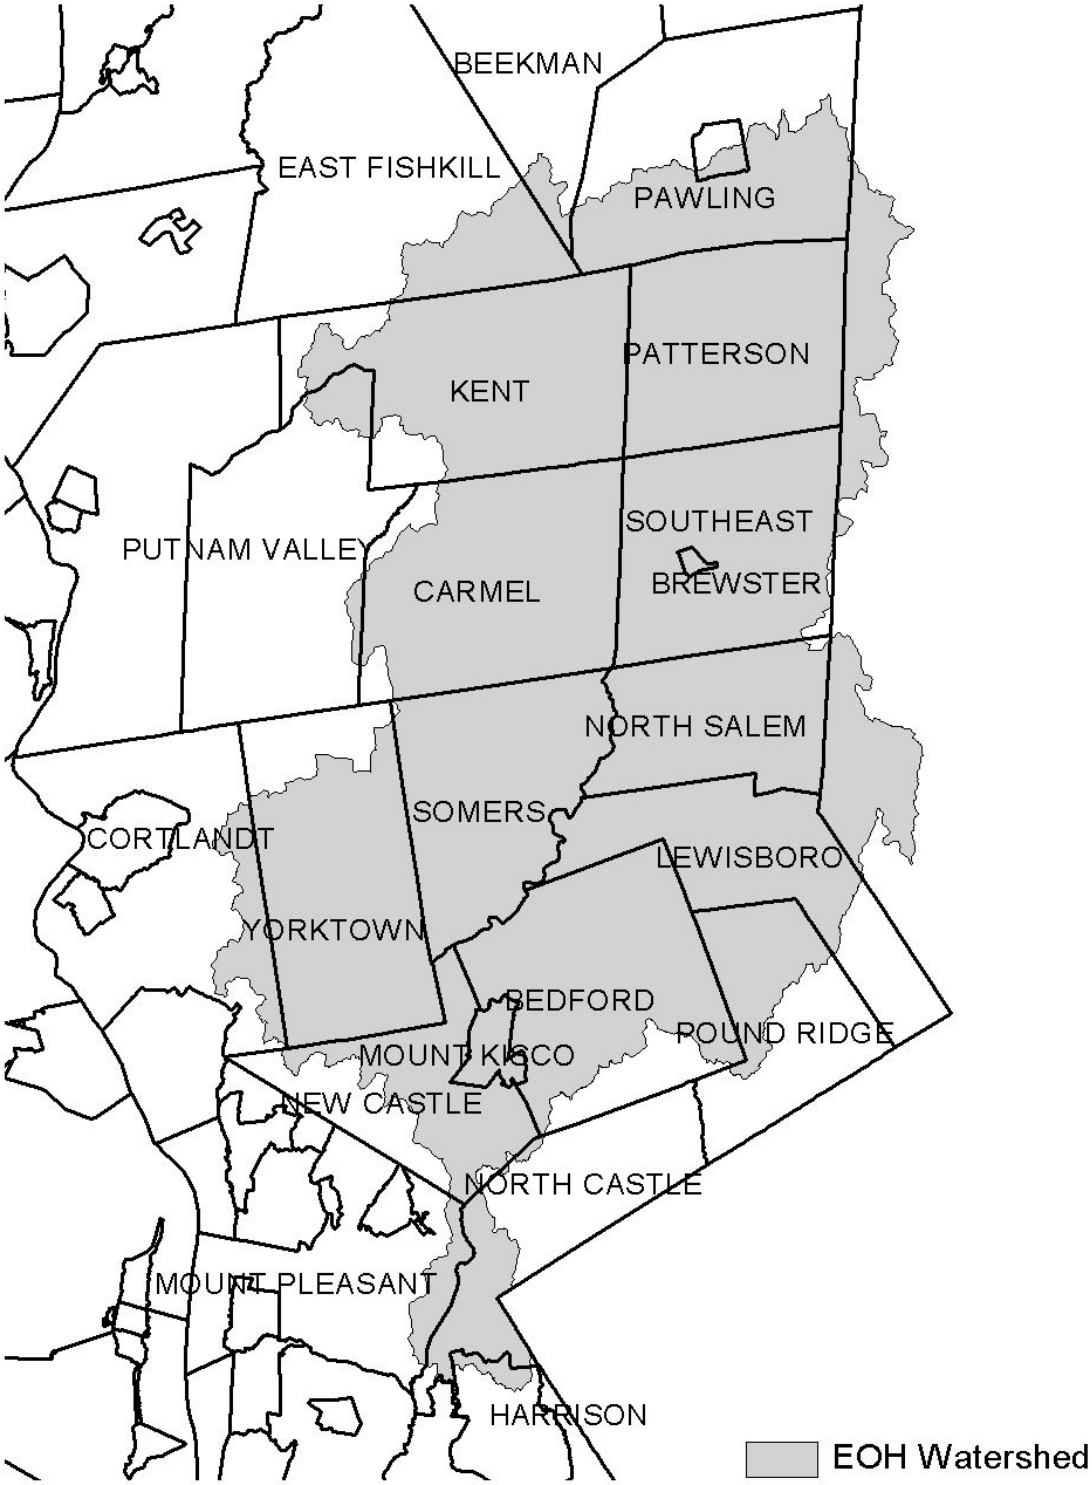

Figure 2 - Onondaga Lake Watershed

Figure 3 - Greenwood Lake Watershed

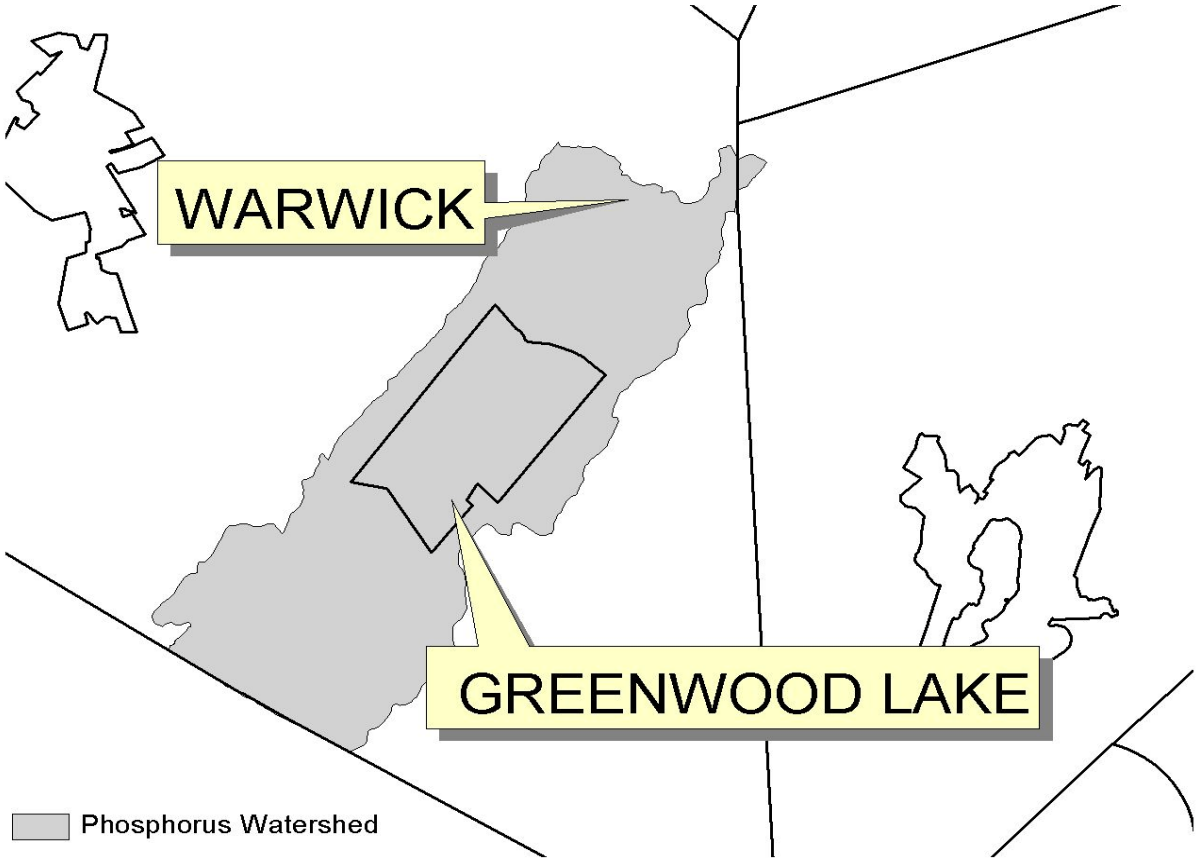

Figure 4 - Oscawana Lake Watershed

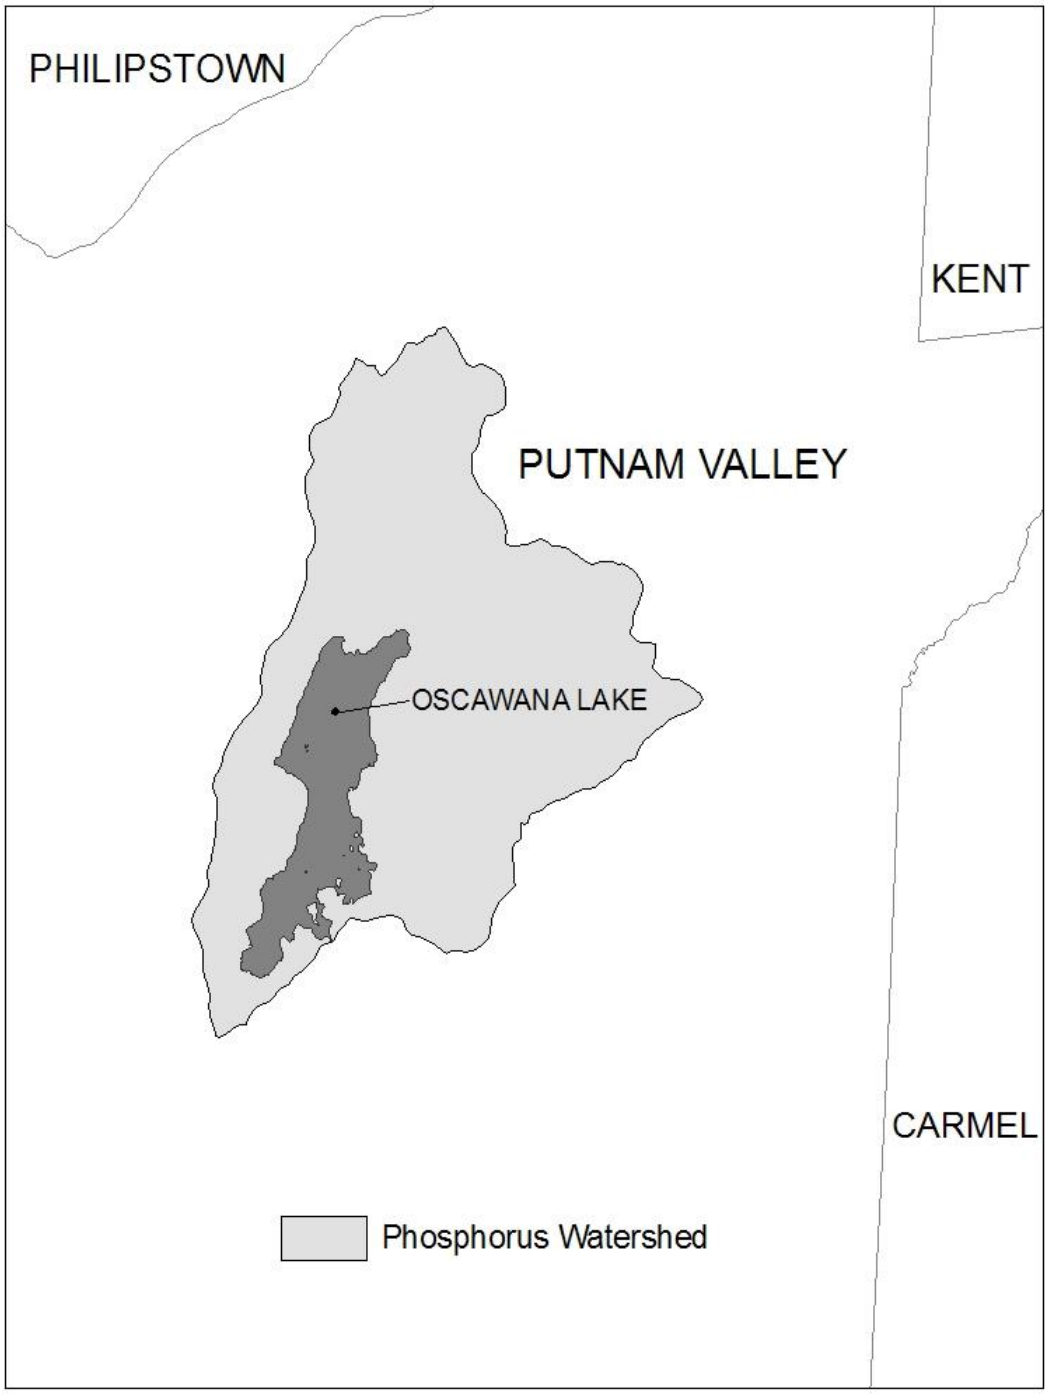

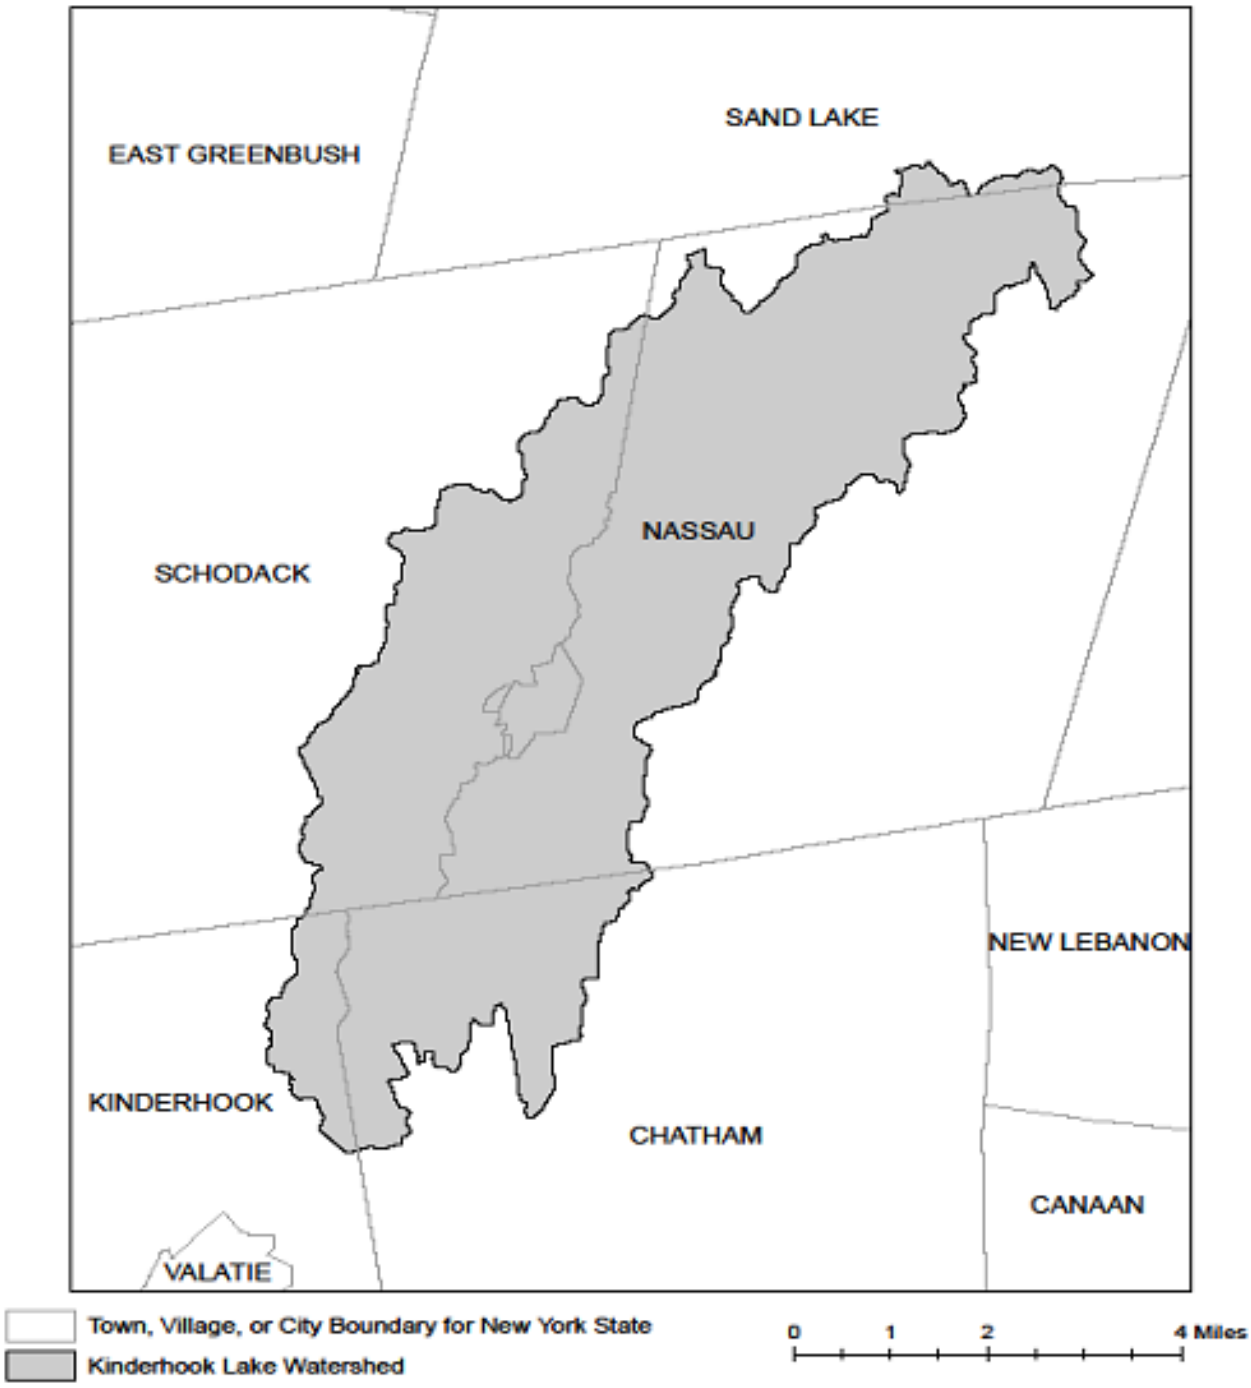

Figure 5 - Kinderhook Lake Watershed

APPENDIX D – Watersheds with Lower Disturbance Threshold

Watersheds where *owners or operators* of construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land must obtain coverage under this permit.

Entire New York City Watershed that is located east of the Hudson River **-** See Figure 1 in Appendix C

APPENDIX E – 303(d) Segments Impaired by Construction Related Pollutant(s)

List of 303(d) segments impaired by pollutants related to *construction activity* (e.g. silt, sediment or nutrients). The list was developed using "The Final New York State 2016 Section 303(d) List of Impaired Waters Requiring a TMDL/Other Strategy" dated November 2016. *Owners or operators* of single family home and single family residential subdivisions with 25% or less total impervious cover at total site build-out that involve soil disturbances of one or more acres of land, but less than 5 acres, and *directly discharge* to one of the listed segments below shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015.

COUNTY	WATERBODY	POLLUTANT
Albany	Ann Lee (Shakers) Pond, Stump Pond	Nutrients
Albany	Basic Creek Reservoir	Nutrients
Allegany	Amity Lake, Saunders Pond	Nutrients
Bronx	Long Island Sound, Bronx	Nutrients
Bronx	Van Cortlandt Lake	Nutrients
Broome	Fly Pond, Deer Lake, Sky Lake	Nutrients
Broome	Minor Tribs to Lower Susquehanna (north)	Nutrients

MS4 SWPPP Acceptance Form - continued

V. Certification Statement - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative

I hereby certify that the final Stormwater Pollution Prevention Plan (SWPPP) for the construction project identified in question 5 has been reviewed and meets the substantive requirements in the SPDES General Permit For Stormwater Discharges from Municipal Separate Storm Sewer Systems (MS4s). Note: The MS4, through the acceptance of the SWPPP, assumes no responsibility for the accuracy and adequacy of the design included in the SWPPP. In addition, review and acceptance of the SWPPP by the MS4 does not relieve the owner/operator or their SWPPP preparer of responsibility or liability for errors or omissions in the plan.

Area of Interest (AOI)
- Area of Interest (AOI)

Soils
- Soil Map Unit Polygons
- Soil Map Unit Lines
- Soil Map Unit Points

Special Point Features
- Blowout
- Borrow Pit
- Clay Spot
- Closed Depression
- Gravel Pit
- Gravelly Spot
- Landfill
- Lava Flow
- Marsh or swamp
- Mine or Quarry
- Miscellaneous Water
- Perennial Water
- Rock Outcrop
- Saline Spot
- Sandy Spot
- Severely Eroded Spot
- Sinkhole
- Slide or Slip
- Sodic Spot
- Spoil Area
- Stony Spot
- Very Stony Spot
- Wet Spot
- Other
- Special Line Features

Water Features
- Streams and Canals

Transportation
- Rails
- Interstate Highways
- US Routes
- Major Roads
- Local Roads

Background
- Aerial Photography

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Dutchess County, New York
Survey Area Data: Version 17, Jun 11, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Oct 7, 2013—Feb 26, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Wallace Campus Development City of Poughkeepsie, Dutchess County, New York
Colliers Engineering & Design Project No. 20003474A

Dear Natalie,

Colliers Engineer & Design (formerly Maser Consulting) has conducted a review of the reduced size proposed development plan for the Wallace Campus Development ("the Reduced Size Project") as it relates to the potential traffic and parking impacts of the Project. The prior development plan ("7-Story/Daycare Project"), which was previously analyzed in our February 27, 2021 letter report, was formerly proposed to consist of 214 mixed income affordable housing units, a 10,197 sq. ft. daycare facility, an approximately 29,000 sq. ft. community fitness center/climbing gym, 6,416 sq. ft of retail/commercial space and an approximately 1-acre privately owned, but publicly accessible green space ("Wallace Green").

The Reduced Size Project is now proposed to consist of 187 mixed income affordable housing units, 14,213 sq. ft. of retail/commercial space along with the Wallace Green. The fitness center/climbing gym and daycare facility are no longer part of the development.

The Reduced Size Project also includes changes to the onsite parking and circulation patterns resulting from the elimination of the previously proposed daycare facility and the associated drop-off/pick-up areas. A total of 60 parking spaces are proposed under this modified development plan as compared to the 62 parking spaces under the previously proposed plan.

The following provides a detailed discussion of the potential traffic and parking impacts of the Project based on this modified development plan as well as a comparison to the previously proposed development plan where appropriate.

Colliers Engineering & Design

Reduced Size Project Parking Demand

As previously identified in our February 27, 2021 letter report, the Project falls within the Poughkeepsie Innovation District Historic Core (PID-HC) and Urban Village (PID-UV) zones. The City of Poughkeepsie Zoning Code (Section 19-3.37.(13)) identifies the minimum parking requirements for the proposed uses within the development. These parking requirements and the total number of required parking spaces for the Reduced Size Project are identified in the Table No. 1 below.

Table No. 1 – Code Required Parking Summary – Reduced Size Project

Building	Proposed Use	Size	Zone	Code Required Parking Ratio	Required Spaces
Main Street Building	Residential (69 Units Total)	17 Units	PID-HC	0 Spaces/Unit	0
		52 Units	PID-UV	0.5 Spaces/Unit	26
				1 Visitor Space/10 Units	6
	Retail	3,309 Sq. Ft.	PID-UV	0 Spaces/ Sq. Ft.	0
Catharine Street Building	Residential	49 Units	PID-HC	0 Spaces/Unit	0
	Retail	3,255 Sq. Ft.		0 Spaces/ Sq. Ft.	0
Wallace Building	Residential	69 Units	PID-HC	0 Spaces/Unit	0
	Retail	7,649 Sq. Ft.		0 Spaces/ Sq. Ft.	0
				Total	32

As indicated in the table above, per the City Code parking requirements, the Reduced Size Project is required to provide a total of 32 off-street parking spaces. The total of 32 required parking spaces is less than half of the required number of parking spaces under the 7-Story/Daycare Project, which was required to provide approximately 90 total parking spaces prior to accounting for shared parking amongst the uses.

The shared parking accommodations for the 302, 304 & 306 Mill Street parcels, which will be provided 12 dedicated parking spaces, will still remain within the overall Wallace Campus parking lot. Similarly, The Wallace consolidated lot will continue to provide the adjacent Hudson River Housing (HRH) with six (6) reserved parking spaces on the Wallace Property during weekday office hours only (8 AM to 6 PM) for employee and client parking. These spaces would be available to Wallace Campus residents and visitors for parking outside these hours. Together with the 32 spaces required for the Reduced Size Project, the total required parking spaces is 50 spaces during HRH office hours and 44 spaces all other times on Weekdays and all day on Weekends.

Colliers Engineering & Design

As previously indicated, the Site Plan for the Reduced Size Project will provide 60 off-street parking spaces, which will accommodate the total parking requirements of the Wallace Campus, 302, 304 & 306 Mill Street Parcels and the HRH facility. Furthermore, as identified in our February 27, 2021 study, there is also sufficient available on-street parking in the vicinity of the Site to accommodate any potential excess parking demand that may be generated by the Project. It is the intent of the PID zone to leverage this availability of underutilized surplus parking in the PID downtown area for future development.

It should also be noted that the typical use of the Wallace Green is proposed to remain as a passive green space for both residents and visitors. As indicated in our prior study, it is the opinion of Colliers Engineer and Design that this space will not generate any additional parking demand, but rather will draw patrons who are already within the proposed development and immediate surrounding neighborhood to utilize the space.

The Reduced Size Project will also hold occasional Public Performances/Community Gatherings within the Wallace Green & Tiered Seating area. The parking accommodations for these performances/gatherings can be accommodated by available on-street parking in the area of the Site as previously identified in our February 27, 2021 study.

Reduced Size Project Traffic Generation & Traffic Related Impacts

In order to assess the potential traffic related impacts of the Project, estimates of the amount of traffic to be generated by the modified Wallace Campus development during each of the peak hours (Weekday AM, Weekday PM and Saturday) were developed based on information published by the Institute of Transportation Engineers (ITE) as contained in the report entitled ***Trip Generation***, 10th Edition, 2017, based on Land Use Categories; 223 - Affordable Housing; 411 - Public Park and; 820 - Retail. It should be noted that where applicable ITE data For Dense Multi-Use Urban Locations was referenced to reflect traffic generation rates commensurate with the downtown location of the proposed development.

Table No. 2, below, provides a summary of the traffic generation estimates for the Reduced Size Proejct based on the ITE data. This table also takes similar internal and multi-modal credits as identified in our February 27, 2021 report, which are based on the credits identified in the ***Poughkeepsie Downtown Parking Improvement Plan – Analysis of Further Parking Demand*** prepared by Nelson Nygaard dated April 2018.

Colliers Engineering & Design

Table No. 2 – Anticipated Site Generated Traffic Volumes for Reduced Size Project

Time Period	Entry			Exit		
	HTGR[1]	Volume	External Vehicle Trips[2]	HTGR[1]	Volume	External Vehicle Trips[2]
Residential – Affordable Housing (187 Units)						
Peak AM Hour	0.34	63	29	0.14	27	13
Peak PM Hour	0.24	44	21	0.14	26	12
Saturday Peak Hour	0.24	45	21	.24	45	21
Commercial Space (14,213 Sq. Ft.)						
Peak AM Hour	1.26	18	9	1.12	16	8
Peak PM Hour	2.39	34	16	2.53	36	17
Saturday Peak Hour	3.16	45	21	3.16	45	21
Public Park (1 Acre)						
Peak AM Hour	1.00	1	1	1.00	1	1
Peak PM Hour	6.00	6	3	5.00	5	3
Saturday Peak Hour	8.00	8	4	6.00	6	3
Total						
Peak AM Hour	---	---	**39**	---	---	**22**
Peak PM Hour	---	---	**40**	---	---	**32**
Saturday Peak Hour	---	---	**46**	---	---	**45**

Notes:

1. The Hourly Trip Generation Rates (HTGR) are based on data published by the Institute of Transportation Engineers (ITE) as contained in the Trip Generation Handbook, 10th Edition, 2017. ITE Land Use Code - 223 - Affordable Housing, ITE Land Use Code - 411 - Public Park and ITE Land Use Code - 820 - Retail. Note where applicable ITE data for dense multi-use urban locations was referenced.
2. "External Vehicle Trips" include a 30% internal capture trip credit for all land uses as well as a 35% multi-modal trip credit to account for internal trips within the development and between the development and other nearby uses as well as non-personal vehicle trips to the Site. These credits are based on data provided in the Poughkeepsie Downtown Parking Improvement Plan - Analysis of Future Parking Demand prepared by Nelson Nygaard dated April 2018.

Table No. 3 below provides a comparison of the above traffic generation estimates for the Reduced Size Project to the previously proposed 7-Story/Daycare Project. The trip generation estimates for the 7-Story/Daycare Project were identified in Table No. 7 of our February 27, 2021 report.

Colliers Engineering & Design

Table No. 3 – Traffic Generation Comparison – 7-Story/Daycare Project vs. Reduced Size Project

Time Period	7-Story/Daycare Project			Reduced Size Project		
	Entry Volume	Exit Volume	Total Volume	Entry Volume	Exit Volume	Total Volume
Peak AM Hour	72	58	130	39	22	61
Peak PM Hour	71	63	134	40	32	72
Saturday Peak Hour	54	56	110	46	45	91

As indicated in the above table, the Reduced Size Project is generally anticipated to generate less traffic than the previously proposed 7-Story/Daycare Project. This is attributable to the reduction in the number of residential units as well as the elimination of the daycare and fitness center/climbing gym uses.

Based on the above traffic generation estimates, the Reduced Size Project is expected to generate less than 100 entering vehicle trips during each of the peak hours analyzed and a portion of these trips are anticipated to be attracted from the existing traffic stream along Mill Street as pass-by and/or diverted link trips. As indicated in our February 27, 2021 report, ITE and NYSDOT guidelines indicate that developments generating less than 100 entering vehicle trips will not result in a significant impact to the surrounding area traffic operations. It should also be noted that no credit has been taken for the existing traffic generation of the existing buildings and/or possible re-occupancies of these spaces.

Reduced Size Project Site Access and Internal Circulation

The elimination of the proposed Daycare facility from the development plan has allowed for the elimination of the previously proposed drop-off area on the eastern one-way entry driveway. This has also allowed for a reconfiguration of the on-site parking areas to maximize the number of parking spaces provided. As a result of these changes, the driveways have been modified to be a one-way pair, with the western driveway to be one-way entering and the eastern driveway to be one-way exiting. This configuration provides the greatest Site distance for exiting vehicles onto Mill Street. Appropriate “One-Way” and “Do Not Enter” signage should be provided at each of the driveway locations as well as internally at the driveway connections to the internal east-west parking aisle.

Conclusions

Based on the data discussed herein, it is the opinion of Colliers Engineering & Design that the Reduced Size Project will not have a significant impact on traffic and parking conditions in the vicinity of the Site. It should also be noted that based on the parking calculations identified above the previous request for a waiver to be granted by the Planning Board for excess parking spaces under the waiver with fee-in-lieu provision of the PID Zoning District, section 19-3.37 (13) (e) is no longer required.

It is also noted, as indicated in our February 27, 2021 report, the proposed modifications to the two (2) Site access driveway connections to Mill Street, as well as the closure of the existing driveways to 302, 304 and 306 Mill Street, will require a NYSDOT Highway Work Permit to be obtained prior to implementation of these modifications.

Sincerely,

Colliers Engineering & Design CT, P.C.

NPS Official Use Only

The National Park Service has reviewed the Historic Preservation Certification Application – Part 1 for the above-named property and has determined that the property:

☐ contributes to the significance of the above-named district or National Register property and is a "certified historic structure" for rehabilitation purposes.
☐ contributes to the significance of the above-named district and is a "certified historic structure" for a charitable contribution for conservation purposes.
☐ does not contribute to the significance of the above-named district or National Register property.

Preliminary Determinations:

☑ appears to meet the National Register Criteria for Evaluation and will likely be listed in the National Register of Historic Places if nominated by the State Historic Preservation Officer according to the procedures set forth in 36 CFR Part 60.
☐ does not appear to meet the National Register Criteria for Evaluation and will likely not be listed in the National Register.
☐ appears to contribute to the significance of a potential historic district, which will likely be listed in the National Register of Historic Places if nominated by the State Historic Preservation Officer.
☐ appears to contribute to the significance of a registered historic district if the period or area of significance as documented in the National Register nomination or district documentation on file with the NPS is expanded by the State Historic Preservation Officer.
☐ does not appear to qualify as a certified historic structure.

SHPO Decision of No Adverse Impact

NEW YORK STATE OF OPPORTUNITY. Parks, Recreation, and Historic Preservation

ANDREW M. CUOMO
Governor

ERIK KULLESEID
Commissioner

May 18, 2021

Mr. Charles Vandrei
Agency Historic Preservation Officer
NYS Environmental Conservation - Division of Lands and Forests
625 Broadway
Albany, NY 12233-4255

Re: DEC
Wallace Campus
City of Poughkeepsie, Dutchess County, NY
20PR06244

Dear Mr. Vandrei:

Thank you for continuing to consult with the Division for Historic Preservation of the Office of Parks, Recreation and Historic Preservation (OPRHP). We have reviewed the submitted materials in accordance with the New York State Historic Preservation Act of 1980 (section 14.09 of the New York Parks, Recreation and Historic Preservation Law). These comments are those of the Division for Historic Preservation and relate only to Historic/Cultural resources.

Our office has reviewed the revisions made to the updated scope of work. We understand that none of the proposed new construction will have an interior connection to the Wallace Department Store building. Based upon our review, it is the OPRHP's opinion that the project will have No Adverse Effect on historic resources provided the following conditions are met:

1. The Part-2 Federal Commercial Tax Credit application for the Wallace Department Store at 331 Main Street must be reviewed and approved by the National Parks Service.
2. A demolition and construction protection plan for the neighboring historic buildings must be developed and implemented. This plan should include physical protection options - if necessary, as well as include monitoring of the historic resources during the proposed work.
3. If these conditions cannot be met, or if there are substantive changes to the project, consultation with our office will resume.

Our office reminds you that the Federal Tax Credit program is administered by the National Park Service (NPS) in coordination with our office. While our office makes recommendations for the program, it is only the NPS that can approve the Tax Credit application. The opinions expressed in this letter are with regards to the Section 14.09 review in place for this project and do not guarantee approval by the NPS for the Tax Credit program. If you have any questions, I am best reached by email.

Sincerely,

Derek Rohde

Historic Information Memo

December 7, 2021

To: Robert Levine, Chair - City of Poughkeepsie Planning Board
Natalie Quinn, Senior Planner - City of Poughkeepsie

From: Wallace Campus Partners

Re: Public & Planning Board Comments Regarding Historic Importance of:
319 Main Street
325 Main Street
327-329 Main Street

The Planning Board has inquired about the historic status of 319, 325, and 327-329 Main Street which will be demolished to make way for a new 5-story building at Wallace Campus.

Age and alterations of the buildings:
The three buildings in question, listed above, comprise approximately 111 linear feet of Main Street, on the North side of the street, facing south. Approximately ten feet of this existing façade is an existing alleyway so the building frontage facing onto Main St is about 100 linear feet. Of the three buildings in question 319 Main Street makes up more than 50% of the frontage.

Finally, both 325 Main Street and 327-329 Main Street have each had their Main Street facades substantially altered – 325 in the past 15 years – where the historic integrity of the two buildings has been irrevocably harmed. While the two buildings are akin to the historic Main Mall Row in scale at four stories, the buildings are otherwise entirely unlike anything currently deemed historic on Main Street. The new construction building proposed to replace these three buildings is actually more aesthetically contextual to the existing historic character on Main Street.

SHPO has determined that the buildings are not eligible for listing:
New York State Historic Preservation Office (NYSHPO) has, through several avenues and over five decades, analyzed the three buildings and has <u>not</u> found them to hold any substantive historic value. On May 18th, 2021, the Division for Historic Preservation of the Office of Parks, Recreation and Historic Preservation (OPRHP) issued a "No Adverse Effect" letter, based on a review of the Wallace project in its entirety, inclusive of the planned demolition and replacement of the 319, 325 and 327-329 Main Street buildings. Separately, NYSHPO – maintains a catalogue of "Resource Evaluations" and, in each instance NYSHPO staff has declared that the buildings in question are "Not Eligible" for addition to the historic register. In their finding none of the four "Criteria for Inclusion in the National Register" have been met. The No Adverse Effect Letter and evidence of all three buildings' ineligibility are attached here. The criteria that have not been met include:

(A) Association with events that have made a significant contribution to the broad patterns in our history;

(B) Association with the lives of persons significant in our past;

(C) Embodies the distinctive characteristics of a type, period or method of construction; or represents the work of a master; or possesses high artistic values; or represents a significant and distinguishable entity whose components may lack individual distinction;

(D) Have yielded, or may be likely to yield information important in prehistory

This completely contrasts with the situation of 331 Main Street, the former Wallace Department store, SHPO with the full support of the Wallace Campus partnership, has recognized the building's historic significance through its addition to the National Registry, and developed an architectural plan to carefully restore the building and preserve its historic details.

The SHPO findings on the three buildings are consistent with the local historic preservation community's response to these buildings since they were first considered as potentially historic properties as part of the Poughkeepsie inventory of historic structures, which survey ran from October 1976 through December 1977. That survey identified 59 properties that should be nominated to the national register but did not include the three buildings in question. Poughkeepsie's own Historic District and Landmark's Preservation Commission (HDLPC) has its own historic register; none of the three buildings are on, or have been nominated for inclusion on, the HDLPC's list. **The City declined to list the buildings at 319, 325, and 327-329 Main Street locally when a comprehensive study of Main Street was done.**

In addition to lack of historical value, the 3 buildings cannot practically be rehabilitated for adaptive reuse:
The three buildings slated for demolition would be difficult to rehabilitate efficiently. Like the width of 325 Main – approximately 19' – renders that building and adjoining buildings not conducive to an economic adaptive re-use. Combining the existing three buildings into a single structure is further delimited by their poor condition, differing floor-to-floor heights, and differing floor count, i.e. two floors vs four floors.

The Applicants will explore all reasonable possibilities of salvaging any interior architectural elements within the buildings.
In addition, at the request of the planning board and community, the Wallace Campus partners have worked with architectural salvagers to repurpose interiors (existing plumbing and remaining furniture and fixtures) of 331 Main Street and 325 Main Street. The architectural salvage company, Zarborkski Emporium, has declined to utilize any items in 319 Main Street. 329 Main Street is fully occupied – once the site is vacant, we will work with interested parties, and allow access for potential architectural salvage before demolitions. We have also reached out to Historic Albany Foundation to see if any exteriors of 319, 325, and 329 Main Street can be preserved and donated. In addition, we have reached out to the Poughkeepsie's Historic District and Landmark Commission to photo document the buildings per their request.

Commissioner

May 18, 2021

Mr. Charles Vandrei
Agency Historic Preservation Officer
NYS Environmental Conservation - Division of Lands and Forests
625 Broadway
Albany, NY 12233-4255

Re: DEC
Wallace Campus
City of Poughkeepsie, Dutchess County, NY
20PR06244

Dear Mr. Vandrei:

Thank you for continuing to consult with the Division for Historic Preservation of the Office of Parks, Recreation and Historic Preservation (OPRHP). We have reviewed the submitted materials in accordance with the New York State Historic Preservation Act of 1980 (section 14.09 of the New York Parks, Recreation and Historic Preservation Law). These comments are those of the Division for Historic Preservation and relate only to Historic/Cultural resources.

Our office has reviewed the revisions made to the updated scope of work. We understand that none of the proposed new construction will have an interior connection to the Wallace Department Store building. Based upon our review, it is the OPRHP's opinion that the project will have No Adverse Effect on historic resources provided the following conditions are met:

1. The Part-2 Federal Commercial Tax Credit application for the Wallace Department Store at 331 Main Street must be reviewed and approved by the National Parks Service.
2. A demolition and construction protection plan for the neighboring historic buildings must be developed and implemented. This plan should include physical protection options - if necessary, as well as include monitoring of the historic resources during the proposed work.
3. If these conditions cannot be met, or if there are substantive changes to the project, consultation with our office will resume.

Our office reminds you that the Federal Tax Credit program is administered by the National Park Service (NPS) in coordination with our office. While our office makes recommendations for the program, it is only the NPS that can approve the Tax Credit application. The opinions expressed in this letter are with regards to the Section 14.09 review in place for this project and do not guarantee approval by the NPS for the Tax Credit program. If you have any questions, I am best reached by email.

Sincerely,

Derek Rohde
Historic Site Restoration Coordinator

DEMOLITION NOTES:

1. CONTRACTOR SHALL NOTIFY "DIG SAFELY NEW YORK" AT 1-800-962-7692 AT LEAST TWO FULL WORKING DAYS PRIOR TO COMMENCEMENT OF ANY WORK IN ACCORDANCE WITH UFPO CODE RULE 53, 16 NYCRR PART 753.
2. ANY ITEM THAT MAY CONFLICT WITH SITE DEVELOPMENT AND IS NOT IDENTIFIED ON THIS PLAN SHALL BE BROUGHT TO THE ATTENTION OF THE OWNER AND DESIGN ENGINEER AS SOON AS POSSIBLE.
3. ADDITIONAL UNDERGROUND FACILITIES MAY BE PRESENT WITHIN THE LIMITS OF THE PROPOSED WORK. THE CONTRACTOR SHALL CONTACT ANY AND ALL PERSONNEL RESPONSIBLE FOR DETERMINING THE LOCATIONS.
4. PRIOR TO DEMOLISHING ANY BUILDINGS/STRUCTURES, THE CONTRACTOR SHALL PERFORM A PRE-DEMOLITION SURVEY IN ACCORDANCE WITH STATE AND FEDERAL REGULATIONS. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS AND APPROVALS BY THE AUTHORITY HAVING JURISDICTION.
5. CONFORM TO APPLICABLE CODE FOR DEMOLITION OF STRUCTURES, SAFETY OF ADJACENT STRUCTURES, DUST CONTROL, RUNOFF CONTROL, AND HAULING, DISPOSAL AND STORAGE OF DEBRIS.
6. PROVIDE, ERECT, AND MAINTAIN TEMPORARY BARRIERS AND SECURITY DEVICES.
7. MAINTAIN EXISTING UTILITIES TO REMAIN IN SERVICE AND PROTECT THEM AGAINST DAMAGE DURING SELECTIVE DEMOLITION OPERATIONS. DO NOT INTERRUPT EXISTING UTILITIES SERVING OPERATING FACILITIES, EXCEPT WHEN AUTHORIZED IN WRITING BY OWNER AND AUTHORITIES HAVING JURISDICTION.
8. WHEN DISTURBED, EXISTING FACILITIES SHALL BE REPAIRED OR REPLACED IN KIND AND IN ACCORDANCE WITH THE REQUIREMENTS OR THE DIRECTION OF THE AUTHORITY HAVING JURISDICTION. ASSOCIATED COSTS SHALL BE BORNE BY THE CONTRACTOR.
9. NOTIFY ADJACENT OWNERS OF WORK THAT MAY AFFECT THEIR PROPERTY, POTENTIAL NOISE, UTILITY OUTAGE, OR DISRUPTION. COORDINATE WITH OWNER.
10. PREVENT MOVEMENT OR SETTLEMENT OF ADJACENT STRUCTURES. PROVIDE BRACING AND SHORING.
11. LOCATE AND IDENTIFY ALL EXISTING UTILITIES WITHIN THE CONSTRUCTION AREA. DISCONNECT AND SEAL OR CAP OFF UTILITY SERVICES THAT WILL BE AFFECTED BY THIS PROJECT. NOTIFY AFFECTED UTILITY COMPANIES BEFORE STARTING WORK AND COMPLY WITH THEIR REQUIREMENTS. VERIFY THAT UTILITIES HAVE BEEN DISCONNECTED AND CAPPED. ABANDONMENT AND DISCONNECTION OF THE EXISTING WATER LINE MUST BE COORDINATED WITH THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. ABANDONMENT AND DISCONNECTION OF THE EXISTING SEWER LINE MUST BE COORDINATED WITH THE CITY OF POUGHKEEPSIE SEWER DEPARTMENT.
12. DEMOLISH AND REMOVE COMPONENTS IN AN ORDERLY AND CAREFUL MANNER.
13. PROTECT EXISTING FEATURES THAT ARE NOT TO BE DEMOLISHED.
14. CONDUCT OPERATIONS WITH MINIMUM INTERFERENCE TO PUBLIC OR PRIVATE ACCESS WAY.
15. MAINTAIN EGRESS AND ACCESS AT ALL TIMES. DO NOT CLOSE OR OBSTRUCT ROADWAYS, OR SIDEWALKS WITHOUT PERMITS.
16. CEASE OPERATIONS IMMEDIATELY IF ADJACENT STRUCTURES APPEAR TO BE IN DANGER. NOTIFY AUTHORITY HAVING JURISDICTION.
17. ROUGH GRADE AND COMPACT AREAS AFFECTED BY DEMOLITION TO MAINTAIN SITE GRADES AND CONTOURS.
18. FIELD VERIFY EXISTING CONDITIONS AND CORRELATE WITH REQUIREMENTS INDICATED ON DEMOLITION PLAN TO DETERMINE EXTENT OF SELECTIVE DEMOLITION REQUIRED.
19. MAINTAIN EXISTING UTILITIES TO REMAIN IN SERVICE AND PROTECT THEM AGAINST DAMAGE DURING SELECTIVE DEMOLITION OPERATION.
20. CONDUCT DEMOLITION OPERATIONS TO PREVENT INJURY TO PEOPLE AND DAMAGE TO ADJACENT BUILDINGS AND FACILITIES TO REMAIN. ENSURE SAFE PASSAGE OF PEOPLE AROUND SELECTIVE DEMOLITION AREA.
21. USE WATER MIST, TEMPORARY ENCLOSURES AND OTHER SUITABLE METHODS TO LIMIT THE SPREAD OF DUST AND DIRT. COMPLY WITH GOVERNING ENVIRONMENTAL PROTECTION REGULATIONS. DO NOT USE WATER WHEN IT MAY DAMAGE EXISTING CONSTRUCTION, SUCH AS ICE, FLOODING, OR POLLUTION.
22. REMOVE, TRANSPORT AND REMOVE DEBRIS IN A MANNER THAT WILL PREVENT SPILLAGE ON ADJACENT SURFACES AND AREAS AND MEET ALL APPROPRIATE DISPOSAL AND TRUCKING LAWS.
23. CLEAN ADJACENT STRUCTURES AND IMPROVEMENTS OF DUST, DIRT AND DEBRIS CAUSED BY SELECTIVE DEMOLITION OPERATIONS. RETURN ADJACENT AREAS TO CONDITION EXISTING BEFORE START OF SELECTIVE DEMOLITION.
24. PROMPTLY DISPOSE OF DEMOLISHED MATERIALS. ALL DEBRIS RESULTING FROM DEMOLITION ACTIVITIES SHALL BE DISPOSED OF OFF-SITE AT A FACILITY APPROVED TO RECEIVE THE DEBRIS. DO NOT ALLOW DEMOLISHED MATERIALS TO ACCUMULATE ON-SITE. DO NOT BURN DEMOLISHED MATERIALS ON-SITE.
25. NO BLASTING IS PROPOSED FOR THE PROJECT.
26. A MINIMUM OF TEN FEET OF EXISTING PIPE SHALL BE REMOVED AROUND ALL EXISTING MANHOLES, WHERE NEW PIPES ARE PROPOSED TO CONNECT.
27. IF ANY STORM DRYWELLS OR PREVIOUSLY UNIDENTIFIED UNDERGROUND STRUCTURES ARE IDENTIFIED AND EXHIBIT A SEWAGE/SEPTIC ODOR NOTIFY SITE ENGINEER AND TREAT AS SANITARY WASTE FOR DISPOSAL.
28. EXISTING SANITARY SEWER FOR SOUTH BUILDINGS TAKEN FROM HISTORICAL DATA.
29. THE CONTRACTOR SHALL COORDINATE WITH ARLINGTON FIRE DEPARTMENT FOR ACCESS LOCATIONS TO THE SITE DURING DEMOLITION / CONSTRUCTION.
30. THE ABANDONMENT, REMOVAL & DECOMMISSIONING OF ALL EXISTING SUBSURFACE DISPOSAL SYSTEMS AND SANITARY LINE COMPONENTS MAY BE CONSIDERED HAZARDOUS WASTE AND MUST BE REMOVED IN ACCORDANCE WITH THE PROCEDURES APPROVED BY THE DUTCHESS COUNTY DEPARTMENT OF HEALTH AND NYSDEC AND CERTIFIED BY A NYS PROFESSIONAL ENGINEER.
31. ALL EXISTING MONITORING WELLS ONSITE, ARE TO BE CUT AND CAPPED 4' BELOW GRADE AND FILLED WITH GROUT. WELLS ARE TO BE ABANDONED SHALL BE IN ACCORDANCE WITH DUTCHESS COUNTY DEPARTMENT OF HEALTH REGULATIONS.
32. KNOX BOX LOCKS ARE TO INSTALLED ON EACH OF THE EMERGENCY ACCESS POINTS OF THE TEMPORARY CHAIN LINK FENCE AND DAISY CHAINED TO THE CONTRACTORS PAD LOCK.
33. PRIOR TO THE START OF CONSTRUCTION OR EXCAVATION, TREE'S TO BE RETAINED SHALL BE PROTECTED BY SILT FENCE, SNOW FENCE, CONSTRUCTION FENCE, OR EQUAL, WHICH WILL BE PLACED AT THE DRIP LINE OR SEVERAL FEET BEYOND. HOWEVER, THE FENCING SHALL NOT CROSS PUBLIC SIDEWALKS. NO STORAGE OR STOCKPILING OF CONSTRUCTION MATERIALS, DEBRIS OR EQUIPMENT SHALL OCCUR WITHIN THE FENCED AREA.

GENERAL MAP NOTE:

ACCESS, SHARED PARKING, AND LANDSCAPING IMPROVEMENTS WITH ADJOINING PARCELS:

THE WALLACE CAMPUS DRAWING SETS FORTH THE BOUNDARIES OF THE WALLACE CAMPUS CONSOLIDATED LOT AND SHOWS THE SITE PLAN FOR THAT LOT. FOUR ADJOINING PARCELS OUTSIDE THE WALLACE CAMPUS ARE ALSO SHOWN ON THE DRAWING SET, FOR THE LIMITED PURPOSE OF DEPICTING THE OFF-SITE IMPROVEMENTS TO BE MADE ON THOSE PROPERTIES PURSUANT TO SHARED PARKING AND EASEMENT AGREEMENTS, AND TO SHOW THE MANNER IN WHICH THOSE PHYSICAL IMPROVEMENTS AND ACCESS PROVISIONS WILL IMPROVE PEDESTRIAN AND VEHICULAR CIRCULATION IN THE NEIGHBORHOOD, AS WELL AS LANDSCAPING, LIGHTING, AND COMMUNITY CHARACTER. THE PROJECT SPONSOR WILL ENTER INTO SHARED PARKING AND PERMANENT ACCESS EASEMENT AGREEMENTS WITH THE OWNERS OF THESE ADJOINING PARCELS, WHICH WILL BE APPROVED BY THE PLANNING BOARD AS PART OF THE PROJECT APPROVALS. THE DRAWING SET DEPICTS THE OFF-SITE WORK TO BE PERFORMED BY THE PROJECT SPONSOR ON THESE PARCELS TO IMPLEMENT THE SHARED PARKING AND ACCESS AGREEMENTS. THE WORK ON 302, 304 AND 306 MILL STREET ("THE 3 MILL STREET LOTS") WOULD ELIMINATE TWO EXISTING CURB CUTS ON MILL STREET (BETWEEN 302 AND 304 MILL AND BETWEEN 304 AND 306 MILL), AND PROVIDE ADDITIONAL GREEN SPACE ON THOSE LOTS, INCLUDING ALONG THE MILL STREET FRONTAGE TO REPLACE THOSE DRIVEWAYS. THE WALLACE CAMPUS OWNER WILL PROVIDE A PERMANENT ACCESS EASEMENT TO THE OWNER OF THE 3 MILL STREET LOTS FOR THE BENEFIT OF OWNERS AND TENANTS, TO ACCESS THE PARKING AREAS LOCATED ON THESE LOTS VIA THE WALLACE CAMPUS ACCESS DRIVES. THE SHARED PARKING AGREEMENT WOULD MAINTAIN THE ALLOCATION OF DEDICATED PARKING (9 SPACES) TO THE 3 MILL STREET LOTS IN COMPLIANCE WITH THE PID ZONING. LIGHTING IMPROVEMENTS, PEDESTRIAN WALKWAYS, AND STORMWATER IMPROVEMENTS WILL BE PROVIDED TO SERVE THE OFFSITE SHARED PARKING AREAS IN THE SAME MANNER AS THE PARKING AREAS ON THE WALLACE CAMPUS PARCEL. PURSUANT TO A SEPARATE SHARED PARKING AGREEMENT WITH THE HUDSON RIVER HOUSING ("HRH") PROPERTY, THE PROJECT SPONSOR WILL BE GRANTED A PERMANENT EASEMENT TO CONSTRUCT PEDESTRIAN SIDEWALK PATHS WITHIN THE HUDSON RIVER HOUSING PROPERTY CONNECTING TO MILL STREET AND PROVIDING ACCESS FROM THAT PARKING AREA TO THE REAR ENTRANCE TO THE HRH OFFICE BUILDING, AND PARKING IMPROVEMENTS ALONG THE HRH LOT SOUTHERLY BOUNDARY THAT INTEGRATE WITH THE WALLACE CAMPUS PARKING AREA, AND TO PLACE A PORTION OF THE PROJECT DUMPSTER. LIGHTING IMPROVEMENTS AND LANDSCAPING WILL BE INSTALLED AS SHOWN ON THE DRAWING SET. THE PROJECT SPONSOR WILL PROVIDE HRH WITH A PERMANENT ACCESS EASEMENT TO USE THE TWO WALLACE CAMPUS MILL STREET ENTRANCES AND EXITS FOR ACCESS TO, AND USE OF, 6 PARKING SPACES WHICH ARE LOCATED ON WALLACE CAMPUS PROPERTY DIRECTLY ABUTTING THE WESTERLY BOUNDARY OF HRH'S PROPERTY (AS SHOWN ON THE DRAWING SET), WHICH SPACES WILL BE RESERVED FOR USE BY HRH EMPLOYEES DURING WORKING HOURS 8 AM TO 6 PM MONDAY TO FRIDAY. THE 6 SPACES TO BE AVAILABLE FOR WALLACE CAMPUS PARKING OUTSIDE OF THOSE HOURS.

COMPACTION AND BACKFILL NOTES

UNLESS OTHERWISE SPECIFIED OR APPROVED BY THE SITE ENGINEER, ALL SITE SUBGRADE AND BACKFILL FOR ALL STRUCTURES INCLUDING, BUT NOT LIMITED TO, PARKING LOT SUBGRADE, ROAD SUBGRADE, CONCRETE PADS AND SIDEWALKS, WATER LINES AND STRUCTURES, SEWER LINES AND STRUCTURES, STORM LINES AND STRUCTURES, TRASH PADS/ENCLOSURES, AND SITE ELECTRICAL AND CONDUIT, SHALL BE COMPACTED IN ACCORDANCE WITH THE FOLLOWING STANDARD.

METHODS OF CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION (NYSDOT) STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED MAY 1, 2008, AND ALL ADDENDA THERETO

GRADING AND DRAINAGE NOTES

1. ALL EXISTING STRUCTURES NOTED TO BE REMOVED, FENCING, TREES, ETC., WITHIN CONSTRUCTION AREA SHALL BE REMOVED & DISPOSED OF OFF SITE. ANY BURNING ON SITE SHALL BE SUBJECT TO LOCAL ORDINANCES.
2. CONTRACTOR SHALL NOTIFY ALL UTILITY COMPANIES HAVING UNDERGROUND UTILITIES ON SITE OR IN RIGHT-OF-WAY PRIOR TO EXCAVATION. CONTRACTOR SHALL CONTACT UTILITY LOCATING COMPANY AND LOCATE ALL UTILITIES PRIOR TO GRADING START.
3. SITE GRADING SHALL NOT PROCEED UNTIL EROSION CONTROL MEASURES HAVE BEEN INSTALLED.

CITY OF POUGHKEEPSIE WATER NOTES

1. ALL WATER MAINS SHALL BE CEMENT LINED DUCTILE IRON PIPE, CLASS 52 PUSH-ON JOINT, UNLESS OTHERWISE SPECIFIED BY OR APPROVED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. JOINTING SHALL EMPLOY "MEGALUG" CONNECTIONS, FIELD LOCK GASKET, OR AS ALTERNATIVELY SPECIFIED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. ALL WATER PIPING CONSTRUCTION SHALL BE TO THE SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. WET TAP OF PUBLIC WATER SYSTEM SHALL BE APPROVED AND SUPERVISED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT. TAPPING SLEEVE SHALL BE STAINLESS STEEL OR APPROVED EQUAL. ALL MAINLINE VALVES SHALL BE RESILIENT WEDGE OR APPROVED EQUAL.

2. THE WATER LINE MAY BE FLEXED WITHIN PIPE SPECIFICATIONS OR LAID DEEPER IN AREAS WHERE A CROSSING WITH A SANITARY LINE OCCURS, TO ACHIEVE THE REQUIRED 1.5' VERTICAL SEPARATION DISTANCE. IF THIS DISTANCE CANNOT BE REASONABLY ACHIEVED, THE CONTRACTOR SHALL USE PRESSURE RATED SANITARY PIPE OF EQUAL OR GREATER RATING THAN THE PRESSURE CLASS FOR THE WATER LINE.

3. MINIMUM VERTICAL SEPARATION BETWEEN WATER MAINS AND SEWER PIPE SHALL BE 18 INCHES MEASURED FROM THE OUTSIDE OF THE PIPES AT THE POINT OF CROSSING. ONE FULL STANDARD LAYING LENGTH OF WATER MAIN SHALL BE CENTERED UNDER OR OVER THE SEWER SO THAT BOTH JOINTS WILL BE AS FAR FROM THE SEWER LINE AS POSSIBLE. IN ADDITION, WHEN THE WATER MAIN PASSES UNDER A SEWER, ADEQUATE STRUCTURAL SUPPORT (COMPACTED SELECT FILL) SHALL BE PROVIDED FOR THE SEWER TO PREVENT EXCESSIVE DEFLECTION OF JOINTS AND SETTLING OF THE SEWER PIPE ON THE WATER MAIN. MINIMUM HORIZONTAL SEPARATION BETWEEN PARALLEL WATER MAINS AND SEWER PIPES (INCLUDING MANHOLES AND VAULTS) SHALL BE 10 FEET MEASURED FROM THE OUTSIDE OF THE PIPES, MANHOLES, OR VAULTS.

4. ALL WATER MAINS SHALL HAVE A MINIMUM OF (5) FIVE FEET OF COVER FROM THE TOP OF THE MAIN TO FINISHED GRADE. THE CONTRACTOR SHALL CHECK ALL FINISHED GRADE STAKES BEFORE TRENCHING TO ENSURE THAT ALL INSTALLED WATER MAINS WILL HAVE THE REQUIRED COVER.

5. THE SUPPLIER OF WATER MUST RECEIVE AT LEAST 48-HOUR ADVANCE NOTIFICATION REQUESTING SAMPLING SERVICES. SAMPLING WILL NOT BE PERFORMED PRIOR TO RECEIPT FROM A NEW YORK STATE LICENSED OR REGISTERED DESIGN PROFESSIONAL (ENGINEER, ARCHITECT, OR LAND SURVEYOR WITH A SPECIAL EXEMPTION UNDER SECTION 7208(N) OF THE EDUCATION LAW) CERTIFYING THAT THE WATER SUPPLY IMPROVEMENTS, TESTING AND DISINFECTION PROCEDURES WERE COMPLETED IN ACCORDANCE WITH THE APPROVED PLANS, REPORTS, SPECIFICATIONS, AND ANY APPROVED AMENDMENTS. A NYSDOH CERTIFIED LABORATORY WILL COLLECT SAMPLES FOR FREE CHLORINE RESIDUAL, TOTAL, AND FECAL COLIFORM AND 24-HOUR BACTERIAL PLATE COUNT. THE CERTIFICATE OF COMPLIANCE, TESTING, AND SAMPLING RESULTS SHALL BE PROVIDED TO THE CITY WATER MAINTENANCE SUPERVISOR AND DUTCHESS COUNTY DEPARTMENT OF HEALTH AS A CONDITION OF APPROVAL FOR OPERATION.

6. THE CONTRACTOR SHALL COORDINATE THE TESTING WITH THE WATER DEPARTMENT SO AS TO MAINTAIN THE AMOUNT OF SERVICE INTERRUPTION TO EXISTING USERS TO THE LEAST EXTENT PRACTICABLE. WATER MAIN INSTALLATION AND TESTING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE PROJECT ENGINEER OR HIS DESIGNEE AS NECESSARY TO MEET CONDITIONS IN NOTE 5 ABOVE.

7. THE WATER MAIN SHALL BE PRESSURE LEAKAGE TESTED IN ACCORDANCE WITH THE MINIMUM REQUIREMENTS OF THE AWWA STANDARD C600 (LATEST REVISION) OR IN ACCORDANCE WITH MORE STRINGENT REQUIREMENTS IMPOSED BY THE SUPPLIER OF WATER. TEST TO FIRST VALVE WITHIN BUILDING.

8. THE WATER MAIN SHALL BE DISINFECTED EQUAL TO AWWA STANDARD FOR DISINFECTING WATER MAINS DESIGNATION C651 (LATEST REVISION). FOLLOWING DISINFECTION, THE WATER MAIN SHALL BE FLUSHED UNTIL THE CHLORINE CONCENTRATION IN THE WATER LEAVING THE MAIN IS NO HIGHER THAN THAT GENERALLY PREVAILING IN THE SYSTEM. THE PROJECT ENGINEER OR HIS DESIGNEE SHALL ALSO WITNESS DISINFECTION AND FLUSHING.

9. ALL WATER MAIN FITTINGS NOT RECEIVING 24-HOUR CHLORINE DISINFECTION CONTACT TIME MUST BE SWAB-DISINFECTED 30 MINUTES PRIOR TO INSTALLATION.

10. THE SAMPLING POINT(S) MUST BE DECONTAMINATED BY FLAMING.

11. FIRE HYDRANTS ARE NOT ACCEPTABLE SAMPLING POINTS, UNLESS OTHERWISE APPROVED BY SITE ENGINEER AND CITY OF POUGHKEEPSIE WATER DEPARTMENT.

12. FIRE HYDRANT WEEP HOLES (DRAINS) SHALL BE PLUGGED WHEN GROUND WATER IS ENCOUNTERED WITHIN SEVEN FEET OF THE FINISHED GRADE. WHEN DRAINS ARE PLUGGED, THE BARREL'S MUST BE PUMPED DRY AFTER USE DURING FREEZING WEATHER. SUCH HYDRANTS SHALL BE IDENTIFIED BY MARKINGS AS APPROVED BY THE CITY OF POUGHKEEPSIE.

13. PROPOSED WATER METERS LOCATED WITHIN THE METER PIT OR BUILDING SHALL BE A COMPATIBLE REMOTE STYLE TYPE (SENSUS), AND SHALL BE APPROVED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT PRIOR TO INSTALLATION. WATER METER SHALL BE EQUIPPED WITH (RADIO TYPE REMOTE READER) TRANSCEIVER PROVIDED BY METER MANUFACTURER AND INSTALLED AND PROGRAMMED BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT.

14. THE WATER LINE SHALL BE INSTALLED AT A CONTINUOUS GRADE WITH NO ABRUPT HIGH POINTS OR LOW POINTS.

15. FINAL WATER DISTRIBUTION SYSTEM AND CERTIFICATION IS SUBJECT TO REVIEW, REVISION AND APPROVAL BY THE CITY OF POUGHKEEPSIE WATER DEPARTMENT AND THE DCDOH PRIOR TO APPROVAL TO OPERATE.

16. ALL WATER MAINS AND RELATED APPURTENANCES SHALL BE CONSTRUCTED TO THE LATEST STANDARDS AND SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE.

17. THE WATER MAIN SHALL NOT BE PLACED INTO SERVICE UNTIL SO AUTHORIZED BY THE CITY OF POUGHKEEPSIE.

18. ALL WATER SERVICE CONSTRUCTION SHALL BE SUBJECT TO INSPECTION BY THE CITY WATER DEPARTMENT PRIOR TO BACKFILLING. BEDDING AND PIPE ZONE MATERIAL SHALL BE COMPOSED OF CRUSHED STONE OR LIGHT GRAVEL HAVING A GRADATION LIMIT OF 3/4" MINUS. AN ACCEPTABLE MATERIAL SHALL MEET THE FOLLOWING REQUIREMENT:

SIEVE DESIGNATION	% PASSING
3/4"	100
NO.40	0-70
NO. 200	0-10

19. TRENCH BACKFILL SHALL BE WELL-GRADED SOIL AND GRAVEL MATERIAL. ALL PARTICLES SHALL HAVE A GRADATION OF 2" OR LESS. AN ACCEPTABLE MATERIAL SHALL MEET THE FOLLOWING REQUIREMENT:

SIEVE DESIGNATION	% PASSING
2 INCH	100
1/4 INCH	30-65
NO. 40	5-40
NO. 200	0-15

20. BEDDING AND BACKFILL MATERIAL SHALL BE STOCKPILED IN AMOUNTS NECESSARY FOR REASONABLE BACKFILLING REQUIREMENTS. A SIEVE ANALYSIS OF BEDDING OR BACKFILL MAY BE REQUIRED AT THE REQUEST OF THE CITY OF POUGHKEEPSIE.

21. THE SITE UTILITY CONTRACTOR SHALL BE RESPONSIBLE FOR ALL BURIED PIPING TO THE LOCATION OF THE PROPOSED BUILDING CONNECTION POINT (I.E. INSIDE THE BUILDING). THIS INCLUDES THE TESTING AND CERTIFICATION OF ALL WATER SERVICE WORK FROM THE CITY WATER CONNECTION POINT TO THE PROPOSED BUILDINGS INTERIOR CONNECTION POINT.

22. INDICATOR TAPE SHALL BE PLACED 12" BELOW FINISHED GRADE DIRECTLY ABOVE ALL WATERLINES.

23. ALL COPPER WATER SERVICE PIPING INSTALLATION, BACKFILL AND TESTING SHALL BE REVIEWED AND APPROVED BY THE CITY OF POUGHKEEPSIE WATER MAINTENANCE SUPERVISOR OR HIS DESIGNEE. BEDDING, PIPE ZONE, AND BACKFILL MATERIAL MUST BE SAND ONLY.

24. THE PIPE SUPPORTS FOR THE METER PIT SHALL BE MADE OF GALVANIZED STEEL AND SHALL BE ADJUSTABLE. THE SUPPORTS ARE TO BE PLACED ONLY BENEATH SPOOL PIECES AND NOT UNDER CRITICAL EQUIPMENT, METERS, ETC.

25. THREE AS-BUILT DRAWINGS WHICH INCLUDE VERIFICATION OF THE WATER INFRASTRUCTURE WILL BE PROVIDED TO THE PLANNING DEPARTMENT FOR DISSEMINATION TO THE ENGINEERING AND WATER DEPARTMENTS PRIOR TO ANY EASEMENT DEDICATION TO THE CITY.

CITY OF POUGHKEEPSIE SANITARY SEWER NOTES

1. FLOOR DRAINS, IF CONSTRUCTED, SHALL BE CONNECTED TO THE SANITARY SEWER. FLOOR DRAINS DO NOT INCLUDE FOUNDATION/FOOTER DRAIN: ALL DISCHARGES TO THE SANITARY SEWER SHALL COMPLY WITH THE EFFLUENT LIMITS OF THE LOCAL AND/OR DUTCHESS COUNTY SANITARY CODE.

2. DEFLECTION TESTS SHALL BE PERFORMED ON ALL FLEXIBLE PIPES. THE TESTS SHALL BE CONDUCTED AFTER FINAL BACKFILL HAS BEEN IN PLACE AT LEAST 5 DAYS. NO PIPE SHALL EXCEED A DEFLECTION OF 5% IF THE DEFLECTION TEST IS TO BE RUN USING A RIGID BALL OR MANDREL, IT SHALL HAVE A DIAMETER EQUAL TO 95% OF THE INSIDE DIAMETER OF THE PIPE. THE TEST SHALL BE PERFORMED WITHOUT MECHANICAL PULLING DEVICES.

3. SANITARY SEWERS AND APPURTENANCES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE LATEST STANDARDS AND SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE. ALL SANITARY SEWER SYSTEM COMPONENTS SHALL BE INSTALLED BY OR UNDER THE SUPERVISION OF A CITY OF POUGHKEEPSIE LICENSED PLUMBER IN ACCORDANCE WITH THE CITY PLUMBING CODE.

4. MAJOR EARTHWORK SHALL BE COMPLETED PRIOR TO INSTALLATION OF ANY SANITARY SEWER MAINS AND APPURTENANCES. AIR CONNECTING SEWER LINES SHALL BE FLUSHED BEFORE TESTED.

5. MAXIMUM ALLOWABLE INFILTRATION OR EXFILTRATION SHALL NOT EXCEED 100 GALLONS PER INCH DIAMETER PER MILE OF PIPE PER DAY FOR THE SANITARY SEWER. IF AN AIR TEST IS USED, THE TEST, AS A MINIMUM, SHALL CONFORM TO THE PROCEDURE DESCRIBED IN THE ASTM -F-1417 (1992) ENTITLED "STANDARD PRACTICE FOR INSTALLATION ACCEPTANCE OF GRAVITY SEWER LINES USING LOW PRESSURE AIR" (RE-APPROVED 1998). SANITARY MANHOLES SHALL BE VISUALLY INSPECTED AND TESTED FOR LEAKAGE BY EXFILTRATION OR VACUUM. VACUUM TESTING OF MANHOLES SHALL COMPLY WITH THE METHOD OUTLINED IN THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION TECHNICAL INFORMATION PAMPHLET (TIP) NO.15 (REVISED).

6. SANITARY SEWER MAINS ARE TO BE POLYVINYL CHLORIDE (PVC) AND SANITARY LATERALS SHALL BE PVC, SDR-35, UNLESS OTHERWISE NOTED.

7. FINAL SEWER COLLECTION SYSTEM LAYOUT IS SUBJECT TO REVIEW, REVISION AND APPROVAL BY THE CITY OF POUGHKEEPSIE SEWER DEPARTMENT.

8. ALL SANITARY PIPE AND/OR MANHOLES SHALL BE A MINIMUM OF TEN (10) HORIZONTAL FEET FROM THE WATER MAIN. SANITARY PIPE SHALL HAVE A MINIMUM 18" SEPARATION FROM ANY WATER MAIN OR WATER SERVICE LINE. IF FOR SOME REASON THIS SEPARATION CANNOT BE ACHIEVED, SANITARY SEWER PIPE IN THE AREA SHALL BE SDR-26 PRESSURE RATED PIPE, (OR BE ENCASED PER THE DETAIL ON DN-3) AND ONE FULL LENGTH OF WATER MAIN SHALL BE CENTERED UNDER OR OVER THE SEWER. ALL SANITARY SEWER CONSTRUCTION SHALL BE TO SPECIFICATIONS OF THE CITY OF POUGHKEEPSIE SEWER DEPARTMENT.

9. ALL SANITARY TESTING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE PROJECT ENGINEER, AND CERTIFICATES OF COMPLIANCE WITH THE INSTALLATION SPECIFICATIONS, TEST STANDARDS, APPROVED PLANS OR APPROVED AMENDMENTS SHALL BE PROVIDED TO THE APPROPRIATE SEWER AUTHORITY AND THE DCDOH AS A CONDITION OF APPROVAL FOR OPERATION.

10. ALL SANITARY SEWER CONSTRUCTION SHALL BE SUBJECT TO INSPECTION BY THE CITY SEWER SUPERINTENDENT PRIOR TO BACKFILLING. PIPE BEDDING AND PIPE ZONE MATERIAL SHALL BE COMPOSED OF CRUSHED STONE OR GRAVEL, FREE OF SOFT NONDURABLE PARTICLES WITH THE FOLLOWING GRADATION REQUIREMENTS:

SIEVE DESIGNATION	% PASSING
3/4"	100
NO.40	0-70
NO. 200	0-10

ALL TRENCH BACKFILL MATERIAL SHALL BE APPROVED BY THE SUPERINTENDENT OF SEWERS AND MUST MEET THE FOLLOWING GRADATION REQUIREMENT:

SIEVE DESIGNATION	% PASSING
2 INCH	100
1/4 INCH	30-65
NO.40	5-40
NO. 200	0-15

BEDDING AND BACKFILL MATERIAL SHALL BE STOCKPILED IN AMOUNTS NECESSARY FOR REASONABLE BACKFILLING REQUIREMENTS. A SIEVE ANALYSIS OF BEDDING OR BACKFILL MAY BE REQUIRED AT THE REQUEST OF THE CITY OF POUGHKEEPSIE.

11. ALL NEW SANITARY SEWER MANHOLE COVERS SHALL BE NOMINAL 26" DIAMETER CAST IRON AND SHALL READ "SANITARY SEWER". FRAMES SHALL BE 8" IN HEIGHT AND THE FRAME AND COVER SHALL BE SYRACUSE CASTINGS NO.1 009 OR AN APPROVED EQUAL.

12. INDICATOR TAPE SHALL BE PLACED 12" BELOW FINISHED GRADE DIRECTLY ABOVE ALL SANITARY LINES.

13. LOCATION OF SEWER LATERAL CLEAN OUTS ARE TO BE PLACED AS SHOWN ON THE APPROVED SITE PLAN AND NOT TO EXCEED EVERY 75' MEASURED FROM THE SEWER MAIN CONNECTION OR AS DETERMINED BY THE CITY OF POUGHKEEPSIE SUPERINTENDENT OF SEWERS WHERE LOCATIONS ARE NOT SPECIFICALLY SHOWN.

14. EXTERNAL DROP MANHOLES SHALL BE USED FOR SEWERS ENTERING AT AN ELEVATION OF 24 INCHES OR HIGHER AT THE INLET OF A SEWER MANHOLE.

15. THREE AS-BUILT DRAWINGS WHICH INCLUDE VERIFICATION OF THE SEWER INFRASTRUCTURE INCLUDING RIMS AND INVERTS WILL BE PROVIDED TO THE PLANNING DEPARTMENT FOR DISSEMINATION TO THE ENGINEERING AND SEWER DEPARTMENTS PRIOR TO ANY EASEMENT DEDICATION TO THE CITY.

COMPACTION AND BACKFILL NOTES

UNLESS OTHERWISE SPECIFIED OR APPROVED BY THE SITE ENGINEER, ALL SITE SUBGRADE AND BACKFILL FOR ALL STRUCTURES INCLUDING, BUT NOT LIMITED TO, PARKING LOT SUBGRADE, ROAD SUBGRADE, CONCRETE PADS AND SIDEWALKS, WATER LINES AND STRUCTURES, SEWER LINES AND STRUCTURES, STORM LINES AND STRUCTURES, TRASH PADS/ENCLOSURES, AND SITE ELECTRICAL AND CONDUIT, SHALL BE COMPACTED IN ACCORDANCE WITH THE FOLLOWING STANDARD.

METHODS OF CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION (NYSDOT) STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS, DATED MAY 1, 2008, AND ALL ADDENDA THERETO

DECOMPACTION OF SOILS IN RECLAIMED AREAS:

THESE PROCEDURES SHALL BE FOLLOWED PRIOR TO INSTALLATION OF TOP SOIL OR INFILTRATION PRACTICES IN ANY AREA PREVIOUSLY IMPERVIOUS OR COMPACTED BY COSTRUCTION EQUIPMENT. FOR ALL AREAS TO BE RECLAIMED FOR STORMWATER INFILTRATION, THE AREA SHALL BE MARKED OFF WITH ORANGE SAFETY FENCE AFTER DEMOLITION AND PRIOR TO DECOMPACTION TO PREVENT FURTHER COMPACTION OF THE UNDERLYING SOILS.

AREAS RECLAIMED AS TOP SOIL:

A. APPLY 3" OF COMPOST OVER SUBSOIL AFTER SUBGRADE LEVELS HAVE BEEN REACHED AND IMMEDIATELY PRIOR TO PLACING PLANTING SOILS.

B. THE ENTIRE SUBGRADE AREA SHALL BE LOOSENED TO A MINIMUM DEPTH OF 12 INCHES UTILIZING THE BUCKET OF A BACK HOE, CAT MOUNTED RIPPER, TILLER, OR EQUIVALENT EQUIPMENT. ROCK PICK ONLY UNTIL UPLIFTED STONE/ROCK MATERIAL OF FOUR INCHES AND LARGER SIZE HAVE BEEN CLEARED FROM THE SITE.

C. ANY SUBGRADE AREAS WHICH HAVE BECOME HEAVILY COMPACTED (DEFINED AS EXCEEDING 86%-88% COMPACTION ASTM 698 STANDARD PROCTOR) INCLUDING, BUT NOT LIMITED TO, TEMPORARY PARKING AREAS, MATERIAL STOCKPILE AREAS, TEMPORARY ROADWAYS, CONSTRUCTION AREAS AND AREAS AROUND THE BUILDING, OTHER CONSTRUCTION AREAS, AREAS SHOWN ON THE PLANS, OR AREAS IDENTIFIED BY THE DESIGN PROFESSIONAL SHALL BE DEEP-SCARIFIED. IMMEDIATELY PRIOR TO PLACING SOILS, HEAVILY COMPACTED AREAS SHALL BE LOOSENED TO A MINIMUM DEPTH OF 18 INCHES USING THE TEETH OF A BACK HOE OR OTHER SUITABLE EQUIPMENT. FREQUENCY OF COMPACTION TESTS SHALL BE ONE PER 500 SQUARE FEET.

D. CONFIRM THAT THE SUBGRADE IS AT THE PROPER ELEVATION AND THAT NO FURTHER EARTHWORK IS REQUIRED TO BRING THE SUBGRADE TO PROPER ELEVATIONS. PROVIDE A REPORT TO THE DESIGN PROFESSIONAL THAT THE SUBGRADE HAS BEEN PLACED TO THE REQUIRED ELEVATIONS, HAS BEEN DECOMPACTED ACCORDING TO THE CONTRACT DOCUMENTS AND IS READY FOR INSPECTION AT LEAST 3 DAYS PRIOR TO PLACING INFILTRATION PRACTICES. PERFORM NO WORK UNTIL ELEVATIONS HAVE BEEN CONFIRMED AND THE AREA HAS BEEN ACCEPTED BY THE OWNER'S REPRESENTATIVE.

E. AFTER THE SOILS HAVE BEEN LOOSENED AND INSPECTED, TOPSOIL MAY BE SPREAD BY USING A WIDE-TRACK BULLDOZER SIZE D-5 OR SMALLER OR MAY BE DUMPED AND SPREAD WITH THE BUCKET OF A BACKHOE FROM THE EDGE OF THE LOOSENED AREA. NO RUBBER-TIRED EQUIPMENT OR HEAVY EQUIPMENT EXCEPT FOR A SMALL BULLDOZER SHALL PASS OVER THE SUBSOILS (SUBGRADE) AFTER THEY HAVE BEEN LOOSENED. IF THE CONTRACTOR PLANS TO UTILIZE SUCH AREAS FOR ANY USE OF HEAVY EQUIPMENT, THIS SHOULD BE CARRIED OUT PRIOR TO BEGINNING THE PROCESS OF LOOSENING SOILS OR FILLING IN THAT AREA, OR IT WILL HAVE TO BE RESCARIFIED AND MEET THIS SPECIFICATION REQUIREMENT.

AREAS RECLAIMED FOR STORMWATER INFILTRATION PRACTICES:

A. EXCAVATE AREA TO THE DEPTH OF THE PROPOSED BOTTOM OF THE INFILTRATION PRACTICE.

B. THE ENTIRE SUBGRADE AREA SHALL BE LOOSENED TO A MINIMUM DEPTH OF 12 INCHES BELOW PROPOSED SUBGRADE UTILIZING THE BUCKET OF A BACK HOE, CAT MOUNTED RIPPER, TILLER, OR EQUIVALENT EQUIPMENT. ROCK PICK UNTIL UPLIFTED STONE/ROCK MATERIAL OF FOUR INCHES AND LARGER SIZE HAVE BEEN CLEARED FROM THE SITE.

C. ANY SUBGRADE AREAS WHICH REMAIN HEAVILY COMPACTED (DEFINED AS EXCEEDING 86%-88% COMPACTION ASTM 698 STANDARD PROCTOR), AS SHOWN ON THE PLANS, OR AREAS IDENTIFIED BY THE DESIGN PROFESSIONAL SHALL BE DEEP-SCARIFIED. IMMEDIATELY PRIOR TO PLACING SOILS, HEAVILY COMPACTED AREAS SHALL BE LOOSENED TO A MINIMUM DEPTH OF 18 INCHES USING THE TEETH OF A BACK HOE OR OTHER SUITABLE EQUIPMENT. FREQUENCY OF COMPACTION TESTS SHALL BE ONE PER 500 SQUARE FEET.

D. CONFIRM THAT THE SUBGRADE IS AT THE PROPER ELEVATION AND THAT NO FURTHER EARTHWORK IS REQUIRED TO BRING THE SUBGRADE TO PROPER ELEVATIONS. PROVIDE A REPORT TO THE DESIGN PROFESSIONAL THAT THE SUBGRADE HAS BEEN PLACED TO THE REQUIRED ELEVATIONS, HAS BEEN DECOMPACTED ACCORDING TO THE CONTRACT DOCUMENTS AND IS READY FOR INSPECTION AT LEAST 3 DAYS PRIOR TO PLACING INFILTRATION PRACTICES. PERFORM NO WORK UNTIL ELEVATIONS HAVE BEEN CONFIRMED AND THE AREA HAS BEEN ACCEPTED BY THE OWNER'S REPRESENTATIVE.

E. AFTER THE SOILS HAVE BEEN LOOSENED AND INSPECTED, INFILTRATION PRACTICES MAY BE INSTALLED USING A WIDE-TRACK BULLDOZER SIZE D-5 OR SMALLER OR MAY BE PLACED, DUMPED, OR SPREAD WITH THE BUCKET OF A BACKHOE FROM THE EDGE OF THE LOOSENED AREA. NO RUBBER-TIRED EQUIPMENT OR HEAVY EQUIPMENT EXCEPT FOR A SMALL BULLDOZER SHALL PASS OVER THE SUBSOILS (SUBGRADE) AFTER THEY HAVE BEEN LOOSENED. IF THE CONTRACTOR PLANS TO UTILIZE SUCH AREAS FOR ANY USE OF HEAVY EQUIPMENT, THIS SHOULD BE CARRIED OUT PRIOR TO BEGINNING THE PROCESS OF LOOSENING SOILS OR FILLING IN THAT AREA, OR IT WILL HAVE TO BE RESCARIFIED AND MEET THIS SPECIFICATION REQUIREMENT.

F. WHEN INFILTRATION PRACTICES ARE LOCATED BELOW PAVEMENT THE AREA SHALL REMAIN FREE OF LARGE VEHICLES UNTIL THE PAVEMENT SUBBASE HAS BEEN INSTALLED.

G. FOR REFERENCE OF DECOMPACTION NOTES, SEE NYS DESIGN MANUAL SECTION 5.1.6 FOR DEEP RIPPING AND DECOMPACTION OF EXISTING AREAS THAT ARE PROPOSED FOR RESTORATION.

CITY OF POUGHKEEPSIE EROSION AND SILTATION CONTROL NOTES

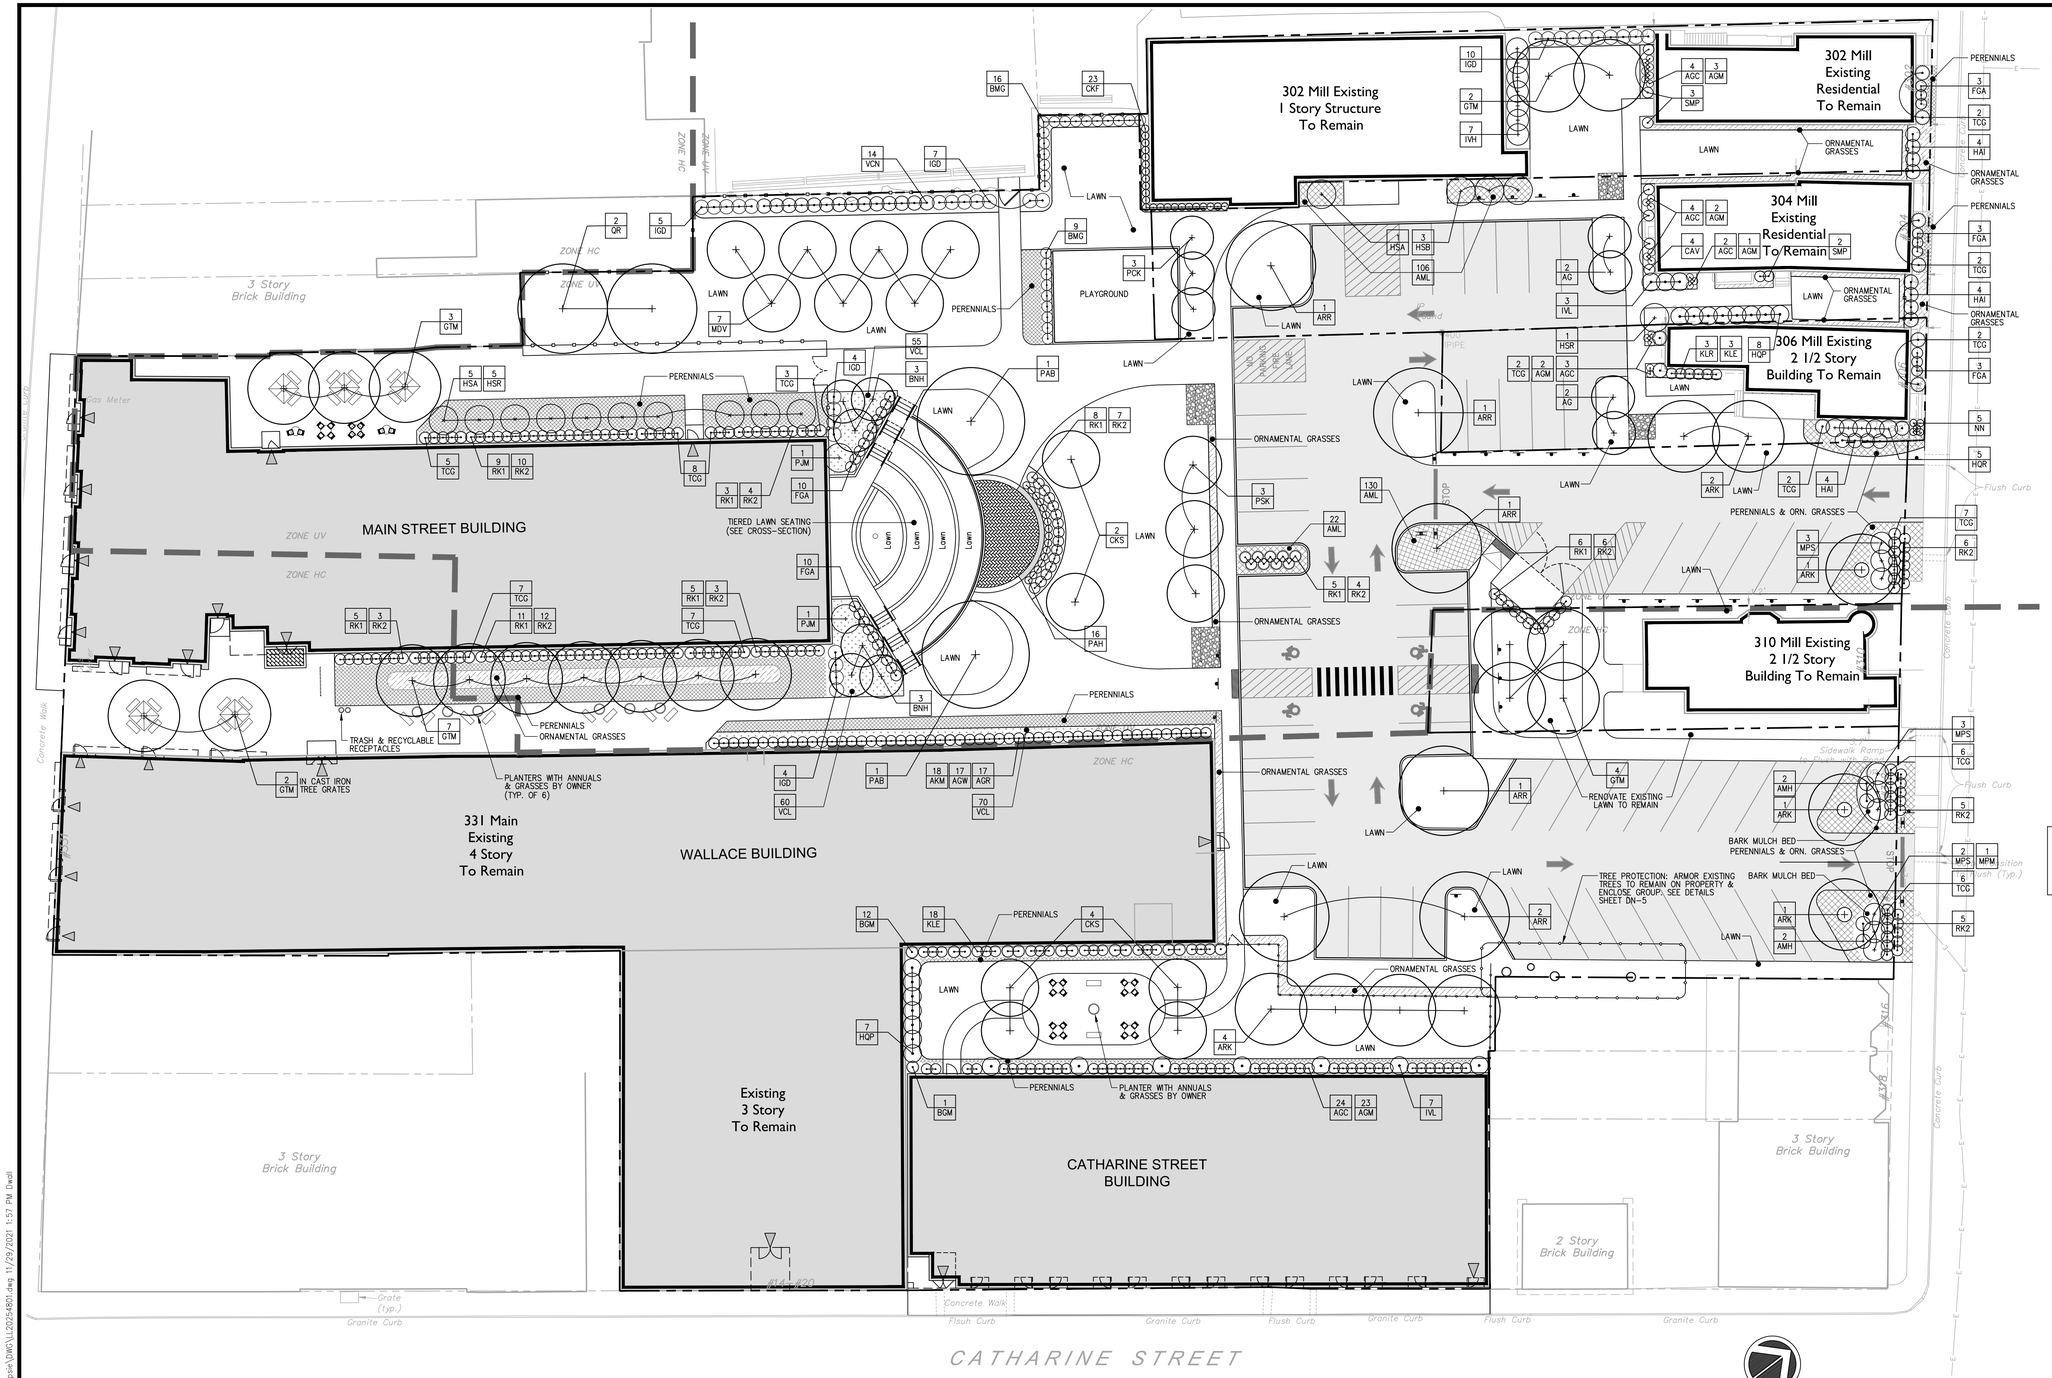
1. All unvegetated areas in excess of 10%, per direction of the Engineer, shall have temporary seeding of fast germinating rye, 10 to 15 #'s per 1,000 sq. ft.
2. Graded areas - upper elevations: Provide temporary drainage swales, 1% grade min., to direct runoff away from construction sites. Discharge areas to be acceptable to the Engineer.
3. Graded areas - lower elevations: Provide drainage swales, 1% min. grades, with staked and secured hay bale siltation. Location of hay bales and discharge areas per approval of Engineer.
4. Permanent seeded areas for erosion control: Mixture of perennial rye and blue and red fescue grasses (50/50), 15 to 25 #'s per 1,000 sq. ft., mulching at 5#'s per 1,000 sq. ft., fertilizer - 5.10.5 at 5#'s per 1,000 sq. ft. (if determined necessary by Engineer), with pegging and netting for grades in excess of 15%.
5. All permanent drainage interceptor swales to be seeded per Item 4 also.
6. All erosion control shall be in accordance with the latest "Urban Erosion and Sediment Control Guidebook" of the Dutchess County Soil and Water Conservation District.
7. All areas shall be seeded and mulched as soon as possible.
8. Grade as needed and feasible to permit the use of conventional equipment for seed bed preparation, seeding and mulch application.
9. Scarify all compacted soils prior to applying topsoil.
10. Apply topsoil per Standard #6 Table 6.1 of the Soil Erosion Control Guide Book.
11. Seed mix shall be as follows:
    Ky. Blue grass 20 lbs/ac.
    Creeping Red Fescue 40 lbs/ac.

GENERAL NOTES

1. ALL CONSTRUCTION SHALL COMPLY WITH CITY OF POUGHKEEPSIE REQUIREMENTS AND SPECIFICATIONS.
2. THE CONTRACTOR IS RESPONSIBLE FOR OBTAINING ALL NECESSARY PERMITS REQUIRED BY GOVERNMENT AGENCIES PRIOR TO CONSTRUCTION. THE CONTRACTOR SHALL POST ALL BONDS, PAY ALL FEES, PROVIDE PROOF OF INSURANCE AND PROVIDE TRAFFIC CONTROL NECESSARY FOR THIS WORK.
3. REFER TO OTHER PLANS AND DETAIL SHEETS FOR ADDITIONAL INFORMATION. THE CONTRACTOR SHALL VERIFY ALL SITE CONDITIONS IN THE FIELD AND CONTACT THE SITE ENGINEER IF THERE ARE ANY QUESTIONS OR CONFLICTS REGARDING THE CONSTRUCTION DOCUMENTS AND/OR FIELD CONDITIONS SO THAT APPROPRIATE REVISIONS CAN BE MADE PRIOR TO BIDDING. ANY CONFLICT BETWEEN DRAWINGS AND THE SPECIFICATIONS SHALL BE CONFIRMED WITH THE LOCAL CONSTRUCTION MANAGER PRIOR TO BIDDING.
4. REFER TO THE DETAIL SHEETS FOR PAVEMENT, CURBING, AND SIDEWALK INFORMATION.
5. ALTERNATIVE METHODS AND PRODUCTS OTHER THAN THOSE SPECIFIED MAY BE USED IF REVIEWED AND APPROVED BY THE SITE ENGINEER, AND THE APPROPRIATE REGULATORY AGENCIES PRIOR TO INSTALLATION.
6. THE CONTRACTOR SHALL RESTORE ANY OF THE FOLLOWING IF THEY ARE NOTED TO REMAIN: UTILITY STRUCTURE, PIPE, UTILITY, PAVEMENT, CURBS, SIDEWALKS, OR LANDSCAPED AREAS DISTURBED DURING CONSTRUCTION TO THEIR ORIGINAL CONDITION OR BETTER TO THE SATISFACTION OF THE CITY OF POUGHKEEPSIE.
7. TRAFFIC CONTROL MEASURES SHALL BE UTILIZED IN ACCORDANCE WITH CITY OF POUGHKEEPSIE AND NYSDOT.
8. PAVEMENT MARKINGS SHALL BE FAST DRYING TYPE IN ACCORDANCE WITH CITY OF POUGHKEEPSIE SPECIFICATIONS.
9. THE CONTRACTOR SHALL SUBMIT SHOP DRAWINGS OF ALL PRODUCTS, MATERIALS AND PLANT SPECIFICATIONS TO THE SITE ENGINEER AND OWNER FOR REVIEW AND APPROVAL PRIOR TO FABRICATION OR DELIVERY TO THE SITE. ALLOW A MINIMUM OF 14 WORKING DAYS FOR REVIEW. APPROVED SHOP DRAWINGS WILL BE PROVIDED BY THE ENGINEER AND COPIED TO THE CITY OF POUGHKEEPSIE.
10. THE CONTRACTOR SHALL PROVIDE AND MAINTAIN TRAFFIC DEVICES FOR PROTECTION OF VEHICLES AND PEDESTRIANS CONSISTING OF DRUMS, BARRIERS, SIGNS, LIGHTS, FENCES AND UNIFORMED TRAFFIC MEN AS REQUIRED OR ORDERED BY THE ENGINEER OR REQUIRED BY THE LOCAL GOVERNING AUTHORITIES. CONTRACTOR SHALL MAINTAIN ALL TRAFFIC LANES AND PEDESTRIAN WALKWAYS AT ALL TIMES UNLESS WRITTEN APPROVAL FROM THE CITY AND GOVERNING AUTHORITIES IS GRANTED.
11. THE PROJECT DRAWINGS ARE GENERALLY DIAGRAMMATIC IN INDICATING THE PRESENCE OF EXISTING UNDERGROUND UTILITIES. INFORMATION ON EXISTING UTILITIES HAS BEEN COMPILED FROM AVAILABLE INFORMATION INCLUDING UTILITY COMPANY AND MUNICIPAL RECORD MAPS AND FIELD SURVEY AND IS NOT GUARANTEED TO BE CORRECT OR COMPLETE. UTILITIES ARE SHOWN TO ALERT THE CONTRACTOR OF THEIR PRESENCE AND THE CONTRACTOR IS SOLELY RESPONSIBLE FOR DETERMINING ACTUAL LOCATIONS AND ELEVATIONS OF ALL UTILITIES AND SERVICES. WHEN THE UTILITIES ARE TO BE LEFT IN PLACE, THE CONTRACTOR SHALL PROVIDE ADEQUATE MEANS OF SUPPORT AND PROTECTION DURING THE EXCAVATION AND BACKFILLING OPERATIONS.
12. PRIOR TO DEMOLITION OR CONSTRUCTION THE CONTRACTOR SHALL CONTACT "CALL BEFORE YOU DIG" AT 1-800-962-7962 AT LEAST 72 HOURS BEFORE COMMENCEMENT OF WORK TO VERIFY ALL UTILITY LOCATIONS. CONTRACTOR SHALL NOT INTERRUPT EXISTING UTILITIES SERVICING FACILITIES OCCUPIED AND USED BY THE OWNER OR OTHERS DURING OCCUPIED HOURS.
13. IF ANY UNCHARTED OR INCORRECTLY CHARTED EXISTING PIPING OR OTHER UTILITY IS UNCOVERED DURING EXCAVATION, THE CONTRACTOR SHALL CONSULT THE SITE ENGINEER IMMEDIATELY FOR DIRECTIONS BEFORE PROCEEDING FURTHER WITH THE WORK.
14. STORAGE OF FLAMMABLE AND HAZARDOUS MATERIALS SHALL BE IN COMPLIANCE WITH THE NYS FIRE AND BUILDING CODE.
15. CONTRACTOR TO PROVIDE SITE ENGINEER WITH SUBMITTALS. ONCE APPROVED, COPIES WILL BE SUPPLIED TO CITY ENGINEER AND APPROPRIATE CITY DEPARTMENTS.
16. NO HERBICIDES OR PESTICIDES WILL BE USED DURING THE OPERATION OF THE SITE.

EROSION AND SEDIMENT CONTROL PLAN

1. LAND DISTURBANCE WILL BE KEPT TO A MINIMUM; RESTABILIZATION WILL BE SCHEDULED AS SOON AS PRACTICABLE.
2. SILTATION FENCE WILL BE INSTALLED AT ALL CULVERT OUTLETS AND ALONG THE TOE OF ALL CRITICAL CUT AND FILL SLOPES.
3. ALL EROSION AND SEDIMENTATION CONTROL MEASURES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE STANDARDS AND SPECIFICATIONS OF THE NEW YORK STATE EROSION & SEDIMENT CONTROL "BLUE BOOK" 2005.
4. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE INSTALLED PRIOR TO CONSTRUCTION WHENEVER POSSIBLE.
5. ALL CONTROL MEASURES SHALL BE MAINTAINED IN EFFECTIVE CONDITION THROUGHOUT THE CONSTRUCTION PERIOD.
6. ADDITIONAL CONTROL MEASURES SHALL BE INSTALLED DURING THE CONSTRUCTION PERIOD, IF NECESSARY OR REQUIRED.
7. SEDIMENT REMOVED FROM CONTROL STRUCTURES WILL BE DISPOSED OF IN A MANNER WHICH IS CONSISTENT WITH THE INTENT OF THE PLAN.
8. DUST CONTROL AND ANTI-TRACKING MAINTENANCE TO BE ADDRESSED AND RESOLVED ON A DAILY BASIS.



INSTALLATION OF SEDIMENTATION AND EROSION CONTROL MEASURES

I. SILTATION FENCE

A. DIG A SIX INCH TRENCH ON THE UPHILL SIDE OF THE DESIGNATED FENCE LINE LOCATION.

B. POSITION THE POST AT THE BACK OF THE TRENCH (DOWNHILL SIDE), AND HAMMER THE POST AT LEAST 2.0 FEET INTO THE GROUND.

C. LAY THE BOTTOM SIX INCHES OF THE FABRIC INTO THE TRENCH TO PREVENT UNDERMIN

PLANTING NOTES:

1. THE LANDSCAPE PLAN AND RELATED DETAILS ARE FOR LANDSCAPING INFORMATION ONLY. PLEASE REFER TO THE SITE, GRADING & EROSION CONTROL PLANS FOR ALL OTHER INFORMATION.
2. THE CONTRACTOR SHALL GUARANTEE THAT ALL PLANTS, TREES, AND SHRUBS SHALL BE HEALTHY AND FREE OF DISEASE FOR A PERIOD OF ONE YEAR AFTER SUBSTANTIAL COMPLETION AND ACCEPTANCE BY OWNER OR LANDSCAPE ARCHITECT. CONTRACTOR SHALL REPLACE ANY DEAD OR UNHEALTHY PLANTS AT CONTRACTOR'S EXPENSE. PLANT MATERIAL REPLACEMENTS SHALL BE GUARANTEED FOR ONE FULL YEAR FROM DATE OF REPLACEMENT. FINAL ACCEPTANCE SHALL BE MADE IF ALL PLANTS MEET THE GUARANTEE REQUIREMENTS INCLUDING MAINTENANCE. MAINTENANCE RESPONSIBILITIES INCLUDE CULTIVATING, SPRAYING, WEEDING, WATERING, TIGHTENING GUYS, PRUNING, FERTILIZING, MULCHING, AND ANY OTHER OPERATIONS NECESSARY TO MAINTAIN PLANT VIABILITY. MAINTENANCE SHALL BEGIN IMMEDIATELY AFTER PLANTING AND CONTINUE UNTIL THE END OF THE ONE YEAR GUARANTEE PERIOD.
3. THE CONTRACTOR SHALL SUPPLY ALL LABOR, PLANTS, AND MATERIALS IN QUANTITIES SUFFICIENT TO COMPLETE THE WORK SHOWN ON THE DRAWINGS AND LISTED IN THE PLANT SCHEDULE. IN THE EVENT OF A DISCREPANCY BETWEEN QUANTITIES SHOWN IN THE PLANT SCHEDULE AND THOSE REQUIRED BY THE DRAWINGS, THE LARGER SHALL APPLY.
4. ALL SHRUB MASSINGS SHALL BE MULCHED TO A DEPTH OF 4" WITH SHREDDED HARDWOOD BARK MULCH.
5. NO PLANT SHALL BE PLACED IN THE GROUND BEFORE ROUGH GRADING HAS BEEN COMPLETED AND APPROVED BY ENGINEER. STAKING THE LOCATION OF ALL TREES AND SHRUBS SHALL BE COMPLETED PRIOR TO PLANTING FOR APPROVAL BY THE OWNER OR LANDSCAPE ARCHITECT. STAKING OF THE INSTALLED TREE MUST BE COMPLETED THE SAME DAY AS IT IS INSTALLED. ALL TREES SHALL BE STAKED OR GUYED PER DETAIL. SEE SHEET DN-1 FOR PLANTING DETAILS.
6. COORDINATE PLANT MATERIAL LOCATIONS WITH SITE UTILITIES. SEE SITE LAYOUT, GRADING AND UTILITY DRAWINGS FOR STORM, SANITARY AND WATER LINES. SEE LIGHTING PLAN FOR ELECTRICAL AND LIGHTING LAYOUT AND DETAILS. UTILITY LOCATIONS ARE APPROXIMATE. EXERCISE CARE WHEN DIGGING IN AREAS OF POTENTIAL CONFLICT WITH UNDERGROUND OR OVERHEAD UTILITIES. THE CONTRACTOR IS RESPONSIBLE FOR ANY DAMAGE DUE TO CONTRACTOR'S NEGLIGENCE AND SHALL REPLACE OR REPAIR ANY DAMAGE AT CONTRACTOR'S EXPENSE.
7. LANDSCAPE PLANTING PITS MUST BE FREE DRAINING. PAVEMENT, COMPACTED SUBGRADE, AND BLASTED ROCK SHALL BE REMOVED FROM WITHIN TRAFFIC ISLANDS TO BE LANDSCAPED TO A DEPTH OF 2' OR TO A GREATER DEPTH IF REQUIRED BY PLANTING DETAILS OR SPECIFICATIONS. REPLACE SOIL WITHIN ISLANDS WITH MODERATELY COMPACTED LOAM OR SANDY LOAM FREE FROM STONES AND RUBBISH 1" OR GREATER IN DIAMETER AND ANY OTHER MATERIAL HARMFUL TO PLANT GROWTH AND DEVELOPMENT. PLANTING INSTALLATION WITHIN ISLANDS SHALL BE AS DETAILED AND CONTAIN PLANTING MIX AS SPECIFIED.
8. TIME OF PLANTING: NEW PLANT MATERIALS SHALL BE INSTALLED BETWEEN APRIL 1 AND JUNE 1, OR AFTER SEPTEMBER 15TH AND NO LATER THAN OCTOBER 31ST.
9. PLANTING SOIL MIXTURE FOR TREES AND SHRUBS:
   - 1 PART PEAT MOSS
   - 3 PARTS TOPSOIL
   - FERTILIZER/LIME (APPLY AS RECOMMENDED BY SOIL ANALYSIS)
   - MYCORHIZA INOCULANT – "TRANSPLANT 1–STEP" AS MANUFACTURED BY ROOTS, INC. OR APPROVED EQUAL.
     USE PER MANUFACTURER'S RECOMMENDATIONS FOR TREES AND SHRUBS.
10. TOPSOIL SHALL BE INSTALLED AT A MINIMUM DEPTH OF 6" IN LAWN AREAS. CONTRACTOR SHALL SUBMIT TOPSOIL TO A CERTIFIED TESTING LABORATORY TO DETERMINE pH, FERTILITY, ORGANIC CONTENT AND MECHANICAL COMPOSITION. THE CONTRACTOR SHALL SUBMIT THE TEST RESULTS FROM REGIONAL EXTENSION OFFICE OF USDA TO THE OWNER OR LANDSCAPE ARCHITECT FOR REVIEW AND APPROVAL. CONTRACTOR SHALL INCORPORATE AMENDMENTS FOR GOOD PLANT GROWTH AND PROPER SOIL ACIDITY RECOMMENDED FROM THE TOPSOIL TEST.
11. LAWN SEEDING MIXTURE:

    15% KENTUCKY BLUEGRASS (POA PRATENSIS – SINGLE VARIETY)
    15% PERENNIAL RYEGRASS (LOLIUM PERENNE)
    30% CREEPING RED FESCUE (FESTUCA RUBRA)
    25% CHEWINGS FESCUE (FESCTUCA RUBRA "JAMESTOWN II")
    15% HARD FESCUE (FESTUCA OVINA "RELIANT II")

    SEEDING RATE: 4.5 LBS PER 1,000 S.F. (ADD 10% TO QUANTITY IF HYDROSEEDED).

    SEEDING DATES: AUGUST 15 – OCTOBER 1 AND APRIL 15 – JUNE 15 UNLESS OTHERWISE APPROVED BY THE OWNER OR LANDSCAPE ARCHITECT.
12. ALL SLOPES GREATER THAN 3:1 RECEIVING A GRASS SEEDING MIXTURE SHALL BE COVERED WITH AN EROSION CONTROL BLANKET.
13. ALL DISTURBED AREAS NOT OTHERWISE DEVELOPED SHALL BE SEEDED WITH THE LAWN SEEDING MIXTURE.
14. TREE PROTECTION: PRIOR TO THE START OF CONSTRUCTION OR EXCAVATION, TREES TO BE RETAINED SHALL BE PROTECTED BY SILT FENCE, SNOW FENCE, CONSTRUCTION FENCE, OR EQUAL, WHICH WILL BE PLACED AT THE DRIP LINE OR SEVERAL FEET BEYOND. HOWEVER, THE FENCING SHALL NOT CROSS PUBLIC SIDEWALKS. NO STORAGE OR STOCKPILING OF CONSTRUCTION MATERIALS, DEBRIS OR EQUIPMENT SHALL OCCUR WITHIN THE FENCED AREA."

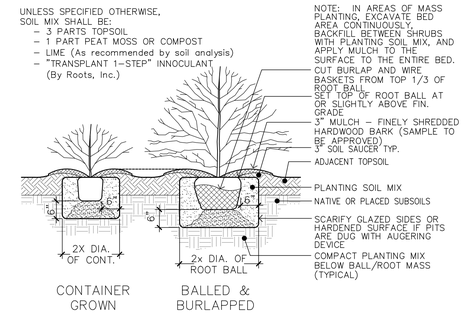
TREE PLANTING

Scale 1/2" = 1'–0"

SECTION THROUGH PERENNIAL BED



PERENNIAL NOTES:

1. BULB/CORM PERENNIALS TO BE PLANTED IN FALL. POTTED PERENNIALS MAY BE PLANTED APRIL 15 TO OCTOBER 1.
2. ROTOTILL FERTILIZER AND LIME INTO SOIL PRIOR TO PLANTING AND IN ACCORDANCE TO SOIL ANALYSIS RECOMMENDATIONS.
3. DO NOT OVER COMPACT PLANTING BED. WATER THOROUGHLY AFTER PLANTING BULBS.
4. ADJUST PLANTING DEPTH AS RECOMMENDED BY BULB SUPPLIER.
5. PROVIDE DRAINAGE AS REQUIRED (PERF PIPE 4" ADS) WHEN SUBGRADE IS CLASSIFIED AS A HEAVY SOIL OR EXCESSIVELY COMPACTED.

UNLESS SPECIFIED OTHERWISE, PERENNIAL BED SOIL MIX SHALL BE:
– 3 PARTS TOPSOIL
– 1 PART MANURE (WEED FREE)
– 1 PART PEAT MOSS OR COMPOST
– LIME (As recommended by soil analysis)
– "MILORGANITE" AT 5 LBS. PER 100 SF.

LiteFrame

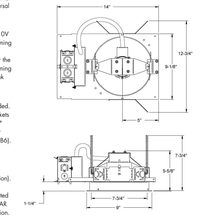
Ceiling Cutout 8 3/4"
Maximum Ceiling Thickness 1 3/4"
For conversion to millimeters, multiply inches by 25.4
Not to Scale

APPLICATIONS:
LiteFrame Commercial LC8SL is a 8" commercial grade LED downlight with available outputs between 1000-1800 lumens. This is suitable to replace most CFL downlighting applications, while realizing substantial energy and maintenance savings. Rated for a minimum of 50,000 hours life (70% lumen maintenance) with ambient plenum temperatures up to 35°C. Free Air Flow around the fixture is required for optimal life performance. This product is not recommended for use with 3rd party "FIREHAT" or insulation barriers.

HOUSING:
One-piece 22 gauge non-corrosive steel platform. Pre-wired J-box with snap-on cover for easy access. Snap-in connection from driver compartment allows easy installation of light engine/trim assembly and can be upgraded to accommodate technology improvements. Approved for 8 (4 in/4 out) No. 12 AWG conductor rated for 90°C through wiring.

REFLECTOR:
High purity aluminum, Alzak, iridescence suppressed, semi-diffuse reflector. Self-trim standard. Painted white self-trim (WT) available as option.

LED LIGHT ENGINE:
The LC8SL uses mid power Nichia LEDs, specifically mixed to provide a minimum of 80 CRI with 3 SDCM color consistency. The use of multiple mid power LEDs allows for optimal thermal management by effectively spreading the heat over a larger area and eliminating hot spots on the LEDs. A diffuse, yet highly transmissive lens obscures the view of the LEDs and creates a smooth, even look from below. The light engine is available in multiple Kelvin temperatures and the system is designed to provide optimal life and lumen maintenance (50,000 hours at 70% Lumen maintenance). The reflector/light engine assembly is mechanically retrained to the housing.



LED DRIVER:
The LC8SL utilizes a constant current LED driver. This same driver is capable of running all three different lumen outputs, resulting in a reduction of housing sku and simplified specification. The driver is UL8750, Class II compliant and universal 120V-277V.

DIMMING:
Comes standard with flicker-free 0-10V dimming to 10%. 0-10V to 1% dimming option is also available. See list of compatible dimmers on page 3. For the sizing of the control circuit, the dimming circuit may require up to 2mA of sink current.

INSTALLATION:
Light commercial bar hangers included. Universal adjustable mounting brackets also accept ½" EMT conduit or ½" or ¾" tubing channel (by others) or Prescolite 24" bar hangers (B24 or B6).

CERTIFICATIONS:
CSA certified to US and Canadian safety standards. Suitable for wet locations (SM and EMR damp location). ENERGY STAR Qualified.
This product qualifies as a "designated country construction material" per FAR 52.225-11 Buy American-Construction. Materials under Trade Agreements effective 6/10/2020. See Buy American Solutions.

WARRANTY:
5 year warranty. See www.prescolite.com for details.

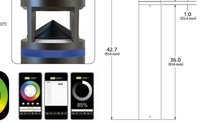
FEATURES
- Traditional or Performance Optics
- Bluetooth® enabled RGBW accent
- Integral NEMA 3R Enclosure
- Dual receptacle power panel
- PA System capability
- IP65 optical system

Pavilion™

DIMENSIONS



ADDITIONAL INFORMATION

LUMINOUS ACCENT:
- The Luminous Accent option adds an additional 1" / 25.4mm to the overall fixture height and may be controlled via wired DMX RDM or Bluetooth® wireless. The Luminous Accent shall be WDS.

HUBBELL LIGHTING RGBW REMOTE APP
- The Hubbell Lighting RGBW Remote application may be downloaded free of charge from the Apple App Store or Google Play.
- Color selection and adjustment.
- Camera function for color matching.
- Intensity slider for dimming/ramping up.
- Save and rename up to 10 presets.
- Group and rename fixtures.
- Fixture is password protected, refer to instructions to set unique password.

J-box in wall by others
Shallow Cutoff Face Surface Mount

WF23 with LED

Light distribution
Shallow Cutoff Face

Surface Mount: Die-cast, low copper (<0.6% Cu) aluminum alloy with double side walls. Zinc plated steel mounting plate supplied for mounting to standard 3" or 4" junction box.

Face Plate: Die-cast, low copper (<0.6% Cu) aluminum alloy with vertical and horizontal double rifts covering the full hemisphere. Ribs are minimum ⅝" depth and ⅜" thickness. Secures to housing with four stainless steel captive socket head screws.
Shallow Cutoff Face: Solid upper half protruding 3¾" from housing and concave lower half.

Lens: Flat tempered glass, ⅜" minimum thickness with internal sandblast. Retained in face plate and sealed with a one-piece silicone gasket.

LED Optical System: A total of 9 LED emitters configured in a rectangular array comprised together as a module. One (1) module for 9 LED version and two (2) modules for 18 LED version. Available in 580nm, 3000K, 4200K and 5100K.

LED Driver: Rated for 9 or 18 LED, Universal voltage from 120 to 277V with a ±10% tolerance. -40°F starting temperature. All drivers are Underwriters Laboratories recognized.

Finish: Each luminaire receives a fade and abrasion resistant, electrostatically applied, thermally cured, triglycidal isocyanurate (TGIC) polyester powdercoat finish. Standard colors include (BL) Black, (DB) Dark Bronze, (WH) White, (PS) Platinum Silver, (SG) Stealth Gray, (LG) Light Gray, and (CC) Custom Color (Include RAL#.).

Finishing Items: Electrical modules and face plates. Each set of finishing items shall be in one container, clearly marked with the fixture catalog number.

CAUTION: Fixtures must be grounded in accordance with national, state, and/or local electrical codes. Failure to do so may result in serious personal injury.

SPECIFICATIONS

CONSTRUCTION
- Low copper aluminum alloy die-casting is designed as one-piece with internal cooling fins.
- Solid, cast aluminum wall creates a thermal barrier between the optical and electrical compartments.
- Molded silicone gasket throughout insures the sealing between the two compartments and provides ingress protection.
- Housing is designed with integral LED heat sink utilized for thermal transfer and for securing the location of each LED module.
- IK09 rated enclosure protects electrical equipment against external mechanical impacts.
- All external fasteners are stainless steel.
- One-piece low copper aluminum alloy die-cast lens frame is secured to housing with 6 screws.

OPTICS
- LEDs mount to a metal printed circuit board assembly (MCPCB).
- Optical lenses are clear injection molded PMMA acrylic.
- Optional Backlight Control on each LED module to completely control unwanted backlight.

INSTALLATION
- Fixtures must be grounded in accordance with national, state and/or local electrical codes. Failure to do so may result in serious personal injury.

ELECTRICAL
- Universal voltage, 120 through 277V with a ±10% tolerance. Driver is Underwriters Laboratories listed.
- High voltage configurations, 347/480. Driver has a 0-10V dimming interface for multi-level illumination options. Driver is Underwriters Laboratories listed.
- "Thermal Shield", secondary side, thermistor provides protection for the sustainable life of LED module and electronic components
- Drivers shall have greater than a 0.9 power factor, less than 20% harmonic distortion, and be suitable for operation in -40°C to 40°C ambient environments.
- Luminaire shall be capable of operating at 100% brightness in a 40°C environment. Both driver and optical array have integral thermal protection that will dim the luminaire upon detection of temperatures in excess of 85°C.
- Surge protection: 10,000k in parallel, 2,000k in series
- Wiring: No. 18AWM rated 105°C, wet rating.

CONTROLS
7PR
- Fully gasketed and wired 7-pin receptacle option. Easy access location above the electrical compartment. 7-pin construction allows for a user-defined interface and provides a controlled definition of operational performance. ANSI twist-lock control module by-others.

Standard customer operation modes:
- Traditional on/off photoelectric control.
- 5-pin wireless photoelectric control for added dimming feature.
- 7-pin wireless photoelectric control for for dimming and additional I/O connections for customer use.

CONSTRUCTION SPECIFICATIONS

1. STONE SIZE – USE 3"–4" ANGULAR STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT.
2. LENGTH – NOT LESS THAN 50 FEET (EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY).
3. THICKNESS – NOT LESS THAN SIX (6) INCHES.
4. WIDTH – TWELVE (12) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. TWENTY–FOUR (24) FOOT IF SINGLE ENTRANCE TO SITE.
5. FILTER CLOTH – WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER – ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CON–STRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE – THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS–OF–WAY, ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACTED ONTO PUBLIC RIGHTS–OF–WAY MUST BE REMOVED IMMEDIATELY.
8. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON A AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

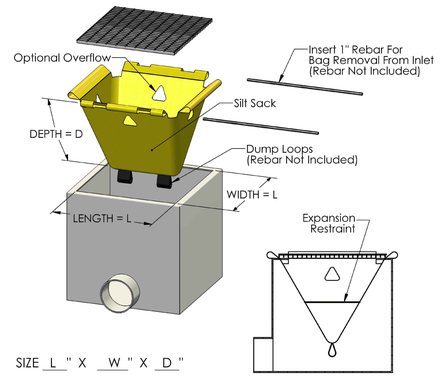
SILT FENCE

NOTES:

1. AREA CHOSEN FOR STOCKPILING OPERATIONS SHALL BE DRY AND STABLE.
2. MAXIMUM SLOPE OF STOCKPILE SHALL BE 1V:2H.
3. UPON COMPLETION OF SOIL STOCKPILING, EACH PILE SHALL BE SURROUNDED WITH SILT FENCING, THEN STABILIZED WITH VEGETATION OR COVERED.
4. SEE SPECIFICATIONS FOR INSTALLATION OF SILT FENCE.
5. HAYBALES OR SILT SOCKS TO BE USED WHERE STOCKPILES ARE LOCATED ON PAVED AREAS.

MATERIALS STOCKPILE
NOT TO SCALE



NOTES:

1. CONCRETE WASHOUT SIGN TO BE INSTALLED WITHIN 30 FEET OF THE TEMPORARY CONCRETE WASHOUT FACILITY.
2. REMOVE HARDENED CONCRETE WHEN WITHIN 4" FROM TOP OF STRUCTURE.
3. CONSTRUCT NEW FACILITIES ONCE CURRENT FACILITIES ARE TWO–THIRDS FULL. IF CONCRETE HAS NOT HARDENED CONSTRUCT NEW FACILITIES ONCE CURRENT FACILITY IS TWO–THIRDS FULL.
4. LINERS, HAYBALES, ET.C SHALL BE INSPECTED FOR DAMAGE. ANY DAMAGE SHALL BE REPAIRED PROMPTLY.
5. SEPARATE FACILITIES TO BE USED FOR VEHICLE WASHING IF NEEDED.
6. NO CONCRETE IS TO BE WASHOUT OUT ON THE GROUND IN ANY LOCATION.

X:\JOBS\Jobs 2020\20-2548-Urban Green-Wallace Campus-Poughkeepsie\DWG\DN20254805.dwg 11/24/2021 3:06 PM Saurav

Full Environmental Assessment Form
Part 2 - Identification of Potential Project Impacts

Part 2 is to be completed by the lead agency. Part 2 is designed to help the lead agency inventory all potential resources that could be affected by a proposed project or action. We recognize that the lead agency's reviewer(s) will not necessarily be environmental professionals. So, the questions are designed to walk a reviewer through the assessment process by providing a series of questions that can be answered using the information found in Part 1. To further assist the lead agency in completing Part 2, the form identifies the most relevant questions in Part 1 that will provide the information needed to answer the Part 2 question. When Part 2 is completed, the lead agency will have identified the relevant environmental areas that may be impacted by the proposed activity.

If the lead agency is a state agency **and** the action is in any Coastal Area, complete the Coastal Assessment Form before proceeding with this assessment.

Tips for completing Part 2:

- Review all of the information provided in Part 1.
- Review any application, maps, supporting materials and the Full EAF Workbook.
- Answer each of the 18 questions in Part 2.
- If you answer "**Yes"** to a numbered question, please complete all the questions that follow in that section.
- If you answer "**No"** to a numbered question, move on to the next numbered question.
- Check appropriate column to indicate the anticipated size of the impact.
- Proposed projects that would exceed a numeric threshold contained in a question should result in the reviewing agency checking the box "Moderate to large impact may occur."
- The reviewer is not expected to be an expert in environmental analysis.
- If you are not sure or undecided about the size of an impact, it may help to review the sub-questions for the general question and consult the workbook.
- When answering a question consider all components of the proposed activity, that is, the "whole action".
- Consider the possibility for long-term and cumulative impacts as well as direct impacts.
- Answer the question in a reasonable manner considering the scale and context of the project.

1. Impact on Land
Proposed action may involve construction on, or physical alteration of, the land surface of the proposed site. (See Part 1. D.1)
If "Yes", answer questions a - j. If "No", move on to Section 2.

☐ NO ☑ YES

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may involve construction on land where depth to water table is less than 3 feet.	E2d	NO ☑	☐
b. The proposed action may involve construction on slopes of 15% or greater.	E2f	NO ☑	☐
c. The proposed action may involve construction on land where bedrock is exposed, or generally within 5 feet of existing ground surface.	E2a	NO ☑	☐
d. The proposed action may involve the excavation and removal of more than 1,000 tons of natural material.	D2a	☑ SMALL	☐
e. The proposed action may involve construction that continues for more than one year or in multiple phases.	D1e	☑ SMALL	☐
f. The proposed action may result in increased erosion, whether from physical disturbance or vegetation removal (including from treatment by herbicides).	D2e, D2q	☑ NO	☐
g. The proposed action is, or may be, located within a Coastal Erosion hazard area.	B1i	NO ☑	☐
h. Other impacts: _____ _____		☑ NO	☐

2. Impact on Geological Features

The proposed action may result in the modification or destruction of, or inhibit access to, any unique or unusual land forms on the site (e.g., cliffs, dunes, minerals, fossils, caves). (See Part 1. E.2.g) ☑ NO ☐ YES

If "Yes", answer questions a - c. If "No", move on to Section 3.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. Identify the specific land form(s) attached: _____ _____	E2g	☐	☐
b. The proposed action may affect or is adjacent to a geological feature listed as a registered National Natural Landmark. Specific feature: _____	E3c	☐	☐
c. Other impacts: _____ _____		☐	☐

3. Impacts on Surface Water

The proposed action may affect one or more wetlands or other surface water bodies (e.g., streams, rivers, ponds or lakes). (See Part 1. D.2, E.2.h) ☑ NO ☐ YES

If "Yes", answer questions a - l. If "No", move on to Section 4.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may create a new water body.	D2b, D1h	☐	☐
b. The proposed action may result in an increase or decrease of over 10% or more than a 10 acre increase or decrease in the surface area of any body of water.	D2b	☐	☐
c. The proposed action may involve dredging more than 100 cubic yards of material from a wetland or water body.	D2a	☐	☐
d. The proposed action may involve construction within or adjoining a freshwater or tidal wetland, or in the bed or banks of any other water body.	E2h	☐	☐
e. The proposed action may create turbidity in a waterbody, either from upland erosion, runoff or by disturbing bottom sediments.	D2a, D2h	☐	☐
f. The proposed action may include construction of one or more intake(s) for withdrawal of water from surface water.	D2c	☐	☐
g. The proposed action may include construction of one or more outfall(s) for discharge of wastewater to surface water(s).	D2d	☐	☐
h. The proposed action may cause soil erosion, or otherwise create a source of stormwater discharge that may lead to siltation or other degradation of receiving water bodies.	D2e	☐	☐
i. The proposed action may affect the water quality of any water bodies within or downstream of the site of the proposed action.	E2h	☐	☐
j. The proposed action may involve the application of pesticides or herbicides in or around any water body.	D2q, E2h	☐	☐
k. The proposed action may require the construction of new, or expansion of existing, wastewater treatment facilities.	D1a, D2d	☐	☐

l. Other impacts: _____ _____		☐	☐

4. Impact on groundwater

The proposed action may result in new or additional use of ground water, or may have the potential to introduce contaminants to ground water or an aquifer. (See Part 1. D.2.a, D.2.c, D.2.d, D.2.p, D.2.q, D.2.t)

☑ NO ☐ YES

If "Yes", answer questions a - h. If "No", move on to Section 5.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may require new water supply wells, or create additional demand on supplies from existing water supply wells.	D2c	☐	☐
b. Water supply demand from the proposed action may exceed safe and sustainable withdrawal capacity rate of the local supply or aquifer. Cite Source: _____	D2c	☐	☐
c. The proposed action may allow or result in residential uses in areas without water and sewer services.	D1a, D2c	☐	☐
d. The proposed action may include or require wastewater discharged to groundwater.	D2d, E2l	☐	☐
e. The proposed action may result in the construction of water supply wells in locations where groundwater is, or is suspected to be, contaminated.	D2c, E1f, E1g, E1h	☐	☐
f. The proposed action may require the bulk storage of petroleum or chemical products over ground water or an aquifer.	D2p, E2l	☐	☐
g. The proposed action may involve the commercial application of pesticides within 100 feet of potable drinking water or irrigation sources.	E2h, D2q, E2l, D2c	☐	☐
h. Other impacts: _____ _____		☐	☐

5. Impact on Flooding

The proposed action may result in development on lands subject to flooding. (See Part 1. E.2)

☑ NO ☐ YES

If "Yes", answer questions a - g. If "No", move on to Section 6.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may result in development in a designated floodway.	E2i	☐	☐
b. The proposed action may result in development within a 100 year floodplain.	E2j	☐	☐
c. The proposed action may result in development within a 500 year floodplain.	E2k	☐	☐
d. The proposed action may result in, or require, modification of existing drainage patterns.	D2b, D2e	☐	☐
e. The proposed action may change flood water flows that contribute to flooding.	D2b, E2i, E2j, E2k	☐	☐
f. If there is a dam located on the site of the proposed action, is the dam in need of repair, or upgrade?	E1e	☐	☐

g. Other impacts: _____ _____		☐	☐

6. Impacts on Air

The proposed action may include a state regulated air emission source. (See Part 1. D.2.f., D.2.h, D.2.g) ☑ NO ☐ YES

If "Yes", answer questions a - f. If "No", move on to Section 7.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. If the proposed action requires federal or state air emission permits, the action may also emit one or more greenhouse gases at or above the following levels:			
i. More than 1000 tons/year of carbon dioxide (CO_2)	D2g	☐	☐
ii. More than 3.5 tons/year of nitrous oxide (N_2O)	D2g	☐	☐
iii. More than 1000 tons/year of carbon equivalent of perfluorocarbons (PFCs)	D2g	☐	☐
iv. More than .045 tons/year of sulfur hexafluoride (SF_6)	D2g	☐	☐
v. More than 1000 tons/year of carbon dioxide equivalent of hydrochloroflourocarbons (HFCs) emissions	D2g	☐	☐
vi. 43 tons/year or more of methane	D2h	☐	☐
b. The proposed action may generate 10 tons/year or more of any one designated hazardous air pollutant, or 25 tons/year or more of any combination of such hazardous air pollutants.	D2g	☐	☐
c. The proposed action may require a state air registration, or may produce an emissions rate of total contaminants that may exceed 5 lbs. per hour, or may include a heat source capable of producing more than 10 million BTU's per hour.	D2f, D2g	☐	☐
d. The proposed action may reach 50% of any of the thresholds in "a" through "c", above.	D2g	☐	☐
e. The proposed action may result in the combustion or thermal treatment of more than 1 ton of refuse per hour.	D2s	☐	☐
f. Other impacts: _____ _____		☐	☐

7. Impact on Plants and Animals

The proposed action may result in a loss of flora or fauna. (See Part 1. E.2. m.-q.) ☑ NO ☐ YES

If "Yes", answer questions a - j. If "No", move on to Section 8.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may cause reduction in population or loss of individuals of any threatened or endangered species, as listed by New York State or the Federal government, that use the site, or are found on, over, or near the site.	E2o	☐	☐
b. The proposed action may result in a reduction or degradation of any habitat used by any rare, threatened or endangered species, as listed by New York State or the federal government.	E2o	☐	☐
c. The proposed action may cause reduction in population, or loss of individuals, of any species of special concern or conservation need, as listed by New York State or the Federal government, that use the site, or are found on, over, or near the site.	E2p	☐	☐
d. The proposed action may result in a reduction or degradation of any habitat used by any species of special concern and conservation need, as listed by New York State or the Federal government.	E2p	☐	☐

e. The proposed action may diminish the capacity of a registered National Natural Landmark to support the biological community it was established to protect.	E3c	□	□
f. The proposed action may result in the removal of, or ground disturbance in, any portion of a designated significant natural community. Source: _____	E2n	□	□
g. The proposed action may substantially interfere with nesting/breeding, foraging, or over-wintering habitat for the predominant species that occupy or use the project site.	E2m	□	□
h. The proposed action requires the conversion of more than 10 acres of forest, grassland or any other regionally or locally important habitat. Habitat type & information source: _____ _____	E1b	□	□
i. Proposed action (commercial, industrial or recreational projects, only) involves use of herbicides or pesticides.	D2q	□	□
j. Other impacts: _____ _____		□	□

8. Impact on Agricultural Resources

The proposed action may impact agricultural resources. (See Part 1. E.3.a. and b.) ☑ NO ☐ YES

If "Yes", answer questions a - h. If "No", move on to Section 9.

	Relevant Part I Question(s)	**No, or small impact may occur**	**Moderate to large impact may occur**
a. The proposed action may impact soil classified within soil group 1 through 4 of the NYS Land Classification System.	E2c, E3b	□	□
b. The proposed action may sever, cross or otherwise limit access to agricultural land (includes cropland, hayfields, pasture, vineyard, orchard, etc).	E1a, Elb	□	□
c. The proposed action may result in the excavation or compaction of the soil profile of active agricultural land.	E3b	□	□
d. The proposed action may irreversibly convert agricultural land to non-agricultural uses, either more than 2.5 acres if located in an Agricultural District, or more than 10 acres if not within an Agricultural District.	E1b, E3a	□	□
e. The proposed action may disrupt or prevent installation of an agricultural land management system.	El a, E1b	□	□
f. The proposed action may result, directly or indirectly, in increased development potential or pressure on farmland.	C2c, C3, D2c, D2d	□	□
g. The proposed project is not consistent with the adopted municipal Farmland Protection Plan.	C2c	□	□
h. Other impacts: _____		□	□

9. Impact on Aesthetic Resources

The land use of the proposed action are obviously different from, or are in sharp contrast to, current land use patterns between the proposed project and a scenic or aesthetic resource. (Part 1. E.1.a, E.1.b, E.3.h.)

☑ NO ☐ YES

If "Yes", answer questions a - g. If "No", go to Section 10.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. Proposed action may be visible from any officially designated federal, state, or local scenic or aesthetic resource.	E3h	☐	☐
b. The proposed action may result in the obstruction, elimination or significant screening of one or more officially designated scenic views.	E3h, C2b	☐	☐
c. The proposed action may be visible from publicly accessible vantage points: i. Seasonally (e.g., screened by summer foliage, but visible during other seasons) ii. Year round	E3h	 ☐ ☐	 ☐ ☐
d. The situation or activity in which viewers are engaged while viewing the proposed action is: i. Routine travel by residents, including travel to and from work ii. Recreational or tourism based activities	E3h E2q, E1c	 ☐ ☐	 ☐ ☐
e. The proposed action may cause a diminishment of the public enjoyment and appreciation of the designated aesthetic resource.	E3h	☐	☐
f. There are similar projects visible within the following distance of the proposed project: 0-1/2 mile ½ -3 mile 3-5 mile 5+ mile	D1a, E1a, D1f, D1g	☐	☐
g. Other impacts: _____ _____		☐	☐

10. Impact on Historic and Archeological Resources

The proposed action may occur in or adjacent to a historic or archaeological resource. (Part 1. E.3.e, f. and g.)

☐ NO ☑ YES

If "Yes", answer questions a - e. If "No", go to Section 11.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may occur wholly or partially within, or substantially contiguous to, any buildings, archaeological site or district which is listed on the National or State Register of Historical Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places.	E3e	☑ SMALL	☐
b. The proposed action may occur wholly or partially within, or substantially contiguous to, an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory.	E3f	☑ SMALL	☐
c. The proposed action may occur wholly or partially within, or substantially contiguous to, an archaeological site not included on the NY SHPO inventory. Source: _____	E3g	☑ NO	☐

d. Other impacts: _____ _____		☐	☐
e. If any of the above (a-d) are answered "Moderate to large impact may occur", continue with the following questions to help support conclusions in Part 3:			
i. The proposed action may result in the destruction or alteration of all or part of the site or property.	E3e, E3g, E3f	☐	☐
ii. The proposed action may result in the alteration of the property's setting or integrity.	E3e, E3f, E3g, E1a, E1b	☐	☐
iii. The proposed action may result in the introduction of visual elements which are out of character with the site or property, or may alter its setting.	E3e, E3f, E3g, E3h, C2, C3	☐	☐

11. Impact on Open Space and Recreation

The proposed action may result in a loss of recreational opportunities or a reduction of an open space resource as designated in any adopted municipal open space plan.
(See Part 1. C.2.c, E.1.c., E.2.q.)
If "Yes", answer questions a - e. If "No", go to Section 12.

☑ NO ☐ YES

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may result in an impairment of natural functions, or "ecosystem services", provided by an undeveloped area, including but not limited to stormwater storage, nutrient cycling, wildlife habitat.	D2e, E1b E2h, E2m, E2o, E2n, E2p	☐	☐
b. The proposed action may result in the loss of a current or future recreational resource.	C2a, E1c, C2c, E2q	☐	☐
c. The proposed action may eliminate open space or recreational resource in an area with few such resources.	C2a, C2c E1c, E2q	☐	☐
d. The proposed action may result in loss of an area now used informally by the community as an open space resource.	C2c, E1c	☐	☐
e. Other impacts: _____ _____		☐	☐

12. Impact on Critical Environmental Areas

The proposed action may be located within or adjacent to a critical environmental area (CEA). (See Part 1. E.3.d)
If "Yes", answer questions a - c. If "No", go to Section 13.

☑ NO ☐ YES

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may result in a reduction in the quantity of the resource or characteristic which was the basis for designation of the CEA.	E3d	☐	☐
b. The proposed action may result in a reduction in the quality of the resource or characteristic which was the basis for designation of the CEA.	E3d	☐	☐
c. Other impacts: _____ _____		☐	☐

13. Impact on Transportation
The proposed action may result in a change to existing transportation systems. ☐ NO ☑ YES
(See Part 1. D.2.j)
If "Yes", answer questions a - f. If "No", go to Section 14.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. Projected traffic increase may exceed capacity of existing road network.	D2j	NO ☑	☐
b. The proposed action may result in the construction of paved parking area for 500 or more vehicles.	D2j	NO ☑	☐
c. The proposed action will degrade existing transit access.	D2j	NO ☑	☐
d. The proposed action will degrade existing pedestrian or bicycle accommodations.	D2j	NO ☑	☐
e. The proposed action may alter the present pattern of movement of people or goods.	D2j	NO ☑	☐
f. Other impacts: The project will result in increased demand for off-street parking. The project will result in the need for signal timing improvements.		☑ SMALL	☐

14. Impact on Energy
The proposed action may cause an increase in the use of any form of energy. ☐ NO ☑ YES
(See Part 1. D.2.k)
If "Yes", answer questions a - e. If "No", go to Section 15.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action will require a new, or an upgrade to an existing, substation.	D2k	NO ☑	☐
b. The proposed action will require the creation or extension of an energy transmission or supply system to serve more than 50 single or two-family residences or to serve a commercial or industrial use.	D1f, D1q, D2k	☑ NO	☐
c. The proposed action may utilize more than 2,500 MWhrs per year of electricity.	D2k	NO ☑	☐
d. The proposed action may involve heating and/or cooling of more than 100,000 square feet of building area when completed.	D1g	☑ NO	☐
e. Other Impacts: The project will result in increased energy use below the above thresholds.		☑ SMALL	☐

15. Impact on Noise, Odor, and Light
The proposed action may result in an increase in noise, odors, or outdoor lighting. ☑ NO ☐ YES
(See Part 1. D.2.m., n., and o.)
If "Yes", answer questions a - f. If "No", go to Section 16.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may produce sound above noise levels established by local regulation.	D2m	□	□
b. The proposed action may result in blasting within 1,500 feet of any residence, hospital, school, licensed day care center, or nursing home.	D2m, E1d	□	□
c. The proposed action may result in routine odors for more than one hour per day.	D2o	□	□

d. The proposed action may result in light shining onto adjoining properties.	D2n	☐	☐
e. The proposed action may result in lighting creating sky-glow brighter than existing area conditions.	D2n, E1a	☐	☐
f. Other impacts: _____ _____		☐	☐

16. Impact on Human Health

The proposed action may have an impact on human health from exposure to new or existing sources of contaminants. (See Part 1.D.2.q., E.1. d. f. g. and h.) ☐ NO ☑ YES

If "Yes", answer questions a - m. If "No", go to Section 17.

	Relevant Part I Question(s)	No,or small impact may cccur	Moderate to large impact may occur
a. The proposed action is located within 1500 feet of a school, hospital, licensed day care center, group home, nursing home or retirement community.	E1d	☑ SMALL	☐
b. The site of the proposed action is currently undergoing remediation.	E1g, E1h	☑ SMALL	☐
c. There is a completed emergency spill remediation, or a completed environmental site remediation on, or adjacent to, the site of the proposed action.	E1g, E1h	☑ SMALL	☐
d. The site of the action is subject to an institutional control limiting the use of the property (e.g., easement or deed restriction).	E1g, E1h	☑ SMALL	☐
e. The proposed action may affect institutional control measures that were put in place to ensure that the site remains protective of the environment and human health.	E1g, E1h	☑ NO	☐
f. The proposed action has adequate control measures in place to ensure that future generation, treatment and/or disposal of hazardous wastes will be protective of the environment and human health.	D2t	☑ NO	☐
g. The proposed action involves construction or modification of a solid waste management facility.	D2q, E1f	☑ NO	☐
h. The proposed action may result in the unearthing of solid or hazardous waste.	D2q, E1f	☑ SMALL	☐
i. The proposed action may result in an increase in the rate of disposal, or processing, of solid waste.	D2r, D2s	☑ SMALL	☐
j. The proposed action may result in excavation or other disturbance within 2000 feet of a site used for the disposal of solid or hazardous waste.	E1f, E1g E1h	☑ NO	☐
k. The proposed action may result in the migration of explosive gases from a landfill site to adjacent off site structures.	E1f, E1g	☑ NO	☐
l. The proposed action may result in the release of contaminated leachate from the project site.	D2s, E1f, D2r	☑ NO	☐
m. Other impacts: See below. _____ _____		☑ SMALL	☐

The site currently contaminated from past use. A Brownfield's Cleanup agreement has been entered into with the NYSDEC. The anticipated cleanup involves removal of existing contaminated soils under the supervision of NYSDEC pursuant to investigative and remedial work plans under NYSDEC's instructions.

17. Consistency with Community Plans

The proposed action is not consistent with adopted land use plans. ☑ NO ☐ YES

(See Part 1. C.1, C.2. and C.3.)

If "Yes", answer questions a - h. If "No", go to Section 18.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action's land use components may be different from, or in sharp contrast to, current surrounding land use pattern(s).	C2, C3, D1a E1a, E1b	☐	☐
b. The proposed action will cause the permanent population of the city, town or village in which the project is located to grow by more than 5%.	C2	☐	☐
c. The proposed action is inconsistent with local land use plans or zoning regulations.	C2, C2, C3	☐	☐
d. The proposed action is inconsistent with any County plans, or other regional land use plans.	C2, C2	☐	☐
e. The proposed action may cause a change in the density of development that is not supported by existing infrastructure or is distant from existing infrastructure.	C3, D1c, D1d, D1f, D1d, Elb	☐	☐
f. The proposed action is located in an area characterized by low density development that will require new or expanded public infrastructure.	C4, D2c, D2d D2j	☐	☐
g. The proposed action may induce secondary development impacts (e.g., residential or commercial development not included in the proposed action)	C2a	☐	☐
h. Other: _____ _____		☐	☐

18. Consistency with Community Character

The proposed project is inconsistent with the existing community character. ☐ NO ☑ YES

(See Part 1. C.2, C.3, D.2, E.3)

If "Yes", answer questions a - g. If "No", proceed to Part 3.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may replace or eliminate existing facilities, structures, or areas of historic importance to the community.	E3e, E3f, E3g	☑ SMALL	☐
b. The proposed action may create a demand for additional community services (e.g. schools, police and fire)	C4	☑ SMALL	☐
c. The proposed action may displace affordable or low-income housing in an area where there is a shortage of such housing.	C2, C3, D1f D1g, E1a	☑ NO	☐
d. The proposed action may interfere with the use or enjoyment of officially recognized or designated public resources.	C2, E3	☑ NO	☐
e. The proposed action is inconsistent with the predominant architectural scale and character.	C2, C3	☑ NO	☐
f. Proposed action is inconsistent with the character of the existing natural landscape.	C2, C3 E1a, E1b E2g, E2h	☑	☐
g. Other impacts: The project will promote environmental justice. _____		☑ SMALL	☐

PRINT FULL FORM

Wallace Campus Project
EAF Part 3
Identification and Evaluation of Potential Project Impacts
Draft 12/14/21

1. ***Impact on Land***
Proposed action may involve construction on, or physical alteration of the land surface of the proposed site.

Part 2 FEAF 1.d. The proposed action may involve the excavation and removal of more than 1,000 tons of natural material.

The project is likely to result in the excavation of more than 1,000 tons of soil because of the need to remove potentially contaminated soil. This will result in an improvement to the quality of the environment. See 16, Impact on Human Health, below, for discussion of this impact. See 1.e below for a discussion of truck traffic.

Part 2 FEAF 1.e. The proposed action may involve construction that continues for more than one year or in multiple phases.

Construction is expected to last 24 months. This will result in ongoing construction related impacts and disturbance to the neighborhood. Such impacts are likely to include increased traffic due to construction and construction related noise, dust and odor impacts. Depth to bedrock is in excess of 40 feet and therefore blasting is unlikely to be required.

The Project Sponsor will be required to employ Best Practices to limit construction impacts. Such practices shall include:

1) Designation of routes for construction trucks to access and stage at the site. This includes trucks removing contaminated soil (see 16, Impact on Human Health, below).

2) Preparation of a dust suppression plan to be implemented during dry periods or other times when blowing dust occurs.

3) Implementation of the March 2, 2021, revised December 7, 2021, and as subsequently amended, Stormwater Pollution and Prevention Plan's (SWPPP's) erosion and sediment control measures including temporary seeding, sediment traps, silt fences, stabilized construction entrances, silt sacks, and other methods described in the NYSDEC Standards and Specifications for Erosion and Sediment Control.

4) All construction vehicles and equipment will be well maintained and operated in an efficient manner. Construction equipment will be required to be equipped with noise attenuation devices and mufflers. In particular, the mufflers on all construction equipment will be fully functional and well maintained by the construction contractor.

5) Construction will be limited to the hours of 6:30 am to 9:00 pm, Monday through Friday, per City Code.

10. ***Impact on Historic and Archeological Resources***
The proposed action may occur in or adjacent to a historic or archaeological resource.

Part 2 FEAF 10.a. The proposed action may occur wholly or partially within, or substantially contiguous to, any buildings, archeological site or district which is listed on the National or State Register of Historical Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation (OPRHP) to be eligible for listing on the State Register of Historic Places.

Portions of the Project Site are located in the City's Mill Street Historic District and adjoining properties are State/National Historic Register listed.

On May 7, 2021 the National Park Service determined that the Wallace Building appeared to meet the criteria for listing on the National Register. The Applicant applied to OPRHP for National Register Nomination for the Wallace Building (331 Main and 14-20 Catharine). This application received preliminary approval on May 7, 2021 indicating that the building will likely be listed in the National Register of Historic Places if nominated by the State Historic Preservation Office pursuant to the procedures set forth in 36 CFR Part 60. Designation to the State and National Registers is likely to happen in 2022. The Applicant has also applied to the National Park Service for Commercial Rehabilitation Tax Credits, which application is also under review.

The Project was submitted to OPRHP for Consistency Review. By letter dated May 18, 2021, the OPRHP determined that the buildings at 319, 325 and 327-329 Main Street were not eligible for the Historic Register. OPRHP further found that with the understanding that none of the new construction will have an interior connection to the Wallace Department Store Building, it is the OPRHP's opinion that the demolition and replacement of the buildings at 319, 325 and 327-329 Main Street will have No Adverse Effect on historic resources provided that the following conditions are met:

1. The Part-2 Federal Commercial Tax Credit application for the Wallace Department Store at 331 Main Street must be reviewed and approved by the National Parks Service.

2. A demolition and construction protection plan for the neighboring historic buildings must be developed and implemented.

The City of Poughkeepsie conducted a survey of potentially historic buildings in 1976-77. That survey identified 59 properties that should be nominated to the National Register but did not include the buildings at 319, 325 and 327-329 Main Street. Poughkeepsie's Historic District and Landmark's Preservation Commission (HDLPC) has its own historic register; none of these buildings are on the register. The City also declined to list these buildings when a comprehensive study of Main Street was done.

The Planning Board engaged an architect, Mass Design Group, to assist in reviewing the architecture of the project. The purpose of this review is to ensure that building architecture is compatible with the historic character of project site buildings as well as the Mill Street Historic District.

The Planning Board and its consultant engaged in extensive dialogue with the Applicant concerning the building architecture. This dialogue resulted in the downsizing of the proposed buildings and the elimination of the need for height variances.

The proposed renovation scope for the Wallace building includes preservation of the Art Deco Main Street exterior, and a limestone façade that will remain unchanged from the second floor to the roof. Transparency will be added to the first floor (per historic images). The east and west facades will have new window penetrations, reworking existing, non-historic penetrations. Internal elements to be retained include utilizing the existing stairways and maintaining the historically significant painted dome at the fourth-floor ceiling. The Applicant has also agreed to retain the former Wallace Department Store sign.

The Wallace project improves and is compatible with the streetscape along Mill Street, enhances landscaping at the driveway entrances, and presents fully finished rear (north) elevations of the buildings to enhance pedestrian and driver views along the Mill Street corridor and into the site. Views into the site from the north will include views of Wallace Green and enhanced plantings within and around parking areas.

The Applicant has also worked with an architectural salvage company (Zarborski Emporium) to repurpose the interiors of 325 and 331 Main Street. The company has declined to utilize any items at 319 Main Street. 325 Main Street is fully occupied. The Applicant has agreed to allow access for potential architectural salvage once it is vacated. The Applicant has reached out to the Historic Albany Foundation to see if any exterior features of 319, 325 and 329 Main Street can be preserved and donated. The Applicant has also reached out to the HDLPC to photo document the buildings as the Commission requested.

Part 2 FEAF 10.b. The proposed action may occur wholly or partially within, or substantially contiguous to, an area designated as sensitive for archeological sites on the NY State Historic Preservation Office (SHPO) archeological site inventory.

The Project was submitted to OPRHP for Consistency Review. A Consistency Determination was issued on May 18, 2021. See 10.a above.

13. Impact on Transportation
The proposed action may result in a change to existing transportation systems.

Part 2 FEAF 13.f. Other Impacts. The Project will result in an increased demand for off-street parking.

The Applicant submitted a parking analysis dated September 28, 2021 and revised December 7, 2021. The analysis reflected modifications to the project as a result of the site plan review process, which included a reduction in units, elimination of the day care facility and fitness center/climbing gym and an increase in retail/commercial space.

The revised plan results in simplification of the parking and circulation patterns because of the elimination of the daycare facility and associated drop-off/pick-up areas.

The Applicant will provide a permanent access easement to the owner of the three Mill Street lots for the benefit of owners and tenants, to access the parking areas located on these lots via the Wallace Campus access drives. The Shared Parking Agreement would maintain the allocation of dedicated parking (12 spaces) to the three Mill Street lots in compliance with the PID zoning. Pursuant to a separate Shared Parking Agreement with the Hudson River Housing ("HRH") property at 310 Mill Street, the Applicant would be granted a permanent easement for improvements within the HRH property in exchange for HRH employees use of six Wallace parking spaces during working hours 8 am to 6 pm Monday to Friday. The six spaces would be available for Wallace Campus parking outside of those hours.

Overall, the project incorporates 60 parking spaces, while 32 spaces are required by zoning. Together with the 32 spaces required for the project, the total required spaces is 50 spaces during HRH office hours and 44 spaces all other times on Weekdays and all day on weekends.
Part 2 FEAF 13.f. Other Impacts. The Project will result in increased demand for off-street parking and will result in the need for signal timing improvements.

The project will hold occasional public performances/community gatherings within the Wallace Green and tiered seating area. The parking accommodations for these performances/gatherings can be accommodated by available on-street parking in the area of the site as was identified in the February 27 parking study. The Applicant has obtained letters expressing interest from several local organizations.

By e-mail dated May 13, 2021 The New York State DOT advised that the Applicant will be responsible for signal timing improvements and an upgrade to a traffic controller. These are improvements that are routinely made when traffic patterns change and would not have any significant adverse impact on traffic patterns.

14. Impact on Energy
The proposed action may cause an increase in the use of any form of energy.

Part 2 FEAF 14.e. Other Impacts: The Project will result in an increase in energy use.

The Project will result in an increased demand for energy in the form of electricity. The increase is less than the thresholds in this Part 2 screening question.

Additionally, the Applicant is proposing to employ Green Building Practices under the Enterprise Green Community program. The Planning Board's engineer, the Chazen Companies, performed an analysis of the Enterprise Green Community Program and found in a report issued March 30, 2021 that it is of similar or greater value in terms of water use, energy efficiency, stormwater management and carbon emissions when compared with the LEED Gold Certification Program.

No significant adverse energy impacts are therefore anticipated.

16. Impact on Human Health
The proposed action may have an impact on human health from exposure to new or existing sources of contaminants.

Part 2 FEAF 16.a. The proposed action is located within 1,500 feet of a school, hospital, licensed day care center, group home, nursing home or retirement community.

The Project is located within 1,500 feet of the More Young Children Magnet Elementary School, Clinton Elementary School, Hudson River Healthcare, Inc., Community Family Development, and Humble Life Family Daycare. However, the project will not generate noise or other forms of pollution and therefore is not anticipated to impact such facilities.

Part 2 FEAF 16.b. The site of the proposed action is currently undergoing remediation.

The subject property has historically been used for commercial uses, including automotive repair, machining operations, furniture finishing, laundry activities, and gasoline underground storage tanks. As a result, the site has been subject to multiple environmental investigations.

Soils at multiple locations throughout the site, ranging in depth from one to seven feet below the parking lot surface, are impacted by Polycyclic Aromatic Hydrocarbons (PAH) and metals (mercury and lead) above Residential Use Soil Clean-up Objectives (i.e. the level of clean soil that must be achieved to allow construction of a residential use). No significant levels of Volatile Organic Carbons pesticides or PCBs have been found in the soils. Additional vapor investigation is warranted to determine whether soil vapor intrusion poses a risk to future building occupants.

The Applicant submitted a Brownfield Cleanup Program (BCP) Application and Remedial Investigation Work Plan (RIWP) to the NYSDEC on January 28, 2021 and a Letter of Completeness was issued on February 16, 2021. A public comment period concluded on March 26, 2021. The Applicant and DEC executed the RIWP on April 16, 2021. The site will therefore be remediated to BCP standards. It is anticipated that the site will be cleaned up to Track 1 standards. Track 1 is the highest standard and results in no restrictions to site use.

Based on the foregoing, no significant impacts to human health are anticipated.

Part 2 FEAF 16.c. There is a completed emergency spill remediation or a completed environmental site remediation on, or adjacent to, the site of the proposed action.

See 16.b above. Environmental remediation is ongoing and will soon be completed.

Part 2 FEAF 16.e The proposed action may affect institutional control measures that were put in place to ensure that the site remains protective of the environment and human health.

While there are no institutional controls currently in place, the Brownfield Site Clean-up Agreement executed with the DEC on April 19, 2021 provides for the possibility of future institutional controls. Such controls, if enacted, would be intended to be protective of the environment and human health.

Part 2 FEAF 16.h. The proposed action may result in the unearthing of solid or hazardous waste.

See b. above for a discussion of this issue.

Part 2 FEAF 16.i. The proposed action may result in an increase in the rate of disposal, or processing, of solid waste.

Project residents will generate solid waste, just as they do in their existing living situations. The project will be equipped with recycling collection facilities. No significant adverse impacts related to solid waste are anticipated.

18. Consistency with Community Character
The proposed project is inconsistent with the existing community character.

Part 2 FEAF 18.a. The proposed action may replace or eliminate existing facilities, structures, or areas of historic importance to the community.

See 10.a above for a discussion of this impact.

Part 2 FEAF 18.b. The proposed action may create a demand for additional community services (e.g. schools, police and fire).

The Project will make demands on community resources similar to any residential project. To the extent that residents relocate from elsewhere in the City to this new affordable housing development, such demands will be relocated, but not changed. The City Police and Fire Departments have indicated their ability to provide services to the project without adverse impacts by letters dated December 14, 2021.

The Project's demands on community resources are therefore not anticipated to be significant.

Part 2 FEAF 18.g. Other. The proposed action will promote environmental justice.

The Project promotes environmental justice because it provides an opportunity for people to leave substandard housing. By providing new workforce housing in the City low wage earners are afforded the opportunity to live in a new building, with attractive amenities, on existing bus lines, and near to educational and work options. The workforce housing will be open to anyone who qualifies and there will be no discrimination on the basis of gender, race or other characteristics. The housing will be subject to all FHA and state funding requirements. The apartments will also provide thirty units of supportive housing and the Applicant has provided information to the City Planning Board on the management of the housing and the apartments overall which includes staffing and security measures to help ensure the success of the supportive and workforce housing.

Wallace Campus – Public Comment Responses from December 21, 2021

The Development Team has listened to the concerns voiced at the planning board meetings and public hearings. All the concerns voiced from the December 21, 2021 and subsequently submitted comments addressed to the Planning Board are addressed below.

Public Comment	Response
Date: December 21, 2021 *Name: Carmela Schwab* *Form: Verbal Comment* *So Carmela Schwab, I live near the Post Office in Poughkeepsie at the Community Outreach Event for Wireless Campus last week.* *The presentation included designing a green space for the public to be able to utilize and enjoy.* *And I had asked the team if they would consider utilizing local nurseries that supply New York native plants, which promote sustainability and beneficial pollinators to be coming into a more urban area where there's typically not space for this.* *When my two suggestions were the Catskill Native Nursery in Croxton and Rosedale Nursery in Hawthorne, New York, both supply Northeast native plants, and both are able to advise them like optimal plant combinations for this, like for the space and conditions available.* *And once rid of native plants are really hardy and fairly low maintenance, they can support pollinators like monarchs and because monarchs are migrating through the Hudson Valley.* *Potentially, this could be like a certified monarch waystation, which is also providing beautiful flowers and blooms.* *It could be educational for the public about plants sustaining butterflies and pollinators, or additionally have space for a raised garden beds with volunteer gardeners or different programs that could provide vegetables and fun activities during the summer where there was space for programs as well.*	The plant list on sheet LL-2 has been revised to included additional shrub, perennial and wildflower species including milkweed with an objective of increasing the habitat and nectar provisions for all pollinators, including the monarch butterfly. Per our submitted plan sheet LL-1 has been modified to show revisions to plant designations where new shrub species are being substituted for plants previously shown on the plan. Wildflower plugs (such as milkweed species) shall be from seed stock gathered in the wild within New York state (preferred), Connecticut, Massachusetts or New Jersey. Additional perennial flower species have been added to the list including three types of milkweeds in order to increase the diversity and quantity of nectar plants for pollinators.

So I just wanted to say I'm really excited for their space and this is possible to consider. *I think that'd be a great addition.* *Thank you, thank you.*	
Date: December 21, 2021 *Name: Michael deCordova* *Form: Verbal Comment* *I had other comments, but I wanted to address Mr. O'Grady because statistics are just statistics and the statistic that I gathered concern for kill comments of support of low income housing project, the underwear factory that didn't have any supportive housing, and most recently, the Poughkeepsie Commons.* *The EMT, fire and police calls are about 100 times in normal housing project at those facilities.* *One hundred times that the police department says they can handle the increased burden.* *Why would that be necessary when it's obvious to every city resident that the police department in our community is severely, severely overburdened? So people have told me not to tell my truth about the community, its needs, its burdens.* *We are above average poor community, something double the rest of Dutchess County, and this will be the largest and the lowest income housing project that we have seen forever.* *So we are adding more low income to our community when our community is struggling.* *They're struggling with tax revenue.* *They're terribly struggling with schools.* *And there's no equal amount of money that the government is giving this project, which is not your purview.*	The Poughkeepsie Fire Department and Police Department have reviewed the project and determined that they have the capacity to serve the project. In addition, the Police Department stated "At this time, nighttime gates would not appear to be necessary given the proposed provision of security cameras, sufficient lighting, and increased activity in the area as a results of the elimination of vacant buildings and proposed multi-family housing." The project's AMI currently averages to 57% AMI, and serves a diverse range of incomes from 30% AMI up to 80% AMI. The Development Team has hosted three public informational sessions (the first in-person on November 11, 2021, the second on December 13, 2021, and the third virtual session on January 6, 2022) to answer questions regarding the project. All materials regarding income mix and summaries of the project are publicly shared to avoid confusion or misinformation about the project. Maser Consulting has conducted a robust traffic study and submitted a report to the City's Planning Board. The report concludes "Furthermore, the proposed development is not anticipated to have any significant traffic related impacts on the surrounding area intersections and with the recommended modifications to facilitate internal circulation and the Daycare drop-off/pick-up, there will not be any traffic related impacts associated with the proposed development." Since the study, the Development Team has reduced the density of the project and removed the day-care program. The reduction of the project supports Maser's conclusion that the project will not have a traffic impact.

It's just very sad that there's no equal amount of resource to fix up neighborhoods, communities, house by house and and the negative beneficiaries of this, if you will. I'm not sure the right word are our children. *And I'm very, very sad for that.* *I don't know how much time I have left.* *Many people have spoken over the months prominent lawyers, people from family services who would prefer that this project be elsewhere or not be of as low income as it is if there ever was a project that required an environmental impact statement.* *This one warrants it for traffic, for economics.* *Look at Moody's ratings of our city, for the character of the community, the impact on the long term growth of our community and the vitality of Main Street.* *The impact on existing businesses and the public controversy.* *This cries for an environmental impact statement.* *There's a lot other things that I would like to say and.* *Mr O'Grady at our meeting last week said, and I quote our system.* *Our system kind of requires us sometimes the House people who aren't quite ready.* *And Mr.* *Last comments, please.* *The CEO of Mega thought that the project across the street that Ken Carney is building was market rate and that that and lucky plot would help to offset his.*	Per the Development Team's response in November, the Development Team has conducted site visits with prospective retail tenants, and all the tenants have expressed support for the residential programming of the project. The Development Team seeks to activate Main Street and help grow the number of small businesses in Poughkeepsie.

He's woefully undereducated about our community because the project across the street is here to hurt you before this project. *One of the lowest income housing projects that we've had in our community.* *So there's a lot of misinformation here and we need to ferret it out properly.* *Appreciate the extra time.*	
Date: December 21, 2021 *Name: Craig Brenly* *Form: Verbal Comment* *Hi, Craig Brenly, county legislator, city and town of Kempsey.* *I just wanted to thank you for taking our comments as a county legislator, I continue to hear concerns about this development at the heart of our business district, and I ask that the committee continue to listen to the residents and the business owners concerns.* *I understand the various concerns have been assessed tonight and as well as discuss tonight.* *One thing that has been clear from all of these meetings is that the residents and business owners here still are calling and expressing their concerns.* *I remind you that as residents, we need to work to get the best decisions for our community.* *There are strong models of how to implement it for affordable housing across this country.* *And this isn't it 100 percent models is not the wave of the future.* *We need to be looking at mixed income that includes market rate components.* *This will truly address stigma.*	Per our response in November 2021, Market rate is not contemplated because the City of Poughkeepsie also has a demonstrated need for more affordable housing – over half of the renters in Poughkeepsie are rent burdened, and pay more than 30% of their income on rent. By capping a resident's rent at 30% of their income, the project will help keep Poughkeepsie affordable to over 300 people who can reside at Wallace Campus. Additionally, most of the City of Poughkeepsie's new developments are market rate housing. Per data from the Department of Planning, approximately two thirds of the housing projects that have been presented at the Planning Board for review have been market rate housing. The Development Team believes that the best way to address stigma is to create an architecturally pleasing, high-quality housing in Downtown Poughkeepsie that serves people in need of quality housing.

We do not want buildings to be stigmatized, and having a market rate component would help with that. *This is a very large project, and it is important that we we look towards getting the strongest development for our residents.* *The best decisions that people make are not in haste.* *Any projects in our Middle Mean Business District need to be well thought out for the benefit of all those living and working here.* *Thank you so much for your time.*	
Date: December 21, 2021 *Name: Doug Nobeletti* *Form: Verbal Comment* *Thank you. I thank the board for taking time to allow us all to feedback on this project once again.* *And yes, as per Cheryl Levine, I will discuss something other than what I've previously discussed.* *I want to address the loss of businesses. We've most notably lost one that has been here for over seven years on Liberty Street and has tried to contribute to a positive reputation about our Main Street corridor.* *Unfortunately, this business owner has been besieged and inundated with folks who are of the demographic we're concerned will be the problem for the core business district.* *Let's just say these are folks that have issues, and I will send you photographs of doorway destinations.* *Three weeks ago by a person that already gets MHRA support and has a home unit in their home unit, but a supportive unit, and it's just encouragingly incapable of functioning outside of being around the liquor store.*	Per Andrew O'Grady's presentation at the planning board, the supportive population at the project are clients of MHA Dutchess who have "demonstrated a level of independence and success and living in their own apartment". The project will have on-site case managers but is not a treatment center. The on-site case managers will provide the 30 supportive housing tenants with mental health services as well as referrals and connections for off-site services including financial and physical health services. Per the EAS Negative Declaration, the project is not expected to have a negative environmental impact. Per Anne Saylor's input at the Planning Board meeting as well as the City's guidelines, a conflict of interest is defined as a financial conflict of interest. Anne Saylor is not at all involved in the Wallace Campus project outside of her role in the Poughkeepsie Planning Board.

We've had a high flux lately of out of towners challenged persons these folks have chosen to spend their time on the sidewalk in doorways, lounging, drinking, loudly, cursing and basically just making Main Street look unappealing to residents and visitors. *I hear this all the time.* *I live in one of my buildings on Main Street. I am not fabricating this out of a dislike.* *I believe in helping people.* *I just don't think that this is a common sense location for a project that wants this potential.* *Sorry, Mr. O'Grady, because we have called your folks to come and help and we're told, well, we can't do it unless the police join us. There's a woman passed out drunk on the floor and the police department doesn't want to come, and he only wants to come 9:00 to 5:00.* *So that hasn't worked out.* *I've recently been informed that Rocco Ulster County's equivalent, the Hudson River Housing, has purchased all the part of the Fairview Industrial Park to build there. It's so, so convenient seeing how near the hospital they are since Kingston is closed their mental health facilities and started sending all of their cases to Mid-Hudson Region.* *So you know what is going on is there. Is there some devious little plan that the county is engaging in to profiteer off of all this? I know people need help, but why are we suddenly taking in Ulster County's problems? Let them deal with their Hudson River housing hasn't built anything in Ulster, to my knowledge.* *But there are many property owners that are afraid to raise their voices. But I'm doing so.* *I have no projects in the pipeline.*	

I have nothing to gain, but everything to lose before granting approval. *I believe a full environmental impact study is a must.* *It is wholly unfair to operate on the faith that this project is of benefit when the processes that are designed to ensure the outcome has no negative impacts on the community and does not disadvantage those already in the community.* *Those who have invested in buildings and property and renovation, we were the impetus for downtown revitalization and then I have one more paragraph.* *If I may levy, I'll give you another 30 seconds.* *Thank you.* *They're on the board. So it's a county employee, the county housing coordinator, miss and Saylor, and is a kind, caring person who I've met with socially and harbored no bad feelings.* *Our job is assisting the placement of those disadvantaged in need of housing. Very noble devotion.* *However, it cannot be overlooked that her placement and subsequent vote on this project can pose a conflict of interest and in the interests of all, should recuse herself from voting on this project.* *I will submit the balance of my comments in writing, and I thank you for your time.*	

Date: December 21, 2021 *Name: Laurie Sandow* *Form: Verbal Comment* *On February 11, 2019, I spoke at a Special Innovation District meeting, but before I read my comments from that date, I'd like to recite something both a little more vintage yet absolutely contemporary.* *The vintage short quote is from the movie It's A Wonderful Life, where George Bailey says, Just remember this, Mr. Potter, that this rabble you're talking about, they do most of the working and living and dying in this community.* *Well, is it too much to have them work and pay and live and die in a couple of decent rooms and a bath anyway? My father didn't think so.* *People were human beings to him, but to you, a warped, frustrated old man, their cattle.* *Well, in my book, my father died a much richer man than you'll ever be.* *And that brings me back to my comments of February 2019, when the Common Council held a special innovation district meeting where I said in part, I'm here today as I met most of the city's public comment periods, and I'm wondering why I'm here.* *Since it's become increasingly clear that public hearings and public comments in the city are staged for a little purpose other than window dressing.* *And also that we have a situation leading up to tonight's meeting where council members claimed to have consulted one person or or one committee or another behind closed doors, but have never asked their questions or had them answered out in public, enlightening the public and creating a permanent public record regarding tonight's vote on the innovation district. I'm unalterably opposed to the ordinance as written.*	The Development Team has provided presentations to a variety of organizations that serve people of color in Poughkeepsie and will continue to do so. Currently, the Development Team has discussed the project with approximately 30 organizations that serve Poughkeepsie. While this is not a requirement of the review process, the Development Team has integrated community outreach as a critical part of the project. Per the previous presentations, the project's breakdown are: • 30-units of supportive housing • 156 units serving households earning between 30%-80% AMI • One superintendent unit The project seeks to provide affordable commercial spaces. Per conversations with prospective tenants, the Development Team has received feedback that the commercial rents are fair and below existing commercial rents in the area.

That is, if I actually knew what was written because the final language of the ordinance was not posted to the city's website or to the special meeting notice. *Once again, it is the city's habit.* *The public is deprived of the opportunity to comment knowledgeably because necessary documents have been withheld from them.* *And while tonight's ordinance pretends to represent, quote unquote best practices, it creates a district that does not include any guarantees of affordable commercial space.* *Of affordable housing.* *Of continuing open space of community space or parkland.* *In fact, it codifies the exact opposite.* *Now, I don't have time to keep reading from my 2019 comments, nor to speak extemporaneously to Mr. O'Grady's comments tonight.* *I can tell you that Amaechi was excoriated in Barrington Atkin's recent shut up and Listen community meeting, which no one on camera tonight attended and which was an entirely different demographic than the majority white faces.* *I'm looking on camera tonight.* *And I'm going to only say that there are a million unanswered questions in this application concerning supportive housing versus affordable housing, which populations were actually occupied, the supportive housing units, how they'll be selected, who other than Amaechi, which has a track record of not showing itself to be a good or adequate provider, will provide supportive services, whether what size and how many other affordable units will comprise of 187 total.*	

How deep in the background Eric Anderson is still buried and involved in this development and so on. Developers in the city of Prove Themselves Amiable Dunce is an expert poker players when it comes to avoiding specifics and producing outcomes that do not match at all their original promises, but without absolute specifics prior to approval and enforceable clawbacks and penalties if any specific is not met or kept. *I cannot support this application.* *Thank you.*	
Date: December 21, 2021 *Name: Norm Steinberg* *Form: Verbal Comment* *Well, I've addressed the planning board. Thank you for inviting me again to speak.* *I don't want to rehash what I spoke to about you.* *But what I did want to say is I did attend the meeting about a week ago on the presentation of all of campus.* *And what I did notice was that in the site plan that talked about the wireless screen itself, I got into a long discussion about actually what was open to the public and what was not.* *So every time we see a site plan is presented to the public, we're not aware of actually what we can actually walk on.* *I found out that there is a very long corridor that is dedicated only to the housing complex and that there are small green spaces around that are dedicated to the public to the housing complex.* *I would first like to see a shaded areas of actually what the public can walk on in terms of the green.* *I'd also like to see what what parking spaces, if any, are available for the public to use if we are going to have events at the site.*	The Development Team submitted a diagram outlining the private outdoor spaces and public green space as part of the January 2022 Site Plan submission. A large majority of the outdoor space is public. There are two private outdoor areas adjacent to the buildings for the Wallace Campus tenants to utilize. Re: market-rate housing, please review our response to Craig Brenly's response.

I'd like to know whether we can park there or whether we have to find parking elsewhere. *So I'm just going to be very pointed this time and I reserve comments it probably in writing with regard to the other points, I also have not heard anybody address.* *I will ask this question again about Is there any thought about market rate housing at this complex? Thank you for the opportunity.*	
Date: December 27, 2021 *Name: Jeff Aman* *Form: Email* *Natalie, I had a chance to watch the Webcast of the 12/21/21 Planning Board meeting and public comments on the Wallace Project. I think it has come a long way forward since the initial submission, and I am now much less negative about the project than I was a few months ago. I remain a bit skeptical, based primarily on history. I like the changes that have evolved in the site plan. The building and property look much better than what was initially proposed, thanks to the work of the Planning Board reviews and the public comment. The explanation of how "supportive housing" will be implemented sounds good. Just please keep in mind the number of questions that were answered by MHA with "we don't believe" or "I don't believe", or "we believe". What was explained was positive and appropriate, but I remain skeptical to a degree, mainly because when this was initially discussed many months ago the developer described it as "some units reserved for individuals in need of services" and the developer did not appear to have any idea what that actually meant at that time. Given everything going on in Dutchess and Ulster Counties I remain fearful that the City of Poughkeepsie is growing as a dumping ground for individuals unwanted by other municipalities. My comments about urine and feces on Main Street were rapidly brushed off in the December 21 meeting, which I assume means that the speaker (from MHA) had his own special interests in mind or is unaware of current*	The development team is working with the appropriate State agency to secure a local resident preference for a portion of the apartments at Wallace Campus. New York State Homes and Community Renewal (NYS HCR) is reviewing the community's and development team's request further. All NYS HCR funded projects must follow a lottery system to best meet Fair Housing Laws. A lottery system was designed to ensure that no racial or other biases are contemplated during the lease up. The Development Team can only pick individuals for the apartments if they apply, and our outreach will rely on our Poughkeepsie partners. All 156 units would go through the lottery process. For the local preference, local residents would be prioritized and vetted first based on their lottery number until the number of local preference units is met, then the units revert back to the top of the lottery list. Given the Development Team's plans to engage with local groups and raise awareness of the lottery locally, it is very likely that more Poughkeepsie residents will be able to get units even after the local preference is met. The supportive units will also likely serve local residents since MHA Dutchess works with many local clients who are in need of quality housing in Poughkeepsie. The Development Team has provided property management plans. Typically, property

business conditions on Main Street. I hope the Planning Board keeps this in mind going forward, as we don't need more developments contributing to our current conditions. In the last few months we have seen closure of Zhane's Palette, the Great Studio, and the Queen City 15 gallery, with closure of the Barrett Art Center soon to follow, with none of these closures being driven by COVID. While I am a strong supporter of affordable housing and well-implemented supportive housing, I stand firm in my belief that we need a balanced housing strategy supporting both market rate and affordable housing, with new developments having a mixture of both - which the Wallace Project does not. If I recall correctly "The RIP" was very unbalanced from the beginning, market rate apartments could not be rented, and look at what it rapidly became. Recent trends of successful high density housing are greatly overweighted with market rate apartments, e.g. 50%+. While I am less negative about the project at this time I still have concerns: 1. A founding argument of the Wallace Campus project is that we as a City need affordable housing. Implicit in this statement is a claim that this project will make a difference for our City. Given this, the preferential selection of residents for affordable housing in the project should be absolute, limited to City of Poughkeepsie residents. If we have such a need, as claimed, an inability of the developer to fill the project with City of Poughkeepsie residents should be a burden carried by the developer, as a result of business decisions by the developer to build affordable housing using public funds. Housing needs by Rhinebeck, Red Hook, Kingston, and other municipalities should be satisfied within those municipalities, and we should not participate in forced displacement of people from their communities due to a lack of affordable housing in those municipalities. 2. The residency requirements should also applied to the supportive housing component of the project, with City of Poughkeepsie residency being an absolute requirement. MHA supports multiple counties in our region and should not be allowed to "refer" or "transfer" people from outside the City of Poughkeepsie to this development, claiming some type of "business need" later, akin to what	management contracts are executed closer to the completion of the entire project, and ergo cannot be provided at this stage of the project. As such, property management agreements are not subject to planning board review.

Kingston Health Alliance is currently doing. If they can't meet the numbers, then there isn't a need, and it should be the developers problem. 3. Numerous agreements and understandings have been discussed in the Planning Board meetings, some of which are described in the project documents while some are merely recorded in the meeting minutes and public comment responses. I think it is important that we all understand how long term oversight of these agreements will be monitored going forward, that the agreements are in writing, that the City of Poughkeepsie and the funding agencies are aware of them, and that proper oversight takes place. As what lawyers will always tell you, if it isn't in the contract you can't cry foul later. This project has the potential of good benefit to our City, with equal potential for long term economic damage. I found the discussion about the Innovation District and role of the creative community in our future to be quite informative. The notion of not having a "north star" in the meeting webcast about 1:28 in, is precisely the problem I believe we have, and the lack of any type of vision of what our City should become in the future has far-reaching implications.	
Name: Laurie Sandow *Date: January 7, 2022* *Form: Email* *Page 1 of 8—Laurie Sandow comments to City of Poughkeepsie Planning Board* *re: Wallace Campus* *I will preface my comments by saying that nobody but nobody, whether rich or poor,* *seeks to find themselves in housing that is not affordable. By federal standards, that means a household paying no more than 30% (or in some documents, 35%) of gross income on housing costs, including rent/mortgage payment, insurance, utilities, taxes,* *and maintenance. Despite this, when the general public hears "affordable", they are more than*	The NYS ESSHI contract will provide rental subsidies for the supportive units. MHA Dutchess has been awarded ESSHI funding to do so and will follow New York State's program guidelines which outline individuals who qualify for rental subsidies. The Development Team has outlined the funding sources in previous meetings and planning board presentations. Funding sources for Wallace Campus are similar to the sources used for all affordable housing developments throughout New York State. The public funding sources were also further reviewed through the Environmental Assessment Form. • NYS HCR funding • State Historic Tax Credits • Brownfield Tax Credits

likely to react with thought along the lines of, "Oh, affordable housing? That's housing for the unwashed masses." *Affordable housing was of so little importance or consequence to City Planner Natalie Quinn that when she wrote the code for the "Innovation District", affordable housing was only included as an incentive, and not as an obligation. The comments and objections* *I voiced to that Innovation District proposal at the time of its public hearing are included further below in this letter, beginning on page 5.* *And so we find ourselves today with an ever-growing number of "market rate"—i.e. projects affordable to only a select population—being approved by the City of Poughkeepsie Planning Board throughout the Innovation District, coupled with the simultaneous destruction of existing affordable housing in the very same District. As an example, I give you Baxter's purchase and conversion of Luckey Platt, where affordable housing was destroyed, and existing tenants who had been living in affordable apartments were driven out through construction that violated their warranty of habitability, and through new leases at rates that equaled only UN-affordable housing.* *I have asked, more than once, that City Administrator Marc Nelson introduce property registration, so that first responders and others will have correct addresses and contact information if/when the need arises. Such registration would also document the number of single-, two-family, and multi-family of properties; the number of properties that are not locally owned, not owner-occupied, and/or fraudulently claimed to be owner-occupied. I've also requested annual Rental Property Income and Expense (RPIE) reporting, such as exists, for example, in New York City, so that this documented information can act as reference, and its data can be applied in various departments.* *Similarly, I have asked, more than once, that Ms. Quinn produce a "heat map" of City of Poughkeepsie purchases, conversions, and parties behind the various LLCs purchasing and registering these parcels. Such an analysis, study and/or map has certainly never been released to the public. It*	• Low Income Housing Tax Credits

is not known whether it has ever been produced behind closed doors. The refusal to do so has always been explained away as "one cannot control the free market", as if data collection would control the market. But as a consequence, applications are ushered through the Planning Board and other City agencies—the Common Council included—with each agency effectively wearing blinders. Projects seek approval, and even rezoning, and are considered as if each application exists in a vacuum and silo, entirely unrelated to a project and/or application that might be just a minute's walk away; entirely unrelated to the net effect of multiple project approvals; or even the projects and populations on just the other side of a certain zoning or district boundary. *And, in stark contrast to all the current approvals for market rate developments, and because of the incentive-only, and still-absent obligation in Innovation District zoning for affordable housing, we have the Wallace Campus proposal for one large, clustered, segregated "affordable" development, that would reserve slightly more than one-sixth of its units for supportive housing.* *I believe the current developers are absolutely sincere in their commitment and desire to provide affordable housing. It's unlikely, of course, that intention was shared by Eric Anderson when he began accumulating all these parcels. Anderson continues to lurk in the background of the Wallace Campus development, in ways that are entirely unknown and opaque to the general public.* *At the December 21, 2021, Planning Board meeting, I read this short quote from the movie "It's a Wonderful Life", where George Bailey said: "Just remember this, Mr. Potter, that this rabble you're talking about…they do most of the working and living and dying in this community. Well, is it too much to have them work and pay and live and die in a couple of decent rooms and a bath? Anyway, my father didn't think so. People were human beings to him, but to you, a warped, frustrated old man, they're cattle. Well in my book, my father died a much richer man than you'll ever be!"* *That quote has deep meaning to me. I absolutely believe in the necessity of providing, creating and/or preserving affordable housing. I believe*	

that working people at all financial rungs; that people who've worked their whole lives and who now live on fixed incomes; and that people who've experienced illnesses, hard times and tragedies that have set them back on their heels, all these people and more deserve quality, affordable housing. So it pains me to object to this development as currently proposed because there are so many unanswered questions, and/or consequences that can be seen, known and already manifested today on Main Street, and at locations and developments, like the MHA/HRH/Dutchess County homeless pods, and the HRH Fallkill Commons. *Regarding Wallace Campus unanswered questions—for example, there are 30 studio units set aside as supportive housing which, by law, can be occupied by just one person. The income range to qualify for those units? Up to $35,850/yr. The subsidy, grants and/or other funding streams going to the developer and/or MHA for those units?—unknown. The criteria for selection in those units?—unknown. The number of veterans repeatedly featured on developer slides that will be selected for these supportive housing units?—unknown. The community opinion of the quality of MHA services?—widely differing opinions among different city ethnicities and demographics. Additionally, if occupants were not categorized as qualifying for supportive housing, the same income of* *$35,850/yr. would qualify them to apply for occupancy in 1- and even 2-bedroom units.* *The terms of the leases for any unit?—unknown. Adjustments to leases and rents if/when vacancies?—unknown. The Property Management company?—still unknown. The problems that Main St. business owners can document, and that they are already encountering on a daily basis?—dismissed by MHA. The claims that this development will bring customers to these Main Street businesses?—unsubstantiated, and not supported through any increase in customer base currently being brought to these businesses by tenants in such developments as the revised Luckey Platt. On the contrary, should someone undertake a study, it is far more likely that City of*	

Poughkeepsie residents will be reflected in the increase of business traffic, not at City locations, but at such Town of Poughkeepsie locations as Hudson Heritage and Eastdale. *The Planning Board's attention to any of these questions? Sadly, just as the Board has set its comment deadline prior to public's opportunity to hear and consider the variances that Wallace Campus developers will be bringing to the Tuesday, January 12, 2022, meeting of the Zoning Board of Appeals, this Board is almost certain to be instructed by Senior Planner and Acting Development Director Natalie Quinn that the public's questions, answers, and concerns are not relevant to the Planning Board's decision-making regarding the Wallace Campus.* *I close by including the comments I first made at the Innovation District special meeting of February 11, 2019:* *I am here today, as I am at most of the City's public comment periods. And I am wondering why I'm here, since it has become increasingly clear that public hearings and public comments in this City are staged for little purpose other than window dressing, And, also, that we have a situation leading up to tonight's meeting where councilmembers claim to have consulted one person, or one committee or another, behind closed doors, but have never asked their questions or had them answered out in public, enlightening the public, and creating a permanent public record.* *Regarding tonight's vote on the Innovation District, I am unalterably opposed to the Ordinance as written—that is, if I actually knew what was written, because the final language of the Ordinance was not posted to the City's website or the Special Meeting notice. Once again, as is the City's habit, the public is deprived of the opportunity to comment knowledgeably because necessary documents have been withheld from them. So I will rely on an earlier draft, that I had to hunt for, and which was filled with typographical errors and incorrect section references, but which otherwise is unlikely to have been changed.* *While tonight's Ordinance pretends to represent "best practices," and unlike the*	

2017-2018 Pace Land Use draft framework, it creates a District that does not include any guarantees of affordable commercial space, of affordable housing, of continuing open space, community space, or parkland. In fact, it codifies the exact opposite. *So much for lip service. What affordable housing is actually being retained? Is there a person on this Council who can point out existing affordable housing anywhere on the Innovation District map?* *Making matters worse, the only other appearance of the word "affordable" anywhere else in the Ordinance is in a section offering Bonus Heights in only two of the four District subdivisions, for developments that include 10% or 20% or more of their total units as affordable housing, and where "affordable" is based on County AMI (Area Median Income) which is already two times City AMI. But that differential is actually irrelevant, because the gap between the amount a building is expected to produce from rents and the amount developers will need to pay lenders and investors is almost certain to* *mean that property owners will never take advantage of these bonus heights in exchange for affordable units. Tonight's Ordinance contains not one word of protection for a single one of this City's challenged populations—from service workers to seniors. I assure you, if affordable housing is not guaranteed in the Ordinance, it's not going to trickle down in the District.* *"(9) Special Dimensional Standards* *(a) Bonus Heights. In order to encourage better design, sustainable land use, and inclusive development, an incentive of additional stories as described below is offered to applicants of housing developments in PID-UV and PID-CC subdistricts if their buildings incorporate anyone of the following features. Maximum cumulative bonuses shall not exceed 3 stories.* *(b) 1. Affordable Housing.* *(c) i. Three (3) additional stories may be added to the maximum permitted building* *(d) height for developments that include 20% or more of the total units as affordable*	

housing. 50% of the affordable units shall be priced to be affordable at 60-80% of Dutchess County AMI and 50% of the affordable units shall be priced to be affordable at 80% - 100% of Dutchess County AMI. - 3 additional stories. *(e) ii. Two (2) additional stories may be added to the maximum permitted building height for developments that include more than 10% of units as affordable housing with 50% of the affordable units priced to be affordable at 60-80% of Dutchess County AMI and 50% of the affordable units priced to be affordable at 80% - 100% of Dutchess County AMI. - 2 additional stories."* *(f) Unlike the 2017-2018 Pace Land Use draft framework, nowhere in the Ordinance is there mention of an inclusionary housing mandate where new developments would include a certain percentage of on-site affordable units. Unlike the Pace Land Use draft framework, nowhere in the Ordinance is there a provision for enduring affordable commercial spaces that will support and retain locally owned businesses. And while the Ordinance also pays lip service to the creative economy, the District map already shows that economy pushed to the outskirts, in the subdistrict named the "Creative Edge".* *(g) According to the Ordinance, permanent parks and outdoor recreational spaces are specifically excluded from the Historic Core:* *(h) (7) Permitted Uses.* *(i) (d) Parks & Programming. Permanent parks and outdoor recreational spaces are permitted as-of-right in all subdistricts, subject to design standards outlined in §193.37(l2)(d), with the exception of the PID-HC Subdistrict. The exclusion of parkland from the Historic Core Subdistrict is intended to encourage a consistent street wall and maximize the efficiency of land use within the commercial corridor.* *How can Poughkeepsie City planners be so uninformed about the value of parks in the urban*	

landscape? Have they never been to places like New York City, where parks like Bryant Park, Union Square and Madison Square are in high demand, and generate tremendous revenue? *With this Ordinance, you can say goodbye to Mural Square, which the City named "square"—not "park"—long ago so that they wouldn't have to alienate it before selling it to a developer. Goodbye to Christmas Tree lighting, to public celebrations on Main Street, to the potential of pop-up restaurants, markets, and outdoor lunches. With this Ordinance, pedestrian plazas and parks will be permitted only in the subdistricts called the Urban Village, and the Civic Corridor.* *The property owners on Main Street, in this so-called Innovation District are largely absentee landlords. They are the very ones who've kept downtown blighted and their properties vacant for the past many years. A change in name won't change their stripes, nor will it cause them to straighten up and fly right. In fact, it will do the opposite, delivering benefits in exchange for the harm they've been doing. And the councilmembers who vote in favor of tonight's Ordinance will be willing partners in that.* *To add to the drama of backroom deals, it's pure comedy that last Monday—the same night the Exempts got their liquor license back—Councilmember Petsas walked into the Council meeting an hour late and three sheets to the wind, complaining about dictatorships and demanding that the Innovation District vote be added to the agenda. His own Council reign was a study in dictatorship and flipping the bird to the public. And need I point out that he and the other sponsors of tonight's Ordinance, are the very same Councilmembers who regularly block public access and comment on their social media accounts, practicing NOT democracy, but their own ongoing policies of censorship, propaganda and fake news.*	

Below is an updated response to a comment submitted on April 15, 2021. The response has been updated based on the modified design.

Date: April 15, 2021 *Name: Roy Budnik* *Form: Email* *Dear Planning Board Members,* *I have owned the 130-year old building at 317 Main Street since 1989. I'll let others address the appropriateness of the Wallace project; I'm more concerned as to how the new "Main Street" building will directly impact my building. For clarification oftl1is matter, please have the applicant address the following questions:* *1) How will the 317 Main Street building be protected during demolition of the Bull and Buddha building and construction of the new Main Street Building?* *2) The foundation of my building is laid-up field stone. How will the foundation be protected during excavation for the new building?* *3) The air intake and exhaust for my high efficiency boiler, the first floor bathroom vent, and the discharge from a roof drain are located about 8 feet above grade at various places along the alleyway wall of my building. How will these be affected by the new development?* *4) Apparently, they plan to block the 8 windows on the second and third floors of my Building, which were installed when the building was constructed in I 890. How will the windows be closed off?* *5) The second and third floors of my building overhang the common building line by about a foot. How will the new construction address this situation?* *6) Telephone and internet services for 317 Main and 315 Main come from cables via the Bull and Buddha building. How will these services be*	1) A fence will be installed around the 319 Main Street building during demolition and construction. Overhead protection will be provided on the sidewalk. Once the construction of the new Main Street building meets the height of 317 Main Street Building roof protection will be provided on 317 Main Street. The contractor, Mega Contracting, is extremely familiar with constructing in very dense urban areas and protecting neighboring buildings is a common practice on all their projects.Mega will also provide insurance certificates to neighboring property owners to cover them for any liability related to the demolition and construction of the new building. 2) The proposed foundation is designed to meet the depth of the 317 Main Street building foundation, therefore underpinning or protectionof foundation wall will not be required. There will be a seismic gap left in between the existing and new foundation wall. 3) Update: Please see response number 5. 4) Update: Please see the response below 5) Update: The building has been redesigned to have a minimum of 5’ clearance of the existing windows on 319 Main St. 6) We will coordinate with Service Providers to have cables relocated without extended loss of service 7) We will provide roof protection consisting of insulation, plywood and planks during construction 20’ from the new building

affected by the new development during and after construction? *7) How will my roof and related flashing on my building be protected?* *None of these matters appear to be discussed in the Wallace application materials. Other questions may come to mind in response to answers received to these questions. Please accept these written questions in lieu of oral comments during the public hearing. Thank you for your consideration.* *Sincerely,* *Roy T. Budnik for 317 Main Mall Corp.*	

Below are comments that did not have any questions for the Development Team.

Name: Deirdra "Jen" Brown and John Watson
Form: Email

Dear Board Members:

My husband (John Watson) and I (Deirdra "Jen" Brown) write in support of the Wallace Campus ("WC") Development. John and I are property tax paying homeowners who live in downtown Poughkeepsie just blocks from the planned demolition and construction. I have been a resident of Poughkeepsie for twelve years, John has been here for more than forty-five years.

We have reviewed the WC planning board submissions, attended Planning Board and WC informational meetings and consulted with other members of the community regarding this project and ***we are of the firm belief that the benefits of the proposed development far outweigh the perceived costs.***

The project, in both the demolition and construction phases, will pull from the local workforce and use locally sourced building material, creating jobs and stimulating the economy. The proposed design is stunningly beautiful while simultaneously adhering to the context of the neighborhood's current architecture. The planned green space, market place and Promenade can only enhance our lovely city as it creates space for engagement with our neighbors and community building activities.

Finally, and most importantly, we endorse WC's commitment to provide deeply ***affordable and supported housing units.*** *This commitment is consistent with our Mayor's expressed commitment to "celebrate the beauty and richness of the diverse peoples of our great City," and to* ***"mindfully cultivate a communal spirit of amity toward one another across lines of race, ethnicity, and religion . . . every day."1*** *In the past, cities across the U.S. have used planning and zoning board decisions to separate the wealthy from the poor, the black from the white, the "us" from the "them," to the detriment of our entire community. The highspeed arterial separating North from South Poughkeepsie is a legacy of such*

policies that not only perpetuates residential segregation but impedes the growth of our entire city. Several commentators at your meetings used the term "Market Rate Units." This phrase is a dogwhistle for separation; for what could possibly motivate a desire to impose 'market rates' on a private development other than a desire to create a residential climate that will draw in the money moving north from New York City, and exclude from the Poughkeepsie Innovation Zone elements they wrongfully view as undesirable. Do not let those voices prevail. We have an opportunity to get this right. To build a community animated by our diversity and our unity. Such communities benefit everyone. With kind regards, we remain

Very truly yours,
John Watson and
Deirdra Jeneva Brown, Esq.

Name: Diamond Mima
Form: Email

Good morning,
My name is Diamond Mima. I am a lifelong resident of the City of Poughkeepsie. I am also a mom of two daughters.
For the last 5 Years I have served my community as an activist, advocate an organizer for affordable, quality, permanent housing.
In my time of serving the community, I have come to know a great need for housing across all incomes, demographics and backgrounds of City of Poughkeepsie residents, including myself.
The city is indeed in a housing crisis. Currently less than 2.6% of unoccupied housing is available. There is also a backlog of eviction court dates not only for the City of Poughkeepsie but for the entire Dutchess County.
I believe our community will benefit greatly from the proposed Wallace campus project. As you know the project will provide 186 affordable housing units in over 14,000 square feet of commercial space, as well as half an acre of open Green Space.
For far too long, downtown Poughkeepsie has been underutilized, forgotten and passed by. A generation or so ago, downtown Poughkeepsie was the Regions, Center of economic and social activity. It is our duty to recreate a downtown that helps everyone in the city. We must invest in the people of the City of Poughkeepsie. I believe wholeheartedly that this project encompasses that.
The Wallace project will Revitalize the area with new commercial space and Green Space and is a major investment for the downtown area of Main Street.
As a City of Poughkeepsie resident and as your neighbor, I compel you to see not only the affordable housing it will bring but the hope that this development can bring to the entire city.
I fully support the new proposed development and ask that you, our planning board, approve this project.
Highest Regards,
Diamond Marie Mima

Date: January 7, 2022
Name: Isis Benitez
Form: Email

Good Morning,
My name is Isis Benitez and I am a current resident in the City of Poughkeepsie as well as working in the City of Poughkeepsie. Housing has always been an issue here in this City. I have grown up here and have seen so many people struggle to keep a roof over their heads let alone their families heads. I have seen people be evicted due to unforeseen circumstances. It has been both appalling and disheartening.
After hearing about the Wallace Campus building project, I assure you that this is much needed. I have never seen affordable housing in the City of Poughkeepsie and see this as a win. The City of Poughkeepsie holds the minority majority, black and brown people. People of color have always had a history of not being able to afford much compared to our white counterparts. To see that this City is now becoming gentrified and be dismayed by it is an understatement. There should be no reason as to why black and brown folks and folks of color in general are being pushed out of this city.
Affordable housing is long overdue. There was not much knowledge shared throughout the City of Poughkeepsie about the Wallace Campus Project, for reasons I cannot understand. This affordable housing project has to happen, it is needed, and the City needs to prioritize it being built. As someone who is up and coming and trying to find my own places to live, I cannot even think about trying to afford an apartment here. A lot of the people I grew up with and moved away cannot think about coming back to live here considering the high increase in rent.
Don't let the racist ties to the City of Poughkeepsie blind you from allowing this affordable housing project to be built. Vote in support and approval of the project, in support of this community!
In Community,
-Isis Benitez

Date: January 7, 2022
Name: Tamara Brown
Form: Email

Dear Natalie,
I'm a newly-returned Poughkeepsie Resident and I'm excited to see the new developments in City of Poughkeepsie. Particularly, I am very excited about the potential Wallace Campus restoration project. I want to express my support. I am happy to see quality affordable housing being built, especially since folks most in need of affordable housing are the folks who would benefit most from living in space where walking here and there is easy. This project is likely to become a generator of economic growth as it makes it easier for new residents to get to and from Main Street stores.
It is also exciting to see a public performance/community space being built on Main Street as this will create a broader sense of cohesive community.
The only aspect of the plan that I am disappointed (or confused?) about - is that there is a fence or barrier around the public space. I am not in favor of fencing in the community space - if it is community space it should be open. In inquiring of the developers, it seems this was done at the behest of the planning board. I hope the planning board reconsiders. As the developers noted, the Police Department does not anticipate trouble with the space if it is left open and accessible.
In every other way - I think this is a thoughtful project that will be great for City of Poughkeepsie. I urge the planning board to go forward with it!
Sincerely,
Tamara Bond-Williams
Poughkeepsie resident

Form: Email

To the City of Poughkeepsie Planning Board:

I write to you to implore your approval of the Wallace Campus site plan. It is apparent that the plan is beyond architecturally sound, and it additionally provides a needed and proper influx of affordable housing that exceeds habitability, a condition many of our residents are left without, through genuinely dignified standards of living.

I am grateful the planning board has made this a stringent process, demonstrating their commitment to this city and its residents. The developers' willingness to commit the time and financial resources toward compliance with the board's demands have led to a plan that not only meets zoning, building, and land use statute, but one that is successful in dialogue with the detail and massing of the project's neighbors. Both parties have executed their duties in these regards to the fullest.
As to the component of affordability, it is fortuitous that this vote occurs the day after Martin Luther King, Jr. Day. Affordable housing on this scale will leave a significant number of our community members with greater means that will serve to bolster their savings and disposable income; it moves beyond ending the indignity and humiliation of living in substandard conditions to the realm of ending poverty, which was a critical component to King's moral and political philosophy. In his book All Labor Has Dignity, King states that "northern ghettos are the prisons of forgotten men." It is our moral and civic duty to be cognizant of our neighbors who continue to live in such conditions and to act on this awareness by abolishing Poughkeepsie's ghettos. The Wallace Campus represents to many a necessary step in this abolition.

While there are innumerable reasons this site plan must be approved, having read and listened to comments and deliberations, it seems a moment needs to be taken to address the reasons a person appointed to represent this city cannot in good conscience vote against this site plan.

Among these reasons is that the crux of the debate has very clearly been about affordable and supportive housing and the people who occupy it, not just anecdotally, but from an evidentiary standpoint-the words and actions surrounding this debate are recorded. What's within a planning board's legal purview in NYS when reviewing site plans is to ensure compliance with zoning, building, and land use statute, all of which this site plan complies with. It is not within a planning board's legal purview to reject a site plan on the grounds of potential residents' income or disabilities, and if rejected the evidence in a resulting civil suit as having done such would be beyond preponderance. Voting against site plan approval would signal a public representative's willingness to deliberately step outside the bounds of law for private interests, the definition of corruption, and place the burden of the resulting civil action, which is inevitable given the developers' abundant financial resources, on the shoulders of the city's taxpayers.

Legal liability aside, government appointees have a moral responsibility to those they represent. Heeding comments of outspoken members of the public that express discriminatory views of those among us with low income and/or disabilities, often with racist undertones, would be unconsc10nable, as would yield to one's own personal biases and prejudices. That these factors are already represented in comments and deliberations assigns an element of immorality to this process that will be in and of itself difficult for this community to recover from.

The rationale to approve this site plan stacks immeasurably higher than any legitimate grounds for rejection, and as such I and many other residents fully expect all planning board members to attend this session and unanimously approve this site plan.

Sincerely,
Brian Robinson

As a person involved in many issues of equity in the City of Poughkeepsie and as mother of a son with a disability who currently lives in the city of Poughkeepsie, I wish to strongly advocate for the Wallace Campus project. The lack of affordable housing even as market priced rentals proliferate is a real threat to the people who currently call Poughkeepsie home as well as to those of middle and lower income who cannot afford to rent in the city.
My son who has Down Syndrome has been residing in his own apartment in the city of Poughkeepsie since 2000, However, as he gets older, his needs are growing. I speak for him and many more individuals with disabilities who would benefit greatly from support services as they strive to live independent and productive lives in the City of Poughkeepsie. As resources from other agencies become more and more stressed, an opportunity such as the Wallace Campus becomes all the more important. Please support this project and approve its continuation.
Muriel Horowitz

December 7, 2021

WALLACE CAMPUS: PROJECT NARRATIVE (REDUCED SIZE PROJECT)

OVERVIEW:

Wallace Campus is a mixed-use development in the eastern half of the city block surrounded by Main Street, Catharine Street, and Mill Street, within the heart of the Poughkeepsie Innovation District (PID) redevelopment area. The project will consolidate several existing underutilized lots to create a 2.52 acre through lot with frontages on Main Street, Catharine Street, and Mill Street. **The Project includes approximately 256,814 gross square feet *(reduced from 277,333 GSF)*** of building redevelopment and new construction, weaving together the restoration of the long dormant Wallace Department Store, including the construction of two new buildings with architectural style and massing which reflect existing context and urban form conducive to place-making. **The buildings will provide 14,213 sf of commercial space including 6,416 sf of new retail spaces along the Main Street pedestrian frontage, 5,797 GSF of commercial space along the Catharine Street frontage, and 2,000 GSF in cellar spaces. The remainder of the Project buildings will be devoted to providing 187 much-needed mixed-income housing rental units (including one super's unit), which will help restore and grow residential and pedestrian activity within the Poughkeepsie Innovation District.**

Wallace Campus also reclaims underutilized blacktop improving the permeability of the site and creating a significant public outdoor greenspace, called "Wallace Green," to benefit residents and the public. The promenade entry to the Green from Main Street creates a full mid-block pedestrian through-route to Mill Street. The Wallace Green Walkway integrates views and access to the Green itself, which provides landscaping, play areas, a tiered seating gathering area, and internal pedestrian access between the new buildings and the landscaped internal parking area.

Vehicular access to the site is provided through consolidation of existing entrances from Mill Street, eliminating two dangerous blind driveways. Through agreements with adjoining lots fronting on Mill Street (302, 304, 306 Mill Street and the Hudson River Housing property at 310 Mill Street), the Project will eliminate two existing curb cuts, and related blind driveways, on Mill Street, provide additional green space around and between existing buildings fronting on Mill Street, in addition to enhancing the pedestrian use of Mill Street via the new Wallace Green walkway between Main and Mill Streets.

DEVELOPMENT TEAM AND PROJECT VISION:

Wallace Campus Manager, LLC, and its development team has over 30 years of experience developing, fully renting-up, and successfully operating mixed-income housing and

mixed-use spaces similar to Wallace Campus. The Development Team has designed its Project to foster the growth of Poughkeepsie's Innovation District by adding much needed reasonably priced, quality-built, housing stock, commercial, and community green spaces to the City's Downtown. The Wallace Campus development model is focused on drawing current and future residents of the City of Poughkeepsie to live, work, and prosper in the City's Downtown. Central purposes of the PID zoning initiative include reclamation of underutilized sites, particularly those with large expanses of blacktop, recreation of street walls, respect for historic context, and creation of new urban spaces that inspire pedestrian activity. The Wallace Campus responds to all of these aims.

RESTORATION AND ADAPTIVE REUSE OF THE HISTORIC WALLACE DEPARTMENT STORE BUILDING:

The project will restore and adaptively reuse the former Wallace Department Store at 331 Main Street, an existing 4-story, 118,536 square foot structure with a tall parapet along Main Street that brings it to a height comparable to other 5-story buildings along Main Street. The Wallace building has been underutilized for many years.

The Project proposes to renovate the former Wallace Department Store building (c. 1880's) to its appearance as a signature building in Poughkeepsie's "period of significance" as a mercantile center in the Hudson Valley during the 19th and 20th Centuries. The Luckey Platt building across the street housed the Wallace Department Store's major competing department store during the 1800's and the Luckey Platt building is listed on the National Register. The proposed Wallace restoration was reviewed by the New York State Historic Preservation Office to be considered as a standalone historically significant building. Landmark Consulting LLC, the Wallace preservation consulting firm, authored the Commercial Rehabilitation Tax Credit Part 1 application for certification to pursue the rehab incentive program for the Wallace Building. The Part 1 application and draft National Register Nomination for the Wallace Building (331 Main and 14-20 Catharine) was reviewed and approved by New York State Historic Preservation Office (SHPO) and the National Park Service (NPS).

The proposed adaptive reuse of the building will create 3,085 SF of commercial retail space with multiple storefronts on the ground floor along the Main Street frontage and 2,564 SF of commercial retail space on the ground floor of the Wallace Extension building along Catharine Street, with an additional 2,000 SF of commercial space in the cellar.

The 3,085 SF of commercial retail space on the ground floor of Main Street in the historic building will have transparency wrapping around the westerly edge of the building at the entrance to a public promenade and the Wallace Green walkway. The remainder of the main Wallace Building will be adaptively reused for rental apartment units, all accessed by an

entrance along the western side of the building, just behind the commercial tenancies and facing the new Wallace Promenade.

Wallace Building rehabilitation:

The proposed renovation scope for the Wallace building includes preservation of the Art Deco Main Street exterior, a limestone façade, that will remain unchanged from the second floor to the roof. Transparency will be added to the first-floor façade (per historic images) opening the ground floor space in a welcoming manner to improve the commercial viability of the space and the pedestrian experience on Main Street, consistent with the PID's zoning requirements. The east and west facades will have new window penetrations, reworking existing, non-historic penetrations.

While the interior of the building will be modified to accommodate new residential and commercial uses, important internal elements will be retained, including circulation within the building, which utilizes beautiful existing stairways and a historically significant painted dome at the fourth-floor ceiling. The Project Sponsor is also exploring the possibility of incorporating the historic Wallace Logo sign in the restoration of the exterior of the building.

The Wallace existing extension is a 3-story annex to the main building, constructed in 1860 which is accessed both internally through the main Wallace building and from Catharine Street. The exterior of this annex is in good condition and will be rehabilitated to its existing aesthetic. The existing circulation structure within the Wallace building contributes to the building's active living design, promoting the use of stairs as a healthy alternative to constant elevator use. The unit distribution of the Wallace Building includes:

Wallace Rehab Building:

STUDIO	1 BR	2 BR	3 BR	**TOTAL**
20	37	12	0	**69**

CONSTRUCTION OF A NEW MAIN STREET BUILDING:

West of the Wallace Department store, a new 81,813 SF building will be constructed ("the Main Street Building"). The Main Street Building will involve the demolition of 319 and 325 Main Street. The buildings have been visually inspected and have been determined that they are in sub-par condition and have been vacant for several years. The Main Street building is 5 stories tall which is the permitted height for the designated zoning and was reduced from 7 stories previously proposed. Both proposed new buildings on the site are being designed to meet Enterprise Green Communities Program certification standards which ensures the buildings will be energy efficient and sustainable.

The Main Street building frontage has been designed with multiple storefronts directly facing Main Street with 3,309 of retail space. The transparency extends around the corner of the building into the promenade, where it will reflect similar transparency in the Wallace Building to the east.

The remainder of the Main Street Building will house new rental apartment units, all accessed by an entrance along the eastern side of the building, just behind the commercial tenancies and facing the new Wallace Promenade. The unit distribution of the Main Street Building includes:

Main Street New Construction Building:

STUDIO	1 BR	2 BR	3 BR	**TOTAL**
12	34	19	4	**69**

The architecture of the Main Street Building, and its scale and massing, have been designed to blend with the historic context of Main Street, as described by SLCE Architects at Planning Board presentations, and represented on the architectural plans and conceptual renderings. See discussion in the following section on PID Standards. The clock that faces the Main Street in the current building will be removed and utilized in the Wallace Building. Initial plans are to either incorporate the clock in the main lobby or utilize it at Wallace Green.

CONSTRUCTION OF NEW BUILDING ON CATHARINE STREET:

The second proposed new building in the project is a 60,145 square foot building fronting onto Catharine Street ("the Catharine Street Building"). The Catharine Street building is five stories tall (reduced from six stories previously proposed). This building replaces an underutilized parking lot, to create a street wall along Catharine Street that is reflective of the historic buildings in the neighborhood. The architectural design features elements and colors that complement the existing building to its south, as well as the surrounding neighborhood. Both new project buildings are being designed to meet Enterprise Green Communities Program certification standards.

The ground floor of the Catharine Street Building will contain approximately 3,255 square feet of commercial space. The architectural design of the ground floor space features a number of doors facing Catharine Street, making this ground floor space easily adaptable to retail use in the future. The design for this building features 100% frontage occupancy along Catharine Street. Residential uses occupy the upper 4 floors of the building as well as the rear of the ground floor. The unit distribution of the Catharine Street building includes:

Catharine Street Building:

STUDIO	1 BR	2 BR	3 BR	**TOTAL**
14	21	9	5	**49**

WALLACE GREEN:

A central feature of the Wallace Campus is the Wallace Green, which contains a public landscaped green space in a park-like setting. This will be one of the only greenspaces in the downtown/PID area, and will therefore create a unique and important feature in the broader and evolving context of the City's redevelopment. The Green will be maintained by the private owner of Wallace Campus, including litter control, landscaping, and general property maintenance and security. The Green is readily accessible to residents of the Wallace Campus as the residential buildings include lobbies with doorways entering onto the pedestrian promenade that passes along the Green. The Green will be open for public access via Main Street and Mill Street. The Green features numerous seating options, in addition to the landscaped lawns and planted areas. The walking paths through the space provide direct access by tenants from the parking area. They also encourage pedestrian movement through the site, and provide access to short term public bicycle parking. 24/7 security monitoring via an integrated camera system and ample lighting will ensure the green space remains a safe and welcoming space at all hours.

A unique feature on the southern portion of the Green is a multi-tiered seating area. The semi-circular shape tiered seating encourages spontaneous small group gatherings of local residents and visitors for conversation, an outdoor meal, a game of chess, meditation, reading, etc. The tiered seating allows for a small performance area, which offers opportunities for artist readings or small performances, focusing on acoustic uses. The use for events is a secondary use, it's function as a flexible and informal gathering space for residents and green space visitors remains the primary use of the space.

The development team plans to actively program the space. Based on initial outreach, a several local organizations and businesses have expressed interest in utilizing the Wallace Green. Uses include but are not limited to children yoga, exercise classes, film screenings, and live comedy shows. Attached are letters of interests to conduct programming at Wallace Green.

WALLACE GREEN WALKWAY: CREATION OF A NEW PROMENADE AND PEDESTRIAN CONNECTIVITY BETWEEN MAIN STREET AND MILL STREET:

The PID Zoning encourages the creation of new pedestrian throughways on large parcels to break up large parcels (19-3.37(12) (c)(1)(ii)). In response to comments requesting exploration of a more direct and seamless pedestrian connection through the project to

create a mid-block pedestrian connection between Main Street and Mill Street, the Applicant has created a direct pedestrian walkway path from Main Street to Mill Street, close to its intersection with Conklin Street. The portion of the walkway nearest Main Street forms the Wallace Campus Promenade, which begins with a wide and inviting pedestrian gathering place where the commercial transparencies of the Main Street Building and Wallace Building wrap around the corners of the respective buildings. This area also leads to the primary entrances to the residential portions of both buildings, just behind the commercial tenancies. The Promenade then continues northward, drawing pedestrians by the inviting views into the Wallace Green just ahead. The Promenade then turns into an open walkway following along the easterly side of the Green and along the westerly side of the Wallace building. The walkway then proceeds through the Wallace Campus internal parking area, passing a connecting sidewalk which proceeds east to connect to the Catharine Street building. After crossing the landscaped parking area, the Walkway then proceeds along the western side of the Hudson River Housing building to reach Mill Street, near its intersection with Conklin Street. In addition to improving pedestrian circulation, this Walkway also provides an opportunity for additional landscaping around the Hudson River Housing building and allows the rear of the Hudson River Housing parcel to provide additional green space within the overall setting.

VEHICULAR ACCESS FROM MILL STREET, CIRCULATION, PARKING, LANDSCAPING: A central accomplishment of the Wallace Campus Project is the replacement of an area of impervious land, a former underutilized parking lot, with green space and public access. To connect these improvements to Mill Street as well as Main Street, substantial consideration has been given to improving access to the property from Mill Street and improving the streetscape and visual character of the Mill Street frontage and views into the site. Mill Street has served as the only vehicular access to the site for many years. The Wallace Campus circulation and parking improvements plan includes upgrades to the existing two main entrances on Mill Street and the vehicular circulation plan for substantially safer and efficient access to and from the Wallace Campus. There is presently no landscaping at the Mill Street frontage of existing driveways. The current Wallace Campus Site Plan substantially increases the areas of landscape screening in the proposed entrance drives and pulls parking further into the site, away from Mill Street, greatly improving the appearance of the site from Mill Street.

The Wallace Campus drawings set forth the boundaries of the Wallace campus consolidated lot and shows the site plan for that lot. Four adjoining parcels outside the Wallace campus are also shown on the drawing set, for the limited purpose of depicting the off-site improvements to be made on those properties pursuant to shared parking and easement agreements, and to show the manner in which those physical improvements and access provisions will improve pedestrian and vehicular circulation in the neighborhood, as well as landscaping, lighting, and community character. The project sponsor will enter into shared parking and permanent access easement agreements with the owners of these adjoining

parcels, which will be approved by the planning board as part of the project approvals. The drawing set depicts the off-site work to be performed by the project sponsor on these parcels to implement the shared parking and access agreements. The work on 302, 304 and 306 mill street ("the 3 mill street lots") would eliminate two existing curb cuts on mill street (between 302 and 304 mill and between 304 and 306 mill), and provide additional green space on those lots, including along the mill street frontage to replace those driveways. The Wallace campus owner will provide a permanent access easement to the owner of the 3 Mill Street lots for the benefit of owners and tenants, to access the parking areas located on these lots via the Wallace campus access drives. The shared parking agreement would maintain the allocation of dedicated parking (12 spaces) to the 3 Mill Street lots in compliance with the PID zoning. Lighting improvements, pedestrian walkways, and stormwater improvements will be provided to serve the offsite shared parking areas in the same manner as the parking areas on the Wallace campus parcel. Pursuant to a separate shared parking agreement with the Hudson river housing (“HRH") property, the project sponsor will be granted a permanent easement to construct pedestrian sidewalk paths within the Hudson river housing property connecting to mill street and providing access from that parking area to the rear entrance to the HRH office building, and parking improvements along the HRH lot southerly boundary that integrate with the Wallace campus parking area, and to place the other improvements shown on the approved plans, including a portion of the project dumpster. Lighting improvements and landscaping will be installed as shown on the drawing set. The project sponsor will provide HRH with a permanent access easement to use the two Wallace campus mill street entrances and exits for access to, and use of, 6 parking spaces which are located on Wallace campus property directly abutting the westerly boundary of HRH's property (as shown on the drawing set), which spaces will be reserved for use by HRH employees during working hours 8am to 6pm Monday to Friday. The 6 spaces to be available for Wallace campus parking outside of those hours.

Lighting improvements and landscaping will be installed as shown on the Drawing Set. Overall, the proposed Wallace Campus development incorporates 60 parking spaces to serve the commercial and residential uses and public space. Please refer to the attached letter of Colliers Engineering and Design addressing parking calculations. **Overall, the Project provides 60 parking spaces while only a total of 32 spaces are required per zoning.** The development team is proposing to maintain these extra parking spaces in the development plan.

December 7, 2021

Re: Wallace Campus Project Review
Chazen Project #82029

Dear Ms. Quinn:

Please accept this letter and accompanying copies of the plan set and documents as our resubmission for the above referenced project.

Please find below our summary of responses to the Comments received from The Chazen Companies in a letter dated November 15, 2021:

Environmental Assessment Form (EAF) Part 1

1. Revisions were made to the EAF to address our minor comments previously submitted (e.g. Coastal Zone status; nearby historic sites).

   Response: *confirmed*

2. Section B.c. identified the possible need for variances. The project was revised to eliminate the need for height variances. We did not find identification of the need for other variances. This section could be revised if no variances are sought.

   GBTS Response: *The height variances were the major variances and they have been eliminated. The remaining variances are area variances relating to increases in side building setbacks, decreases in frontage occupancy, and variances relating to the parking access drives on Mill Street, relating to frontage occupancy, landscape screening and placement of parking islands.*

3. The energy use on Section D.k.i. increased over that projected in the prior EAF. It is not clear why that should be the case since the revised project has been downsized and would presumably use less energy.

   GBTS Response: *This section has been edited to reflect the projected energy use for the entirety of the revised project.*

4. Section D.r. should identify construction and operations solid waste (i.e. non-hazardous waste) generation.

   GBTS Response: *This section has been revised to reflect the amount of construction and operations solid waste expected to be generated for the revised project.*

Parking and Circulation

1. Chazen concurs with the results of the sight distance evaluation for the site driveways. A one-way sign at the exit driveway should be shown on the site plans to prevent wrong way travel when turning onto Mill Street.

   Response: *updated*

Engineering

While revised plans were submitted, most of the engineering comments in our April 12, 2021 review letter have not been responded to. We also have several new comments in response to the latest submission. Note also we did not have time to conduct a detailed review of pipe sizing calculations. We will do so when the next submission addressing our comments is made.

Our consolidated comments are as follows.

Water

1. Engineering Report, Section 1.0: Site improvements are shown to 310 Mill Street (Tax Parcel 6162-78- 128113) but it's not included in the project description. Clarify this parcel's involvement in the project.
   Comment not addressed. The description still doesn't accurately describe the Wallace Campus. The description states there are 5 tax parcels involved and provides 4 addresses & tax parcel identification numbers where 8 individual tax parcels are part of the project. Similarly, the revised Lot Line Consolidation Plan includes Lots A-G and 310 Mill Street still isn't included.
   The description still describes a proposed day care.

   LRC Response: *The description has been revised and follows the site plan note for the description of the project as well as the project narrative.*

   Cuddy Feder Response: *Beginning in the March 2021 submission, all submissions on the project clearly distinguished between the Wallace Campus (Wallace consolidated lot) and the 4 adjoining parcels.) The Project Narrative submitted in March contained exactly the same language as the Note on SP-1 (attached). The Maser Traffic study date 2/27/21: page 8 of 21 describes shared parking with the "4 abutting lots" (making it clear that they are not part of the project. Maser's study also documents that 302, 304*

and 306 collectively require 12 spaces based on the June 2020 approvals. The GB EAF submitted in March includes Figures 1, 2, and 3 which map the "Site Location." The maps delineate the boundaries of 319, 325, 327-329, and 331 only.

2. Engineering Report, Section 2.2: References to "331 Catharine Street" were removed as requested. However, Section 2.2 includes a reference to "the Catharine Street building." As the project contains multiple buildings along Catharine Street, the building references should be checked to make sure they are clearly referencing a single building. The building references throughout the report should be reviewed for clarity and revised as needed.
   Comment not addressed. Response indicates that there is only one proposed building and that there are no revisions proposed to the existing services. This is a correct statement but doesn't address the comment.

LRC Response: *Reference to the Catherine Street building has been clarified to show which building is being proposed and which is staying. See Figure 1 in the engineer's report.*

3. Engineering Report, Section 2.2: provide correspondence from City Engineering that the existing water treatment facility and distribution mains located in the vicinity of the project site have sufficient capacity to supply the additional demand resulting from the proposed project. The engineer's response indicates the project results in a slight increase in water demand. However, this is not based on actual current demand/meter readings so it's not a reflection of the actual increase in demand over the current existing condition.
   Comment not addressed. No correspondence has been provided from City Engineering related to sufficient capacity.

   Response: No correspondence has been received from City Engineering related to sufficient capacity.

4. Engineering Report, Section 2.1: existing sewer generation: office use generation shall be based on number of employees, per Table B-3 "Typical per Unit Hydraulic Loading Rates" of the NYSDEC "Design Standards for Intermediate Sized Wastewater Treatment Systems", March 5, 2014. As previously requested, revise calculations or provide methodology for converting to square footage.
   Comment not addressed. The engineering report continues to reference the NYSDEC "Design Standards for Intermediate Sized Wastewater Treatment Systems" (2014) which is based on number of employees, not square footage. The response indicates the methodology relies on the previous NYSDEC design manual. Either clarify the engineering report methodology reference or provide a conversion for square footage to number of employees based on the previous NYSDEC design manual.

LRC Response: *Clarification has been added to the engineering report on how/why the number of employees was not used in the calculations.*

5. Engineering report, Section 2.1: Existing square footage for Parcel E was increased by approximately 45,000 square feet. Additional information regarding where the square footages, restaurant seats and number of club patrons shall be provided.
   Comment not addressed. The response indicates the information was obtained from "Dutchess County Parcel Access as well as the project Architect for total SF of the building. The number of seats and club patrons was provided by the project architect when reviewing historical documentation for the building." No such supporting documentation has been added to or provided in the engineering report to support the estimated existing flows (ie. the methodology utilized by the project architect). Additionally, references to the fitness center and daycare uses should be removed from Section 2.1.

   LRC Response: *The square footages of each of the buildings were revised to correctly depict what is existing. The reference to the fitness center and the daycare have also been removed.*

6. Engineering Report, Section 2.1: Provide methodology for determining number of employees for the retail spaces included in the Sanitary Sewer Flow / Water Consumption Projections.
   Comment not addressed. The response indicates the estimated flows were provided by the project Architect and previous experience but no such supporting information has been added to or provided in the engineering report to support the estimated flows (ie. the methodology utilized by the project architect).

   Response: *The chart in the Engineering Report was updated to reflect the current employee estimates for the commercial spaces. Wallace Campus partners estimate the number of employees below:*
   Main St building with 3,309 sf of retail - 6 employees
   Catharine Street building with 3,255 sf of retail - 5 employees
   Wallace building with 7,649 sf of retail - 13 employees

7. Engineering report, Section 2.1: A sentence that "sizing for the fitness and daycare are based on occupancy and parking calculations determine estimated number of patrons" has been added to the engineering report. Provide the correlation and calculations used to convert occupancy and parking calculations into number of patrons and number of people used for average daily sewage generation.
   Comment no longer applicable, as the fitness center and daycare are no longer proposed.

   LRC Response: *Comment noted.*

8. Engineering report, Section 2.4: Obtain hydrant flow testing data (if available) from the City Fire Department to verify what the available fire flows are in the vicinity of the project. Alternatively, perform hydrant testing in the vicinity of the project in coordination with the City Fire Department.
   Comment not addressed.

   LRC Response: *Comment noted.*

9. Engineering report, Section 2.4: Additional fire suppression methods may be required for the proposed buildings (standpipe, as an example). Revise fire suppression description accordingly.
   Comment not addressed.

   LRC Response: *If required the architect will provide the required design details during building permit design when it is appropriate to include this information, otherwise the project is required to meet fire code and will be designed accordingly.*

10. Engineering report, Section 4.0: Provide correspondence from Dutchess County Department of Behavioral and Community Health that their review and approval is not required for the proposed project and associated lot consolidation.
    Comment not addressed. No correspondence from DCDBCH has been provided.

    Response: **No correspondence from DCDBCH has been received.**

Sewer

1. Sheets EX-1 & UT-1: The size of the existing sewer main in Catharine Street is shown on plan EX-1. The inverts for one sewer manhole have been provided on UT-1. The invert at the manhole on the opposite side of the connection point shall be shown in order to determine the invert of the existing sewer at the location of the proposed service lateral connection.
   Comment not addressed. The applicant now proposed connecting the sewer lateral directly into the existing sanitary manhole within Catherine Street, which results in less than the minimum 10' horizontal separation to the water line to an existing hydrant. Indicate mitigation proposed at this location.

   LRC Response: *The plans have been revised to provide adequate separation between the water and the proposed sewer connection.*

2. Engineering Report, Section 3.2: verify with City Engineering that the existing wastewater plant and the collection lines in the vicinity of the project site have sufficient capacity to serve the additional wastewater generation resulting from the proposed project. The engineer's response indicates the project results in a slight increase in sewer generation. However, this is not based on actual current demand/meter readings

so it's not a reflection of the actual increase in demand over the current existing condition.
Comment not addressed. No correspondence from City Engineering has been provided.

Response: No correspondence from City Engineering has been received.

3. Engineering Report, Section 3.3: References to "331 Catharine Street" were removed as requested. However, Section 3.3 now references "the Catharine Street building." As the project contains multiple buildings along Catharine Street, the building references should be checked to make sure they are clearly referencing a single building. The building references throughout the report should be reviewed for clarity and revised as needed.
Comment not addressed. Response indicates that there is only one proposed building and that there are no revisions proposed to the existing services. This is a correct statement but doesn't address the comment.

LRC Response: *The proposed buildings have been clarified in the report.*

4. Provide correspondence from Dutchess County Department of Behavioral and Community Health that their review and approval is not required for the proposed project and associated lot consolidation.
Comment not addressed. No correspondence from DCDBCH has been provided.

Response: **No correspondence from DCDBCH has been received.**

Stormwater

1. SWPPP: it's noted that the current General Permit (GP-0-20-001) is provided in Appendix A. However, the narrative and table of contents include references to the previous general permit. Update all references to the current GP number.
Comment partially addressed. The Owner/Operator Certification Form provided in the SWPPP references GP-0-15-002 and should be replaced with the current version. The Appendix B divider page also contains a reference to GP-0-15-002.

LRC Response: *The SWPPP has been revised.*

2. SWPPP Narrative, page 8: describes one existing dry well to remain. Based on the Demolition Plan and HydroCAD modeling provided, it appears there may be 2 existing dry wells to remain. Clarify/revise as needed.
Comment addressed.

LRC Response: *Comment noted.*

3. SWPPP Narrative, page 8: states "all proposed piping is sized to accommodate peak flow from 25- year 24-hour storm, as prescribed by the local authority." Provide pipe sizing calculations for review.
   Pipe sizing calculations have been provided but have not yet been reviewed due to the delayed submission and resulting review timeframe. Related comment(s), if any, will be provided at a later date.

   LRC Response: *Comment noted.*

4. SWPPP Narrative, page 9: Section 5.2 states there are seven different design points. However, only two are shown on the pre-development and post-development watershed maps. Clarify/revise as needed.
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

   LRC Response: *The SWPPP has been revised.*

5. SWPPP Narrative, page 10: clarify what the "TOWN CB" peak flow discharge rate table refers to. **Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.**

   LRC Response: *There is an existing catch basin located in Mill Street. This is what is considered the Town CB that is being analyzed to make sure that the storm events aren't exceeding the pre conditions.*

6. SWPPP: provide calculations for the provided WQv pretreatment.
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

   LRC Response: *WQv pretreatment calculations have been provided.*

7. SWPPP NOI: answer question 9
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

   LRC Response: *NOI question 9 has been answered.*

8. SWPPP NOI: answer question 10
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

LRC Response: *NOI question 10 has been answered.*

9. SWPPP NOI: in question 29, provide the green roof contributing impervious area.
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

   LRC Response: *The green roof area has been added.*

10. SWPPP NOI: answer question 42.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

    LRC Response: *Question has been answered.*

11. SWPPP Test Pit Log: 2 test holes are provided in a test pit log, though it's not clear if they were performed at the project site. The log is for "Springside Neighborhood" and states that the location of the test pits are shown on DA-1. However, no test pits can be located on DA-1. **Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.**

    LRC Response: *The title has been revised.*

12. SWPPP Infiltration Test Log: 2 infiltration test holes are provided in an infiltration test log, though it's not clear if they were performed at the project site. The log is for "Springside Neighborhood" and states that the location of the test pits are shown on DA-1. However, no test pits can be located on DA-1.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

    LRC Response: *The title has been revised.*

13. SWPPP: provide preliminary infiltration testing for the proposed infiltration practices in accordance with Section 6.3.1 and Appendix D of the NYSDEC Stormwater Design Manual.

    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

    LRC Response: *Infiltration testing has been provided.*

14. Dry wells should include rooftop runoff only per Section 6.3.1 of the Design Manual. Alternatively, question 23 in the NOI shall be answered "No" and the SWPPP will be submitted for 60-day review from NYSDEC.
Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

LRC Response: *Comment noted.*

15. SWPPP Narrative: Identify which existing and proposed buildings have cellars and provide a discussion of the proximity of proposed dry wells to those buildings.
Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

LRC Response: *The narrative has been revised.*

16. SWPPP Narrative: Provide the design calculations in Appendix D that are referenced in the narrative.
Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

LRC Response: *Calculations have been provided.*

17. SWPPP DA-2: show existing dry well(s) to remain.
Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

LRC Response: *The drywells are shown.*

Plans

1. OP-1: Existing Zoning Maps show the scale as 1"=1,000' where it appears the scale is 1"=100'
Comment not responded to. The Applicant shall provide a response for all previous comments.

LRC Response: *Comment has been revised.*

2. SP-1: Title block states scale is 1"=20', plan states scale as 1"=40' where it appears the scale is 1"=30'
Comment not responded to. The Applicant shall provide a response for all previous comments.

LRC Response: *Comment has been revised.*

3. SG-1: dimension the separation from the proposed dry wells to the existing and proposed structures to ensure at least 10 feet of separation.
   Comment not responded to. The Applicant shall provide a response for all previous comments.

   LRC Response: *The plans have been revised to ensure 10 feet of separation.*

4. SG-1: less than 6" of cover is provided at Catch Basin #1. Revise accordingly.
   Comment not responded to. The Applicant shall provide a response for all previous comments.

   LRC Response: *Plans have been revised.*

5. SG-1: Rim elevation of DW-4 doesn't match the proposed grading.
   Comment not responded to. The Applicant shall provide a response for all previous comments.

   LRC Response: *Plan has been revised.*

6. SG-1: show what appears to be an existing drywell to remain on the east side of the CB to be replaced with proposed catch basin with sump (vicinity of CB#1). Alternatively, if this existing dry well isn't proposed to remain, remove the proposed piping shown tributary to it.
   Comment not responded to. The Applicant shall provide a response for all previous comments.

   LRC Response: *Plan has been revised.*

7. A number of improvements are shown on the 310 Mill St parcel, but it has not otherwise been identified as a project parcel.
   Comment not responded to. The Applicant shall provide a response for all previous comments.

   LRC Response: *Comment has been revised.*

8. Additional technical review comments of the site plan set will be provided once the general engineering comments provided herein have been addressed.
   Comment not responded to. The Applicant shall provide a response for all previous comments.

   LRC Response: *Comment noted.*

VEHICULAR ACCESS FROM MILL STREET, CIRCULATION AND PARKING:

A central accomplishment of the Wallace Campus Project is the replacement of an area of impervious land, a former underutilized parking lot, with green space and public access. To connect these improvements to Mill Street as well as Main Street, substantial consideration has been given to improving access to the property from Mill Street and improving the streetscape and visual character of the Mill Street frontage and views into the site. Mill Street has served as the only vehicular access to the site for many years. The Wallace Campus circulation and parking improvements plan includes upgrades to the existing two main entrances on Mill Street and the vehicular circulation plan for substantially safer and efficient access to and from the Wallace Campus.

The Wallace Campus Drawing sets forth the boundaries of the Wallace Campus Consolidated Lot and shows the Site Plan for that Lot. Four adjoining parcels outside the Wallace Campus are also shown on the Drawing Set, for the limited purpose of depicting the off-site improvements to be made on those properties pursuant to Shared Parking and Easement Agreements, and to show the manner in which those physical improvements and access provisions will improve pedestrian and vehicular circulation in the neighborhood, as well as landscaping, lighting, and community character. The Project Sponsor will enter into Shared Parking and Permanent Access Easement Agreements with the owners of these adjoining parcels, which will be approved by the Planning Board as part of the Project approvals. The Drawing Set depicts the off-site work to be performed by the Project Sponsor on these parcels to implement the Shared Parking and Access Agreements. The work on 302, 304 and 306 Mill Street ("The 3 Mill Street Lots") would eliminate two existing curb cuts on Mill Street (between 302 and 304 Mill and between 304 and 306 Mill), and provide additional green space on those lots, including along the Mill Street frontage to replace those driveways. The Wallace Campus owner will provide a permanent access easement to the owner of the 3 Mill Street Lots for the benefit of owners and tenants, to access the parking areas located on these lots via the Wallace Campus access drives. The Shared Parking Agreement would maintain the allocation of dedicated parking (12 Spaces) to the 3 Mill Street lots in compliance with the PID zoning. Lighting improvements, pedestrian walkways, and storm water improvements will be provided to serve the offsite Shared Parking areas in the same manner as the parking areas on the Wallace Campus parcel, all as shown on the Proposed Site Plan drawings. Pursuant to a separate Shared Parking agreement with the Hudson River Housing ("HRH") property at 310 Mill Street, the Project Sponsor will be granted a permanent easement to construct pedestrian sidewalk paths within the Hudson River Housing property connecting to Mill Street and providing access from that parking area to the rear entrance to the HRH Office building, and parking improvements along the HRH lot southerly boundary that integrate with the Wallace Campus parking area. Lighting improvements and landscaping will be installed as shown on the Drawing Set. The Project Sponsor will provide HRH with a permanent access easement to use the two Wallace Campus Mill Street entrances and exits for access to, and use of, 6 parking spaces which are located on Wallace Campus property directly abutting the westerly boundary of HRH's property (as shown on the Drawing Set), which spaces will be reserved for use by HRH employees during working hours 8 am to 6 pm, Monday to Friday. The 6 spaces to be available for Wallace Campus parking outside of those hours. There will be dedicated space for a pick-up/drop-off for the Day Care Center.

Overall, the proposed Wallace Campus development incorporates 62 parking spaces to serve the commercial and residential uses and public space.

Please refer to the attached Report of Maser Consulting addressing Shared Parking, Waiver and fee-in-lieu parking, and Traffic and Circulation on the site. Overall, the Project provides 62 parking spaces and is requesting a Waiver and fee-in-lieu for 18 spaces.

Re: Wallace Campus Project Review
Chazen Project #82029

Dear Ms. Quinn:

The Chazen Companies has reviewed the Wallace Campus project materials submitted by ALC Planning and Development dated November 5, 2021. We have the following comments.

Environmental Assessment Form (EAF) Part 1

1. Revisions were made to the EAF to address our minor comments previously submitted (e.g. Coastal Zone status; nearby historic sites).
2. Section B.c. identifies the possible need for variances. The project was revised to eliminate the need for height variances. We did not find identification of the need for other variances. This section could be revised if no variances are sought.
3. The energy use on Section D.k.i. increased over that projected in the prior EAF. It is not clear why that should be the case since the revised project has been downsized and would presumably use less energy.
4. Section D.r. should identify construction and operations solid waste (i.e. non-hazardous waste) generation.

Parking and Circulation

1. Chazen concurs with the results of the sight distance evaluation for the site driveways. A one-way sign at the exit driveway should be shown on the site plans to prevent wrong way travel when turning onto Mill Street.

Engineering

While revised plans were submitted, most of the engineering comments in our April 12, 2021 review letter have not been responded to. We also have several new comments in response to the latest submission. Note also we did not have time to conduct a detailed review of pipe sizing calculations. We will do so when the next submission addressing our comments is made.

Our consolidated comments are as follows.

Water

1. Engineering Report, Section 1.0: Site improvements are shown to 310 Mill Street (Tax Parcel 6162-78- 128113) but it's not included in the project description. Clarify this parcel's involvement in the project.
   Comment not addressed. The description still doesn't accurately describe the Wallace Campus. The description states there are 5 tax parcels involved and provides 4 addresses & tax parcel identification numbers where 8 individual tax parcels are part of the project. Similarly, the revised Lot Line Consolidation Plan includes Lots A-G and 310 Mill Street still isn't included. The description still describes a proposed day care.

2. Engineering Report, Section 2.2: References to "331 Catharine Street" were removed as requested. However, Section 2.2 includes a reference to "the Catharine Street building." As the project contains multiple buildings along Catharine Street, the building references should be checked to make sure they are clearly referencing a single building. The building references throughout the report should be reviewed for clarity and revised as needed.
   Comment not addressed. Response indicates that there is only one *proposed* building and that there are no revisions proposed to the existing services. This is a correct statement but doesn't address the comment.

3. Engineering Report, Section 2.2: provide correspondence from City Engineering that the existing water treatment facility and distribution mains located in the vicinity of the project site have sufficient capacity to supply the additional demand resulting from the proposed project. The engineer's response indicates the project results in a slight increase in water demand. However, this is not based on actual current demand/meter readings so it's not a reflection of the actual increase in demand over the current existing condition.
   Comment not addressed. No correspondence has been provided from City Engineering related to sufficient capacity.

4. Engineering Report, Section 2.1: existing sewer generation: office use generation shall be based on number of employees, per Table B-3 "Typical per Unit Hydraulic Loading Rates" of the NYSDEC "Design Standards for Intermediate Sized Wastewater Treatment Systems", March 5, 2014. As previously requested, revise calculations or provide methodology for converting to square footage.
   Comment not addressed. The engineering report continues to reference the NYSDEC "Design Standards for Intermediate Sized Wastewater Treatment Systems" (2014) which is based on number of employees, not square footage. The response indicates the methodology relies on the previous NYSDEC design manual. Either clarify the engineering report methodology reference or provide a conversion for square footage to number of employees based on the previous NYSDEC design manual.

5. Engineering report, Section 2.1: Existing square footage for Parcel E was increased by approximately 45,000 square feet. Additional information regarding where the square footages, restaurant seats and number of club patrons shall be provided.
   Comment not addressed. The response indicates the information was obtained from "Dutchess County Parcel Access as well as the project Architect for total SF of the building. The number of seats and club patrons was provided by the project architect when reviewing historical documentation for the building." No such supporting documentation has been added to or provided in the engineering report to support the estimated existing flows (ie. the methodology utilized by the project architect). Additionally, references to the fitness center and daycare uses should be removed from Section 2.1.

6. Engineering report, Section 2.1: Provide methodology for determining number of employees for the retail spaces included in the Sanitary Sewer Flow / Water Consumption Projections.
   Comment not addressed. The response indicates the estimated flows were provided by the project Architect and previous experience but no such supporting information has been added to or provided in the engineering report to support the estimated flows (ie. the methodology utilized by the project architect).

7. Engineering report, Section 2.1: A sentence that "sizing for the fitness and daycare are based on occupancy and parking calculations determine estimated number of patrons" has been added to the engineering report. Provide the correlation and calculations used to convert occupancy and parking calculations into number of patrons and number of people used for average daily sewage generation.
   Comment no longer applicable, as the fitness center and daycare are no longer proposed.

8. Engineering report, Section 2.4: Obtain hydrant flow testing data (if available) from the City Fire Department to verify what the available fire flows are in the vicinity of the project. Alternatively, perform hydrant testing in the vicinity of the project in coordination with the City Fire Department.
   Comment not addressed.

9. Engineering report, Section 2.4: Additional fire suppression methods may be required for the proposed buildings (standpipe, as an example). Revise fire suppression description accordingly.
   Comment addressed.

10. Engineering report, Section 4.0: Provide correspondence from Dutchess County Department of Behavioral and Community Health that their review and approval is not required for the proposed project and associated lot consolidation.
    Comment not addressed. No correspondence from DCDBCH has been provided.

Sewer

1. Sheets EX-1 & UT-1: The size of the existing sewer main in Catharine Street is shown on plan EX-1. The inverts for one sewer manhole have been provided on UT-1. The invert at the manhole on the opposite side of the connection point shall be shown in order to determine the invert of the existing sewer at the location of the proposed service lateral connection.
   Comment not addressed. The applicant now proposed connecting the sewer lateral directly

into the existing sanitary manhole within Catherine Street, which results in less than the minimum 10' horizontal separation to the water line to an existing hydrant. Indicate mitigation proposed at this location.

2. Engineering Report, Section 3.2: verify with City Engineering that the existing wastewater plant and the collection lines in the vicinity of the project site have sufficient capacity to serve the additional wastewater generation resulting from the proposed project. The engineer's response indicates the project results in a slight increase in sewer generation. However, this is not based on actual current demand/meter readings so it's not a reflection of the actual increase in demand over the current existing condition.
   Comment not addressed. No correspondence from City Engineering has been provided.

3. Engineering Report, Section 3.3: References to "331 Catharine Street" were removed as requested. However, Section 3.3 now references "the Catharine Street building." As the project contains multiple buildings along Catharine Street, the building references should be checked to make sure they are clearly referencing a single building. The building references throughout the report should be reviewed for clarity and revised as needed.
   Comment not addressed. Response indicates that there is only one *proposed* building and that there are no revisions proposed to the existing services. This is a correct statement but doesn't address the comment.

4. Provide correspondence from Dutchess County Department of Behavioral and Community Health that their review and approval is not required for the proposed project and associated lot consolidation.
   Comment not addressed. No correspondence from DCDBCH has been provided.

<u>Stormwater</u>

1. SWPPP: it's noted that the current General Permit (GP-0-20-001) is provided in Appendix A. However, the narrative and table of contents include references to the previous general permit. Update all references to the current GP number.
   Comment partially addressed. The Owner/Operator Certification Form provided in the SWPPP references GP-0-15-002 and should be replaced with the current version. The Appendix B divider page also contains a reference to GP-0-15-002.

2. SWPPP Narrative, page 8: describes one existing dry well to remain. Based on the Demolition Plan and HydroCAD modeling provided, it appears there may be 2 existing dry wells to remain. Clarify/revise as needed.
   Comment addressed.

3. SWPPP Narrative, page 8: states "all proposed piping is sized to accommodate peak flow from 25-year 24-hour storm, as prescribed by the local authority." Provide pipe sizing calculations for review.
   Pipe sizing calculations have been provided but have not yet been reviewed due to the delayed submission and resulting review timeframe. Related comment(s), if any, will be provided at a

later date.

4. SWPPP Narrative, page 9: Section 5.2 states there are seven different design points. However, only two are shown on the pre-development and post-development watershed maps. Clarify/revise as needed.
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

5. SWPPP Narrative, page 10: clarify what the "TOWN CB" peak flow discharge rate table refers to.
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

6. SWPPP: provide calculations for the provided WQv pretreatment.
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

7. SWPPP NOI: answer question 9
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

8. SWPPP NOI: answer question 10
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

9. SWPPP NOI: in question 29, provide the green roof contributing impervious area.
   Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

10. SWPPP NOI: answer question 42.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

11. SWPPP Test Pit Log: 2 test holes are provided in a test pit log, though it's not clear if they were performed at the project site. The log is for "Springside Neighborhood" and states that the location of the test pits are shown on DA-1. However, no test pits can be located on DA-1.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

12. SWPPP Infiltration Test Log: 2 infiltration test holes are provided in an infiltration test log, though it's not clear if they were performed at the project site. The log is for "Springside Neighborhood" and states that the location of the test pits are shown on DA-1. However, no test pits can be located on DA-1.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

13. SWPPP: provide preliminary infiltration testing for the proposed infiltration practices in accordance with Section 6.3.1 and Appendix D of the NYSDEC Stormwater Design Manual.

Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

14. Dry wells should include rooftop runoff only per Section 6.3.1 of the Design Manual. Alternatively, question 23 in the NOI shall be answered "No" and the SWPPP will be submitted for 60-day review from NYSDEC.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

15. SWPPP Narrative: Identify which existing and proposed buildings have cellars and provide a discussion of the proximity of proposed dry wells to those buildings.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

16. SWPPP Narrative: Provide the design calculations in Appendix D that are referenced in the narrative.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

17. SWPPP DA-2: show existing dry well(s) to remain.
    Comment not responded to. Response letter includes responses for stormwater comments 1-3 only. The Applicant shall provide a response for all previous comments.

Plans

1. OP-1: Existing Zoning Maps show the scale as 1"=1,000' where it appears the scale is 1"=100'
   Comment not responded to. The Applicant shall provide a response for all previous comments.

2. SP-1: Title block states scale is 1"=20', plan states scale as 1"=40' where it appears the scale is 1"=30'
   Comment not responded to. The Applicant shall provide a response for all previous comments.

3. SG-1: dimension the separation from the proposed dry wells to the existing and proposed structures to ensure at least 10 feet of separation.
   Comment not responded to. The Applicant shall provide a response for all previous comments.

4. SG-1: less than 6" of cover is provided at Catch Basin #1. Revise accordingly.
   Comment not responded to. The Applicant shall provide a response for all previous comments.

5. SG-1: Rim elevation of DW-4 doesn't match the proposed grading.
   Comment not responded to. The Applicant shall provide a response for all previous comments.

6. SG-1: show what appears to be an existing drywell to remain on the east side of the CB to be replaced with proposed catch basin with sump (vicinity of CB#1). Alternatively, if this existing dry well isn't proposed to remain, remove the proposed piping shown tributary to it.
   Comment not responded to. The Applicant shall provide a response for all previous comments.

7. A number of improvements are shown on the 310 Mill St parcel, but it has not otherwise

been identified as a project parcel.
Comment not responded to. The Applicant shall provide a response for all previous comments.

8. Additional technical review comments of the site plan set will be provided once the general engineering comments provided herein have been addressed.
Comment not responded to. The Applicant shall provide a response for all previous comments.

Please do not hesitate to contact me with any comments or questions.

Sincerely,

Stuart F. Mesinger, AICP
Vice President, Land Development

Wallace Campus – Public Comment Responses from November 16, 2021

The Development Team has listened to the comments voiced at the planning board meetings and public hearings. All the concerns voiced from the November 16, 2021 Planning Board Meeting are addressed below.

Public Comment	Response
Date: November 16, 2021 *Name: Norman Steinberg* *Form: Public Comment* *Thank you, the board.* *I just have two simple comments waiting for answers.* *Based upon the information that was presented over the last couple of months, it appears to me that the overall income for this total project is based upon an affordable median income of approximately 78 percent.* *If you include the supportable housing, according to the documents that were submitted, the affordable median income in Poughkeepsie is approximately $50000.* *The income at this project will have an a weighted average of approximately $39000 across 189 units.* *I just would like to explain how you see that economic impact affecting and helping the downtown go through some level of revitalization, bringing in new stores and new restaurants and bars.* *And as to why nobody's still discussing market rate housing for this project.* *That's my first question.* *My second, and I just would like that answer to someone to address it during the public comment, Mr.* *Steinberg will have you give your full comments.* *And when the public hearing is closed, either the applicant or the board will be able to respond.*	The income levels must average out to 60% AMI (per Dutchess County AMI level) for the project to qualify for funding from the New York State's Home and Community Renewal agency. The Development Team has conducted site visits with several prospective retail tenants, and all the prospective tenants have expressed support for the residential programming and income levels of the project. The business typology were food businesses. The project will encourage commercial revitalization by targeting businesses that will activate Main Street and Catharine Street and offering competitive and below market rental rates to support new businesses. Market rate is not contemplated because The City of Poughkeepsie also has a demonstrated need for more affordable housing – over half of the renters in Poughkeepsie are rent burdened, and pay more than 30% of their income on rent. By capping a resident's rent at 30% of their income, the project will help keep Poughkeepsie affordable to over 300 people who can reside at Wallace Campus. Additionally, most of the City of Poughkeepsie's new developments are market rate housing. Per data from the Department of Planning, approximately two thirds of the housing projects that have been presented at the Planning Board for review have been market rate housing. Per zoning requirements, the project must retain commercial frontage adjacent to the sidewalk. Creating a courtyard with Main Street frontage is not allowed.

But your time is still running. *So I want you to finish your second comment, please.* *All right. So my second comment is based upon my experiences.* *I would love to see a design that would switch the footprints of the of the proposed new building with the wireless screen, put the wall screen facing Main Street given the depth of what is already being presented.* *It's not a what I would expect of a full green or a full campus for the quality of the city of Poughkeepsie, but putting it in front of the building would create a regal courtyard.* *You could easily create.* *You could use a great table's retail facing a courtyard on Main Street.* *Plus, the security that you do talk about in the front lobby could overlook the green and on Main Street.* *And that would lead to a certain revitalization.* *Right now, I don't see, I don't see really, especially based on income levels, what's going to stimulate retail and commercial on Main Street or on the side streets.* *But if we can create a public green in front of it where you can actually just have your outdoor, yes, I think look really valid.* *I'm done.*	
Date: November 16, 2021 *Name: Laurie Sandow* *Form: Public Comment* *Thank you, Lord Senator, and I'm forced to waste part of my three minutes to note my concern that*	The non-permeable areas will be the surface parking lots. The half-acre park will be permeable. The project will significantly increase the amount of permeable area as compared to the existing site conditions.

the public is limited to three minutes, as if substantial comment and impact can be made in that short period. *I look forward to the day when certain city staff and elected find themselves in the position of the public hobbled to three minutes and put thanks to the city website redesign.* *I had the wrong start time in my calendar and did not join last month's Planning Board meeting until after the Wallace campus public hearing had come and gone.* *Thanks also to that redesign, I doubt how many members of the public actually know about tonight's public hearing, but having listened to the wall as part of the last meeting, I'm going to offer some comments and response.* *There was mention at the last meeting that on October 18, the Wallace applicant met with the mayor, city administrator, unnamed members of the planning board, an unnamed members of the Common Council.* *Yet I have not seen a single post nor heard a single comment at a council meeting or elsewhere reporting on this meeting and what in particular people found illuminating about it.* *Nor are there public alerts when applicants make updates so that people might become aware and access this material prior to being surprised at a planning board meeting.* *Nor why the Wallace campus has not been the focus of a council agenda item in public hearing.* *If I heard correctly in response to one question, the applicant mentioned that a certain pay portion of their plan would not be permeable. Surface really got to love a developer who is determinedly not forward thinking when so many people in the city of Poughkeepsie have recently reported severe flooding of their property post either and post other recent heavy rains stated tonight.*	The Development Team does not seek to charge for use of the Wallace Green space unless additional services or work is needed to accommodate the programming partners. Regarding the development team's offer to donate the proceeds from architectural salvage items: Fall Kill Creative Works, an active non-profit, was originally incepted as the Mid-Hudson Heritage Center. The Development Team is open to other organizations. The building staffing plan is designed to ensure quality management and maintenance of the building for the long-term. The Development Team expects to hire approximately three building maintenance staff members, including an on-site superintendent and two porters. In addition, there will be front desk staff to ensure security of the building as well as on-site social service staff. There will be an on-site maintenance office, management office, and service staff offices. The project will be built in compliance with the City of Poughkeepsie's building codes for multi-family dwelling. Per the City's EAF review, the Development Team has provided a phasing schedule to mitigate the length of the project. The general contractor has successfully built ground-up projects in New York City in dense areas with minimal disturbance and neighbor impact.

Outdoor events on Walworth Green will have to might take place, and I want to know how much these these users will pay the development to use the green. *Also tonight there was mention of donations to the Mid-Hudson Heritage Center. How can that be when the Mid-Hudson Heritage Center no longer exists? The applicant, if I heard right, is planning one hundred eighty seven units with only one site site superintendent, unreal superintendent.* *And what size apartment with family or without family? One hundred sixty seven unit building with just a super no porter, no doorman, no handyman, resident manager of security staff or management office.* *I would offer you random samples of how this these numbers are handled and jobs are handled in a large multi-unit family multifamily apartment building in New York City. But I don't have time in three minutes when talking about the size of the building.* *I've heard absolutely no mention of compliance with multiple dwelling laws, something that other developers in the city of Poughkeepsie have evaded.* *Now, I've not heard any discussion of the disruption that construction will cause to neighboring businesses in terms of dust access, loss of revenue, etc..* *Additionally, for anyone who has attended Yvonne Flowers meetings, read the utter failures of Hudson River Housing and Mental Health America and the disruption the pods have caused to residents of North Hamilton.* *I'm not so sanguine about assurances that this development will not cause injury to surrounding residents and businesses.* *Finally, I note that the planning board appears to review each application as if it exists in the*	

vacuum of a perfect world silo, rather than in a city with many imperfect conditions and challenges. *Thank you.*	
Date: November 16, 2021 *Name: Michael DeCordova* *Form: Public Comment* *Three men used to park four cars on its own land.* *Have you provided them parking? If not, do you think that is a neighborly? How many equity holders of wireless currently reside as that term is legally defined within 15 minutes of the site? Previously, ninety five percent of Wallace's apartments were below the 60 percent county income level and seventy five percent below the 50 percent level.* *An earlier presentation used county income levels.* *The developer should present the county income levels so apples can be compared to apples to see how the levels have changed, as they stated last month.* *Another shop project fall comments said one point one police calls per apartment per year extrapolated to wireless. This equates to two hundred and five police visits per year. If your projection is lower than for kill two, what would you attribute that? Additionally, how many fire and EMT calls are anticipated per apartment per year of all federal, state and federal and state housing programs?* *Are there any that provide better financial incentives than the sharp, low income housing tax credit program that you are using? Are there any programs that allow less developer risk?* *What is your status of your application for a historic landmark status? What is the project's total cost estimate? The statutory amount of the developer fee, the projected market value upon completion, the projected positive cash flow*	Per a previous response to Michael DeCordova's April 20, 2021 Comment: > The plan will also not create a parking deficit. Currently, the proposed plan has 63 parking spaces. Per the City of Poughkeepsie's zoning, 32 is required. Colliers Engineering analyzed the parking needs based on the programming and residential density and concurred that the parking provided meets the needs of the project. Furthermore, the City's retained civil engineering consultant, Chazen Companies, reviewed the projected circulation and parking needs and approved the current parking plan. Additionally, there are several underutilized parking lots in the nearby vicinity if visitor to downtown Poughkeepsie need additional parking. For example, the City of Poughkeepsie conducted a parking study in 2017 and found that the current parking lots in the nearby area are underutilized. Currently, there are 980 total parking spots in the adjacent area. The 90-space public parking lot adjacent to the project site has an estimated utilization rate of less than 30% on weekends and less than 60% on weekdays. Attached to the response document is a chart with the City of Poughkeepsie's AMI and Dutchess County's AMI. However, income levels of the building are not considered part of the Planning Boards official review since it is not in the jurisdiction of the Planning Board to dictate rent levels of proposed residential buildings as part of the site plan review process.

on the fifth and tenth year? And how does that compare to a market rate project? What are the projected total annual taxes the project would provide our city without a pilot? What reductions in taxes do you seek and for how many years? What is the dollar value of the historic and brownfield tax credits on both federal and state levels? Are those available through a market rate project? Also, what is the dollar value of the low income housing tax credit? Are there any other tax credits being used like Opportunity Zone or 10 30 ones for a typical shop low income housing tax credit developments? What percent of developers equity will remain after permanent financing? Can a developer cash out upon completion? The New York State Shop program requires its clients to have disabling life challenges in the system, setting many different specialists in trauma, drug addiction and serious mental illness, residents leaving incarceration, et cetera. *Our master's or doctorate degrees in psychology or social work required.* *Is there a requirement that those clients who are prescribed medicine actually take it? How many caseworkers will be assigned to these clients? What are their hours and responsibilities? To whom do the caseworkers report? And are they required to live on site? If not, is there a radius restriction in the event of an after hours emergency? Caseworkers who pays them? Are they employees of Wallace or the state of New York? Can Wallace contract with an outside agency to provide them? Who is ultimately responsible for their work? The state of New York? Wallace for the outside employment agency.* *Is it contemplated that mental health America will be a tenant? If so, who will it serve? Thank you.*	The project will not create additional strain on the public services. The Development Team has provided the public requests for police services for a completed project in New York City with similar unit mix, including supportive housing, as an attachment to this document. To date, although the project has been fully occupied and operating for the past two-years, zero calls have been made to the New York City Police Department. The Development Team does not have access to EMS or other health related requests for service due to HIPPA privacy regulations. The Development Team does not have access to all the data for all projects financed with state and federal funding. However, the Development Team is working to review the project with the local fire department to formally assess the impact on emergency services. The Poughkeepsie fire department and police department have previously reviewed the project and have not indicated adverse impacts. The New York State Historic Preservation Office has reviewed all the sites and buildings related to the site. The Wallace Department store building on 331 Main Street has been determined to be eligible for listing on the National Registry. The project's total cost has been submitted to the planning board via the project information form and is publicly accessible. The project's financing, valuation and cash flow are not subject to public opinion or planning board review and thus the questions posed in the group above/below will not be answered. The development team can represent that it has the full means and capabilities of successfully financing and completing this project. Furthermore, the development will be providing significant personal and corporate guarantees during the construction period and extending beyond through the property operations for a minimum of fifteen years. For all questions related to the valuations and the cash projections of affordable housing projects, please feel free to

	utilize any of the affordable housing consultants, identified by Novgradac or any of the other myriad resources available on-line. MHA Dutchess will be the on-site service provider and will provide services to the supportive units at the project. MHA Dutchess has been awarded ESSHI funding to do so and will follow New York State's program guidelines. Funding is awarded by the New York State. MHA Dutchess will have dedicated on-site offices to serve the residents at Wallace Campus
Date: November 18, 2021 *Name: Michael DeCordova* *Form: Email to City of Poughkeepsie* *Natalie:* *Might you be able to send me, or direct me to a source which contains, the current AMI levels for the City of Poughkeepsie? Also, delineating if that is single households or families would be helpful. I'd like to compare the City AMI levels vs. the County AMI levels to extrapolate data for the Wallace project. I found it impossible to correlate their presentation to the county ami levels.* *It seems a logical PR campaign to present their rents relative to city ami (which is lower than the county's) but we know that is not how it is done for subsidies. As a consequence, I don't really nor can I easily compare it to other City affordable and SHOP projects without using the same data points.* *And, for those who contend that downtown needs a higher income demographic to improve our City, its tax base, its attractiveness and perhaps, most importantly, its school system, it doesn't matter which statistic is used. Unfortunately, the project doesn't approach what the Urban Land Institute said was its formula for developing successful Supportive Housing and below market housing projects.* *Please make my request a part of the record for Wallace, distribute to Planning Board members, and ask them to present their apartments as they had in the first presentation: total number of studios, ones, twos and now threes at which*	Since April 2021, the Development Team has increased the number of larger units (two-bedrooms and three-bedrooms) by 23 units while decreasing the overall number of units. In addition, the Development Team has increased the proportion of higher income tier units. Regarding the AMI levels, please see the above response to Michael DeCordova's November 16, 2021 comment.

county income levels (ie: 30% AMI: ___ studios; ____ones; ____ twos;____ threes; 40% AMI:___ studios; ____ones; ____ twos; ____threes; 50% AMI: ___ studios; ____ones; ____ twos; ____threes; 60% AMI ___ studios; ____ones;____ twos; ____ threes;80% AMI: ___ studios; ____ones; ____ twos; ____ threes; Market Rate: ___ studios; ____ones; ____ twos; ____ threes; etc.). *Thank you very much and I wish you well.* *Michael*	
Date: November 11, 2021 *Name: Doug Nobiletti* *Form: Email* *Planning Board members,* *I have attached a document which I hope will prompt some critical thinking over the proposed Wallace Campus Project.* *I'm certain you all, or most of you, feel a sense of accomplishment in having the developer scale back his numerous iterations of the proposed development.* *I just want you to understand that this project comes with much risk. I have been championing Main Street since 2001.* *I have watched the brass ring slip through our grasp over many projects which should have set a course to make this project never a consideration. Aside from my own redevelopment of 328-330 Main, I have worked with the former owners of Wallace to form the Downtown Poughkeepsie Partnership, which accomplished many positive changes for this critical block, the jewel in the crown or our city. We have led 3 properties to qualify for our local historic register, have accomplished a temporary park, Mural Square, we've run an Ambassadorship program, employing city youths to clean the corridor, something the city seems unable to maintain,*	On November 16, 2021, the Development Team introduced Mental Health America - Dutchess as the on-site, non-profit service provider. MHA Dutchess will provide case management and on-site assistance to the residents of the supportive units. MHA Dutchess serves a large number of Veterans -- due to a high number of Veterans in Dutchess County, the Wallace Campus's supportive units could serve the Veteran population of Poughkeepsie. The Development Team does not own neighboring commercial properties and does not have any influence over the retail tenancy. The Wallace green space will be actively and passively programmed to prevent unwanted activity within the green. We carefully planned a tailored security plan as well as active public programming. Per the November Site Plan submission, we have provided a lighting plan that will ensure that at nighttime, the space will be adequately lit. In addition, we will have 24/7 front desk security who can respond to any resident and community concern. Although the project is several years away from completion, we have started engaging programming partners who will utilize the green space to ensure it remains vibrant with positive community activity. LOIs and written interest have been provided by: • Bardavon 1869 Opera House • Poughkeepsie Jazz Project • Mindful Yoga with Liz

I helped refocus PACE University/Kevin Dwarka away from Hooker avenue to concentrate on our downtown as a more critical effort. *The decision you make Tuesday, November 16th will have permanent ramifications to the character of our city as a whole. Unfortunately, many of us see it as more problematic than as "problem solving".* *Please do read the attached PDF, and ask yourself would you live there?* *Thank you,* *Doug* *PDF:* *Re: Wallace Campus Public Hearing, October 19, 2021, relevant to the upcoming meeting November 16, 2021* *To: The City or Poughkeepsie Planning Board & Developers of the Wallace Campus Project* *While I appreciate your efforts at these public hearings to create the best project possible for the City, nevertheless this project in its current state has failed to adequately address the following key issues:* *Supportive Housing – Not appropriate for a downtown business district trying to rejuvenate* *While the developer appears to continually include supportive housing units, it rarely is, if ever mentioned in this development. Why is this t this the case? Why does it appear that any discussion of this issue is hidden or avoided?* *The logic of establishing a home base for people in need of mental health and treatment services right in the heart of our Downtown, our struggling Central Business District, does not make any sense when the City is attempting to attract new businesses, people who will spend money at retail establishments and wish to frequent fun and interesting restaurants and other business types.* *This is not a case of NIMBY, this is a case of common sense*	The Development Team has also responded to public comments regarding security at Wallace Campus. The response is copied below. On-site presence: The residential lobbies will have 24/7 front desk security. Appropriate lighting: The project will include appropriate levels of exterior lighting in both the front sides and rear of both the new building and existing Wallace department store as well as the Wallace Green space to illuminate presently dim portions of Main and Catherine Streets. The November 2021 submission outlines the lighting plan that reflects the illumination of the project site. Security systems: The developer will also incorporate into these areas a highly effective security system designed to assure tenant safety and quickly report safety issues to local authorities. Elements of the security system will include advanced software, motion activated cameras and speaker microphones. These systems can be backed up by remote monitoring, ensuring an alert can be transmitted 24/7. Mixed-use buildings create active presence 24/7: The mixed-use nature of the proposed development will also increase physical presence and deter safety issues. Currently this area on the site is covered with asphalt and several abandoned and under-utilized buildings in the heart of downtown Poughkeepsie, sparingly used and mostly desolate. The project will not create additional strain on the public services – please see the above response to Michael DeCordova's November 16, 2021 comment.

This project establishes a home base for a population that has a variety of issues including substance abuse who will be surrounded by attractive-nuisances catering to their urges. Right next door to Wallace is a bodega which specializes in cheap beer, tobacco and unhealthy foods, while 50 yards across the street is a liquor store, our number one attractive nuisance for reasons obvious to us property/business owners. Will we just see this existing problem expand further? *Wallace Green Concept – The Realities of Poughkeepsie – How will it be managed?* *Given the failure to police the other Downtown Poughkeepsie parks & recreational areas, it needs to be fully thought through and investigated how the Green is going to be utilized, managed, and maintained. What will prevent it from becoming another Poughkeepsie "Needle Park?" Without a carefully thought out plan, different from what has been tried before, it will be similar to all the other public spaces along the Main Street corridor. A review of the call records from the police, fire, and emergency medical services proves this out. One thing I did not see in the renderings were any trees to help create a welcoming natural streetscape & shade. Wallace is on the sunny side of the street where trees would thrive.* *For many years I worked with your 1st ward representative to have trees planted in order to help soften the landscape, as many businesses owners complained about the detrimental effect of strong sunlight reflecting off their windows. This effort never came to fruition, leaving businesses frustrated and disappointed that the north side of the street, which is in constant shade, happens to be fully tree lined, yet theirs remains barren. This is your opportunity to change that.* *Poughkeepsie A Failed History of Public Amenities -Murphy Park – Liberty Street Planter* *All our Main St. parks/accessible open spaces have been shuttered, or have had seating areas removed. The population of homeless, loiterers, and substance abusers which really needs tender loving care, need be administered to yet they should not receive assistance on the sidewalks of*	The Development Team seeks to minimize disturbance and work as expeditiously as possible to complete the project. The contractor is extremely familiar with constructing in very dense urban areas and will schedule the work to mitigate disturbances to the area's circulation and traffic. The Development Team fully recognizes the importance of preserving important components of history, especially in the built environment. Per the planning board's feedback, the Development Team is salvaging identified components of the buildings that will be demolished as a part of the project. Additional site visits with Poughkeepsie's Historic District and Landmarks Preservation Commissioner have been scheduled to document the current building's, and the Development Team has offered to share any photo documentation that within its possession. In addition, to ascertain the historic importance of all of the buildings in the Wallace Campus, the Development Team met with the New York's State Historic Preservation Office and reviewed all the buildings in the campus. Per SHPO and the Development Team's historic preservation consultants, the only building that was historically significant was the Wallace Department Store building (331 Main Street). The plans for Wallace Green have been carefully thought out. Wallace Green meets the standards of the PID zoning, including that it is visually and physically accessible, providing pedestrian access from a public sidewalk or a private walkway open to the public; that it is landscaped, and that it includes amenities, and that the owner has committed to maintaining the Green. The submitted site plan drawings show a complete landscaping plan for the Wallace Green. The landscape plan (See sheets LL-1 and LL-2) show trees within Wallace Green including 2 London Plane trees, 3 Kwanzan Cherry Trees and 2 Kousa Dogwood Trees, as well as numerous ornamental shrubs and decorative perennials. The Wallace site plan overall shows 66 new trees being planted

our city, in the heart of our business district. Take a look at Murphy Park, right in front of the Poughkeepsie underwear factory. This once promising park has now been fully enclosed by chain-link fence to prevent access by anyone. Many businesses once located in PUF have left for greener pastures. *The city used to have a beautiful mature tree and raised-bed planter at Liberty* *Street, which the administration saw fit to remove -not because of the plan to remake the parking area: it was determined to be the best solution for dealing with substance-abusing drug addled loitering population who insist on soothing themselves with a variety of substances. Numerous calls to Police have resulted in Narcan being administered, while the majority drunkenly act-out, leaving copious amounts of empty liquor bottles throughout the corridor and on every inch of Main Street. Did I fail to mention public defecation, urination, & illicit sexual activities?* *Prolonged Demolition and Construction Process* *The prolonged demolition and construction process is going to have a damaging effect on the existing businesses, many which are already struggling to survive. It will also severely exacerbate the already difficult traffic/parking/loading situation.* *Failure to embrace Historic Preservation* *I find it very disappointing that you still choose to tear down three perfectly functional buildings which, though modified and refaced, are now part of the historic fabric of our existing streetscape. They are our familiar streetscape and have been for some time.* *If you look at cities such as Boston Savannah GA,and Dublin Ireland, you're not allowed to just destroy a building's facade, you must preserve it. They support preserving historic facades while constructing modern buildings behind them. Feel free to consult with your colleagues at the Boston Planning & Development Agency, formerly known as the http://www.bostonplans.org/ Boston Redevelopment Authority. Yes, the facades at 319-325-329 have been muddled, but there is*	within the site, 945 shrubs, and extensive perennials and decorative grasses. Plantings within the Main Street right-of-way are within the jurisdiction of the City, as the commenter notes. In addition, SHPO 319 Main Street, 325 Main Street, and 327-329 Main Street disqualified the three buildings slated for demolition as contenders for landmark status. A memo regarding the historic components of the project was submitted to the planning board for review and is publicly accessible.

photographic evidence of what used to exist and can be remade. *There are plenty of examples of Main Street buildings which have been restored to present their facades and storefronts with relative historical accuracy, along with building envelopes rehabbed and brought up to current standards of energy efficiency and safety. Look no further than the two properties you face: 328 and 330 Main Street. They've been restored as such and hold a place on the local historic register, also making a rather prominent appearance in one of your streetscape renderings.* *Thank you,* *Doug Nobiletti* *Managing Partner*	
Date: November 15, 2021 *Name: Kari Rieser* *Form: Email* *Owning a shop on Main Street has given me a particular vantage point for the wallace campus that I don't think many people have. If we are going to use our "innovation business district" as a place where we are now housing hundreds and hundreds of people, some whom have serious mental health issues, then I think we need to come to terms with the fact that having a downtown business district with a thriving downtown I not in the cards. I am all for supportive housing but in the only one or two intact blocks that we have left of our Main Street?, I can't believe this is the only place that this could happen. And if that is the case I think we should all be OK with businesses leaving this district and going someplace else and just write off our business district for the decades to come. The only businesses that will be able to thrive will be beauty supply, smoke shops and convenient stores. And all of that is fine as long as everyone understands that that is the choice that is being made. I believe in Poughkeepsie! I believe that housing is a human right, but I don't believe putting people most at risk for drug and alcohol addiction in the very place that it is most easily found is a good choice.* *Thank you very much for all you do.* *Sincerely, Kari Rieser*	Please see the above response to Norman Steinberg's November 16, 2021 comment.

Date: November 11, 2021 *Name: Tina Staniscia* *Dear Natalie,* *After our conversations and interviews, I'm well aware how supportive you are of the Wallace Campus Project. I am conflicted about the scope of the work the long-term upheaval of the blocks and surrounding areas. I am skeptical about the project actually being completed at all, although certain it will commence, no matter the cost.* *What perplexes me is how one justifies our initial conversations regarding the Poughkeepsie Innovation District. I thought it was important to you, Mayor Rolison and the city to improve the Main Street Business Corridor for actual businesses. The Wallace Campus Project leans heavily on a high percentage of subsidized units in order to secure the highest financial incentives for the developer. Folks of all levels of financial means deserve to have access to affordable housing, but why does it have to be in this stretch of Main Street? How will this possibly attract new businesses that aren't barber shops, hair and nail salons, cell phone stores, bodegas, or smoke shops?* *With a seemingly imminent approval for the WCP on the horizon, is there any example of another downtown business that has managed to grow and thrive while creating more subsidized and supportive housing? Will anything improve? When will the ongoing problems that happen daily be addressed? Drunks, addicts, sex workers and dealers work out in the open. Parking is a disaster, street sanitation is non-existent, and a lack of police presence keep people away. As much as I adore my new business and the customers who have been so supportive, I hesitate to make any long-term commitment to staying at its current location.* *I used to feel the City of Poughkeepsie had potential. I have to say I am not feeling at all optimistic. I have lived here for over four decades. At the time, the Main Mall was a wonderful place. It was vibrant and bustling with activity, not an empty storefront in sight. Nothing would bring me more joy than being proven wrong. I just don't see it happening.*	Please see above – the Development Team has had food focused retail tenants express interest in occupying Wallace Campus. Adaptive reuse and affordable housing have been effective at revitalization of downtown areas. New York State government manages the Downtown Revitalization Initiative in conjunction with the Empire State Development Corporation and the New York State Homes and Community Renewal department. Several Downtown Revitalization funding awards (Tannersvillev, City of Batavia, etc.) have affordable housing components.

Wallace - Income and Rent Overview

1.0 INTRODUCTION

This Water Quality and Quantity Plan and Stormwater Pollution Prevention Plan (SWPPP) have been prepared pursuant to the Environmental Protection Agencies' (EPA) and the New York State Department of Environmental Conservations (NYSDEC) Phase II Storm Water Regulations. All parties, as defined below, are responsible for executing the SWPPP and for complying with the requirements set forth in the EPA's National Pollution Discharge Elimination System (NPDES) General Permit, the NYSDEC's State Pollution Discharge Elimination System (SPDES) General Permit GP-0-20-001, and any local governing agencies having jurisdiction with regard to erosion and sediment control.

The purpose of the SWPPP, described herein, is to provide for the proper control and treatment of water quality and quantity impacts due to the proposed project. These controls and treatments will be achieved through the use of appropriate features such as conveyance piping and underground drywells. The goal is to manage the post-development storm water discharge to match or improve on the pre-development conditions, provide necessary water quality treatment and quality control for the new development and prevent discharge of pollutants into receiving waters, in keeping with the afore-noted regulations and best management practices as described within the New York State Erosion and Sediment Control Manual and the New York State Stormwater Design Manual.

This SWPPP outlines methods that Owner/Developers and Contractors can use to adjust construction practices in a way that will retain surface water quality and prevent sediment laden runoff from entering rivers, streams, estuaries, wetlands and other sensitive environments. This SWPPP describes methods for permanent stormwater management features in the design and runoff management during the construction phase.

1.1 Responsibilities of the Participants

It is the responsibility of the Owner/Developer, General Contractor and subcontractors to comply with the measures set forth in this SWPPP and implement pollutant control measures which retain surface water quality and prevent sediment laden runoff from entering rivers, streams, estuaries, wetlands and other sensitive environments. The following outlines the responsibilities of all participants.

Owner/Developer's Qualified Representative

1. Prepare this Water Quality and Water Quantity Report and SWPPP using good Engineering practices, best management practices and in compliance with NYSDEC Phase II Storm Water Regulations. The Owner/Developer, General Contractor and all Sub Contractors involved in earth disturbance during construction must certify this Plan by signing the certifying statement contained in **Appendix A**.
2. Prepare the Notice of Intent (NOI) for the Owner/Developer for submission to the NYSDEC at least 5 days prior to commencement of construction.
3. The SWPPP that has been prepared for the job site shall include certification forms and a completed and signed NOI.
4. Provide copies of the SWPPP and the "Acknowledgement of Notice of Intent" to the local government agencies having jurisdiction or regulatory control over the project.
5. Review the site prior to the beginning of construction and certify in an inspection report that the appropriate pre-construction erosion and sediment control measures outlined herein, and

that are required by the NYSDEC SPDES General Permit, have been installed and will operate as designed.

6. Conduct on-site inspections every 7 days for general compliance with the SWPPP and the NYSDEC SPDES General Permit. Inspection reports will be provided to the Owner/Developer within 24-hours of the field inspection. Any problem areas or areas in need of additional stabilization shall be made clear to the Owner/Developer. The Owner/Developer and the authorized person who is responsible for the overall operation of the site, such as a project manager or site superintendent, must certify these reports by signing the certifying statements contained at the end of the reports and must be maintained in the on-site log book as described below.
7. Review onsite Contractors SWPPP records to ensure compliance and update them as required or necessary.
8. Update the SWPPP each time there is a significant modification to the design or construction which may have a significant effect on the potential for discharge of pollutants into receiving waters.
9. When construction is complete, provide the Owner/Developer with certification that an inspection has been completed verifying that the site has undergone final stabilization.
10. When the site has undergone final stabilization, prepare the Notice of Termination (NOT) for the Owner/Developer for submission to the NYSDEC.

Owner/Developer/Operator/Permittee

The following is a summary of the Owner/Developer's responsibilities:

1. Sign the NOI contained in **Appendix B** and certify the SWPPP by signing the Owner/Developer's Certification statement contained in **Appendix A** of this report. The NOI should be submitted to:

   NYSDEC "Notice of Intent"
   Bureau of Water Permits
   625 Broadway
   Albany, New York 12233-3505

2. When the Owner/Developer receives a letter of "Acknowledgement of Notice of Intent" from the NYSDEC, post a copy of this letter at the site for public viewing on a kiosk, in a construction field trailer, in model home, etc. A copy should also be forwarded to the Owner/Developer's Qualified Representative for the project file.
3. Post at the site with the "Acknowledgement of Notice of Intent" a SWPPP inspection activity log for public viewing on a monthly basis.
4. Ensure that a log book, containing all the required documentation, is kept on site and made available for inspection upon request. The book should contain an extra copy of the "Acknowledgement of Notice of Intent", a copy of this Water Quality and Water Quantity and SWPPP report, weekly SWPPP inspection reports, SWPPP inspection quarterly reports and a copy of the SPDES General Permit.
5. Ensure the SWPPP report, inspection reports and inspection quarterly summaries are certified by an authorized person who has responsibility for the overall operation of the site such as a project manager or site superintendent. Certification of these documents is executed by signing the certifying statements contained in **Appendix A** and at the end of the inspection reports.

6. Require the General Contractor and all Sub Contractors involved with construction activity that disturbs site soils, to fully implement the SWPPP and the requirements set forth in the SPDES General Permit. The SWPPP should be certified by the General Contractor and all Sub Contractors involved with earth disturbance during construction by signing the certifying statement in **Appendix A**.

7. Upon project completion and when the site has reached final stabilization, the Owner/Developer should sign the Notice of Termination (NOT) prepared by the Owner/Developer's Qualified Representative and submit to:

   NYSDEC "Notice of Termination"
   Bureau of Water Permits
   625 Broadway
   Albany, New York 12233-3505

8. Retain all site records and documentation including Engineering reports, SWPPP reports, SWPPP inspection reports and all records of data used to complete the NOI for a minimum of 3 years from the date the site reached final stabilization.

9. Provide an Operation & Maintenance (O&M) manual to the new Owner/Developer who is expected to conduct the necessary O&M over the life of the structures as described in Section 10.0 of this report.

Contractors and Sub-Contractors

The following is a summary of the Contractor's responsibilities:

1.0 Implement fully the SWPPP while following the Phasing Plan and the requirements set forth in the SPDES General Permit. Certify the SWPPP by signing the Contractor's Certification statement contained in **Appendix A** of this report.

2.0 Provide the names and addresses of all subcontractors' involved in construction activities that disturb site soils for inclusion in the SWPPP.

3.0 Ensure all Sub Contractors involved in construction activities that disturb site soils implement fully the SWPPP and the requirements set forth in the SPDES General Permit. All Sub Contractors must certify the SWPPP by signing the Contractor's Certification statement contained in **Appendix A** of this report.

4.0 Conduct inspections on a regular basis of the erosion and sedimentation controls installed at the site. Maintain and repair as necessary all erosion and sedimentation controls.

1.2 Participant Contact Information

Owner/Developer/Operator	Owner/Developer's Qualified Representative	Contractor's & Sub- Contractors
Wallace Campus Manger, LLC 48-02 25th Avenue, Suite 400 Astoria, NY 11103	**LRC Engineering & Surveying, PC** 85 Civic Center Plaza, Suite 103 Poughkeepsie, NY 12601 (845) 243-2880	**TBD**

2.0 SITE DESCRIPTION

This section briefly describes existing and proposed hydrologic and hydraulic conditions at and around the project site as they relate to Surface Water Management planning considerations. Subsequent sections contain a description of the manner in which site runoff will be managed to minimize effects on areas adjacent to the site.

2.1 Location

The Wallace Campus is 2.52 acres consisting of 4 parcels located at 319, 325, 327-329, 331 Main Street, in the City of Poughkeepsie. The properties are identified as Tax ID#'s 6162-77-114098, 109079, 109077 and 6162-78-127091. Parcels 6162-77-121116, 116114, 116113 and 112116 are adjoining lots only part of site work for parking no utilities are proposed. The site is located on the north side of Main Street, the west side of Catharine Street, and the south side of Mill Street (Westbound Arterial). The project has UTM coordinates of 589367 Easting and 4617455 Northing.

Figure 1: Location Map

2.2 Topography

Elevations are mainly flat throughout the property. There is not much grade change from one side of the property to the other. The proposed buildings will be situated so that there is access to the buildings from all sides. The proposed site walks are all handicap accessible. The site is broken into many drainage areas. Some flow to an existing system located in Mill Street and others flow towards existing drywells located on site.

2.3 Land Cover and Site Development

The existing land cover consists of a combination of impervious building structures, asphalt pavement and grass area. Currently there are eleven existing buildings on the site. The buildings are surrounded by walkways, parking areas and grass areas. Four of the buildings will be removed and two buildings will be constructed in their place. The existing parking areas will be removed, and grassed areas will be constructed. Parking for the buildings will be available on site. The existing water shed has 2.91 acres of impervious surface. The proposed development will eliminate 0.42 acres of impervious area for a total of 2.49 acres of impervious surface.

2.4 Soils

Soils mantling the site have been classified by the United States Department of Agriculture (USDA) Soil Survey of Dutchess County, New York. The following soils groups are present, based on the afore-noted mapping:

1. Ur: Urban Land

According to NRCS soil hydraulic classifications Ur is a "Class D". The results of the onsite soil tests can be found in **Appendix D**.

2.5 Rainfall Data

Rainfall data utilized in the modeling and the analysis was obtained from NRCS & NRCC Extreme Precipitation in New York and New England, an interactive web tool for extreme precipitation analysis. The data used is specific to Poughkeepsie NY and various 24-hour storm events are presented below. A record of the extreme precipitation data is included in Appendix D.

Rainfall data utilized in the modeling and the analysis was obtained from Exhibit 10.1 in the New York State Department of Environmental Conservation publication entitled, "New York Guidelines for Urban Erosion and Sediment Control". The data used is specific to Dutchess County and various 24-hour storm events are presented below.

24-Hour Storm Event	24-hour rainfall
1 year	2.61
2 year	3.16
10 year	4.68
25 year	5.85
100 year	8.22

2.6 Streams and Water Bodies

There are no streams or water bodies located onsite.

2.7 Wetlands and Floodplains

There are no wetlands or floodplains located onsite.

2.8 Historical and Cultural Resources

The project area will be reviewed in accordance with Section 106 of the National Historic Preservation Act of 1966.

3.0 PROJECT DESCRIPTION

Tax Lots 6162-78-127091, 6162-77-114098, 109077, & 109079 will be combined into one tax parcel. The proposed project will demolish the existing buildings at 319, 325, and 327-329 main street and will replace them with a new building which will include retail and residential units. The existing building at #331 Main Street will be repurposed to include commercial area, fitness area, and residential area. The project will also include a new building to be located along Catharine Street and will have commercial daycare and residential area within it. The project will include modifications to the surrounding parking, sidewalk, and landscaping. The site will be graded to avoid any surface ponding and blend into the landscape. The project has been designed to incorporate proposed and existing drywells as stormwater treatment practices. Each of the drywells have at least 10 feet of separation distance to the proposed and existing buildings to ensure that no flooding within the building occurs.

4.0 METHODOLOGY

The stormwater design approach for this project will accommodate all NYS DEC requirements and will ensure that water quality and water quantity volumes are managed accordingly. The methodology for designing the stormwater management, as well as, the erosion and sediment control structures for this project are as follows:

1. Evaluate the hydrologic condition of the tributary area using the USDA-SCS Technical Release No. 20 (June 1986) Methods.
2. Determine peak flows from each watershed, for various storm events, using the Hydro CAD computer program.
3. Determine the water quality volume, runoff reduction volume, channel protection volume, overbank flood protection volume and extreme storm flood protection volume for each drainage area that requires mitigation. Design the mitigation program to the DEC water quality and quantity methodology for each affected area.
4. Perform hydrologic routings for the selected stormwater systems using the Hydro CAD computer program. Examine and compare the output for the DEC design criteria, and also for peak elevations and peak outflows for both pre and post-development conditions as may be prescribed by the local authority.
5. Design the erosion and sedimentation control structures, and prepare engineering calculations for the design of channels and conveyance piping in accordance with the "New York Standards and Specifications for Erosion and Sediment Control", July 2016, New York State Department of Environmental Conservation".

4.1 Green Infrastructure Planning Guidelines

The proposed project has been designed to implement as many green infrastructure planning guidelines as possible. All of the guidelines are not always applicable or cannot be achieved. The planning methods are discussed below.

Preservation of Undisturbed Areas

The proposed project is located in a portion of the site that has been disturbed in the past. There are no significant undisturbed areas to place into permanent conservation; however, the undisturbed slopes to the south of the project will remain.

Preservation of Buffers

There are no existing stream, river, or wetland vegetated buffers on the project site.

Reduction of Clearing and Grading

The proposed project is located in a previously disturbed area which has already been cleared in the past. This reduces the need for further clearing and grading on the property.

Locating Development in Less Sensitive Areas

As described above, the project is located in an area of the site that has been previously disturbed.

Open Space Design

The proposed development is designed so the buildings are grouped together.

Soil Restoration

Any soil disturbed during the course of construction will be restored in accordance with the NYSDEC Stormwater Design Manual, Section 5.1.6.

Roadway Reduction

There are no proposed roads in this project. The drive aisles are the minimum allowed by the City code.

Sidewalk Reduction

The sidewalks are the minimum width required to meet code and area only proposed where needed to provide safe and adequate pedestrian circulation.

Driveway Reduction

The drive aisles are the minimum required by code.

Cul-de-sac Reduction

There are no proposed cul-de-sacs or dead ends. The layout has a continuous drive aisle to achieve sufficient vehicle access while eliminating the need for large unnecessary dead ends.

Building Footprint Reduction

As a redevelopment project, several existing buildings on the site will be removed.

Parking Reduction

As a redevelopment project, the majority of the site is currently parking and will be partially eliminated to add green space and reduce parking to the minimum required.

5.0 HYDROLOGIC AND HYDRAULIC ANALYSIS

Stormwater Management Design has the purpose of improving the quality of surface water runoff from all impervious areas and providing retention for increased runoff quantities that may occur. For the proposed project, the appropriate methodology to manage stormwater is to capture and treat runoff for quality and quantity control for the site.

The hydrologic analysis was performed uses the Hydro CAD stormwater modeling software, and all data regarding areas has been calculated in AutoCAD. Soils information has been obtained through mapping per the NRCS Dutchess County Soils Survey, onsite deep tests and infiltration tests. The results of the Hydraulic Analysis can be found in **Appendix C**.

5.1 Proposed Runoff Treatment – Water Quality

By allowing stormwater runoff to infiltrate back into the ground we are able to minimize the impacts on the surround surface waters and treat the runoff through exfiltration into the sub surface soils. The evaluation of the site to determine the water quality volumetric requirements follow strictly the procedures presented in chapters 4 & 5 of the New York State Stormwater Design Manual, and is provided in full in **Appendix D**.

The table below summarizes the volumes required and provided for runoff reduction and water quality; Detailed calculations can be found in **Appendix D.**

Overall there is a reduction of impervious in this area. The discharge rate is reduced and the reduction in impervious surface will reduce the potential for pollutants. Based on the size, location, and site features it is not the ideal location to treat runoff.

Water quality requirements for the proposed project will be achieved via a runoff reduction practice. Runoff reduction practices will satisfy the minimum required runoff reduction volume (RRv) by use of direct infiltration via drywells.

Pretreatment

For the proposed drywells, pretreatment has been provided in sumps in the catch basins and yard drains prior to entering the drywells. The four yard drains provide 200 cf of pretreatment and the three catch basins provide 120 cf of pretreatment storage for a total of 320 cf of storage.

5.2 Proposed Stormwater Management – Water Quality

The design observation points have been modeled in Hydro CAD and represents the total flow leaving the project drainage areas. Two different drainage points have been evaluated based on the proposed site development. The drainage analysis points are shown on the pre and post drainage area maps in **Appendix E.** The table below displays the peak discharge rates for the design points and demonstrates that discharge rates for post construction are less than or equal to what is currently produced at the design points meeting the requirements of Overbank Flood Protection and Extreme Flood protection.

Channel Protection Volume is not required if the Runoff Reduction volume is reduced onsite through runoff reduction techniques or infiltration practices.

6.0 PERMANENT STORMWATER MANAGEMENT FEATURES

6.1 Conveyance Piping

Storm runoff from developed areas will be conveyed to and through the stormwater system by a series of underground piping and surface flows. Due to relatively small watershed areas associated with each catch basin, the SCS Unit Hydrograph TR-55/TR-20 Method and inlet capacities for circular pipes were used for pipe sizing. In general, piping is designed such that:

- All proposed piping is sized to accommodate the peak flow from the 25-year 24-hour storm, as prescribed by the local authority.
- Flow capacity is sufficient to convey runoff to the receiving discharge points
- Strength is sufficient to withstand the soil cover and vehicle loads.
- In some instances the existing site drainage system is not capable of conveying all of the runoff contributing to the drainage structure. The model shows that the basins fill and sheet flow overland to the next available drainage structure in large storm events. In no cases does the "surcharging" exceed 6 inches. In these locations the post condition has been improved to convey the flow or reduce the "surcharging".

6.2 Drywells

Monthly Maintenance

- Check all inflow pipes and clear of any debris
- Check all outflow pipes and clear of any debris
- Check to ensure drywell is draining between storm cycles.

Annual Maintenance

- Check depth of drywell to ensure greater than 25% storage capacity remains.
- If less than 25% contract Vacuum truck services to clean debris from Drywell.
- If drywell is not draining between storms, contract vacuum truck to clean debris.

7.0 STORMWATER EROSION AND SEDIMENT CONTROLS

Several types of permanent and temporary storm water pollutant controls are required to be installed and implemented for pre-construction, during construction and post-construction as shown on the Construction Plans and per the NYSDEC SPDES General Permit. Guidelines and recommendations can be found in the "New York State Standards and Specifications for Erosion and Sediment Control."

The permanent storm water management system has been designed to accommodate peak storm flows utilizing catch basins, piping and grass swales.

Selection of temporary storm water controls will be on an "as needed basis" and will depend on the specific conditions of the site. Since site characteristics can change significantly during construction, it is important to monitor the site regularly to ensure the proper selection and implementation of the necessary controls. These controls include, but are not limited to, silt fence, drainage swales, check dams, hay bales, stone construction entrances, sediment traps and seeding and mulching.

7.1 Erosion and Sediment Controls

Temporary Stabilization

Silt fences, drainage swales, stabilized stone construction entrances, erosion control blankets, and seeding and mulching, as well as, other controls will be utilized as temporary surface water management features. See the Erosion and Sediment Control Plan(s) and details sheets for the location, size, quantity and details of the temporary stormwater management features as described below.

Silt Fence

Silt fence will be used as necessary to reduce the sediment load in the receiving drainage ditches and as a perimeter sediment control device. In addition, silt fencing will be placed on the downslope sides of all disturbed areas 5 ft. from the toe of the slope until more permanent drainage and erosion control structures are established. In cases with environmentally sensitive areas adjacent to the downslope sides of disturbed areas, silt fencing should be placed at the toe of the slope outside the sensitive area. All silt fence are to be 36" minimum length with built in woven wire mesh (min. 6X6 14 ½ gauge) unless otherwise specified on the construction details.

Inlet Protection

Storm drain inlet protection measures prevent soils, sediment, and debris from entering storm basins. In unpaved areas inlet protection shall consist of a row of silt fence completely encircling the drain inlet. In paved areas inlet protection can consist of stone and block, silt sox, or hanging filter traps as specified on the plans.

Stabilized Stone Construction Entrance

A construction entrance is used at all entrances and exists to construction activities. The stone construction entrance is stabilized to reduce tracking of mud and dirt onto surrounding roads and surfaces.

Seeding and Mulching

Seeding and mulching is one of the most important and underutilized erosion control practices. Exposed earths pose the greatest risks for erosion and sediment. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within fourteen (14) days from the date the current soil

disturbance activity ceased. Temporarily Ceased means that an existing disturbed area will not be disturbed again within 14 calendar days of the previous soil disturbance.

Soil Stockpile

A soil stockpile is formed with soil excavated to provide proper building elevations. Stockpiled soil is later used to contour the surface to the desired grades, removed from the site, or the material is used for reclamation/restoration of the region following the removal of roads and facilities. All soils piled onsite must be completely enclosed by silt fence around the toe of the slope. The site fence should be installed a minimum of 2 feet from the toe of the slope. The soil pile should have a maximum side slope of 1V:2H. All soil piles must be stabilized with seed and mulch or covered with a plastic tarp if the soil will not be used within fourteen (14) days from the date the current soil pile was created.

Permanent Stabilization

Permanent stormwater stabilization measures include catch basins, piping and other stormwater structures as described in sections 5 and 6. In all instances, the structures associated with the stormwater management system have been sized to accommodate peak flows from the appropriate storm events as required by the governing municipality. All lawns, basins and swales will be permanently seeded and mulched and maintained as necessary to prevent over growth.

Concrete Washout Areas

Concrete washouts are used to contain concrete and liquids when the chutes of concrete mixers and hoppers are cleaned after a delivery. The washout facility consolidates the liquids and allows them to harden for easy disposal. This prevents contaminated liquids from flowing offsite or leaching into the groundwater aquifer.

7.2 Other Pollutant Controls

Paints and Solvents

During construction temporary structures such as construction trailers may be moved on site to store items such as paints, solvents and gasoline pertinent to the continuation of construction activities. The intention of these structures is to shelter potential contaminants from stormwater and reduce the potential of toxic chemicals from entering the stormwater runoff due to construction activities.

Solvents and detergents that will be used for regular cleaning and maintenance of construction vehicles or temporary structures may be stored on-site. Solvents shall be used in cleaning machinery pursuant to 6 NYCRR Part 750. After use, solvents shall be disposed of in approved containers and removed from site at scheduled intervals.

Fuels

Fuel for construction equipment shall either be obtained from a licensed distributor of petroleum products or from an approved above ground storage tank on site. A distributor may be contracted to arrive on site periodically and fill all equipment as necessary. All distributors of petroleum products must have adequate liability insurance to mitigate and clean up any spills that occur on site as well as obtain appropriate permits and licenses from the NYSDEC. All above ground storage tanks with a combined capacity of 1,100 gallons shall be registered with the NYSDEC pursuant to 6 NYCRR Part 614 Standards for New and Substantially Modified Petroleum Storage Facilities.

Fuel from construction vehicles may come into contact with stormwater when vehicles are stored outside. Good housekeeping and preventative maintenance procedures shall be implemented to ensure fuel spills and leaks are minimized during refueling and storage. Any small-scale fuel or oil spills must be

remedied immediately and contaminated soils shall be disposed of appropriately. A licensed spill prevention and response team shall handle large-scale gasoline spills.

Oil and other petroleum products may be stored on site, in limited quantities, to ensure the continued operation of construction equipment in the event a scheduled delivery is unavailable. Items shall be stored in their original containers within temporary structures and shall not be exposed to stormwater. Used oil and petroleum products shall be stored in approved containers until recycled or disposed of at an approved disposal facility.

Temporary Facilities

Temporary sanitary facilities may be located on site for construction workers. This facility shall be located in an accessible and visible location. Such a facility shall be leak and tip proof. A waste management company may be contracted to arrive on site and provide the routine pumping and sanitization of the facility. Such a company shall have adequate liability insurance to mitigate and clean up any spills that occur on site as well as appropriate permits and licenses from the NYSDEC.

Dust Control

Construction vehicles shall enter and exit the site at the stabilized construction entrance. The construction entrance will trap dust and mud that would otherwise be carried off-site by construction traffic. Water trucks will be used as needed during construction to reduce dust generated on the site. The general contractor will provide dust control in compliance with applicable local and state dust control regulations. The construction entrances will be maintained during the life of the construction and repaired, and/or cleaned, periodically to ensure proper function.

Dewatering

If dewatering is required the water must be free of silt and sediment prior to discharge offsite or to any existing water bodies. If sediment is present, methods of sediment removal may include, but are not limited to; silt bags, temporary sediment traps, temporary sediment basins, or sheet flow across stabilized vegetated surfaces. As the quantity and quality of water cannot accurately be determined prior to excavation dewatering practices must be determined during construction and should be approved by the site engineer prior to commencing any dewatering activities.

Solid Waste

No solid materials are allowed to be discharged from the site with stormwater. All solid waste shall be collected and placed in containers. The containers will be emptied periodically by a contract trash disposal service and hauled away from the site.

Thermal Pollution

Stormwater that comes in contact with roadways, driveways, parking lots or other impermeable surfaces may increase in temperature during warm weather. If stormwater is discharged into surface water bodies, the temperature of the water body may also increase, potentially threatening plant and animal species sensitive to temperature changes as well as providing an environment that may cause nuisance species to flourish.

After development is complete, impervious areas shall be graded to channel water to catch basins and culverts, which in turn convey stormwater to the stormwater management basin. All stormwater shall be stored and treated within the basins and shall be released over a 24 hour period, which shall minimize the potential for raising the temperature of any downstream water bodies.

7.3 Best Management Practices

Throughout construction, care shall be taken to ensure sediment does not enter surface water bodies and chemicals do not enter stormwater, potentially contaminating surface and groundwater supplies. The following Best Management Practices (BMP) shall be observed to maintain responsible environmental practices on the construction site.

Good Housekeeping

Good housekeeping is essential to reducing the risk of contaminating runoff waters during every stage of construction. The General Contractor shall ensure supervisors train each employee in good housekeeping practices as they pertain to the implementation of this SWPPP.

Immediately following mobilization, the General Contractor shall take an inventory of all equipment and containers containing hazardous or toxic materials and submit this inventory to the Owner/Developer to keep on-site with this Stormwater Pollution Prevention Plan. This inventory shall be updated regularly to reflect changes in the quantity or type of hazardous and toxic materials stored on site. In the event of a spill, the Spill Response Team can refer to the inventory if the contents of the spill are unknown.

All equipment shall be operational while it is stored on site. Inspections shall be conducted regularly to ensure all equipment is free of leaks and that oil and grease are not in contact with soils or stormwater. Portable equipment such as chain saws, drills, as well as hand tools, must be placed within a trailer or under cover at the end of each work day.

A storage area shall be designated on-site where all hazardous or toxic materials are stored. Each employee shall return the materials to the designated storage area following use. Chemicals including oil, grease, solvents and detergents shall be stored on-site in approved containers only. Used chemicals shall be disposed of in refuse containers and removed periodically. Containers shall be regularly inspected to ensure the integrity of the container and sealed to prevent leaks.

A scheduled clean-up shall occur at the end of each workweek. During this clean up, empty containers of solvents, oils, grease, paints and detergents shall be disposed of, containers of gasoline shall be placed in trailers where they are not in contact with stormwater and the inventory shall be updated. Empty containers shall not be permitted on the ground.

Preventative Maintenance

All on-site vehicles must be inspected regularly for oil and grease leaks. All leaks shall be repaired immediately upon obtaining the appropriate equipment. If the leak cannot be fixed immediately, it shall be temporarily mitigated to prevent the flow of contaminants onto the soil and potentially into the stormwater. If necessary, the reservoir will be drained to stop the flow of contaminants or the vehicle will be moved under cover. Drip pans shall be used when performing any maintenance or cleaning on construction vehicles.

Spill Prevention and Response

The safety of employees and neighbors shall be of utmost concern when hazardous or toxic chemicals are stored or utilized on-site. Safety Data Sheets (SDS) shall be obtained for all toxic or hazardous substances that are stored on-site to provide employees with a valuable database in assessing risk in the event of a spill.

Any above ground storage tanks on site shall be installed pursuant to 6 NYCRR Part 614. According to the New York State "Minimum Standards for New and Substantially Modified Above Ground Storage Facilities", all tanks installed must meet or exceed the design criteria in one or more of the following design or manufacturing standards: UL No. 142, UL No. 58, API Standard No. 650, API Standard No. 620, CAN4-S601-M84 or CAN4-S630-M84. Tanks constructed of wood, concrete, aluminum, fiberglass reinforced plastic as well as riveted or bolted steel tanks are not permitted. All tanks must have installed leak detection systems, secondary containment, corrosion protection, and undergo periodic monitoring pursuant to all Part 614 requirements.

Should a spill occur, a licensed spill contractor will be contacted to mitigate the potential negative effects of a spill. Additionally, the NYSDEC must be notified of a release of petroleum products. The General Contractor shall have trained employees knowledgeable in the location of sorbent, brooms, rags and mops in the event of a small-scale spill. An inventory of equipment and its location shall be posted in a visible location as well as kept in proximity to this Pollution Prevention Plan. If the General Contractor does not have Hazardous Materials trained employees on site, a firm that specializes in handling spills, soil and water contamination shall be called.

After a spill occurs, all personnel not trained in hazardous materials spill response shall be asked to evacuate the immediate area. The NYSDEC Spill Response Team shall be called to investigate the spill and determine if additional actions should be taken to ensure the safety of personnel and nearby residents. Should any employee have a suspected injury, a local emergency squad must be contacted immediately.

8.0 CONSTRUCTION SEQUENCE SCHEDULING

The scale of site construction does not necessitate that this project be a phased construction project; However, the construction will be sequenced to limit the exposed soils to reduce the amount of sediments in runoff water and ultimately preserve the quality of surface waters. The construction method selected is designed to combine development with responsible land management as well as protection of sensitive environments both within the proposed development and the surrounding area.

Temporary and permanent stabilization methods will be implemented before construction begins and will be continuously modified throughout the project to provide the best methods for stormwater management and pollution prevention. For more details pertaining to construction sequence, please refer to the "NYSDEC Instruction Manual for Stormwater Construction Permit" pages 23-26. A typical and sample ordering of site construction activities is as follows:

Pre-Construction Activities

- Identify all natural resources and mark and protect them as necessary i.e trees, vegetation, limits of disturbance.
- Identify on-site and downstream surface water bodies and install controls to protect them from sedimentation.
- Establish temporary stone construction entrance pads to capture mud and debris from the tires of construction vehicles.
- Install perimeter sediment controls such as silt fences, as shown on the project plans.
- Install temporary construction fencing as shown on the project plans or as directed by the site engineer.

- All earth disturbances during this phase should be limited to work necessary to install erosion and sedimentation controls.

During Construction Activities

- Complete building demolition in accordance with notes and procedures identified on the demolition plan.
- As site grading is completed install runoff and drainage controls as shown on the project plans and as necessary. These controls should reduce run-off flow rates and velocities, as well as, divert off site and clean run-off.
- Stabilize the conveyance system i.e. ditches, swales, berms etc. by seeding, mulching and installing rock check dams.
- Utilize practices to infiltrate stormwater runoff as much as possible when applicable.
- Stabilize all stormwater runoff outlets as shown on the project plans and as necessary.
- Limit soil disturbance to small areas and preserve as much of the existing vegetation as practical.
- Complete all underground utility improvements prior to installation of hard surface improvements.
- All topsoil stockpiles should be staged in an area away from surface waters and storm drains and should be protected and stabilized.
- Earth disturbance is not allowed in established buffers, within any regulated distance from wetlands, or within the high water line of a body of water affected by tidal action or other such protected zones.
- At any location where surface run-off from disturbed or graded areas may flow off-site, sedimentation control measures must be installed to prevent sedimentation from being transported.
- Regular inspections and maintenance should be performed as described in the following section.

Post-Construction Activities

- Identify the permanent structural or non-structural practices that will remain on the site.
- Provide an Operation & Maintenance (O&M) manual to the new Owner/Developer who is expected to conduct the necessary O&M over the life of the structures as described in Section 10.0 of this report.

9.0 IMPLEMENTING THE SWPP

9.1 Employee Training

All employees involved in site-development activities shall be aware of the stipulations outlined in this SWPPP as it pertains to their everyday activities. All such employees must be able to recognize potential problems and have the ability to provide either temporary or permanent stabilization measures, as appropriate, to mitigate stormwater runoff before problems occur. The NYSDEC periodically holds workshops on erosion and sediment control. It is recommended that the affected and responsible on-site personnel attend these workshops to ensure training is current and up to date. Contact the NYSDEC for more information.

9.2 Site Inspections

The Owner/Developer must have a qualified professional conduct an assessment of the site prior to the commencement of construction and certify in an inspection report that the appropriate erosion and sediment controls described in this SWPPP have been adequately installed or implemented to ensure overall preparedness of the site for the commencement of construction. A qualified professional is

defined as a Professional Engineer or Landscape Architect licensed to practice in New York State, or is a Certified Professional in Erosion and Sediment Control (CPESC). Once construction begins regular inspection of construction activities by the qualified professional are required at least once every 7 days to ensure deficiencies regarding erosion and sedimentation are reported and corrected. It is the responsibility of the Contractor to continuously monitor construction activities to ensure the measures outlined in this report are being implemented.

Areas which have not been fully stabilized, areas used for materials storage and all structural control measures must be inspected once every 7 calendar days to monitor erosion and assess the risk of sedimentation. For sites where soil disturbance activities are on-going and the owner operator has received authorization in accordance with Part II.C.3 to disturb greater than five (5) acres of soil at any one time, the qualified inspector shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days. For areas construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and temporary stabilization measures have been applied to all disturbed areas, the qualified inspector shall conduct a site inspection at least once every (30) calendar days.

A thorough site evaluation shall be performed to determine the continued applicability of the permit, and assess the need to make any changes that have not already been reflected in this SWPPP. The SWPPP shall be reviewed to evaluate its overall effectiveness in preventing sediment laden stormwater runoff. Temporary and permanent stabilization methods shall be assessed and new methods shall be established, should any method be determined to be inadequate.

A copy of the SWPPP must be maintained on site at all times in the field log book. The Owner/Developer must maintain a record of all inspection reports with the on site SWPPP. The SWPPP and inspection reports must be maintained on site and be made available to the permitting authority upon request.

9.3 Maintenance

It shall be necessary to maintain all temporary controls installed as well as vegetative measures across the site. Maintenance shall also be necessary to ensure the permanent structural features, such as underground chambers, catch basins and conveyance piping remain optimally functional and continue to reduce the risk of sediment loading of surface water bodies. All controls shall be repaired or replaced as necessary and as noted on the inspection reports as prepared by the Owner/Developer's Qualified Representative.

During construction, maintenance of these stabilization measures shall be the responsibility of the General Contractor or appropriate Sub Contractors. Vegetative plantings must not be allowed to become overgrown. Vegetation shall be removed should it be ineffective and be replaced with a variety of grasses, trees and shrubs more suitable for preventing stormwater runoff. Silt fences must be inspected regularly to ensure that they are still effective and their capability to reduce stormwater runoff has not been reduced due to prolonged sun exposure.

Piping and catch basin sumps shall be cleaned out periodically to prevent the collection of sediment that will reduce the maximum flow. Sediment must be removed from sediment basins, infiltration basins or traps whenever their capacity has been reduced by 50 percent of their design capacity.

Guidelines and recommendations for installation and maintenance practices can be found in the "New York State Standards and Specifications for Erosion and Sediment Control"

9.4 Progress Reports and Summaries

Progress reports shall be completed by the General Contractor and all Sub Contractors weekly to document any conditions, which may affect adherence to the construction schedule and may ultimately result in changes to the stormwater pollution prevention plan.

Each progress report must contain the project, date, weather conditions and a brief description of progress made throughout the week, including the use of temporary and permanent stabilization measures on all exposed soils. The progress reports shall be filed with this SWPPP in the on-site log book.

Additionally, as described in Section 1.1 of this report, the Owner/Developer's Qualified Representative will prepare weekly inspection reports and quarterly summaries. These reports should be maintained in the on site log book as well.

9.5 Certification

Prior to starting construction, the Owner/Developer must certify that to the best of their knowledge this SWPPP was prepared in accordance with the requirements in the NYSDEC SPDES General Permit and that it meets all federal, state and local erosion and sediment control requirements. The certifying statement is presented in **Appendix A** of this report.

The General Contractor and all appropriate Sub Contractors are responsible for reading and understanding the SWPPP and are also required to certify the SWPPP by signing the certifying statement presented in **Appendix A** of this report.

All inspection reports and inspection quarterly summaries are to be certified by an authorized person who has responsibility for the overall operation of the site such as a project manager or site superintendent. Certification of these documents is executed by signing the certifying statements presented at the end of the inspection reports.

10.0 POST CONSTRUCTION INSPECTION & MAINTENANCE

Post-construction, regularly scheduled inspections and maintenance will be necessary to ensure the permanent structural features such as the stormwater management basins and the conveyance system components remain optimally functional and continue to reduce the risk of sediment loading of surface water bodies. Follow manufactures guidelines and the detailed construction installation and maintenance guidelines included in **Appendix A** for all stormwater management practices.

When construction is complete, the Contractor will remain responsible for the site until the entire site has reached final stabilization. The site is considered stabilized when all soil disturbing activities have been completed and a uniform, perennial vegetative cover, with a density of 80%, has been established or equivalent stabilization measures, such as the use of mulches or geotextiles, have been employed on all unpaved areas and areas not covered by permanent structures. Weekly inspections should continue until the site has reached this point.

At the time of final stabilization, the Owner/Developer's Qualified Representative shall perform a final inspection of the site and certify that the site has successfully undergone final stabilization using either vegetative or structural stabilization methods and that all temporary erosion and sediment controls such as silt fence, not needed for long term use, have been removed. All storm water practices must be clean and free of sediment and or debris or must be cleaned by the contractor prior to turning the maintenance

responsibilities over to the Owner/Developer. At this point, the Owner/Developer is responsible for the following:

1. Submit to the NYSDEC a NOT prepared by the Owner/Developer's Qualified Representative as described in Section 1.1 of this report.
2. Identify all the permanent stormwater management structures that have been constructed and provide the New Owner/Developer with an Operations and Maintenance (O&M) manual that will be necessary in order for the structures to function properly after the site has been stabilized. Section 10.0 of this report satisfies the O&M requirements
3. Transfer the Water Quality and Quantity Report and SWPPP to the New Owner/Developer.
4. Certify that the permanent structures have been constructed as described by this plan and the drawings.

The new Owner/Developer shall overtake responsibility of inspecting and maintaining drainage and erosion control features over the lifetime of the structures. Maintenance personnel, employed by the New Owner/Developer, must be aware of the SWPPP and should be trained to recognize signs that stabilization measures may not be performing optimally or are failing. The inspection of on-site stabilization measures will become part of routine preventative maintenance practiced by the New Owner/Developer and his employees.

10.1 Inspection

Overall Site Inspection

The overall site, embankments, vegetation and stormwater conveyance system components including catch basins, culverts, swales and outlets should be inspected regularly. The inspections should include but are not limited to:

1. Density and condition of vegetation and ground cover.
2. Erosion, differential settlement or cracking of embankment.
3. Bulging or sliding of toe of embankments.
4. Sedimentation of on-site or downstream water bodies.
5. Sedimentation of culverts or swales.
6. Sedimentation of lawn areas, paved areas, within the sand filter units or catch basin sumps.
7. Accumulation of pollutants, including oils or grease in catch basin sumps.
8. Damage or fatigue of storm sewer structures or associated components.

Water Quality Practice Inspection (if applicable)

All water quality practices and all associated features should be inspected regularly. The inspections should include but are not limited to:

1. Density and condition of vegetation and ground cover.
2. All features of the practice should be clear of brush and tree growth.
3. Erosion, differential settlement or cracking of basin embankments.
4. Bulging or sliding of toe of embankments.
5. Presence of animal burrows.
6. Evidence of clogging or sedimentation at inlets or outlets.
7. Erosion of the flow path through the detention basin.
8. Spillways should be inspected for structural integrity.
9. Spillways should be clear of obstructions.
10. Inlet/outlet riprap should be inspected for scour and dislodged stones and obstructions should be removed.
11. Accumulation of sediments at inlets, outlets and silt traps.

Detailed inspection checklists for each of the Stormwater Management Practices can be found in **Appendix A**.

10.2 Maintenance

Overall Site Maintenance

Maintaining vegetative and structural measures for soil protection is necessary to keep the storm water system functioning properly. Maintenance should occur on a regular basis and should include but is not limited to:

Seasonal Maintenance

1. Vegetated areas should be maintained to promote vigorous and dense growth. Lawn areas should be mowed at least three times a year but may require more frequent mowing's depending on the growth rate.
2. Trees and unwanted vegetation should be removed from inlet structures, outlet structures, banks, and berms to prevent clogging or weakening of the berms and structures.
3. Paved areas should be swept at least twice a year and in the early spring for removal of deicing materials.
4. Accumulation of litter and debris should be removed during each mowing or sweep operation.
5. Structural components of the storm sewer system such as culverts and catch basins which require repair or replacement should be addressed immediately following identification.
6. Cleanout of catch basin sumps should occur when accumulation of sediments and debris are within six inches of the catch basin outlet pipe.
7. Swale and drainage way maintenance will include periodic mowing, occasional spot reseeding and weed control. Weeds and woody plants should be eradicated or cut back since they reduce the efficiency of the drainage way.
8. Rip rap lined inlet and outlets that show signs of scour should be repaired. Weed and brush growth at the inlets and outlets should be controlled as needed.

Winter Maintenance

1. Remove snow and ice from inlet structures, basin inlet and outlet structures and away from culvert end sections.
2. Snow removed from paved areas should not be piled at inlets/outlets of the stormwater management basin.
3. Use of deicing materials should be limited to sand and environmentally friendly chemical products. Use of salt mixtures should be kept to a minimum.
4. Sand used for deicing should be clean, course material free of fines, silt, and clay.
5. Materials used for de-icing should be removed during the early spring by sweeping and/or vacuuming.

Underground Practices Maintenance

1. A consistent schedule of inspection shall be observed for all system components to insure continued effective operation.
2. Areas surrounding the surface access points shall be kept clear of overgrowth.
3. All inspections shall be logged. A specific schedule, on a quarterly basis, shall be maintained by the system owner/operator and a periodic replacement of the water quality practice media shall be schedule for minimally every two years.
4. Accumulation of litter and debris should be removed during each mowing or sweep operation.

5. Structural components of the system which require repair or replacement should be addressed immediately following identification.
6. Spillways should be cleared of obstructions.
7. Inlet/outlet riprap damage due to scour should be repaired.

For any proprietary practices refer to manufacturer specifications for additional maintenance requirements. Detailed maintenance checklists for each of the Stormwater Management Practices can be found in **Appendix A**.

11.0 CONCLUSION

The Engineer has designed a NYSDEC-compliant Stormwater Management Plan for the Wallace Campus project. Overall, the proposed stormwater management system reduces and/or eliminates the impacts of the proposed re-development by controlling and treating stormwater using catch basins, storm-sewer piping, and drywells. Offsite storm discharges and velocities for the proposed project are less than what currently exists. The stormwater management system will function adequately and will not adversely affect adjacent or downstream properties provided it is constructed and maintained as outlined in this plan and as shown on the site plans.

Properly completing forms such as those contained in this document meet the inspection requirement of NYSDEC SPDES GP for Construction Activities. Completed forms shall be kept on site at all times and made available to authorities upon request.

I. PRE-CONSTRUCTION MEETING DOCUMENTS

Project Name _____

Permit No. _____**Date of Authorization**_____

Name of Operator _____

Prime Contractor _____

a. Preamble to Site Assessment and Inspections -The Following Information To Be Read By All Person's Involved in The Construction of Stormwater Related Activities:

The Operator agrees to have a qualified professional[1] conduct an assessment of the site prior to the commencement of construction[2] and certify in this inspection report that the appropriate erosion and sediment controls described in the SWPPP have been adequately installed or implemented to ensure overall preparedness of the site for the commencement of construction.

Prior to the commencement of construction, the Operator shall certify in this site logbook that the SWPPP has been prepared in accordance with the State's standards and meets all Federal, State and local erosion and sediment control requirements.

When construction starts, site inspections shall be conducted by the qualified professional at least every 7 calendar days and within 24 hours of the end of a storm event of 0.5 inches or greater (Construction Duration Inspections). The Operator shall maintain a record of all inspection reports in this site logbook. The site logbook shall be maintained on site and be made available to the permitting authorities upon request. The Operator shall post at the site, in a publicly accessible location, a summary of the site inspection activities on a monthly basis (Monthly Summary Report).

The operator shall also prepare a written summary of compliance with this general permit at a minimum frequency of every three months (Operator's Compliance Response Form), while coverage exists. The summary should address the status of achieving each component of the SWPPP.

Prior to filing the Notice of Termination or the end of permit term, the Operator shall have a qualified professional perform a final site inspection. The qualified professional shall certify that the site has undergone final stabilization[3] using either vegetative or structural stabilization methods and that all temporary erosion and sediment controls (such as silt fencing) not needed for long-term erosion control have been removed. In addition, the Operator must identify and certify that all permanent structures described in the SWPPP have been constructed and provide the owner(s) with an operation and maintenance plan that ensures the structure(s) continuously functions as designed.

1 "Qualified Professional means a person knowledgeable in the principles and practice of erosion and sediment controls, such as a Certified Professional in Erosion and Sediment Control (CPESC), soil scientist, licensed engineer or someone working under the direction and supervision of a licensed engineer (person must have experience in the principles and practices of erosion and sediment control).

2 "Commencement of construction" means the initial removal of vegetation and disturbance of soils associated with clearing, grading or excavating activities or other construction activities.

3 "Final stabilization" means that all soil-disturbing activities at the site have been completed and a uniform, perennial vegetative cover with a density of eighty (80) percent has been established or equivalent stabilization measures (such as the use of mulches or geotextiles) have been employed on all unpaved areas and areas not covered by permanent structures.

b. Operators Certification

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. Further, I hereby certify that the SWPPP meets all Federal, State, and local erosion and sediment control requirements. I am aware that false statements made herein are punishable as a class A misdemeanor pursuant to Section 210.45 of the Penal Law. "

Name (please print):_____

Title _____**Date:**_____

Address: _____

Phone: _____ **Email:**_____

Signature:_____

c. Qualified Professional's Credentials & Certification

" I hereby certify that I meet the criteria set forth in the General Permit to conduct site inspections for this project and that the appropriate erosion and sediment controls described in the SWPPP and as described in the following Pre-construction Site Assessment Checklist have been adequately installed or implemented, ensuring the overall preparedness of this site for the commencement of construction."

Name (please print):_____

Title _____**Date:**_____

Address: _____

Phone: _____ **Email:**_____

Signature:_____

d. Pre-construction Site Assessment Checklist (NOTE: Provide comments below as necessary)

1. Notice of Intent, SWPPP, and Contractors Certification:

Yes No NA

[ ] [ ] [ ] Has a Notice of Intent been filed with the NYS Department of Conservation?
[ ] [ ] [ ] Is the SWPPP on-site? Where?_____
[ ] [ ] [ ] Is the Plan current? What is the latest revision date?_____
[ ] [ ] [ ] Is a copy of the NOI (with brief description) onsite? Where?_____
[ ] [ ] [ ] Have all contractors involved with stormwater related activities signed a contractor's certification?

Pre-construction Site Assessment Checklist (continued)

2. Resource Protection

Yes No NA

[ ] [ ] [ ] Are construction limits clearly flagged or fenced?

[ ] [ ] [ ] Important trees and associated rooting zones, on-site septic system absorption fields, existing vegetated areas suitable for filter strips, especially in perimeter areas, have been flagged for protection.

[ ] [ ] [ ] Creek crossings installed prior to land-disturbing activity, including clearing and blasting.

3. Surface Water Protection

Yes No NA

[ ] [ ] [ ] Clean stormwater runoff has been diverted from areas to be disturbed.

[ ] [ ] [ ] Bodies of water located either on site or in the vicinity of the site have been identified and protected.

[ ] [ ] [ ] Appropriate practices to protect on-site or downstream surface water are installed.

[ ] [ ] [ ] Are clearing and grading operations divided into areas <5 acres?

4. Stabilized Construction Entrance

Yes No NA

[ ] [ ] [ ] A temporary construction entrance to capture mud and debris from construction vehicles before they enter the public highway has been installed.

[ ] [ ] [ ] Other access areas (entrances, construction routes, equipment parking areas) are stabilized immediately as work takes place with gravel or other cover.

[ ] [ ] [ ] Sediment tracked onto public streets is removed or cleaned on a regular basis.

5. Perimeter Sediment Controls

Yes No NA

[ ] [ ] [ ] Silt fence material and installation comply with the standard drawing and specifications.

[ ] [ ] [ ] Silt fences are installed at appropriate spacing intervals

[ ] [ ] [ ] Sediment/detention basin was installed as first land disturbing activity.

[ ] [ ] [ ] Sediment traps and barriers are installed.

6. Pollution Prevention for Waste and Hazardous Materials

Yes No NA

[ ] [ ] [ ] The Operator or designated representative has been assigned to implement the spill prevention avoidance and response plan.

[ ] [ ] [ ] The plan is contained in the SWPPP on page _____

[ ] [ ] [ ] Appropriate materials to control spills are onsite. Where? _____

II. CONSTRUCTION DURATION INSPECTIONS

a. Directions:
Inspection Forms will be filled out during the entire construction phase of the project.
Required Elements:

(1) On a site map, indicate the extent of all disturbed site areas and drainage pathways. Indicate site areas that are expected to undergo initial disturbance or significant site work within the next 14-day period;

(2) Indicate on a site map all areas of the site that have undergone temporary or permanent stabilization;

(3) Indicate all disturbed site areas that have not undergone active site work during the previous 14-day period;

Inspect all sediment control practices and record the approximate degree of sediment accumulation as a percentage of sediment storage volume (for example, 10 percent, 20 percent, 50 percent);

(5) Inspect all erosion and sediment control practices and record all maintenance requirements such as verifying the integrity of barrier or diversion systems (earthen berms or silt fencing) and containment systems (sediment basins and sediment traps). Identify any evidence of rill or gully erosion occurring on slopes and any loss of stabilizing vegetation or seeding/mulching. Document any excessive deposition of sediment or ponding water along barrier or diversion systems. Record the depth of sediment within containment structures, any erosion near outlet and overflow structures, and verify the ability of rock filters around perforated riser pipes to pass water; and

(6) Immediately report to the Operator any deficiencies that are identified with the implementation of the SWPPP.

SITE PLAN/SKETCH

Inspector (print name)	**Date of Inspection**
Qualified Professional (print name)	**Qualified Professional Signature**

The above signed acknowledges that, to the best of his/her knowledge, all information provided on the forms is accurate and complete.

Maintaining Water Quality

Yes No NA

[ ] [ ] [ ] Is there an increase in turbidity causing a substantial visible contrast to natural conditions?

[ ] [ ] [ ] Is there residue from oil and floating substances, visible oil film, or globules or grease?

[ ] [ ] [ ] All disturbance is within the limits of the approved plans.

[ ] [ ] [ ] Have receiving lake/bay, stream, and/or wetland been impacted by silt from project?

Housekeeping

1. General Site Conditions

Yes No NA

[ ] [ ] [ ] Is construction site litter and debris appropriately managed?

[ ] [ ] [ ] Are facilities and equipment necessary for implementation of erosion and sediment control in working order and/or properly maintained?

[ ] [ ] [ ] Is construction impacting the adjacent property?

[ ] [ ] [ ] Is dust adequately controlled?

2. Temporary Stream Crossing

Yes No NA

[ ] [ ] [ ] Maximum diameter pipes necessary to span creek without dredging are installed.

[ ] [ ] [ ] Installed non-woven geotextile fabric beneath approaches.

[ ] [ ] [ ] Is fill composed of aggregate (no earth or soil)?

[ ] [ ] [ ] Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

Runoff Control Practices

1. Excavation Dewatering

Yes No NA

[ ] [ ] [ ] Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.

[ ] [ ] [ ] Clean water from upstream pool is being pumped to the downstream pool.

[ ] [ ] [ ] Sediment laden water from work area is being discharged to a silt-trapping device.

[ ] [ ] [ ] Constructed upstream berm with one-foot minimum freeboard.

2. Level Spreader

Yes No NA

[ ] [ ] [ ] Installed per plan.

[ ] [ ] [ ] Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.

[ ] [ ] [ ] Flow sheets out of level spreader without erosion on downstream edge.

3. Interceptor Dikes and Swales

Yes No NA

[ ] [ ] [ ] Installed per plan with minimum side slopes 2H:1V or flatter.

[ ] [ ] [ ] Stabilized by geotextile fabric, seed, or mulch with no erosion occurring.

[ ] [ ] [ ] Sediment-laden runoff directed to sediment trapping structure

Runoff Control Practices (continued)

4. Stone Check Dam

Yes No NA

[ ] [ ] [ ] Is channel stable? (flow is not eroding soil underneath or around the structure).
[ ] [ ] [ ] Check is in good condition (rocks in place and no permanent pools behind the structure).
[ ] [ ] [ ] Has accumulated sediment been removed?.

5. Rock Outlet Protection

Yes No NA

[ ] [ ] [ ] Installed per plan.
[ ] [ ] [ ] Installed concurrently with pipe installation.

Soil Stabilization

1. Topsoil and Spoil Stockpiles

Yes No NA

[ ] [ ] [ ] Stockpiles are stabilized with vegetation and/or mulch.
[ ] [ ] [ ] Sediment control is installed at the toe of the slope.

2. Revegetation

Yes No NA

[ ] [ ] [ ] Temporary seedings and mulch have been applied to idle areas.
[ ] [ ] [ ] 4 inches minimum of topsoil has been applied under permanent seedings

Sediment Control

1. Stabilized Construction Entrance

Yes No NA

[ ] [ ] [ ] Stone is clean enough to effectively remove mud from vehicles.
[ ] [ ] [ ] Installed per standards and specifications?
[ ] [ ] [ ] Does all traffic use the stabilized entrance to enter and leave site?
[ ] [ ] [ ] Is adequate drainage provided to prevent ponding at entrance?

2. Silt Fence

Yes No NA

[ ] [ ] [ ] Installed on Contour, 10 feet from toe of slope (not across conveyance channels).
[ ] [ ] [ ] Joints constructed by wrapping the two ends together for continuous support.
[ ] [ ] [ ] Fabric buried 6 inches minimum.
[ ] [ ] [ ] Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation is ___% of design capacity.

Sediment Control (continued)

3. Storm Drain Inlet Protection (Use for Stone & Block; Filter Fabric; Curb; or, Excavated practices)

Yes No NA

[ ] [ ] [ ] Installed concrete blocks lengthwise so open ends face outward, not upward.
[ ] [ ] [ ] Placed wire screen between No. 3 crushed stone and concrete blocks.
[ ] [ ] [ ] Drainage area is 1acre or less.
[ ] [ ] [ ] Excavated area is 900 cubic feet.
[ ] [ ] [ ] Excavated side slopes should be 2:1.
[ ] [ ] [ ] 2" x 4" frame is constructed and structurally sound.
[ ] [ ] [ ] Posts 3-foot maximum spacing between posts.
[ ] [ ] [ ] Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
[ ] [ ] [ ] Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation ___% of design capacity.

4. Temporary Sediment Trap

Yes No NA

[ ] [ ] [ ] Outlet structure is constructed per the approved plan or drawing.
[ ] [ ] [ ] Geotextile fabric has been placed beneath rock fill.

Sediment accumulation is ___% of design capacity.

5. Temporary Sediment Basin

Yes No NA

[ ] [ ] [ ] Basin and outlet structure constructed per the approved plan.
[ ] [ ] [ ] Basin side slopes are stabilized with seed/mulch.
[ ] [ ] [ ] Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is ___% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.
Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

CONSTRUCTION DURATION INSPECTIONS
b. Modifications to the SWPPP (To be completed as described below)

The Operator shall amend the SWPPP whenever:
1. There is a significant change in design, construction, operation, or maintenance which may have a significant effect on the potential for the discharge of pollutants to the waters of the United States and which has not otherwise been addressed in the SWPPP; or
2. The SWPPP proves to be ineffective in:
a. Eliminating or significantly minimizing pollutants from sources identified in the SWPPP and as required by this permit; or
b. Achieving the general objectives of controlling pollutants in stormwater discharges from permitted construction activity; and
3. Additionally, the SWPPP shall be amended to identify any new contractor or subcontractor that will implement any measure of the SWPPP.

Modification & Reason:

III. Monthly Summary of Site Inspection Activities

SPDES General Permit For Stormwater Discharges From Construction Activity (GP-0-20-001)

Project/Site Name: Wallace Campus

eNOI Submission Number: _____

eNOI Submitted by: ☐ **Owner/Operator** ☐ **SWPPP Preparer** ☐ **Other**

Certification Statement - Owner/Operator

I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted.

CONTRACTOR CERTIFICATION

I hereby certify under penalty of law that I understand and agree to comply with the terms and conditions of the SWPPP and agree to implement any corrective actions identified by the *qualified inspector* during a site inspection. I also understand that the *owner or operator* must comply with the terms and conditions of the most current version of the New York state Pollutant Discharge Elimination System ("SPDES") general permit for stormwater *discharges* from *construction activities* and that it is unlawful for any person to cause or contribute to a violation of *water quality standards.* Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations."

Albany, New York 12233-3505

NYR _____ (for DEC use only)

Stormwater Discharges Associated with Construction Activity Under State Pollutant Discharge Elimination System (SPDES) General Permit # GP-0-20-001

All sections must be completed unless otherwise noted. Failure to complete all items may result in this form being returned to you, thereby delaying your coverage under this General Permit. Applicants must read and understand the conditions of the permit and prepare a Stormwater Pollution Prevention Plan prior to submitting this NOI. Applicants are responsible for identifying and obtaining other DEC permits that may be required.

Tax Map Numbers

1. Provide the Geographic Coordinates for the project site in NYTM Units. To do this you **must** go to the NYSDEC Stormwater Interactive Map on the DEC website at:

www.dec.ny.gov/imsmaps/stormwater/viewer.htm

Zoom into your Project Location such that you can accurately click on the centroid of your site. Once you have located your project site, go to the tool boxes on the top and choose "i"(identify). Then click on the center of your site and a new window containing the X, Y coordinates in UTM will pop up. Transcribe these coordinates into the boxes below. For problems with the interactive map use the help function.

X Coordinates (Easting): 589376

Y Coordinates (Northing): 4617452

2. What is the nature of this construction project?

○ **New Construction**

○ **Redevelopment with increase in impervious area**

● **Redevelopment with no increase in impervious area**

3. Select the predominant land use for both pre and post development conditions.
SELECT ONLY ONE CHOICE FOR EACH

Pre-Development Existing Land Use

- ○ FOREST
- ○ PASTURE/OPEN LAND
- ○ CULTIVATED LAND
- ○ SINGLE FAMILY HOME
- ○ SINGLE FAMILY SUBDIVISION
- ○ TOWN HOME RESIDENTIAL
- ○ MULTIFAMILY RESIDENTIAL
- ○ INSTITUTIONAL/SCHOOL
- ○ INDUSTRIAL
- ● COMMERCIAL
- ○ ROAD/HIGHWAY
- ○ RECREATIONAL/SPORTS FIELD
- ○ BIKE PATH/TRAIL
- ○ LINEAR UTILITY
- ○ PARKING LOT
- ○ OTHER

Post-Development Future Land Use

- ○ SINGLE FAMILY HOME — Number of Lots
- ○ SINGLE FAMILY SUBDIVISION
- ○ TOWN HOME RESIDENTIAL
- ○ MULTIFAMILY RESIDENTIAL
- ○ INSTITUTIONAL/SCHOOL
- ○ INDUSTRIAL
- ● COMMERCIAL
- ○ MUNICIPAL
- ○ ROAD/HIGHWAY
- ○ RECREATIONAL/SPORTS FIELD
- ○ BIKE PATH/TRAIL
- ○ LINEAR UTILITY (water, sewer, gas, etc.)
- ○ PARKING LOT
- ○ CLEARING/GRADING ONLY
- ○ DEMOLITION, NO REDEVELOPMENT
- ○ WELL DRILLING ACTIVITY *(Oil, Gas, etc.)
- ○ OTHER

***Note**: for gas well drilling, non-high volume hydraulic fractured wells only

4. In accordance with the larger common plan of development or sale, enter the total project site area; the total area to be disturbed; existing impervious area to be disturbed (for redevelopment activities); and the future impervious area constructed within the disturbed area. (Round to the nearest tenth of an acre.)

Total Site Area	Total Area To Be Disturbed	Existing Impervious Area To Be Disturbed	Future Impervious Area Within Disturbed Area
3.1	3.1	2.9	2.4

5. Do you plan to disturb more than 5 acres of soil at any one time? ○ **Yes** ● **No**

6. Indicate the percentage of each Hydrologic Soil Group(HSG) at the site.

A	B	C	D
%	%	%	100 %

7. Is this a phased project? ○ **Yes** ● **No**

8. Enter the planned start and end dates of the disturbance activities.

Start Date 04/01/2022 – **End Date** 04/01/2024

9. Identify the nearest surface waterbody(ies) to which construction site runoff will discharge.

Name

Fall Kill Creek

9a. Type of waterbody identified in Question 9?

- ○ Wetland / State Jurisdiction On Site (Answer 9b)
- ○ Wetland / State Jurisdiction Off Site
- ○ Wetland / Federal Jurisdiction On Site (Answer 9b)
- ○ Wetland / Federal Jurisdiction Off Site
- ○ Stream / Creek On Site
- ● Stream / Creek Off Site
- ○ River On Site
- ○ River Off Site
- ○ Lake On Site
- ○ Lake Off Site
- ○ Other Type On Site
- ○ Other Type Off Site

9b. How was the wetland identified?

- ○ Regulatory Map
- ○ Delineated by Consultant
- ○ Delineated by Army Corps of Engineers
- ○ Other (identify)

10. Has the surface waterbody(ies) in question 9 been identified as a 303(d) segment in Appendix E of GP-0-20-001? ○ **Yes** ● **No**

11. Is this project located in one of the Watersheds identified in Appendix C of GP-0-20-001? ○ **Yes** ● **No**

12. Is the project located in one of the watershed areas associated with AA and AA-S classified waters? ○ **Yes** ● **No**
If no, skip question 13.

13. Does this construction activity disturb land with no existing impervious cover and where the Soil Slope Phase is identified as an E or F on the USDA Soil Survey? ○ **Yes** ● **No**
If Yes, what is the acreage to be disturbed?

.

14. Will the project disturb soils within a State regulated wetland or the protected 100 foot adjacent area? ○ **Yes** ● **No**

15. Does the site runoff enter a separate storm sewer system (including roadside drains, swales, ditches, culverts, etc)? ● **Yes** ○ **No** ○ **Unknown**

16. What is the name of the municipality/entity that owns the separate storm sewer system?

CITY OF POUGHKEEPSIE

17. Does any runoff from the site enter a sewer classified as a Combined Sewer? ○ **Yes** ● **No** ○ **Unknown**

18. Will future use of this site be an agricultural property as defined by the NYS Agriculture and Markets Law? ○ **Yes** ● **No**

19. Is this property owned by a state authority, state agency, federal government or local government? ○ **Yes** ● **No**

20. Is this a remediation project being done under a Department approved work plan? (i.e. CERCLA, RCRA, Voluntary Cleanup Agreement, etc.) ○ **Yes** ● **No**

21. Has the required Erosion and Sediment Control component of the SWPPP been developed in conformance with the current NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book)? ● **Yes** ○ **No**

22. Does this construction activity require the development of a SWPPP that includes the post-construction stormwater management practice component (i.e. Runoff Reduction, Water Quality and Quantity Control practices/techniques)? ● **Yes** ○ **No**
If No, skip questions 23 and 27-39.

23. Has the post-construction stormwater management practice component of the SWPPP been developed in conformance with the current NYS Stormwater Management Design Manual? ○ **Yes** ● **No**

24. The Stormwater Pollution Prevention Plan (SWPPP) was prepared by:

- ● **Professional Engineer (P.E.)**
- ○ **Soil and Water Conservation District (SWCD)**
- ○ **Registered Landscape Architect (R.L.A)**
- ○ **Certified Professional in Erosion and Sediment Control (CPESC)**
- ○ **Owner/Operator**
- ○ **Other**

SWPPP Preparer Certification

I hereby certify that the Stormwater Pollution Prevention Plan (SWPPP) for this project has been prepared in accordance with the terms and conditions of the GP-0-20-001. Furthermore, I understand that certifying false, incorrect or inaccurate information is a violation of this permit and the laws of the State of New York and could subject me to criminal, civil and/or administrative proceedings.

First Name RODNEY **MI** E

Last Name MORRISON

Signature

Date 10/25/2021

25. Has a construction sequence schedule for the planned management practices been prepared? ○ Yes ○ No

26. Select **all** of the erosion and sediment control practices that will be employed on the project site:

Temporary Structural

- ○ Check Dams
- ○ Construction Road Stabilization
- ● Dust Control
- ○ Earth Dike
- ○ Level Spreader
- ○ Perimeter Dike/Swale
- ○ Pipe Slope Drain
- ○ Portable Sediment Tank
- ○ Rock Dam
- ○ Sediment Basin
- ○ Sediment Traps
- ● Silt Fence
- ● Stabilized Construction Entrance
- ● Storm Drain Inlet Protection
- ○ Straw/Hay Bale Dike
- ○ Temporary Access Waterway Crossing
- ○ Temporary Stormdrain Diversion
- ○ Temporary Swale
- ○ Turbidity Curtain
- ○ Water bars

Biotechnical

- ○ Brush Matting
- ○ Wattling

Vegetative Measures

- ○ Brush Matting
- ○ Dune Stabilization
- ○ Grassed Waterway
- ● Mulching
- ○ Protecting Vegetation
- ○ Recreation Area Improvement
- ● Seeding
- ○ Sodding
- ○ Straw/Hay Bale Dike
- ○ Streambank Protection
- ○ Temporary Swale
- ● Topsoiling
- ○ Vegetating Waterways

Permanent Structural

- ○ Debris Basin
- ○ Diversion
- ○ Grade Stabilization Structure
- ● Land Grading
- ○ Lined Waterway (Rock)
- ○ Paved Channel (Concrete)
- ○ Paved Flume
- ○ Retaining Wall
- ○ Riprap Slope Protection
- ○ Rock Outlet Protection
- ○ Streambank Protection

Other

Post-construction Stormwater Management Practice (SMP) Requirements

Important: Completion of Questions 27-39 is not required if response to Question 22 is No.

27. Identify all site planning practices that were used to prepare the final site plan/layout for the project.

- ● **Preservation of Undisturbed Areas**
- ● **Preservation of Buffers**
- ● **Reduction of Clearing and Grading**
- ● **Locating Development in Less Sensitive Areas**
- ● **Roadway Reduction**
- ● **Sidewalk Reduction**
- ● **Driveway Reduction**
- ○ **Cul-de-sac Reduction**
- ● **Building Footprint Reduction**
- ● **Parking Reduction**

27a. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6("Soil Restoration") of the Design Manual (2010 version).

- ● All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).
- ○ Compacted areas were considered as impervious cover when calculating the **WQv Required**, and the compacted areas were assigned a post-construction Hydrologic Soil Group (HSG) designation that is one level less permeable than existing conditions for the hydrology analysis.

28. Provide the total Water Quality Volume (WQv) required for this project (based on final site plan/layout).

Total WQv Required

0.05 **acre-feet**

29. Identify the RR techniques (Area Reduction), RR techniques(Volume Reduction) and Standard SMPs with RRv Capacity in Table 1 (See Page 9) that were used to reduce the Total WQv Required(#28).

Also, provide in Table 1 the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

Note: Redevelopment projects shall use Tables 1 and 2 to identify the SMPs used to treat and/or reduce the WQv required. If runoff reduction techniques will not be used to reduce the required WQv, skip to question 33a after identifying the SMPs.

Table 1 - Runoff Reduction (RR) Techniques and Standard Stormwater Management Practices (SMPs)

	Total Contributing Area (acres)		Total Contributing Impervious Area(acres)
RR Techniques (Area Reduction)			
○ Conservation of Natural Areas (RR-1)		and/or	
○ Sheetflow to Riparian Buffers/Filters Strips (RR-2)		and/or	
○ Tree Planting/Tree Pit (RR-3)		and/or	
○ Disconnection of Rooftop Runoff (RR-4)		and/or	
RR Techniques (Volume Reduction)			
○ Vegetated Swale (RR-5)			
○ Rain Garden (RR-6)			
○ Stormwater Planter (RR-7)			
○ Rain Barrel/Cistern (RR-8)			
○ Porous Pavement (RR-9)			
○ Green Roof (RR-10)			0.045
Standard SMPs with RRv Capacity			
○ Infiltration Trench (I-1)			
○ Infiltration Basin (I-2)			
○ Dry Well (I-3)			1.48
○ Underground Infiltration System (I-4)			
○ Bioretention (F-5)			
○ Dry Swale (O-1)			
Standard SMPs			
○ Micropool Extended Detention (P-1)			
○ Wet Pond (P-2)			
○ Wet Extended Detention (P-3)			
○ Multiple Pond System (P-4)			
○ Pocket Pond (P-5)			
○ Surface Sand Filter (F-1)			
○ Underground Sand Filter (F-2)			
○ Perimeter Sand Filter (F-3)			
○ Organic Filter (F-4)			
○ Shallow Wetland (W-1)			
○ Extended Detention Wetland (W-2)			
○ Pond/Wetland System (W-3)			
○ Pocket Wetland (W-4)			
○ Wet Swale (O-2)			

Table 2 - Alternative SMPs (DO NOT INCLUDE PRACTICES BEING USED FOR PRETREATMENT ONLY)

Alternative SMP	Total Contributing Impervious Area(acres)
○ **Hydrodynamic**	
○ **Wet Vault**	
○ **Media Filter**	
○ **Other**	

Provide the name and manufacturer of the Alternative SMPs (i.e. proprietary practice(s)) being used for WQv treatment.

Name

Manufacturer

Note: Redevelopment projects which do not use RR techniques, shall use questions 28, 29, 33 and 33a to provide SMPs used, total WQv required and total WQv provided for the project.

30. Indicate the Total RRv provided by the RR techniques (Area/Volume Reduction) and Standard SMPs with RRv capacity identified in question 29.

Total RRv provided

0.05 **acre-feet**

31. Is the Total RRv provided (#30) greater than or equal to the total WQv required (#28).

● **Yes** ○ **No**

If Yes, go to question 36.
If No, go to question 32.

32. Provide the Minimum RRv required based on HSG.
[Minimum RRv Required = (P)(0.95)(Ai)/12, Ai=(S)(Aic)]

Minimum RRv Required

. **acre-feet**

32a. Is the Total RRv provided (#30) greater than or equal to the Minimum RRv Required (#32)?

○ **Yes** ○ **No**

If Yes, go to question 33.
Note: Use the space provided in question #39 to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). A detailed evaluation of the specific site limitations and justification for not reducing 100% of the WQv required (#28) must also be included in the SWPPP.
If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

33. Identify the Standard SMPs in Table 1 and, if applicable, the Alternative SMPs in Table 2 that were used to treat the remaining total WQv(=Total WQv Required in 28 - Total RRv Provided in 30).

Also, provide in Table 1 and 2 the total impervious area that contributes runoff to each practice selected.

Note: Use Tables 1 and 2 to identify the SMPs used on Redevelopment projects.

33a. Indicate the Total WQv provided (i.e. WQv treated) by the SMPs identified in question #33 and Standard SMPs with RRv Capacity identified in question 29.

WQv Provided

[ ][ ][ ].[ ][ ][ ] **acre-feet**

Note: For the standard SMPs with RRv capacity, the WQv provided by each practice = the WQv calculated using the contributing drainage area to the practice - RRv provided by the practice. (See Table 3.5 in Design Manual)

34. Provide the sum of the Total RRv provided (#30) and the WQv provided (#33a). [ ][ ][ ].[ ][ ][ ]

35. Is the sum of the RRv provided (#30) and the WQv provided (#33a) greater than or equal to the total WQv required (#28)? ○ **Yes** ○ **No**

If Yes, go to question 36.
If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

36. Provide the total Channel Protection Storage Volume (CPv) required and provided or select waiver (36a), if applicable.

CPv Required

[ ][ ][ ].[ ][ ][ ] **acre-feet**

CPv Provided

[ ][ ][ ].[ ][ ][ ] **acre-feet**

36a. The need to provide channel protection has been waived because:

○ Site discharges directly to tidal waters or a fifth order or larger stream.

● Reduction of the total CPv is achieved on site through runoff reduction techniques or infiltration systems.

37. Provide the Overbank Flood (Qp) and Extreme Flood (Qf) control criteria or select waiver (37a), if applicable.

Total Overbank Flood Control Criteria (Qp)

Pre-Development

[ ]1[5].7[ ][ ] **CFS**

Post-development

[ ][ ]8.5[ ][ ] **CFS**

Total Extreme Flood Control Criteria (Qf)

Pre-Development

[ ]2[7].8[ ][ ] **CFS**

Post-development

[ ]1[6].8[ ][ ] **CFS**

37a. The need to meet the Qp and Qf criteria has been waived because:

- ○ Site discharges directly to tidal waters or a fifth order or larger stream.
- ● Downstream analysis reveals that the Qp and Qf controls are not required

38. Has a long term Operation and Maintenance Plan for the post-construction stormwater management practice(s) been developed? ● **Yes** ○ **No**

If Yes, Identify the entity responsible for the long term Operation and Maintenance

WALLACE CAMPUS MANAGER, LLC

39. Use this space to summarize the specific site limitations and justification for not reducing 100% of WQv required(#28). (See question 32a) This space can also be used for other pertinent project information.

40. Identify other DEC permits, existing and new, that are required for this project/facility.

- ○ Air Pollution Control
- ○ Coastal Erosion
- ○ Hazardous Waste
- ○ Long Island Wells
- ○ Mined Land Reclamation
- ○ Solid Waste

41. Does this project require a US Army Corps of Engineers Wetland Permit? ○ **Yes** ● **No**
If Yes, Indicate Size of Impact. [ ][ ][ ][ ][ ].[ ]

42. Is this project subject to the requirements of a regulated, traditional land use control MS4? ● **Yes** ○ **No**
(If No, skip question 43)

43. Has the "MS4 SWPPP Acceptance" form been signed by the principal executive officer or ranking elected official and submitted along with this NOI? ● **Yes** ○ **No**

44. If this NOI is being submitted for the purpose of continuing or transferring coverage under a general permit for stormwater runoff from construction activities, please indicate the former SPDES number assigned. [N][Y][R][ ][ ][ ][ ][ ][ ]

Owner/Operator Certification

I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted.

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity

Please indicate your permit identification number: NYR ___ ___ ___ ___ ___ ___

I. Owner or Operator Information

1. Owner/Operator Name:

2. Street Address:

3. City/State/Zip:

4. Contact Person: | 4a.Telephone:

4b. Contact Person E-Mail:

II. Project Site Information

5. Project/Site Name:

6. Street Address:

7. City/Zip:

8. County:

III. Reason for Termination

9a. □ All disturbed areas have achieved final stabilization in accordance with the general permit and SWPPP. ***Date final stabilization completed** (month/year): _____

9b. □ Permit coverage has been transferred to new owner/operator. Indicate new owner/operator's permit identification number: NYR ___ ___ ___ ___ ___ ___
(Note: Permit coverage can not be terminated by owner identified in I.1. above until new owner/operator obtains coverage under the general permit)

9c. □ Other (Explain on Page 2)

IV. Final Site Information:

10a. Did this construction activity require the development of a SWPPP that includes post-construction stormwater management practices? □ yes □ no (If no, go to question 10f.)

10b. Have all post-construction stormwater management practices included in the final SWPPP been constructed? □ yes □ no (If no, explain on Page 2)

10c. Identify the entity responsible for long-term operation and maintenance of practice(s)?

_____

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity - continued

10d. Has the entity responsible for long-term operation and maintenance been given a copy of the operation and maintenance plan required by the general permit? □ yes □ no

10e. Indicate the method used to ensure long-term operation and maintenance of the post-construction stormwater management practice(s):

□ Post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain practice(s) have been deeded to the municipality.

□ Executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s).

□ For post-construction stormwater management practices that are privately owned, a mechanism is in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the owner or operator's deed of record.

□ For post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university or hospital), government agency or authority, or public utility; policy and procedures are in place that ensures operation and maintenance of the practice(s) in accordance with the operation and maintenance plan.

10f. Provide the total area of impervious surface (i.e. roof, pavement, concrete, gravel, etc.) constructed within the disturbance area? _____ (acres)

11. Is this project subject to the requirements of a regulated, traditional land use control MS4? □ yes □ no

(If Yes, complete section VI - "MS4 Acceptance" statement

V. Additional Information/Explanation:

(Use this section to answer questions 9c. and 10b., if applicable)

VI. MS4 Acceptance - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative (Note: Not required when 9b. is checked -transfer of coverage)

I have determined that it is acceptable for the owner or operator of the construction project identified in question 5 to submit the Notice of Termination at this time.

SPDES GENERAL PERMIT
FOR STORMWATER DISCHARGES

From

CONSTRUCTION ACTIVITY

Permit No. GP- 0-20-001

Issued Pursuant to Article 17, Titles 7, 8 and Article 70

of the Environmental Conservation Law

Effective Date: January 29, 2020 Expiration Date: January 28, 2025

John J. Ferguson

Chief Permit Administrator

1-23-20

Authorized Signature Date

Address: NYS DEC
Division of Environmental Permits
625 Broadway, 4th Floor
Albany, N.Y. 12233-1750

PREFACE

Pursuant to Section 402 of the Clean Water Act ("CWA"), stormwater *discharges* from certain *construction activities* are unlawful unless they are authorized by a *National Pollutant Discharge Elimination System ("NPDES")* permit or by a state permit program. New York administers the approved State Pollutant Discharge Elimination System (SPDES) program with permits issued in accordance with the New York State Environmental Conservation Law (ECL) Article 17, Titles 7, 8 and Article 70.

An *owner or operator* of a *construction activity* that is eligible for coverage under this permit must obtain coverage prior to the *commencement of construction activity*. Activities that fit the definition of "*construction activity*", as defined under 40 CFR 122.26(b)(14)(x), (15)(i), and (15)(ii), constitute construction of a *point source* and therefore, pursuant to ECL section 17-0505 and 17-0701, the *owner or operator* must have coverage under a SPDES permit prior to *commencing construction activity*. The *owner or operator* cannot wait until there is an actual *discharge* from the *construction site* to obtain permit coverage.

***Note: The italicized words/phrases within this permit are defined in Appendix A.**

Part 1. PERMIT COVERAGE AND LIMITATIONS

A. Permit Application

This permit authorizes stormwater *discharges* to *surface waters of the State* from the following *construction activities* identified within 40 CFR Parts 122.26(b)(14)(x), 122.26(b)(15)(i) and 122.26(b)(15)(ii), provided all of the eligibility provisions of this permit are met:

1. *Construction activities* involving soil disturbances of one (1) or more acres; including disturbances of less than one acre that are part of a *larger common plan of development or sale* that will ultimately disturb one or more acres of land; excluding *routine maintenance activity* that is performed to maintain the original line and grade, hydraulic capacity or original purpose of a facility;

2. *Construction activities* involving soil disturbances of less than one (1) acre where the Department has determined that a *SPDES* permit is required for stormwater *discharges* based on the potential for contribution to a violation of a *water quality standard* or for significant contribution of *pollutants* to *surface waters of the State.*

3. *Construction activities* located in the watershed(s) identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

B. Effluent Limitations Applicable to Discharges from Construction Activities

*Discharge*s authorized by this permit must achieve, at a minimum, the effluent limitations in Part I.B.1. (a) – (f) of this permit. These limitations represent the degree of effluent reduction attainable by the application of best practicable technology currently available.

1. Erosion and Sediment Control Requirements - The *owner or operator* must select, design, install, implement and maintain control measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. The selection, design, installation, implementation, and maintenance of these control measures must meet the non-numeric effluent limitations in Part I.B.1.(a) – (f) of this permit and be in accordance with the New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, using sound engineering judgment. Where control measures are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must include in the *Stormwater Pollution Prevention Plan* (“SWPPP”) the reason(s) for the

deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

a. **Erosion and Sediment Controls.** Design, install and maintain effective erosion and sediment controls to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such controls must be designed, installed and maintained to:

   (i) *Minimize* soil erosion through application of runoff control and soil stabilization control measure to *minimize pollutant discharge*s;

   (ii) Control stormwater *discharge*s, including both peak flowrates and total stormwater volume, to *minimize* channel and *streambank* erosion and scour in the immediate vicinity of the *discharge* points;

   (iii) *Minimize* the amount of soil exposed during *construction activity*;

   (iv) *Minimize* the disturbance of *steep slopes*;

   (v) *Minimize* sediment *discharge*s from the site;

   (vi) Provide and maintain *natural buffer*s around surface waters, direct stormwater to vegetated areas and maximize stormwater infiltration to reduce *pollutant discharge*s, unless *infeasible*;

   (vii) *Minimize* soil compaction. Minimizing soil compaction is not required where the intended function of a specific area of the site dictates that it be compacted;

   (viii) Unless *infeasible*, preserve a sufficient amount of topsoil to complete soil restoration and establish a uniform, dense vegetative cover; and

   (ix) *Minimize* dust. On areas of exposed soil, *minimize* dust through the appropriate application of water or other dust suppression techniques to control the generation of pollutants that could be discharged from the site.

b. **Soil Stabilization**. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within fourteen (14) days from the date the current soil disturbance activity ceased. For construction sites that *directly discharge* to one of the 303(d) segments

listed in Appendix E or is located in one of the watersheds listed in Appendix C, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. See Appendix A for definition of *Temporarily Ceased*.

c. **Dewatering**. *Discharge*s from *dewatering* activities, including *discharge*s from *dewatering* of trenches and excavations, must be managed by appropriate control measures.

d. **Pollution Prevention Measures**. Design, install, implement, and maintain effective pollution prevention measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such measures must be designed, installed, implemented and maintained to:

(i) *Minimize* the *discharge* of *pollutants* from equipment and vehicle washing, wheel wash water, and other wash waters. This applies to washing operations that use clean water only. Soaps, detergents and solvents cannot be used;

(ii) *Minimize* the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste, hazardous and toxic waste, and other materials present on the site to precipitation and to stormwater. Minimization of exposure is not required in cases where the exposure to precipitation and to stormwater will not result in a *discharge* of *pollutants*, or where exposure of a specific material or product poses little risk of stormwater contamination (such as final products and materials intended for outdoor use) ; and

(iii) Prevent the *discharge* of *pollutants* from spills and leaks and implement chemical spill and leak prevention and response procedures.

e. **Prohibited *Discharges*.** The following *discharge*s are prohibited:

(i) Wastewater from washout of concrete;

(ii) Wastewater from washout and cleanout of stucco, paint, form release oils, curing compounds and other construction materials;

(iii) Fuels, oils, or other *pollutants* used in vehicle and equipment operation and maintenance;

(iv) Soaps or solvents used in vehicle and equipment washing; and

(v) Toxic or hazardous substances from a spill or other release.

f. Surface Outlets. When discharging from basins and impoundments, the outlets shall be designed, constructed and maintained in such a manner that sediment does not leave the basin or impoundment and that erosion at or below the outlet does not occur.

C. Post-construction Stormwater Management Practice Requirements

1. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must select, design, install, and maintain the practices to meet the *performance criteria* in the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015, using sound engineering judgment. Where post-construction stormwater management practices ("SMPs") are not designed in conformance with the *performance criteria* in the Design Manual, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. The *owner or operator* of a *construction activity* that requires post-construction stormwater management practices pursuant to Part III.C. of this permit must design the practices to meet the applicable *sizing criteria* in Part I.C.2.a., b., c. or d. of this permit.

a. Sizing Criteria for New Development

(i) Runoff Reduction Volume ("RRv"): Reduce the total Water Quality Volume ("WQv") by application of RR techniques and standard SMPs with RRv capacity. The total WQv shall be calculated in accordance with the criteria in Section 4.2 of the Design Manual.

(ii) Minimum RRv and Treatment of Remaining Total WQv: Construction activities that cannot meet the criteria in Part I.C.2.a.(i) of this permit due to site limitations shall direct runoff from all newly constructed impervious areas to a RR technique or standard SMP with RRv capacity unless infeasible. The specific site limitations that prevent the reduction of 100% of the WQv shall be documented in the SWPPP.

For each impervious area that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered infeasible.

In no case shall the runoff reduction achieved from the newly constructed impervious areas be less than the Minimum RRv as calculated using the criteria in Section 4.3 of the Design Manual. The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

(iii) Channel Protection Volume ("Cpv"): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
(1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
(2) The site discharges directly to tidal waters, or fifth order or larger streams.

(iv) *Overbank* Flood Control Criteria ("Qp"): Requires storage to attenuate the post-development 10-year, 24-hour peak discharge rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
(1) the site discharges directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

(v) Extreme Flood Control Criteria ("Qf"): Requires storage to attenuate the post-development 100-year, 24-hour peak discharge rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
(1) the site discharges directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

b. *Sizing Criteria* for *New Development* in Enhanced Phosphorus Removal Watershed

(i) Runoff Reduction Volume (RRv): Reduce the total Water Quality Volume (WQv) by application of RR techniques and standard SMPs with RRv capacity. The total WQv is the runoff volume from the 1-year, 24 hour design storm over the post-developed watershed and shall be

calculated in accordance with the criteria in Section 10.3 of the Design Manual.

(ii) Minimum RRv and Treatment of Remaining Total WQv: *Construction activities* that cannot meet the criteria in Part I.C.2.b.(i) of this permit due to *site limitations* shall direct runoff from all newly constructed *impervious areas* to a RR technique or standard SMP with RRv capacity unless *infeasible*. The specific *site limitations* that prevent the reduction of 100% of the WQv shall be documented in the SWPPP. For each *impervious area* that is not directed to a RR technique or standard SMP with RRv capacity, the SWPPP must include documentation which demonstrates that all options were considered and for each option explains why it is considered *infeasible.*

In no case shall the runoff reduction achieved from the newly constructed *impervious areas* be less than the Minimum RRv as calculated using the criteria in Section 10.3 of the Design Manual. The remaining portion of the total WQv that cannot be reduced shall be treated by application of standard SMPs.

(iii) Channel Protection Volume (Cpv): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event; remaining after runoff reduction. The Cpv requirement does not apply when:
(1) Reduction of the entire Cpv is achieved by application of runoff reduction techniques or infiltration systems, or
(2) The site *discharge*s directly to tidal waters, or fifth order or larger streams.

(iv) *Overbank* Flood Control Criteria (Qp): Requires storage to attenuate the post-development 10-year, 24-hour peak *discharge* rate (Qp) to predevelopment rates. The Qp requirement does not apply when:
(1) the site *discharge*s directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

(v) Extreme Flood Control Criteria (Qf): Requires storage to attenuate the post-development 100-year, 24-hour peak *discharge* rate (Qf) to predevelopment rates. The Qf requirement does not apply when:
(1) the site *discharge*s directly to tidal waters or fifth order or larger streams, or
(2) A downstream analysis reveals that *overbank* control is not required.

c. Sizing Criteria for Redevelopment Activity

(i) Water Quality Volume (WQv): The WQv treatment objective for *redevelopment activity* shall be addressed by one of the following options. *Redevelopment activities* located in an Enhanced Phosphorus Removal Watershed (see Part III.B.3. and Appendix C of this permit) shall calculate the WQv in accordance with Section 10.3 of the Design Manual. All other *redevelopment activities* shall calculate the WQv in accordance with Section 4.2 of the Design Manual.

(1) Reduce the existing *impervious cover* by a minimum of 25% of the total disturbed, *impervious area*. The Soil Restoration criteria in Section 5.1.6 of the Design Manual must be applied to all newly created pervious areas, or

(2) Capture and treat a minimum of 25% of the WQv from the disturbed, *impervious area* by the application of standard SMPs; or reduce 25% of the WQv from the disturbed, *impervious area* by the application of RR techniques or standard SMPs with RRv capacity., or

(3) Capture and treat a minimum of 75% of the WQv from the disturbed, *impervious area* as well as any additional runoff from tributary areas by application of the alternative practices discussed in Sections 9.3 and 9.4 of the Design Manual., or

(4) Application of a combination of 1, 2 and 3 above that provide a weighted average of at least two of the above methods. Application of this method shall be in accordance with the criteria in Section 9.2.1(B) (IV) of the Design Manual.

If there is an existing post-construction stormwater management practice located on the site that captures and treats runoff from the *impervious area* that is being disturbed, the WQv treatment option selected must, at a minimum, provide treatment equal to the treatment that was being provided by the existing practice(s) if that treatment is greater than the treatment required by options 1 – 4 above.

(ii) Channel Protection Volume (Cpv): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.

(iii) *Overbank* Flood Control Criteria (Qp): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site.

(iv) Extreme Flood Control Criteria (Qf): Not required if there are no changes to hydrology that increase the *discharge* rate from the project site

d. Sizing Criteria for Combination of Redevelopment Activity and New Development

Construction projects that include both New Development and Redevelopment Activity shall provide post-construction stormwater management controls that meet the sizing criteria calculated as an aggregate of the Sizing Criteria in Part I.C.2.a. or b. of this permit for the New Development portion of the project and Part I.C.2.c of this permit for Redevelopment Activity portion of the project.

D. Maintaining Water Quality

The Department expects that compliance with the conditions of this permit will control *discharge*s necessary to meet applicable *water quality standards*. It shall be a violation of the *ECL* for any discharge to either cause or contribute to a violation of *water quality standards* as contained in Parts 700 through 705 of Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York, such as:

1. There shall be no increase in turbidity that will cause a substantial visible contrast to natural conditions;

2. There shall be no increase in suspended, colloidal or settleable solids that will cause deposition or impair the waters for their best usages; and

3. There shall be no residue from oil and floating substances, nor visible oil film, nor globules of grease.

If there is evidence indicating that the stormwater *discharge*s authorized by this permit are causing, have the reasonable potential to cause, or are contributing to a violation of the *water quality standards*; the *owner or operator* must take appropriate corrective action in accordance with Part IV.C.5. of this general permit and document in accordance with Part IV.C.4. of this general permit. To address the *water quality standard* violation the *owner or operator* may need to provide additional information, include and implement appropriate controls in the SWPPP to correct the problem, or obtain an individual SPDES permit.

If there is evidence indicating that despite compliance with the terms and conditions of this general permit it is demonstrated that the stormwater *discharge*s authorized by this permit are causing or contributing to a violation of *water quality standards*, or if the Department determines that a modification of the permit is necessary to prevent a violation of *water quality standards*, the authorized *discharge*s will no longer be eligible for coverage under this permit. The Department may require the *owner or operator* to obtain an individual SPDES permit to continue discharging.

E. Eligibility Under This General Permit

1. This permit may authorize all *discharges* of stormwater from *construction activity* to *surface waters of the State* and *groundwaters* except for ineligible *discharges* identified under subparagraph F. of this Part.

2. Except for non-stormwater *discharges* explicitly listed in the next paragraph, this permit only authorizes stormwater *discharge*s; including stormwater runoff, snowmelt runoff, and surface runoff and drainage, from *construction activities*.

3. Notwithstanding paragraphs E.1 and E.2 above, the following non-stormwater discharges are authorized by this permit: those listed in 6 NYCRR 750-1.2(a)(29)(vi), with the following exception: "Discharges from firefighting activities are authorized only when the firefighting activities are emergencies/unplanned"; waters to which other components have not been added that are used to control dust in accordance with the SWPPP; and uncontaminated *discharge*s from *construction site* de-watering operations. All non-stormwater discharges must be identified in the SWPPP. Under all circumstances, the *owner or operator* must still comply with *water quality standards* in Part I.D of this permit.

4. The *owner or operator* must maintain permit eligibility to *discharge* under this permit. Any *discharges* that are not compliant with the eligibility conditions of this permit are not authorized by the permit and the *owner or operator* must either apply for a separate permit to cover those ineligible *discharges* or take steps necessary to make the *discharge* eligible for coverage.

F. Activities Which Are Ineligible for Coverage Under This General Permit

All of the following are **not** authorized by this permit:

1. *Discharge*s after *construction activities* have been completed and the site has undergone *final stabilization*;

2. *Discharge*s that are mixed with sources of non-stormwater other than those expressly authorized under subsection E.3. of this Part and identified in the SWPPP required by this permit;

3. *Discharges* that are required to obtain an individual SPDES permit or another SPDES general permit pursuant to Part VII.K. of this permit;

4. *Construction activities* or *discharges* from *construction activities* that may adversely affect an *endangered or threatened species* unless the *owner or*

operator has obtained a permit issued pursuant to 6 NYCRR Part 182 for the project or the Department has issued a letter of non-jurisdiction for the project. All documentation necessary to demonstrate eligibility shall be maintained on site in accordance with Part II.D.2 of this permit;

5. *Discharges* which either cause or contribute to a violation of *water quality standards* adopted pursuant to the *ECL* and its accompanying regulations;

6. *Construction activities* for residential, commercial and institutional projects:

   a. Where the *discharge*s from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and

   b. Which are undertaken on land with no existing *impervious cover*; and

   c. Which disturb one (1) or more acres of land designated on the current United States Department of Agriculture ("USDA") Soil Survey as Soil Slope Phase "D", (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase "E" or "F" (regardless of the map unit name), or a combination of the three designations.

7. *Construction activities* for linear transportation projects and linear utility projects:

   a. Where the *discharge*s from the *construction activities* are tributary to waters of the state classified as AA or AA-s; and

   b. Which are undertaken on land with no existing *impervious cover*; and

   c. Which disturb two (2) or more acres of land designated on the current USDA Soil Survey as Soil Slope Phase "D" (provided the map unit name is inclusive of slopes greater than 25%), or Soil Slope Phase "E" or "F" (regardless of the map unit name), or a combination of the three designations.

8. *Construction activities* that have the potential to affect an *historic property*, unless there is documentation that such impacts have been resolved. The following documentation necessary to demonstrate eligibility with this requirement shall be maintained on site in accordance with Part II.D.2 of this permit and made available to the Department in accordance with Part VII.F of this permit:

   a. Documentation that the *construction activity* is not within an archeologically sensitive area indicated on the sensitivity map, and that the *construction activity* is not located on or immediately adjacent to a property listed or determined to be eligible for listing on the National or State Registers of Historic Places, and that there is no new permanent building on the *construction site* within the following distances from a building, structure, or object that is more than 50 years old, or if there is such a new permanent building on the *construction site* within those parameters that NYS Office of Parks, Recreation and Historic Preservation (OPRHP), a Historic Preservation Commission of a Certified Local Government, or a qualified preservation professional has determined that the building, structure, or object more than 50 years old is not historically/archeologically significant.

      - 1-5 acres of disturbance - 20 feet
      - 5-20 acres of disturbance - 50 feet
      - 20+ acres of disturbance - 100 feet, or

   b. DEC consultation form sent to OPRHP, and copied to the NYS DEC Agency Historic Preservation Officer (APO), and
      (i) the State Environmental Quality Review (SEQR) Environmental Assessment Form (EAF) with a negative declaration or the Findings Statement, with documentation of OPRHP's agreement with the resolution; or
      (ii) documentation from OPRHP that the *construction activity* will result in No Impact; or
      (iii) documentation from OPRHP providing a determination of No Adverse Impact; or
      (iv) a Letter of Resolution signed by the owner/operator, OPRHP and the DEC APO which allows for this *construction activity* to be eligible for coverage under the general permit in terms of the State Historic Preservation Act (SHPA); or

   c. Documentation of satisfactory compliance with Section 106 of the National Historic Preservation Act for a coterminous project area:

(i) No Affect
(ii) No Adverse Affect
(iii) Executed Memorandum of Agreement, or

d. Documentation that:

(i) SHPA Section 14.09 has been completed by NYS DEC or another state agency.

9. *Discharge*s from *construction activities* that are subject to an existing SPDES individual or general permit where a SPDES permit for *construction activity* has been terminated or denied; or where the *owner or operator* has failed to renew an expired individual permit.

Part II. PERMIT COVERAGE

A. How to Obtain Coverage

1. An *owner or operator* of a *construction activity* that is not subject to the requirements of a regulated, traditional land use control MS4 must first prepare a SWPPP in accordance with all applicable requirements of this permit and then submit a completed Notice of Intent (NOI) to the Department to be authorized to discharge under this permit.

2. An *owner or operator* of a *construction activity* that is subject to the requirements of a *regulated, traditional land use control MS4* must first prepare a SWPPP in accordance with all applicable requirements of this permit and then have the SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department. The *owner or operator* shall have the “MS4 SWPPP Acceptance” form signed in accordance with Part VII.H., and then submit that form along with a completed NOI to the Department.

3. The requirement for an *owner or operator* to have its SWPPP reviewed and accepted by the *regulated, traditional land use control MS4* prior to submitting the NOI to the Department does not apply to an *owner or operator* that is obtaining permit coverage in accordance with the requirements in Part II.F. (Change of *Owner or Operator*) or where the *owner or operator* of the *construction activity* is the *regulated, traditional land use control MS4* . This exemption does not apply to *construction activities* subject to the New York City Administrative Code.

B. Notice of Intent (NOI) Submittal

1. Prior to December 21, 2020, an owner or operator shall use either the electronic (eNOI) or paper version of the NOI that the Department prepared. Both versions of the NOI are located on the Department's website (http://www.dec.ny.gov/). The paper version of the NOI shall be signed in accordance with Part VII.H. of this permit and submitted to the following address:

   NOTICE OF INTENT
   NYS DEC, Bureau of Water Permits
   625 Broadway, 4th Floor
   Albany, New York 12233-3505

2. Beginning December 21, 2020 and in accordance with EPA's 2015 NPDES Electronic Reporting Rule (40 CFR Part 127), the *owner or operator* must submit the NOI electronically using the *Department's* online NOI.

3. The *owner or operator* shall have the SWPPP preparer sign the "SWPPP Preparer Certification" statement on the NOI prior to submitting the form to the Department.

4. As of the date the NOI is submitted to the Department, the *owner or operator* shall make the NOI and SWPPP available for review and copying in accordance with the requirements in Part VII.F. of this permit.

C. Permit Authorization

1. An *owner or operator* shall not *commence construction activity* until their authorization to *discharge* under this permit goes into effect.

2. Authorization to *discharge* under this permit will be effective when the *owner or operator* has satisfied all of the following criteria:

   a. project review pursuant to the State Environmental Quality Review Act ("SEQRA") have been satisfied, when SEQRA is applicable. See the Department's website (http://www.dec.ny.gov/) for more information,

   b. where required, all necessary Department permits subject to the *Uniform Procedures Act ("UPA")* (see 6 NYCRR Part 621), or the equivalent from another New York State agency, have been obtained, unless otherwise notified by the Department pursuant to 6 NYCRR 621.3(a)(4). *Owners or operators* of *construction activities* that are required to obtain *UPA* permits

must submit a preliminary SWPPP to the appropriate DEC Permit Administrator at the Regional Office listed in Appendix F at the time all other necessary *UPA* permit applications are submitted. The preliminary SWPPP must include sufficient information to demonstrate that the *construction activity* qualifies for authorization under this permit,

c. the final SWPPP has been prepared, and

d. a complete NOI has been submitted to the Department in accordance with the requirements of this permit.

3. An *owner or operator* that has satisfied the requirements of Part II.C.2 above will be authorized to *discharge* stormwater from their *construction activity* in accordance with the following schedule:

   a. For *construction activities* that are not subject to the requirements of a *regulated, traditional land use control MS4*:

      (i) Five (5) business days from the date the Department receives a complete electronic version of the NOI (eNOI) for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.; or

      (ii) Sixty (60) business days from the date the Department receives a complete NOI (electronic or paper version) for *construction activities* with a SWPPP that has not been prepared in conformance with the design criteria in technical standard referenced in Part III.B.1. or, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C., the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, or;

      (iii) Ten (10) business days from the date the Department receives a complete paper version of the NOI for *construction activities* with a SWPPP that has been prepared in conformance with the design criteria in the technical standard referenced in Part III.B.1 and the *performance criteria* in the technical standard referenced in Parts III.B., 2 or 3, for *construction activities* that require post-construction stormwater management practices pursuant to Part III.C.

b. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*:

(i) Five (5) business days from the date the Department receives both a complete electronic version of the NOI (eNOI) and signed "*MS4* SWPPP Acceptance" form, or

(ii) Ten (10) business days from the date the Department receives both a complete paper version of the NOI and signed "MS4 SWPPP Acceptance" form.

4. Coverage under this permit authorizes stormwater *discharges* from only those areas of disturbance that are identified in the NOI. If an *owner or operator* wishes to have stormwater *discharges* from future or additional areas of disturbance authorized, they must submit a new NOI that addresses that phase of the development, unless otherwise notified by the Department. The *owner or operator* shall not *commence construction activity* on the future or additional areas until their authorization to *discharge* under this permit goes into effect in accordance with Part II.C. of this permit.

D. General Requirements For Owners or Operators With Permit Coverage

1. The *owner or operator* shall ensure that the provisions of the SWPPP are implemented from the *commencement of construction activity* until all areas of disturbance have achieved *final stabilization* and the Notice of Termination ("NOT") has been submitted to the Department in accordance with Part V. of this permit. This includes any changes made to the SWPPP pursuant to Part III.A.4. of this permit.

2. The *owner or operator* shall maintain a copy of the General Permit (GP-0-20-001), NOI, *NOI Acknowledgment Letter*, SWPPP, MS4 SWPPP Acceptance form, inspection reports, responsible contractor's or subcontractor's certification statement (see Part III.A.6.), and all documentation necessary to demonstrate eligibility with this permit at the *construction site* until all disturbed areas have achieved *final stabilization* and the NOT has been submitted to the Department. The documents must be maintained in a secure location, such as a job trailer, on-site construction office, or mailbox with lock. The secure location must be accessible during normal business hours to an individual performing a compliance inspection.

3. The *owner or operator* of a *construction activity* shall not disturb greater than five (5) acres of soil at any one time without prior written authorization from the Department or, in areas under the jurisdiction of a *regulated, traditional land*

use control MS4, the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*). At a minimum, the *owner or operator* must comply with the following requirements in order to be authorized to disturb greater than five (5) acres of soil at any one time:

a. The *owner or operator* shall have a *qualified inspector* conduct **at least** two (2) site inspections in accordance with Part IV.C. of this permit every seven (7) calendar days, for as long as greater than five (5) acres of soil remain disturbed. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

b. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. The soil stabilization measures selected shall be in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016.

c. The *owner or operator* shall prepare a phasing plan that defines maximum disturbed area per phase and shows required cuts and fills.

d. The *owner or operator* shall install any additional site-specific practices needed to protect water quality.

e. The *owner or operator* shall include the requirements above in their SWPPP.

4. In accordance with statute, regulations, and the terms and conditions of this permit, the Department may suspend or revoke an *owner's or operator's* coverage under this permit at any time if the Department determines that the SWPPP does not meet the permit requirements or consistent with Part VII.K..

5. Upon a finding of significant non-compliance with the practices described in the SWPPP or violation of this permit, the Department may order an immediate stop to all activity at the site until the non-compliance is remedied. The stop work order shall be in writing, describe the non-compliance in detail, and be sent to the *owner or operator*.

6. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4*, the *owner or operator* shall notify the

regulated, traditional land use control MS4 in writing of any planned amendments or modifications to the post-construction stormwater management practice component of the SWPPP required by Part III.A. 4. and 5. of this permit. Unless otherwise notified by the *regulated, traditional land use control MS4*, the *owner or operator* shall have the SWPPP amendments or modifications reviewed and accepted by the *regulated, traditional land use control MS4* prior to commencing construction of the post-construction stormwater management practice.

E. Permit Coverage for Discharges Authorized Under GP-0-15-002

1. Upon renewal of SPDES General Permit for Stormwater Discharges from *Construction Activity* (Permit No. GP-0-15-002), an *owner or operator* of *a construction activity* with coverage under GP-0-15-002, as of the effective date of GP- 0-20-001, shall be authorized to *discharge* in accordance with GP- 0-20-001, unless otherwise notified by the Department.

   An *owner or operator* may continue to implement the technical/design components of the post-construction stormwater management controls provided that such design was done in conformance with the technical standards in place at the time of initial project authorization. However, they must comply with the other, non-design provisions of GP-0-20-001.

F. Change of Owner or Operator

1. When property ownership changes or when there is a change in operational control over the construction plans and specifications, the original *owner or operator* must notify the new *owner or operator*, in writing, of the requirement to obtain permit coverage by submitting a NOI with the Department. For *construction activities* subject to the requirements of a *regulated, traditional land use control MS4,* the original *owner or operator* must also notify the MS4, in writing, of the change in ownership at least 30 calendar days prior to the change in ownership.

2. Once the new *owner or operator* obtains permit coverage, the original *owner or operator* shall then submit a completed NOT with the name and permit identification number of the new *owner or operator* to the Department at the address in Part II.B.1. of this permit. If the original *owner or operator* maintains ownership of a portion of the *construction activity* and will disturb soil, they must maintain their coverage under the permit.

3. Permit coverage for the new *owner or operator* will be effective as of the date the Department receives a complete NOI, provided the original *owner or*

operator was not subject to a sixty (60) business day authorization period that has not expired as of the date the Department receives the NOI from the new *owner or operator*.

Part III. STORMWATER POLLUTION PREVENTION PLAN (SWPPP)

A. General SWPPP Requirements

1. A SWPPP shall be prepared and implemented by the *owner or operator* of each *construction activity* covered by this permit. The SWPPP must document the selection, design, installation, implementation and maintenance of the control measures and practices that will be used to meet the effluent limitations in Part I.B. of this permit and where applicable, the post-construction stormwater management practice requirements in Part I.C. of this permit. The SWPPP shall be prepared prior to the submittal of the NOI. The NOI shall be submitted to the Department prior to the *commencement of construction activity*. A copy of the completed, final NOI shall be included in the SWPPP.

2. The SWPPP shall describe the erosion and sediment control practices and where required, post-construction stormwater management practices that will be used and/or constructed to reduce the *pollutants* in stormwater *discharges* and to assure compliance with the terms and conditions of this permit. In addition, the SWPPP shall identify potential sources of pollution which may reasonably be expected to affect the quality of stormwater *discharges*.

3. All SWPPPs that require the post-construction stormwater management practice component shall be prepared by a *qualified professional* that is knowledgeable in the principles and practices of stormwater management and treatment.

4. The *owner or operator* must keep the SWPPP current so that it at all times accurately documents the erosion and sediment controls practices that are being used or will be used during construction, and all post-construction stormwater management practices that will be constructed on the site. At a minimum, the *owner or operator* shall amend the SWPPP, including construction drawings:

    a. whenever the current provisions prove to be ineffective in minimizing *pollutants* in stormwater *discharges* from the site;

b. whenever there is a change in design, construction, or operation at the *construction site* that has or could have an effect on the *discharge* of *pollutants*;

c. to address issues or deficiencies identified during an inspection by the *qualified inspector,* the Department or other regulatory authority; and

d. to document the final construction conditions.

5. The Department may notify the *owner or operator* at any time that the SWPPP does not meet one or more of the minimum requirements of this permit. The notification shall be in writing and identify the provisions of the SWPPP that require modification. Within fourteen (14) calendar days of such notification, or as otherwise indicated by the Department, the *owner or operator* shall make the required changes to the SWPPP and submit written notification to the Department that the changes have been made. If the *owner or operator* does not respond to the Department's comments in the specified time frame, the Department may suspend the *owner's or operator's* coverage under this permit or require the *owner or operator* to obtain coverage under an individual SPDES permit in accordance with Part II.D.4. of this permit.

6. Prior to the *commencement of construction activity*, the *owner or operator* must identify the contractor(s) and subcontractor(s) that will be responsible for installing, constructing, repairing, replacing, inspecting and maintaining the erosion and sediment control practices included in the SWPPP; and the contractor(s) and subcontractor(s) that will be responsible for constructing the post-construction stormwater management practices included in the SWPPP. The *owner or operator* shall have each of the contractors and subcontractors identify at least one person from their company that will be responsible for implementation of the SWPPP. This person shall be known as the *trained contractor.* The *owner or operator* shall ensure that at least one *trained contractor* is on site on a daily basis when soil disturbance activities are being performed.

   The *owner or operator* shall have each of the contractors and subcontractors identified above sign a copy of the following certification statement below before they commence any *construction activity*:

   "I hereby certify under penalty of law that I understand and agree to comply with the terms and conditions of the SWPPP and agree to implement any corrective actions identified by the *qualified inspector* during a site inspection. I also understand that the *owner or operator* must comply with

the terms and conditions of the most current version of the New York State Pollutant Discharge Elimination System ("SPDES") general permit for stormwater *discharge*s from *construction activities* and that it is unlawful for any person to cause or contribute to a violation of *water quality standards*. Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations"

In addition to providing the certification statement above, the certification page must also identify the specific elements of the SWPPP that each contractor and subcontractor will be responsible for and include the name and title of the person providing the signature; the name and title of the *trained contractor* responsible for SWPPP implementation; the name, address and telephone number of the contracting firm; the address (or other identifying description) of the site; and the date the certification statement is signed. The *owner or operator* shall attach the certification statement(s) to the copy of the SWPPP that is maintained at the *construction site*. If new or additional contractors are hired to implement measures identified in the SWPPP after construction has commenced, they must also sign the certification statement and provide the information listed above.

7. For projects where the Department requests a copy of the SWPPP or inspection reports, the *owner or operator* shall submit the documents in both electronic (PDF only) and paper format within five (5) business days, unless otherwise notified by the Department.

B. Required SWPPP Contents

1. Erosion and sediment control component - All SWPPPs prepared pursuant to this permit shall include erosion and sediment control practices designed in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Where erosion and sediment control practices are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must demonstrate *equivalence* to the technical standard. At a minimum, the erosion and sediment control component of the SWPPP shall include the following:

    a. Background information about the scope of the project, including the location, type and size of project

b. A site map/construction drawing(s) for the project, including a general location map. At a minimum, the site map shall show the total site area; all improvements; areas of disturbance; areas that will not be disturbed; existing vegetation; on-site and adjacent off-site surface water(s); floodplain/floodway boundaries; wetlands and drainage patterns that could be affected by the *construction activity*; existing and final contours ; locations of different soil types with boundaries; material, waste, borrow or equipment storage areas located on adjacent properties; and location(s) of the stormwater *discharge*(s);

c. A description of the soil(s) present at the site, including an identification of the Hydrologic Soil Group (HSG);

d. A construction phasing plan and sequence of operations describing the intended order of *construction activities*, including clearing and grubbing, excavation and grading, utility and infrastructure installation and any other activity at the site that results in soil disturbance;

e. A description of the minimum erosion and sediment control practices to be installed or implemented for each *construction activity* that will result in soil disturbance. Include a schedule that identifies the timing of initial placement or implementation of each erosion and sediment control practice and the minimum time frames that each practice should remain in place or be implemented;

f. A temporary and permanent soil stabilization plan that meets the requirements of this general permit and the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016, for each stage of the project, including initial land clearing and grubbing to project completion and achievement of *final stabilization*;

g. A site map/construction drawing(s) showing the specific location(s), size(s), and length(s) of each erosion and sediment control practice;

h. The dimensions, material specifications, installation details, and operation and maintenance requirements for all erosion and sediment control practices. Include the location and sizing of any temporary sediment basins and structural practices that will be used to divert flows from exposed soils;

i. A maintenance inspection schedule for the contractor(s) identified in Part III.A.6. of this permit, to ensure continuous and effective operation of the erosion and sediment control practices. The maintenance inspection

schedule shall be in accordance with the requirements in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016;

j. A description of the pollution prevention measures that will be used to control litter, construction chemicals and construction debris from becoming a *pollutant* source in the stormwater *discharges*;

k. A description and location of any stormwater *discharges* associated with industrial activity other than construction at the site, including, but not limited to, stormwater *discharges* from asphalt plants and concrete plants located on the *construction site*; and

l. Identification of any elements of the design that are not in conformance with the design criteria in the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, dated November 2016. Include the reason for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. Post-construction stormwater management practice component – The *owner or operator* of any construction project identified in Table 2 of Appendix B as needing post-construction stormwater management practices shall prepare a SWPPP that includes practices designed in conformance with the applicable *sizing criteria* in Part I.C.2.a., c. or d. of this permit and the *performance criteria* in the technical standard, New York State Stormwater Management Design Manual dated January 2015

   Where post-construction stormwater management practices are not designed in conformance with the *performance criteria* in the technical standard, the *owner or operator* must include in the SWPPP the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

   The post-construction stormwater management practice component of the SWPPP shall include the following:

   a. Identification of all post-construction stormwater management practices to be constructed as part of the project. Include the dimensions, material specifications and installation details for each post-construction stormwater management practice;

b. A site map/construction drawing(s) showing the specific location and size of each post-construction stormwater management practice;

c. A Stormwater Modeling and Analysis Report that includes:
   (i) Map(s) showing pre-development conditions, including watershed/subcatchments boundaries, flow paths/routing, and design points;

   (ii) Map(s) showing post-development conditions, including watershed/subcatchments boundaries, flow paths/routing, design points and post-construction stormwater management practices;

   (iii) Results of stormwater modeling (i.e. hydrology and hydraulic analysis) for the required storm events. Include supporting calculations (model runs), methodology, and a summary table that compares pre and post-development runoff rates and volumes for the different storm events;

   (iv) Summary table, with supporting calculations, which demonstrates that each post-construction stormwater management practice has been designed in conformance with the *sizing criteria* included in the Design Manual;

   (v) Identification of any *sizing criteria* that is not required based on the requirements included in Part I.C. of this permit; and

   (vi) Identification of any elements of the design that are not in conformance with the *performance criteria* in the Design Manual. Include the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the Design Manual;

d. Soil testing results and locations (test pits, borings);

e. Infiltration test results, when required; and

f. An operations and maintenance plan that includes inspection and maintenance schedules and actions to ensure continuous and effective operation of each post-construction stormwater management practice. The plan shall identify the entity that will be responsible for the long term operation and maintenance of each practice.

3. Enhanced Phosphorus Removal Standards - All construction projects identified in Table 2 of Appendix B that are located in the watersheds identified in Appendix C shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the applicable *sizing criteria* in Part I.C.2. b., c. or d. of this permit and the *performance criteria,* Enhanced Phosphorus Removal Standards included in the Design Manual. At a minimum, the post-construction stormwater management practice component of the SWPPP shall include items 2.a - 2.f. above.

C. Required SWPPP Components by Project Type

Unless otherwise notified by the Department, *owners or operators* of *construction activities* identified in Table 1 of Appendix B are required to prepare a SWPPP that only includes erosion and sediment control practices designed in conformance with Part III.B.1 of this permit. *Owners or operators* of the *construction activities* identified in Table 2 of Appendix B shall prepare a SWPPP that also includes post-construction stormwater management practices designed in conformance with Part III.B.2 or 3 of this permit.

Part IV. INSPECTION AND MAINTENANCE REQUIREMENTS

A. General Construction Site Inspection and Maintenance Requirements

1. The *owner or operator* must ensure that all erosion and sediment control practices (including pollution prevention measures) and all post-construction stormwater management practices identified in the SWPPP are inspected and maintained in accordance with Part IV.B. and C. of this permit.

2. The terms of this permit shall not be construed to prohibit the State of New York from exercising any authority pursuant to the ECL, common law or federal law, or prohibit New York State from taking any measures, whether civil or criminal, to prevent violations of the laws of the State of New York or protect the public health and safety and/or the environment.

B. Contractor Maintenance Inspection Requirements

1. The *owner or operator* of each *construction activity* identified in Tables 1 and 2 of Appendix B shall have a *trained contractor* inspect the erosion and sediment control practices and pollution prevention measures being implemented within the active work area daily to ensure that they are being maintained in effective operating condition at all times. If deficiencies are identified, the contractor shall

begin implementing corrective actions within one business day and shall complete the corrective actions in a reasonable time frame.

2. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *trained contractor* can stop conducting the maintenance inspections. The *trained contractor* shall begin conducting the maintenance inspections in accordance with Part IV.B.1. of this permit as soon as soil disturbance activities resume.

3. For construction sites where soil disturbance activities have been shut down with partial project completion, the *trained contractor* can stop conducting the maintenance inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational.

C. Qualified Inspector Inspection Requirements

The *owner or operator* shall have a *qualified inspector* conduct site inspections in conformance with the following requirements:

[Note: The *trained contractor* identified in Part III.A.6. and IV.B. of this permit **cannot** conduct the *qualified inspector* site inspections unless they meet the *qualified inspector* qualifications included in Appendix A. In order to perform these inspections, the *trained contractor* would have to be a:

- licensed Professional Engineer,
- Certified Professional in Erosion and Sediment Control (CPESC),
- New York State Erosion and Sediment Control Certificate Program holder
- Registered Landscape Architect, or
- someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity].

1. A *qualified inspector* shall conduct site inspections for all *construction activities* identified in Tables 1 and 2 of Appendix B, with the exception of:

   a. the construction of a single family residential subdivision with 25% or less *impervious cover* at total site build-out that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located

in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

b. the construction of a single family home that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres and is not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E;

c. construction on agricultural property that involves a soil disturbance of one (1) or more acres of land but less than five (5) acres; and

d. *construction activities* located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

2. Unless otherwise notified by the Department, the *qualified inspector* shall conduct site inspections in accordance with the following timetable:

a. For construction sites where soil disturbance activities are on-going, the *qualified inspector* shall conduct a site inspection at least once every seven (7) calendar days.

b. For construction sites where soil disturbance activities are on-going and the *owner or operator* has received authorization in accordance with Part II.D.3 to disturb greater than five (5) acres of soil at any one time, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

c. For construction sites where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *qualified inspector* shall conduct a site inspection at least once every thirty (30) calendar days. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to reducing the frequency of inspections.

d. For construction sites where soil disturbance activities have been shut down with partial project completion, the *qualified inspector* can stop conducting inspections if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational. The *owner or operator* shall notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix F) or, in areas under the jurisdiction of a *regulated, traditional land use control MS4,* the *regulated, traditional land use control MS4* (provided the *regulated, traditional land use control MS4* is not the *owner or operator* of the *construction activity*) in writing prior to the shutdown. If soil disturbance activities are not resumed within 2 years from the date of shutdown, the *owner or operator* shall have the *qualified inspector* perform a final inspection and certify that all disturbed areas have achieved *final stabilization,* and all temporary, structural erosion and sediment control measures have been removed*;* and that all post-construction stormwater management practices have been constructed in conformance with the SWPPP by signing the "*Final Stabilization*" and "Post-Construction Stormwater Management Practice" certification statements on the NOT. The *owner or operator* shall then submit the completed NOT form to the address in Part II.B.1 of this permit.

e. For construction sites that directly *discharge* to one of the 303(d) segments listed in Appendix E or is located in one of the watersheds listed in Appendix C, the *qualified inspector* shall conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.

3. At a minimum, the *qualified inspector* shall inspect all erosion and sediment control practices and pollution prevention measures to ensure integrity and effectiveness, all post-construction stormwater management practices under construction to ensure that they are constructed in conformance with the SWPPP, all areas of disturbance that have not achieved *final stabilization,* all points of *discharge* to natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site*, and all points of *discharge* from the *construction site*.

4. The *qualified inspector* shall prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report shall include and/or address the following:

a. Date and time of inspection;

b. Name and title of person(s) performing inspection;

c. A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection;

d. A description of the condition of the runoff at all points of *discharge* from the *construction site*. This shall include identification of any *discharges* of sediment from the *construction site*. Include *discharges* from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow;

e. A description of the condition of all natural surface waterbodies located within, or immediately adjacent to, the property boundaries of the *construction site* which receive runoff from disturbed areas. This shall include identification of any *discharges* of sediment to the surface waterbody;

f. Identification of all erosion and sediment control practices and pollution prevention measures that need repair or maintenance;

g. Identification of all erosion and sediment control practices and pollution prevention measures that were not installed properly or are not functioning as designed and need to be reinstalled or replaced;

h. Description and sketch of areas with active soil disturbance activity, areas that have been disturbed but are inactive at the time of the inspection, and areas that have been stabilized (temporary and/or final) since the last inspection;

i. Current phase of construction of all post-construction stormwater management practices and identification of all construction that is not in conformance with the SWPPP and technical standards;

j. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices and pollution prevention measures; and to correct deficiencies identified with the construction of the post-construction stormwater management practice(s);

k. Identification and status of all corrective actions that were required by previous inspection; and

l. Digital photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The *qualified inspector* shall also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The *qualified inspector* shall attach paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.

5. Within one business day of the completion of an inspection, the *qualified inspector* shall notify the *owner or operator* and appropriate contractor or subcontractor identified in Part III.A.6. of this permit of any corrective actions that need to be taken. The contractor or subcontractor shall begin implementing the corrective actions within one business day of this notification and shall complete the corrective actions in a reasonable time frame.

6. All inspection reports shall be signed by the *qualified inspector.* Pursuant to Part II.D.2. of this permit, the inspection reports shall be maintained on site with the SWPPP.

Part V. TERMINATION OF PERMIT COVERAGE

A. Termination of Permit Coverage

1. An *owner or operator* that is eligible to terminate coverage under this permit must submit a completed NOT form to the address in Part II.B.1 of this permit. The NOT form shall be one which is associated with this permit, signed in accordance with Part VII.H of this permit.

2. An *owner or operator* may terminate coverage when one or more the following conditions have been met:

   a. Total project completion - All *construction activity* identified in the SWPPP has been completed; and all areas of disturbance have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices have been constructed in conformance with the SWPPP and are operational;

b. Planned shutdown with partial project completion - All soil disturbance activities have ceased; and all areas disturbed as of the project shutdown date have achieved *final stabilization*; and all temporary, structural erosion and sediment control measures have been removed; and all post-construction stormwater management practices required for the completed portion of the project have been constructed in conformance with the SWPPP and are operational;

c. A new *owner or operator* has obtained coverage under this permit in accordance with Part II.F. of this permit.

d. The *owner or operator* obtains coverage under an alternative SPDES general permit or an individual SPDES permit.

3. For *construction activities* meeting subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *qualified inspector* perform a final site inspection prior to submitting the NOT. The *qualified inspector* shall, by signing the "*Final Stabilization*" and "Post-Construction Stormwater Management Practice certification statements on the NOT, certify that all the requirements in Part V.A.2.a. or b. of this permit have been achieved.

4. For *construction activities* that are subject to the requirements of a *regulated, traditional land use control MS4* and meet subdivision 2a. or 2b. of this Part, the *owner or operator* shall have the *regulated, traditional land use control MS4* sign the "MS4 Acceptance" statement on the NOT in accordance with the requirements in Part VII.H. of this permit. The *regulated, traditional land use control MS4* official, by signing this statement, has determined that it is acceptable for the *owner or operator* to submit the NOT in accordance with the requirements of this Part. The *regulated, traditional land use control MS4* can make this determination by performing a final site inspection themselves or by accepting the *qualified inspector*'s final site inspection certification(s) required in Part V.A.3. of this permit.

5. For *construction activities* that require post-construction stormwater management practices and meet subdivision 2a. of this Part, the *owner or operator* must, prior to submitting the NOT, ensure one of the following:

a. the post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain such practice(s) have been deeded to the municipality in which the practice(s) is located,

b. an executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s),

c. for post-construction stormwater management practices that are privately owned, the *owner or operator* has a mechanism in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the *owner or operator's* deed of record,

d. for post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university, hospital), government agency or authority, or public utility; the *owner or operator* has policy and procedures in place that ensures operation and maintenance of the practices in accordance with the operation and maintenance plan.

Part VI. REPORTING AND RETENTION RECORDS

A. Record Retention

The *owner or operator* shall retain a copy of the NOI, NOI Acknowledgment Letter, SWPPP, MS4 SWPPP Acceptance form and any inspection reports that were prepared in conjunction with this permit for a period of at least five (5) years from the date that the Department receives a complete NOT submitted in accordance with Part V. of this general permit.

B. Addresses

With the exception of the NOI, NOT, and MS4 SWPPP Acceptance form (which must be submitted to the address referenced in Part II.B.1 of this permit), all written correspondence requested by the Department, including individual permit applications, shall be sent to the address of the appropriate DOW Water (SPDES) Program contact at the Regional Office listed in Appendix F.

Part VII. STANDARD PERMIT CONDITIONS

A. Duty to Comply

The *owner or operator* must comply with all conditions of this permit. All contractors and subcontractors associated with the project must comply with the terms of the SWPPP. Any non-compliance with this permit constitutes a violation of the Clean Water

Act (CWA) and the ECL and is grounds for an enforcement action against the *owner or operator* and/or the contractor/subcontractor; permit revocation, suspension or modification; or denial of a permit renewal application. Upon a finding of significant non-compliance with this permit or the applicable SWPPP, the Department may order an immediate stop to all *construction activity* at the site until the non-compliance is remedied. The stop work order shall be in writing, shall describe the non-compliance in detail, and shall be sent to the *owner or operator*.

If any human remains or archaeological remains are encountered during excavation, the *owner or operator* must immediately cease, or cause to cease, all *construction activity* in the area of the remains and notify the appropriate Regional Water Engineer (RWE). *Construction activity* shall not resume until written permission to do so has been received from the RWE.

B. Continuation of the Expired General Permit

This permit expires five (5) years from the effective date. If a new general permit is not issued prior to the expiration of this general permit, an *owner or operator* with coverage under this permit may continue to operate and *discharge* in accordance with the terms and conditions of this general permit, if it is extended pursuant to the State Administrative Procedure Act and 6 NYCRR Part 621, until a new general permit is issued.

C. Enforcement

Failure of the *owner or operator,* its contractors, subcontractors, agents and/or assigns to strictly adhere to any of the permit requirements contained herein shall constitute a violation of this permit. There are substantial criminal, civil, and administrative penalties associated with violating the provisions of this permit. Fines of up to $37,500 per day for each violation and imprisonment for up to fifteen (15) years may be assessed depending upon the nature and degree of the offense.

D. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for an *owner or operator* in an enforcement action that it would have been necessary to halt or reduce the *construction activity* in order to maintain compliance with the conditions of this permit.

E. Duty to Mitigate

The *owner or operator* and its contractors and subcontractors shall take all reasonable steps to *minimize* or prevent any *discharge* in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

F. Duty to Provide Information

The *owner or operator* shall furnish to the Department, within a reasonable specified time period of a written request, all documentation necessary to demonstrate eligibility and any information to determine compliance with this permit or to determine whether cause exists for modifying or revoking this permit, or suspending or denying coverage under this permit, in accordance with the terms and conditions of this permit. The NOI, SWPPP and inspection reports required by this permit are public documents that the *owner or operator* must make available for review and copying by any person within five (5) business days of the *owner or operator* receiving a written request by any such person to review these documents. Copying of documents will be done at the requester's expense.

G. Other Information

When the *owner or operator* becomes aware that they failed to submit any relevant facts, or submitted incorrect information in the NOI or in any of the documents required by this permit , or have made substantive revisions to the SWPPP (e.g. the scope of the project changes significantly, the type of post-construction stormwater management practice(s) changes, there is a reduction in the sizing of the post-construction stormwater management practice, or there is an increase in the disturbance area or *impervious area*), which were not reflected in the original NOI submitted to the Department, they shall promptly submit such facts or information to the Department using the contact information in Part II.A. of this permit. Failure of the *owner or operator* to correct or supplement any relevant facts within five (5) business days of becoming aware of the deficiency shall constitute a violation of this permit.

H. Signatory Requirements

1. All NOIs and NOTs shall be signed as follows:

    a. For a corporation these forms shall be signed by a responsible corporate officer. For the purpose of this section, a responsible corporate officer means:

(i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or

(ii) the manager of one or more manufacturing, production or operating facilities, provided the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

b. For a partnership or sole proprietorship these forms shall be signed by a general partner or the proprietor, respectively; or

c. For a municipality, State, Federal, or other public agency these forms shall be signed by either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal agency includes:

(i) the chief executive officer of the agency, or

(ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of EPA).

2. The SWPPP and other information requested by the Department shall be signed by a person described in Part VII.H.1. of this permit or by a duly authorized representative of that person. A person is a duly authorized representative only if:

a. The authorization is made in writing by a person described in Part VII.H.1. of this permit;

b. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field,

superintendent, position of *equivalent* responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position) and,

c. The written authorization shall include the name, title and signature of the authorized representative and be attached to the SWPPP.

3. All inspection reports shall be signed by the *qualified inspector* that performs the inspection.

4. The MS4 SWPPP Acceptance form shall be signed by the principal executive officer or ranking elected official from the *regulated, traditional land use control MS4,* or by a duly authorized representative of that person.

   It shall constitute a permit violation if an incorrect and/or improper signatory authorizes any required forms, SWPPP and/or inspection reports.

I. Property Rights

The issuance of this permit does not convey any property rights of any sort, nor any exclusive privileges, nor does it authorize any injury to private property nor any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations. *Owners or operators* must obtain any applicable conveyances, easements, licenses and/or access to real property prior to *commencing construction activity*.

J. Severability

The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit shall not be affected thereby.

K. Requirement to Obtain Coverage Under an Alternative Permit

1. The Department may require any owner or operator authorized by this permit to apply for and/or obtain either an individual SPDES permit or another SPDES general permit. When the Department requires any discharger authorized by a general permit to apply for an individual SPDES permit, it shall notify the discharger in writing that a permit application is required. This notice shall

include a brief statement of the reasons for this decision, an application form, a statement setting a time frame for the owner or operator to file the application for an individual SPDES permit, and a deadline, not sooner than 180 days from owner or operator receipt of the notification letter, whereby the authorization to discharge under this general permit shall be terminated. Applications must be submitted to the appropriate Permit Administrator at the Regional Office. The Department may grant additional time upon demonstration, to the satisfaction of the Department, that additional time to apply for an alternative authorization is necessary or where the Department has not provided a permit determination in accordance with Part 621 of this Title.

2. When an individual SPDES permit is issued to a discharger authorized to *discharge* under a general SPDES permit for the same *discharge*(s), the general permit authorization for outfalls authorized under the individual SPDES permit is automatically terminated on the effective date of the individual permit unless termination is earlier in accordance with 6 NYCRR Part 750.

L. Proper Operation and Maintenance

The *owner or operator* shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the *owner or operator* to achieve compliance with the conditions of this permit and with the requirements of the SWPPP.

M. Inspection and Entry

The *owner or operator* shall allow an authorized representative of the Department, EPA, applicable county health department, or, in the case of a *construction site* which *discharges* through an *MS4*, an authorized representative of the *MS4* receiving the discharge, upon the presentation of credentials and other documents as may be required by law, to:

1. Enter upon the owner’s or operator's premises where a regulated facility or activity is located or conducted or where records must be kept under the conditions of this permit;

2. Have access to and copy at reasonable times, any records that must be kept under the conditions of this permit; and

3. Inspect at reasonable times any facilities or equipment (including monitoring and control equipment), practices or operations regulated or required by this permit.

4. Sample or monitor at reasonable times, for purposes of assuring permit compliance or as otherwise authorized by the Act or ECL, any substances or parameters at any location.

N. Permit Actions

This permit may, at any time, be modified, suspended, revoked, or renewed by the Department in accordance with 6 NYCRR Part 621. The filing of a request by the *owner or operator* for a permit modification, revocation and reissuance, termination, a notification of planned changes or anticipated noncompliance does not limit, diminish and/or stay compliance with any terms of this permit.

O. Definitions

Definitions of key terms are included in Appendix A of this permit.

P. Re-Opener Clause

1. If there is evidence indicating potential or realized impacts on water quality due to any stormwater discharge associated with construction activity covered by this permit, the owner or operator of such discharge may be required to obtain an individual permit or alternative general permit in accordance with Part VII.K. of this permit or the permit may be modified to include different limitations and/or requirements.

2. Any Department initiated permit modification, suspension or revocation will be conducted in accordance with 6 NYCRR Part 621, 6 NYCRR 750-1.18, and 6 NYCRR 750-1.20.

Q. Penalties for Falsification of Forms and Reports

In accordance with 6NYCRR Part 750-2.4 and 750-2.5, any person who knowingly makes any false material statement, representation, or certification in any application, record, report or other document filed or required to be maintained under this permit, including reports of compliance or noncompliance shall, upon conviction, be punished in accordance with ECL §71-1933 and or Articles 175 and 210 of the New York State Penal Law.

R. Other Permits

Nothing in this permit relieves the *owner or operator* from a requirement to obtain any other permits required by law.

APPENDIX A – Acronyms and Definitions

Acronyms

APO – Agency Preservation Officer
BMP – Best Management Practice
CPESC – Certified Professional in Erosion and Sediment Control
Cpv – Channel Protection Volume
CWA – Clean Water Act (or the Federal Water Pollution Control Act, 33 U.S.C. §1251 et seq)
DOW – Division of Water
EAF – Environmental Assessment Form
ECL - Environmental Conservation Law
EPA – U. S. Environmental Protection Agency
HSG – Hydrologic Soil Group
MS4 – Municipal Separate Storm Sewer System
NOI – Notice of Intent
NOT – Notice of Termination
NPDES – National Pollutant Discharge Elimination System
OPRHP – Office of Parks, Recreation and Historic Places
Qf – Extreme Flood
Qp – Overbank Flood
RRv – Runoff Reduction Volume
RWE – Regional Water Engineer
SEQR – State Environmental Quality Review
SEQRA - State Environmental Quality Review Act
SHPA – State Historic Preservation Act
SPDES – State Pollutant Discharge Elimination System
SWPPP – Stormwater Pollution Prevention Plan
TMDL – Total Maximum Daily Load
UPA – Uniform Procedures Act
USDA – United States Department of Agriculture
WQv – Water Quality Volume

Definitions

All definitions in this section are solely for the purposes of this permit.

Agricultural Building – a structure designed and constructed to house farm implements, hay, grain, poultry, livestock or other horticultural products; excluding any structure designed, constructed or used, in whole or in part, for human habitation, as a place of employment where agricultural products are processed, treated or packaged, or as a place used by the public.

Agricultural Property –means the land for construction of a barn, *agricultural building*, silo, stockyard, pen or other structural practices identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State" prepared by the Department in cooperation with agencies of New York Nonpoint Source Coordinating Committee (dated June 2007).

Alter Hydrology from Pre to Post-Development Conditions - means the post-development peak flow rate(s) has increased by more than 5% of the pre-developed condition for the design storm of interest (e.g. 10 yr and 100 yr).

Combined Sewer - means a sewer that is designed to collect and convey both "sewage" and "stormwater".

Commence (Commencement of) Construction Activities - means the initial disturbance of soils associated with clearing, grading or excavation activities; or other construction related activities that disturb or expose soils such as demolition, stockpiling of fill material, and the initial installation of erosion and sediment control practices required in the SWPPP. See definition for "*Construction Activity(ies)*" also.

Construction Activity(ies) - means any clearing, grading, excavation, filling, demolition or stockpiling activities that result in soil disturbance. Clearing activities can include, but are not limited to, logging equipment operation, the cutting and skidding of trees, stump removal and/or brush root removal. Construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility.

Construction Site – means the land area where *construction activity(ies)* will occur. See definition for "*Commence (Commencement of) Construction Activities"* and "*Larger Common Plan of Development or Sale" also.*

Dewatering – means the act of draining rainwater and/or groundwater from building foundations, vaults or excavations/trenches.

Direct Discharge (to a specific surface waterbody) - means that runoff flows from a *construction site* by overland flow and the first point of discharge is the specific surface waterbody, or runoff flows from a *construction site* to a separate storm sewer system

and the first point of discharge from the separate storm sewer system is the specific surface waterbody.

Discharge(s) - means any addition of any pollutant to waters of the State through an outlet or *point source*.

Embankment –means an earthen or rock slope that supports a road/highway.

Endangered or Threatened Species – see 6 NYCRR Part 182 of the Department's rules and regulations for definition of terms and requirements.

Environmental Conservation Law (ECL) - means chapter 43-B of the Consolidated Laws of the State of New York, entitled the Environmental Conservation Law.

Equivalent (Equivalence) – means that the practice or measure meets all the performance, longevity, maintenance, and safety objectives of the technical standard and will provide an equal or greater degree of water quality protection.

Final Stabilization - means that all soil disturbance activities have ceased and a uniform, perennial vegetative cover with a density of eighty (80) percent over the entire pervious surface has been established; or other equivalent stabilization measures, such as permanent landscape mulches, rock rip-rap or washed/crushed stone have been applied on all disturbed areas that are not covered by permanent structures, concrete or pavement.

General SPDES permit - means a SPDES permit issued pursuant to 6 NYCRR Part 750-1.21 and Section 70-0117 of the ECL authorizing a category of discharges.

Groundwater(s) - means waters in the saturated zone. The saturated zone is a subsurface zone in which all the interstices are filled with water under pressure greater than that of the atmosphere. Although the zone may contain gas-filled interstices or interstices filled with fluids other than water, it is still considered saturated.

Historic Property – means any building, structure, site, object or district that is listed on the State or National Registers of Historic Places or is determined to be eligible for listing on the State or National Registers of Historic Places.

Impervious Area (Cover) - means all impermeable surfaces that cannot effectively infiltrate rainfall. This includes paved, concrete and gravel surfaces (i.e. parking lots, driveways, roads, runways and sidewalks); building rooftops and miscellaneous impermeable structures such as patios, pools, and sheds.

Infeasible – means not technologically possible, or not economically practicable and achievable in light of best industry practices.

Larger Common Plan of Development or Sale - means a contiguous area where multiple separate and distinct *construction activities* are occurring, or will occur, under one plan. The term “plan” in “larger common plan of development or sale” is broadly defined as any announcement or piece of documentation (including a sign, public notice or hearing, marketing plan, advertisement, drawing, permit application, State Environmental Quality Review Act (SEQRA) environmental assessment form or other documents, zoning request, computer design, etc.) or physical demarcation (including boundary signs, lot stakes, surveyor markings, etc.) indicating that *construction activities* may occur on a specific plot.

For discrete construction projects that are located within a larger common plan of development or sale that are at least 1/4 mile apart, each project can be treated as a separate plan of development or sale provided any interconnecting road, pipeline or utility project that is part of the same “common plan” is not concurrently being disturbed.

Minimize – means reduce and/or eliminate to the extent achievable using control measures (including best management practices) that are technologically available and economically practicable and achievable in light of best industry practices.

Municipal Separate Storm Sewer (MS4) - a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

(i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, stormwater, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to surface waters of the State*;*
(ii) Designed or used for collecting or conveying stormwater;
(iii) Which is not a *combined sewer*; and
(iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

National Pollutant Discharge Elimination System (NPDES) - means the national system for the issuance of wastewater and stormwater permits under the Federal Water Pollution Control Act (Clean Water Act).

Natural Buffer –means an undisturbed area with natural cover running along a surface water (e.g. wetland, stream, river, lake, etc.).

New Development – means any land disturbance that does not meet the definition of Redevelopment Activity included in this appendix.

New York State Erosion and Sediment Control Certificate Program – a certificate program that establishes and maintains a process to identify and recognize individuals who are capable of developing, designing, inspecting and maintaining erosion and sediment control plans on projects that disturb soils in New York State. The certificate program is administered by the New York State Conservation District Employees Association.

NOI Acknowledgment Letter - means the letter that the Department sends to an owner or operator to acknowledge the Department's receipt and acceptance of a complete Notice of Intent. This letter documents the owner's or operator's authorization to discharge in accordance with the general permit for stormwater discharges from *construction activity*.

Nonpoint Source - means any source of water pollution or pollutants which is not a discrete conveyance or *point source* permitted pursuant to Title 7 or 8 of Article 17 of the Environmental Conservation Law (see ECL Section 17-1403).

Overbank –means flow events that exceed the capacity of the stream channel and spill out into the adjacent floodplain.

Owner or Operator - means the person, persons or legal entity which owns or leases the property on which the *construction activity* is occurring; an entity that has operational control over the construction plans and specifications, including the ability to make modifications to the plans and specifications; and/or an entity that has day-to-day operational control of those activities at a project that are necessary to ensure compliance with the permit conditions.

Performance Criteria – means the design criteria listed under the "Required Elements" sections in Chapters 5, 6 and 10 of the technical standard, New York State Stormwater Management Design Manual, dated January 2015. It does not include the Sizing Criteria (i.e. WQv, RRv, Cpv, Qp and Qf) in Part I.C.2. of the permit.

Point Source - means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, vessel or other floating craft, or landfill leachate collection system from which *pollutants* are or may be discharged.

Pollutant - means dredged spoil, filter backwash, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand and industrial, municipal, agricultural waste and ballast discharged into water; which may cause or might reasonably be expected to cause pollution of the waters of the state in contravention of the standards or guidance values adopted as provided in 6 NYCRR Parts 700 et seq .

Qualified Inspector - means a person that is knowledgeable in the principles and practices of erosion and sediment control, such as a licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder or other Department endorsed individual(s).

It can also mean someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided that person has training in the principles and practices of erosion and sediment control. Training in the principles and practices of erosion and sediment control means that the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect has received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect shall receive four (4) hours of training every three (3) years.

It can also mean a person that meets the *Qualified Professional* qualifications in addition to the *Qualified Inspector* qualifications.

Note: Inspections of any post-construction stormwater management practices that include structural components, such as a dam for an impoundment, shall be performed by a licensed Professional Engineer.

Qualified Professional - means a person that is knowledgeable in the principles and practices of stormwater management and treatment, such as a licensed Professional Engineer, Registered Landscape Architect or other Department endorsed individual(s). Individuals preparing SWPPPs that require the post-construction stormwater management practice component must have an understanding of the principles of hydrology, water quality management practice design, water quantity control design, and, in many cases, the principles of hydraulics. All components of the SWPPP that involve the practice of engineering, as defined by the NYS Education Law (see Article 145), shall be prepared by, or under the direct supervision of, a professional engineer licensed to practice in the State of New York.

Redevelopment Activity(ies) – means the disturbance and reconstruction of existing impervious area, including impervious areas that were removed from a project site within five (5) years of preliminary project plan submission to the local government (i.e. site plan, subdivision, etc.).

Regulated, Traditional Land Use Control MS4 - means a city, town or village with land use control authority that is authorized to discharge under New York State DEC's

SPDES General Permit For Stormwater Discharges from Municipal Separate Stormwater Sewer Systems (MS4s) or the City of New York's Individual SPDES Permit for their Municipal Separate Storm Sewer Systems (NY-0287890).

Routine Maintenance Activity - means *construction activity* that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility, including, but not limited to:

- Re-grading of gravel roads or parking lots,
- Cleaning and shaping of existing roadside ditches and culverts that maintains the approximate original line and grade, and hydraulic capacity of the ditch,
- Cleaning and shaping of existing roadside ditches that does not maintain the approximate original grade, hydraulic capacity and purpose of the ditch if the changes to the line and grade, hydraulic capacity or purpose of the ditch are installed to improve water quality and quantity controls (e.g. installing grass lined ditch),
- Placement of aggregate shoulder backing that stabilizes the transition between the road shoulder and the ditch or *embankment*,
- Full depth milling and filling of existing asphalt pavements, replacement of concrete pavement slabs, and similar work that does not expose soil or disturb the bottom six (6) inches of subbase material,
- Long-term use of equipment storage areas at or near highway maintenance facilities,
- Removal of sediment from the edge of the highway to restore a previously existing sheet-flow drainage connection from the highway surface to the highway ditch or *embankment*,
- Existing use of Canal Corp owned upland disposal sites for the canal, and
- Replacement of curbs, gutters, sidewalks and guide rail posts.

Site limitations – means site conditions that prevent the use of an infiltration technique and or infiltration of the total WQv. Typical site limitations include: seasonal high groundwater, shallow depth to bedrock, and soils with an infiltration rate less than 0.5 inches/hour. The existence of site limitations shall be confirmed and documented using actual field testing (i.e. test pits, soil borings, and infiltration test) or using information from the most current United States Department of Agriculture (USDA) Soil Survey for the County where the project is located.

Sizing Criteria – means the criteria included in Part I.C.2 of the permit that are used to size post-construction stormwater management control practices. The criteria include; Water Quality Volume (WQv), Runoff Reduction Volume (RRv), Channel Protection Volume (Cpv), *Overbank* Flood (Qp), and Extreme Flood (Qf).

State Pollutant Discharge Elimination System (SPDES) - means the system established pursuant to Article 17 of the ECL and 6 NYCRR Part 750 for issuance of permits authorizing discharges to the waters of the state.

Steep Slope – means land area designated on the current United States Department of Agriculture ("USDA") Soil Survey as Soil Slope Phase "D", (provided the map unit name is inclusive of slopes greater than 25%) , or Soil Slope Phase E or F, (regardless of the map unit name), or a combination of the three designations.

Streambank – as used in this permit, means the terrain alongside the bed of a creek or stream. The bank consists of the sides of the channel, between which the flow is confined.

Stormwater Pollution Prevention Plan (SWPPP) – means a project specific report, including construction drawings, that among other things: describes the construction activity(ies), identifies the potential sources of pollution at the *construction site*; describes and shows the stormwater controls that will be used to control the pollutants (i.e. erosion and sediment controls; for many projects, includes post-construction stormwater management controls); and identifies procedures the *owner or operator* will implement to comply with the terms and conditions of the permit. See Part III of the permit for a complete description of the information that must be included in the SWPPP.

Surface Waters of the State - shall be construed to include lakes, bays, sounds, ponds, impounding reservoirs, springs, rivers, streams, creeks, estuaries, marshes, inlets, canals, the Atlantic ocean within the territorial seas of the state of New York and all other bodies of surface water, natural or artificial, inland or coastal, fresh or salt, public or private (except those private waters that do not combine or effect a junction with natural surface waters), which are wholly or partially within or bordering the state or within its jurisdiction. Waters of the state are further defined in 6 NYCRR Parts 800 to 941.

Temporarily Ceased – means that an existing disturbed area will not be disturbed again within 14 calendar days of the previous soil disturbance.

Temporary Stabilization - means that exposed soil has been covered with material(s) as set forth in the technical standard, New York Standards and Specifications for Erosion and Sediment Control, to prevent the exposed soil from eroding. The materials can include, but are not limited to, mulch, seed and mulch, and erosion control mats (e.g. jute twisted yarn, excelsior wood fiber mats).

Total Maximum Daily Loads (TMDLs) - A TMDL is the sum of the allowable loads of a single pollutant from all contributing point and *nonpoint source*s. It is a calculation of the maximum amount of a pollutant that a waterbody can receive on a daily basis and still meet *water quality standards*, and an allocation of that amount to the pollutant's sources. A TMDL stipulates wasteload allocations (WLAs) for *point source* discharges, load allocations (LAs) for *nonpoint source*s, and a margin of safety (MOS).

Trained Contractor - means an employee from the contracting (construction) company, identified in Part III.A.6., that has received four (4) hours of Department endorsed

training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity. After receiving the initial training, the *trained contractor* shall receive four (4) hours of training every three (3) years.

It can also mean an employee from the contracting (construction) company, identified in Part III.A.6., that meets the *qualified inspector* qualifications (e.g. licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, New York State Erosion and Sediment Control Certificate Program holder, or someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of Department endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other Department endorsed entity).

The *trained contractor* is responsible for the day to day implementation of the SWPPP.

Uniform Procedures Act (UPA) Permit - means a permit required under 6 NYCRR Part 621 of the Environmental Conservation Law (ECL), Article 70.

Water Quality Standard - means such measures of purity or quality for any waters in relation to their reasonable and necessary use as promulgated in 6 NYCRR Part 700 et seq.

APPENDIX B – Required SWPPP Components by Project Type

Table 1
Construction Activities that Require the Preparation of a SWPPP That Only Includes Erosion and Sediment Controls

The following construction activities that involve soil disturbances of one (1) or more acres of land, but less than five (5) acres:

- Single family home not located in one of the watersheds listed in Appendix C or not *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family residential subdivisions with 25% or less impervious cover at total site build-out and not located in one of the watersheds listed in Appendix C and not directly discharging to one of the 303(d) segments listed in Appendix E
- Construction of a barn or other *agricultural building*, silo, stock yard or pen.

The following construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land:

All construction activities located in the watersheds identified in Appendix D that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Installation of underground, linear utilities; such as gas lines, fiber-optic cable, cable TV, electric, telephone, sewer mains, and water mains
- Environmental enhancement projects, such as wetland mitigation projects, stormwater retrofits and stream restoration projects
- Pond construction
- Linear bike paths running through areas with vegetative cover, including bike paths surfaced with an impervious cover
- Cross-country ski trails and walking/hiking trails
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are not part of residential, commercial or institutional development;
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that include incidental shoulder or curb work along an existing highway to support construction of the sidewalk, bike path or walking path.
- Slope stabilization projects
- Slope flattening that changes the grade of the site, but does not significantly change the runoff characteristics

Table 1 (Continued) CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT ONLY INCLUDES EROSION AND SEDIMENT CONTROLS

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Spoil areas that will be covered with vegetation
- Vegetated open space projects (i.e. recreational parks, lawns, meadows, fields, downhill ski trails) excluding projects that *alter hydrology from pre to post development* conditions,
- Athletic fields (natural grass) that do not include the construction or reconstruction of *impervious area* and do not *alter hydrology from pre to post development* conditions
- Demolition project where vegetation will be established, and no redevelopment is planned
- Overhead electric transmission line project that does not include the construction of permanent access roads or parking areas surfaced with *impervious cover*
- Structural practices as identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State", excluding projects that involve soil disturbances of greater than five acres and construction activities that include the construction or reconstruction of impervious area
- Temporary access roads, median crossovers, detour roads, lanes, or other temporary impervious areas that will be restored to pre-construction conditions once the construction activity is complete

Table 2

CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Single family home located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family home that disturbs five (5) or more acres of land
- Single family residential subdivisions located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix E
- Single family residential subdivisions that involve soil disturbances of between one (1) and five (5) acres of land with greater than 25% impervious cover at total site build-out
- Single family residential subdivisions that involve soil disturbances of five (5) or more acres of land, and single family residential subdivisions that involve soil disturbances of less than five (5) acres that are part of a larger common plan of development or sale that will ultimately disturb five or more acres of land
- Multi-family residential developments; includes duplexes, townhomes, condominiums, senior housing complexes, apartment complexes, and mobile home parks
- Airports
- Amusement parks
- Breweries, cideries, and wineries, including establishments constructed on agricultural land
- Campgrounds
- Cemeteries that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Commercial developments
- Churches and other places of worship
- Construction of a barn or other *agricultural building* (e.g. silo) and structural practices as identified in Table II in the "Agricultural Management Practices Catalog for Nonpoint Source Pollution in New York State" that include the construction or reconstruction of *impervious area*, excluding projects that involve soil disturbances of less than five acres.
- Golf courses
- Institutional development; includes hospitals, prisons, schools and colleges
- Industrial facilities; includes industrial parks
- Landfills
- Municipal facilities; includes highway garages, transfer stations, office buildings, POTW's, water treatment plants, and water storage tanks
- Office complexes
- Playgrounds that include the construction or reconstruction of impervious area
- Sports complexes
- Racetracks; includes racetracks with earthen (dirt) surface
- Road construction or reconstruction, including roads constructed as part of the construction activities listed in Table 1

Table 2 (Continued)

CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A SWPPP THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES

The following construction activities that involve soil disturbances of one (1) or more acres of land:

- Parking lot construction or reconstruction, including parking lots constructed as part of the construction activities listed in Table 1
- Athletic fields (natural grass) that include the construction or reconstruction of impervious area (>5% of disturbed area) or *alter the hydrology from pre to post development* conditions
- Athletic fields with artificial turf
- Permanent access roads, parking areas, substations, compressor stations and well drilling pads, surfaced with *impervious cover,* and constructed as part of an over-head electric transmission line project, wind-power project, cell tower project, oil or gas well drilling project, sewer or water main project or other linear utility project
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a residential, commercial or institutional development
- Sidewalk, bike path or walking path projects, surfaced with an impervious cover, that are part of a highway construction or reconstruction project
- All other construction activities that include the construction or reconstruction of *impervious area* or *alter the hydrology from pre to post development* conditions, and are not listed in Table 1

APPENDIX C – Watersheds Requiring Enhanced Phosphorus Removal

Watersheds where *owners or operators* of construction activities identified in Table 2 of Appendix B must prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the Enhanced Phosphorus Removal Standards included in the technical standard, New York State Stormwater Management Design Manual ("Design Manual").

- Entire New York City Watershed located east of the Hudson River - Figure 1
- Onondaga Lake Watershed - Figure 2
- Greenwood Lake Watershed -Figure 3
- Oscawana Lake Watershed – Figure 4
- Kinderhook Lake Watershed – Figure 5

Figure 1 - New York City Watershed East of the Hudson

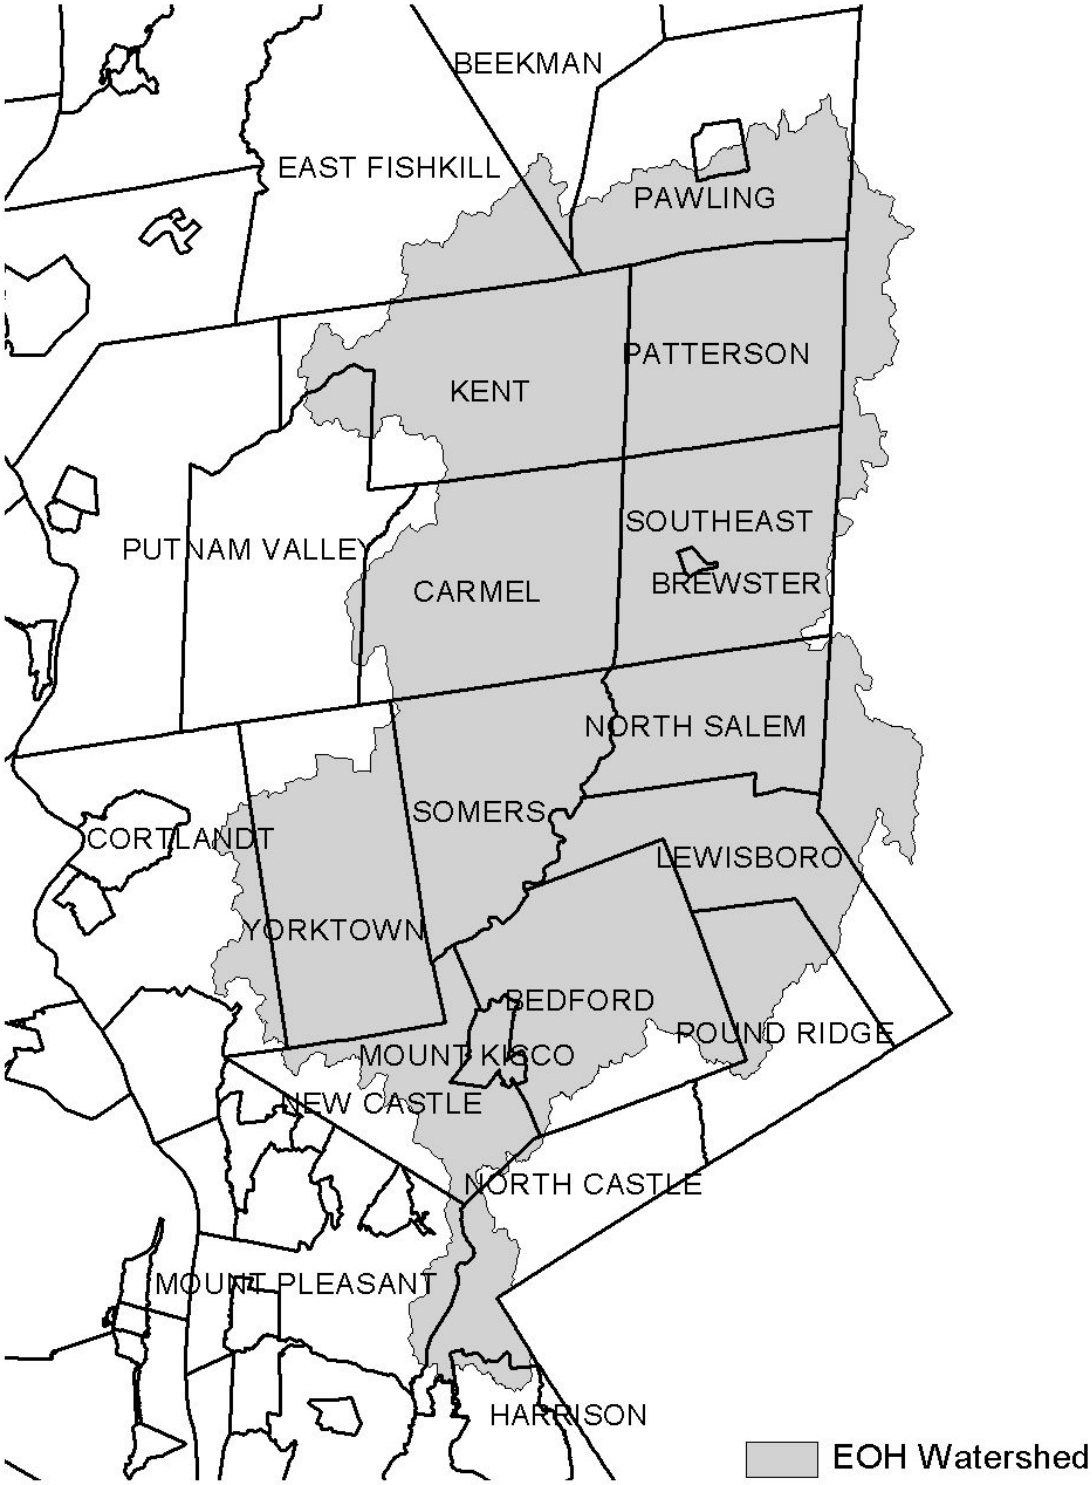

Figure 2 - Onondaga Lake Watershed

Figure 3 - Greenwood Lake Watershed

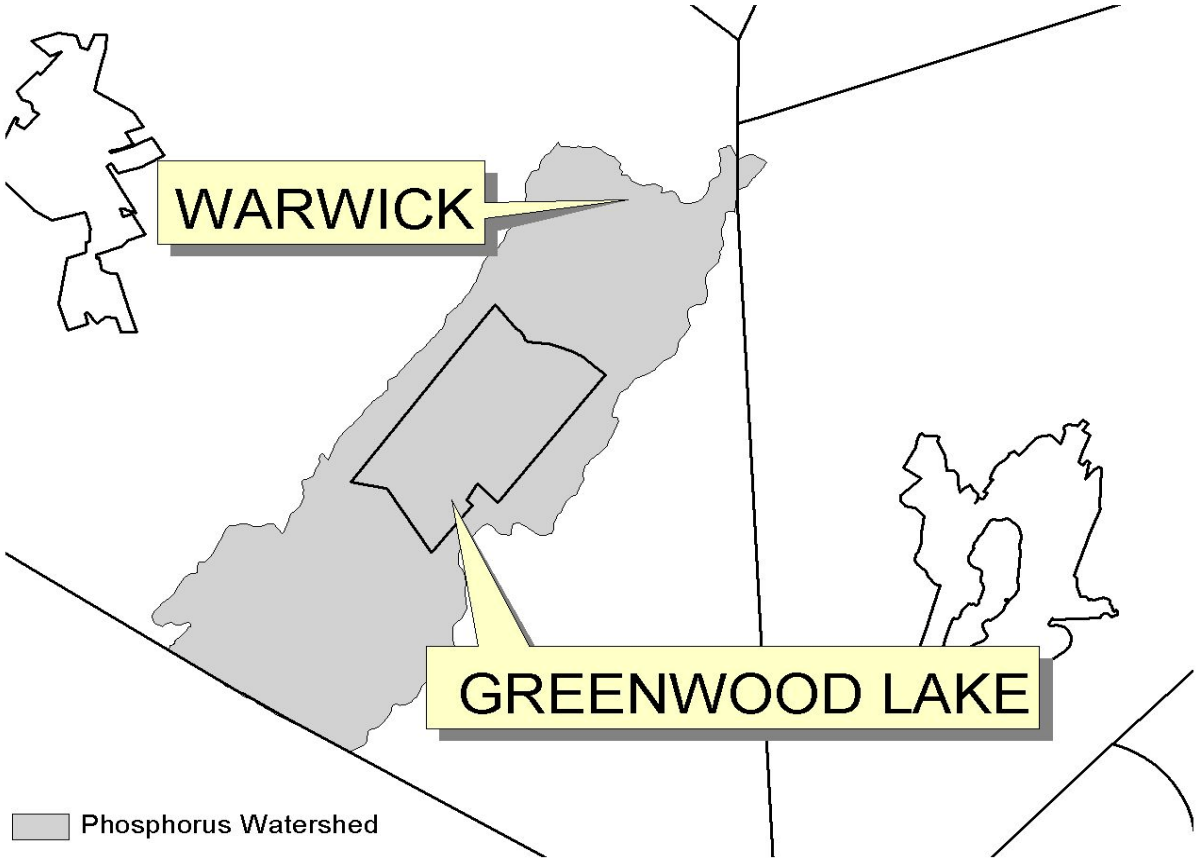

Figure 4 - Oscawana Lake Watershed

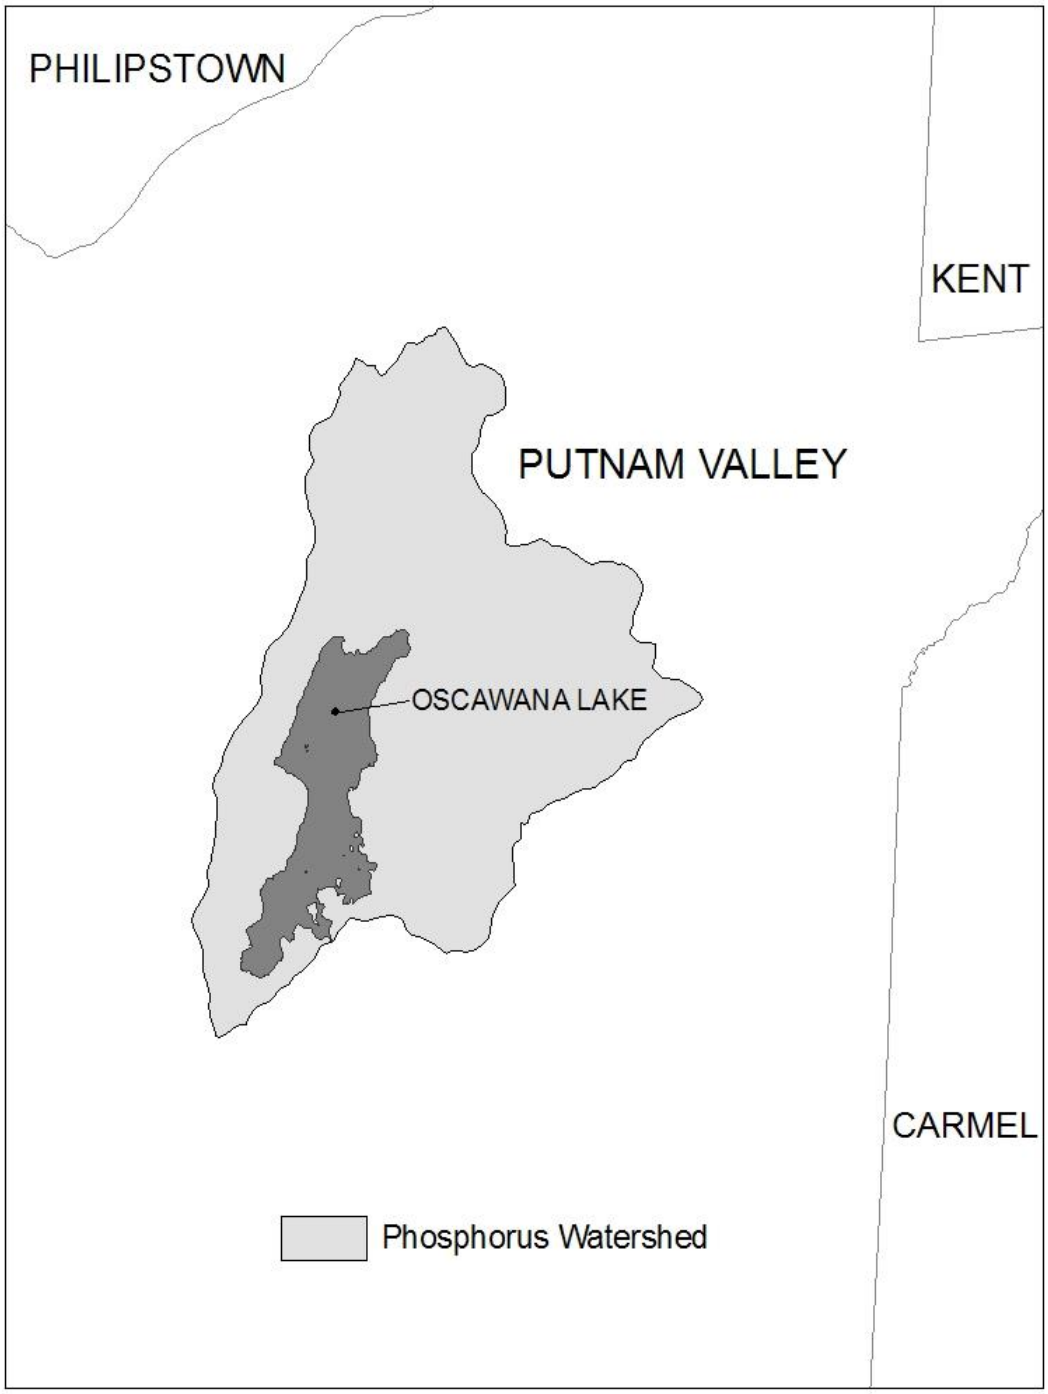

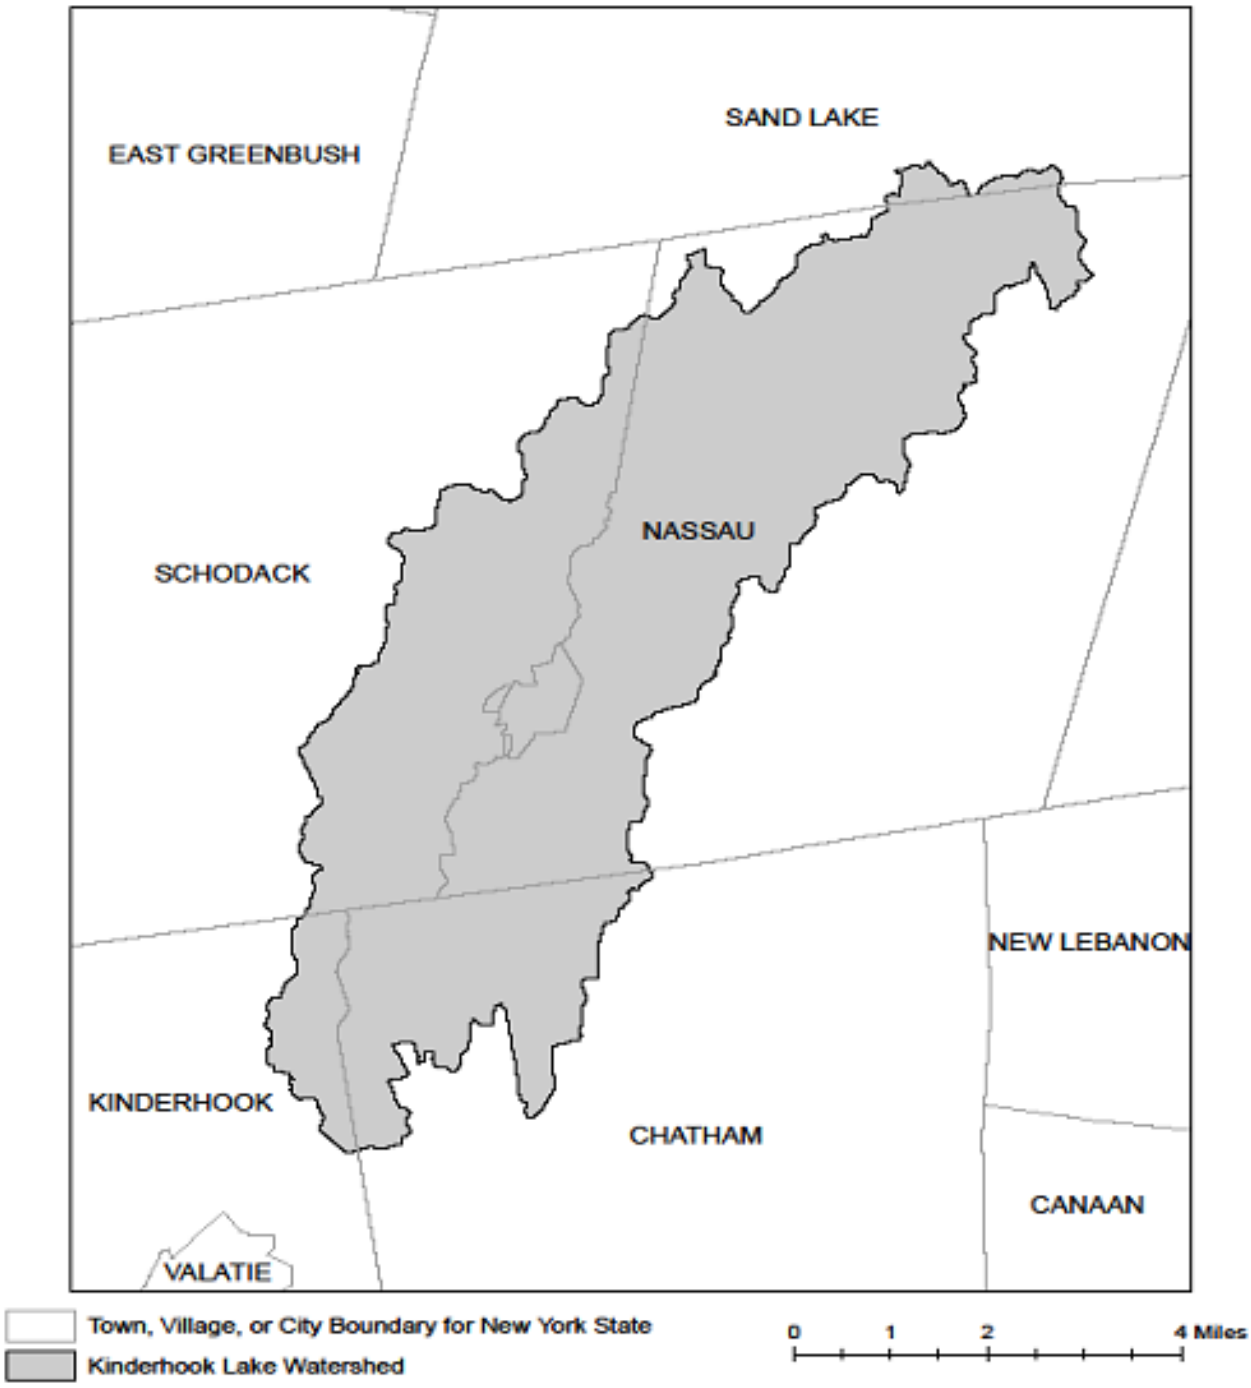

Figure 5 - Kinderhook Lake Watershed

APPENDIX D – Watersheds with Lower Disturbance Threshold

Watersheds where *owners or operators* of construction activities that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land must obtain coverage under this permit.

Entire New York City Watershed that is located east of the Hudson River **-** See Figure 1 in Appendix C

APPENDIX E – 303(d) Segments Impaired by Construction Related Pollutant(s)

List of 303(d) segments impaired by pollutants related to *construction activity* (e.g. silt, sediment or nutrients). The list was developed using "The Final New York State 2016 Section 303(d) List of Impaired Waters Requiring a TMDL/Other Strategy" dated November 2016. *Owners or operators* of single family home and single family residential subdivisions with 25% or less total impervious cover at total site build-out that involve soil disturbances of one or more acres of land, but less than 5 acres, and *directly discharge* to one of the listed segments below shall prepare a SWPPP that includes post-construction stormwater management practices designed in conformance with the New York State Stormwater Management Design Manual ("Design Manual"), dated January 2015.

COUNTY	WATERBODY	POLLUTANT
Albany	Ann Lee (Shakers) Pond, Stump Pond	Nutrients
Albany	Basic Creek Reservoir	Nutrients
Allegany	Amity Lake, Saunders Pond	Nutrients
Bronx	Long Island Sound, Bronx	Nutrients
Bronx	Van Cortlandt Lake	Nutrients
Broome	Fly Pond, Deer Lake, Sky Lake	Nutrients
Broome	Minor Tribs to Lower Susquehanna (north)	Nutrients
Broome	Whitney Point Lake/Reservoir	Nutrients
Cattaraugus	Allegheny River/Reservoir	Nutrients
Cattaraugus	Beaver (Alma) Lake	Nutrients
Cattaraugus	Case Lake	Nutrients
Cattaraugus	Linlyco/Club Pond	Nutrients
Cayuga	Duck Lake	Nutrients
Cayuga	Little Sodus Bay	Nutrients
Chautauqua	Bear Lake	Nutrients
Chautauqua	Chadakoin River and tribs	Nutrients
Chautauqua	Chautauqua Lake, North	Nutrients
Chautauqua	Chautauqua Lake, South	Nutrients
Chautauqua	Findley Lake	Nutrients
Chautauqua	Hulburt/Clymer Pond	Nutrients
Clinton	Great Chazy River, Lower, Main Stem	Silt/Sediment
Clinton	Lake Champlain, Main Lake, Middle	Nutrients
Clinton	Lake Champlain, Main Lake, North	Nutrients
Columbia	Kinderhook Lake	Nutrients
Columbia	Robinson Pond	Nutrients
Cortland	Dean Pond	Nutrients

MS4 SWPPP Acceptance Form - continued

V. Certification Statement - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative

I hereby certify that the final Stormwater Pollution Prevention Plan (SWPPP) for the construction project identified in question 5 has been reviewed and meets the substantive requirements in the SPDES General Permit For Stormwater Discharges from Municipal Separate Storm Sewer Systems (MS4s). Note: The MS4, through the acceptance of the SWPPP, assumes no responsibility for the accuracy and adequacy of the design included in the SWPPP. In addition, review and acceptance of the SWPPP by the MS4 does not relieve the owner/operator or their SWPPP preparer of responsibility or liability for errors or omissions in the plan.
